Litigation with the adjoining Alameda company, which claimed payment for ore, said to have been extracted from its ground by Success, was decided in favor of Alameda Co., but the Success Co. appealed and won. This was followed by the Alameda appealing, but the court dismissed case in May, 1917.

Property: 8 claims on Nine Mile Creek, 2 miles N. W. of Wallace. Company also operates the Red Bird mine in Custer county, where 828,-

727 tons of 10.73% lead and 7.86 oz. silver ore is estimated in reserve. 100-ton mill was to be erected in 1917.

Ore: zinc with lead-silver content. According to U. S. G. S. Prof. Paper, No. 62, there is no vein, the ore occurring in masses of irregular form and size, which are chiefly replacements of quartzite in places where it has been most thoroughly fissured. The ore is strictly confined to the sedimentary rock; surrounding country rock is monzonite.

Development: by tunnels to 700' level, and by shaft from 700' to 1,500' level, the latter recently opened. New work in 1915, 1,575', included 200' of shaft sinking. Considerable time and trouble were required to locate the ore on the 1,200' level.

Ore reserves: under date of Jan. 24, 1916, the president reported "tonnage now in sight is better than at any time during the past year, and is estimated sufficient to run the mill at the present rate for about 18 months. Grade of ore not given. Examination made in March, 1916, said to show 21,500 tons ore, blocked out above the 1,200' level, and in addition 87,200 tons of probable ore, no grade given.

The nature of the ore occurrence almost necessitates having but small reserves. Present conditions indicate the possibility of opening up new ore at depth. In May, 1917, it was reported that the orebody had been cut on the 1,500' level, showing 6' of high grade zinc ore and considerable lead.

Equipment: includes a 250-ton mill. Flotation is used.

Production: in 1916, was valued at \$693,045 from zinc, lead, silver and flotation slime.

The reticence of the management regarding operations and costs, in connection with the stock promotion, and the many conflicting reports issued, are all poor policy and have tended toward giving a feeling of uncertainty to stockholders and the investing public. If the management were sincere, a little frankness would do no harm.

It was reported in September, 1917, that company's books were to be examined by court order. Overhead charges are said to be excessive and in each month for a year there have been losses. Ore sales for 7 months in 1917 were \$226,000 against \$555,000 in that period of 1916. The whole affair is highly unsatisfactory.

TAMARACK & CUSTER CONSOLIDATED MINING CO. IDAHO

Wallace, Idaho. **Officers:** J. J. Day, pres., gen. mgr. and treas.; E. L. Day, v. p.; H. L. Day, sec.; R. M. Walker, E. H. Knight, F. M. Rotter, rock, E. Boyce, directors.

Inc. in Nevada, 1913. **Cap.,** \$2,000,000; \$1 par; unissued, \$223,500.

Financial statement shows net profits for 1914, \$187,063; for 1915, \$344,796; for 1916, \$338,746.

First dividend of 2 cts. per share was paid May, 1916; total in 1916 was \$71,050.

Property: about 40 claims and fractions, acquired from the old Tamarack & Chesapeake and Custer companies, on Nine Mile Creek, Coeur d'Alene district, Shoshone Co., Idaho. The Hercules mine nearby is controlled by the same interests.

Ore: contains 9% lead and 7 oz. silver, part direct smelting and part concentrating. Mill recovery is reported to be about 83% without flotation.

The company with the Hercules interests built and is operating the new lead smelter at Northport, which is to be enlarged to handle copper products. Direct information is not available but it is said that the gross ore reserves are about \$9,000,000. One ore-shoot on the Leonard tunnel level is reported to have been proved for 1,500' with ore on both faces.

Little is available concerning this company for 1916, the policy of reticence that has resulted in much criticism in the past being continued. Early in 1917 the 500-ton Frisco mill at Gem was purchased from the Federal Mining Co., for \$150,000, also the 8,000' Hercules aerial tram. To this line was added 2½ miles to connect the mine and mill. In June, operations were resumed after suspension since March. The remodeled mill includes a flotation plant. About 350 men are employed. In July, 1917, mine produced 3,000 tons of crude ore and concentrate valued at \$150,000.

TEDDY MINING & MILLING CO., LTD.

IDAHO

Kellogg, Shoshone Co., Idaho. J. B. Cox, sec.

Cap., \$1,000,000; shares \$1 par.

Property: 7 claims and a mill site, 1 mile E. of Kellogg, shows 2 veins, 1 of about 15' width, carrying copper ore with quartz gangue, and 1 of about 12 to 35' width, carrying silver-lead ore giving assays up to 12% lead and 30 oz. silver per ton.

Development: by crosscut tunnels of 100' and 550'. There are several mine buildings.

Mine is being operated under 2-year lease from March, 1916, by C. W. Browne, Dr. T. R. Mason and J. W. McCrea, of Kellogg. The lease covers only the ground above the intermediate tunnel, which was extended 40' to intercept the main vein.

TERRIBLE EDITH MINE.

IDAHO

A group of claims in the Eureka district, near Murray, Idaho, under lease to C. and W. H. Conn, of Butte, Mont.

Development: by 1,300' crosscut and 600' of drifting developed zinc ore of shipping grade. Several shipments of 50% ore were made and 150 tons monthly contracted for. The mine is also said to show promising bodies of galena with silver and gold.

TUCKER MINING & MILLING CO.

IDAHO

Address: Box 68, Wallace, Ida.

Officers: Peter Bahn, pres. and gen. mgr.; J. Pearson, v. p.; W. Turner, sec.-treas.; above are directors.

Inc. June, 1908, in Idaho. **Cap.**, \$1,000,000; shares \$1 par; assessable; issued, \$600,000; given in exchange for the property. Annual meeting in June.

Property: 7 claims, unpatented, 140 acres, in the Hunter district, 3 miles E. of the Snowstorm, shows Revett quartzite, cut by a diabase dike with veins, 1 to 4' in surface width, said to carry copper-gold-silver ore.

Development: by a 1,000' tunnel, shows low-grade copper ore at depth of 100' in E. crosscut tunnel. At 400' depth owners expect to cut the vein.

TUSCUMBIA MINING CO.

IDAHO

Address: Morton Webster, sec.-treas., Wallace, Idaho. **Officers:** George May, pres.; George W. Dougherty, v. p.; with D. L. McGrath, Wallace, D. J. Whaley, M. L. Whaley and A. A. Whaley, of Stevensville, Mont., directors.

Inc. 1910 in Idaho. **Cap.**, 1,500,000 shares; 50c par. Mine was under lease for 2½ years from April, 1915, to Gust Ehrenburg, of Spokane, and Albert Nelson, of Wallace.

Property: 4 claims, 76 acres, covers nearly 3,000' of the apex of the Tuscumbia (Sunset) lode, and 1,000' more or less of the Idora lode. The Tuscumbia is a strong, persistent vein in Pritchard slate, varying from 6 to 20' in width and branching at times. It carries shoots of silver-lead ore and of zinc.

Development: by tunnels, the lowest now worked being the Idora

crosscut tunnel. The Hill tunnel, 4,000' long, has not cut the vein; it is 1,015' below the Idora tunnel.

Mine has been stoped and orebodies largely mined out above the Idora tunnel, but the vein is believed to give promise of large bodies of milling ore at deeper levels. The property also has title, through ownership of apex, to an important orebody of the Idora mine. Deep development can be done by tunnels, as the Roy or Hill tunnel is 1,300' below the Tuscumbia apex and 1,015' below the Idora tunnel.

Property considered very promising, but company needs financing to provide funds for deep and extensive development work.

UNITED LEAD CO.

IDAHO

Name changed to Silverado Mining Co., which see.

VIENNA-INTERNATIONAL MINING CO.

IDAHO

Address: R. A. Marshall, sec., Wallace, Ida.

Officers: A. H. Featherstone, pres.; C. R. Mowery, v. p.; R. A. Marshall, sec.-treas.; with A. B. Livingston and D. Rosenbaum, directors.

Annual meeting was held on Sept. 4, 1917.

Property: 6 claims, 3 patented, and a mill site, near the mouth of Flora gulch, on Placer creek, 6 miles S. of Wallace, shows banded shale and quartzites of the middle part of the Newland formation, striking N 50 to 60° W., and dipping 70° S. Principal vein has a quartz-siderite ore body, 3 to 5' wide with strike almost E.-W. and vertical dip. Ore on the dump shows galena, pyrite and chalcopyrite in a quartz-siderite gangue of too poor a grade to be profitably concentrated.

Development: by a 400' shaft, and 2 tunnels of 700'. New management plans unwatering the shaft, sinking to 500' and drifting on the 400' and 500' levels.

WALLACE MINING, MILLING & REALTY CO.

IDAHO

M. R. Evans, mgr., Wallace, Idaho.

Property: 9 claims on Placer creek, alongside of city limits of Wallace said to show a big vein with scattered galena ore.

Development: by 1,500' tunnel. Is equipped with electric power, compressor, etc.

WARDNER LEASING CO.

IDAHO

Address: J. D. Owen, Kellogg, Ida.

Officers: W. A. Beaudry, pres.; D. W. Price, v. p.; J. D. Owen, sec.-treas.; with R. A. Carnochan, directors.

Inc. April, 1917, in Wash. Cap., \$500,000; shares \$1 par; assessable 410,000 issued.

Property: has 25-year lease on 60 acres of patented ground in Wardner townsite. Company has definite development plans and sufficient funds. Contiguous properties are the Caledonia, Last Chance and Bunke Hill & Sullivan, all well known producers.

Development: in Aug., 1917, the shaft was down 100', making 5' daily.

WEST HECLA MINING CO.

IDAHO

Office: 601 Empire State Bldg., Spokane, Wash.

Officers: Morton Webster, pres.; R. H. Bailey, v. p.; J. V. Pohlman sec.-treas.; with A. A. Booth and T. A. Russell, directors.

Inc. in Wash. Cap., \$1,500,000; shares \$1 par; assessable; 1,450,000 issued.

Property: 3 patented claims opposite the Hecla mine, Burke, Ida.

In Sept., 1917, company was prospecting in quartzite for the Hecla lead silver vein. Workings to depth of 650' totaled, 1,750'.

WEST HUNTER MINING CO.

IDAHO

Address: A. M. Strode, Mullan, Idaho.

Cap., 1,500,000 shares; 10c par; 600,000 shares in treasury.

Property: 1 patented, 7 unpatented claims about one-half mile from Mullan, in the Coeur d'Alene district. The claims show a large body of quartz sprinkled with galena, which has been exposed by surface workings.

In Aug., 1917, a crosscut tunnel was being extended to cut ore exposed on the surface.

WEST NINE MILE MINING CO.

IDAHO

Chas. Heilbronner, pres. and gen. mgr., Wallace, Idaho. H. C. McAllister, treas. Olin & Co., fiscal agents.

Property: 4 claims west of the Success and Alameda mines on west fork of Nine Mile Creek.

Development: by 400' tunnel shows a vein said to carry occasional bunches of ore. In June, 1917, 200' additional tunneling was to be done. T. W. Clayton and F. C. Moore recommended sinking on the surface showings.

WESTERN UNION MINING CO.

IDAHO

Idle. Letters returned unanswered in May, 1917, from Wallace, Idaho.

Officers: D. H. Anderson, pres.; B. L. Collins, sec.; L. L. Woodford, treas.; D. H. Anderson, R. F. Collins, J. E. Burbank, G. W. Allen, W. Holm, W. Bjorklund, E. Hagman, directors; E. Roberts, supt.

Inc. Jan., 1916, in Idaho. **Cap.**, 2,000,000 shares; 10c par; 1,500,000 shares issued in exchange for stock in Aurora-Sampson and H. E. M. companies; 500,000 shares in treasury for future development.

Property: 30 claims of the Aurora-Sampson and H. E. M. companies near Wallace, in the Coeur d'Alene district. Owns the H. E. M. 100-ton concentrating mill at Wallace, which has a flotation unit using Naval Stores oils.

Development: aggregating 8,500' includes the H. E. M. lower tunnel, which at 2,300' and at a vertical depth of 1,000' encountered a large orebody in Aurora-Sampson ground. Drifts on the vein extend 800'. Values are lead and silver. The H. E. M. mine has 8,000' of underground workings. **Management** proposes active mining work and ore extraction.

WISCONSIN MINING CO.

IDAHO

Letters sent to Kellogg returned unanswered in May, 1917.

Officers: Louis Bolduc, pres.-treas.; P. Mason, v. p., with J. Bolduc, F. Jones and J. W. Thompson, directors; J. S. Ross, sec.

Inc. 1912. **Cap.**, \$1,500,000; shares \$1 par. Company is practically the successor of the Gold Leaf Consolidated Mines and the Coeur d'Alene Consolidated Mining Co., the shares of the old companies being made transferable share for share in the new company, upon payment of back assessments.

Property: 4 claims, unpatented, 2½ miles east of Kellogg, has 800' of tunnels and crosscuts and one 90' vertical shaft, developing a vein of 5 to 6' width, carrying copper ore and a little lead.

Equipment: includes a 2-drill compressor, run by water power from Moon creek, and a hoist. Development work only was done in 1915.

WONDERFUL MINING CO., LTD.

IDAHO

Office: Otterson Blk., Wallace, Idaho. A. H. Featherstone, sec.-treas. Stock is assessable.

Property: 4 claims, patented, near Mullan, Shoshone Co., Idaho., W. of the Bullion mine, on the eastern slope of Stevens peak. A 1,200' cross-cut tunnel is developing a vein said to give a fair showing of galena and copper ore.

YANKEE BOY MINING CO.**IDAHO**

Scott Anderson, pres. and mgr., Wallace, Idaho. Property leased, in part, to Big Creek Leasing Co., which see. The Yankee Boy mine is in the Big Creek section, near Kellogg, Shoshone Co., Idaho.

Development: includes a 1,800' tunnel and a 500' raise. A 4' vein cut in 1916 is said to average 200 oz. silver per ton with copper-lead value. Samples said to have assayed 123 oz. silver; 8.4% lead; 14% iron; 0.8% copper.

Equipment: includes gasoline engine, compressor, etc.

Production: in 1913 was 271 tons with gross value of \$35,461 and 38 tons in 1914 returning \$38,646. Net profit for 1914 was \$4,557. No later returns available.

CUSTER COUNTY**CHAMPION MINING CO.****IDAHO**

Idle. R. T. Badger, sec.-treas., Utah National Bank Bldg., Salt Lake City, Utah. **Mine office:** Mackay, Custer Co., Idaho.

Officers: Edw. R. Hall, pres.; C. T. Mixer, v. p.; preceding, with O. I. Mallory and J. E. Frick, directors; H. A. Brown, supt.

Inc. 1905 in Utah. **Cap.**, \$100,000; non-assessable.

Property: 9 claims, unpatented, in the Alder Creek district, 6 miles from a railroad. Developed by tunnel, with about 1,500' of workings, showing silver, lead and copper ores.

CLAYTON MINING & SMELTING CO.**IDAHO**

Clayton, Custer Co., Idaho.

Lands: 18 claims, showing argentiferous copper and lead ores. Has water power and a smelter rated at 50 tons. Reported sold to Idaho Smelting & Mining Co., in 1914.

COPPER BASIN MNG. CO.

Main office: 804 Newhouse Bldg., Salt Lake City. **Mine office:** Mackay, Idaho.

Officers: John Pingree, pres.; H. W. Weiler, v. p. and supt.; R. West, sec.-treas.; F. H. Vahrenkamp, managing director and cons. engr.

Cap., \$1,000,000; shares \$1 par; increased from 100,000 shares. **Levi** 2c assessment Aug. 18, 1917.

Property: 15 claims and 3 fractions, 24 miles from Mackay, Idaho. Copper Basin, Mont. Claims to have an orebody on the 100' level, 200' long, 50' wide with a 65' winze still in ore from which assays from various lots run 10% copper, 13% iron and some silver.

Production: 30 to 50 tons daily. Company had 40 teams hauling summer, 1917.

CUSTER SLIDE MINING & DEV. CO.**IDAHO**

Officers: R. L. Holland, pres.; D. Y. Butcher, sec.; Wm. H. Fittgen, gen. mgr.; all of Colorado Springs, Colo.

Property: 700 acres in Yankee Fork district, Custer Co., Idaho, including the Montana and Sunbeam groups, also mill, power plant and dam of the Sunbeam Cons. Mines Co. The Montana mine was operated during 1916 and some rich gold ore is said to have been found. **Mine** an old producer. Active operations began in 1917, the past two years being devoted to preliminary work. An aerial tram connects the mine with the Sunbeam mill.

EMPIRE COPPER CO.**IDAHO**

Office: F. G. Taylor, sec. and transfer agt., 322 Eccles Bldg., Ogden, Utah. **Mine address:** Mackay, Custer Co., Idaho.

Officers: L. R. Eccles, pres.; J. M. Eccles, v. p.; Jos. Scowcroft, treas.; F. A. Behling, mgr.; above and John Pingree, directors.

Inc. June, 1907, in Maine. Cap., \$1,200,000; shares \$1 par; 1,000,000 shares issued. Stock listed on Salt Lake City and Kansas City Stock Exchanges. Annual meeting 3d Tuesday in May.

Dividends: paid since May, 1913, \$680,000. Is on regular 5% quarterly dividend basis, 1917.

Property: the White Knob Copper Mine, 3 miles south of Mackay on the Salmon River branch of the Oregon Short Line, with 89 claims, 18 patented, 700 acres, also mill and smelter sites of 480 acres, and a railroad right-of-way, in the Alder Creek district, Custer County, Idaho.

Geology: property carries a great number of lenticular contact replacements, in quartz porphyry and granite porphyry. The property is remarkable for its peculiar ore deposits, varying greatly in size and shape, occurring at the metamorphosed garnetized margin of contact, garnetization existing in some instances for fully six hundred feet from the contact. The geology has been carefully studied and is described by Kemp in the Transactions Am. Inst. of Mg. Eng., 1907, and in Genesis of the Mackay Copper Deposits, by Jos. B. Umpleby, Econ. Geol. The ore is largely a cupriferous pyrite with much chrysocolla derived from its alteration. The average assay of the 68,475 tons of ore mined in 1916 was copper, 4.008% gold, .04 oz.; silver, 1.97 oz. per ton.

Development: mine has a glory hole, 125 to 200' wide, but mining is mainly by tunnel. The property is opened by some 40 tunnels and five shafts, and has a total of underground workings in excess of 15 miles. The greatest vertical depth has been attained in the Cossack tunnel, which is some 5,000' long, having a depth of 1,800'; some ore showing. A raise of 1,000' is now being run to connect with the Alberta tunnel. Only shipping ore is being extracted and plans are under consideration for the erection of a mill to treat the low-grade ores that have been and are now being developed.

Equipment: includes air compressors having a capacity of 36 drills, steam driven; machine shop, blacksmith shop, bunk houses, boarding-house and commissary.

At present the mine is reached by an 85-mile branch of the Oregon Short Line R. R. Co., running from Blackfoot to Mackay, and is connected by the 7½ miles Empire Railroad, owned by the company, of 36" gauge, equipped with two 33-ton and one 35-ton Shay mountain climbing locomotives and 34 cars. The line has a maximum gradient of 9%, with a rise of 1,000', and has one 6% grade on a 34° curve. A 3-mile aerial tramway of 1,000 tons daily capacity will be in operation before 1918.

Smelter at mine is not in operation, ore being shipped to the A. S. & Co.'s plant at Garfield, Utah, for treatment.

Year	Tons Mined	Lbs. Copper	Oz. Gold	Oz. Silver
1916.....	69,475	4,990,147	2,860	123,353
1915.....	54,295	4,702,119	3,155	125,135
1914.....	18,251	2,012,244	962	53,768
1913.....	34,722	3,565,479	1,812	92,805

The average number of men employed during the past year on company account has been 150, and in addition about an equal number have been engaged by the 50 sets of lessees working on the property.

Because of strong metal prices, average royalty paid by lessees during the past year was 32½% of the net smelter returns.

OST PACKER MINING CO.

IDAHO

Office: 564 E. First South St., Salt Lake City, Utah. Mine and works
Exec: Ivers, Custer Co., Idaho.

Officers: Jas. Ivers, pres.; J. T. Finlen, v. p.; Henry Welsh, sec.-treas. with J. Frank Judge and H. A. McCornick, directors; J. P. Boyle, mgr.

Inc. 1903, in Utah. **Cap.**, \$150,000; shares \$1 par; changed 1916 to 600,000 shares, 25c par. Stockholders privileged to purchase new shares at ratio of 3 for each old share held. Company declared a dividend of 25c. a share Oct., 1913. Stock listed on Salt Lake City Exchange.

The Packer Co. was inc. June, 1917, as a holding company to take over 80% or more of the Lost Packer Mng. Co. stock.

Property: 34 claims, 4 patented, in the Loon Creek district, 112 miles west of Mackay, the nearest rail point. The mine and smelter are in the mountains 7,100' above sea level, but an auto road runs to the mine. Claim said to show a number of iron outcrops, covering two contacts, two miles apart, one a limestone diorite contact, the other between limestone and quartzite. These outcrops are of favorable character.

Development: by drift tunnels, No. 1 having a back of 450', No. 2 a back of 700', and No. 9 a back of 870', later showing rich ore, and planned to have a back of 2,000', ultimately. Tunnels are drifts on a vein of 2 to 7' average width, with maximum width of 15 to 18', carrying ore said to average 9 to 16% copper, and 2-8 oz. gold per ton, with a paystreak of 2" to 5" width, proven to average about 2' for a distance of 500', and depth of 400'. Mine is developed to 1,000' level. See U. S. G. S. Bull. 530 G.

Company employs 80 men at the mines and 400 horses are required to handle supplies and output.

Equipment: about \$225,000 has been expended on surface improvement and equipment, including the smelter, but excluding the 50-ton oil flotation concentrator, built in 1915. The property has water power, with an electric light plant, assay office and necessary mine buildings.

The smelter has a 100-ton water-jacket blast furnace, making matte of about 45% copper, 25 oz. silver and 8 to 10 oz. gold per-ton, with slags running only about 0.2% copper. The smelter ran 24¼ days in the summer of 1913, smelting 1,800 tons of ore, and producing 380 tons of matte. Total production to end of 1915 was \$800,000. Management estimates 20,000 tons of ore in old stopes expected to net \$4.97 per crude ton.

No 1916 production, as company was developing only.

LOST PACKER MINING & SMELTING CO.

IDAHO

Mine near Ivers, Custer Co., Idaho. John T. Clarke, treas. and managing director.

Inc. 1907, in Wyoming. **Cap.**, \$3,000,000; shares \$5 par, as a holding company, to gradually acquire the outstanding stock of the Lost Packer and other mining companies.

PACKER CO., THE.

IDAHO

Offices: Mackintosh Block, Salt Lake City, Utah, and Suite 625, No. 149 Broadway, New York.

Officers: Chas. Read, pres.; E. G. Rowe, v. p.; with W. A. Black, T. E. Gubin and A. J. Miller, directors. J. H. Woodmansee, sec.-treas. Register & Transfer Co., N. Y., register and transfer office.

Inc. June 12, 1917, in Me. **Cap.**, \$600,000; par \$1; \$500,000 issued.

Organized as holding company to take over 80% or more of Lost Packer Mining Co. stock (which see).

RAMSHORN MINE.

IDAHO

At Bay Horse, Custer Co., Idaho. Presumably belonging to Ramshorn Mining Co. Was reported by State Inspector of mines in 1912, to be the best developed source of dry silver ore in Idaho.

Shows well-defined fissure veins in black altered slate of igneous material. Vein varies from a few inches to several feet in width and carries

quartz and spathic iron with ore shoots containing streaks and spots of tetrahedrite carrying high copper and silver values.

Examined 1913 by Frank Leland and said to be under option to him.

RANKIN CREEK PLACER MINES CO. IDAHO

Address: A. S. Thatcher, pres., 1455 Michigan Ave., Salt Lake City, Utah. T. B. Meldrum, sec.-treas.

Inc., 1917 in Utah. Cap., \$25,000; shares 25c par; 60,000 in treasury.

Property: 80 acres in Yankee Fork district, Custer County, reported to carry free gold. About 1,000' of placer ground previously worked averaged \$3 per cu. yd. There is an old mill on the ground. Active development to start Sept., 1917.

RED BIRD MINING & SMELTING CO. IDAHO

Inc. 1913 to take over assets of Idaho Smelting and Mining Co. J. B. Jones, sec.-mgr.

Property: consists of extensive holdings near Clayton, Custer Co., 60 miles N.-W. of the Oregon Short Line terminal at Mackay, including the Ella group at Clayton, Red Bird group on Squaw Creek, Silver Rule group on Slate Creek, Skylark group at Bayhorse, and a 100-ton smelter at Clayton. The Red Bird mine is the principal property, containing lead-silver-copper-gold ore. Ore occurs in well-defined veins opened to maximum depth of 900' by shafts and crosscuts. The smelter was closed down, Nov., 1915, after an unsuccessful run of one month, during which it turned out 2,700 bars of bullion, containing good silver values. Development work has apparently also been discontinued.

ELMORE COUNTY

BOISE ROCHESTER MINING CO (INC.) IDAHO

Address: Atlanta, Elmore Co., Idaho, and care of Leo. J. Falk, pres., Boise, Idaho; S. G. Smith, supt.

Property: the Bagdad Chase Gold M. & M. Co., also known as the Pettit mine. Claims show a fissure vein 3-12' wide developed for 800' by tunnel. Ore is said to average \$9 per ton in gold and silver for this entire distance.

Ore is delivered to 40-stamp mill by Bleichert tram. Treatment consists of amalgamating, concentrating and cyaniding.

ELMORE COPPER CO. IDAHO

Address: 137 South La Salle St., Chicago, Ill. Wm. O. Reuss, pres.

Inc. in Idaho. Cap., \$5,000,000; \$1 par; non-assessable.

Property: 8 claims, 160 acres, 10 miles from the Boise cutoff railroad, said to show ore throughout entire holdings.

Development: by 980' of drifts and crosscuts and 200' shaft, showing an orebody.

FREMONT COUNTY

WEIMER COPPER CO. IDAHO

Office: care Jesse Knight, Provo, Utah. Mine near Dubois, Fremont Co. Idaho.

Property: 18 claims, 360 acres, on Birch Creek, in Skull canyon district, shows a crushed zone 100 to 200' thick between quartzite and limestone, which carries high-grade ore in pockets and in cross fissures, of 3" to 2' width, running at right angles to the main contact deposit.

Development: by an open cut and 2 tunnels of 300' each. Idle for several years.

IDAHO COUNTY

BLACK PINE MINING CO.

IDAHO

Office: 926 W. Lehigh Ave., Philadelphia, Pa. Mine office: Elk City, Idaho.

Officers: S. J. Rieben, pres.; Louis H. Michel, v. p.; Dr. Wm. H. Kuick, treas.; R. T. Moyer, sec., with J. B. Shourds, Dr. Fred. Bridgland, I. Thompson and Jas. McGrath, directors.

Inc. Feb. 13 in Arizona. Cap., \$1,000,000; shares \$1 par.

Property: 41 claims, 700 acres, includes Black Pine and Crown Point mines, at Elk City, Idaho Co., Idaho.

Ore: gold-silver, in veins believed to be a continuation of the Mascot lead. Ore said to average \$12 per ton in gold, silver, lead and zinc.

Development: by 1,400' tunnel.

Equipment: 50-ton mill and concentrators. The mill is to begin operations, Sept., 1917. Management plans to thoroughly prospect the ground.

BLUE GROUSE MINE.

IDAHO

Owned by V. W. Brasch, Paulsen Bldg., Spokane, Wash.

Property: in the Orogrande district, 1½ miles N. W. of Orogrande Idaho County, said to have the extension of veins opened up in the adjoining Umatilla mine.

Development: 600' of tunnels, said to show veins 4½ to 10' wide, averaging \$12 per ton in gold and silver.

BLUE JACKET MINING CO.

IDAHO

Mine P. O.: Lucile, Idaho Co., Idaho.

Officers: W. B. Clark, pres., Johns Hopkins University, Baltimore, Md.; B. N. Baker, v. p.; J. M. Lawford, sec.-treas.; with F. T. Homer and Frank E. Johnesse, directors; F. E. Johnesse, gen. mgr. and supt.

Inc., Oct. 20, 1908, in Idaho. Cap., \$50,000; shares \$1 par, fully paid. Annual meeting, first Monday in January. Company is a close corporation.

Property: 7 claims, patented, about 132 acres, in Crooks Corral mining district, Idaho Co., Idaho.

Geology: ore occurs as replacement along contact between diorite and andesite porphyry. Orebody is from 50 to 70' wide, runs east and west, and dips at an average angle of 35°. It has been opened up by a 300' shaft, numerous tunnels, crosscuts and drifts, aggregating 3,395'. These workings block out 33,000 tons of ore, carrying 3.7% copper with 1.5 oz. silver and \$1.80 gold per ton. The orebody is more or less oxidized down to the 70' level, though the greater part of the ore in the lower levels is original sulphide and the enriched portion lies between the 1st and 4th levels. Reserves estimated at 542,000 tons. Property has no mill, hoist or reduction plant of any kind and has been closed down since 1909 awaiting railroad transportation, which is still 40 miles away. Property is a good one and officers able and responsible.

CLEARWATER GOLD & COPPER MINING CO.

IDAHO

Mine office: Clearwater, Idaho Co., Idaho.

Officers: Samuel Seidenfeld, pres.-mgr., 1027 W. 10th Ave., Spokane, Wash.; Herman A. Bush, v. p.; J. H. Wourms, sec.-treas.; Dennis Reardon, supt.

Inc. 1907, in Idaho. Cap., \$2,500,000; shares \$5 par, assessable; 489,000 outstanding.

Lands: 16 claims, including the Cunningham group, on the north fork of the Clearwater river, 50 miles south of Wallace, nearest rail point Amanda, with 6 miles of wagon road and 11 miles of trail. Property shows vein said to be traceable 5 miles, 1 mile on company's lands, carrying ox

dized ores near surface, with chalcopyrite and chalcocite at depth, giving assays of 5% copper, \$1.50 gold, and 1 to 2 oz. silver per ton.

Development: by 3 tunnels, lower tunnel, 1,900' long, cutting the ledge at the face 300' below surface. Management estimates 18,000 tons of ore on dumps, June, 1915, and total reserves at 400,000 tons, averaging 4½% copper.

Equipment: includes hoist and air compressor. \$250,000 bond issue contemplated to provide funds for aerial tramway, necessary equipment and development work.

GOLDEN GATE PLACER MINES.

IDAHO

Office: Pendleton, Ore.; B. Parlett, sec. **Cap.**, \$75,000, shares \$1 par. Operating mine in Idaho Co., Idaho.

HAMILTON MINING CO.

IDAHO

Office: 307 Benton St., Portland, Ore.

Officers: R. E. White, pres.; A. N. Hamilton, sec.

Cap., \$2,400; shares \$1; all outstanding.

Property: on the South fork of Salmon River, Idaho Co., Ida. Company reported, October, 1917, to have purchased the Grand Central mine, consisting of 2 claims in Cable Cove district, near Sumpter, Baker county, Oregon, formerly owned by Mollie Gibson Gold M. & M. Co.

Development: by 500' of tunnels, said to show an ore bearing vein from 24' wide. The tunnel is to be extended 400'.

HARTWIG MINING CO.

IDAHO

Mine at Pollock, Idaho Co., Idaho.

Officers: Wm. Hartwig, pres.; G. W. G. Geiger, sec.; W. J. Moore, treas.; preceding officers, C. Brinkman, Fred Goldsmith and Gustave Peters, directors.

Inc. Jan. 3, 1906, in Iowa. Cap., \$72,000; shares \$25 par; fully issued.

Property: 5 claims, patented, 72 acres, and a 5-acre mill site, in the Rapid River district, near Salmon river, said to carry several contact deposits between limestone and diorite, of which 4, under development, are of 30' estimated average width, traceable 400', carrying oxidized and chalcopyrite ores, reported by company to average 14% copper, with traces of lead and zinc, 3 oz. silver and \$10 gold per ton. Figures undoubtedly too high for an average of the orebody.

Development: 75' shaft, and 3 tunnels of 1,000' aggregate length, an 875' lower tunnel cutting the ore zone, which shows but little ore. Property has 4 buildings but no power equipment. Idle some years, owing to lack of transportation facilities.

IDAHO ANTIMONY MINING CO.

IDAHO

H. L. Williams, Seattle, Wash., managing director. Channing Prichard, supt.

Property: in Yellow Pine mining district, near Cascade, Idaho county, shows an orebody of stibnite, 18-30" wide, developed by 4 tunnels. Two carload shipments, 1915-16, are reported to have yielded 47% antimony. No later returns.

MINERAL ZONE MINING CO.

IDAHO

No recent returns secured. G. L. L. Baskett, supt., Elk City, Idaho.

Property: known as the Parr group, includes the Mineral Zone gold mine near Elk City. In April, 1916, a clean-up of a 15 days' run is said to have yielded \$2,300.

Development: is by tunnels. There is a 3-stamp mill on the property. Ten men employed.

NORTHWESTERN MINING CO.

IDAHO

Out of business.

Property: a copper mine near Lucile, Idaho Co., Ida., was acquired by the Blue Jacket Mining Co., R. H. Bayard, pres., Gailbin Bldg., Baltimore, Md.

OLIVIA GROUP

IDAHO

Owned and operated by Hazlitt & Trader, Dixie, Idaho Co., Idaho.

Property: 11 unpatented claims, 210 acres in Dixie mining district shows gold-silver-copper ore in quartz fissure veins, 8"-40" wide, running N. W., with dip 60° N. E. The country rock is granite and gneiss.

Development: by 100' tunnel, 100' vertical shaft and drifts, totaling 1,000' of underground workings.

Equipment: includes a new 10-ton Huntington mill, which ran only a short time in 1915. Plan driving tunnel on Ironsides claim to depth of 250'

STECKNER GOLD MINING CO.

IDAHO

Care D. B. Cornell, sec.-treas., Great Barrington, Mass. Henry Tator, pres.; F. H. Cornell, v. p.

Inc. Feb. 17, 1914, in Arizona. **Cap.**, \$2,000,000.

Property: the Gold Dollar group, 10 lode and 5 placer claims, near Orogrande, Idaho Co., Idaho, shows fissure veins in granite. The veins are 2'-4' thick and carry gold ore, shown by systematic sampling to carry \$ to \$13 per ton.

Development: by 3,000' of work, all tunnels, 1,000' depth.

UNA MINING CO.

IDAHO

J. M. Hinton, supt., Orogrande, Ida.

Officers: J. W. Turner, pres.; Thos. A. White, v. p.; Ralston McCraig sec.-treas., with W. B. Phillips and W. S. Willis, directors.

Inc. 1914. **Cap.**, \$1,250,000; shares \$1 par; 650,000 issued.

Property: the Una mine, near Orogrande, shows a vein 10' wide carrying pay streaks of a few inches to 5' thick. In the 40' shaft the ore is said to average \$7 per ton in gold with some silver.

Development: by 900' tunnel to cut vein at 200' depth.

UNITY GOLD MINES CO.

IDAHO

Offices: care of Idaho Mines Syndicate, 120 Broadway, New York and Boise, Idaho.

Officers: Jas. H. Hawley, pres.; L. M. Hart, v. p.; George C. Luebbers sec.; George W. Fletcher, treas.; J. A. Czizek, mgr.; above are directors R. A. Beall, supt.

Inc. April, 1916, in Del. **Cap.**, 500,000 shares; \$5 par; outstanding 200,000 shares. Security Transfer & Registrar Co., New York, transfer agt. and registrar. Listed on New York curb.

Property: 2 groups of claims, 120 acres, including the Little Giant and Charity mines, in the Warren mining district, Idaho Co., 40 miles from railroad. Has been idle for several years. Claims said to cover 2 distinct veins for 4,500' along the outcrop. In addition company owns a millsite and 4½ miles of ditches and pipe lines with water rights. Parallel quartz vein carry gold ore.

Development: by tunnels and shallow shafts. Present management driving a 6,000' tunnel to cut the veins 400' below present workings. The Charity mine has been developed by a 150' shaft and shallow tunnels. In July, 1917, the long tunnel was in 1,450', where the Banner vein was 5' wide. At 600' beyond is the Giant vein, and the Charity mine 3,000' farther, opening it at 2,000' depth.

The proven shoot in the Little Giant vein is said to be 1,200' long worked to 200' depth; and that on the Charity vein 1,100' long worked to 150'

The former will be cut at 700' and the latter at 1,200' depth by the tunnel. The last 5,500 tons milled from the Little Giant upper workings yielded \$85 per ton.

A 50-ton mill is being erected, driven by water power.

KOOTENAI COUNTY

COMMONWEALTH MINING CO.

IDAHO

Ernest C. Wood, supt.; 401 Empire State Bldg., Spokane, Wash.

Property: Commonwealth mines at Hayden Lake, 140 acres, worked for 25 years by various companies.

Development: totals 1,100' including 400' shaft sunk on dip of vein. From 12 to 18 men are employed. Values are in lead and silver reported to average \$12.

LATAH COUNTY

GOLD CREEK MINING & MILLING CO.

IDAHO

Office: A. A. Kirby, sec.-treas., Paulsen Bldg., Spokane, Wash.

Officers: E. V. Thompson, pres.; A. G. Crum, v. p.; Paul Bockmier, mgr.; preceding with J. H. Fussy, C. C. Burr, directors.

Property: in Gold Creek district, Latah Co., Ida., considered promising. Financial condition satisfactory and work proceeding.

LATAH COPPER MINING CO., LTD.

IDAHO

Potlatch, Latah Co., Idaho. Idle since 1907. See Vol. XI, Copper Handbook.

MERGER MINING CO., LTD.

IDAHO

Address: J. C. Northrup, mgr., Palouse, Wash.

Officers: J. C. Northrup, pres.; C. E. Frederick, v. p.; W. E. McCroskey, sec.; G. A. Weldon, treas.; above with J. A. Saylor, directors.

Inc. Oct. 15, 1913, in Wash. **Cap.**, \$3,750,000; shares \$1 par; 3,350,000 issued; assessable for annual labor only.

Property: 20 claims, 318 acres, known as the Hoodoo mine, well watered and timbered, on Copper mountain, near the Palouse river, in the Hoodoo district, Latah county, almost 40 miles from Palouse, with a 20-mile wagon-road to Harvard, and 10 miles from the Puget Sound railway. The property shows quartzite and schist, with contact fissures in quartzite and schist, having a N. E. strike, and a N. W. dip. Orebody said to be 10 to 40' wide, and to contain chalcopryrite, and chalcocite ores, the latter with 22% and the chalcopryrite ore, 3% copper. No production during 1916.

Development: includes 5 tunnels, with about 2,000' of workings.

Equipment: includes 60-h. p. gasoline power, with a 3-drill air compressor. There are 16 buildings. Property leased in 1917, and concentrator to be built.

MIZPAH COPPER MINING CO., LTD.

IDAHO

Property sold to Merger Mng. Co., which see.

LEMHI COUNTY

ALLIE MINING CO., LTD.

IDAHO

Edgar C. Ross, of the Ross Syndicate, Salt Lake City, pres.-gen. mgr. Company inc. 1905. Property, 18 claims, including the Allie mine in the Texas district, near Gilmore, Lemhi Co., Idaho. Lead-silver ores occur in fissure veins in flat Devonian limestone underlain by Cambrian quartzite.

A development tunnel 4,500' long has been driven into Gilmore mountains jointly by this, the Gilmore and the Pittsburg-Idaho companies. This crosses a dozen silver-lead and one gold vein. Development 1915 was on

the Latest Out lead vein at 800' below the outcrop. For geological feature see Umpleby, Bull. 528, U. S. Geol. Survey, 1913, p. 107.

The Allie vein, closely parallel to the lead veins, has a gangue of iron oxide with no lead, only a trace of silver and almost exclusively gold value averaging 1 ounce gold with 50% iron.

In 1914 ore reserves were claimed to be 15,000 tons, with average assay of \$12 per ton gold. Extensive prospecting had not up to 1913 shown any commercial silver-lead deposits, but had opened up good gold ore.

Production: First shipment in Feb., 1914, of about 26 tons gold or showed smelter returns of \$11,060. Total production was 50 tons, averaging better than \$300 per ton. Later returns, if any, are not available.

BLACKBIRD COPPER & GOLD MINING CO., LTD. IDAHO

General office: DuBois, Pa. **Office:** 807 Newhouse Bldg., Salt Lake City, Utah.

Officers: John E. DuBois, pres.; Chas. J. North, v. p.; F. O. Frick, sec. W. H. Watt, treas. and gen. mgr.; with L. N. Morrison, directors.

Inc. in West Virginia. Cap., \$2,000,000; shares \$1 par; nonassessable Bonds, \$500,000, at 6%. Annual meeting, fourth Tuesday in January. Is close corporation.

Property: Brown Bear mine and adjoining ground, covering 29 claims patented, 482 acres, in the central part of the Blackbird district, Lemhi Co. Idaho.

Development: 3 shafts, with drifts and numerous short tunnels. Ore bodies are irregular replacements along fracture zones in schist and quartzite. Idaho property is in one of the best mineralized sections of the state and is said to show wide zones of disseminated ore carrying 2½% copper and 5 cts. gold for each per cent copper. This district is regarded as promising. Property shut down since patenting.

Company also owns 97 claims, 87 patented, adjoining the Cactus mine in the San Francisco district of Utah. This property has considerable development and was explored by diamond drilling. Development of the 300 level from an old shaft disclosed a vein of chalcopyrite ore.

CARMAN CREEK MINING CO. IDAHO

Salmon City, Lemhi Co., Idaho. J. W. F. Halcombe, pres.-mgr.-sec. John Harlan, v. p.; Wm. Wallace, treas.

Inc. Dec., 1905, in Washington. Cap., \$1,000,000; shares \$1 par; nonassessable; 999,500 issued.

Property: 7 claims, about 140 acres, 16 miles from Salmon, said to carry an oreshoot showing gold, silver and copper ore. Assessment work only was done in 1916.

COPPER QUEEN MINE IDAHO

T. E. G. Lynch, owner, Digby, Nova Scotia, Canada. Mine near Tendoy, Lemhi Co., Idaho.

The mine is erroneously reported to be the property of the Copper Queen Gold Mining Co., in a Geological Survey report (Bull. 528, p. 120) but has belonged to T. E. G. Lynch since 1899. The Copper Queen Mining & Smelting Co. leased the Queen of the Hills mine, 40 miles away. Lessee Copper Queen mine shipped 448 tons of sorted ore to Salt Lake City, 1911 that averaged 29.4% copper, 5.2 oz. silver and 0.81 oz. gold per ton. Reported Dec. 1915, that mine has recently been leased to the Idaho-Seattle Mining Co., which see.

COPPER QUEEN MINING & SMELTING CO. IDAHO

Office: 608 Lonsdale Bldg., Duluth, Minn. **Mine office:** Salmon, Lemhi Co., Idaho.

Officers: Geo. H. Crosby, pres. and gen. mgr.; Emerson Hill, v. p.; A. J. McLennan, sec.-treas.; A. F. Bennett, supt.

Inc. June 12, 1905, in Arizona. **Cap.**, \$500,000; shares \$1 par; nonassessable; issued, \$282,000. Absorbed 1908, the Copper Queen & Crescent Mining & Smelting Co., giving 1 share for 8.

Property: the Queen of the Hills mine, 17 claims, 320 acres, in the Eureka district, 7 miles N. W. of Salmon, is said to show 3 nearly vertical fissure veins in granite and schistose quartzite, with a generally N. E. strike. The Eva, or westernmost vein, shows an 8 to 14" quartz band on the wall of a brecciated zone 5' wide. The central, or Queen, and the Nellie veins show 12 lodges of granite breccia partly cemented by quartz. The ore is coarsely crystalline quartz, carrying pyrite, chalcopyrite and some galena, with \$3 to \$5 in gold occurring in 5 known oreshoots, 2 in the Nellie, 2 in the Queen and 1 in the Eva vein.

Development: by shafts of 105' and 400' with 5 levels and by 7 tunnels, longest 450' with 4,700' of workings.

Equipment: includes 100-h. p. electric plant, a 24-h. p. hoist, good for 700' and a 5-drill air compressor. There are 10 buildings, including a 50-ton log mill, having 15 Allis-Chalmers stamps, a gyratory crusher and 2 Wilfley tables.

Property idle, in charge of a watchman.

DULUTH-LEMHI MINING CO.

IDAHO

Former secretary-treasurer writes, 1917, that company is out of business. Described in Vol. XII.

ERICKSON MINE

IDAHO

Bond and lease held by G. W. Holmberg on copper mine 8 miles west of Leadore, transferred to Salmon River Copper Co., July, 1917.

GILMORE MINING CO.

IDAHO

Offices: 222 Kearns Bldg., Salt Lake City, Utah; and Gilmore, Lemhi Co., Idaho.

Officers: Edgar C. Ross, pres. and gen. mgr.; Frank Hahne, v.-p.; Harry R. Hyde, treas.; Clarence Warnock, asst. sec., with E. B. Critchlow, directors.

Inc. Feb. 10, 1912 in Utah. **Cap.**, \$1,000,000; shares \$1 par, assessable; outstanding \$800,000. Bonds authorized, \$100,000; none issued. Company is a close corporation. Annual meeting, Jan. 2. All receipts from ore sales spent in development work.

Property: 12 patented claims, 250 acres, in the Texas mining district, at Gilmore, was purchased from the Allie Mng. Co., Ltd.

Ore: gold-silver in fissure veins in limestone, said to have an average value of \$14.50 per ton. Veins strike N. 10° E. and dip 60°.

Development: by a 60° incline shaft and tunnels, greatest depth of workings on the vein is 850'. Total underground workings, 8,800'. This company in conjunction with the Pittsburgh-Idaho and Allie Mining companies has run a 4,500' development and transportation tunnel into Gilmore Mountain, which is said to cut a number of lead-silver fissures and one important gold vein.

Production: Shipments early in 1917 totaled \$72,084, ore averaging 0.025 oz. gold, 7.75 oz. silver, and 23.16% lead. Monthly output is 15 cars of ore. See U. S. G. S. Bull., 528, p. 107.

HARMONY MINES CO.

IDAHO

Office: 602 Hearst Bldg., Chicago, Ill. **Idaho address:** Salmon, Idaho.

Officers: A. W. Nieman, pres. and mgr.; C. Nickelson, v. p.; Gladys Nieman, sec.; J. W. Reihman, treas.; E. F. Nieman, supt.; above, with C. V. Nieman, H. Cohen, A. C. Skafgard and G. Prasche, directors.

Inc. Jan. 24, 1916, in Nev. Cap., \$1,000,000; shares \$1 par; 649,000 issued. Annual meeting, third Tuesday in January.

Statement for 1916 shows income from stock sales, etc., of \$46,866; operating expenses, \$42,686; gross earnings, \$1,191. 30,000 shares sold at \$2, 1917.

Property: 11 claims, unpatented, 218 acres, in Whittington Creek mining district, Lemhi Co., Idaho. Claims show 2 well defined orebodies occurring in a shear zone in schist. Vein being worked is 18' wide, but the center is low grade material and only the higher grade streaks of ore on the wall are mined.

Ore: sulphide, occurring as chalcopyrite with average assays of 6% copper.

Development: by two tunnels, 180' and 700' long, with total underground workings of 1,085'. Lower crosscut tunnel will be main working level.

Equipment: includes compressor and 2-bucket tram. Employs 20 men.

Production: 28 tons of ore in 1916; 5 carloads averaging 8% copper, to July, 1917.

Company seems to be developing its property energetically.

IDAHO-SEATTLE MINING CO.

IDAHO

Office: 1604 Hoge Bldg., Seattle, Wash. **Mine office:** Tendoy, Idaho.

Officers: F. R. Van Tuyl, pres.; L. E. Eyman, v. p.; R. V. T. Horsham, sec.-treas., with F. A. Linforth and L. R. Margetts, directors; S. A. Matthews, supt.

Inc. Oct. 13th, 1915, in Mont. Cap., \$1,000,000; shares \$1 par; 100,000 issued. Annual meeting 2nd Monday in January. Gross earnings in 1917 were \$20,000 from dump and mine.

Property: 3 claims, 2 patented, 60 acres, known as the Copper Queen mine, in Agency creek 8 miles from Tendoy, Lemhi county, held under bond and lease. Claims show bornite, chalcopyrite, copper glance and quartz in fissure veins dipping at from 45-70°. Ore occurs in shoots 20"-16', reported to average 10% copper, ½ oz. gold, 1 oz. silver per ton. Developed by 1,600' of underground workings to depth of 300'. Ore is mined by overhead stoping.

Equipment: includes small concentrator. Underground workings to be unwatered during 1917. Machine-drills installed in 1916.

IDAHO TUNGSTEN CO.

IDAHO

Had a 7-year lease on the Ima Cons. M. & M. Co. (which see) property near Ima, Patterson Creek, Lemhi Co., Idaho. Said to have shipped 12 tons of 60% tungsten concentrates, 1915.

IMA CONSOLIDATED MINING & MILLING CO.

IDAHO

Warren Zeigler, supt.

Inc. 1900 in Idaho.

Property: 21 patented claims near Ima, on Patterson creek, 21 miles S. W. of Landore, Ida. Tungsten was discovered on this property in 1898 but was not mined until 1911.

Ore: mainly hubnerite with some wolframite, occurs in white quartz fissure veins, 1-10' thick in a formation of pre-Cambrian sedimentary rocks closely resembling silicious schist. The quartz gangue shows lead, zinc and iron sulphides.

Development: aggregates about 2,500' of tunnels and drifts.

Equipment: includes a 50-ton concentrator with flotation unit. Property was worked under a 7 years' lease by the Idaho Tungsten Mining Company. Shipped about 12 tons of 60% tungsten concentrates in 1915. Reported under lease to L. A. Jeffs and E. W. Johnson, 1916.

LATEST OUT MINING & SMELTING CO.**IDAHO**

Ralph Nichols, mgr., Gilmore, Lemhi Co., Idaho.

Property: the Latest Out mine, at Gilmore, is a lead-silver mine, developed to depth of 800'. Shipments of 27,000 tons were made 1910-12. Worked by lessee in 1915-16. (See full description by Nichols in Trans. Am. Inst. M. E., Vol. XLVI, pp. 937-9, Lead-Silver Mines of Gilmore (Lemhi Co., Idaho).)

Ore: limonite and hematite replaced by shoots of lead minerals in fissure veins in limestone at right angles to bedding with south rake to ore-shoots. Sulphides decrease with depth. Ore on 200'-500' level assays 32% lead, 10% silica, 25% iron, 3% zinc and 12 oz. silver per ton. Oreshoots are 30'-40' wide in places.

LEMHI GOLD MINING CO.**IDAHO**

Operates the property of the Virginia Cons. Mining Co., near Baker, Lemhi Co., Idaho.

PITTSBURGH-IDAHO CO., LTD.**IDAHO****Office:** 223 Fourth Ave., Pittsburgh, Pa. **Mine office:** Gilmore, Idaho.

Officers: A. S. Ross, pres.; Irvan Neckermann, 1st v. p.; Robt. B. Little, 2nd v. p.; W. A. McCutcheon, sec.-treas.; with G. W. Provost, J. W. Brown and J. S. Alexander, directors; H. F. Ellard, supt.

Inc. in Idaho. Cap., \$1,000,000; shares \$1 par; 809,407 shares issued. Authorized bond issue, \$150,000; \$18,000 retired by sinking fund; \$5,000 outstanding. Commonwealth Trust Co., Pittsburgh, registrar; 223 Fourth Ave., Pittsburgh, transfer office. Annual meeting, 1st Monday in July. Stock listed on Salt Lake City Exchange.

Dividend: 3c per share paid Apr., 1916. Total dividends to date, \$375,000.

Statement of year ending Jan., 1917, shows: quick assets, including cash, accts. rec., supplies, etc., \$447,760; property, \$887,070; total, \$1,334,830; liabilities: cap. stock, \$1,000,000; sinking fund bonds, \$150,000; accts. payable, \$2,421; surplus, \$182,409.

Net income for 1916 was \$159,934, out of which \$44,928 was distributed in dividends. Total operating expenditures were \$165,468.

Property: 25 claims, 5 patented, about 500 acres, at Gilmore, Lemhi county, said to show fissure veins in limestone, from 3 to 26' wide and 150 to 450' long. Veins strike N.-S., with dip of about 45°. Ores are carbonate-sulphides, and shipments to date average 26% lead, 12 oz. silver and 75 cts. gold per ton of crude ore.

Company is also developing the Brown group on which high-grade ore has been discovered. A recent shipment netted \$86 per ton, the ore averaging 62% lead, 30 oz. silver and .03 oz. gold per ton. Is a very promising prospect.

Development: by 600' shaft being sunk to 800'. Winze down about 150' below 600' level discloses a continuous oreshoot averaging 44% lead, 26 oz. silver and .03 oz. gold per ton; vein is 7' wide at bottom of winze.

Equipment: Diesel electric generator plant ordered, 1917.**Production:** ore shipments in 1916 netted \$229,460 and leasers paid \$28,187.**PITTSBURGH-IDAHO MINING & MILLING CO.****IDAHO****Office:** Kamiah, Idaho. **Mine office:** Gilmore, Idaho. A. S. Ross, pres.-gen. mgr.

Inc. Jan., 1903, in Idaho, as successor of Pittsburgh-Idaho Mining Co. Cap., \$1,000,000; shares \$1 par.

Property: 19 claims, 380 acres, in the Lo Lo district, near the Montana line. Claims said to show 6 contact veins, between gneiss and quartz-schistosity, of which two, of 50 to 100' width, carry cuprite, malachite, bornite

and chalcopyrite, giving assays up to 12% copper, 14 oz. silver and \$20 gold per ton.

Development: to 600' level by shafts and tunnels of 40', 290' and 600'. A winze sunk 50' from the 600' level on a 3' vein showed lead carbonate ore with high lead and silver values. Company employed 28 men in 1915 and granted 30 leases. Gasoline power is used.

Production: was at the rate of 2,000 tons per month in 1912; 800-900 tons in 1913; 200 tons in 1914. No recent returns.

SUNSET MINING CO.

IDAHO

Address: Thomas Walden, Leadore, Ida.

Officers: D. C. Smith, pres.; D. L. McGrath, v. p. and gen. mgr.; E. G. Ellis, treas.; G. W. Dougherty, sec.; with E. R. Day, J. R. McGrath and Matilda Ellis, directors.

Property: at Leadore, Lemhi Co., Ida., said to show lead-silver ore.

Development: by 900' crosscut tunnel. In July, 1917, about 50 tons daily was shipped. A 200-ton mill contemplated.

VIRGINIA CONSOLIDATED GOLD MINING CO.

IDAHO

Idle.

Property: 207 Atlas Blk., Salt Lake City, Utah. Mine near Baker, Lemhi Co., Idaho. L. M. Byers, pres.; W. A. Byers, sec.-treas. and gen. mgr.

Inc. 1904, in Idaho. **Cap.**, \$500,000; shares \$1 par.

Property: 15 claims, 11 patented, 300 acres, in the Sand Creek district. 5 miles from a railroad, show slate, granite and porphyry, with 8 fissure veins, said to average 2' in width and to be traceable 6,000', carrying chalcopyrite and galena, assaying up to 7% copper, 2 oz. silver and \$25 gold per ton. Mine is reported to have 6,000' of workings, with 10,000 tons of ore in sight.

Equipment: includes a 3-stamp mill.

LEWIS COUNTY

DEER CREEK MINING & MILLING CO.

IDAHO

Forest, Lewis Co., Idaho.

Officers: W. J. Orr, pres.-gen. mgr., Bellefontaine, O.; A. M. Orr, v. p.; E. C. Orr, sec.-treas.; S. Q. Orr, asst. sec.-mgr.; with B. F. Pool, J. P. Lorang, P. Myers, W. Gesler, E. Fisher and G. Harshman, directors.

Property: 17½ claims, 17 miles S. W. of Winchester, in the Salmon River direct. shows orebodies 10 to 20' wide, carrying copper ore with gold values. One vein has 4' of chalcopyrite ore developed by a tunnel: \$150,000 reported to have been spent in development and equipment, latter including 2,000' of flume, water wheel, and compressor. Company plans 1,500' tunnel to tap vein at 1,000' and rebuilding mill, destroyed by fire in 1916.

OWYHEE COUNTY

BANNER M. & M. CO.

IDAHO

Peter Steele, pres. and gen. mgr.

Property: 20 claims, at Silver City, Owyhee Co., Idaho, an old-time producer. Authorized bond issue in 1915 provided sufficient capital for development work.

Ore: quartz, carrying gold and silver.

Development: by tunnel.

Equipment: 4 (Nissen)-stamp mill, using pan-amalgamation and concentrators, compressor and electric power. Is working small crew in development.

DEMMING MINES CO.

IDAHO

Main office: Nampa, Idaho. **Mine address:** care M. T. Rowland, Demming, via Murphy, Ida.

Officers: W. L. Kellogg, pres.; M. T. Rowland, v. p. and gen. mgr.; E. A. Gilbert, sec. -treas.; with P. A. Alquist and George Wagner, directors. E. W. Rowland, 1st asst. gen. mgr.; Harold Rowland, 2nd asst. gen. mgr.; J. H. Winchell, assayer and engineer.

Inc. in Idaho. Cap., \$15,000,000; shares \$5 par.

Property: 38 claims, 600 acres, 38 miles S. E. of Murphy, Owyhee county, Ida. Claims show fissure veins in granite that run N. E.-S. W. and are cut by cross fissures 5 to 12' wide. Ore is sulphide carrying gold and silver values.

Development: by tunnels and shaft. Reserves in No. 1 were estimated as worth \$400,000.

Equipment: 100-ton mill using ball mill, Janney flotation machines and Oliver filter, compressor, auto-trucks, etc. Mill to be enlarged.

SILVER CITY MINING CO.

IDAHO

Silver City, Owyhee Co., Idaho. Requests for information unanswered.

Property: near Silver City, adjoins the Trade Dollar Consolidated on the east and has a system of parallel fissures containing gold-silver ores. In 1914 the company remodeled the old Blaine mill, purchased from the Trade Dollar Consolidated, located in Long Gulch, ½ mile S. E. of Silver City. Mill has 10 stamps, classifiers, concentration tables, and a 25-ton cyanide plant. Recent production not reported.

SINKER TUNNEL MINING CO.

IDAHO

Address: W. G. Adams, sec., Nampa, Ida.

Property: the War Eagle group of gold claims in Silver City district. Idle since 1878, but re-opened in April, 1916, since when the 6,400' tunnel has been extended 310', cutting a rich vein, said to be 9' wide, including a "granite horse."

SHOSHONE COUNTY

(See *Coeur d' Alene district.*)

ILLINOIS**AMERICAN ZINC CO. OF ILL.**

ILLINOIS

A subsidiary of the Amer. Z. L. & Sm. Co. and described under that title.

BURR MINING CO.

ILLINOIS

Connersville, Ind.

Officers: F. C. Bosler, pres.; Jos. R. Mountain, v. p.; P. H. Kinsler, sec. -treas.; J. H. Billingsly, gen. mgr., Galena, Ill.; preceding officers, J. H. Banghman, directors. F. J. Dewilde, cons. engr.

Inc. in Ind. and Wis. Cap., \$30,000; shares \$100 par.

Operating the Treganza lease, 40 acres mineralized land, near Galena, Ill. A 165' shaft develops sheet-ground formation. Company put a new 200-ton mill in commission, Feb., 1916. Output is zinc concentrates. Shipping at the rate of 160 tons of 45% concentrates weekly, 1916-17.

GREAT WESTERN LEAD MANUFACTURING CO.

ILLINOIS

Address: Galena, Ill.

Property: the Pittsburgh lead mine, the second largest producer in northern Illinois. Workings are down 140' and a 100-ton mill is operated.

MATTHIESSEN & HEGELER ZINC CO.

ILLINOIS

Address: La Salle, Ills. Owns and operates large zinc oxide and spelter furnaces, etc., and are noted buyers of pure and high grade zinc ore from the Missouri-Oklahoma fields. Is also a manufacturer of sulphuric acid.

MINERAL POINT ZINC CO.

ILLINOIS

Subsidiary of the New Jersey Zinc Co., 55 Wall St., New York.

Property: the Marsden-Black Jack, the largest lead and zinc produce in northern Illinois. Shafts are 200 and 250' deep. A mill is operated.

ROSICLARE LEAD & FLUORSPAR CO.

ILLINOIS

Property: is opened to 500'. Mill has a 500-ton capacity. It is the largest lead producer in southern Illinois.

VINEGAR HILL ZINC CO.

ILLINOIS

Address: Galena, Ill.

Property: the Unity and Graham mines in the Galena district. During 1916 there were 13 holes drilled and mining was started on one lease; on the other ore blocked out by the other 36 holes, a working shaft was sunk and a 200-ton mill erected and started.

The Unity is the third largest zinc producer in the State.

WISCONSIN ZINC CO.

ILLINOIS

Subsidiary of the American Zinc, Lead & Smelting Co., 55 Congress St. Boston, Mass.

Property: the Birbeck zinc mine in the Galena district. northern Ill.

INDIANA

INTERNATIONAL LEAD REFINING CO.

INDIANA

East Chicago, Ind. Is a subsidiary of the International Smelting Co. and described thereunder.

KANSAS

ADMIRALTY ZINC CO.

KANSAS-OKLAHOMA

Address: Douthat, Okla. F. M. Aiken, Tulsa, Okla., pres.; O. Brinton, mgr.; John Griffard, supt.

Inc. in Delaware. Cap., \$750,000.

Property: 180 acres in Oklahoma and Kansas, shows a blanket deposit between lime and flint, carrying zinc-lead sulphides, said to average 10% metal content.

Development: by vertical shaft to depth of 220'.

Equipment: includes 8"x8" hoist, 3 compressors, 4 electric pumps, tramway and 4 mills, with a daily capacity of 1,200 tons. Ore treated during 1915-16 amounted to 51,200 tons, concentrates averaging 62.50% zinc and 81.50% lead.

Recent production has been as follows: in 1915: 936,750 lbs. zinc and 156,000 lbs. lead; in 1916: 600,000 lbs. zinc and 1,014,200 lbs. lead. Management plans erecting 2 new mills in 1917.

CHANUTE SPELTER CO.**KANSAS**

Office: St. Louis, Mo. Works office: Chanute, Kansas.

COLUMBUS M. & D. CO.**KANSAS**

Property sold 1917 to American Metal Co. for \$3,000, and a royalty of 2½% on future output.

COMMERCE MINING & ROYALTY CO.**KANSAS**

One of the largest operators in the Kansas-Oklahoma field.

Address: Picher, Okla. Has a lease on the Weber land, N. of Picher.

Drilling showed ore at 270' depth to which one shaft has been sunk.

INSPIRATION MINING CO.**KANSAS**

Address: Amos Gipson, 1st Natl. Bank, Joplin, Mo.

Property: zinc claims N. of Picher, Okla., on the Kansas side. Drilling showed a deposit 108' long, from a depth of 225' to 275'. Two shafts are down and drifting started. The A. R. G. 400-ton mill, formerly at Duenweg, Mo., has been rebuilt here.

JOPLIN ORE AND SPELTER CORPORATION**KANSAS**

Offices: 40 Exchange Place, New York, and Joplin, Mo. Works at Pittsburg, Kan.

Officers: Wm. Barret Ridgely, New York, pres.; E. Allendorf, Joplin, Mo., treas.

Inc. April, 1916, in West Virginia, to take over the property of the Joplin Ore & Spelter Co., of Missouri. Cap., \$2,000,000; shares \$1 par, changed on \$5 July, 1916; all issued and fully paid. Empire Trust Co., New York, registrar. Stock transferred at company's office.

Dividends: initial one of 5.5% paid May 25, 1916.

Property: a zinc smelter at Pittsburg, Kan., about 37 miles from Joplin, Mo. Plant consists of 6 blocks of furnaces, each having 224 retorts, a total of 1,344 retorts. Two additional blocks of 224 retorts, built in 1916, give the company a total of 1,792 retorts and an estimated capacity of 14,380,000 lbs. of spelter annually. Property reported on by Arthur E. Feust, E. M., in 1916.

In the 9 months ended Dec. 31, 1916, gross income was \$813,006, less \$46,739 for ore purchased, leaving a gross profit of \$266,267. Operations cost \$209,761, leaving \$56,506 net profit. Full capacity was not attained owing to the low price of spelter in 1916.

MAINE**DOUGLAS COPPER MINE****MAINE**

Blue Hill, Maine. Operated by American Smelting & Refining Co. for the 60,000 tons of fluxing ore developed on property.

MARYLAND**BALTIMORE COPPER SM. & ROLLING CO.****MARYLAND**

(Baltimore Copper Works), Fourth Ave. and Fifth St., Canton, Baltimore, Md. Jos. Clendenin, pres.; Wm. H. Peirce, v. p.; Edw. Brush, v. p.; Thoman, sec.; Chas. N. Sappington, treas. Company succeeded the

American Smelting & Refining Co., which built the first American smelter in 1845, and is controlled, through stock ownership, by American Smelting & Refining Co. (American Smelters Securities Co.)

located on one of the best harbors of the Atlantic coast, with excellent rail connections, being very advantageously located for foreign business. The plant is large and modern, with a smelting refinery, electrolytic plant, and sheet copper mill, and an electrolytic refinery, of 1,000 tons daily capacity, has

anodes arranged on both series and multiple plan. Material treated is entirely auriferous and argentiferous, being received in the form of blister copper from various western states, and from several foreign countries. Works employ about 3,500 men.

GREAT FALLS MINE.

MARYLAND

Formerly called the Hill-Townsend Gold Mine, in Montgomery Co., Md. In 1914 the old workings were cleaned out, the shaft retimbered, and new drifts run. The 25-ton tube mill was only used to make tests of ore mined. Small shipments were made to the smelter and results said to have been satisfactory.

UNITED M., M. & COPPER SM. CO.

MARYLAND AND PENNSYLVANIA

Idle. Office: Frederick, Md. Mines at New London, Md., and Charmian, Pa. A. L. Wickart, sec., Allentown, Pa.

Inc. 1913, in New Jersey, as a merger of the Eagle Metallic Copper Co. and the Linganore Copper Co., now dead. Owns all the property of Linganore C. Co.

Cap., \$2,000,000.

Property: 806 acres, in 2 groups, include the Dolly Hyde, New London and Eagle mines, on the Western Maryland and Baltimore & Ohio railroads.

The Dolly Hyde mine, 220 acres, was for many years the principal copper property of Maryland, though never a large producer. The mine has contact deposits in dolomite and phyllite, carrying a little malachite in the upper workings, succeeded at shallow depth by bornite and chalcopryrite in white marble. This mine is idle, but was being prepared for production, late 1913.

The New London or Linganore mine, 86 acres, with 14 acres of timber land, was opened and worked 1835-55, apparently at a profit, and was idle after 1881, until reopened, May, 1907, but is again idle. The property has two 4 to 5' fissure veins in slate, with N.-E. strike, carrying bornite and gray copper, estimated to average 3% copper and 16 oz. silver per ton, with a trace of gold. Development is by a 250' shaft and 4 tunnels, longest 340', with a total of 1,095' of workings, estimated to block out 17,307 tons of ore for stoping.

The New London mine has a 65-h. p. steam plant, with a 35-h. p. hoist, good for 500' depth, and an 8-drill Sullivan air compressor. There are 12 buildings.

The mill, 40x25' in size, consisting of a ball mill and slime tables, was built in 1911.

The Eagle mine comprises 500 acres near Charmian, including an old copper mine, never successfully worked. Property shows a mineralized zone of 400' average width, carrying native copper, chalcocite, bornite, chalcopryrite and tetrahedrite, averaging about 2 oz. silver per ton, with traces of gold. Mine has a 480' shaft at 40° incline, in ore from surface giving assay up to 6% copper, but is worked opencast.

Equipment includes a 175-ton smelter and 150-h. p. steam plant.

MASSACHUSETTS

NEW ENGLAND MINING CO.

MASSACHUSETTS

Idle. Office: 35 School St., Greenfield, Mass. Mine office: Chalemont, Franklin Co., Mass. Othello A. Fay, pres.; E. Forrest Sweet, sec.; Capt. Geo. H. Davenport, treas. and gen. mgr., at last accounts.

Inc. 1902. Cap., \$500,000; shares \$5 par.

Owns about 1,000 acres 2 miles west of the Davis pyrite mine. Ve-

traceable 700', is approximately vertical, conforming closely in dip and strike with the Savoy schist in which it occurs. Deposit apparently is a fahlband, lacking well-defined walls, ore occurring scattered through 15 to 20' of the schist, with 6 to 12" of quartz, well mineralized, on the south wall, and a heavy impregnation of chalcopyrite, 1 to 2' wide, on the north wall. Property has been partly stripped, and vein trenched across.

REVERE COPPER CO.

MASSACHUSETTS

See Taunton-New Bedford Copper Co.

TAUNTON-NEW BEDFORD COPPER CO.

MASSACHUSETTS

Taunton, Mass. Henry F. Bassett, sec.-treas. Absorbed Revere Copper Co.

Inc. Jan. 15, 1831. **Cap.**, \$1,200,000; shares \$100. Corporation does a copper manufacturing business, making sheet brass, copper print rollers, etc.

MICHIGAN

The Copper companies are grouped together in one section and the Iron mining companies in another list, arranged alphabetically, irrespective of counties or ranges.

COPPER MINES

ADVENTURE CONSOLIDATED COPPER CO.

MICHIGAN

Office: 32 Broadway, New York. **Mine office:** Greenland, Ontonagon Co., Mich.

Officers: W. Parsons Todd, pres.; Charles G. Lund, v. p.; preceding officers, Chas. J. Devereaux, W. R. Todd, Jas. L. Bishop and Chas. D. Hanchette, directors: W. A. O. Paul, sec.-treas.; E. W. Walker, supt.

Inc. Oct. 17, 1898, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; paid in, \$23. American Loan & Trust Co., Boston, registrar; Old Colony Trust Co., Boston, transfer agt. Annual meeting, first Thursday after first Wednesday in June. Stock listed in Boston.

Operations, 1912, were conducted at a loss of \$38,741, and company ended year with cash assets, \$42,307, and liabilities, \$33,634. An assessment of \$1 per share was levied July 20, 1911, and again in March, 1916. On Jan. 1, 1917, balance on hand was \$38,412 as compared with \$2,245 on Jan. 1, 1916, and \$2,054 on Jan. 1, 1915. Receipts for 1916 totaled \$100,037 and expenditures \$61,625. Receipts were derived from rents, sale of previously stored mass copper and assessments paid.

Property: Consists of 3 old mines, the Adventure, Knowlton and Hilton, opened, in 1850, 1853 and 1863 respectively. 1,696 acres on the mineral belt, also a mill site on Lake Superior. The mineral lands are located in Secs. 35 and 36, T. 51 N., R. 38 W., and in Secs. 1 and 2, T. 50 N., R. 39 W. The Toltec and part of the Belt lie on the north, South Lake east, Toltec and Mass on the South, and the Mass on the west of the main tract. The Knowlton tract has the Mass to the north and east, Flint Steel to the south and Michigan to the west, the Ridge mine of the Mass lying between the two Adventure tracts. The village of Greenland lies on the northwestern corner of the Adventure's principal tract, and the village of Maple Grove, controlled by the company, is near the mine.

The old Adventure mine was opened 1850, along a line of ancient pits showing prehistoric mining. The largest annual production was 233,941 lbs. fine copper, 1857. After being closed by owners, the old openings were worked for years by tributors, proving notably rich in silver.

The Hilton, or Ohio mine, opened 1863, on the Mass lode, never was worked vigorously. The Knowlton was opened in 1853. These three old

mines made 1,949,173 lbs. fine copper, previous to their merging as the Adventure Consolidated which started work Nov. 1, 1898.

Diamond drill work and crosscutting has disclosed four copper-bearing lodes.

The Adventure property has a series of 7 parallel copper-bearing beds in a cross-section of about 1,200' and these coupled with the existence of Adventure bluff, a 300' hill, caused the opening of the mine by adits, as well as by shafts. The Evergreen belt, of Ontonagon county, comprises a belt of bedded traps, amygdaloids and conglomerates, 7 of these amygdaloidal beds carrying copper on the Adventure tract. These beds were fully described, Vols. I to VII, inclusive.

The cupriferous beds of the Evergreen belt are notoriously bunched being rich in spots and worthless at other points. The strike of the parallel lodes of the Adventure is N. 73° E. on the main tract, where operations were conducted, shafts being sunk at an angle of 45°. The old mine has 4 tunnels and 4 shafts, latter, except No. 1, which is in the Merchant lode being sunk on the Knowlton bed, at 45°, and numbered from west to east.

Production from the old mines ceased, Jan., 1908, since which time only exploratory and development work was done. Shipments were resumed in November, 1916.

There are 5 shafts, of which No. 5 is the deepest.

No. 5 shaft, started May 6, 1909, is 6x16' inside measurement, with two 6x6' hoisting compartments and a 4x6' compartment for ladders and pipe. Shaft is vertical and was 1,520' deep, June, 1913. It is located about 150' south of No. 3 shaft, is lined with concrete for a depth of 50' from the collar, and is solidly timbered from surface. The shaft cuts No. 1 Adventure lode at depth of 894', and is expected to cut No. 2 lode at about 2,200' depth, and No. 3 at about 2,600' depth. The No. 1 lode, opened by an 8' crosscut on the 1,021' level has been drifted upon for a distance of about 200' and discloses very little copper. A 1,150' exploratory crosscut south and west on the 1,500' level intercepts 3 beds, designated as Nos. 2, 3 and 4, cutting the first at a distance of 634', the second at 880' and the third 1,015' from the shaft. These lodes, opened by drifts out from the crosscut are altogether without promise so far as opened, the No. 2 lode, 29' wide and opened for a distance of 145', carrying much copper in the first 7' with the remainder practically barren; No. three, 32' wide, and opened 547', showing varying amounts and generally poor, and No. four, 65' wide, carrying practically no copper in the 34' drift run along the footwall of the lode. A fifth lode, No. 1½, first encountered in shaft sinking, is opened for a distance of about 130' at a depth of 1,190' in the shaft, and makes a fair showing. All work was suspended June, 1913, and only resumed in May, 1916. No. 3 shaft has been unwatered to the 8th level and ore is being mined from 3rd-8th levels.

The new Mass lode, so-called, lying about 120' S. E. of the Evergreen bed, was opened by test pitting, May, 1909, and some crosscutting was done from the Evergreen bed, down to the 6th level of No. 2 shaft, but only a few feet of drifting was done. This bed shows a width of 8 to 12', and carries flaky copper, with considerable epidote. No work is in progress on this bed.

The mine equipment includes a 38x59' steel boiler house with three horizontal Burt boilers; a 59x59' steel engine house having an Allis-Chalmers duplex double-cone drum direct-acting hoist with 42x60" cylinders, capable of raising a 12-ton load from a depth of 5,000' on an incline of 45° at a speed of 2,000' per minute, and a 38x65' steel compressor house having a 60-drill Rand-Corliss air compressor. There is a complete electric system.

and power plant and protection from fire is furnished by water mains. The principal mine buildings are sheathed with steel and painted, and the property is served by a spur of the Copper Range railroad.

Production has been as follows: 23,572 lbs. in 1900; 29,361 lbs. in 1901; 66,211 lbs. in 1902; 2,182,608 lbs. in 1903; 1,380,480 lbs. in 1904; 1,606,208 lbs. in 1905; 1,552,628 lbs. in 1906; 1,244,874 lbs. in 1907. Shipments to the Winona mill begun in November 1916, have been gradually increased to about 300 tons per day.

AHMEEK MINING CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. Mine office: Kearsarge, Keweenaw Co., Mich.

Officers: Rodolphe L. Agassiz, pres.; Jas. MacNaughton, v. p. and gen. mgr.; Clarence H. Bissell, sec.-treas.; G. L. Osgood, asst. sec.-treas.; Rodolphe L. Agassiz, Wm. A. Hodgson, Thomas L. Chadbourne, Jr., E. V. R. Thayer, Thomas N. Perkins and Francis L. Higginson, directors; S. Russell Smith, supt.; Thos. Rapson, mg. cap.; J. T. Reeder, purch. agt.; John G. Bennetts, clerk; A. L. Burgan, mill supt.

Inc. March 22, 1880, in Michigan and charter extended, 1910, for 30 years. Cap., \$1,250,000; shares \$25 par, fully issued; \$17 paid in; increased, June 8, 1915, to 200,000 shares; par \$25, 4 new shares being given for each one of the original shares. Last assessment was \$5, Feb. 5, 1904. Paid dividends of \$5 in 1911, \$22 in 1912, \$17 in 1913, \$4 in 1914, \$13 on old capitalization and \$2.50 on new in 1915; \$14 per share in 1916; \$12 for 9 months of 1917.

Annual meeting, second Tuesday in April. American Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agent.

Balance of assets was \$968,772 at end of 1914; \$1,583,654 at end of 1915; \$2,233,364 on Dec. 31, 1916. Is controlled by the Calumet & Hecla Mining Co. through ownership of 98,048 shares, of a total issue of 200,000 shares.

Net income for 1916 was \$3,449,710 compared with \$2,180,000 in 1915; \$463,000 in 1914; \$207,420 in 1913, and \$1,465,397 in 1912.

Property: 931 acres, lying between the Mohawk and Allouez mines, set off, 1880, by the Seneca Mining Co., to work the Kearsarge or Houghton conglomerate. Under the management of Capt. John Daniell, 2 shafts were sunk on this bed, which averages about 70' width, with 3 paystreaks of 2 to 3', aggregating 7' width, each carrying copper in good quantities, but bed not payable as a whole, owing to great width of partly or wholly barren rock. Boundary lines were rectified, by exchange of 11.18 acres with Allouez, July, 1903, and by a similar exchange of 20 acres, with Mohawk, 1909, giving straight boundary lines on the dip of the bed, permitting easier development by all mines concerned. Work on the present mine was started Dec. 2, 1902, as work at the Mohawk mine had disclosed the position and trend of the Kearsarge lode.

The Kearsarge bed, on which the present mine is opened, ranged 14 to 15' in width, with but little poor ground encountered in the entire mine. Openings are considerably ahead of stoping requirements, and blocking out almost entirely by drift stopes, which are carried about 9' wide and 14' high to the boundary limits, where extraction is begun and brought backward to the shafts, thus reducing timber requirements to a minimum. The mine keeps 3,000,000 to 3,500,000 tons of stamp rock blocked out for stoping. All levels below the first are 125' apart. A Richmond electric bell signal system connects all underground workings with the engine rooms, and underground stations are connected with surface by telephone. Concrete is substituted for timber in the construction of the shafts, and in other places where practicable, rendering the shafts as nearly fireproof as possible. Mules are used in tramming rock underground.

During 1916, exploration was continued in the Kearsarge conglomerate on No. 10 level of No. 2 shaft, the drift was swung at right angles to the general strike of the lode and continued as a crosscut to a point 1,352 W. of the Kearsarge lode, where the Kearsarge conglomerate lode was cut. This body is 36' wide, and carries a little copper in streaks. Other work did not find commercial ore, but a S. drift opened a fissure giving 12 tons of mass copper.

A cross fissure vein of domeykite, copper arsenide, 71.7% copper, and mohawite, a copper-nickel-cobalt arsenide, mainly the former, that is 4 to 12" wide, was opened 300' south of No. 1 shaft, on the 5th level, and a second vein of 2 to 12" width is found about a quarter-mile south, both crossing the bedded formation at practically right angles.

The mine has 4 shafts, numbered from south to north, planned to develop the entire tract. Nos. 1 and 2 shafts, 1,445' apart, sunk at 42°, are each 8x17' 4" in size, with 2 hoisting compartments and a ladderway. These shafts were 2,720' and 2,971' deep respectively at end of 1916. Each shaft has, between the 9th and 10th levels, a 400-ton rock bin, equipped with a measuring hopper holding exactly one 7-ton skip load, loaded in 20 seconds by one man, this system saving much time, and confining hoisting of all rock mined down to the 10th level to 1 point in the shaft. No. 1 shaft can be sunk to about 3,000' depth before cut off by the Allouez line and No. 2 can be sunk much deeper.

All openings from No. 1 shaft show ore of average quality, save those on No. 8, 10, 14 and 16 levels south, beyond the disturbed area.

Extensions on No. 3, 14, 16 and 17 levels north, on No. 18 south, and on No. 19, 20, 21 and 22 both ways from No. 2 shaft, have been in average ore but from No. 16 down the copper is not so uniformly distributed.

The northern end of the mine is developed by shafts 3 and 4, begun August, 1908. These will command the 12 forties lying in the western half of Sec. 28 and eastern half of Sec. 29. Shafts 3 and 4, three-fourths mile N. E. of No. 2, have a common collar, being only 6' apart at surface but diverging north and south, from the surface, at an angle of 42°. These shafts are sunk through 70' of overburden, and are concreted into the solid rock ledge for depth of 95' from surface. Owing to the outcrop of the Kearsarge lode being owned by the Mohawk, Ahmeek having only the underlay at its northern end, shafts 3 and 4 are sunk in the hanging, at an angle of 80° on a plane corresponding longitudinally to the strike of the bedded formation, and bend at depth of 980', in a curve with a radius of about 400', bringing the shafts to 34°, to correspond with the rather flat dip at the Kearsarge bed, both shafts entering the bed, early 1911, at depth of about 1,275'. Concrete sets and stringers have been used in these shafts wherever ground would permit. Each shaft has 3 compartments, with two 8x8' skipways and a 4x8' ladderway. It is proposed to work out the upper portion of the bed by crosscuts, beginning at depth of 1,020' in No. 4 shaft which will be the 1st level in these shafts, which have 3 stations above the point where the bed intersects, from which crosscuts will be run to the Kearsarge bed, to the Mohawk line. No. 3 shaft was 2,473' and No. 4 was 2,319' deep at end of 1916. In 1915 new workings totaled 8,769' compared with 13,654' in 1916.

During 1916, openings north of No. 3 were of average grade, but stopes showed the vein to carry copper in bunches. Development at No. 4 shaft was generally satisfactory.

The main power house, between shafts 1 and 2, is in 2 parts, of brick and steel, with composition roof. Equipment of No. 1 power house includes 60-drill and 50-drill Nordberg cross-compound 2-stage air compressor.

ors, and a 32x72" cylinder Nordberg hoist. The electrical plant consists of a 13x26" Nordberg tandem-compound engine, direct-connected to a 200 k. w. 250-volt Northern Electric generator. Condenser pumps and reheaters are located in the basement. No. 2 engine house is a duplicate of No. 1, containing a similar hoist with double conical drums with maximum diameter of 18'-6", capable of hoisting 10-ton skips in counterbalance from 1 mile depth. Nos. 1 and 2 engine houses are connected by a steel-frame boiler house, having six 200 h. p. boilers, with room for 8 equipped with feed pumps, ash sluices, coal trestles, etc. The boiler house has a self-supporting steel smokestack, 150' high and 7'6" in diameter, on a sandstone-faced concrete base. A 1,360 cu. ft. Sullivan compressor was installed early in 1917.

Shafts 3 and 4 are equipped with two 32x72" cylinder Nordberg hoists, a triple-expansion Nordberg compressor, and turbo-generator, housed in a brick structure 65' wide by 146' long, with corrugated-iron roof; a steel boiler house 57' wide and 84' long with corrugated-iron roof, housing eight 200 h. p. boilers, and a steel self-supporting brick-lined smokestack, 7' diameter and 140' high. There is also a change house of brick construction, 39x139'. One shaft rock house serves both shafts.

The central crushing plant, of brick, is 800' north of No. 1 shaft, and 24' south of No. 2 with which the plant is connected by a temporary frame trestle 37' high and 14' wide, carrying a double track for 7-ton tram cars, which are dumped by means of cradles, and rock directed by grizzlies and chutes to the crusher, below which is a hopper, feeding directly into a shaker driven by a 7½ h. p. electric motor, crushed rock, thence being fed automatically into a link-belt conveyor driven by a 35 h. p. motor, going to the rock bin. The crusher building, of steel, contains 3 Farrell crushers, driven by a 12x24" Nordberg engine, and tram cars are actuated by two 35 h. p. motors, located in the 2nd story of the building. Crushed rock goes to a 1,600-ton cylindrical steel rock bin, 32' in diameter and 48' high, set on concrete piers, with tunnel and railway track beneath, permitting the filling of cars by gravity, 1 man loading a 40-ton car in 10 seconds.

Mine buildings include office building, machine shop, warehouse, connecting with railway tracks; an office for mining captains and timekeepers, smithy, cold-storage shed, and about 100 dwellings. The locality is protected by a water system having 6,000' of 6" mains with 16 Ludlow hydrants. Water is taken from an 8' dam across the outlet of Seneca lake. This water supply probably will be adequate for several years, but is located on another company's land. A large water supply could be developed from Ahmeek lands near the Allouez boundary, and an inexhaustible supply is available from Lake Superior, 4 miles distant, but about 600' lower. The fire-protection system was connected with that of the Calumet & Hecla during 1916.

The mine has rail connections with both the Mineral Range and Keweenaw Central lines, and is connected with the mill by the Mineral Range, which enters the structure over a steel trestle 100' high.

The stamp mill, at Hubbell, on Torch lake, went into commission June, 1910. There were 4 heads, each stamp breaking about 560 tons of rock daily. The mill site has a frontage, on Torch lake, of about 2,000' with a maximum water depth of 90', providing for wasting sands for many years. Ground was broken May, 1913, for an addition to the mill, with room for 4 heads, all of which have been installed, together with extensive grinding machinery. No. 7 stamp started in July, 1916, and No. 8 in Feb., 1917. The output in April, 1917, was 4,200 tons daily.

Several new ideas are embodied in the erection and equipment of this

mill. The material of construction is steel and concrete throughout. Stamps rest on concrete piers, each standing on a concrete slab 4'6" thick that rests directly upon a hard pan of closely-cemented gravel. Each slab holds about a mile of wire cable, interlaced upward on its surface and reaching into the pier above, which is 40x40' at the base, pyramidal in form and 38' high, giving the stamps an elevation of about 50' above lake level. There are four 1,000-ton rock bins. A new feature in local mill construction is double-deck floors, the jigs being located on the upper roughing floor, and sands overflowing to Evans round tables and Wilfley concentrators on the ground floor. Wash equipment includes 88 jigs, 1 Evans round tables, 45 Wilfley tables and 4 sets of Woodbury jigs. Tests made to end of 1910, indicate a saving of about one-half pound fine copper per ton from the Woodbury system of milling, over the old system. The jigs and tables are actuated exclusively by electricity.

The mill power house has six 200 h. p. boilers, and a low pressure steam turbine. The plant has a 300 k. w. generator, and a pump of 40,000,000-gal. daily capacity, capable of supplying water for 8 heads, connected with Torch lake by a 600' pipe intake.

Production:

Year	Tons R'k Treated	Lbs. Mineral Produced	Lbs. Cu. per Ton R'k Stpd.	Cost(a) per Ton	Lbs. Copper Produced	Tot. Cost per Lb.	Rec'd per Lb.
1916....	1,164,010	20.7	\$1.46	24,142,158	11.47c	25.7

1914....	590,519	20,333,000	23.1	1.55	13,634,605	9.71	13.0
1913....	383,749	13,742,140	24.0	1.77	9,220,874	13.30	15.4
1912....	652,260	23,945,315	25.2	1.39	16,455,769	7.85	16.6
1911....	598,549	21,917,925	25.4	1.42	15,196,127	7.17	12.8
1910....	530,365	16,758,521	22.3	1.42	11,844,954	11.05	12.9
1909....	406,045	22.7	9,198,110	15.48(b)	13.3
1908....	298,178	21.1	6,280,241	12.66	13.3

(a) Includes mining, transportation, stamping and taxes. (b) Due to unusually heavy construction costs.

Copper production is marketed through the United Metals Selling Company. Reserves not officially given are maintained at about 5,000,000 tons, and the life of the mine is estimated at 18 years, with present output.

The strike called by the Western Federation of Miners on July 1, 1913, and declared off on April 12, 1914, curtailed production during that time. Later in 1914 when the European war broke out, the copper market was demoralized and the mines were operated on a three-quarter time basis from Sept. 1, 1911, to Feb. 1, 1915.

With 8 stamps operating, Ahmeek is now producing at the rate of over 30,000,000 lbs. copper per year, figured on the basis of 21 lbs. ore, at a cost per lb. copper of about 11c.

ALGOMAH MINING CO.

MICHIGAN

Office: 60 Congress St., Boston, Mass. Mine office: Lake Michigan, Ontonagon Co., Mich.

Officers: R. M. Edwards, pres. and gen. mgr.; S. L. Powers, v. pres.; Albert L. Wyman, sec.; Henry Tolman, treas.; R. M. Edwards, J. H. Edwards, Henry Tolman, S. L. Powers and Arthur C. Paine, directors; Thomas Bennett, supt.; Wm. Wearne, mg. capt.

Inc. June, 1910, in Michigan. Cap., \$2,500,000; shares \$25 par, 100,000 shares; paid in \$13. Last assessment, May 18, 1916, \$1. Capitalization, 60,000 shares were given land owners in full payment

property and 10,000 shares were sold to public at \$10 per share. Annual meeting, third Tuesday in April. American Trust Co., Boston, transfer agent; Federal Trust Co., Boston, registrar. Stock is listed on the Boston Stock Exchange.

The treasurer's statement, Dec. 31, 1916, showed excess of assets, \$26,-470, as compared with excess of liabilities, \$18,133, Dec. 31, 1915; \$14,597 surplus assets at close of 1914 and \$27,707 in 1913.

Property: 480 acres, adjoining the Lake mine in Ontonagon Co., Michigan, being the N. $\frac{1}{2}$ and S. W. $\frac{1}{4}$ of Sec. 3, T. 50 N., R. 30 W. Property was owned formerly by a company of the same name, which began work 1852, and did a little prospecting, with negative results, expending about \$65,000.

An 8x12' exploratory shaft, started in an amygdaloidal bed, without definite data as to pitch, was over 560' deep, May, 1917. For the first 95' the shaft continued in vein material, passing into the hanging wall at about 25' from surface. The first level, opened at 104', has about 2,350' of drifts, and a 90' crosscut to the eastern sandstone. The second level, 212' from surface, has a crosscut northwest across the formation which, for more than 1,000', exposes almost solid trap, a small amygdaloid, 560' from the shaft, showing some native copper in about 680' of drifts. The Algomah bed, in which the shaft is sunk, apparently has a dip of about 80° and a width ranging from about 40' at the first level to about 60' at a depth of 470', indicated by diamond-drill borings.

The Algomah bed is peculiar in both strike and contents, strike apparently being nearly north and south, in line with the strike at the Lake mine, next north, and the bed carrying copper oxide instead of native copper, as is the case with all of the other copper mines of the Lake Superior district opened on the bedded formation of the Keweenaw series. Ore is mainly black oxide, or melaconite, carrying traces of native copper, and chrysocolla of 16 to 19% assay tenor was found in a test pit near the shaft. Assays made of a small quantity of selected ore, removed in the course of shaft sinking, gave a copper value of 24.1%, this selected ore representing one-tenth of the entire body of material taken from the shaft.

Considerable diamond drilling has been done in the area west of the body, and to great depth, but results are conflicting and nothing definite is known concerning either the dip, strike or value of the several copper-bearing formations there encountered. No mining work was done on the property during 1914, but one shipment of selected ore was made, which yielded 5,065 lbs. copper and sold for \$1,695. A few shipments of ore, taken from above the 40' level, were made in 1915, the first assaying 14% copper. Shaft sinking, resumed in the summer of 1915, to be continued to 500' depth. Development work will be done on this level. It is expected that in both the shaft will encounter some of the lodes worked in the Lake and Algomah Lake mines, as they flatten downward and dip toward the Algomah bed. Property is a likely prospect only.

Equipment: includes a steam hoist, with capacity to lift a 3-ton load to a depth of about 500', and an air compressor. Buildings include a power plant, office and boarding houses. Property considered promising and management good.

ALLOUEZ MINING CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. Mine office: Allouez, Ontonagon Co., Mich.

Officers: Rodolphe L. Agassiz, pres.; Jas. MacNaughton, v. p. and managing directors, Harry F. Fay, D. S. Dean, F. L. Higginson. Wardens: D. L. Pickmaside and Alex. White, directors; Geo. G. W. Ridley, supt.; J. J. Gibbens, mg. capt.

Inc. Sept., 1859, in Michigan. Cap., \$500,000; shares \$25 par; reorganized and reincorporated, 1889, with capitalization \$2,500,000; shares \$25 par; paid in, \$22.25. Last assessment, \$3 per share, was levied 1904. Annual meeting second Wednesday in April. Old Colony Trust Co., Boston, registrar. American Trust Co., Boston, transfer agent. Owns a half interest in the Lake Milling, Smelting & Refining Co. Is controlled through ownership of 41,000 shares, by Calumet & Hecla Mining Co.

Initial dividend, \$1 per share, was paid July 31, 1915; \$9 in 1916, and \$3 for first quarter, 1917.

Balance sheet of Dec. 31, 1916, shows quick assets and cash of \$1,545,811 and accounts payable of but \$154,602. Construction expenses for 1916 were \$22,321; mine expenses, \$901,042; smelting, etc., \$185,805, with a gain from mining operations of \$1,524,511.

Lands: 3,400 acres, including mineral ground 640 acres, adjoining the Ahmeek Mining Co., which contains the Kearsarge amygdaloid at great depth.

The old mine, opened 1859, is on the Allouéz conglomerate, a bed underlying the greenstone. The conglomerate, 30' wide in many places, with strike of N. 39° E., and dip of 39°, average 0.7 to 1% copper, and is very refractory under the stamps. There are 3 shafts, deepest about 3,700'. Mining was begun actively in 1869, and stopped in 1877, with an exhausted treasury. The mine was then leased to Watson & Walls, who made money from it, after paying a royalty of one-eighth on gross production. In 1888 the company resumed control, to quit once more, financially exhausted, in 1885. Watson & Walls took the mine again, and once more did well; the company resumed work on its own account for the third time, and again lost money, stopping all work in 1892. The old mine had been idle for some years, except for exploratory and development work in 1898 to 1900 when a shaft was sunk 1,200' on the Osceola lode, and nearly 4,000' of openings secured thereon, with indifferent results. The shafthouse at the Osceola shaft has been demolished. The old stamp mill, on Hills creek, has 3 old-fashioned heads, and is too antiquated for use. The old Allouéz made 26,051,528 lbs. fine copper, 1869 to 1892.

At No. 1 mill, Point mills, the water system was improved in 1914. At No. 2 mill, Hubbell, work progressed slowly on the two new stamps. The fire system was connected with the Calumet & Hecla.

Development: at the Allouéz mine is on the Kearsarge amygdaloid bed, which does not outcrop on Allouéz lands, though underlying the entire 640-acre tract, hence was opened on the underlay. The mine had but one producing shaft, until late 1909. Shafts Nos. 1 and 2 are connected by crosscuts and drifts, on several levels. The Kearsarge bed, above the 14th level is opened by crosscuts, uppermost being at the 6th level, below which plat have been cut in the shafts at the 8th, 10th and 12th levels, for crosscuts to be run to the bed. The Kearsarge bed averages about 16' width in the Allouéz mine.

New underground openings totaled 8,517' in 1912; 4,400' in 1913; 3,521 in 1914; 4,858' in 1915; 3,503' in 1916.

No. 1 shaft, at the extreme southeastern corner of the tract, with 3 compartments, started May, 1903, and 3,688' deep, leaves surface at an angle of 75°, but at slight depth takes an angle of 80°, continuing thereon to about 1,435' depth, when a curve of 60' brings the shaft to an angle of 38° which is the dip of the bed. At the change of angle, on reaching the bed a single idler with a very wide flange cares for the cables passing at this end. Owing to the steep pitch of the shaft, back rails of 6x10" timber are used on the wheels of the skips that their flanges cannot leave the

steel rails, the wooden timbers serving as guides. The first level is opened to a depth of 1,264'. In order to save pumping charges on surface water, a tupper, cut entirely around the shaft, leads to an incline 36' long, used as a dump. This shaft showed very fine ground in its upper levels, but deeper penings are not so good. Equipment at No. 1 shaft includes a 42x62' steel shaft rock house having two 18x34" crushers. The floor was re-modeled during 1916.

Development on Nos. 18 and 19 levels of No. 1 shaft have been of average quality, though on No. 19 north, the ground was somewhat erratic.

No. 2 shaft, 1,500' northeast of No. 1, is similar to No. 1 in general design, but changes pitch when entering the bed at 2,307' from surface, from 42° to 49°. The bed above the point of intersection will be reached, to the boundary, by crosscuts. This shaft is sunk further in the hanging than No. 1 owing to the proximity of a lake. A new record in shaft sinking was established, 1908, at No. 2, when, with 2 drills, the shaft was sunk a total of 1,275', in addition to which 4 flats were cut, and 105' of crosscutting was done. The collar of No. 2 shaft is of concrete. Washington fir and 16x24" steel I beams, with 14x14" square timber wall flats and 4" plank sheathing, the interior, from collar to solid rock ledge, is lined with 22" of concrete, spacers having their ends bedded in concrete, this giving an impregnable shaft, sunk through 52' of treacherous quicksand overburden. Both shafts have been sunk to about 9,400' before reaching the western boundary line. No. 2 shaft is 3,408' deep.

At No. 2 shaft during 1916, No. 17 level reached the Ahmeek boundary. On Nos. 18, 19, 20 and 21 good ground was opened, especially on No. 18. Electric locomotives have been installed.

Machinery equipment includes a Nordberg hoist with 32x72" duplex cylinders and 18' double-conical drum for No. 1 shaft, and No. 2 has a 330" engine good for depth of 5,000'. No. 1 engine house, of mine rock, with redstone trimmings, has 12-drill and 18-drill air compressors, and No. 2 engine house has a 60-drill Laidlaw-Dunn-Gordon air compressor. The No. 1 boiler house has five 125 h. p. boilers and a 120' self-supporting steel stack. Buildings include a redstone machine shop and smithy, and a large warehouse. There is a very considerable mine location, with numerous dwellings, some remaining from 40 years ago, and some new. The mine is reached by a spur of the Mineral Range railroad.

Recent production has been as follows:

	Tons R'k	Lbs. Min. Produced	Lbs. Cu. Mine Cost		Lbs. Cu. Produced	Total Cost Rec'd	
			per Ton R'k Stpd.	per Ton (a)		per Lb.	per Lb.
1913	566,960		18.02	\$1.589	10,219,290	10.47	25.305
1914	534,705	10,043,459	18.78	1.365	10,043,459	9.31	18.166
1915	354,457	9,408,470	17.09	1.583	6,056,548	11.18	12.853
1916	236,663	6,640,000	17.29	1.687	4,091,129	12.09	15.672
1917	233,618	8,787,120	16.56	1.613	5,525,455	13.52	16.668
1918	288,610	7,532,490	16.56	1.668	4,780,494	13.30
1919	247,119	7,406,970	18.84	1.769	4,655,702	11.57

(a) Includes mining, transportation, stamping and taxes.

The strike, called July 23, 1913, by the Western Federation of Miners and declared off April 12, 1914, interfered with production during that time. When the European war broke out in 1914 the property was operated on a quarterly time basis from Sept. 1, 1914, to Feb. 1, 1915.

The Alloway, a considerable disappointment in earlier years, earned a profit of \$171,264 in 1912, turning a deficit of \$77,700 of former years

into balance of assets of \$93,564 over all liabilities were \$114,530. Earnings in 1916 were \$1,524,571 capital of \$963,810, the company is now on a cash basis. It is regarded as a good investment.

ARNOLD MINING CO.

Idle. Office: 78 Devonshire St., Boston, Mass.; Keweenaw Co., Mich.

Officers: Francis L. Maguire, pres.; John Wesley Clark, supt.; preceding officers, Ed. Fitzgerald, directors. Annual meeting, second Tuesday in March.

Inc. 1864, in Michigan. Cap., \$2,500,000; stock \$1,000,000.

Property: 3,323 acres, in T. 58 N., R. 31 E., S. 10 N., Keweenaw Co., Mich. Includes the Old Copper Falls mine and the Arnold mine, about 3 miles on Lake Superior. The Copper Falls mine, until Aug., 1893, made 25,686,429 lbs. fine copper. The Arnold mine, on the Arnold Creek fissure, and paid dividends of \$100,000 per year. The mine developed on the Arnold ashbed, was opened in 1901, rock stamped averaging under 0.8% copper. A 2½-mile narrow-gauge railroad, known as the Arnold, was built. Its stock of which has been sold. No. 1 shaft, 1,000 ft. deep, sunk at an angle of 26° with the horizon. Total production, inclusive, was 2,065,817 lbs. fine copper.

ASHBED MINING CO.

Office: 78 Devonshire St., Boston, Mass.; Keweenaw Co., Mich.

Officers: Francis L. Maguire, pres.; John Wesley Clark, supt.; preceding officers, John G. Lund, directors.

Inc. 1880, in Michigan. Cap., \$1,000,000; stock \$1,000,000. Annual meeting, second Tuesday in March.

Property: 1,143 acres, Petherick mine, Keweenaw Co., Mich., adjoining the Arnold mine. The last annual report is described in Vol. II of the Copper Handbook.

BALTIC MINING CO.

Dissolved. Property now owned by Bohemia Mining Co.

Office: 85 Devonshire St., Boston, Mass.; Ontonagon Co., Mich. Operating office, Ontonagon, Mich.

Officers: Wm. A. Paine, pres.; Charles E. Paine, sec.-treas.; preceding officers, John F. Edwards and F. Ward Paine, directors.

Inc. Jan. 29, 1910. Cap., \$2,500,000; stock \$1,000,000; issued, \$1,875,000. Of the 75,000 shares, 45,000 were sold to the Public Trust Co., transfer agent. Stock is selling at about \$2. Annual meeting, third Tuesday in March.

Property: 960 acres, originally known as the Henwood. It is underlain by the cupriferous amygdaloidal bed. Drilling was done in 1910. Drill holes in various amygdaloidal beds, with copper content remarkably promising or that would justify operations. Annual report, March, 1911.

Annual report, Feb., 1917, shows that as soon as sufficiently important developments are discovered, development work will be undertaken.

side of every conglomerate 18% of the stoping ground. The conglomerate mine is requirements, and has up-and winzes.

is used in the mine and of timber had gone under-rosscuts connecting the Red us incline shafts to support al, such as worn out skip ums, is used for lagging, to wer workings is not up to n copper contents, and it is shafts in the district, that Superior may descend to w 4,000'.

removing shaft-pillars, cleaned 476,310 tons of ore. rely from underground fires. like sulphide ore, but the old imable as tinder. The really n 1884, July and Nov., 1887, precautions are taken against ofing of all mine timber with ll shafts, the maintenance of engines, an electric alarm sys-ns, from the 8th to the 51st ributed as to be most readily the first 4 fires the Calumet & llions of dollars, while a num-ere drawn so badly that they May, 1900, severely tested the n Sunday evening, when the s, and gaining great headway n of the mine was shut off by ed at surface, by covering the h dirt tamped tightly into the ough holes in the earth, dirt was extinguished in 3 weeks, tinted working without inter-rgin, and there seem reasons ns are taken to prevent un-ermission to go underground e days being for a single trip. et & Hecla is met branches, branch, and

met & Hecla assured control of the Osceola and other Lake Superior mining companies formerly under the management of A. S. Bigelow, through a bargain with Mr. Bigelow, by which his entire stock interests were so to the Calumet & Hecla.

In 1916 Calumet & Hecla offered to purchase the remaining shares of Tamarack Mining Co.; but owing to a dispute as to a fair price the matter was not consummated until June 25, 1917, when the C. & H. Co. agreed with Tamarack shareholders and the former acquired the assets of the latter. The Tamarack mine now belongs to the C. & H. Co.

The share holdings of the Calumet & Hecla in subsidiary companies were as follows on Dec. 31, 1916: 41,000 shares of Allouez Mining Co.; 41,500 shares of Centennial Copper Mining Co.; 19,400 shares of Cliff Mining Co.; 50,100 shares of Gratiot Mining Co.; 152,977 shares of La Salle Copper Co.; 32,750 shares of Osceola Consolidated Mining Co.; 50,100 shares of Superior Copper Co.; 39,288 shares of Laurium Mining Co.; 32,910 shares of Isle Royale Copper Co.; 98,048 shares of Ahmeek Mining Co.; 19,400 shares of Tamarack Mining Co.; 34,259 preferred shares and 42,602 common shares of White Pine Copper Co.; 3,482 shares Calumet Transportation Co., and 2,000 shares in Great Lakes Transportation Corp. The Frontenac, Manitou, Dana and St. Louis companies have been completely absorbed.

On Dec. 23, 1916, the company sold its 11,207 shares of Seneca Mining Co. for \$60 per share, a total of \$672,420. The C. & H. has no further interest in the Seneca.

Property: the landed holdings of the Calumet & Hecla, including property owned outright, property controlled through subsidiary corporation mining lands under options, and timber and miscellaneous lands, in Houghton, Keweenaw and Ontonagon counties, Michigan, amounts to approximately 209,051 acres, of which 102,804 acres are in Keweenaw county. The company, with its subsidiaries, has a water front of more than 34 miles on the shores of Lake Superior, Lac La Belle and Torch Lake, and approximately 60,000 people are supported by the operations of the company at its allied interests.

The Calumet & Hecla mine proper, about 2,750 acres, lies in a compact tract in Secs. 11, 13, 14, 15, 22, 23 and 24, T. 56 N., R. 33 W., in addition to which the company owns considerable tracts, west of the Tamarack mine, carrying the underlay of the Calumet conglomerate at such stupendous depth that opening would require a 2-mile vertical shaft, and it is very doubtful whether these lands ever will become available for mining of the Calumet conglomerate. The lands west of the Tamarack were explored in 1904, by diamond drill, in search of a supposed cupriferous conglomerate but nothing of promise was found.

The original Calumet & Hecla mine is opened on the Calumet conglomerate bed, and a parallel mine has been developed on the Osceola amygdaloid, while a third parallel mine has been partly developed on the Kearsarge amygdaloidal bed.

The Calumet conglomerate has proven unprofitable both to the north and south of the Calumet & Hecla, though workable at the Tamarack mine which has developed the underlay by vertical shafts. The conglomerate has an average strike of N. 33° 30' E., with average dip of 37° 30' with a horizon. The bed is of 5' to 26' maximum width, with an average of 13' giving about 2,400 fathoms of stoping ground, or about 43,200 tons of stope rock, per acre. As a rule, the richer portions of the conglomerate are in the central part of the Calumet & Hecla tract. The walls of the conglomerate carry considerable copper, especially the amygdaloidal footwall, and much of the adhering trap rock formerly rejected is now milled. Fills

of 75' and even up to 150' width, left on either side of every conglomerate shaft, contain stamp rock equivalent to about 18% of the stoping ground available before the robbing of the pillars. The conglomerate mine is opened 6 to 8 years in advance of immediate requirements, and has upwards of 200 miles of shafts, drifts, crosscuts and winzes.

About 18,000,000' of timber, board measure, is used in the mine annually, and to the end of 1916, over 900,000,000' of timber had gone underground. Iron pillars are used as supports, in crosscuts connecting the Red Jacket shaft with drifts on the bed, and in various incline shafts to support the hanging wall. Iron, mainly scrap material, such as worn out skip rails, cut to 10' lengths and placed above I-beams, is used for lagging, to some extent. The conglomerate bed in the lower workings is not up to its average value above, being wide, but low in copper contents, and it is evident, from the results secured by the deep shafts in the district, that while the cupriferous stratified beds of Lake Superior may descend to tremendous depth, copper values decrease below 4,000'.

The conglomerate mine, which, until a few years ago, was the entire Calumet & Hecla, has a life, at the present rate of production, of between 8 and 12 years, followed by 5 to 10 years of scrambling, with greatly decreased output. The conglomerate has decreased in average copper contents with depth, but output averaged in 1915, 3.36 lb., and in 1916, 3.59 lb. more than in 1914, partly because old pillars, etc., were robbed. The mine works normally 175 power drills on the conglomerate, and 125 drills on the amygdaloid.

During 1916, there were 78 drills at work removing shaft-pillars, cleaning up arches and backs of stopes. This yielded 476,310 tons of ore.

The Calumet & Hecla has suffered severely from underground fires. The rock carrying native metal cannot burn, like sulphide ore, but the old timbering eventually becomes nearly as inflammable as tinder. The really serious mine fires, 5 in number, occurred in 1884, July and Nov., 1887, Nov. 30, 1888, and May 27, 1900. All possible precautions are taken against mine fires, these including the partial fire-proofing of all mine timber with zinc chloride solution, regular sprinkling of all shafts, the maintenance of water pipes and hydrants, fire hose, chemical engines, an electric alarm system and 18 telephones at various pump stations, from the 8th to the 51st levels, inclusive, in 5 different shafts, so distributed as to be most readily accessible from all part of the mines. From the first 4 fires the Calumet & Hecla suffered aggregate losses of several millions of dollars, while a number of lives were lost, and 3 valuable shafts were drawn so badly that they were abandoned. The fifth and last fire, in May, 1900, severely tested the mine's fire system, the fire breaking out on Sunday evening, when the mine was deserted by all but a few employees, and gaining great headway before it was discovered. The burning portion of the mine was shut off by closing the fire doors, and the mine was sealed at surface, by covering the mouths of the shafts with heavy timbers, with dirt tamped tightly into the crevices between. Wherever gas escaped through holes in the earth, dirt was tamped in and luted with water. The fire was extinguished in 3 weeks, and the South Hecla portion of the mine continued working without interruption. All fires have been of mysterious origin, and there seem reasons for suspecting incendiarism. Great precautions are taken to prevent unauthorized persons entering the mine, and permission to go underground is given only by the president, in writing, each pass being for a single trip.

Equipment: the conglomerate property of the Calumet & Hecla is worked as 2 separate mines, known as the Hecla and Calumet branches, the South Hecla being a southerly continuation of the Hecla branch, and

mine were estimated Jan., 1916, at 6,000,000 tons, and the Osceola bed has been found to carry fair copper values, at a vertical depth of nearly 1 mi in the Tamarack property.

Depths of Shafts Jan. 1, 1916		Distance between Shafts	
No. 13.....	3,232'	13 to 14.....	2,78
No. 14.....	2,958'	14 to 15.....	2,40
No. 15.....	3,002'	15 to 16.....	2,10
No. 16.....	3,274'	16 to 17.....	1,80
No. 17.....	2,111'	17 to 18.....	1,60
No. 18.....	1,460'		

The Kearsarge amygdaloid bed outcrops about 2,200' east of the Osceola amygdaloid and 2,900' east of the Calumet conglomerate, with parallel strike and dip of about 38°, underlying the entire main tract. Work of development was begun Aug., 1903, and there are 3 shafts, numbered from north to south, each having 3 compartments and being practically duplicated of those on the Osceola amygdaloid. The shafts above the ledge are "timbered" with steel, brick and concrete, the hanging wall being lined with 3 arches of brick, laid in 3 to 5 courses, thickness being increased with depth, supported by 2 rows of I-beams, which serve also as dividers for the shaft. The Kearsarge bed, as opened by these shafts, is erratic, though showing stretches of ground that probably will yield 18 to 22 lbs. fine copper per ton, with reasonable selection. No work has been done on this ledge since the beginning of the strike, July 23, 1913.

No. 19 shaft, about 1,000' south of the Centennial boundary line, is 1,350' deep, and was closed down Dec., 1907. No. 20 shaft, next south of No. 19 is about 1,350' in depth, and idle also.

No. 21, the southernmost shaft on the Kearsarge bed, is 8,000' south of No. 20, and, at shallow depth, showed well in copper, but deeper workings were not so promising, the rock yielding only about 12 lbs. of copper per ton of rock mined. The shaft is 2,291' deep; not working since July, 1913.

The Calumet amygdaloid, lying between the conglomerate and the Osceola amygdaloid, has been little opened, but might prove payable, as it shows some good ground in a crosscut on the 900' level.

The shaft rock houses at the conglomerate incline shafts, of uniform pattern accommodate 40-ton railroad cars. Rock is hoisted to the top of each shaft rock house, passing thence over grizzlies that allow the fine rock to fall through, the larger masses being reduced in 24x36" crushers. Crushed rock falls by gravity into storage bins, whence it is dumped in railroad cars that take it to the mills, railroad tracks running underneath each rock house. The standard equipment includes a 50-h. p. induction motor at each shaft, for driving crushers.

Owing to labor scarcity in 1917, underground haulage is done as far as possible by storage-battery and trolley-type locomotives.

Equipment: on surface at the Calumet & Hecla is probably the most complete installation to be found in the world. With few exceptions everything is duplicated, to prevent possible delay or suspension, by reason of fire or accident.

The power plants at the main mine, on the Calumet conglomerate, include 4 large boiler plants and 6 hoisting plants. The hoists of the conglomerate mine are very powerful, ranging in capacity from 1,000 to 5,000 h. p. each. Miners are carried to and from work in the incline shafts in man cars, these being long trucks having tiers of circus seats, regular skips when needed, being shifted quickly on or off the skip tracks by large

cranes. This method has proven the safest, quickest and cheapest for moving men in and out of deep incline shafts.

At No. 4 Calumet shaft there is a group of the most powerful mining machinery in existence. Engine house contains the 2,500-h. p. Corliss engine "Superior," with 40" cylinders and 72" stroke; the auxiliary engines "Baraga" and "Rockland," of 1,000 h. p and 600 h. p. respectively; 2 Rand air compressors, of 25 and 40-drill capacity, and the engine "Mackinac," a 1,000-h. p. quadruple-cylinder triple-expansion steel giant, operating 4 Nordberg air compressors with a combined capacity of 500 drills. There also are four 35-drill auxiliary compressors. In the old Riedler compressor, water was injected into the compression cylinders, while the Nordberg machines deliver the compressed and greatly heated air to a cylindrical steel cooler, 12' in diameter and 30' high, into which water is sprayed from above and drawn off at the bottom, this cooling the air to 80° F. Power is supplied by batteries of boilers in 2 boiler houses adjoining. Locomotives haul the coal into the boiler houses, where it is fed to the grates by stokers.

The Hecla engine house, flanked by a large boiler house, contains the 1,200-h. p. compound hoisting engine "Frontenac" and 2 auxiliary engines, of 600 h. p. each, also a 30-drill Rand air compressor and a pair of water-plunger air compressors, with combined capacity of 144 drills, being the largest machines of this type ever constructed.

South of the Hecla plant is the "G. H. & S." engine house, having the "Houghton" and "Seneca" engines, of 1,300 h. p. each. The Hecla boiler house has 5 large boilers and a 200' smokestack, of 9' 6" internal diameter.

The engine house operating Hecla shafts Nos. 7 and 9 contains the engines "Hancock" and "Pewabic," each of 1,400 h. p., which operate 25' drums by spur gearing, and two 600 h. p. vertical compound engines for trolley cars. Boiler house has 5 boilers and a 250' smokestack of 12' 6" internal diameter.

The South Hecla engine house at shaft No. 11 has a 1,000-h. p. Lidgerwood hoist.

The Red Jacket shaft has two 2,850-h. p. triple expansion hoists, and in an adjoining building are five 300-h. p. boilers. In raising 10-ton loads vertically from a depth of 1 mile, the weight of the cage and steel cable nearly equals that of the cargo of rock, but with the aid of counterbalance the engines can hoist 10-ton loads at a speed of 40 miles per hour, the regular hoisting time being about 90 seconds for the vertical distance of nearly a mile, including time taken for starting and stopping, an achievement no locomotive could duplicate on a horizontal plane. The engine operates on a system devised by S. B. Whiting, formerly manager of the company. To overcome the dangerous strain caused by unequal wearing, Walker differential rings are placed on the sheaves, the cables taking 4 complete turns around the driving sheaves.

Equipment at the Amygdaloid shafts on the Osceola bed is practically the same at shafts 13, 14, 15 and 16, the new shaft No. 18, having a compound engine and boiler house, with a small Lidgerwood hoist. Shafts 13 and 16 have Nordberg first-motion double conical-drum hoists, operating on two skips in balance, good for 5,000' depth each. No. 14 and 15 have double hoists with 25' cylindrical drums, good for 5,000' depth. Shafts 17 and 18 are equipped with small Lake Shore and Lidgerwood hoists and single 24-ton skips. All the shafts have permanent shaft rock-houses, similar to those of the conglomerate workings. All engine-houses have air connections with the main compressor-plants at the old mine.

The machine shop has an equipment excelled by only a few of the shops in the country, including a 25-ton electric traveling crane and

mammoth planers, with electric power throughout. These shops are capable of handling anything and everything in the line of repair work, and also have complete manufacturing facilities for the making of mining, mill and smelting machinery, and have turned out hundreds of Wilfley table and other special machinery, under agreement with the owners of the patents.

The foundry has 2 iron cupolas, and a brass foundry, with a 20-ton electric traveling crane. The pattern shop has 2 departments, one for the shop proper and one for storing patterns.

The carpenter shop is equipped with as complete a line of labor-saving machinery as can be found in any general woodworking establishment.

The blacksmith shops are as large as those of the largest manufacturers of machinery, and are fully equipped. The Calumet shop also sharpens upwards of 50 tons of steel drills daily. The Hecla shop does blacksmithing and forging for the entire mine. The various shops employ upwards of 150 blacksmiths.

The main electric plant of 12,000 h. p. capacity is at the mills, in Lake Linden, with a substation at the mine.

The office building is a large and handsome stone structure, housing the various executive departments and the engineering force of the mine. The company's private telephone system has an exchange with about 200 instruments, including a number of deep underground stations, with local and long-distance connections.

The Calumet & Hecla public library had 45,000 volumes in 1917; ranked third in point of circulation in the state of Michigan, with an attendance in reading rooms of 88,040 in 1917. In addition to books in English, there are works in German, French, Italian, Swedish, Norwegian, Slavonian, Polish, Hungarian, Finnish and Croatian, with periodicals and newspapers in scores of languages, about 30 different nationalities being represented on the company's payroll. There also is a branch library and reading room at Lake Linden, for employees of the stamp-mill and smelters.

The company maintains a hospital, for employees solely, with complete surgical and laboratory apparatus and a dozen physicians.

The company owns about 1,200 dwellings, furnished to employees at an average rental of 6% on actual cost, plus cost of maintenance, and upwards of 1,200 dwellings are owned by employees on lands leased from the company at low yearly rentals. This low rent is equivalent to an increased wage, compared with Western mines.

There are 15 school houses on the lands of the Calumet & Hecla, most of which were built by the company, including a fine manual training school and a truly magnificent high school building at Calumet.

On Calumet & Hecla lands there are upwards of 30 churches, of a dozen different denominations. All of these sites were donated by the company, and in most cases substantial aid has been given in their erection and maintenance, entirely regardless of creed.

The company built a \$50,000 bath house containing tubs, showers and a 26'-40' swimming pool. A charge of 2½ cts. per bath is made, except in the women's department, which is free to women and children. The charge covers merely the cost of washing the towels and in no way compensates for the operation of the bath house proper.

In 1904 the Calumet & Hecla Mining Co. started a pension fund. Certain employees who had attained the age of sixty years or more and who had been in the company's employ twenty years or more, were retired on a pension proportionate to their length of service and their wages. The pensions have run from \$9 per month to \$38 per month.

On July 15, 1916, the C. & H. celebrated its 50th anniversary. Long-service medals were given to 1,371 employees; of these, 169 were for men who had worked over 40 years, 380 for between 30 and 40 years, the remainder for between 20 and 30 years. During 1916 the men received a 10% premium, plus 25c for each day worked from July 1 to Dec. 31. At present the bonus is 10% plus 50c daily.

The company maintains 3 distinct systems of waterworks, one at the mines in Calumet, one at the mills in Lake Linden, and one on the shore of Lake Superior, 4 miles N. W. of Calumet. The Lake Superior plant pumps water for domestic uses at Calumet against a head of 733', with an electric centrifugal pump of 3,000,000 gals. daily capacity. This plant also furnishes water to the mill and smelter boilers, on Torch lake. At the Calumet dam and mine there are 7 pumps, having a combined daily capacity of upwards of 45,000,000 gals.

The company maintains a fire department, affording protection to the mine buildings and location, and responding to calls from Red Jacket, Laurium and the other towns that go to make up the mining camp of Calumet, with 40,000 population.

The Hecla & Torch Lake standard gauge railroad, owned by the company, connects the mines, mills, smelter and shops by upwards of 20 miles of main tracks, spurs and sidings. Equipped with 150 forty-ton steel rock cars and several locomotives.

The 2 stamp mills, known as Hecla and Calumet, are at Lake Linden, 4 miles from the mine, on a tract of 998 acres, having several miles of frontage on Torch Lake.

The mills have steel frames, with concrete foundations, spaced 20' apart, with 2 and 3 tiers driven to bed-rock, and topped with 6x12" square timber, capped by a 4"x6" bed of concrete. The mills have 27 Leavitt heads and 1 Nordberg steeple-compound head; 17 heads treating conglomerate ore and 11 crushing amygdaloid rock. Stamps are actuated by steam power, but the other milling machinery is operated electrically. The Leavitt heads have a daily capacity of about 350 tons of conglomerate, and 500 tons of Osceola amygdaloid.

The mill equipment below the stamps, includes Woodbury-Benedict 4-deck Evans-Rawlings round-tables, from which slimes are treated by Wilfley tables; Chilean regrinding mills. The 220 Wilfleys effect a considerable saving of the very fine copper formerly lost, and greatly reduce the water consumption.

As the mills stand on the flat western shore of Torch lake, but little above water level, tailings speedily filled the shallow lake for some distance off shore, and to deposit the sand it became necessary to secure a considerable initial elevation, which is gained by sand wheels. The material entering the mills as conglomerate rock leaves as coarse sand to the extent of fully 6,000 tons daily. The sludge is washed through launders to the sand-houses, where it is scooped up by the buckets of the wheels and dumped, high above, into launders running on trestles far out into the lake, these spouting forth miniature brick-red Niagaras. There are two wheel houses, one for each mill. The Calumet wheel house has sand wheels of 50' diameter, and the Hecla 50' and 64' diameter. The sand wheel is to all appearances a gigantic bicycle wheel, fitted with spur gearing where the rubber tire should be. The complete wheel weighs 500 tons, and is mounted upon massive concrete masonry. Four 25-ton iron bed plates support the pillars carrying the 21-ton Krupp forged steel axle, which is 27' long and 32" in diameter with a hollow core of 26" diameter. Radiating from axle to rim are 17 steel spokes 32' long. The completed wheel is 10' wide and 64' in

diameter, driven by gear and pinion, power being furnished by a 700-h. dynamo, and has a capacity of 55,000 gals. per revolutions. Nearly 2 years were required to build and adjust this monstrous wheel.

During 1916 there were no important changes at the stamp-mills. Year's tests on flotation in the laboratory were encouraging and two 50-t Mineral Separation machines have been installed. Company will pay royalty per lb. of copper recovered.

The No. 1 regrinding plant, built 1908-09, and in full commission Jan 1910, occupies a 195x340' building. The frame is of structural steel, resting on concrete foundations, the floor being of stamp sand, with a concrete capping, no particle of wood entering into the construction of the building. Power is furnished by eight 250-h. p. induction motors, giving about 100% excess capacity, to provide against delays through overhauling and repairing. The plant has cost about \$400,000. Equipment, built almost exclusively in the shops and foundries of the company, consists of 48 Chilean mills resting on concrete piers, in 2 parallel rows, each pier being a hollow octagon 6' high and 7' in diameter, with a 10" wall, the hollow being filled to a height of 10' with stamp sand, capped by 4' of concrete. All piers are joined by concrete ribs, in which a heavy steel cable is embedded, passing through each pier connection. The Chilean mills are being replaced by Hardinge mills. There are 200 Wilfley tables, each section of the plant having 6 grinders, 18 tables for roughings, 4 tables for middlings, and 2 tables for slimes. Product from each set of 2 grinders goes to a settling tank, from whence the roughings go to the first 3 tables, and the slime to 2 other tables, the middlings from each 15 tables going to 2 additional tables. The coarse sands from the Calumet mill go to sand wheel No. 2, and waste sands to wheel No. 1, the coarse sand elevated by wheel No. 2, running to the regrinding plant, where the amount going to each mill is regulated by feed gates, an overflow tank at the end of the launder carries for the surplus, in case of stoppage of the mill. A Hardinge conical tumbling mill, crushing coarse tailings, is 8' in diameter at the larger end, the pulverizing of sands being accomplished by the use of Danish pebbles on lining of hard brick. Re-modeling of No. 1 plant is expected to be completed in 1917.

The regrinding mill has traveling cranes, and every piece of machinery is duplicated, so that breakages can be repaired quickly. The mill is fed with tailings from the stamps, sands carrying up to 12 lbs. copper per ton. No slime goes to the regrinding plant, which treats exclusively coarse gravel and sand from the jigs and tables. The product is clean mineral, of good average tenor, which is pumped into bins, and thence loaded into cars for shipment to the smelter. Labor costs are very low, the plant being automatic throughout, and the force is only 12 men and boys per shift.

The management figured on an extraction of about 5 pounds copper per ton from the tailings reground, at a cost of about 6 cts. per lb., on a basis of about 2,000,000 lbs. yearly production. Production, to end of 1916, from the tailings plant was 13,751,310 lbs. fine copper. Comparative results in No. 1 regrinding plant for several years are as follows:

Year	Tons Coarse Tailing	Lbs. Cu. Crushed per Ton	Lbs. Cu. Rec.	Lbs. Copper Produced	Cost per Ton
1911	477,794	12.66	4.50	2,152,110	5.00
1912	481,320	12.86	4.48	2,155,292	4.98
1913	388,164	11.92	3.94	1,529,007	5.88
1914	351,929	11.52	3.74	1,316,704	7.38
1915	337,243	13.14	4.01	1,352,869	6.23
1916	364,581	13.98	3.79	1,380,344	6.23

(a) Exclusive of smelting and refining.

The regrinding plant has proven its ability to treat fresh tailing at a substantial profit. The tailings at the Lake Linden mills are the most extensive in the world, containing about 40,000,000 tons of stamp sand, carrying an average of 8 to 10 lbs. of copper per ton in the newer sands, and 12 to 20 lbs. in the older sands, these tailings carrying about 500,000,000 lbs. of copper—an amount greater than the total production of any but the largest copper mines of the world.

The No. 2 regrinding plant, begun 1912, operations started in 1914, is practically a duplicate of No. 1. The mill is equipped with 64 Hardinge conical mills and will retreat tailings in Torch Lake. These are obtained by means of a specially designed dredge, which will dig to a depth of 100' below the surface of the lake.

The reclamation plant (the dredge) worked continuously in spite of zero weather and 18" of ice on Torch lake. It treated 545,727 tons of tailing, containing 21.06 lb. copper per ton, saving 9.92 lb., or a total of 5,412,-510 lbs., at cost of 4.586c per lb. in 1916. The treatment included leaching.

Results have been as follows:

	Tons Coarse Tailings Crushed	Lbs. Cu. per Ton	Lbs. Cu. Rec. per Ton	Lbs. Cu. Produced	Cost (a) per Lb.
1914.....	75,630	11.84	4.59	347,363	5.66c
1915.....	168,461	13.14	4.73	796,858	4.36c
1916.....	182,705	13.98	4.98	909,453	4.30c

(a) Exclusive of smelting and refining.

A leaching plant was completed in summer of 1916 to retreat tailings from the regrinding plants by leaching with an ammoniacal solution, the ammonia being reclaimed, and is taking 6 lbs. of copper from the tailings. The cost was 6c per lb. of copper produced, exclusive of smelting and selling charges.

The capacity of 2,000 tons daily is being doubled in 1917.

Water for the mills is supplied by 4 pumps, of which the "Michigan" is the most powerful in the world, having a daily capacity of 60,000,000 gals. Auxiliary pumps are the "Huron" and "Ontario" of 20,000,000 gals. capacity each, the "Erie" of 10,000,000 gals., and an I. P. Morris pump of 22,000,000 gals. daily capacity.

The electrification of the Calumet & Hecla was begun in 1904, and eventually will be completed, at mines, mills and smelters, except for some of the big compound hoists and air compressors at the mine, where a change from steam to electricity would be doubtful economy, as well as necessitating enormous initial outlays.

Machinery at the power plant includes the old engines "Saginaw" and "Gratiot," the former an Allis-Chalmers twin vertical tandem compound-expansion engine having 17x40x48" cylinders, each engine being direct connected to a 1,000 k. w. alternating current generator, and the Leavitt engines "Owego" and "Ontonagon," of 3,000 h. p. each, built originally for hoisting purposes, direct-connected to 2,000-k. w. generators. The electric equipment of the mills includes 15 motors, of 20 to 250 h. p. each.

Another 10,000-k. w. turbo-generator is being installed. This will make the total capacity of the power-plant 22,500 k. w.

The boiler house has twenty 500-h. p. Babcock-Wilcox tubular boilers. There are coal crushers, feeding an endless link-belt system with 308 steel bucket, of 60 tons hourly capacity, taking coal to overhead bins, whence it is fed to the grates by Roney automatic stokers. Water requirements at the boiler plant are about 750,000 gals. daily, obtained from a 20,000-gal. reservoir, fed from Lake Superior via the Calumet pipe line.

The Torch Lake smelter is at Hubbell, about a mile south of the mill on a 30-acre site having ample frontage on Torch lake, with deep water in front and 3 railways at the rear. The smelter has 4 stone furnace buildings, and a 50x70' furnace building, both blast furnaces and reverberatories having been rebuilt within the past few years. There are 18 reverberatories which are top-charged, having platforms above on which the mineral is thoroughly dried before charging. The blast furnace is 40x128" at the tuyeres, its comparatively small size being due to the use of reverberatory furnaces for the bulk of the smelting work. A new steel-frame smelter building houses three 150-ton reverberatory-furnaces, of so-called Jumbuck pattern, modeled after the furnaces of the Lake Superior Smelting & Refining Co. The practice of the smelting plant is fully abreast of the time in all essentials.

Another furnace was blown in during November, 1916.

The electrolytic plant, 155x270', at Hubbell, has superseded the Buffalo reduction plant, which has been abandoned. It is built of steel and brick and contains four 7½-ton traveling cranes and 512 lead-lined wooden tanks 3'x11'x3' 9" deep, in 4 sets of 128 tanks. Each set is arranged in 4 sections of 32 tanks, and each section in two tiers. The electric current is furnished by four 125-volt direct current generators driven by alternating current motors operating on current transmitted at 13,000 volts from the power plant at Lake Linden, transformed to 2,300 volts. There is a continuous circulation through the deposition tanks of the electrolyte which contains about 3 to 4% copper and 10 to 12% sulphuric acid. The plant has a capacity of 65,000,000 lbs. copper per year. Company markets its own copper. This plant also recovers several hundred thousand ounces of silver yearly, an item that is mentioned now in the balance-sheets.

There is 1 concentrate or mineral house, with a storage capacity of 18,000 tons, at Hubbell. Calumet & Hecla concentrate, locally called mineral, carries less than 60% copper.

The power plant at the smelter has three 125-h. p. boilers, and each of the two large reverberatory furnaces has a 300-h. p. boiler attached through which the waste gases pass.

The smelting works have an assay office and laboratory, office and large warehouse for supplies.

The dock system of the Calumet & Hecla is extensive, including a series of very large coal sheds at Lake Linden and a series of docks at the mill and smelters on Torch lake. The 750' coal wharf has 11 Hunt hoists, and three 52' movable derricks.

The Calumet & Hecla owns and operates the ship canal connecting Torch lake with the government waterways on Portage lake, this canal being 21' deep and accommodating the largest vessels plying the great lake. Tolls, ranging from 10 cts. on soft coal to 50 cts. per ton on packed freight, are charged by the company, on independent cargoes entering Torch lake through this canal.

A saw mill, at the head of Torch Lake, receives logs by rafts, and ships sawed lumber and timber by a branch of the Hecla & Torch Lake railway. The company owns extensive tracts of pine, hemlock and hardwood timber along the southern shore of Lake Superior, this land carrying between 40,000,000' and 500,000,000' of standing timber. The company also has a long term timber contract with the Keweenaw Association, Ltd., and buys extensively of jobbers, the requirements for underground timbering also being 18,000,000' annually, in addition to the many million feet of timber and lumber used on surface at the mines, mills and smelters.

The conglomerate rock from the old Calumet & Hecla workings is

shown a strongly declining tendency in values for many years past, and a rather alarming decline within the past few years. Net returns were almost $\frac{1}{2}$, or 100 lbs. of fine copper per ton in 1873; 4.75%, or 95 lbs. fine copper per ton, in 1880; 3.012%, or 60.24 lbs. per ton, in 1889; 59.93 lbs. in 1900; 2.44 lbs. in 1902; 39.68 lbs. in 1907; 35.96 lbs. in 1908; 33.14 lbs. in 1909; 0.12 lbs. in 1910; 30.38 lbs. in 1911; 29.73 lbs. in 1912; 27.85 lbs. in 1913; 6.38 lbs. in 1914; 29.74 lbs. in 1915, and 29.97 lbs. in 1916.

Rock from the Osceola amygdaloid returned 18.45 lbs. per ton in 1907; 7.67 lbs. in 1908; 16.40 lbs. in 1909; 15.82 lbs. in 1910; 15.89 lbs. in 1911; 15.08 lbs. in 1912; 14.31 lbs. in 1913; 13.62 lbs. in 1914; 13.32 lbs. in 1915, and 13.60 lbs. in 1916.

Average for all rock milled, during the calendar year 1912, was 24.18 lbs. fine copper per ton; 22.11 lbs. in 1913; 20.70 lbs. in 1914; 22.38 lbs. in 1915, and 22.53 lbs. in 1916.

Detailed figures, by years, of both production and dividends, from the organization of the company, in 1871, may be found in the statistical chapter.

Production has shown a steady decline since 1906, in which year the high mark of 100,023,420 lbs. fine copper was reached, and in 1913 was only 5,016,890 lbs. copper, climbing to 53,691,562 lbs. in 1914 and 71,030,518 lbs. in 1915. Production in 1913 and 1914 was seriously affected by the labor strike, called by the Western Federation of Miners on July 23, 1913, and declared off on April 12, 1914, and by the extraordinary conditions prevailing in the copper market in 1914, due to the European war. The mine was operated on a $\frac{3}{4}$ -time basis from Sept. 1, 1914, until Feb. 1, 1915, when work was resumed on full time.

Production and costs since 1910:

	Tons R'k Treated	Lbs. Cu. per Ton R'k	Mine Cost per Ton Exc. Cons.	Copper Produced Lbs.	Cost per Lb. for Cons.	Net Cost per Lb.	Rec'd per Lb.
1917**				60,000,000			
1916	3,166,274	22.53	\$2.03	71,349,591*	0.60c	11.03c	25.48c

Kearsarge Lode, Amygdaloid—

1913.....	18,203	233,915
1912.....	19,050	228,985

Reviewing the 52 years' career of this company, several features deserve attention. To the investor, the total dividends, \$145,250,000 paid on an investment of \$1,200,000 is not only remarkable for its amount but because dividends have been continuous.

To the technical man this record is particularly noteworthy, when the mining record is considered. Beginning in 1866, with a small production from the rich native copper ore of the Calumet conglomerate, the company's present daily production of 10,000 tons now comes from 3 separate lodes mined by 17 shafts, several of them a mile deep. The yearly production of copper is from 65 to 75 million pounds, with a record amount, 100 million in 1906.

This production comes from very low-grade ore—lower, in fact, than that of the Utah Copper or other great porphyry deposits. The ore originally mined, carried nearly 5% or 100 lbs. of copper per ton, but the grade of ore decreased from year to year as depth was gained until it is now only 1½% or 30 lbs. copper per ton of ore. The maintenance of dividends despite this decrease in value is due to the ability of the management to steadily reduce costs from \$10 per ton to the present cost of \$2 per ton, so that a pound of copper is now produced as cheaply from the lean ore as it was from the richest ore. The company is also saving over 5,000,000 lbs. of copper annually by retreating the old waste or tailings made many years ago at its mills and dumped into the lake, and has installed a leaching plant which promises to give a new youth to the entire district, by its treatment of ore carrying flake copper.

In 1906 the company, realizing that the Calumet conglomerate lode, of which the company was started, would eventually be exhausted, began the purchase of other properties and of shares in other Lake Superior companies. Controlling interest in six companies, bought for \$8,592,000 by issue of company notes (all paid-off by February, 1917), has proved very profitable, these stocks returning \$6,156,124 in dividends, and meanwhile increasing in market value.

With its White Pine property and its new leaching plant, it looks as if a new era of prosperity had begun.

CASS COPPER CO.

MICHIGAN

Address: Houghton, Mich.

Officers: Fred Smith, pres.; John T. Reeder, v. p.; John W. Black, sec. & treas., with John H. Rice and Jas. P. Corgan, directors; A. H. Meuché, gen. mgr.

Inc. 1916, in Michigan, to take over the Norwich mine, owned by the Copper Crown Mining Co. Cap., \$3,750,000; shares \$25 par; 40,000 shares were paid for the property and 20,000 issued to the public at \$3 per share to pay for diamond drill campaign. Operating expenses for 1916 total \$33,079; cash in treasury, May 31, 1917, \$11,779. Annual meeting, last Monday in June.

Property: 1,980 acres, in Ontonagon county, T. 49 N. R. 41 W., near the Mineral Range R. R., has several well-known lodes crossing the ground.

Development: by 9,550' of diamond drilling, which discovered an identified lode of shot and mass copper. This will probably be developed by an old 1,000' tunnel. Work has stopped temporarily until materials and men can be had.

CENTENNIAL COPPER MINING CO.

MICHIGAN

Subsidiary of Calumet and Hecla Mining Co.

Office: 12 Ashburton Place, Boston, Mass. **Mine office:** Calumet, Houghton Co., Mich. Rodolphe L. Agassiz, pres.; Jas. MacNaughton, v. p. and gen. mgr.; preceding officers, H. F. Fay, Dudley S. Dean, F. L. Higginson, E. B. Dave and E. V. R. Thayer, directors. C. H. Bissell, sec.-treas.; G. L. Osgood, jr., asst. sec.-treas.; J. H. Chynoweth, mg. capt.

Inc. 1896, in Michigan, as successor of Centennial Mining Co. **Cap.**, \$2,500,000, shares \$25 par; issued, \$2,250,000; paid in, \$19,500. Last assessment, 1905, was \$4. Calumet and Hecla owns 41,500, or 46%, of the 90,000 shares outstanding.

American Trust Co., Boston, transfer agent; Old Colony Trust Co., Boston, registrar. Annual meeting, first Tuesday in April.

Profits were \$6,046 net in 1911, \$50,511 net in 1912, \$31,397 in 1913, \$3,213 deficit in 1914, \$142,440 in 1915, and \$276,546 in 1916.

Balance sheet for 1916 shows assets of cash and accounts receivable \$454,858, supplies \$30,344; total, \$485,204. Liabilities for accounts payable \$36,835; excess of assets over liabilities, \$448,368. Dividend No. 1, Sept. 21, 1916, \$90,000; No. 2, Mar. 20, 1917, \$90,000.

During 1916 the Centennial and Wolverine companies exchanged rights to mine on about 1 acre of ground each.

Lands: 670 acres, Sec. 12, T. 56 N., R. 33 W., and a triangular patch of about 30 acres, at the S. E. corner of the main tract, bought to secure the outcrop of the Kearsarge lode, and including about 10 acres, bought 1905, of the Old Colony, for the surface plant. The first work was done, 1863, by the Schoolcraft Mining Co., which failed to open a paying mine, and was reorganized, 1876, as the Centennial Mining Co., and again reorganized, 1896; with present title. Expenditures of upwards of \$1,500,000 were made by the old company in unsuccessful efforts to open a paying mine on the northern extension of Calumet conglomerate. Seven shafts, 3 of considerable depth, were sunk on this bed, No. 3, the deepest, being bottomed at 3,200'. The Centennial lands are in the great mining area of Calumet, and are available for building purposes. Two additions have been platted, and surface rights sold at good prices, mineral rights being reserved.

The present company did a little work, 1897, on the old conglomerate shaft, then turned attention to the Osceola bed, deepening 2 shallow shafts to 1,050' and 1,150' depth, respectively. The Osceola bed, where opened on the Centennial tract, averages about 15' in width, but is lean.

Work on the Kearsarge bed was begun Sept., 1899. Owing to the outcrop of the Kearsarge occurring on the 30-acre tract bought of the Osceola, with only a 100' right-of-way connecting it with the main tract, it was necessary to open the mine on the Kearsarge bed in a peculiar manner, by 2 shafts. These are but 90' apart, on surface, and continue parallel, on the dip of the bed, until the 13th level, when the main tract is reached, after which No. 2 shaft diverges from No. 1 at an angle of 15° on the plane of the bed, 300' being taken by the curve. This method of opening gives short drifts until the shafts enter the main Centennial tract. Each shaft is 17x18' inside of timbers, with 3 compartments, sunk at an angle of 39° with the horizon, through an overburden of about 100' depth. The Kearsarge bed averages about 16' in width, and showed fair copper values in the upper beds followed by a comparatively barren zone until the 14th level, when there came a gradual improvement, which unfortunately has not been maintained, the mine as a whole proving disappointing. New openings, made since 1916, amounted to 2,298', all contributory to the No. 2 shaft.

No. 1 shaft was raised in the north compartment from the 37th level, a distance of 160', making a total depth of 4,000'. No other work has been

done here since 1910. No. 1 has a steel shaft rock-house, with 3,000-ton bins and a 32x72" Nordberg duplex hoist, with double-conical drum, good for depth of 6,000', operating 5-ton skips.

No. 2 shaft, 4,293' deep, shows fair ground from the 18th to the 31st levels, inclusive. This shaft shows poor ground to within 50' of the South Kearsarge boundary, where drifts were stopped. The South Kearsarge drifts are in rich ground up to the boundary, which seems strange.

Openings north of the shaft on 35th and 36th drifts have been extended to the Wolverine boundary. The 38th level has been driven north 250', but shows no copper.

Equipment: includes a cylindrical steel shaft rock-house, with 1,000-ton bins, and a 32x60" Sullivan duplex straight-face hoist, with 2 drums of 14 diameter and 15' 6" winding face, grooved for 1 1/2" cable. The hoist is fitted with devices to prevent overwinding, and is calculated to raise 5-ton skips at the rate of 4,000' per minute, operating under 150-lb. steam pressure.

Trammers were scarce during 1917 so a rope-haulage system was installed on No. 37 level. This will handle ore sent from the 4 levels above.

The mine is served by the Copper Range and Mineral Range railroads and has a private line connecting the shops and shafts.

Rock is stamped by the mill of the Lake Milling, Smelting & Refining Co., which is separately described. At No. 2 mill, Hubbell, two new stamps were installed in summer of 1917.

Production was seriously curtailed for a time in 1913 and 1914 by the Western Federation of Miners' strike, called July 23, 1913, and declared off on April 12, 1914. Conditions prevailing in the copper market after the European war started were the cause of the mine operating on three quarter time from Sept. 1, 1914, to Feb. 1, 1915. In Aug., 1915, the rock house of No. 1 shaft was gutted by fire and production suffered for a month at that time. Centennial at best is a small producer and this series of misfortunes has worked an extra hardship on it.

Production:

Year	Tons R'k Treated	Lbs. Min. Produced	Lbs. Cu. per Ton R'k Stpd.	Mine Cost per Ton (a)	Lbs. Copper Produced	Total Cost per Lb.	Rec'd per Lb.
1916	150,617	15.72	\$1.916	2,367,400	13.44c	25.02c
1915	150,191	3,029,880	15.63	1.753	2,347,500	12.45c	18.14c

1912	106,517	2,567,385	16.36	1.920	1,742,338	13.46c	16.98c
1911	86,543	2,321,200	17.26	1.869	1,493,834	12.69c	12.92c
1910	102,133	2,380,820	15.40	1.948	1,572,566	14.48c	12.82c
1909	196,525	14.15	2,583,793	15.61c	13.28c
1908	169,693	12.94	2,196,377	18.49c	13.30c

Note.—Production for first 4 months, 1917, averaged 154,000 lbs. copper.

(a) Includes mining, transportation, stamping and taxes.

CHAMPION COPPER CO.

MICHIGAN

Office: 82 Devonshire St., Boston, Mass. Mine office: Painesdale Houghton Co., Mich. Mill office: Redridge, Houghton Co., Mich.

Officers: Wm. A. Paine, pres.; Chas. J. Paine, Jr., v. p.; F. W. Paine, sec.-treas.; Frederick W. Denton, gen. mgr.; preceding, with Samuel Smith, Geo. P. Gardner, W. Cameron Forbes, P. W. Denton and Ed. Richard Olney, directors; H. Schacht, asst. gen. mgr.; John Jolly, underground supt.; Edw. Koepel, mill supt.; M. L. Cunningham, asst. mill supt.; H. F. Mercer, chief engr.; E. W. Krzaka, chief electrician; W. J. Richards, mechanic.

Inc. Dec., 1899, in Michigan. Cap., \$2,500,000; shares \$25 par, all issued, full paid in. Is controlled jointly by Copper Range Consolidated Co. and St. Mary's Mineral Land Co., through equal ownership of stock, and owns \$110,000 stock in the Michigan Smelting Co.

Balance sheet of Dec. 31, 1916, showed a net profit of \$5,870,606, and a surplus of \$1,671,933. Receipts from ore sales in 1916 were \$8,494,367.

Dividends: \$3 in 1903; \$2 in 1904; \$10 in 1905; \$12 in 1906; \$10 in 1907; \$5 in 1908; \$8 in 1909; \$9 in 1910; \$5 in 1911; \$11 in 1912; \$9 in 1913; \$31 in 1915; \$60.14 in 1916; \$51.20 in 1917, to Jan., 1918; a total of \$226.34 per share, or \$22,634,000.

Property: 1,240 acres, being the S. $\frac{1}{2}$ of Sec. 30, W. $\frac{1}{2}$ and N. $\frac{1}{2}$ of N. E. $\frac{1}{4}$ and S. W. $\frac{1}{4}$ of N. E. $\frac{1}{4}$ of Sec. 31, T. 54 N., R. 35 W., practically all on the mineral belt. Neighbors are the Copper Range and Trimountain on the north, lands of St. Mary's Co. and Hussey, Howe & Co. on the east; Hussey-Howe lands and the Globe tract on the south, and Copper Range lands on the west. The tract carries 9,047' on the strike of the bed, and, at the present angle of dip, the deepest shaft could go down to the impossible depth of 18,950' before reaching the western boundary.

Geology: development started in 1899, under direction of Dr. L. L. Hubbard, and 3 parallel amygdaloidal beds were uncovered by trenching, one of which, the Baltic, showed phenomenal copper values. The 2 amygdaloids paralleling the Baltic bed showed copper in sufficient quantities to render their future exploration advisable. A fourth amygdaloidal bed, about 15' wide, discovered 1901, east of the Baltic bed, carries heavy copper to an encouraging extent, and there also is a fissure vein of arsenical ore, apparently algodonite (copper arsenide) near "C" shaft. The width of this vein at surface is slight, and mineral contents variable, but on the second level the fissure is 2' wide, and well mineralized.

The dip of the Baltic bed at the Champion is about 70° and strike same as at the Trimountain, not the easterly trend of the Baltic mine. The bed runs 13 to 45' and averages 24' width, carrying more epidote than at the Trimountain and Baltic. The surface of the tract is very hilly, but the overburden is less than is found either to the northward or southward. The stretches of lean ground in the mine are few, and the bed carries heavy copper in profusion, mostly in barrel size, but running up to masses of 10 tons in weight. Only about 60% of the rock broken is hoisted, waste rock being sorted out and used for dry walling, packing itself.

All shafts are connected on numerous levels and about 2 miles of new workings are made yearly. The bed shows so little poor ground that nearly every level will be opened from end to end of the mine, eventually giving the longest average drifts of any Lake Superior property. The only really poor ground found in the mine was shown in "E" shaft, between the 3d and 4th levels, and the mine shows some stopes of phenomenal width and richness. The ground opened, 1914, was of average value. A large area of good ground was opened between Nos. 2 and 3 shafts in 1915.

Development: by 4 shafts, named from north to south: "B" shaft, the northernmost, 1,835' south of the Trimountain boundary, is 2,356' deep; "C" shaft, 1,650' south of "B," is 2,334' deep; "D" shaft, 1,300' south of "C," is 2,087' deep; "E" shaft, 1,300' south of "B" and 3,900' north of the Globe boundary, is 2,188' deep. The third level of "E" shaft has been driven 3,000' beyond the Globe boundary. "F" shaft, started 1,300' south of "B," was abandoned on account of treacherous overburden, but the Baltic bed was located, 1907, by diamond drill at a new site, 1,800' south of "E," and 2,100' beyond the Globe boundary.

The work in 1916 was: 11,791' of drifting, 722' of cross-cutting, 3,511' of raising and 27' of shaft sinking.

Equipment: the shafts are practically duplicates in all essential particulars, having 40x50' shaft rock houses, with 90-ton ore bins, enlarged, 1908, by the Wisconsin Bridge & Iron Co. Equipment at each rock house includes a steam hammer for heavy copper, and one 12x15" rock crusher, taking everything hoisted from the mine direct from chutes. The shafts have duplicate first-motion Nordberg hoists with 24x60" duplex cylinders and double conical drums of 14' diameter, with capacity for two 3,000' cables each, hoisting 6-ton skips. The boiler houses have Bradley and Burt boilers, with coal trestles connecting. Water for boilers is furnished from a 12,000,000-gal. dam.

Very extensive use is made of electric power on surface, and there are some underground electric pumps. The electric plant at "F" shaft has a 250-k. w. General Electric generator, direct connected to an Allis-Chalmers cross-compound vertical engine.

The main steel compressor building at "F" shaft has a 100-drill Nordberg quadruple expansion 2-stage air compressor, with capacity to compress 9,120 cu. ft. of free air per minute to a pressure of 70 lbs. per inch. The compressor operates at a steam pressure of 280 lbs., and has a regenerative feed-water system. Power is furnished by three 250-h. p. Geary water-tube boilers. At "B" shaft there is a 40-drill Ingersoll-Sergeant cross-compound 2-stage air compressor with vertical receiver inter-cooler. The electric plant, with a 100-k. w. generator, is in the main compressor building.

Buildings at the mine include a change house, dwellings and machine shop, with traveling crane and trolley rail for its entire length, with a 30-h. p. electric motor.

The stamp mill is at Freda, on Lake Superior, 2 miles west of Redridge. Lower-pressure turbine and accessories were installed in 1915. The mill has 6 Nordberg stamps, there being 4 compound stamps, with 15½" cylinders, each treating about 700 tons daily, and 2 simple stamps, with 28" cylinders, of about 660 tons daily capacity each, giving the mill a total capacity of fully 4,000 tons daily.

The concentration department was remodeled, 1908, and given additional tables and larger settling tanks. The wash for the heads has Hodge graduated adjustable-speed jigs, with plungers working simultaneously or alternately, in pairs, Woodbury jigs and Deister concentrating tables. Rag-gings are reground by Allis-Chalmers crushing rolls having 1 roll fixed and the other in a spring bearing. The preliminary discharge from the stamp heads is treated on very large jigs, having 30x48" sieves, of punched steel, with one-eighth inch openings, installed in connection with the head. Each head has a V-shaped settling tank, 40' long, 9' deep, 12' wide at the top and 6" wide at the bottom, slimes being drawn from spigots at the bottom. The flow of water through the settling tanks does not exceed 6' per minute.

The mill is heated by hot water from a Green fuel economizer.

The steel boiler house has four 200-h. p. Stirling boilers, 5 Dutch oven Scotch marine boilers and 2 Hawley down-draft furnaces. In 1916 a 235' concrete stack, 100" dia. at top, was constructed, and a new boiler installed. Coal is brought to the boilers by tram, and reduced to uniform size by a grinder before feeding to the grates, and ashes are washed into the lake through a launder. Exhaust steam passes through dry condensers, thence to a hot well, from which water is fed to the boilers. Power for the mill is supplied by a 500-h. p. Nordberg cross-compound engine and a turbine, with a 180-h. p. engine in reserve.

The steel pump house, with truss roof and traveling crane, has a 20,000,000-gal. Nordberg triple-expansion pump. Water for the mill and boilers comes from the lake through a 1,020' tunnel, the shore end having

a well with bottom 8' lower than the lake level, this being the longest tunnel ever driven under Lake Superior. The intake crib has an area of 45 sq. ft. and, with a second crib, the tunnel could furnish water for 10 stamps. Water cost is less than 1½ cts. per ton of rock stamped. Screens have been installed in the tunnel, obviating the trouble formerly caused by sand and wood pulp in the water. A sand loading plant was erected in 1915. During the year 173,170 cu. yds. of stamp sand were run into the mine for fill. In 1916, \$225,567 was spent for additional equipment which included locomotives, changehouse, additional dwellings, etc., at mine and at the mill, a concrete stack, a boiler, steel railway trestles, turbine, mill equipment and fire proofing of mill.

Production:

The Champion is one of the largest and richest of Lake Superior mines and has been admirably managed.

CHEROKEE COPPER CO.**MICHIGAN**

J. A. Thomas, supt., Houghton, Mich. Mine address: Winona, Houghton Co., Mich.

Officers: W. A. Hodgson, pres.; Linus Stannard, 1st v. p.; Deen L. Robinson, 2nd v. p.; Wm. D. Calverly, sec.-treas.; preceding, with J. H. Rice, B. F. Sparks and F. W. Nichols, directors.

Inc. April, 1910, in Michigan. **Cap.** \$2,500,000; shares \$25 par; issued, \$1,750,000, of which 49,000 shares were given for lands, 5,000 shares went to the promoters, and 16,000 shares were sold to the public at \$5. An assessment of 50c a share was levied and was due March 26, 1917. Cash on hand Feb. 9, 1917, was \$14,990.

Property: 800 acres, Sec. 2 and S. E. ¼ of Sec. 3, T. 51 N., R. 57 W., lying between the Bohemia and King Philip, 1 to 2 miles S. W. of the latter, formerly were owned by the Penn Mining Co., and later by the ill-starred Belt Mines Co., Ltd. Land, entirely on the mineral belt, formerly included what is now the Lake mine of the Lake Copper Co., and carries upwards of a mile of the copper-bearing formation, presumably carrying the Evergreen belt. In 1913 diamond drilling began. No. 6 drill hole cut a cupriferous amygdaloidal bed of 32' width, of which 5' carried good copper.

The vein is amygdaloid to epidotal amygdaloid in character with general N. E. strike and dip of 62°, having barrel and shot copper in surface workings, and a width of 30' to 45'.

Development: by shaft, down 250', with openings at 110'. At 220' there is a station with drifting underway. At 110', vein showed a width of 26'.

Equipment: hoist, compressor, pumps, etc.

CLARK MINE**MICHIGAN**

Idle. Office: care Dr. Léon Estivant, owner, 47 Ave. de l'Alma, Paris France. Mine office: Copper Falls, Keweenaw Co., Mich. Fred W. Nichols, agent.

Property: 2,433 acres, includes mines formerly known as the Clark, Bel and Montreal, about 3 miles south of Copper Harbor, between Lake Fanni Hooe on the north and Breakfast Lake on the south, including Lake Mangane. Mine, opened 1858, for copper, also carries a promising 2' vein of pyrolusite, average of assays, 1900, by Duparc, of Geneva, giving 55.73% manganese and 1.36% copper. Has shipped about 1,200 tons of high-grade manganese ore. Was tested, 1905, and again, 1910, by diamond drills. Was under option, 1910, to United States Smelting, Refining & Mining Co. Fully described Vol. II.

CLIFF MINING CO.**MICHIGAN**

Subsidiary of Calumet and Hecla Mining Co.

Office: 12 Ashburton Place, Boston, Mass. Operating office: Calumet Mich. Mine office: Phoenix, Keweenaw Co., Mich.

Officers: Rodolphe L. Agassiz, pres.; Jas. MacNaughton, v. p. and genl. mgr.; preceding with Geo. A. Flagg, R. C. Grew, W. E. L. Dillaway, Francis L. Higginson and Walter Hunnewell, directors; C. H. Bissell, sec.-treas. Geo. L. Osgood, asst. sec.-treas.

Inc. Jan., 1910, in Michigan. Cap., \$2,500,000; shares \$25 par; issued \$1,500,000, \$13 paid in. Is controlled through ownership of 19,400 shares by Calumet & Hecla Mining Co. Ended 1916 with \$21,445 cash, and accounts receivable; and accounts payable of only \$110. State Street Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Annual meeting, first Wednesday in April.

Property: includes the Cliff mine proper, and the South Cliff, connected underground on the 3d level. The Cliff mine, 2 miles N. E. of the Ojibway is the oldest mine in the Lake Superior district, opened 1846, closed 1870 again reopened 1872, and abandoned 1878, paying dividends, 1849-79, of \$2,518,620. The old mine was opened on a fissure vein crossing the bedded formation at practically right angles, and was pretty thoroughly worked out before the property was abandoned. The main fissure vein had several feeders, and a number of independent fissure veins, including the West vein, which was rich in copper near surface, and the East Cliff vein, about an eighth of a mile east of the main vein. The Cliff was notably rich in native silver.

The Cliff carries the Kearsarge amygdaloidal bed for about 2 miles, and for practically unlimited depth, the shaft being a trifle less than 2 miles from the most northerly shaft of the Ojibway, which is the nearest opening on the Kearsarge lode. The Tamarack Mining Co., which owned the Cliff until 1910, secured a complete geological cross-section of the tract, by diamond drilling, 1903-07, the Kearsarge bed being located by 12 drill holes the majority of which were said to show commercial values, and, in addition, the property carries about 20 other amygdaloidal beds, under the greenstone bluff, which is such a prominent feature of the landscape, rising to a height of several hundred feet. A temporary vertical shaft, with single compartment, started Aug., 1910, was sunk 217', entering the bed near the hanging wall of the Kearsarge, the ground being considerably disturbed at this point. Work in this shaft was abandoned during the first half of 1913, as the Kearsarge vein at this place proved narrow, dry and barren.

Five diamond drill holes were put down during 1914 and 1915 to explore the beds eastward in the hope of finding a profitable vein towards the Eastern sandstone. The cross-section crossed the horizon of the Old Co.

ony, Mayflower and St. Louis amygdaloid lodes and the Bohemia and St. Louis conglomerate lodes, but very little copper was disclosed by this work.

The Cliff was the first mine ever opened on native copper, and production, 1845, was 19,903 lbs., which was the first commercial output of copper from Lake Superior. Total production, 1845-82, was 38,054,340 lbs. fine copper.

Equipment: includes a power house, with boilers, duplex hoist, and a 5-drill air compressor. Buildings include a smithy, changing house, combination office and warehouse, boarding house and a number of dwellings. The mine is reached by the Keweenaw Central railway.

Owing to the unsatisfactory results of the drill-holes, property has been idle during the past year.

CONTACT COPPER CO.

MICHIGAN

Office: 70 State St., Boston, Mass. **Mine office:** Houghton, Mich.

Officers: Harry F. Fay, pres.; C. J. Morrisey, sec.-treas.; preceding, with W. A. Mosman, W. S. B. Cram and John G. Stone, directors. G. S. Goodale, supt.

Inc. May, 1910, in Michigan. Cap., \$5,000,000; shares \$25 par; paid in \$2.50; issued 111,125 shares. Annual meeting, third Thursday in March.

Company is a reorganization of the Elm River Copper Co., whose shareholders were given the privilege of exchanging their stock for shares in the Contact Copper Co. on the basis of share for share, on condition that they subscribed for additional shares at \$2 each, to the extent of 50% of their holdings in Elm River. Practically 75% of Elm River stock was exchanged and the Contact Co. has now acquired title to all the real estate and personal property of the former company, which has been dissolved and is now in process of liquidation.

Report Jan. 1, 1917, showed cash on hand, \$5,922. Company should receive \$6,500 in Sept., 1917, further payment on timber contract.

Property: 2,360 acres, in one continuous tract, within the limits of the copper-bearing formations in Houghton Co., Mich. Within these limits the property has a maximum distance along the strike of 16,900', a width of cross-section of 11,600' and embraces the horizons of all the copper-bearing beds of the Keweenaw formation, between the Eastern Sandstone and the upper part of the Ashbed series.

Nearly a complete cross-section has been secured by upwards of 11,600' of diamond-drill borings, despite the heavy overburden on nearly all of the tract. Borings have given cores carrying copper from a number of different beds, but not in commercial quantities. On July 1, 1915, drilling was resumed in the S. E. $\frac{1}{4}$ of Sec. 11, to investigate the horizon believed to contain the so-called No. 8 Amygdaloid opened on the neighboring Wyandot property and correlated with the Baltic lode on which all the mines of the Copper Range Co. are located. Up to March, 1916, about 5,271' of drilling had been done and the lode definitely located at depths of 450' and 950', respectively, from the outcrop. In hole No. 20, 2,518' of drilling was accomplished between March 1 and Jun 29, 1916. In hole No. 20 the lode was located between 1,878' and 1,958'; in No. 21 between 641' and 671'. In these 4 holes, a formation has been indicated of about 35' average thickness showing a uniformly favorable character of rock.

Equipment: includes a duplex hoist good for 1,000', 2 Burt marine boilers and a 4-drill air compressor. Water is taken from a dam by a Blake pump. Buildings include a carpenter shop, two-story warehouse, boarding house with accommodations for 100 men, school house and a number of dwellings.

In order to protect the company's cash, work was suspended in 1916, to await the result of active diamond drill work on the ground north and south of the company holdings.

COPPER CROWN MINING CO.**MICHIGAN**

Inc. July 18, 1902, in Michigan. Cap., \$2,500,000; increased about 1911, to \$3,000,000; shares \$25 par; issued, 66,200 shares. Company in July, 1916, sold its property to the Cass Copper Co., for 40,000 shares of latter company's stock, which see.

COPPER RANGE COMPANY**MICHIGAN**

Office: 82 Devonshire St., Boston, Mass. Mine office: Painesdale, Houghton Co., Mich. Sales Dept.: 32 Broadway, New York.

Officers: Wm. A. Paine, pres.; F. W. Denton, v. p.; F. W. Paine, sec-treas.; above with Chas. J. Paine, Jr., J. R. Stanton, S. L. Smith and R. H. Gross, directors; William H. Schacht, gen. mgr. W. Parsons Todd, sales mgr., New York; John M. Wagner, purch. agent, Houghton, Mich. American Trust Co., Boston, transfer agent; State Street Trust Co., Boston, registrar. Annual meeting, 1st Wednesday in May.

Inc. 1899, in Michigan. Cap., \$2,500,000, increased 1915 to \$10,000,000; shares \$25 par; issued, 390,336 shares; reserved for exchange 4,664; treasury stock, 5,000 shares. The company is now the successor of the Copper Range Consolidated, which Dec., 1901, took over 99,699 shares of the company's stock. On Oct. 18, 1915, this holding company was formally dissolved and the shares exchanged for those of the Copper Range Co.

Dividends: \$1,536,086 in 1905; \$2,304,810 in 1906; \$2,304,810 in 1907; \$1,536,740 in 1908; \$1,536,930 in 1909; \$1,537,340 in 1910; \$1,357,104 in 1911; \$788,428 in 1912; \$1,084,498 in 1913; \$1,182,003 in 1915; \$3,941,648, or \$10 per share, in 1916; \$2.50 per share quarterly in 1917; total dividends to Dec. 31, 1916, \$19,110,397.

The balance sheet shows:

Assets:	1916	1915	1914
Cash at Boston.....	\$2,647,943	\$853,641	\$177,000
Cash at Mine and supplies.....	813,945	615,559	627,000
Copper on hand.....	2,053,758	1,934,027	1,363,750
Copper Range R. R. Bonds.....	870,000	890,000	870,000
Accounts receivable.....	89,917	82,000
Michigan Sm. Co. stock.....	340,000	76,470	340,000
	<hr/>	<hr/>	<hr/>
	\$6,815,564	\$4,689,697	\$3,140,000
 Liabilities:	 1916	 1915	 1914
Notes payable.....	\$1,200,000
Mine indebtedness.....	\$194,319	\$189,949	257,000
Accounts payable.....	226,817	201,949
One-half Champion.....	835,966	907,934	900,000
Excess of assets.....	5,558,460	3,390,464	1,980,000
	<hr/>	<hr/>	<hr/>
	\$6,815,564	\$4,689,697	\$3,140,000

Net income for 1916 from operations of all the subsidiary companies before deducting dividends was \$6,078,189, or \$15.40 per share. The dividend was but \$10, the difference being added to surplus.

Holdings consist of the entire assets of the Copper Range Consolidated, namely: 50,000 shares of Champion Copper Co., which is one-half the

issue; 99,990 shares Baltic Mining Co.; 96,920 shares Atlantic Mining Co., and 42,443 shares of Copper Range Railroad Co. stock.

Trimountain Mining Co. and Baltic Mining Co. have been dissolved, as they are owned entirely by the Copper Range Co.

In 1917, the entire property of the South Range Mng. company was bought for \$50,000, consisting of 7,000 acres undeveloped mineral lands in Houghton and Ontonagon counties.

Property: 16,467.64 acres, mainly in Houghton County. Mining companies controlled own an additional 12,240.4 acres. Company secured an option on 3,500 acres lying to the south from the St. Mary's Mineral Land Co. and bought for \$50,000 scattered lands to the extent of 5,000 acres. Average yield of copper per ton of rock was 22.90 lbs. in 1914, 32.50 lbs. in 1915, and 33.07 lbs. in 1916, the highest figure yet obtained. The company's original tract of 9,360 acres mineral and 441 acres non-mineral and, lies between the Baltic mine (800 acres) on the south and the Trimountain (1,351 acres) on the north. The Champion lies between the Baltic and the St. Mary's Mineral Land property. The Atlantic mine has been idle since the mine was wrecked by air blasts in 1911. The Baltic mine, a highly mineralized amygdaloid bed 15'-60' wide, mined through three shafts, 300' deep. The Champion works three separate amygdaloid beds mined by four 2,000' shafts. The Tri-mountain output comes from the Baltic bed mined by 4 shafts, one 2,800' deep.

The company is the second largest producer of the Lake Superior district.

The total 1916 production of copper from which this company's profits are derived, that is, Baltic, Trimountain, and one-half of Champion, was 37,946,930 lbs., as compared with 37,035,642 lbs. in 1915. The average yield is 33.07 lbs. of copper per ton from 1,655,447 tons stamped.

Costs and Profits—1916

	Production Lbs.	Cost per Lb.	Profits	Price Rec'd
Baltic.....	12,425,804	10.85c	\$1,792,667	25.28c
Trimountain.....	8,720,558	11.1c	1,236,048	25.28c
Champion, one-half.....	16,800,568	7.8c	2,935,303	25.28c
	37,946,930	9.56c	\$5,964,019	25.28c
Copper Range Co.:				
Atlantic.....	37,035,642	8.06c	3,459,236.44	17.4c
.....	19,953,854	10.66c	541,961.06	13.38c
.....	18,767,359	11.71c	595,958.01	14.89c
.....	28,967,428	10.51c	1,631,676.10	16.16c
.....	29,310,579	9.74c	817,879.86	12.54c

The above table shows the effect of improvements in mining and milling machinery. These improvements give assurance that operating results similar to those of 1916 may be expected to continue under average conditions.

Development: for 1916 totaled 39,665' and in addition there was 6,264' being.

Ore reserves: a satisfactory tonnage was developed in 1916, which was equal in amount to that extracted. Tons of rock stamped in 1916 1,655,447. The new selling department of the company effected a substantial saving in commissions and proved an unqualified success. Copper production is an assured success and worthy of all that has been said about it.

Copper Range Consolidated Co.

Company dissolved Oct. 18, 1915, shareholders receiving an equal number of Copper Range Co. stock in exchange.

Copper Range Railroad Co.

Office: 82 Devonshire St., Boston, Mass. Operating office: Houghton, Mich.

Officers: Wm. A. Paine, pres.; F. W. Paine, v. p. and sec.-treas. preceding officers, John H. Rice, Frederick W. Denton, Thos. S. DeWm. D. Calverley, Samuel L. Smith, F. R. Bolles, gen. mgr., directors.

Inc. 1899 in Michigan. Cap., \$5,000,000; shares \$100 par; issued, \$4,244,300. Debentures outstanding, \$2,280,000 first-mortgage 5% bonds. Company is authorized to issue bonds to extent of \$20,000 per mile of completed main line, and \$15,000 per mile of completed branch lines and side tracks. Is controlled by Copper Range Company. Balance sheet of Dec. 31, 1916, gave cost of road at \$6,173,016, with equipment inventoried at \$871,500. Earnings were \$601,643 gross and \$186,979 net in 1914; \$811,346 gross and \$326,895 net in 1915; \$930,606 gross and \$324,131 net in 1916. Credit balance as carried to balance sheet, \$712,948. About 75% of the gross income is derived from transportation of ore, mineral and freight.

The railroad has upwards of 100 miles of trackage, the 65-mile main line running from Calumet to McKeever, and connecting with the Keweenaw Central at Calumet; the Duluth, South Shore & Atlantic, Hancock at Calumet and Mineral Range railways at Hancock and Houghton, and the Chicago, Milwaukee & St. Paul railway at McKeever. The company also has trackage rights over 19 miles of the Chicago, Milwaukee & St. Paul railway, between McKeever and Ontonagon, and operates a daily passenger service between Calumet and Ontonagon, with additional trackage rights of 73 miles over the same line, over which fast freights are operated between Calumet and Channing, Mich. Trackage rights have been given the Chicago, Milwaukee & St. Paul over the Copper Range between McKeever and Houghton, and a direct passenger service, with exceptionally good equipment, is operated jointly by the Chicago, Milwaukee & St. Paul and Copper Range lines, between Chicago and Houghton. Spurs connect the main lines with all of the principal mines along the right-of-way.

The company owns a half-interest in a bridge crossing Portage lake between Houghton and Hancock; also extensive water frontage on Portage lake, in the western part of Houghton, with general office building, shop, roundhouse, warehouses and wharves for merchandise and coal. The coal wharf is equipped with modern unloading machinery, and has deep water alongside, capable of accommodating the largest freighters plying the great lakes. The Copper Range railway is a model small road.

Baltic Mining Co.

Company has been dissolved. Its properties are owned entirely by the Copper Range Company, including \$80,000 stock in the Michigan Smelting Co.

Paid dividends of \$7,950,000 to end of 1913; dividends being \$12.50 in 1905; \$14 in 1906; \$10 in 1907; \$9 in 1908; \$10 in 1909; \$10 in 1910; \$5 in 1911; \$7 in 1912; \$2 in 1913. Net earnings, 1916, were \$1,792,667, and company ended the year with a surplus of \$3,253,184. Total assets were given as: \$5,714,000 with total liabilities of \$21,250.

Lands: 800 acres, near the western limit of the Michigan copper belt, about 75 acres being on the eastern sandstone and non-mineralized. Held

ings comprise all of Sec. 21 except the S. E. $\frac{1}{4}$, and W. $\frac{1}{2}$ of Sec. 20, T. 54 N., R. 34 W. Lands are bounded on the north by the Wheal Kate and Sec. 16 of the Atlantic; on the east by St. Mary's Mineral Land Co.; on the south by St. Mary's lands, lands of Hussey, Howe & Co., and the Trimountain mine; on the west by the Trimountain. Exchanged 39 acres, 1905, with the Atlantic mine, which will enable the Baltic to sink No. 5 shaft to much greater depth than otherwise possible. To the southward the Trimountain and Champion mines are opened on the same bed, which has a strike of N. 63° E., from Baltic shafts 2 to 5, and to the northward is the Superior mine, on the same bed. The dip of the bed averages about 73° , being the sharpest of any developed cupriferous bed in the Lake district.

The Baltic amygdaloidal bed is exceptionally strong, ranging 15 to 60' in width, and so well mineralized that at most points it can be more or less thoroughly stoped from wall to wall. The great width of the stopes has brought about the use of a walling system, by which waste rock is built into dry walls along the drifts, thus saving timbering, while giving stronger walls than any timber could supply, and saving the cost of hoisting lean rock. The walling system of the Baltic has proven a success under actual test, and is now in general use in the Lake district, the credit being due Mr. Denton. A little melaconite is found in narrow fissures crossing the lode, these being too small to follow, but the black oxide ore mined in the stopes is saved in the milling, carrying 35 to 40% copper as dressed, and smelts readily with the native copper mineral. The native copper of the Baltic is arsenical, and it is probable that some copper arsenides are mined and milled, as narrow arsenical fissure veins occur occasionally in the district south of Portage lake. While the finished copper is arsenical, it makes wire of great tensile strength.

Development: shafts are numbered from south to north. In 1916, 20,143' of new openings and 584' of shaft sinking was done.

No. 1, the discovery shaft, located between Nos. 2 and 3, was sunk at a wrong angle, and was abandoned at depth of 219'.

No. 2, the southernmost shaft, is 2,773' deep, began production 1906 and furnished about half of the 1916 production. The surface plant at No. 2 includes a boiler house with two 250 h. p. Stirling boilers, and an engine house with a Nordberg air compressor reducing 4,000' of free air per minute to a pressure of 70 lbs. per square inch, and a Nordberg hoist with double-conical drum. The shaft rock house has a crusher operated electrically, and the shaft has concrete stringers.

No. 3 shaft, 1,170' northeast of No. 2 and 3,103' deep, has a steel shaft rock house of the circular type, with 1,200-ton bins, equipment including a 60-hp engine, two 18x24" Blake crushers and a large crusher operated electrically.

No. 4 shaft, 900' northeast of No. 3 and 2,867' deep, has a frame shaft rock house sheathed with steel, 36x71', with 17x31' wing, 88' high, with 1,400-ton rock bins and two 18x24" Blake crushers.

No. 5 shaft, the northernmost, 885' N. E. of No. 4 and 1,624' deep, has a rock house duplicating that at No. 4. Stoping was done on the 9th and 10th levels, inclusive, and drifts run to the Atlantic boundary. The ground was considerably disturbed in the upper levels, but is growing more solid at the bottom, and good showings are reported on the West lode. There is a duplex Nordberg, good for 1,500' depth. Shaft has been abandoned and ground tributary thereto is mined and ore hoisted through the No. 1 shaft.

Hand power cranes for handling mass copper have been installed at No. 2 shaft, and the mine has electric pumps. In 1915 installation of addi-

tional dynamo for underground haulage and construction of transformer house for new transmission line from stamp mills was completed.

The compressor house, between shafts Nos. 3 and 4, is 36x58' in size, with concrete foundations, stone walls and steel roof, housing a compressor with capacity to reduce 4,000 cu. ft. of free air per minute to a pressure of 70 lbs. per inch. Adjoining is a boiler house of similar material, 49x76', with wing 2x62', having four 250-h. p. Stirling boilers and a 140' self-supported steel smokestack. This boiler plant supplies steam for shafts 3 and 4. A new boiler plant was constructed in 1916. Adjoining the boiler house is a 360' coal trestle, of 5,000 tons capacity, underneath being a 5x8' concrete tunnel, through which coal is hauled in tram cars, on a down grade, by endless cable. The mine has a complete electric light plant. A considerable town has grown up about the mine with well-built dwellings for employees on lands owned by the company. The property is served by the Painesdalk branch of the Coper Range railroad, under the same control as the mine.

The mill, on Lake Superior, one-half mile west of the Atlantic mill went into commission Dec., 1901, and was enlarged, 1907. The building is of structural steel, on stone foundation, equipped with 4 Allis simple heads of 500 to 625 tons daily capacity each, and 2 Nordberg compound heads of about 800 tons daily capacity each, giving the mill a capacity of about 4,000 tons daily. Equipped with Wilfley tables, Woodbury jigs and Deister concentrating tables for treating the finer slimes. The mill has crushing roll and a Huntington mill for regrinding, and a settling tank for slimes. Mineral carries about 60% fine copper. Power is furnished by a 500-h. p. 14x33 Nordberg cross-compound engine, and a 180-h. p. auxiliary engine.

Adjoining the mill is a boiler house with five 250-h. p. Stirling boiler and a Green fuel economizer. Draft is secured by a set of duplex fans driven by the mill engine, with a concrete smokestack 226' high and 8' diameter. Behind the boiler house is a 25,000-ton coal storage yard, for the joint use of the Baltic and Atlantic mills, coal being brought to the boilers, through tunnels, by gravity. A 1,250 k. w. electrical plant, installed 1912, at the Baltic mill, supplied power for number of regrinding mills and this and other stamp mills of the parent company.

Water for the Baltic and Atlantic mills is furnished by a \$150,000 gravity dam across the mouth of Salmon Trout river. The entire steel structure is anchored to a 2" steel base plate, at the bottom of the concrete, by large number of 1½", 2", and 2½" steel rods of 15 to 30' length. Water taken from the dam about 20' below the crest by three 38" riveted steel pipes, one on the Atlantic and two on the Baltic side. Surmounting the structure is a trestle of the Copper Range railroad.

Production:

	Rock Stamped Tons	Copper Produced Pounds	Yield per Ton, Lbs.	Cost per Pound	Price Received
1907.....	761,288	16,704,868	21.94	10.34c	17.25
1908.....	764,117	17,724,854	23.19	08.28c	13.39
1909.....	814,260	17,817,836	21.88	07.98c	13.09
1910.....	781,419	17,540,762	22.46	08.32c	12.75
1911.....	696,795	15,370,449	22.06	09.09c	12.54
1912.....	652,433	13,373,961	20.50	10.94c	16.14
1913.....	333,289	7,736,126	23.21	11.91c	14.52
1914.....	324,433	7,001,945	21.58	11.17c	13.38
1915.....	378,443	12,028,947	31.79	09.50c	17.48
1916.....	369,287	12,425,804	33.65	10.85c	26.25
Total.....	5,875,764	137,734,552	23.44	09.54c	15.00

The ultimate productive capacity of the mine cannot be predicted with safety, but the present milling capacity is equal to making nearly 25,000,000 lbs. fine copper yearly, and ultimately this output, or even a greater production, should be reached.

Trimountain Mining Co.

Company was dissolved Jan., 1917, by Circuit Court, County of Houghton. Entire properties owned by the Copper Range Co.

Officers: John Jolly, supt.; Edw. Koepel, mill supt.; H. T. Mercer, engr.; Benj. D. Noetzel, clerk; Richard Bowden, mg. capt.; Wm. J. Richards, master mechanic.

Dividends: \$3 in 1903, \$5 in 1908, \$1.50 in 1910, \$3 in 1912, and \$2 in 1913.

Balance of assets Jan. 1, 1917, \$2,600,231, including \$1,946,358 cash and copper on hand amounting to \$94,572. Liabilities amounted to \$108,142, leaving a surplus of \$2,492,088 for the year.

Property: 1,120 acres, the E. $\frac{1}{2}$ of Sec. 19, W. $\frac{1}{2}$ of Sec. 20, N. $\frac{1}{2}$ of Sec. 29, and N.-E. $\frac{1}{4}$ of Sec. 30, all in T. 54 N., R. 34 W. The Baltic mine lies to the N. and the Champion to the S., with undeveloped lands to the E. and W.

Owing to a very heavy sand overburden the mine was opened by drop-shafts sunk through alluvium, with raises to surface on the angle of the dip of the stratified formation. The Baltic bed runs 15 to 50', with an average width of 25', on the Trimountain property. Heavy copper is found near the walls, and masses upwards of a ton in weight have been found, but values occur mainly disseminated in stamp rock.

The Trimountain shafts enter lean streaks or shoots, sometimes 500' in horizontal length, with flat northerly pitch or rake, underlain by copper ore. Lying parallel with and about 65' W. from the Baltic bed, is a wide amygdaloid, carrying some heavy copper and considerable stamp rock. This bed is not yet been worked, but may be made available for production at some time in the future. The great width of the lode has led to a dry-wall-ging with waste rock, which is used also for building underground chutes, which are roughly circular, with inner diameter of about 5' and are filled out with waste, as stopes are carried upward, three chutes being built at a steep pitch, the wedging of the surrounding waste rock serving to hold the walls immovable. The saving in timbering brought about by dry-wall-ging and building chutes of mine rock is very great.

Development: No. 1 shaft, 210' north of the Champion boundary line, sunk at an angle of 68°, with 1st level opened 168' below the collar, and levels thereafter at 100' intervals. The upper levels tributary to No. 1 shaft have been worked out, and the shaft abandoned at depth of 2,284'. It now serves as a waste sand chute.

No. 2 shaft, 1,023' N. E. of No. 1, was 2,859' deep at the end of 1915, and considerable improvement has been noted in ground below the 14th level, and the bottom levels the best opened in this shaft. The shaft rock house, with 2,000-ton rock bins, and is equipped with an engine, steam hammer and two crushers. Rock is raised by a 2,500-h. p. Nordberg direct-connected duplex hoist, with double-conical drum of 18' maximum diameter, capable of raising 6-ton skips from 1 mile depth.

No. 3 shaft, 1,027' N. E. of No. 2, sunk at an angle of 68°, was 2,563' deep at the end of 1915. Beneath 60' of sand, the rock was found to be highly fractured and barren down to the 2nd level, only becoming solid and productive below the 14th level.

Phoenix shaft of the Keweenaw Copper Co. Lands cover a $1\frac{1}{2}$ mile stretch across the strike of the copper lode and near the Phoenix, St Clair and Eagle River properties of the Keweenaw Copper Co., with Ojibway lands on west and east. Lands are crossed by Kearsarge amygdaloid which dips 30° N. W., giving 292.5 acres underlaid by this lode, whose copper content in this part of the range is as yet unprospected. Diamond drilling on this tract is planned for 1917-18.

FRANKLIN MINING CO.

MICHIGAN

Office: 60 Congress St., Boston, Mass. **Mine office:** Demmon, Houghton Co., Mich. **Mill office:** Point Mills, Houghton Co., Mich.

Officers: R. M. Edwards, pres.-gen. mgr.; Henry D. Forbes, v. p. Henry Tolman, treas.; preceding, with C. W. Van Law, C. A. Hight, Sidney J. Jennings and Harry M. Howard, directors. Albert L. Wyman, sec Enoch Henderson, supt.

Inc. April 3, 1857, in Michigan. **Cap.**, \$500,000, and reincorporated, 1887 for 30 years; cap. increased, 1899, to \$2,500,000, and again increased, Nov. 1908, to \$5,000,000; shares \$25 par; issued, 166,473; paid in \$16.20, to Dec 1915. Unissued stock has been set aside for the purpose of acquiring the total capitalization or 100,000 shares of the Rhode Island Copper Co. Has paid dividends of \$1,240,000, and has levied assessments of \$1,753,000, including a \$2 assessment called Aug., 1914. Federal Trust Co., Boston registrar; American Trust Co., Boston, transfer agent. Annual meeting third Wednesday in April.

Balance sheet of Dec. 31, 1916, showed a cash surplus of \$192,094, as compared with \$30,022 in 1915. The revenue in 1916 totaled \$834,616. All notes payable, amounting to \$155,000 on Jan. 1, 1916, have been paid from earnings, so the company has no indebtedness save current expenses.

Property: 3,280 acres of mineral property, and a 217-acre mill site, with 1 mile of frontage on Portage lake. The old Franklin mine (described Vol. VIII), 160 acres, was sold, July, 1908, to the Quincy Mining Co., for \$170,000, and Sec. 6, T. 55 N., R. 33 W., 640 acres, lying directly north of the Franklin Junior and west of the Rhode Island, was bought from St. Mary's Mineral Land Co., 1909, for 33,333 shares of stock.

Property carries 2 miles of the strike of the Pewabic amygdaloid and other cupriferous beds of the Keweenawan series. In addition to the main tract, there are 3 other tracts of mineral lands, of 160, 480 and 640 acres. The company also controls, and is absorbing, the Rhode Island Copper Co., which has 800 acres immediately north of the Franklin Junior mine.

Development: early work was on the Franklin Junior property, where two parallel lodes, the Allouez conglomerate and the Pewabic amygdaloid 500' apart, have been worked. The amygdaloid worked prior to 1902 gave but 9.65 lbs. copper per ton, and was abandoned in favor of the conglomerate until the latter, decreasing in width and value on the 2,000 to 2,400' levels, was abandoned and work resumed on the Pewabic in the Franklin, Jr., shaft (No. 1), sunk about 20' in the footwall. The values being extremely low, mining was stopped, and only exploratory work done. In 1913, a crosscut was started eastward from the shaft at the 3,200' level to explore the entire eastern part of the company's holdings. At 550' from the amygdaloid this crosscut entered payable ore in the Allouez conglomerate, in the Autumn of 1913. Drifts were at once started to prove the extent and copper content of the orebody. Work continued until August, 1914, and was resumed in July, 1915; the orebody now being developed for 3,100' on the 32nd level. It is opened for stoping on each level from the 27th down to the 20th, an average of 700' on each level.

or a total of 7,043' of drifting, with a continuous raise, used as an ore chute from the 2,700' to the 3,700' level, where ore is gathered by electric motor trains and carried to the shaft. Besides this main raise there is another for men and supplies, the new raises in 1916 aggregating 391'. The shaft is down to the 37th level, and shows considerable improvement below a depth of 2,000'. Shaft is equipped with a steel circular rock house (Edwards design), formerly used at No. 2 conglomerate shaft. On the 18th level a crosscut driven in 1915 connects the lode with the shaft, and a similar crosscut has been driven on the 37th level. The old conglomerate shaft, bottomed at 2,400' on the incline, has not been connected.

The most important development in 1916 was the extension of No. 17 and 22 levels S. from No. 1 shaft to a point under No. 2 shaft. The lode here is richer and wider than the average of the conglomerate. This ground, up to No. 17 level, is untouched. No. 2 shaft which had caved, is being reopened and equipped. The work is difficult, but No. 14 level had been reached in June, 1917.

Underground costs were considerably reduced by mechanical haulage on No. 29, 30 and 31 levels.

Having cut the Allouez conglomerate, the exploration crosscut on the 32nd level was continued to a total distance, Dec. 31, 1916, of 4,542' from the Pewabic lode. The crosscut encounters and passes for 25' through the Calumet conglomerate at 2,150', the 10' Osceola amygdaloid at 2,820' and the Kearsarge conglomerate, 40' wide, at 3,380' from the shaft, but all three lodes were devoid of any copper. Twenty-two other amygdaloids were also cut, 9 of them copper bearing, but only 2 rich enough to warrant exploratory drifts and raises; the remaining 13 were barren.

The long crosscut on No. 32-level was driven through the Kearsarge side and stopped on the footwall side of the Wolverine sandstone, 4,542' from the Pewabic amygdaloid. Ore of sufficiently good grade to warrant further exploration was found on the footwall side of the Kearsarge amygdaloid.

Production in 1916 came from drift-stopes and stopes so placed as to need short tramming. Total openings, development and exploratory, amounted to 8,577' in 1916. Company employs 340 men at mine and 80 men at mill.

Equipment: includes a Nordberg hoist at No. 1 shaft hoisting a 10-ton cage, and has special air-compression cylinders, storing up energy, otherwise wasted, in compressed air, the compressed air being mixed with steam in the cylinders, as a prime motive force.

The mill is reached by the Mineral Range railroad. Equipment includes 3 Allis-Chalmers 2-way heads, with 20x24" cylinders, each capable of crushing 350 tons of conglomerate or 500 tons of amygdaloid rock daily. Each stamp is fed from a 1,000-ton rock bin, and equipped with magnetic separators, which remove considerable heavy copper. The wash plant includes 8 Woodbury classifiers, 20 roughing jigs, 15 finishing jigs, 20 Willsley and 10 Overstrom tables. The jigs are of the Hodge type, with centershield copper discharges, obviating skimming.

25 stamp mortars are now on concrete foundations. Power for the mill is furnished by a 16x32" Allis-Chalmers engine, and is supplied by two 500 h. p. Stirling boilers. The boiler house has a supporting brick-lined smokestack of 7' diameter, 165' high, on a rock foundation. Water is furnished by a 15,000,000-gal. Allis-Chalmers compound pump, having 12x12" high-pressure and 42x42" low-pressure cylinders, with 47" stroke and plungers of 37½" diameter. Water flows through a 36" pipe line, running 200' under the rock to a crib

protected by quarter-inch screens. The mill has a 5x12" duplex fire pump with fire hose, and electric light. There is a 267' wharf at the mill site equipped with coal hoist and sheds, with 18' of clear water alongside. The mill site has about 20 dwellings for employees.

Production: in 1903 the recovery of copper was 15.25 lbs. per ton rock stamped and in 1907 was only 11.48 lbs., falling, 1909, to 9.47 lbs. per ton of rock stamped. The largest production ever secured by the mill was 5,259,140 lbs. fine copper in 1902. Recent production has been: 4,206 lbs. in 1905; 4,228,650 lbs. in 1906; 4,401,248 lbs. in 1907; 3,703,421 lbs. in 1911; 1,615,556 lbs. in 1909; 966,353 lbs. in 1910; 820,203 lbs. in 1911; 1,710,651 lbs. in 1912; 1,021,440 lbs. in 1913; 93,283 lbs. in 1914. 1916 production was 280 tons hoisted, 19,317 being discarded and balance, 267,286 stamped, yield 3,116,566 lbs. refined copper, equal to 11.7 lbs. per ton. The daily output is 1,100 to 1,400 tons of ore.

In 1918 company will attempt (once more) to develop the Pewabic Quincy amygdaloid lode, as good rock was found in it on the 30th level. Property is now on a profitable basis and management excellent.

GLOBE MINING CO.

MICHIGAN

Office: 15 William St., New York.

Officers: L. P. Yandall, pres.; R. D. Rickard, v. p.; J. R. Starnes, sec.-treas.; preceding officers, and W. H. Leggett, of Detroit, direct. Inc. May, 1911, in Michigan. Cap., \$78,250; shares \$25 par; fully paid and fully issued.

Property: 3,200 acres, Secs. 1, 2, 3, 4 and 5, T. 53 N., R. 35 W., extending entirely across the Keweenaw trap formation, from the eastern to the western sandstone, lies next south of the Champion, and immediately west of the Challenge, carrying about 6,000' of the strike of the Baltic parallel beds. Mine was developed by the Copper Range Consolidated under option, but option was relinquished, Feb. 1, 1909, after expenditure of upwards of \$500,000.

Development: diamond-drill borings, to locate the Baltic lode. Some cores with excellent values, but disclosed a heavy overburden of sand and boulders, rendering it necessary to reach the solid rock by a vertical shaft. Work was begun early 1905, but the first shaft was abandoned on account of quicksand, and was replaced by a new vertical shaft, about 700' long, to the Champion boundary. The shaft is telescopic, inside measurements at the collar being 13' 3"x23' 3", with a second section below 9x19' 6", and a third section of still smaller size.

The shaft is 1,040' deep, with first level 356' below surface, and levels were cut thereafter at 100' intervals. The Baltic amygdaloid was tested by some diamond-drill boring, and about 900' of drifting was reached on the seventh level, which is about 1,000' from surface, and showed a little copper in patches, but on the whole was unpayable, and work was suspended March 31, 1909, and property has been idle since. Notwithstanding the unfavorable results secured by the work done so far, the property is by no means without promise.

GRATIOT MINING CO.

MICHIGAN

Idle. Office: 12 Ashburton Place, Boston, Mass. **Operating Office:** Calumet, Mich.

Officers: Rudolph T. Agassiz, v. p.; Geo. A. Flagg, sec.-treas.; Walter Hunnewell and Francis T. Blinn, directors.

Property: 600 acres, the N. W. $\frac{1}{4}$ of Sec. 26, N. E. $\frac{1}{4}$ of Sec. 27, E. $\frac{1}{4}$ of Sec. 23, and S. E. $\frac{1}{4}$ of Sec. 22, except the N. W. $\frac{1}{4}$ of the W. $\frac{1}{4}$, T. 57 N., R. 32 W. Property lies S. and E. of the Seneca and E. of the Mohawk, carrying the Kearsarge amygdaloidal bed under about 175 acres, to a maximum depth of about 2,700'. Extensive drill strings were made before the shafts were started. The Kearsarge bed averages about 12' in width, with strike of N. 42° E., and average dip 33 to 36° with the horizon, and its copper contents are painfully low. Development: by two 3-compartment shafts, exact duplicates, sunk at an angle of 36° on the Kearsarge bed. Levels are opened at 100' intervals.

No. 1 shaft, about 1,500' from the Seneca boundary, is 1,900' deep, showing a bed up to 18' in maximum width. Drifting has been done on the alternate odd-numbered levels, from the 1st to 9th, inclusive.

No. 2 shaft, 1,475' S. W. of No. 1, and 1,800' N. of Mohawk No. 1, 1,500' deep, and drifting has been done on the 2nd, 3rd, 5th and 7th levels, the best showing being on the 5th.

Property is served by a $\frac{1}{4}$ -mile spur of the Mineral Range railway, which north from the Mohawk mine.

Production: begun July, 1910, was 28,552 tons of rock, yielding 265-lbs. fine copper, and in 1911, was 1,347 tons rock, yielding 14,275 lbs. copper, or about 9.3 lbs. copper per ton of rock milled. The mine was shut down April 3, 1911. It is obvious that, owing to its comparatively small size and shallow depth, the Gratiot cannot work the Kearsarge bed profitably at the average price of copper, except on a very large scale, and it could be operated much more advantageously in conjunction with the Seneca than alone.

HANCOCK CONSOLIDATED MINING CO.

MICHIGAN

Hancock, Mich.

Officers: John D. Cuddihy, pres.; Capt. Thos. Hoatson, v. p.; John H. Hoatson, sec.-treas.; preceding, with Allen F. Rees, Capt. Samuel B. Harris and Capt. Jas. Hoatson, directors; C. E. Weed, gen. engr.; Richard Coombs, capt.; Daniel Fisher, clerk; C. W. McDougall, engr.; Fred G. Schubert, water mechanic.

Inc. June 11, 1906, in Michigan. Cap., \$5,000,000; shares \$25 par; issued, 200,000; fully paid with \$1 assessment levied March, 1915, payable \$1 each, May and Sept., 1915, and Jan., 1916. Old Colony Trust Co., Boston, reg. agent; State Street Trust Co., Boston, transfer agent. Stock on Boston Exchange. Annual meeting, third Wednesday in June. Company began business with \$1,000,000 and paid \$552,623 for its proportionate share for year ending Dec. 31, 1916, were \$771,515, made up of \$275 for mining expenses, including smelting, freight, marketing, etc.; \$200,000 on notes; \$29,823 taxes and \$12,467 for Lake Milling, Sm. Co. stock.

Receipts for 1916 were \$103,668. Receipts were \$875,202 in 1916, made up of \$2,916 from 2,600,859 lbs. copper marketed at 28.093c; \$117,016 from assays, \$2,240 interest.

Property consists of 840 acres of mineral territory, immediately west and south of the old Quincy mine, in T. 55 N., R. 34 W., including the Hancock mine, 180 acres, set aside, 1859, by the Quincy Mining Co. and conveyed to the Federal rights to the Pewabic bed. The Pewabic bed covers about 150 acres. The Hancock tract of 136 acres, is owned by the Hancock Mining Co., Hancock, Michigan.

Shaft No. 7 shaft,

In June, 1916, approximately 75 acres were sold to the Quincy Mining Co. for \$226,000. In part payment therefor the Hancock was granted the right to use Quincy No. 7 shaft and 1 stamp of the Quincy Mining Company also owns lots 6 and 7, Sec. 28, for a mill site.

The old Hancock mine, opened 1859, was closed June 1, 1885, account of the low price of the metal, after producing 5,709,384 lbs. of copper. The Hancock or Sumner amygdaloidal bed averaged about in width below the fifth level, to a depth of 1,052', where the mine was bottomed.

The property carries the upper half of the Michigan series of cupriferos traps and conglomerates, and has 4 known copper-bearing beds, the Pewabic being the most important. The property also carries the underground, but not the outcrop, of the 3 copper-bearing beds of the Quincy, the being the Quincy to the eastward, apparently of little value, followed by the Pewabic, which is the main bed of the Quincy and the so-called West lode of the Quincy. The known copper-bearing beds outcropping on the Hancock property are the Hancock or Sumner, mined in the old Hancock mine, and now known as No. 1 lode, lying about 1,100' west of the Pewabic; the old West bed, now known as No. 2 lode, lying about 300' west of No. 1, and the New West bed, now known as No. 3 lode, lying about west of No. 2.

Development: No. 1 shaft is the old main 3-compartment shaft of the Hancock mine. It has a remodeled wooden shaft rock house, and a Lake Shore hoist good for 2,000' depth.

The new and main 5-compartment working shaft known as No. 2, 2,200' N. W. of No. 1. It is vertical, with dimensions 9'6" x 29'6", being the second largest in the Lake Superior district, and is 4,001' deep. This shaft intersects No. 3 bed at a depth of 2,038', the bed here showing a dip of 37°, compared with 47° in the upper workings, this flattening of the bed at depth, corresponding to a similar flattening shown to the north of the No. 7 shaft of the Quincy. The No. 4 lode is intersected by the No. 2 shaft at a depth of 3,105'; it is 17' thick and carries payable ore.

Ground below the 53rd level, 4,000' below the surface, is reached by 2 subsidiary shafts sunk from the 49th level, connecting with the No. 2 shaft through chutes on the 53rd level and through drift connections to the 49th level.

Considerable drifting has been done on both No. 2 and No. 3, No. 3 being opened by a winze from the 10th to 18th levels, with drifts on the 9th to 18th levels, inclusive, several of which are more than 100' long. No. 2 shaft has loading stations on the 13th, 18th, 23rd, 27th, 32nd, 39th, 44th, 49th and 53rd levels, to which rock broken will be sent by chutes from the levels above.

No. 2 shaft has a shaft rock house that is the most modern in the Lake Superior district. The building has a total height of 128', the working floor 60' above the ground. The bins are of 1,000 tons capacity each.

Work in 1916 was confined to blocking out ground for mining in the lower workings tributary to No. 2 shaft and in extending levels south of Quincy No. 7 shaft into Hancock ground from the 66th to the 72nd level. Steeping was done principally on No. 4 vein, on the west vein of No. 3 lode, all between the 44th and 53rd levels. Total amount of ore produced was 7,515 tons.

Equipment: includes two 50-ton barrel crushers and a smaller one, and a 30-ton barrel crusher. The 2 large crushers are fed by 2 steel travelways, and are driven by a 50-h. p. induction motor and a 10-h. p. motor.

ng table has a 10 h. p. induction motor. Two men per shift are expected to do all work on the crushing floor.

The main engine house at No. 2 shaft is equipped with 2 hoists, main engine being a Sullivan Corliss direct-connected hoist, operating 2 skips in counterbalance, with capacity to hoist 8 tons of rock from a depth of 4,000', at a steam pressure of 150 lbs. There also is a Sullivan first-motion hoist.

The steel compressor house has an electric traveling crane, 13-drill and 16-drill air compressors and a new 35-drill tandem-compound air compressor. The boiler house has 2 batteries of 4 return tubular boilers, each 2' in diameter and 18' long.

Buildings at No. 2 include a machine shop, smithy, office, changing house and a number of dwellings. The main plant at No. 2 shaft is reached by a spur of the Mineral Range railway. Company employs about 200 men when running full time.

Electric haulage installed in lower levels of No. 2 shaft, 1917.

Production: in 1916 was 203,112 tons rock milled, producing 2,824,934 lbs. copper, or 13.9 lbs. per ton. Costs are estimated at 20c per lb. Output, 1,000 tons daily, October, 1917.

The mine has been developed very extensively and given a thoroughly modern and complete equipment. The ground opened, while by no means rich as some in the Lake Superior district, is of fair average value and with exceptionally good equipment and an able and experienced management, the Hancock promises to make a successful low-grade mine.

HOUGHTON COPPER CO.

MICHIGAN

Office: 199 Washington St., Boston, Mass. **Mine office:** Houghton, Houghton Co., Mich.

Officers: Chas. J. Paine, Jr., pres.; Geo. P. Gardner, v. p.; A. E. Coe, Secy.; preceding, with W. Cameron Forbes, Jas. P. Edwards and Frederick W. Nichols, directors; Rex R. Seeber, supt.

Incorporated Jan., 1910, in Michigan. Cap., \$2,500,000; shares \$25 par; assessable; 100,000 issued; \$8 paid. Is controlled by St. Mary's Mineral Land Co., through ownership of 37,228 shares of the 67,000 shares outstanding. Old company Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agent.

Annual report for year ending Dec. 31, 1916, shows: total receipts, \$251, of which \$3,520 was from assessments and \$46,361 is due on copper.

Expenditures for 1916 totaled \$78,694. Balance of assets was \$24,419, 7,580 lbs. copper.

Property: 23 acres of surface rights, with mineral rights to 160 acres owned in fee, being the N. W. ¼ of Sec. 14, T. 54 N., R. 34 W., lying E. of the Isle Royale mine and adjoining the Superior mine. Diamond drilling was begun March, 1910, in the horizon of the Baltic-Superior bed, showing 2 cupriferous amygdaloidal beds, the Superior and East lodes, and 2' wide respectively, with dip of 51°, separated by about 83' of sand and conglomerate, the lower bed overlying another conglomerate of distance of about 150', these strata corresponding exactly with the formation. Maximum operating depth is figured at 2,800'.

Development: by 620' shaft, sunk about 60' in the footwall, and a second sunk 513' below the 620' level, disclosing rich copper rock in the Superior lode. The ground penetrated by the shaft is soft and badly decomposed, necessitating close timbering and occasional concreting; the shaft has been lined with a concrete collar for depth of 300'. Work in 1916 included 1312' of drifts and crosscuts on the 4th and 12th levels. Winze sunk 115' to 1,160' cutting the Superior vein which is 40' wide at this

point and shows good rock on foot and hanging wall with about 10' of poor rock between.

The crosscut on the 12th level encountered the west lode, which showed a little copper, but conditions do not warrant the sinking of the main shaft from the 6th level to this depth. On the 450' level drifting on the vein showed some copper, but not in commercial grade or quantity.

Equipment: includes a small power plant, and a 16-drill Nordberg electric air compressor. There are necessary buildings, including an office, changing house and warehouse, all of wood.

Due to the outbreak of the European war the mine was closed down from Sept., 1914, to July, 1915.

Production:

	Tons Rock milled	Lbs. Min. prod.	Lbs. Min. p. t.	Lbs. Ref. Copper	Lbs. Cu. p. t. Rock
1916	19,444	365,880	18.8	204,274	10.56
1915	14,656	258,900	19.5	156,766	10.69

Sale price for 1915 was 22.2c per lb.; for 1916, 29.21c.

The property, though small, for the Lake Superior district, is considered promising and management good. Company employs about 35 men.

The mine is almost paying expenses from ore shipped, but management is waiting for development in the adjacent Superior mine (31st level) below sinking shaft to the 8th level. In October, the Houghton company was cleaning out the 19th level of the Superior mine preparatory to extending it 300' or so into Houghton ground.

Is a promising proposition.

HULBERT MINING CO.

MICHIGAN

Idle. Albert S. Bigelow, pres., 199 Washington St., Boston, Mass. W. A. S. Chrimes, sec.-treas.; Fred W. Nichols, agt., Houghton, Mich.

Inc. about 1865, in Michigan. Cap., \$1,000,000; shares \$25 par; all issued.

Owens 1,640 acres of mineral land, in Houghton and Keweenaw counties, Michigan, undeveloped; part of the surface rights have been sold, but mineral rights reserved. Property valued at \$21,802. Gross receipts in 1912 were \$408. No mining done since organization.

HUMBOLDT COPPER CO.

MICHIGAN

Idle. Copper Falls, Keweenaw Co., Mich. Thos. Hoatson, pres. C. A. Wright, sec., Calumet, Mich.

Inc. 1863, in Mich. Cap., \$1,000,000; shares \$25 par. Amount paid \$100,000 in real estate, and \$240,986 cash. Annual report of Dec. 31, 1914, shows \$2,281 cash on hand. Is controlled through ownership of 90% of outstanding stock by the Keweenaw Copper Co. Announced to be started Tuesday in March.

Property: Secs. 16 and 21, the former fractured, all on the mineral belt, about midway between the two main mines, lying north of the greenstone, with the main mines to the south. The mine, opened 1853, has a single shaft about 300' deep, sunk on the ashbed, with characteristics as at the Arnold, carrying occasional ore to the surface.

In May, 1914, diamond drill holes numbered 1 and 2 were sunk through a portion of the hanging wall and across the footwall. Hole 1 intersected the copper bearing part of the lode 13 feet respectively from surface. Hole number 2 intersected the lode at 713 feet from surface, and disclosed a small amount of ore with good values in both the upper and lower part of the lode. The flow in each of the holes.

a second zone of about 25' width, are parts of a single bed of approximate 265' width, the second zone of 25' being near the center of the wide bed. No. 5 hole and No. 9 hole both cut felsite carrying heavy copper, apparent a continuation of the same orebody.

Ground was broken, Jan., 1911, near No. 2, the discovery hole, for vertical shaft, the overburden at this point being about 110'. The shaft cylindrical, of 17' outside diameter, lined with steel and concrete, with inside dimensions of 8x12', and is 1,415' deep.

During 1916 new work totaled 1,029'; 379' on the 1,150' level and 650' on the 1,400' level, done to find the ore cut by No. 2 drill-hole at 1,430'. Rock of similar character-felsite was found on both levels, also copper in several places in the felsite near the felsite-trap contact, but not in commercial quantities. No. 2 hole was not found, but No. 9 was found 14' from its theoretical position. The conclusion is that the deposit cut by No. 2 hole cannot be of any great size, or have a regular trend. Although this has not been proved, it was decided to explore in the South Lake amygdaloid lodes, an incline shaft being sunk for this purpose. In July 1917, at 150', the shaft passed through an amygdaloid lode 25' wide, but not containing commercial quantities of copper. Work will proceed to 300' depth.

Equipment: includes a steam hoist good for 2,500' depth, compressors and necessary mine buildings.

ISLAND COPPER CO.

MICHIGAN

Office: 1400 Alworth Bldg., Duluth, Minn.

Officers: Thos. F. Cole, pres.; Geo. C. Stone, v. p.; Frederick V. Nichols, sec.; preceding, with M. H. Alworth, Oscar J. Larson, Henry Nolte, Geo. G. Barnum, Geo. A. Tomlinson and Julius H. Barnes, directors; Edw. J. Maney, treas.

Inc. March 9, 1909, in Michigan. **Cap.**, \$1,000,000; shares \$25 par; \$6 paid; issued, 26,735 shares at \$6 each, or \$160,410. Annual meeting, first Tuesday in June.

Property: on Isle Royale, over 92,000 acres out of the 125,000 acres comprising the island, includes the former holdings of the Isle Royale Land Corporation, Ltd., and the Island Mining Co. Idle. See Vol. 3, Copper Handbook.

ISLE ROYALE COPPER CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. **Mine office:** Houghton, Mich.

Officers: E. V. R. Thayer, pres.; Rodolphe L. Agassiz, v. p.; E. V. R. Thayer, Chas. O. Whitten, F. L. Whitcomb, E. C. Lewis, E. V. R. Thayer, G. R. Whitten and Chas. N. King, directors; James MacNaughton, mgr.; Clarence H. Bissell, sec.-treas.; G. L. Osgood, asst. sec.-treas.; E. Richards, mine supt.; A. G. Andrews, Jr., mill supt.; Harry Reed, engr.; John T. Reeder, chief clerk and purch. agt.; Harry E. Lukey, chf. Edward Colenso, chief mg. capt.

Inc. March, 1899, in New Jersey, as a merger of the Isle Royale Copper Mining Co. and Miners' Copper Co. **Cap.**, \$3,750,000; shares \$25 par; controlled through ownership of 32,910 shares of outstanding stock of the Calumet & Hecla. Old Colony Trust Co., Boston, transfer agent; Standard Trust Co., Boston, registrar. Company owns a one-third interest in the Lake Superior Smelting Co. Annual meeting, first Wednesday in June, 343 Washington St., Jersey City, N. J.

Profits: 1916 with balance of current assets, \$233,551. 1915 with balance of current assets, \$498,277 in 1915, and \$233,551 in 1916.

Dividends: \$1 per share was paid March 31, 1913; and \$5 in 1916, equal to \$750,000. The dividend rate for 1917 is higher than in 1916, due to extra distributions.

Property: 3,520 acres and an 80-acre mill site. Mineral lands include the old Isle Royale, Grand Portage and Huron mines, the Dodge and true prospects, the mineral rights in the Montezuma tract of about 200 acres purchased, 1913, for \$100,000, and sundry undeveloped tracts. The Bussey-Howe tract of 280 acres, lying N. E. of the Superior, supposed to carry the extension of the Baltic bed, was bought, 1907, for \$220,000. Lands include all of Secs. 1, 2 and 11, and parts of Secs. 3, 9, 10 and 15, T. 54 N., R. 34 W.; also 160 acres in Sec. 6, T. 54 N., R. 33 W., 40 acres in Sec. 31, T. 55 N., R. 33 W., and 160 acres in Sec. 36, T. 55 N., R. 34 W., giving a compact tract carrying about 2½ miles of the strike of the system of copper-bearing beds.

The Isle Royale has 3 parallel amygdaloidal beds, with strike of N. 20° E. and average dip of 56°, of which 2 have been extensively opened, these being the Isle Royale and Portage beds, the latter lying approximately 200' W. of the former. The shafts are on the Isle Royale, but the Portage bed is opened on many levels by crosscuts. East of the amygdaloids is the "Mabbs vein," lying near the Eastern sandstone, 4 to 7' wide and rich in mass and barrel copper, but deficient in stamp rock. It was opened to a depth of about 250' by John and Austin Mabbs, about 1875, and has been tested to some extent by the present owner. There also are unidentified and unexplored copper-bearing amygdaloids lying W. of the Portage bed and occasional narrow fissure veins carrying arsenical copper ores.

The 3 old mines included in the present Isle Royale tract produced 8,452,590 lbs. fine copper, under primitive conditions, at a net aggregate cost of about \$2,500,000. The old Isle Royale and Grand Portage mines were opened in 1853 and the Huron in 1855. The history of these 3 mines given in detail in Vol. II.

Development: considerable diamond drilling has been done. Underground openings were 19,106' in 1912; 13,626' in 1913; 9,694' in 1914; 14,446' in 1915; and 17,455' in 1916. About 75 rock-drills are used.

No. 1 shaft, near the northern boundary, was completely gutted by fire, Dec., 1903, and was abandoned. This shaft had 3 compartments and 3,614' deep, opened on the Isle Royale bed, with crosscuts driven on the 11th to 15th levels, inclusive, to the Portage bed, lying 150 to 220' W., about 2 miles of drifts opened thereon, stoping having been about equally divided between the 2 beds, which were found markedly similar in characteristics and copper values. Concrete dams have been built across the south drifts of No. 1 at the 13th and 14th levels, holding back the mine water. Surface water is collected on the 8th level and sent to No. 2 shaft for taking out. The surface plant at No. 1 was dismantled, 1908, machinery going to No. 4 shaft.

In May, 1914, work was started to retimber the shaft, preparatory to taking and exploring the Portage lode. In Feb., 1916, the work had been carried down to the 16th level and hoisting was being done from the next level.

No. 2 shaft, with 3 compartments, 2,280' S. W. of No. 1, is 3,167' deep. This shaft produces less mass copper than formerly, and the north side has not been looked especially well for several years, the average of the mine as a whole, about half of the ground

consolidation shaft rock house, with Portage Lake

crushers. The engine house is equipped with a hoist capable of raising 6-ton skips from a depth of 6,000'.

No. 3 is merely a site for a shaft, to reopen the old Huron mine.

The new shafts, Nos. 4, 5, 6 and 7, are all on the Isle Royale bed at the southern end of the property, and have several miles of working showing considerable heavy copper. These shafts are unconnected with the former workings, in shafts Nos. 1 and 2, at the northern end of the property. Shafts 4, 5 and 6 are connected by drifts on the upper level.

No. 4 shaft, about 3,100' S. of No. 2, is 2,244' deep, developing stamp rock of very fair average grade. Equipment includes a Nordberg duplex cylinder hoist, good for 1 mile depth and a 35-drill air compressor, both taken from No. 1 shaft. There is a cylindrical steel shaft rock house, built by the Wisconsin Bridge & Iron Co., having cylindrical rock bins 4' in diameter and 32' high.

A skip-road was constructed in the N. compartment. No. 1 to 11 level North drifts are connected with the Huron workings. There were 22 drifts operated, 1916, and 75% of the ground opened shows ore equal to the average of the mine.

No. 5 shaft, about 5,100' S. of No. 2, on Sec. 2, was started Oct., 1914, and was 1,965' deep, Jan., 1917. The shaft is sunk in the footwall, and equipped with a hoist, good for a depth of 3,000'. There were 15 drifts operated.

No. 6 shaft, about 7,300' S. W. of No. 2, near the center of Sec. 2, has 3 compartments and was 2,084' deep, Jan., 1917, developing very good average ground, the bed showing much epidote. The levels are open at 100' and 120' intervals. On surface there is a circular steel shaft rock house, similar to that at No. 4. The plant at No. 6 includes a brick engine house, with hoist and 45-drill air compressor, and a steel boiler house. Drills used totaled 25 and 66% of the ground opened contains copper.

No. 7 shaft, 2,400' S. of No. 6, was started in 1913. Work was stopped on account of the strike and was not resumed until late in 1915. During 1916 it was sunk 820', making bottom 946' deep. Ore is good.

"A" shaft, started Sept., 1908, on the Hussey-Howe tract, is 972' deep with the first plat cut at depth of 350'. A 205' crosscut, at depth of 474' discloses only the bed in which the shaft is sunk. On the 3rd level, at depth of 714', a drift was run S. to within 50' of the Houghton-Copper boundary, disclosing a fair amount of amygdaloidal rock, not carrying copper in promising quantities. "A" shaft is supposed to be sunk on the Baltic bed, but there is very great doubt as to whether the shaft really is open on the northern extension of the Baltic, and failure to locate the twin Baltic bed, within a distance of 205' in the crosscut on the 474' level, accentuates this doubt.

The Sec. 12 shaft, begun Oct., 1905, and discontinued Jan., 1908, at depth of 812', also was sunk in search of the Baltic bed and drifts and crosscuts were opened in 4 directions, without securing satisfactory results. The shaft was sunk in a badly disturbed amygdaloidal bed, practically barren of copper.

A shaft was started on Sec. 10, but was discontinued because of the small diameter. A 35-drill substituted, the drill cores showed the Baltic bed in width carried stamp-ore.

The No. 2 engine house, a 35-drill air compressor; a 10-ton boiler and a 3,000-ton coal bin, are taking water from a

30x50x6'. The machine shop is of steel, on stone foundations. Shaft houses and rock houses are lighted by electricity, commercial current being taken from the Houghton County Electric Light Co. The company has a private telephone system. There are about 150 dwellings on the company's lands. At No. 2 shaft in 1916 a new collar house, skip dumps in ore house, stack and flues were built.

At No. 5 shaft a new ore house was erected and 2 Farrell crushers installed, also 2 C. & H. sorting pans.

The Isle Royale railway, owned by the company, connects the mine and mill with about 5 miles of main line, having easy grades. Equipment includes 35-ton, 55-ton and 60-ton locomotives, and 40 forty-ton steel rockers, equipped with air brakes. A 3,700' spur was laid in 1916.

The mill site, at the mouth of Pilgrim river, has nearly 1 mile of wharfage on Portage lake. The old mill, insured for \$100,000, was burned on June 24, 1914. Work on a new 2,000-ton mill was started immediately and by June, 1915, the first stamp head was operating. By the end of August the heads were working. The mill cost \$220,000 and has three 300-ton rockers and 3 Nordberg stamps having circular mortars and 1/2" screen openings. The stamps rest on concrete bases, 20' thick, and are fitted with triple-compound steam cylinders. Each stamp has a maximum capacity of 700 to 750 tons daily. The dressing floor has 78 rough jigs, 6 finishing jigs and 55 Wilfley tables to treat slime. There are rolls with fixed bearings to regrind coarse gravel from the mortars.

The mill has a complete machine shop on the second floor, power being furnished by a 600 k. w. mixed pressure G. E. Curtis turbo-generator, taking steam from five 200 h. p. boilers in a boiler house at the rear of the mill.

There is a 32x600' wharf, with deep water alongside, at the mill site, with appliances for unloading coal and general freight and for the dispatch of mineral in scows to the Dollar Bay smelter, 2 miles across Portage lake.

Water is furnished the mill by a 16,000,000-gal. Nordberg Corliss pump, specially designed to handle muddy water, having a triple discharge into a riveted steel water main, running 2,200' from pump house to mill, the pump being located some distance from the mill, to obviate stamp sand entering the intake. Three 100 h. p. boilers furnish power for the pumps, being taken from a large coal trestle at the rear of the pump house boiler rooms. A dam near the mill supplies feed water for the boilers.

Recent production: has been as follows—

	Tons R'k	Lbs. Min.	Lbs. Cu. per Ton R'k	Mine Cost per Ton (a)	Lbs. Cu. Produced	Total Cost per Lb.	Rec'd per Lb.
1915	925,419	13,727,832	13.4	\$1.53	12,412,111	15.75c	25.86c
1914	680,270	13,727,832	13.7	1.45	9,342,106	14.94c(b)	18.36c
1913	474,349	9,451,115	13.9	1.49	6,601,235	13.05c	13.16c
1912	314,679	5,887,000	13.2	2.12	4,158,548	18.81c	15.29c
1911	531,105	11,461,410	15.4	1.54	8,186,957	11.89c	16.66c
1910	457,440	10,339,171	16.4	1.47	7,490,120	10.85c
1909	520,860	10,433,060	14.5	1.42	7,567,399	11.84c

(a) Includes mining, transportation, stamping and taxes.

(b) Includes nearly 2c per lb. extraordinary expense of rebuilding the mill, reopening No. 1 shaft, and No. 7 shaft expense.

The Isle Royale's production in 1914 was greatly restricted by the Lake Superior strike; normal production was again resumed in June, 1914,

to be soon followed by the demoralized copper market due to the outbreak of the European war; the property operated on a three-quarters time basis until Feb., 1915.

Operations in 1916 were affected adversely by a general scarcity of labor.

The Isle Royale is a low-grade mine, but shows itself capable of earning substantial profits. In 1915 the property made amends for its shortcomings of the previous 2 years; and at present more men are employed and more rock is being hoisted than ever before in its history. The output in May, 1917, was 86,000 tons of ore, yielding at the rate of 1,300,000 lbs. of copper per month. Large ground reserves are maintained and necessary and with a still larger output in prospect, profitable operations for many years to come are confidently anticipated.

"The Isle Royale is one of the instances of low-grade copper production in this district. When it had become evident that there was only one hope for a mine that produced an ore that averaged but 12 or 13 lbs. of copper per ton, and that was by the output of an enormous tonnage of rock, there was little to the future for the Isle Royale except hope. Now the Isle Royale is running on an average of better than 15 lbs. of copper per ton. The average for July, 1917, was 15 lb. and for August, 16 lb. The output of rock is keeping its own stamp-mill running at capacity and sending 450 or 500 tons daily to the Point Mills plant, and it could send 1,000 tons daily to the custom-mill if the miners could be secured. The property is operating profitably. The seventh shaft is down to the ninth level and the most southerly openings are in rock which runs a little better than was anticipated and as good as anything recently opened in any of the Isle Royale shafts."—M. & S. Press, Aug. 25, 1917.

KEWEENAW COPPER CO.

MICHIGAN

Office: Calumet State Bank Bldg., Calumet, Mich. Mine near Marquette, Keweenaw Co., Mich.

Officers: Thos. F. Cole, pres.; Spencer R. Hill, v. p.; Capt. Th. Hoatson, 2nd v. p. and mining director; F. W. Taylor, sec.-treas.; W. Uren, gen. mgr., and G. G. Hartley, directors; John C. Shields, railway agent.

Inc. March 11, 1905, in Michigan. Cap., \$10,000,000; shares \$25 per share issued \$4,062,884; paid in \$20. Last assessment was \$1, Sept., 1915. Shares listed on Boston and Duluth Stock Exchanges. Controls, through its ownership, the Phoenix Consolidated Copper Co., Meadow Mining Co., Humboldt Copper Co., Keweenaw Central Railroad Co. and Washington Copper Mining Co. Has about 2,300 shareholders. American Trust Co., Boston, registrar; Old Colony Trust Co., Boston, transfer agent. Annual meeting, second Monday in March.

Balance sheet, Dec. 31, 1916, shows: assets, \$4,070,746, which include cash, \$1,085,207; receivables, \$1,545,291; cash, \$63,254; development, \$1,377,194; accounts payable, \$344,697; current liabilities, \$1,377,194; and interest, \$2,592.

The company is engaged in the construction of the Keweenaw Central stock issue, \$5,000,000. The company has \$500,000 in bonds and bills payable, \$500,000 in accounts payable, and a deficit of \$1,000,000. The company has \$1,000,000 in spurs and branches.

The company is located at Marquette, Mich. The mine is in the town of Lac La Poudre.

main groups, carrying the strike of the Keweenaw mineral belt for about 14 miles, including practically all of the amygdaloidal and conglomerate cupriferous beds of the district, as well as numerous copper-bearing cross fissures. Lands are in T. 58 N., of Rs. 27, 28 and 29 W., and include the tracts formerly owned by the Aetna Copper Harbor, Empire, Girard, Hanover, Keweenaw, Mandan, Medora, Pennsylvania & Boston, Resolute and Vulcan companies, in addition to lands controlled through stock ownership in subsidiary corporations.

The company's lands carry nearly 2 miles of water frontage on either side of the Montreal river, including Fish cove, 1 mile east of the river's mouth, which might be made a fair harbor at comparatively small expense. The lands include 5 miles of the course of the river, on both banks, and, with other holdings, give the company the entire water-frontage of Mosquito lake, making possible the development of a great water power, with hydro-electric installation at the mouth of the river. There is a mill site on Bete Gris bay, at the mouth of the Montreal river, having about 5 miles of water frontage.

The company also owns the Lac La Belle, or Mendota, ship canal, 1 mile long, connecting Lac La Belle with Lake Superior. This canal has a 14' channel, and leads to a splendid haven that should be made a harbor of refuge.

The Medora mine, opened about 1860, had 3 old shafts, about 100' apart, deepest 140'. The Medora amygdaloidal bed, traversing lands of the company for about 4 miles, lies immediately under the Allouez conglomerate, and outcrops several hundred feet north of the Montreal river bed. The Medora, about 12' in average width, is a soft chocolate-colored amygdaloid, carrying considerable prehnite, calcite and quartz, in connection with fine lamp copper and occasional heavy copper, a 30" paystreak along the foot-wall carrying some barrel work, the bed as a whole being bunched.

The Medora tract also carries other copper-bearing beds, among these being the Medora fissure vein, outcropping about 225' E. of No. 1 shaft, and making into the shaft at depth. About 100' S. of the Medora amygdaloid is another bed carrying copper in small quantities, and to the northward are the Wolverine amygdaloid, of about 15' width, and the Allouez conglomerate, lying about 280' N. of the Medora bed, at surface.

The Medora mine was reopened on a considerable scale to depth of 700' and length of 1,800', with about 2 miles of workings. All work in the mine was stopped Sept., 1909. The Medora workings are fully described in Vol. VIII.

The Empire mine also carries the Medora bed, about 3 miles E. of No. 1 shaft, and some trenching and test pitting, done 1906-07, on the Empire tract, showed a bed of about 15' width, carrying some copper at surface. The Empire also carries the Montreal river amygdaloid, on which the company did considerable work.

The Medora-Mandan-Resolute tract of 2,440 acres carries the Kearsarge bed under practically its entire territory. The shaft on the Kearsarge, known as No. 2, is about a mile S. of the old Medora workings, and is 1,327' deep when abandoned, 1911.

The company owns a diamond drill outfit and has made extensive borings, including a cross section of the Medora, Mandan, Resolute and Empire formations. In 1912-1914, were confined to exploratory work in the Kearsarge bed, and the first drill hole located a copper deposit in the Kearsarge bed, early 1913, at a depth of about 500'. Mine has

1914

obtained satisfactory results on No. 7 and 14 levels of

Phoenix mine, on the Ashbed lode, in charge of C. A. Wright. Commenced treatment in Oct., 1916, at the old Phoenix mill, of ore from the Ashbed lode. In Aug., 1917, 4,170 tons was stamped, yielding 12.64 lbs. refined copper per ton, giving a 72% recovery, which is to be increased by improvements.

KEWEENAW LAND ASSOCIATION, LTD.

MICHIGAN

Office: Room 33, No. 87 Milk St., Boston, Mass. **Operating office:** Marquette, Mich.

Officers: A. B. Emmons, chairman; Nathaniel Wilson, sec.; Dudley S. Dean, treas.; John M. Longyear, gen. agt.

Is a land corporation, holding 400,000 acres, mainly timber lands, with some mineral lands, partly on the Keweenawan copper belt, in the upper peninsula of Michigan, taken over from the Lake Superior Ship Canal, Railway & Iron Co.

LA SALLE COPPER CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. **Mine office:** Calumet Houghton Co., Mich.

Officers: Rodolphe L. Agassiz, pres.; Jas. MacNaughton, v. p. and gen. mgr.; preceding, with W. Hunnewell, F. L. Higginson, T. N. Perkins, D. S. Dean and Lindeley Loring, directors; G. G. Endicott, sec.-treas.; H. L. Bennett, asst. sec.-treas.; Ole Hallingby, supt.; Wm. Skewes and Josiah Bartell, mining captains.

Inc. Dec., 1906, in Michigan. **Cap.,** \$10,000,000; shares \$25 par; issued 302,977 shares. Company absorbed the Caldwell Copper Co. and controlled the Tecumseh Copper Co., through ownership of practically the entire issue, giving 1½ shares of La Salle for 1 of Tecumseh, and bought the entire property of the Tecumseh, May 11, 1910, for \$1,648,000. Is controlled through ownership of 152,977 shares, by the Calumet & Hecla Mining Co. The Calumet & Hecla contributed \$1,000,000 cash to the company's treasury, taking pay in stock, and agreed to loan \$750,000 additional cash, as needed. Operations for 1916 show total receipts, \$368,253; total expenses, \$289,300, leaving a profit of \$78,855, against a deficit of \$15,522 in 1915. Balance-sheet, assets, Dec. 31, 1916, \$173,492. Annual meeting, second Wednesday in June.

Property: 2,360 acres, also the Gregory mill site, on Torch lake, nearly opposite the Calumet & Hecla mills. The Tecumseh and Caldwell contributed 560 acres each and 540 acres were furnished by the Calumet & Hecla, St. Mary's Mineral Land Co., Sheldon & Douglass Estate, and other interests, these lands being put into the company at a novel basis-valuation, figured upon zones of 2,500' depth on the dip of the Kearsarge bed, allowance being made for decreased land values on zones carrying the underlay at increase depths. There are 4 shafts, 2 on the Tecumseh and 2 on the Caldwell tract, with room for 8 additional shafts, to give total of 7 shafts, at intervals of about one-third mile. The property carries the strike of the Keweenawan formation for about 2½ miles.

Development: property has been prospected by diamond drilling, more than 30 diamond-drill holes having been bored on the Tecumseh and Caldwell tracts, a few years ago.

The first work at the Tecumseh mine was done on the Calumet conglomerate, many years ago, when a 1,000' shaft was sunk that found payable ore. During the second era of activity, 1889-1902, a shaft was sunk 2,300' on the Osceola amygdaloid, but this bed, being found practically barren of copper, work was abandoned Nov., 1902. It is probable that the old Osceola shaft will eventually be reopened, as the southern drift, the No. 6 shaft of the Osceola, below the 4,000' level, near the Tecumseh

An arrangement was made in 1916 with the Osceola Consolidated, whereby No. 42 level S. of No. 6 shaft, Osceola mine, was extended into La Salle ground 692'. The result was encouraging. The drift was stopped in June, 1917, as the cost of tramping was so high. For 1,100' the ground opened was good; the last 400' was poor. The total length was 3,350'. No. 45 level is also to be extended into La Salle ground.

La Salle No. 1 shaft, formerly known as No. 1 Tecumseh, sunk on the Kearsarge bed, has 3 compartments, 2,146' deep, and shows the Kearsarge lode to be 8' to 12' thick, but is characterized by irregularly distributed values. The workings have encountered large areas of good ore, some of it with very rich patches of coarse copper that is rather showy though the average value has been, on the whole, somewhat disappointing in the mill. Equipment includes a 250 h. p. boiler and a hoist.

Operations in 1916 were confined to Nos. 11, 12, 13, and 15 levels. The stopes were generally rather lean.

La Salle No. 2 shaft, formerly known as No. 2 Tecumseh, is located about 1,700' S. of No. 1 and is of the same size; it is 2,079' deep, and shows a bed of workable thickness but not carrying much copper. The power plant has a 125 h. p. boiler, a hoist good for 2,500' depth, and a 15-drill air compressor. Buildings include a changing house. A branch of the Mineral Range railroad was built to the shaft in 1913. Development at this shaft during 1916, revealed both fair and poor ground.

Hoists at No. 1 and 2 shafts are now of 18x24" Lidgerwood types

No. 5 shaft, originally known as No. 1 Caldwell, and later as No. 1 La Salle, is 1 mile S. of No. 1 shaft; is 1,450' deep, shows a poorly-defined bed, with unsatisfactory copper contents, and work was discontinued Nov., 1910.

No. 6 shaft, known as No. 2 La Salle, sunk at a point 1,500' S. W. of No. 5, was abandoned, June, 1909, at depth of 882', because the lode showed little or no copper; the surface equipment was removed to No. 2 shaft.

The Kearsarge bed is comparatively thin in the Tecumseh tract, ranging from 7 to 11', with an average thickness of about 9'. It is estimated that approximately 1,000,000 tons of stamp rock were blocked out in the No. 1 Tecumseh, to the end of 1912, the greatest length of lateral opening being on the 12th level, where a stretch of about 1,000' of good stoping ground has been developed.

Development: in 1913 No. 1 shaft was unwatered down to the 17th level and stoping started in July. The big labor strike started on the 23rd of the month and the mine was closed down. Operations, started in Jan., 1914, continued until Aug., at the time of outbreak of the European war. Work was again resumed in June, 1915. Total development work amounted to 141' in 1913; 1,123' in 1914; 1,127' in 1915, and 3,323' in 1916. At the present time daily shipments are 600 tons of rock, while development work is also being pushed.

Production:

	Tons R'k	Lbs. Cu. per Ton R'k Stpd.	Lbs. Cu. Produced
Treated	144,829	9.53	1,380,352
.....	80,959	9.67	782,493
.....	45,509	11.88	540,731
.....	2,221	19.76	43,906
.....	18,970	14.77	280,598

and Franklin mills are treating La Salle ore.

Price received for copper in 1916 averaged 25.68c per lb. Net cost per pound was 19.96c and cost of mining, etc., \$1.79 per ton of ore. Copper output in first four months of 1917 averaged 180,000 lbs. per month.

Property has improved considerably of late.

LAKE COPPER CO.

MICHIGAN

Office: 85 Devonshire St., Boston, Mass. Mine office: Lake Mine, Ontonagon Co., Mich.

Officers: Wm. A. Paine, pres.; John H. Rice, v. p.; Robt. H. Gross, sec-treas.; preceding with Wm. F. Fitzgerald, Reginald C. Pryor, Wm. S. Rooney, F. Ward Paine, directors. Elton W. Walker, mgr.; James McKie, supt.

Inc. Nov. 27, 1905, in Mich. Cap., \$2,500,000; shares \$25 par; \$5 paid, fully issued. Shares are listed on the Boston Stock Exchange. Federal Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agt. Annual meeting, third Tuesday in June.

Report for fiscal year, ending April 30, 1917, shows: total receipts, \$450,497, which includes: copper sold, \$442,696; miscellaneous, \$7,800. Expenditures total \$342,302, including mine expenses, \$247,000; smelter, freight and marketing copper, etc., \$31,357; shaft equipment and development, \$46,936; taxes, \$17,007. Surplus May 1, 1915, \$167,145; surplus April 30, 1916, \$254,164; April 30, 1917, \$362,359. Profit for year, \$108,194.

Property: 2,010 acres, including 1,150 acres of mineral land, 680 acres of timber lands and 180 acres of cutover lands. The company bought 20 acres immediately E. of the shaft from St. Mary's Mineral Land Co., to provide room for a surface plant, the purchase carrying with it mineral rights to a depth of 100' thus caring for the upper portion of the Lake shaft, collar of which is almost divided by the section line. Property includes the S. E. $\frac{1}{4}$ of Sec. 29, S. E. $\frac{1}{4}$ of Sec. 30, N. W. $\frac{1}{4}$ of Sec. 32, and E. $\frac{1}{2}$ of Sec. 31, T. 51 N., R. 37 W.

The first work of the company was done on the Knowlton and Butler beds, with a little work on what formerly was supposed to be the Evergreen, principal work being on the Knowlton amygdaloid, on which there were old shafts of 170' and 300', latter having been deepened to 600' by the present company. Considerable copper was taken from the Knowlton bed, but it was thought wise to transfer work to virgin territory, at the southern end of the property, and the wisdom of this move was demonstrated by the outcome. There also is a 90' shaft on the Tresidder bed, 1,000' E. of the Knowlton, which was sunk 1865, and is said to have paid for sinking from the copper extracted. Considerable diamond drilling has been done, and the borings of the Adventure, on adjoining lands, indicate that the Lake should have several other promising amygdaloid beds, in the same general horizon as the Lake bed now being opened.

Geology: the strike of the Lake amygdaloid in the immediate vicinity of the shaft is about 10° E., with dip of about 35° W. It was at first thought that the Lake was a fissure, but that this is not the case was proved relatively by the disclosure of parallel strata, including a conglomerate, in the Tresidder. The Lake bed, which is a typical amygdaloid, has its unusual strike and dip, and is surrounded by a zone ranging from 50 to 100'. The hanging wall of the Lake footwall is extremely irregular, and the boundary between copper rock and hanging wall is marked by several shoots of enriched copper. A recent statement was made by the company that diamond drilling from the Lake bed had been done and it is said

known that the lode turns W. and passes into South Lake ground. Thirteen diamond drill holes have been bored aggregating 1,628'. The northernmost bottom workings of the mine show a deflection to the westward, with a strike, at the extreme north, of N. 15° W., which corroborates the hypothesis of Dr. L. L. Hubbard, that the Lake bed is the third and the East lode, the fourth bed from the top in the series of 4 amygdaloid beds cut by the drill holes of the South Lake.

There are two other lodes only 50' W. of the Lake with commercial ore. The long crosscut on the South Lake proves Dr. Hubbard's theory.

The mine is operated by a 1,500' incline shaft, ore being extracted from 11 levels from the 2nd to the 11th. The lode is bunchy with very rich spots and some mass copper, but the general average is about 2%, which is equivalent to 25 lbs. of refined copper.

The Knowlton shaft was unwatered Aug., 1916, to mine ore from the Knowlton lode, which though narrow, shows good copper values where opened. The Butler and Evergreen lodes can be reached by an 800' crosscut from this shaft.

Development: the mine has about 30,000' of workings, a very large proportion of the drifts being in neither the footwall nor the hanging-wall, giving a rather indifferent line on the actual values in the bed. New work during last fiscal year totaled 4,196'.

Equipment: include a 32x72" Nordberg duplex-cylinder double-conical-drum hoist, capable of lifting 10-ton loads from depth of a mile; old drill and 15-drill air compressors, taken from the equipment of the old belt mine, and a new 50-drill 2-stage cross-compound air compressor, in a steel compressor house. Mine structures include a machine shop, smithy, hanging house, office and boarding house. There are 9 dwellings and a number of old houses at the Belt location. The property is served by the main line of the Copper Range railway, which passes through the old Belt station, with a 1½ mile spur to the shaft, and a siding has been built to within 500' of the shaft by the Mineral Range railway, giving the mine the advantage of competitive railway rates. About 150 men are employed.

Production: fiscal year ending April. Work resumed in May, 1915, after a 2-year shutdown.

	Tons R'k Stmpd.	Mineral Lbs.	Lbs. Cu. per Ton R'k	Lbs. Cu. Produced	Cost per Lb.	Rec'd per Lb.
	70,440	2,346,970	21.14	1,489,247	20.00(c)	29.726
(a)	59,848	2,511,216	26.42	1,581,071	15.622(b)	20.149
			14.95	275,647	15.074
	83,109	2,153,128	15.39	1,300,562	19.5(c)

(a) Did not produce during first 3 months. (b) Includes 1.036c charge to resuming operations. (c) Approximately.

Shipping 300 tons rock daily, July, 1917, to the Baltic mill, carrying 25-lbs. copper per ton. Costs are too high to allow of much profit at current metal prices.

The management is both experienced and capable, and the mine, though small, is most promising.

THE MILLING, SMELTING & REFINING CO. MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. Operating office: Calumet,

Works office: Point Mills, Houghton Co., Mich.

Officers: R. L. Agassiz, pres.; Jas. MacNaughton, v. p. and gen. mgr.; G. Endicott, sec.-treas.; preceding, with H. F. Fay and D. L. Dean,

Michigan. Cap., \$2,500,000; shares \$25 par; fully issued;

\$11.85 paid in. Stock distribution is as follows: Allouez Mining Co., 36,100 shares; Centennial Copper Mining Co., 16,164 shares; Hancock Cons. M. Co., 10,000 shares; Isle Royale Copper Co., 18,836 shares; Superior Copr Co., 18,836 shares.

Owens 2 mills; one, called the Centennial-Allouez mill, is at Point Mi on the shore of Portage lake, on land adjoining the Franklin mill site. T mill was built by the Arcadian Copper Co., and was bought, 1904, by t Centennial Copper Mining Co., and later transferred to the present corpo tion. The mill of 4,000 tons daily capacity is equipped with 6 Nordber stamps and crushing rolls to treat oversize material. Power is furnished a 600 h. p. Nordberg cross-compound engine, and water is supplied by 15,000,000-gal Nordberg pump. A new boiler house containing 8 boile was completed in 1915. The other mills, known as Lake No. 2 mill, is Hubbell and has 4 stamps in operation. A wharf, running 675' into de water, is equipped with a modern coal hoist and coal shed.

LAKE SHORE MINING CO.

MICHIGAN

Idle several years. Office: 990 West Kensington Road, Los Angel Calif. Mine near Green, Ontonagon Co., Mich. W. H. Garlick, pres.

Inc. in Michigan. Cap., \$500,000; shares \$25 par.

Property: 821 acres, patented, on the shore of Lake Superior, is reported to carry bedded deposits, between slate walls, of 5' and 12' wid showing copper oxides and chalcocite giving average assays of 2% copp 0.5 oz. silver and 40 to 80c gold per ton. Apparently the orebody is of t secondary or Porcupine series of the Keweenaw formation, and ores m change to native copper at depth. A little prospecting has been done.

LAKE SUPERIOR DEVELOPMENT CO.

MICHIGAN

Office: care Clyde Mackenzie, sec., Houghton, Mich. Jos. Cro pres.; Jos. W. Selden, treas.

Property: 400 acres, held under option, the N. $\frac{1}{2}$ of Sec. 25, and S. of S. W. $\frac{1}{4}$ of Sec. 24, T. 57 N., R. 32 W., about $\frac{1}{2}$ mile E. of the Grat and about $1\frac{1}{2}$ miles of the Ojibway. Lands are on the Keweenawan f mation. Drill boring made 1910-11, gave much encouragement, and co many hopes to resume operations.

LAKE SUPERIOR SMELTING CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. Works office: Dollar B Houghton Co., Mich.

Officers: R. L. Agassiz, pres.; C. H. Bissell, sec.-treas.; preceding w Geo. A. Flagg, F. L. Higginson, F. W. Hunnewell and Jas. MacNaught directors. Jas. MacNaughton, gen. mgr.; Harry B. Conant, supt.

Inc. July, 1891, in Michigan. Cap., \$1,200,000; shares \$25 par, fully p and issued. Is controlled through ownership of 25,000 shares, by the Tack rack Mining Co., and by the Osceola Cons. Mining Co., which has 15 shares, and the Isle Royale Copper Co., which has 8,000 shares.

The smelter is connected with the plant of the Tamarack-Oscola M. Co. It has 2 rotary furnaces and 3 refining furnaces. There is a large ladle having a 1,100-lb. ladle, and a large conveyor into a endless belt, dumping over sprockets. The ore is delivered mechanically by a large hoist.

About 300 men are employed. The Tamarack-Osceola, Isle Royale and Superior also owns the district.

MICHIGAN

Works office: Calumet, Mich.

Officers: Rodolphe L. Agassiz, pres.; Jas. MacNaughton, v. p. and gen. mgt.; with W. Hunnewell, F. L. Higginson, G. A. Flagg, directors; G. G. Endicott, sec.-treas.; H. L. Bennett, asst. sec.-treas.

Inc. in Michigan. Cap., \$1,000,000; shares \$25 par; fully issued. Is controlled, through ownership, of 39,288 shares, by the Calumet & Hecla Mining Co. Has paid dividends of \$4 per share, through sale of town lots in the village of Laurium. Company ended 1916 with balance of liabilities of \$24,473. Annual meeting, second Tuesday in June.

Property: 575 acres with mineral rights, including 325 acres whose surface is also owned. Company originally owned 640 acres, lying next east of the Calumet & Hecla, but a triangular tract of about 65 acres, carrying both surface and mineral rights, was sold to the Calumet & Hecla, and about 250 acres of surface rights have been disposed of since as building lots, with reservation of mineral rights. The property carries about 1½ miles of the strike of the Kearsarge bed, with 280 acres of underlay, giving the Laurium a chance to develop this bed to a depth of about 4,400'.

Development: the Laurium shaft, started Aug. 7, 1909, as a result of previous diamond-drill borings, is about 2,200' from the S. W. corner of Sec. 35, and about one-half mile N. of No. 1 Tecumseh shaft. The shaft is 1,661' deep, with about 7,000' of workings. The mine was closed July, 1913, at the time of the strike and has not been reopened since. When operations were suspended workings on the 12th, 14th and 15th levels were in poor ground, showing very little copper.

Equipment: includes a boiler house, engine house with a large hoist and air compressor, and a changing house.

MASS CONSOLIDATED MINING CO.

MICHIGAN

Office: 79 Milk St., Boston, Mass. **Mine office:** Mass, Ontonagon Co., Mich.

Officers: John W. Linnell, pres.; Theo. O. Nicholson, v. p.; Wilfred A. Croft, sec.-treas.; Elton W. Walker, supt.; preceding with Francis L. Squire, Wm. F. Fitzgerald, Jas. B. Hill, D. Allison Carrick and Fred J. Buhheis, directors. E. Fenner Douglass, mill supt.; A. P. Bennetts, mgmt. Jos. Bice, master mechanic.

Inc. 1899 in Michigan. Cap., \$2,500,000; shares \$25 par; issued, 97,317 shares; paid in, \$24; \$8 paid on organization, balance in installments. Old Trust Co., Boston, transfer agent. Annual meeting, 2nd Thurs-March.

Balance-sheet for 1916 shows receipts, \$1,255,896; net profit, \$430,528; of cash assets, \$449,255. Construction in 1916 cost \$94,556.

Dividends: initial dividend paid, Aug., 1916, with total for 1916 of \$2 per share was paid to mid-year, equal to \$194,634. Dividend payments suspended, Oct., 1917.

Property: about 5,500 acres, lying in a very irregular but fairly compact in Secs. 33, 34 and 35, T. 51 N., R. 38 W., in Secs. 4, 5, 6, 7, 8, 9, T. 50 N., R. 38 W., and in Sec. 1, T. 50 N., R. 39 W., holdings being on the N. by the Union, Adventure and farm lands, on the E. by Venture and Toltec, and on the S. by various farm lands, and on the W. by the Flint Steel, Adventure and St. Mary's Mineral Land Co. These include 4 old mines, the Ridge, Evergreen, Mass and Ogima, also prospects, the Merrimac and Hazard, joint production of which, under management, was 11,131,023 lbs. fine copper. These 5 properties are described in detail in Vol. II, Copper Handbook.

Some of the 7 cupriferous amygdaloidal beds of the Laurium group are greatly in width from point to point but average thickness in their strike, which varies from N. 32°

E., on the north, to N. 37° E. at the southern boundary. The dip of the beds varies from 38° at the Ridge to 47° at the old Mass mine. The copper-bearing beds of the Evergreen belt on the lands of the Mass Consolidated are as follows, from north to south:

1. Knowlton. Carries heavy copper and stamp rock.
2. Mass. Lies 140' south of the Knowlton, and carries a little heavy copper and stamp rock.
3. North Butler. Lies about 75' south of the Mass bed, is wide and fairly mineralized in places.
4. Butler. Lies about 200' south of the North Butler, is 12' to 15' wide, carrying mainly stamp copper with occasional heavy copper.
5. Ogima. Lies about 100' south of the Butler. Carries mainly stamp copper with some barrel-work, being 5' to 10' wide and showing some good ground.
6. Evergreen or Ridge. Lies about 250' south of the Ogima and one of the best beds of the property, ranging 4 to 40' in width and usually being richest where widest. Is very bunched but shows some excellent stopes yielding mass copper and stamp-rock of good grade.

7. New Mass. This bed which is the lowest of the series of the Evergreen belt and brings the number of cupriferous beds to 7, corresponding with the number in the adjoining Adventure property, lies about 120' under the Evergreen bed and was opened by crosscuts from "A" shaft on the 12th and 18th levels. The bed averages about 12' in width carrying considerable epidote and is very showy, but the copper is exceedingly fine, most of it being of a flaky nature, very deceptive to the eye. A mill test of the rock from this bed, 1909, gave a recovery of only 18 lbs. of mineral per ton.

Development: the Mass has openings on all its copper-bearing beds and rock is hoisted through the nearest shaft, workings on each level being connected by crosscuts. The Mass carries the outcrop of the copper-bearing beds of the Evergreen belt for about 1½ miles. Shafts "A" and "B" are connected on the Butler lode down to and including the 10th level. The mine as a whole is notably rich in mass copper and carries silver values. The ground is exceedingly bunched, ranging from very rich to almost barren. Considerable rock selection is made underground, bringing average contents of stamp rock to 16.51 lbs. per ton. About 50% of the rock broken is hoisted, and about 25% of the recovery is in mass copper.

"A" shaft, 1,757' deep, with two compartments, sunk on the Evergreen bed has been abandoned.

"B" shaft, 875' S. W. of "A" has 3 compartments, and is bottomed 1,857'. Levels are at variable intervals; those at considerable intervals permit a larger saving in drifting through poor ground and sub-levels are run where needed.

"C" shaft, 148' S. W. of "B" and bottomed on the 14th level, is the Ogima shaft. It is on the Butler bed, but the Evergreen bed is cut by a 400' crosscut on the 3rd, 5th and 7th levels. Some high-grade ground was opened on the 3rd and on the 9th levels west on the Butler bed in 1912. The extensive and concentrated work upon the Butler though it was also done on the Ogima and Knowlton beds, tributary to "C" since 1910, results in the latter being promising.

"D" shaft, 115' S. W. of "C"

Considerable work has been done on the Mass bed from the Evergreen bed into the horizontal. The Mass bed is a massive bed of diamond drills on the Mass bed. Diamond drills on the Mass bed. Diamond drills on the Mass bed. Amygdaloidal and

quite a distance under the hypothetical horizon of the so-called Adventure beds, with distance to the eastern sandstone undetermined.

Development during 1916 totaled 2,931'. Results were satisfactory, the quantity of ore opened more than equalled that extracted. The grade increased from 14.35 lbs. in 1915 to 16.51 lbs. in 1916. The Evergreen lode on No. 5 level is well mineralized as far West, as "C" shaft in virgin ground. This lode yielded 61,580 tons, and the Butler lode 219,965 lbs.

The shaft rock house at "B" is equipped with a steam hammer, Good loads crusher, and a 50x24" Nordberg engine; "C" shaft has a steel shaft rock house; both have been equipped with devices permitting automatic handling of rock.

The central power house has a 24x48" Allis-Chalmers duplex hoist good for one-half mile depth. The power plant includes a 50-drill Rand 2-stage cross-compound air compressor, a 75-k. w. dynamo for electric light, and three 335-h. p. Babcock & Wilcox water-tube boilers.

In addition to the usual mine buildings, there are about 80 good dwellings. The company also has a town site, Mass City, which is the terminus of the Mineral Range railroad, and a station on the C., M. & St. P. railway; the village having a considerable population, with a number of hotels and business houses.

The Mass mill is at Keweenaw bay, on an arm of Lake Superior, at the junction of the Mineral Range and Duluth, South Shore & Atlantic Highway, 16 miles S. of Houghton and 34 miles N. E. of the mine. Equipment includes 2 Nordberg stamps, 1,350 tons daily capacity.

The mill boiler house contains 6 Stirling water-tube boilers. Ashes and sludgers are washed into the lake through a launder.

The pump house has a 16,000,000-gal. Nordberg vertical pump, connected with a tunnel running 300' under the bed of the bay to the intake.

Production: begun 1899, with an output of 42,800 lbs. fine copper, gradually increased to 2,576,447 lbs. in 1903, decreasing thereafter, through the end of the Evergreen bed. Recent production has been as follows: 2,007,950 lbs. fine copper in 1905; 2,106,738 lbs. in 1906; 2,078,677 lbs. in 1907; 1,766,930 lbs. in 1908; 1,723,436 lbs. in 1909; 1,321,885 lbs. in 1910; 1,326,898 lbs. in 1911; 2,045,006 lbs. in 1912; 1,213,545 lbs. in 1913; 2,955,952 lbs. in 1914; 4,638,438 lbs. in 1915; 4,752,588 lbs. in 1916.

Ore treated in 1916 totaled 287,900 tons. In June, 1917, the monthly output was 22,000 tons, a falling-off due to labor shortage.

Cost of refined copper in 1916 was 15.37c and price received 26.27c per lb.

The Mass Consolidated has had every sort of misfortune that befalls a mine, but through the acquisition of the Evergreen Bluff property, has been placed in better mining position than ever before. The experience of years has given a thorough knowledge of the vagaries and possibilities of the copperiferous beds of the Evergreen belt; though bunched, two of the beds are of real promise, the Evergreen and Butler. It is probable that these beds can be worked occasionally, but the future of the mine rests on the Evergreen and Butler beds. There also is the possibility of locating and developing other and richer beds to the southward of the main workings, in the region of the Lake and Adventure beds.

The management is both progressive and experienced.

MINING CO.

MICHIGAN

Boston, Mass. Mine office: Houghton, Hough-

Geo. F. Gardner, v. p.; preceding,
 Geo. A. L. Dickerman, F. W. Nichols,
 Geo. S. Gondale, supt.

south of the old Minnesota shafts and the 7' amygdaloidal bed supposed to be the Butler, opened to some extent in Peninsula bluff 2,000' south of "B" shaft, shows some heavy copper and stamp rock. There are 3 shafts on the Butler bed and a tunnel cutting several parallel copper-bearing strata. There also are cupriferos amygdaloidal outcrops north of the Calico bed on which no work has been done.

Development: mine has 3 shafts on the Calico bed and about 10 miles of workings. "A" shaft is 2,133' deep; "B" is bottomed at the 14th level and "C" at the 11th level. The lode grew steadily poorer with depth and showed a tendency to pinch, being only about 5' wide on the 16th level. "A" shaft, though well charged with copper. The mine was closed down Oct., 1909, continuing about 25 men in exploratory work until the end of 1910, when the property was turned over to tributors, who continued to scam the mine with some profit to themselves and the company until March 1913, when all work was stopped.

In July, 1915, work was resumed in the old "E" shaft, 265' deep, on the Butler lode; it was sunk 30' below No. 6 level, a total of 630'. At 550' main and mill copper was exposed, and continued to 615'. Fair to rich ore was opened for 275' contiguous to this shaft.

Generally, results in 1916 on the Butler, Ogima, and Evergreen lodes were highly encouraging.

Ore reserves at end of 1916 were 4,200 tons of stamp rock.

Buildings include a machine shop, smithy, carpenter shop, warehouse, office and changing house.

The mill, construction of which was begun April, 1906, is about 1 mile north of the Mass mill, on Keweenaw bay, with ample water frontage. Construction was suspended, 1907, though perhaps no more than \$10,000 would be required to complete the mill, on which about \$175,000 has been expended.

In 1916 the water-supply was completed, bins lined, and tables overhauled, and plant is ready for operation.

Production: 1900-1905, 6,113,500 lbs. copper; 2,875,341 lbs. copper; 1906; 2,665,404 lbs. in 1907; 3,000,206 lbs. in 1908; 1,979,305 lbs. in 1909; 368,000 lbs. in 1910; 327,773 lbs. in 1911; 162,590 lbs. in 1912, and 90,000 lbs. in 1913.

The mine in the past has proved a disappointment, and untoward financial conditions have restricted the exploratory and development work which are clearly called for. Recent developments have been rather promising, and the mill is to be started at an early date. Shaft sinking underway.

The property is very fully described in Vol. X; Copper Handbook.

MICHIGAN SMELTER CO.

MICHIGAN

Office: 82 Devonshire St., Boston, Mass. Works office: Houghton, Mich.

Officers: Wm. A. Paine, pres.; John R. Stanton, v. p.; F. W. Paine, treas.; Frederick I. Cairns, supt., and Chas. A. Snow, directors; John M. Ford, assl. supt.

Inc. 1900, Michigan. Cap., \$500,000; shares \$25 per. The entire issue is owned by mining companies, the Copper Range group holding 12,000 shares; Stanton companies 3,000; others as follows: Mohawk, 3,200; Atlantic, 1,000; and others. Profits for second Monday

Company owned by Houghton, near the It was designed by

smelter in the Lake Superior district, with a capacity of 90,000,000 lbs. fine copper yearly.

The plant is terraced throughout, permitting automatic handling of material. The copper ore (locally mineral) is delivered in 40-ton bottom-dumping steel cars by the Copper Range railroad, which also hauls away the refined copper for shipment from the Copper Range wharves in Houghton.

The 3,000-ton storage bins hold 10 days' supply for the works. Mineral is dehydrated in rotary dryers by water gases from the furnaces, taken to the furnaces in tram cars and dumped into hoppers on the charging floor. Coal trestles, on an upper level, hold 15,000 tons of hard and soft coal, with tunnels underneath through which fuel is taken in tram cars, descending by gravity to the furnaces and boiler rooms. There also are separate storage bins for charcoal, sand and limestone.

The reverberatory furnace buildings has three 5-ton traveling cranes and 6 furnaces. Alternating with the larger reverberatories are one 300-h. p. and two 200-h. p. Stirling water-tube boilers, heated by waste gases from the furnaces. After leaving the boilers the gases are drawn through a 6x8' subterranean flue, with arched roof, up the hill to a 150' smokestack, with base 100' above the furnace building.

The blast-furnace building has 2 blast furnaces. Blister copper is cast, mechanically, in moulds upon a circular casting table, cooled in water, and carried by a link elevator to the loading platform. Slags are carried mechanically to the sampling mill and reduced in a 30-ton crusher of 1,000 tons daily capacity for resmelting. The slag from the final fusion is granulated by water and discharged through launders to low ground northward for grading.

The combination machine shop and power house has a complete equipment driven by an independent engine, and a 300-h. p. Nordberg horizontal tandem-compound engine, driving a 200-k. w. generator, actuates the rotary blowers for the blast furnaces. Electric power is used for operating the drying plant, cranes, casting machinery and lighting. There are 3 specially designed Jeffrey electric locomotives.

Miscellaneous buildings include office, laboratory, warehouse, barn, etc. Water is obtained from the old Atlantic dam, on Cole's creek, through a pipe flume with capacity of 5,000 gals. per minute, leading to a 50,000-gal. storage tank, 100' above the works, giving good pressure at all points. The plant is well planned and well handled.

Office: 132 Winder St., Detroit, Mich. Louis O. Broadwell, pres.; Hugh A. McPherson, sec.

Inc. Dec. 16, 1874. Cap., \$1,000,000; shares \$25 par.

Property: 1,455 acres in Secs. 22, 23, 26, 27, 34 and 35, T. 66 N., R. 35 W. at the head of McCargo's Cove on the Isle Royale, shows a line of sedimentary, largest 400' and about 1½ miles long. Idle since about 1881.

MICHIGAN MINING CO.

MICHIGAN

Office: 15 William St., New York. Mine office: Mohawk, Keweenaw Co., Mich. Mine office: Gay, Mich.

Stanton, pres.; G. W. Drucker, sec.-treas.; above with W. F. W. Denton, directors.

Cap., \$2,500,000; shares \$25 par; all issued; listed on Boston Exchange. Boston Safe & Trust Co., Boston, transfer agt.

Profit in 1916 was \$2,270,054. Dividends absorbed \$1,700,000. Surplus at end of 1916 was \$2,333,839.

Dividends: (paid semi-annually, Feb. and Aug.) \$5 in 1906; \$9 in 1907; \$2.50 in 1908; \$3 in 1909; \$2 in 1910; \$1.75 in 1911; \$3.50 in 1912; \$5 in 1913; \$1 in 1914; \$6 in 1915; \$17 in 1916; \$20.50 in 1917; a total of \$7,625,000.

Property: 800 acres, in an irregular tract, having its axis on the strike of the Kearsarge amygdaloidal bed, in Secs. 27, 28, 33 and 34, T. 57 N., R. 32 W., about 4 miles N. E. of Calumet, with the Ahmeek and Seneca mine on the north and Ahmeek to the west. In May, 1916, purchased 900 acre near Dollar Bay, lying between Torch and Portage lakes, with a long strip of shore on each side, thus acquiring an excellent millsite on Torch lake.

Geology: property carries the Kearsarge amygdaloidal bed, which ranges from 15' to 18' in average width, or about the same as at the Wolverine mine, and the upper workings carry about the same percentage of copper as in the Wolverine mine, but the lower workings are by no means so rich. The Kearsarge bed is crossed at approximately right angles by a number of narrow fissure veins, with nearly vertical dip, that are yielding a considerable amount of mass copper and in addition there are 3 cross-fissures carrying copper arsenides, including mohawkite, keweenaite, mohawkite, whitneyite, and stibio-domeykite, the first two being peculiar to this district and first found in this mine. The fissures carrying mohawkite range 3" to 3' in width, are well mineralized where crossing the amygdaloidal bed and for an indefinite but usually short distance on either side, the mohawkite and allied arsenides occasionally occurring massive, but commonly being disseminated in an arenaceous gangue. Values in the arsenides decrease with depth and recent production has been small. There also are some cupiferous amygdaloidal beds in the stratified series that may be of great attention later.

Development: 6 shafts, numbered from north to south, of uniform 8x18' inside of timbering, with solid cribbing through the overburden with identical equipment. No. 5 shaft has a concrete collar 10½"x23"x11' deep, and No. 6 is concreted for a depth of 90'. The skipways are laid with concrete stringers, which prove very satisfactory. The mine is equipped with Richmond electric signals and operates about 65 power drills. No work in 1916 totaled 15,224'.

No. 1 shaft, about 1,500' south of the northern boundary, is bottomed at the 22nd level and is 2,598' deep. No. 1 hoist, in the central power-plant at No. 2 shaft, operates two 4-ton skips in counterbalance. No. 1 shaft has a combination shaft rock house, equipped with a 12x24" Nordberg engine and crushers. In 1916 new openings showed less mineralization than in 1915.

No. 2 shaft is 2,364' deep. Like No. 1, it had good ore near surface with impoverishment at depth, followed by improvement below the 13 level. The power plant at No. 2 shaft, serving both Nos. 1 and 2, includes an engine house and boiler house. Hoists are Nordberg double-cone drum duplex-cylinder engines, good for 6,000' depth, each handling 4-ton skips in counterbalance. The boiler house has 2 locomotive type boilers with foundations for 3 additional boilers, and the engine house has 2 100-horsepower air compressors, of 40 drills aggregate capacity.

No. 3 shaft is 1,000' deep and has been abandoned, as the ground water is not so high as to be of any advantage through shafts No. 1 and 2. No. 4 shaft is 1,000' deep, with good average ground from surface to 1,000' depth. It has a power house with 3 crushers and 2 air compressors. No. 5 shaft is 1,000' deep, with double-cone drum hoist, good for 1,000' depth. No. 6 shaft has a

drill Nordberg and a 60-drill Ingersoll-Sergeant cross-compound 2-stage compressor.

No. 5 shaft is 1,709' deep. Equipment includes a new all-steel shaft rock house and a Bullock hoist good for 2,000' depth.

No. 6 shaft, the southernmost and newest, is about 2,600' south of No. 5 and 2,600' from the Ahmeek boundary, commanding about three-fourths of a mile of the strike of the Kearsarge bed under about 160 acres, or approximately as much ground as the entire Wolverine mine. This shaft, located about 60' in the footwall rock, is 1,307' deep, and can be sunk to a maximum of 4,000'.

New openings at No. 4, 5, and 6 shafts in 1916 showed ore of fine quality. Mechanical haulage was installed on No. 8 level of No. 6 shaft.

The mill, near the mouth of the Tobacco river, on Traverse bay, Lake Superior, opposite the mill of the Wolverine, is 178x206' in size, of steel frame sheathed with iron, on foundations of sandstone. A steel trestle, 100' long and 50' high, leads into the mill, loaded cars being pulled up the incline by a winding engine. The mill has 4 stamps, all compounded, giving daily capacity of 2,800 to 3,000 tons. The mill has a Chilean mill and 3 sets of auxiliary crushing rolls, with fixed bearings, to reduce oversize material from the mortar boxes of the heads, this averaging 20 to 25% of rock stamped. Mineral from the wash discharges automatically and is sluiced to the basement, where shoveled into 1½-ton mineral cars, having 14-mesh perforated steel bottoms that allow the drainage out of water, after which the cars are weighed, then lifted by a cage elevator and dumped into bins. The bin house has 4 compartments, each with cement floor and steam-pipes underneath, for drying the remaining moisture from the wash. The mineral is taken from the bin house, in self-dumping steel mineral cars to the Michigan smelter at Houghton for reduction. Tailings from the mill are watered, then raised by bucket elevator, and stacked by belt conveyor, some distance from the mill. To utilize exhaust steam from stamps a 1,250-hp. turbo-generator has been installed.

Water for both the Mohawk and Wolverine mills is furnished from a hot pump house, standing near the Tobacco river, from which water is pumped. The pump house has a 20,000,000-gal. triple expansion Snow pump, supplemented by a 9,000,000-gal. Nordberg pump, giving an ample water supply for both mills.

A 30x300' wharf, on Traverse bay, a short distance from the mill, with a pier of clear water alongside, is fitted with coal hoists and storage sheds, ample for the needs of both mills. Employs about 700 men.

Yield of fine copper, per ton of rock stamped, averaged 15.79 lbs. for the decade ended 1912.

 Quinman Co., Mich.

Officers: B. T. Morrison, pres.; Harry Highley, sec.-treas.; Chas. M.
 Baker, Harry M. Howard and W. S. Warn, directors.

Inc. 1848, in Michigan; rechartered 1878, cap. increased later to \$3
 500,000; shares \$25 par; issued, \$1,875,000, and rechartered 1908. Paid div-
 idends, 1861-72, of \$330,000, and levied a 40c assessment 1909. The com-
 pany has no debts.

Property: 1,852 acres, having the Michigan on the north and east and
 the Victoria on the south and west, carries the western continuation of the
 contact vein of the old Minnesota mine, now owned by the Michigan Cop-
 per Mining Co. The property showed, when work was begun, the re-
 mains of ancient mining operations, including a shaft of 50' depth, timbered and
 scaffolded, with a nearly continuous sheet of copper extending down the
 side. The company had considerable litigation with the old Minnesota com-
 pany over the title to 115 acres of land, the National finally winning. The
 company stopped work 1893.

 of the Match mine.

orden, Theo. L. Herrmann, J. H. Susmann and Chas. J. Paine, Jr., directors; Sidney S. Lang, supt.

Inc. March 21, 1912, in Michigan. **Cap.**, \$5,000,000; shares \$25 par; \$10 paid in; issued 102,000 shares. U. S. Mortgage & Trust Co., registrar. Annual meeting, third Wednesday in March.

Company ended 1916, with a cash balance of \$6,074; investments, \$126,000; development expenses, \$118,240, or \$150,532 since 1912.

Property: 1,200 acres, in Secs. 34 and 35, T. 55 N., R. 34 W., and Sec. 3, T. 54 N., R. 34 W., just west of Houghton, on the south shore of Portage Lake, carries practically all of the Ashbed amygdaloidal beds, including the Atlantic and the Quincy-Pewabic lodes.

Development: property was slightly explored under former owners, but efforts were sporadic and altogether unimportant. Operations by present owners were begun July 10, 1912, in the horizon of the Hancock lodes. Drill borings yielded good showings of copper at depth of 513' in what was presumed to be an extension of Hancock No. 3 lode, and again at a depth of 1,301' where a 6" streak of coarse copper was encountered.

In 1914, the main, or Dakota Heights adit on the old Pewabic lode was extended 126', encountered the lode at 100', and drifts No. 2-A north and south were continued for 70' and 63'. A total of 1,936' of drifting was done during the year. This work indicated a lode, 6-8' wide, for 700', showing copper ore, but not of commercial value. During 1915 exploratory work was confined to the workings from the Dakota Heights, or No. 4 adit; a total of 1,172' of drifting on the Pewabic lode showed considerable copper in the No. 2 North drift. A 200' winze was sunk from this drift and 1,602' drifts and crosscuts driven from the lower level. About 1,000' of drifts and crosscuts were driven in crosscuts No. 4 East, No. 3 West and drift No. 2 South. No beds of value were found in the southern part of the property.

In 1916 all exploration was confined to workings from No. 4 adit. N. end of property. No. 2 drift was put out 352' on the old Pewabic lode, showing no copper. Work from No. 4 E. crosscut disclosed nothing worth further exploration, save the bed in which the breast of crosscut in.

An electric hoist was installed near top of main winze, and the winze sunk 220' to 410' level. Some small lenses of fair ore were opened during this work. Possibilities of 400' level are better than at 190'.

Equipment: includes hoist, compressor, pump and electric power.

The property is considered promising and the management is excellent.

NEW ARCADIAN COPPER CO.

MICHIGAN

Houghton, Mich.

Officers: Robt. H. Shields, pres. and gen. mgr.; Col. Sylvester T. Everett, v. p.; Wm. F. Miller, sec.-treas. **Directors:** Wm. B. Anderson, John Merton, John C. Shields, L. W. Killmar, Jas. W. Shields, Allen F. Cox, R. H. Shields, S. T. Everett and Herman W. Fesing, engr.; Otto Weber, mg. capt.

Inc. April 27, 1909, in Michigan. **Cap.**, \$3,750,000; shares \$25 par; assessable; paid in, \$125.00. Last assessment levied in July, 1917. This company succeeded the Arcadian Copper Co., a corporation organized in New Jersey that had non-assessable stock, and exchanged shares, par value, levying an assessment of \$1 per share, 1909. Property was transferred, by deed, from the old company to the new, May 30, 1909. Company owned 21,000 shares of stock of the New Baltic Copper Co. Boston Safe Deposit & Trust Co., registrar; American Trust Co., Boston, transfer agent. Meeting, first Tuesday in May.

Revenue in 1916 totaled \$139,731; including \$7,384 from sales of copper, \$24,141 from assessments, \$40,000 from sale of land, and \$66,743 from 1916 balance. Cash at end of 1916 amounted to \$21,316.

Property: 3,500 acres, includes 5 old mines worked at various periods in the past. The Arcadian Copper Co., predecessor of present company operated the property with great vigor, 1898-1901, and equipped it with machinery, and a 3-stamp mill at Grosse Point. Operations on the Is Royale bed proving unsatisfactory, all work was suspended June 15, 1901. The hoist, machinery and shaft houses were sold to the Trimountain Mining Co., the stamp mill to the Centennial Copper Mining Co., and the property dismantled. The floating debt of the old company was liquidated by the sale of 800 acres of land, for \$750,000, to the Quincy Mining Co. The old mine and equipment were fully described in Vols. I and II of the Copper Handbook.

Development: exploratory work was resumed Oct., 1905, by the old company, on an amygdaloidal bed about one-fourth mile east of the Is Royale amygdaloid previously worked, and crosscutting from the 200' level of the exploratory shaft disclosed 5 cupriferous beds in a distance of 1 1/2 miles. Work was suspended March, 1908, until reorganization, and was resumed Aug., 1909, by diamond-drill boring from the bottom of the 200' exploratory shaft, which is in the S. W. 1/4 of Sec. 29. Exploratory work, 1910-1917, included considerable trenching and test pitting, but was devoted mainly to securing 3 cross-sections, nearly 1 mile apart, by diamond drilling, and 12 holes, aggregating over 26,000', have been drilled. Drill hole No. 22 most promising amygdaloid lode, in the north area. A shaft started June, 1917, on this lode, was 1,660' deep in Aug., 1917, and is to be sunk to a depth of 2,500 to 3,000'.

Crosscutting was done on the 750' level to explore the 2 copper-bearing amygdaloid beds disclosed by diamond drilling, one 300' east, the other 1/2 mile west of the shaft. On this level an amygdaloid vein of great promise has been opened up 150' east of the shaft. Crosscuts and drifts have also been driven on the 250', 600', 900' and 1,050' levels and disclosed good copper contents. The 600' level has 600' of drifting on this lode. On the 750' level, No. 8, conglomerate was cut and found to be well mineralized at this point. During 1916, 2,114' of drifting was done and 747' of crosscutting.

Ore crushed at the Franklin mill last year, totaled 1,391 tons, yielding 23 lbs. refined copper per ton. Several thousand tons ore to be treated this year.

Equipment: includes a steam plant, with boilers, a hoist good for 2,500', a 15-drill air compressor, necessary mine buildings, and a 10-ton equipped rock-house with an 18x24" crusher.

New openings in 1916 were of generally favorable nature. On the 1,500' level the vein is up to 20' wide, has been opened for 270', and is of good grade.

Owing to its immense acreage and mineral beds, the property is considered promising and made available for sale.

NEW BALTIC COPPER CO.

MICHIGAN

Houghton, Mich.

Officers: R. H. Shields, president.

John Edwards, sec.-treas.

John Merton; Herman Festen.

Inc. Dec. 14, 1909, in Michigan.

Capital stock, \$1,000,000, all paid up and assessable; issued, \$2,176,000; 2,176,000 shares.

Principal office; American Trust Co., New York.

New Baltic Exploration, giving

100,000 shares to the Edwards camp.

Copper Co., for lands, and selling 20,000 shares to the public, at \$8. Company began operations with \$120,000 cash. Two assessments realized a total of \$116,254. All officers with exception of general manager serve without pay. Annual meeting, third Wednesday in April.

Statement for 1916 shows receipts, \$82,531, of which, \$60,659 was from assessments and \$20,361 from 1915 balance. Development cost, \$18,101, and land purchased, \$40,000. Cash on hand at end of 1916 was \$21,648, plus \$55,595 due for assessments called.

Property: 800 acres, Sec. 16, T. 55 N., R. 33 W., with mineral rights to the N. W. $\frac{1}{4}$ of the N. W. $\frac{1}{4}$ reserved by the New Arcadian Copper Co. Exploratory work, begun June 10, 1909, included extensive trenching in the horizon of No. 3 conglomerate, supplemented by boreholes put down by a Calyx shot drill, cutting a 3 $\frac{1}{2}$ " core, considerable trouble having been experienced in getting down stand pipes. No. 3 borehole, at a depth of 330', cut 2' of exceptionally good copper-bearing rock, with 6" of heavy copper, and a drill core fairly charged with copper was taken, Sept., 1909, from what was thought to be the western Baltic bed, at depth of 300'. In Nov., 1909, a drill hole pitched at an angle of 60°, cut an amygdaloidal bed estimated to pitch at 60° in opposition, giving cores of 105' aggregate depth, showing copper at various points, the final 7' being well charged with fine stamp copper and a considerable amount of very coarse stamp copper. The drilling also disclosed an unidentified amygdaloidal bed of about 75' width, carrying considerable copper in masses approaching barrel-work size. Deepest hole bored was 1,200'.

Ground was broken June, 1910, for an exploratory shaft, which was started about 35' in the footwall trap, and sunk to a depth of 500'. Although shaft was started in the foot, the formation rolls so that the bed was at 3 points in the depth of 310'. At 200' the shaft cut the footwall of the amygdaloidal bed, carrying much calcite but devoid of copper. At depth of the bed was cut again, carrying extremely heavy copper of a grade usually better than the average of the payable mines of the district. Tests on the 350' and 500' levels disclosed exceedingly bunchy ground, with occasional pockets of rich copper, and a crosscut on the 500' level showed further pockets of rich copper, and a crosscut on the 500' level showing No. 4 conglomerate bed, distant about 1,500' from the shaft. This crosscut was continued to a point over 1,900' from the shaft. Facts concerning this vein were obtained from work done on it by the New Arcadian, adjoining property.

The drilling campaign ended with No. 7 hole at a depth of 1,235' in the No. 8 conglomerate was 41' thick at depth of 1,192'. Hole passed through good-looking amygdaloid veins, with copper in beds at 329', 493', 792' and 1,192'. The New Arcadian vein is probably that cut at 792'. Shaft was started to cut the N. extension of this vein, and was down 100' in Aug., 1917. The vein sought, well charged with copper. Equipment, including a steam boiler-house, etc., were installed. It is believed that property offers great

Shelden

Officers: R. M. Edwards, pres. and gen. mgr.; Arthur C. Paine, v. p.; Henry Tolman, treas., with H. D. Forbes and S. L. Powers, directors; A. L. Wyman, sec.

Inc. Aug. 26, 1908, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; fully issued; \$10 paid in.

Company paid \$144,000 for 360 acres of land, bought of St. Mary's Mineral Land Co., one-half in cash and one-half in 9,000 shares of stock at \$8, beginning business with \$300,000 cash in the treasury. The company suffered heavily by the failure of S. R. Dow & Co., Sept., 1912, losing \$160,188 in cash and interest unlawfully borrowed by its former president, S. R. Dow, and at the end of 1912 was \$19,000 in debt. This indebtedness was wiped out by an assessment of \$1 per share, levied April 18, 1913. Federal Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting, third Thursday in April.

Annual report for 1916 shows total receipts of \$100,333, and expenses, \$71,745, leaving a balance of \$28,587. Cash on hand, \$26,683, accounts payable, \$6,520. An assessment of \$1 per share, in June, 1916, made \$100,000 available for development, of which \$38,487 was spent.

Property: 1,120 acres, in Secs. 28, 29, 32 and 33, T. 51 N., R. 37 W., lying immediately north and east of the Lake Copper Co. Property was supposed to carry about 7,000' of the strike of the Lake amygdaloidal bed, but apparently the Lake bed curves to the westward, rather than to the east. Property also carries the copper-bearing series of the Evergreen belt of amygdaloidal beds, and various other unidentified cupriferous strata. The company's lands are crossed by the Fire Steel river, and are traversed by both the Mineral Range and Copper Range railways.

Exploratory work has been planned thoroughly and systematically, the preliminary work consisting of diamond drilling to give 2 complete cross-sections, of about 8,500' and 9,500', respectively, to determine the strike and dip of all the strata on the property. These sections are about 1,000' apart and the contact of the Keweenaw series with the eastern sandstone has been definitely located by drilling. Numerous drill holes have been bored with depth ranging from 200' to more than 2,000'.

Diamond drilling was begun 1909, and ended 1911, with the No. 15 hole. Several cupriferous amygdaloidal beds were disclosed, and 2, underlying Nos. 6 and 8 conglomerates, have been correlated as extensions of Nos. 1 and 2 of the Adventure series of lodes. No. 1 bed, of about 33' width showed 10' fairly charged with copper and No. 2 bed was lean. The formations above No. 8 conglomerate bed are practically unexplored, and excepting the work done in holes Nos. 3 and 7 remain entirely untouched. The results obtained from holes 3, 7 and 13, below this conglomerate bed, were very promising and a vertical shaft was therefore started July, 1913, in the vicinity of No. 3. At a depth of 300' a crosscut to the N. W. was started. This cut through No. 8 conglomerate at 210' from the shaft. At 790' the crosscut broke through into overburden. A 200' winze, 30° incline, was sunk and 100' gained in depth. On the 400' level exploratory work for the lodes developed on South Lake property was continued, but with little success in finding commercial rock. At a distance of 1,050' N. W. of the shaft the crosscut broke through into the overburden. In the summer of 1915 shaft sinking was resumed, and by June, 1916, had been bottomed on the 800' level.

Crosscuts at right angles to the general trend of the formation were driven in both directions from the shaft on the 800' level. In July, 1916, S. E. crosscut was in 1,800'. Progress in each direction is 110' more.

A lode found at 765' in has been opened by 400' of drifts. The S. E. crosscut will continue through the copper bearing amygdaloids found by drilling.

Equipment: includes a Nordberg hoist good for depth of 1,200', a small air compressor, boarding house and other necessary mine buildings.

The North Lake is an exploration company, but in view of the encouraging results secured by diamond-drill borings on this and adjoining properties, is considered promising and the present management is good.

OJIBWAY MINING CO.

MICHIGAN

Office: Suite 3300, 120 Broadway, New York City. **Mine office:** Calumet, Mich.

Officers: Thos. F. Cole, pres.; Thos. Hoatson, v. p.; Jos. B. Cotton, v. p.; Frederic R. Kennedy, sec.-treas.; Henry B. Paull, auditor; above, with G. A. Tomlinson, Walter B. Congdon, E. R. Grochau and Sam'l Jenner, directors; Wm. J. Uren, mgr.

Inc. June 8, 1907, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; assessable; issued, \$2,100,000, \$15 paid. Levied a \$2 assessment Jan., 1910, payable \$1 March and \$1 Oct. and a \$1 assessment Dec. 10, 1912. Balance sheet, May, 1917, shows: assets, mining property, \$459,919; due on calls, \$2,953; cash, \$24,593; accounts receivable, \$4,381; supplies and suspense items, \$8,356; deficit, \$719,797. Liabilities, capital stock, \$1,260,000.

Boston Safe Deposit & Trust Co., registrar; American Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting, first Tuesday in June.

Property: 1,560 acres, bounded on the north by the Cliff and on the south by the Seneca, includes the old Manhattan tract, Bacon & Jacob lands, bought of the Union Copper Land & Mining Co.

The Kearsarge bed was located, 1904, on the Miskwabik tract, about 4 miles N. E. of Mohawk No. 1 shaft, and was proven by 5 bore holes drilled across the formation at intervals of 1,200'. Four of these holes gave good results, being especially rich well toward the northern limits of the tract. The drill holes showed the Kearsarge amygdaloidal bed to be divided into alternations of amygdaloid and trap, immediately above the geological horizon of the Wolverine sandstone, the different cores each showing copper from either one or more of four horizons. Drilling indicates that copper values alternate from bed to bed, or layer to layer, if the cupriferous nature of the Ojibway be considered a single strata; only two of the amygdaloid layers being well mineralized in a given cross-section, as a rule.

Development: by two 3-compartment shafts. No. 1, or north shaft, 600' from the northern boundary of the property, is 2,051' deep, disclosing copper from grass roots. Developments in this shaft show that the Kearsarge stratum is split in two, having distinct beds of 20' and 13' respectively, separated by 13 to 15' of trap. The 1,600' and 1,700' levels show good ore.

No. 2 shaft, 1,116' S. W. of No. 1, is sunk about 90' in the footwall, and 1,954' deep, disclosing very little copper ground above 800', though a material betterment is noted below that depth, and a very marked improvement is noted below 1,500' depth. This shaft is sunk in unusually hard ground, requiring very little timbering. Work was suspended June 30, 1917, for lack of working capital.

The mine is equipped for development to a depth of 2,000'. Development has been systematic, but the former management planned making use of 5-drill cores, which, as development has proven, gave rather favorable indication of the richness of the lode.

OLD COLONY COPPER CO.**MICHIGAN**

Office: 70 State St., Boston, Mass. **Mine office:** Houghton, Mich.
Inc. 1898 in Michigan.

By vote of stockholders, Feb. 26, 1917, company was consolidated with the Mayflower Mining Co., on a share for share basis, under the title of Mayflower-Old Colony Copper Co., which see.

Property: about 1,200 acres on the Mineral Range, Houghton Co. Mich., in Sec. 17-18, T. 56, N., R. 32 W., east of the Calumet & Hecla, and south of the Mayflower mines.

Development: a cross-section was secured, 1899-1901, by a tunnel drive about 3,000' and by diamond drill borings eastward to the western end of the tunnel; this cross-section showed upwards of 75 amygdaloidal and conglomerate beds, a number of which carried a little copper in the drift cores and where cut in the tunnel. There are 5 shafts, aggregating about 2,200' in depth, and over 6,000' of drifts and crosscuts, all of which have shown indifferent results. Work was discontinued in 1909, and resumed again in 1911 by diamond drilling. In April, 1912, having finished the first and second sections of the original plan to drill the southern and eastern part of company's lands, the drills were moved to the north, and hole No. 14 was located between 400' and 500' S. E. of Mayflower hole No. 16, which has been called the "discovery" hole, and in which the so-called Mayflower lode was first cut on that property, disclosing a lode of unusual width and a high degree of mineralization. Two drills have been employed continuously in this work which has progressed in a general S. W. direction along the strike of the strata.

This diamond drilling campaign was an entirely original exploration of an unprospected territory, and met many puzzling geological problems but the work was thoroughly and scientifically performed and the lode has been located within an area of 3,000' N. and S. by 2,000' E., and the general average of values is good.

ONECO COPPER MINING CO.**MICHIGAN**

Office: 78 Devonshire St., Boston, Mass. **Mine office:** Hancock, Mich.

Officers: John D. Cuddihy, pres.; John Brooks, sec.-treas.; preceded with F. L. Maguire, J. E. Fitz Gerald, Jr., directors; John L. Harris, mgr.

Inc. Dec., 1898, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; \$1 paid in; issued, \$1,750,000 June 9, 1913. Levied a 50c assessment, Jan. 1906, a \$1 assessment, Feb. 21, 1910, and a \$1 assessment, Oct. 10, 1911. Annual meeting, third Thursday in March. Stock traded on Boston exchange. Company its own transfer agent; Federal Trust Co., Boston, registered.

Property: 800 acres in Houghton county, all on the Keweenaw formation, in Secs. 2, 10 and 11, T. 56 N., R. 33 W., forming a large tract of 640 acres, and a smaller tract of 160 acres, adjoining diagonally on the N. E. corner. The property lies east of the Franklin Junior, Rhode Island mines, but is separated therefrom by a quarter mile of intervening lands.

Development: the mine was opened 1862, and exploring was done in 1890 and 1898. Work was begun by the company June 26, 1909, on a compartment shaft that was sunk 500'. Drifting on the upper levels showed a bed of fair width, carrying a little copper, and the shaft cut a vertical fissure, rich in copper, this being of interest because it is one of the productive crossveins found in the Portage Lake district. The lode in which the shaft was sunk has been variously identified as the 10th

Work was suspended 1900 until Aug., 1909, when diamond drilling was gun, 10 drill holes being bored, cutting the Oneco bed on which the shaft sunk, and an unidentified amygdaloidal bed, called the Torch Lake or omahawk lode, about 1,200' west of the Oneco, cores from both beds showing more or less copper. Drill holes were bored to depth of 1,000' to 1,700', locating the eastern sandstone and giving 2 complete cross-sections, 2,700' apart.

The mine was reopened Nov., 1910, and drifting resumed on the 4th level. The shaft has been sunk to a depth of 1,250' and extensive drifting on the 9th, 10th, 14th and 12th levels, both north and south, has shown the vein to be 10 to 20' wide and well mineralized. Mine has been idle since 1914, due to lack of funds.

ONONDAGA COPPER CO.

MICHIGAN

Houghton, Mich.

Officers: Reginald C. Pryor, pres., treas. and gen. mgr.; C. H. Lang, v. p.; Wm. Duffney, sec., with Ward B. Smith and D. L. Robinson, directors.

Inc. April 22, 1912, in Michigan. **Cap.**, \$3,750,000; shares, \$25 par; \$4 paid; issued, 99,955. Stock listed on the Boston Curb Exchange. State Street Trust Co., Boston, transfer agent; Commonwealth Trust Co., registrar. Balance, Dec. 31, 1916, \$33,130.

Property: 10,230 acres in Ontonagon Co., Mich., near the White Pine mine of the Calumet & Hecla Co. The formation, a fine-grained sandstone, has been exposed by surface trenching at several points and found to carry flake copper in considerable quantity. The values appear to be patchy, but as the ore frequently averages 10% where cross-faults occur, a commercial average may reasonably be expected.

Development: is confined to diamond drill work. The first hole completed in Jan., 1913, has a depth of 1,912' and is apparently in the horizon of the Isle Royale-Arcadian lode. Hole No. 2 is 1,500' deep. Hole No. 5, driven in 1913 to 2,000' depth, failed to reach the contact. In 1914 holes Nos. 6, 7, 8 and 9 were drilled, making a complete cross-section from the S. E. corner of Sec. 14 to the N. W. corner of Sec. 4. None of the cores cut in the holes gave cores showing copper in commercial quantities. Owing to unsettled conditions work was discontinued Sept. 21, 1914. Drilling near the northern boundary was started July, 1915, each hole exploring the territory farther south. In the extreme S. E. corner the lode was located at 1,100' depth, but revealed no copper values. In 1916, drilling for cores from the lode in several places, but revealed no commercial values, so operations were stopped, Aug., 1916, and management will await results of development on neighboring properties.

OSCEOLA CONSOLIDATED MINING CO.

MICHIGAN

Office: 12 Ashburton Place, Boston, Mass. Mine office: Osceola, Houghton Co., Mich.

Officers: E. V. R. Thayer, pres.; Rodolphe L. Agassiz, v. p.; Wm. H. Thayer, E. V. R. Thayer, J. M. Longyear, Wm. D. Calverly, D. S. Dean, Wm. Joy and Guy W. Carrier, directors; C. H. Bissell, sec.-treas.; G. L. Wood, asst. sec.-treas.; James MacNaughton, gen. mgr.; Frank H. Haller, A. Lincoln Burgan, mill supt.; Chas. D. Hoh1, chief engr.; Jas. Rowe, Osceola branch: Jos. Discombe, mng. capt. North Kearsarge branch: Frank Lands, mng. capt. South Kearsarge branch: John T. [unclear], mng. capt.; Wm. Veale, chief clerk.

Inc. 1891 in Michigan and reincorporated 1903. For a term of 30 years. Capital, \$2,000,000, shares \$25 par, issued, \$2,403,750. State Street Trust Co., Boston, registrar; America Trust Co., Boston, transfer agent. Shares

are listed on the Boston Stock Exchange. Annual meeting, second Thursday in March. Company is controlled by the Calumet & Hecla Mining Co., through ownership of 32,750 shares.

Balance sheet of Dec. 31, 1916, shows net earnings of \$2,776,160, and surplus of \$2,677,547.

Dividends: company has paid 87 dividends, beginning 1878, to August 1917, aggregating \$16,217,975. Recently dividends have been \$2 in 1904; \$1 in 1905; \$16 in 1906; \$7 in 1907; \$2 in 1908; \$14 in 1909; \$8 in 1910; \$7 in 1911; \$12 in 1912; \$7.50 in 1913; \$3 in 1914; \$8 in 1915; \$19 in 1916; \$12 in Aug., 1917.

Net earnings were: \$677,105 in 1908; \$1,070,645 in 1909; \$758,586 in 1910; \$664,628 in 1911; \$1,163,288 in 1912, equivalent to \$12.09 per share; \$381,960 in 1913; \$353,677 in 1914; \$1,610,860 in 1915; \$2,776,160 in 1916.

Property: 2,120 acres, in 4 separate tracts, also an extensive mill site, in Houghton Co., and miscellaneous lands in Houghton and Keweenaw Counties, Michigan. Company's property includes the Osceola, North Kearsarge, South Kearsarge and Tamarack Junior mines.

The Osceola mine proper, 720 acres, lying next south of the Calumet & Hecla, was opened, 1873, on the Calumet conglomerate; this bed proving unremunerative, work was begun on the Osceola amygdaloidal bed, parallel and 730' east of the Calumet conglomerate. The Osceola amygdaloid has a strike of approximately N. 39° E., and is opened by six shafts numbered from north to south. Crosscuts have been sent from the Osceola workings to the Calumet conglomerate, at various depths, without encouragement, and diamond drilling was done, 1904, to locate and test the Kearsarge amygdaloid on the old Osceola tract, but the results were not encouraging. It is said that the company ceded the right to mine the Kearsarge bed of its property to the Laurium Mining Co., in exchange for certain surface rights.

The 4 northernmost shafts of the Osceola mine proper are abandoned. No. 5 Osceola shaft, 700' S. E. of No. 3, is 4,667' deep. No. 6 Osceola shaft, formerly known as the Opechee, 1,300' S. W. of No. 5, is 4,734' deep. This shaft shows some good stopes, especially on the lower levels in the southern drifts, toward the Tecumseh mine.

Some work was done at No. 3 shaft in 1916, but stopped 1917, until labor and mill arrangements improve. Mining was limited to No. 6 shaft where, on No. 38 and 39 levels S. the ground was rich. No. 42 was driven into La Salle ground (which report see). An auxiliary shaft was started 1,800' S. of No. 6, and is operating between No. 43 and 45 levels. Road haulage was installed on No. 45 to tram ore from this new shaft.

Osceola contributed 225,030 tons of 14.89 lb. copper ore in 1916.

The compressor house is equipped with a 50-drill Nordberg 2-stage cross-compound air compressor.

Water is secured from Lake Superior through a 1½-mile line of pipe, connecting with a stand pipe at the Tamarack mine, leading to a 130,000-gal. concrete reservoir between Osceola shafts Nos. 5 and 6.

The Kearsarge or North Kearsarge mine, 1,120 acres, lies north of Wolverine, with which it has underground connections. Extensive diamond drilling, 1905-1907, showed considerable good stamp rock in the hanging walls, at points where the main bed was impoverished. Diamond drill boring costs were \$2 to \$3 per foot, as against 50 to 55 per foot drifting. The Kearsarge amygdaloidal bed ranges 16 to 20' in width in the mine, and has proven very lumpy, though with very good average yield. The southern workings, approaching the Wolverine, have shown very

ment, but the mine is richest near the Ahmeek, to the north. About 60 power drills are used in this branch.

No. 1 North Kearsarge shaft is 4,092' deep and has a Nordberg hoist good for 6,500' depth, operating two 6-ton skips in balance. No. 2 North Kearsarge shaft was abandoned at depth of 2,400', some years ago.

No. 3 North Kearsarge shaft, 1,825' N. E. of No. 1, is 3,403' deep and develops a large area of good ground, especially in the northern drifts. No. 3 North Kearsarge shaft, begun 1907, sunk 75' in the footwall, is 1,622' deep. The shaft is lined with concrete for 185' from surface, and has large loading bins just below the 10th and 13th levels, to which rock is milled through chutes, from the levels above. Equipment of the rock house includes two 40-ton crushers, driven by a special Nordberg engine.

Shaft No. 3 was repaired during 1915 and 1916, and is producing 450 tons daily, all from above No. 20 level. Copper-content of ore from No. 3 and 4 shafts improved over previous years.

The steel frame boiler house at No. 4 has three 84" Pratt boilers, with room for 2 additional.

The North Kearsarge surface plant includes a stone compressor house and a 30-drill compressor at No. 1 shaft, where are located also the combination machine and carpenter shops, warehouse and office, all of wood.

North Kearsarge contributed 651,079 tons of 14.23 lb. copper ore during 1916, which was considered a profitable period for the mine.

The **South Kearsarge** mine, 160 acres, lying south of the Wolverine and east of the Centennial, was known formerly as the Iroquois. Development was begun Sept., 1899, and the best stopes are toward the Centennial side, the Kearsarge bed averaging about the same width as in the North Kearsarge and Wolverine mines, and being remarkably uniform in copper values. This mine is completely developed, both shafts and all but a few of the drifts having reached the boundaries of the property, and the mine was officially stated to have a life of but 2 years, at the present rate of production, without taking into account about 700,000 tons in the pillars and ches; the mining of these will be a slow operation and costs higher than present.

Mining pillars continued in 1916 to a limited extent. Over 33% of the ore treated from this mine (408,572 tons of 17.06 lb. copper) came from pillar work, cleaning up finished stopes, and a surface dump. When these are finished the 1917 yield will be lower.

No. 1 South Kearsarge shaft, the northernmost, is 2,820' deep, and practically at the boundary. The shaft rock house cares also for rock from No. 2 shaft, with which it is connected by an 1,100' trestle. Two skips are operated in balance. No. 2 South Kearsarge shaft is 1,992' deep.

A 350-gal per min. motor-driven pump was installed in 1916 to handle water coming through caved workings.

The **Tamarack Junior** mine, 120 acres, lying between the Centennial and Magnet & Hecla, has 2 vertical shafts, on the Calumet conglomerate, No. 2 shaft is 3,860' deep, with 12 levels opened. The Tamarack Junior has been active since 1903, and apparently is dead, so far as the conglomerate is concerned, with indifferent prospects of finding other workable cupriferous ore on the tract.

Rock is transported from the various mines to the mills by the Hancock & Calumet railway, a branch of the Duluth, South Shore & Atlantic

is built in 2 sections, the main section being 176x213', of steel with 4 Nordberg triple-compound stamps. These stamps, which are in very general use in the Lake Superior district, were invented by

B. Nordberg as the result of some years of experimentation. The stamps have circular mortars, with $\frac{3}{8}$ " screens, and hydraulic separators, about 20% of the copper secured in milling coming from the mortar discharges and separators. The older section has 3 stamps with circular screens having $\frac{3}{8}$ " openings, and is otherwise a duplicate of No. 2 mill.

The wash department of the 2 mills are equipped with Woodbury classifiers and jigs with 6 round tables and 1 Wilfley table for each stamp, the Wilfleys taking headings from the round tables. An Allis-Chalmers Chilean mill reduces over-size material from the stamp mortars and there are crushing rolls and Hardinge mills. Stamping costs were 16.95c per short ton in 1905, and only 11.71c in 1907, the latter figure being the lowest ever reported by any mill for this work, and milling costs were 13.30c per ton in 1908. No figures of stamping costs have been made public since the change in management.

Mill improvements in 1916 amounted to \$24,645. The fire-protection system was connected with the Calumet & Hecla.

The steel boiler house, adjoining the mills and furnishing power for both, has three 250- h. p. 72" boilers, delivering steam at 150-lbs. pressure, and nine 250 h. p. 84" boilers operated under 105-lbs. pressure, all of the locomotive-firebox type.

The power plant has an Allis-Chalmers Corliss engine, operating a 100 k. w. Morgan-Gardner d. c. generator, furnishing current for 220-volt incandescent enclosed arc lamps.

The joint pump house of the Osceola and Tamarack mines has two 40,000,000-gal. triple-expansion Nordberg pumps having 22", 40" and 60" cylinders, with three 30" horizontal plungers of 52" stroke and 42" discharge. Water is taken through an 8' tunnel, running 1,275' under Torch lake, with 3" intake holes, guarding against clogging by ice.

Production:

	Tons R'k	Lbs. Min. Produced	Mine		Total		Rec'd
			Lbs. Cu. per Ton R'k Stpd.	Cost per Ton(a)	Lbs. Cu. Produced	Cost per Lb. Cts.

1910.....	1,217,720	25,669,913	15.9	1.28	19,346,566	9.37	

(a) Includes mining, transportation, stamping and taxes per ton rock.

(b) 63,449 tons No. Kearsarge rock stamped at Tamarack mills at cost of 27.28c per ton.

(c) 77,937 tons No. Kearsarge rock stamped at Tamarack mills at cost of 24.32c per ton.

(d) 13,379 tons No. Kearsarge rock stamped at Tamarack mills at cost of 27.88c per ton.

In 1916 the mine costs per ton at the different mines owned by company were as follows: Osceola, \$1.54; North Kearsarge, \$1.20; Kearsarge, \$1.18.

Strike conditions and inefficiency of steel plant and outbreak of the European war bear in 1914, 1915, 1916, and high costs during that time. From 1917 to 1919...

mines were operated on a three-quarters time basis. Osceola is a low-grade mine whose profitable operation is insured by the efficient management of the Calumet & Hecla control.

Copper yield for the first 4 months of 1917 averaged 1,519,000 lbs. per month; nearly 40,000 tons of ore was treated in June, 1917.

PACIFIC COPPER CO. MICHIGAN

Office: 705 Sears Bldg., Boston, Mass. Mine office: Leopold Bldg., Houghton, Houghton Co., Mich.

Officers: Geo. P. Gardner, pres.; Chas. J. Paine, Jr., sec.-treas.; preceding, with W. Cameron Forbes, Chas. E. Perkins, Nathaniel H. Stone, E. V. R. Thayer, T. N. Perkins, Walter Hunnewell and R. R. Goodell, directors; F. W. Nichols, agent.

Inc. Aug., 1890, in Michigan. Cap., \$1,250,000; shares \$25 par; issued, \$1,000,000, \$2 paid. Is controlled, through ownership of about 20,000 shares, by St. Mary's Mineral Land Co. Paid a \$1 dividend Nov. 18, 1910. Ended 1916 with \$7,706 cash on hand.

Property: 820 acres, the N. W. ¼ and the S. W. diagonal half of the S. W. ¼ of the N. E. ¼ of Sec. 4, and Sec. 5, T. 54 N., R. 34 W. Land lies just N. W. of the Atlantic mine, and supposedly carries the northern extension of the Atlantic ashbed, on which a little exploratory work was done previous to organization. Has done no mining work since 1890.

Of the \$40,000 originally raised by sale of 20,000 shares, one-half was spent in prospecting work. The timber on the lands has been sold at various times and 140 acres sold to the Naumkeag Copper Co. From these sales and interest on funds, company has distributed \$40,000 cash and 4,000 shares of Naumkeag Copper Co. stock to its stockholders.

PHOENIX CONSOLIDATED COPPER CO. MICHIGAN

Controlled by Keweenaw Copper Co. Office: Calumet, Mich. Mine near Phoenix, Keweenaw Co., Mich.

Officers: Thos. F. Cole, pres.; Spencer R. Hill, v. p.; F. W. Taylor, W. J. Uren, gen. mgr. Sec.-treas.; preceding, with G. G. Hartley and Thos. Hoatson, directors;

Inc. April, 1899, in Michigan. Cap., \$2,500,000; shares \$25 par; \$14.50 paid in. Is controlled by the Keweenaw Copper Co., through ownership of about 90% of the share capital, acquired by an exchange of shares on the basis of 10 shares of Phoenix for 1 share of Keweenaw.

Report for year ended Dec. 31, 1916, showed assets of \$1,804,842, which includes: real estate, \$505,213; development and exploration expense prior to 1916, \$1,065,785; exploration and development during 1916, \$74,988; cash, \$1,080.

Liabilities: Keweenaw Copper Co., \$112,995; mine accounts and liabilities, \$1,847. Last assessment was \$2 per share, July, 1915.

Property: 2,505 acres, carrying 5 different fissure veins, on which more extensive mining has been done, at various times. The old Phoenix mine, included in the present consolidation, is famous for having produced the largest mass of native copper ever found, weighing upwards of 500 tons. The Phoenix fissure, on which work was begun 1846, was opened to a depth of about 90', yielding a considerable mass copper and silver. There also are possibilities on the adjacent lode, which has been slightly developed by exploratory workings. The mine has extensive openings and a modern shaft, and was closed down in 1885, without success, until closed down, Dec. 18, 1905.

Discovered during an... in 1910, gave encouraging results... after several years of idleness, ... drilled, aggregating 1,824'

on the 4th, 6th, 8th, 10th and 12th levels, all the cores showing copper either in the drifts or towards the walls.

New work in 1916 totaled 5,426'. Shaft sunk 201' to 1,616' in depth and good copper ground was found on the 6th, 7th, 8th and 10th levels. The "Old Phoenix" fissure was explored by a crosscut northwards to hanging wall of the Ashbed lode and found not mineralized, excepting where it cuts the lode.

Equipment: at power plant at No. 1 shaft includes 3 boilers, 2 air compressors, hoisting engine and pumps. The mill contains 7 Wilfley tables. Company plans to make tests with the Mineral Separation process, 1917.

QUINCY MINING CO.

MICHIGAN

Office: 32 Broadway, New York. **Mine and works office:** Hancock, Houghton Co., Mich.

Officers: Wm. Rogers Todd, pres.; W. Parsons Todd, v. p.; Jas. L. Bishop, Chas. J. Devereaux, Isaac H. Meserve, Wm. M. Belcher, John M. Longyear, Walter P. Bliss and Otto Kirchner, directors; W. A. O. Paul, sec.-treas.; F. J. McLain, asst. sec.-treas.; Chas. L. Lawton, gen. mgr.; Alex. Laist, smelter supt.

Inc. March 30, 1848, under special charter from the state of Michigan. Cap., \$3,750,000; shares \$25 par; issued, \$2,750,000. Original cap., \$500,000; reincorporated March 6, 1878, for 30 years more with cap. \$1,000,000, increased, 1889, to \$1,250,000, again increased, 1896, to \$2,500,000, and once more increased, 1906, to \$3,750,000. Reincorporated 1908 for a third term of 30 years. Old Colony Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting, first Wednesday in June.

Comparative Statement: Assets and Liabilities exclusive of real estate, mine plant and supplies in use.

(a) After deducting \$226,250 paid Hancock Cons. Mining Co. for mineral land purchased.

(b) Balance, Jan. 1, 1913, \$1,233,278; also, deduct \$150,000 paid note given St. Mary's Canal Mineral Land Co.

Dividends: Quincy paid its first dividend in 1862, and profits have been disbursed to shareholders in every succeeding year except 1866 and 1867, giving the company a continuous dividend record of 49 years, from 1862 to date, rendering it the oldest dividend-paying American copper mine, second only to the Genesis Sulphur & Copper Co. Ltd., which has a record of continuous dividends since 1867, or 1 year longer than the Quincy record. Recent dividends for 2 years have been as follows: 1902, 28%; 1902, 28%; 1903, 28%; 1904, 28%; 1905, 24%; 1906, 30%; 1907, 32%; 1908, 18%; 1909, 16%; 1910, 18%; 1911, 20%; 1912, 22%; 1913, 24%; 1914, 26%; 1915, 32%; 1916, 34%; 1917, \$25,187,500.

A table of statistics, production, costs, etc., 1864-1905, is given in Vol. Copper Handbook.

The year 1917 marked Quincy's 69th anniversary. During this period has paid its stockholders \$25,187,500 in dividends and still had \$2,663,615 surplus, equivalent to a profit of 4½c on each of 571,452,080 lbs. copper produced, and sold at an average price for the entire 69 years of 15.3456c, equal to \$87,765,820.

Production in 1916 was 1,204,020 tons of rock, averaging 17½ lbs. copper. Outlook for 1918 is good for continued production and a new hoist suitable for 10,000' in depth will permit deep exploration. A noteworthy fact was the find of a great body of mass copper 40' long and 70% pure, on the level of No. 2 shaft, early in 1917.

Property: is very extensive, the management having adopted the policy, many years ago, of expansion of territory as opportunities offered. Acquisitions include a purchase of the Arcadian Copper Co., 1907, at a price of \$50,000; the old Franklin mine, 1908, at a cost of \$170,000, and the acquisition, 1910, of Sec. 14 and the N. E. ¼ of Sec. 22, of 800 acres, from St. Mary's Mineral Land Co. bought for \$600,000; 80 acres under and to the S. of shaft No. 2 were bought from Hancock Mining Co., July, 1915, for \$226,250.

The holdings of the Quincy now include lands formerly held by the Pewabic, Franklin, Mesnard, Pontiac, Arcadian and St. Mary's, in order named, from south to north.

Geology and Development: property carries the Pewabic bed and a number of parallel copper-bearing amygdaloids, from the Hancock mine, on the northern shore of Portage lake, to the boundary of the Franklin Junior mine, or about half way from Hancock to Calumet. Through the acquisition of new territory, shafts Nos. 2, 6 and 8 can be sunk to practically unlimited depth.

The mine was opened 1848, on the Quincy amygdaloid, a bed lying some distance west of the Pewabic, but the Quincy bed was abandoned 1856, when the Pewabic amygdaloid was opened. There is a footwall branch, known as the Pewabic East lode, underlying and parallel with the main bed, which occasionally yields good returns. The so-called West branch, about 100' west of the Pewabic bed, has been opened by shafts Nos. 4 and 7 through crosscuts on the 30th, 39th, 40th, 44th and 49th levels, and considerable stamp rock has been stoped therefrom. About 1,000' west of the Pewabic bed is the Hancock amygdaloid, which is narrow but fairly mineralized, and which yielded an average of 21 lbs. fine copper per ton, after reasonable selection, when worked in the old Hancock mine, this figure being actually above the present average return from the Pewabic bed.

The Pewabic amygdaloidal bed, on which all shafts are sunk, has a strike of about N. 30° E., with an average dip of 52 to 54° at surface, flattening in the lowest workings at depth of more than a mile to approximately 37° 30', the shafts following the dip of the bed on catenary curves. The Pewabic averages about 30' in width in the upper workings, but is usually narrower at the bottom. The lower workings show decreased copper values with much less heavy copper than above, but the ore is more abundant in value. Part of the decrease in copper returns is due to mining that formerly would have been left as worthless and practically the Pewabic bed is now mined. There are copper courses, or shoots, in the north with depth.

The Pewabic bed has good walls and the mine requires comparatively little timber as the walls are built of waste rock, in wide stopes, saving so the cost of timber. Shafts are sunk in the Pewabic rock now runs 17 lbs. fine cop-

per per ton, with some silver values. Previous to about 1890, about 40% of the copper was secured in masses. In 1912 the proportion of mass copper was about 15%. The southernmost drifts of the Quincy are about 3,000' below mean water datum of Portage lake, while the northernmost workings at No. 8 shaft are fully 2 miles from the southern breasts.

New work totaled 27,340' in 1915, and average about 6 miles yearly, the mine having over 100 miles of workings. Fire doors have been installed and every precaution is taken against fire. Miners are carried to and from work in man cars holding 30 men each, and hoisting cables are inspected frequently, with every care taken to prevent accidents.

The electric underground traction plant was installed by the General Electric Co., tram lines averaging about 1,800' each in length with gradients of 1.5% towards the shafts. The equipment includes 20 electric locomotives, each hauling 4 or 5 three-ton rock cars at a speed of 6 to 8 miles per hour, 1 man caring for each train. Tram cars are unloaded into 500-ton storage bins, built on the hanging-wall side of the shafts. This system of storage obviates the loss of time by either the tram lines or skips, and adds about 25% to the hoisting capacity of the mine, the property being equipped with hoisting and rockhouse capacity for a production of over 4,000 tons daily. About 200 rock drills are used in sinking, drifting and stoping, and extensive use is made of the diamond drill for exploratory and preliminary development work.

The Quincy has been much troubled by air blasts, violent disturbances brought about by the settling of superincumbent rock in the scores of miles of worked-out openings, causing violent compression of the air elsewhere throughout the mine. The most serious disturbances from air blasts, which are practically artificial earthquakes, felt for only a few miles distance upot surface, were experienced in Feb., 1906, and March, 1914, and there seems reason to fear that these troubles will prove intermittently continuous for the balance of the mine's life. The air blasts, while unpleasant, have caused more alarm than damage.

Owing to the absorption of adjoining mines, the Quincy shafts are numbered irregularly and are described hereinafter in order of occurrence from south to north, rather than in order by number.

No. 7 shaft: the southernmost, planned and sunk by John L. Harlan leaves surface at an angle of 53° and is bottomed at an angle of 37°. The shaft was sunk 4,000', in 18 months, through very refractory rock, the speed being rendered possible by sinking and raising in 5 sections simultaneously. The shaft is bottomed at the 71st level, at a depth of about 6,000'.

No. 7 shaft has a steel shaft rock house, with 750-ton bins, a steam hammer and two 24x36" crushers.

No. 7 shaft has an 8,000-h. p. Allis-Chalmers Corliss hoist, with 52x36" cylinders and winding drums 28' in diameter by 11' 9" face, carrying 8,000 lbs. of 1½" steel cable, the main shaft weighing 120,000 lbs. This hoist can raise 6-ton skips from a depth of 1½ miles at a speed of 3,000' per minute, hoisting being limited to this rate by an automatic cutoff which also prevents overwinding. Starting a load of 6 tons from a depth of more than a mile, the hoist, if untouched, will check without damage after raising a skip only a few feet higher than the appointed place in the shaft house. There is a 1,300-gal. bailer in addition to skips.

No. 4 shaft is closed down.

No. 2 shaft: 585' next north of No. 4, is below the 75th level. Equipment includes a 1,300-gal. bailer for raising water and 30 to 40 power skips are operated normally.

No. 2 shaft has a shaft rock house, built 1908, by the American

No. 7. Stamp rock from the shaft is dumped onto grizzlies, with wide bars, smaller material falling into circular bins, whence it passes by gravity to the crushers and thence into the main rock house bin. The smaller mass copper passes through the grizzly bars, is picked out by workmen and dropped into a chute carrying it to a steam hammer, there also being a chute for waste rock. The grizzlies allow large pieces of rock to fall into a bin of reinforced concrete in front of the steam hammer, where broken rock is sent to the main rock house bin through a chute, while mass copper is dropped into a steel tube leading to a circular steel bin, which loads into railroad cars through chutes with pneumatic gates.

No. 2 shaft has a special crushing plant for waste rock, between the collar of the shaft and the rock house. Poor rock is dumped into a circular bin and drawn by gravity to a crusher, going thence to circular storage bins, from which it is drawn off into wagons or railroad cars for use in railroad ballasting, road building and concrete work. There are similar crushing plants at the other main shafts, except No. 7.

The surface equipment of No. 2 shaft is very heavy, being practically duplicate of that at No. 7, including a powerful hoist and two 60-drill cross-compound 2-stage Corliss air compressors.

No. 6 shaft 1,928' north of No. 2, is below the 73rd level. Equipment includes an Allis-Chalmers duplex hoist, with a 22' 6" straight-face drum, using 8-ton skips; a 1,300-gal. bailer, a centrifugal feed-water heater being attached to one cylinder of the hoist, and a 100-drill 2-stage compound air compressor. The boiler house has four 250-h. p. Wickes water-tube vertical boilers, nine 100-h. p. locomotive firebox boilers, and a powerful fire pump.

The Franklin mine lies next north of No. 6. The Quincy bought the old Franklin mine, 160 acres, for \$170,000, taking possession Dec., 1908, and using the mine immediately. It is doubtful if the old shafts ever will be used by the Quincy.

No. 8 shaft: the Mesnard, 4,168' north of No. 6, is at the 64th level, levels in this shaft were opened at 135' intervals and former numbering of the 24th level of No. 8 correspond with the 42d level of No. 6. This level was poor in the upper levels, but the lower workings, while by no means up to the Quincy average of some years ago in quality of ore developed, show a bed wider and better mineralized than above, and the ground is of very satisfactory and profitable average, the improvement that began on the 10th level being very marked below the 20th level. The present average of the lode at the Mesnard shaft is nearly up to the present average of the older workings. This shaft is connected with the workings to the south, which at this depth are at 200' intervals, from the 41st, which is the first to pass under the old Franklin mine, to the 63rd inclusive. Production, begun 1907 from this shaft, was 1,600 tons daily. The power use at No. 8 has a Nordberg 32x72" duplex-cylinder engine with double eccentric drum, of 12' 6" minimum and 18' 6" maximum diam., good for 6,000 h. p., and a 65-drill Nordberg 2-stage cross-compound air compressor. The boiler room has ten 250-h. p. Parker and Fisher boilers. There is a large engine house of reinforced concrete at the shaft, and a building built for uses for employees.

No. 9 shaft: 2,000' north of No. 8 is the old shaft, which has a concrete collar and cut down to 3-cylinder engine, and at 2,600' cuts a drift from No. 8. It is used for ventilation.

To the north of the Pontiac shaft is the old shaft, which is to the right of the Arcadian Copper Co. and is used for ventilation. It is the extension of the Pewabic bed.

The surface plant of the Quincy is very complete. Miscellaneous buildings at the mine include a large warehouse, general office, several hundred dwellings at the mine location and a considerable number of houses at the mills.

Water for boilers and potable use at the mine location is taken from Portage lake, the pumps forcing water for a mile against a static head of 640'.

The company's private rail line, the Quincy & Torch Lake, built 1890, is 6 miles long, touching at all shafts and shops at the mine and at the boiler house, wharves and coal sheds at the mill. This line is connected with the Mineral Range, Hancock & Calumet and Copper Range railways. Equipment includes several locomotives, freight cars and nearly 150 hopper cars for rock, the latter having automatic couplers and air brakes.

Stamp mills: at Mason, on Torch lake, 6 miles from the mine, have 8 stamps, with combined capacity of about 5,500 tons daily, the stamps giving an average duty of about 700 tons. Two 36"x8' Hardinge ball mills were added in 1916. In 1917 steel balls were substituted for pebbles in these mills. The results secured at the Quincy mills reflect great credit upon Superintendent Shields.

No. 1 mill, of wood, has 5 Allis-Chalmers 2-way stamps, taking steam at 100 lbs. pressure. There is an Allis-Chalmers Huntington mill for regrinding raggings, and the dressing machinery includes 92 Hodge jigs, and 32 Wilfley tables.

No. 2 mill, 630' north of No. 1, has 3 Allis-Chalmers heads, each set on foundations of heavy timbers and concrete, surmounted by a bottom plate of 22 tons, a middle plate of 18 tons and a top plate of 18 tons, all of solid iron castings, above which are the mortar boxes of the stamps. The stamps have 1" revolving screens for the mortar boxes, with hydraulic discharges, as have the launders leading from the mortars, these yielding about 60% of the copper secured. Finishing jigs and slime tables have been replaced by 24 Wilfley tables, 8 for each stamp, assisted by 3 Standard concentrators. Each stamp has 12 rough jigs, 6 Wilfleys for finishing and 2 Wilfleys and 1 Standard table for slimes. There is a settler from which slimes are taken to the Wilfley tables. Regrinding is done by a Trem Chilean mill, with 3 jigs and 3 Wilfleys as auxiliaries. By the adoption of hydraulic discharges and other improvements the capacity of the stamp-heads has been increased about 25%, while changes in the wash have given an increased capacity of 30%, with labor costs reduced 25% and loss in tailings cut down 40 to 50%. About 35% of the present product of the mill is No. 3 grade mineral, carrying very fine copper.

The mill power house at No. 2 mill, has four 250-h. p. Wickes vertical water-tube boilers. There is an electric light plant.

The mill and pump house has a 20,000,000-gal. centrifugal pump, and a 20,000,000-gal. Allis-Chalmers vertical triple-expansion pump, and the mill pump house has 3 pumps with combined capacity of 21,000,000 gal. daily. Water is taken from a 7x7' 6" tunnel, driven 100' under the bed of the lake. A 6x6' 6" tunnel 440' long, connecting mills, boiler houses and pump houses carries both water and steam pipes.

The tailings at the mills are very extensive, including millions of tons of stamp sand, and various experiments on reconcentration have been conducted by different interests at intervals since 1902. The companies who have attacked this proposition have bankrupted themselves with want of continuous regularity, notwithstanding which, the successful results have been secured at the regrinding mills of the Calumet & Hecla after proving that the Quincy sands also may be retreated profitably at some future time.

Smelter: blown in Dec. 1, 1898, is at Ripley, on the shore of Portage Lake, opposite Houghton, just east of Hancock and only a half mile from the mine.

One building has four 40-ton reverberatory furnaces, and a second building has 60-ton and 120-ton reverberatories, the latter having an automatic casting machine. On arriving at the reverberatory building the trucks carrying mineral are lifted by electric cranes and contents dumped to the furnaces, which are top-charged. An overhead trolley in the main building permits handling large bars and cakes, and a trolley dipping stem is used for casting. Slags are trammed, in 3,000-lb. pots, to a hydraulic elevator which raises the ladles and dumps their contents to the end of a trestle. The cupola building has 1 blast furnace only, for reverberatory slags. A briquetting plant has 2 boiler-iron retorts for briquetting low-grade mineral before smelting. Miscellaneous buildings at the smelter include an engine house, casting house, cooper shop, office, laboratory, machine shop, 50x100' warehouse, and a coal shed.

Production has remained nearly constant for several years but was seriously lessened by the labor strike of 1913. Silver production averages out 100,000 oz. yearly.

Recent Production:

	Tons R'k	Lbs. Mineral Produced	Ref. Copper Lbs.	Lbs. Cu. per(a) Ton R'k	Cost per Lb.	Sell. Price
6.....	1,204,026	33,864,280	21,065,612	17.5	12.4c	25.5c

(a) Includes mining expense, smelting transportation, etc., and taxes in Michigan.

Management is entitled to credit for following unswervingly a policy of expansion. Finlay in 1911 estimated a life of 7 years and a further production of but 200,000,000 lbs. of copper. Additional acreage purchased that year makes the probable production 1,000,000,000 lbs. of copper in a life of 50 years. The company has the longest record of continuous annual dividend payments of any American copper mine and bids fair to continue disbursing large profits for at least another generation or two.

RHODE ISLAND COPPER CO. MICHIGAN

Subsidiary of the Franklin Mining Co.

Office: 60 Congress St., Boston, Mass. Mine office: Demmon, Houghton Co., Mich.

Officers: R. M. Edwards, pres.; Henry Tolman, treas.; Albert L. Tolman, sec.; preceding, with S. J. Jennings, H. M. Howard, Carlos W. Law and C. A. Hight, directors.

Inc. Dec. 9, 1898, in Michigan. Cap., \$2,500,000; shares \$25 par; paid \$10.50. Assessment No. 2, of \$1, was payable Jan. 14, 1907, and assessment No. 3, of 50c, was payable June 15, 1910. The Franklin Mining Co. has 99,000 shares, or 99%, acquired by exchange of 3 shares Rhode Island one of Franklin. Annual meeting second Wednesday in April. No bonded debt. American Trust Co., Boston, transfer agent.

Annual report for 1912. Total assets, \$320; borrowed

from Franklin Mining Co., \$8,980; insurance, total receipts, \$10,322. Expenses amounted to \$127 at mine, \$1,436 taxes, balance being interest and incidentals.

Property: 800 acres, immediately north of the Franklin Junior mine. The ground has been explored by extensive diamond-drill work, showing cores from the Mesnard epidote, Allouez conglomerate, Pewabic amygdaloid, Kearsarge amygdaloid, and other copper-bearing beds. All the formations lying between the Kearsarge amygdaloid and the Calumet conglomerate were drilled by a series of holes, the Calumet bed showing traces of copper. The first cores from the Kearsarge bed showed copper in somewhat encouraging quantities from a bed of about 19' width.

No. 1 shaft, 500' deep, is sunk on the Pewabic amygdaloid. This lode is 8 to 10' thick, of which 2 to 3' near the hanging wall is well mineralized but spotty in the 4 levels opened.

No. 2 shaft, 1,227' deep, has 10 levels, with a 125' winze below the 10th. The workings are north of the shaft, except on the 8th, 9th and 10th levels, the latter 2,400' long. The 8th level south develops a fair stretch of copper ground toward the Franklin Junior, and a 1,400' drift on the 8th level north showed 25 to 75' stretches of payable ground. The Rhode Island property is being developed by the Franklin Mining Co., at a depth of about 2,000', where the Pewabic bed averages 8 to 10' width.

The Albany & Boston, or Allouez conglomerate, has been opened by crosscuts on the 500' and 1,000' levels, but the showing secured was discouraging. A crosscut of about 250' length on the 10th level, about 1,100' south of No. 2 shaft, has disclosed an amygdaloidal bed of some promise. The east crosscut on the 8th level, at depth of 1,000' cut 2 apparently valueless beds, one being the Mesnard epidote. The East lode, about 5' wide carries a little copper, but nothing of promise. The West lode, 96' from the Pewabic, is 7 to 9' wide, carrying occasional bunchy copper. The amygdaloidal beds lying between the West lode and the Allouez conglomerate have been tested by N.-S. drifts, 3 proving barren.

Equipment: includes a frame shaft house at No. 2, with an engine house having a Nordberg hoist capable of raising 2-ton skips from a quarter mile depth, and a 12-drill Rand air compressor. Buildings include machine shop and smithy, warehouse and 15 dwellings.

The Rhode Island is idle and the plan of developing at greater depth through the north drifts of the Franklin is a good one, since the Pewabic bed to the south of the Rhode Island has shown great improvement below a depth of 2,000' in both the Mesnard shaft of the Quincy and the main shaft of the Franklin.

ST. LOUIS COPPER CO.

MICHIGAN

Out of business. Assets transferred to Calumet & Hecla Mining Co.
For description, see Vol. XII.

ST. MARY'S MINERAL LAND CO.

MICHIGAN

Office: 705 Sears Bldg., Boston, Mass. Mine office: Houghton, Houghton Co., Mich.

Officers: Geo. Peabody Gardner, pres.; Walter Hunnewell, v. p.; Dr. J. Paine, Jr., sec.-treas.; preceding, with E. V. R. Thayer, W. Cameron Forbes, Albert S. Bigelow, Thos. N. Perkins, Charles E. Perkins, Richard Olney, N. S. Stone and Chas. N. King, directors; A. E. Coe, asst. treas.; Fredric W. Nichols, resident agent; Dr. Lucius L. Hubbard, cons. geologist.

Inc. March 4, 1901, in New Jersey. Cap., \$5,000,000; shares \$25 par value issued, \$4,000,000. Controls, through ownership of entire stock, except founders' shares, the St. Mary's Canal Mineral Land Co., a corporation inc. 1863, in New York, to acquire 180,000 acres of land given by

ate of Michigan for the construction of the first ship canal at Sault Ste. Marie. These lands in Houghton, Ontonogon and Keweenaw counties, Mich., formerly included the tracts on which the Calumet & Hecla, Baltic, Mountaintop, Champion, Ojibway and other mines have been developed. The company has about 400 shareholders. Shares are listed on the Boston Stock Exchange. Old Colony Trust Co., Boston, registrar. Annual meeting, first Wednesday in March, in Jersey City, N. J.

Income of the company consists mainly of dividends from the Champion Copper Co., with a small but steady income from sales of lands, timber and wood, and occasional but irregular large receipts from sales of mineral lands. The balance sheet of Dec. 31, 1909, gave quick assets of \$4,489,273, and on Dec. 31, 1916, the company had \$56,104 cash on hand, with notes receivable, \$24,381, and was without liabilities.

Receipts for the year ending Dec. 31, 1916, were \$572,963.

Share assets of the company Dec. 31, 1916, were: 50,000 shares Champion Copper Co.; 25,000 shares Mayflower M. Co.; 20,165 shares La Salle Copper Co.; 79 shares Hancock Cons. Mng. Co.; 20,000 shares Pacific Copper Co.; 37,222 shares Houghton Copper Co.; 1,571 shares Franklin Mng. Co.; 2,000 shares Ojibway Mng. Co.; 56,778 shares Winona Copper Co.; 208 shares Copper Range Cons. Copper Co.; 640 shares St. Mary's Mineral Land Co.; 80 shares Old Colony Copper Co.; 8,340 shares Naumkeag Copper Co.; 17,902 shares Douglass Copper Co.; 10 shares Amphridrome Co.; 100 shares D. A. Stratton Co.

From 1863 to 1900 the old company paid cash dividends of \$2,200,000, and also paid stock dividends of 1 share of Tamarack, 1884; 1 share of Antrim, 1890; 1½ shares of Baltic and one-half share of Winona, 1898; 1 share of Old Colony and 1½ shares of Trimountain in 1899.

Dividends: (of the present company)

1903.....	\$1	1911.....	\$3
1904.....	1	1912.....	3
1905.....	2	1913.....	3
1906.....	4	1914.....	0
1907.....	5	1915.....	8(b)
1908.....	0	1916.....	19
1909.....	1	1917.....	14(a)
1910.....	1(c)		

(a) Including dividend declared Aug. 30, 1917. (b) Not including North and Hancock stock distributions equivalent in cash to \$2.59 a share. Not including Franklin stock distribution equivalent to \$4.

Property: Jan. 1, 1917, consisted of 93,011.69 acres freehold, with mineral rights to 14,133.69 acres additional, property being scattered along the Lake Superior copper belt, with principal holdings on the South Range, S. W. of Houghton, in Houghton and Ontonogon counties.

The company, since its reconstruction, in 1900, has refused to sell its mineral lands outright, preferring to join with other land holders in the formation of new companies, taking pay for its lands in shares, on a pro rata basis, or partly in shares and partly in cash. This policy involves heavy expenditures for exploratory and development work, but has resulted in giving the company a half interest in a new mine, the Champion, which is capable, and of furnishing funds to St. Mary's company for both dividends and development work elsewhere, and a continuance of this policy must result in making St. Mary's Mineral Land Co. the part or sole owner of a large number of mines. Owing to the great extent of its lands, located along the Keweenaw copper belt, stretching along the mineral range

for scores of miles, the landed holdings of the company are of great potential value. The management is vigorous and far-seeing.

In August, 1917, it was reported that W. E. Hopper, of the Michigan College of Mines, was making a geological examination of the St. Mary's lands.

SENECA COPPER CORPORATION

MICHIGAN

Offices: 11 Broadway, New York; and W. J. Uren, 3 Calumet State Bank Bldg., Calumet, Mich.

Officers: Frederick Lewisohn, pres.; Walter Lewisohn, v. p.-treas. E. J. Macnamara, sec.; with Hamilton Fish, Jr., T. F. Cole, F. deC. Sullivan P. A. Clarke and W. F. Bartholomew, directors.

Inc. Dec. 26, 1916, in New York. **Cap.**, 200,000 shares. Company owns 11,960 shares of the 20,000 in the Seneca Mining Co.

Balance sheet of Jan. 4, 1917, shows assets totaling \$2,420,000, including 13,926 Seneca M. Co. shares at \$60 each, or \$835,560; cash at banks, \$1,564,440; and debit balance, \$20,000. Liabilities include 200,000 shares without par value, \$1,400,000 capital surplus and \$20,000 accounts payable.

SENECA MINING CO.

MICHIGAN

Subsidiary of the Calumet & Hecla Mng. Co.

Office: 11 Broadway, New York. **Operating office:** Calumet, Mich Mine near Mohawk, Mich.

Officers: Frederick Lewisohn, pres.; Walter Lewisohn, treas.; E. C. Westervelt, sec.; E. J. Macnamara, asst. treas.; W. J. Uren, gen mgr.

Inc. March 23, 1860, in Michigan. **Cap.**, \$500,000; shares \$25 par; fully issued, \$10 paid. Is controlled, through ownership of 11,960 shares, by the Seneca Copper Corporation (which see), a concern organized to take over shares owned by the Calumet & Hecla. The company had a debit balance Jan. 1, 1917, of \$179,703. American Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agt. Annual meeting, fourth Monday in March.

Property: 1,880 acres, just north of the Mohawk and Ahmeek mines, is a swampy tract, somewhat irregular in outline and heavily covered with drift. The property carries the Calumet, Keweenaw and Allouez conglomerates and the Osceola, Kearsarge and other amygdaloidal beds, this statement being based mainly upon the outcrop of the Kearsarge lode seen in the N. E. corner and extending for 1¼ miles across the property. The mine is on the Keweenaw Central railway.

Development: The property was diamond drilled, 1907-08, giving some good cores from the Kearsarge amygdaloidal bed. This was followed by the sinking of a single 3-compartment shaft, located about 3,000' north of No. 1 shaft of the Gratiot mine. The shaft is sunk in the footwall, being 60' from the Kearsarge bed on the 1st level, 250' on the 3rd level, and 220' on the 5th level. The shaft is 957' deep, with 5 levels. Development shows little or no copper values above the 4th level, but the bed has been opened by crosscuts and drifts on several levels, with about 2,000' of laterals. On the 5th level the Kearsarge bed is about 15' wide and for a distance of 15' carries a 4' pay-streak having fair copper values. No. 1 shaft has a temporary frame shaft rock house, with crusher.

There is room for a second shaft on the outcrop of the Kearsarge bed but this lode must be reached by vertical or sharply inclined shafts on the balance of the property as the lode outcrops outside the holdings, though the underlay extends under the entire tract.

In June, 1917, sinking No. 2 shaft with 3 compartments was started near Mohawk No. 2. A hoist of 4,000' capacity has been erected.

Equipment: includes a small power house, Lake Shore duplex hoist good for 2,000', a 15-drill air compressor and 2 locomotives firebox boiler.

buildings include a boarding house and bunk house. Operations were suspended April, 1911.

Property is considered promising.

HELDEN & COLUMBIAN COPPER CO.

MICHIGAN

Idle. Address: care J. H. Rice, Houghton, Mich.

Property: lies next north of the Isle Royale mine and includes mineral rights under many private residences, near Portage Lake. An important discovery of sheet copper was made Sept., 1915, in an unidentified lode opened in excavating a cellar in this tract. Described in Vols. I and II of Copper Handbook.

SOUTH LAKE MINING CO.

MICHIGAN

Office: 60 Congress St., Boston, Mass. **Mine office:** Houghton, Mich.

Officers: R. M. Edwards, pres.-gen. mgr.; Arthur C. Paine, sec.-treas.; succeeding, with Thos. S. Woods, E. C. Robinson and Geo. E. Davis, directors.

Inc. Feb. 25, 1880, in Michigan, as the Aztec Copper Co.; reincorporated Aug. 12, 1909, under present title and corporate existence extended for 30 years from Feb. 25, 1910. **Cap.**, \$1,000,000; shares \$25 par, increased to 1,000,000, Dec., 1917; assessable; all issued; \$6.60 paid in. Last assessment, payable June 3, 1912. Of the issued stock 40,000 shares were given to the old stockholders share for share, 20,000 were offered the same stockholders at \$2 per share and nearly all taken by them; 10,000 shares were offered to holders of record May, 1913, at \$6.60, but were largely taken by the underwriters; 10,000 shares were offered in March, 1915, and 10,000 more Oct., 1915, at \$5. The last two offerings were practically all taken by the archolders. In April, 1916, the last installment of 10,000 shares was offered to the stockholders, at the rate of \$7.75 per share.

Balance of assets Dec. 31, 1916, was 2,212, including \$1,774 cash on hand. Expenses at mine were \$157,646, including \$88,334 for underground work and \$37,125 for construction. American Trust Co., Boston, registrar; Federal Trust Co., Boston, transfer agt. Annual meeting, 1st Tuesday in March.

In Nov., 1917, company announced it had secured an option on S. W. 1/4 of Sec. 30 immediately north of its property. A special stockholders' meeting to be held Dec. 11, 1917, for purpose of voting on an increase capital stock to provide funds for above purchase.

Property: 334 acres of mineral lands, being the W. 1/2 of Sec. 31, T. N., R. 37 W., adjoining the Lake mine on the east, and the Adventure mine on the west. In Dec., 1917, 160 acres, with dip of the North Lodes were acquired.

History: work was begun on the property in 1862, though the name Aztec was originally taken because the remains of extensive workings of prehistoric race were thought, in those days, to have been the work of the Aztecs. A 16-lb. stone hammer was taken from the old workings.

The mine had a stamp mill in early days, and produced 756,853 lbs. fine copper, of which 100 tons was secured in a single mass. Exploratory work was done, 1905-06, on the Knowlton bed, of the Evergreen series, by the McC-Algolah Development Co., and diamond-drill borings were begun Oct., 1909, continuing until March, 1911, when suspended by reason of adverse financial conditions. Borings were begun at the base of Evergreen belt, near the foot of the Evergreen belt, thence working southward toward eastern sandstone. Eight drill holes were put down at various points on property.

Exploratory drilling having shown copper rock in five holes, four of which were 200' square, actual mine development work was begun. The holes showed that the beds run N. 70° W. and dip at 10° to 15°. The cores and recent underground work were carefully

studied by A. C. Lane in 1916, who reports work, No. 2 lode, or possibly, a combination of the Lake lode, mined by the Lake Copper Co. in the 300' crosscut, north of the South lode. The same as those dipping south on the South lode. This means that the veins fold over, dipping north, so that a vertical shaft can reach both limbs.

The vertical shaft, begun May, 1915, reaches up lodes Nos. 1 and 3, and the Butler lode, which ore is being mined, 1917. For 400' it is said to be spectacular in character. Work continued until November, when a connection with the No. 3 lode on the sixth level will be completed. The ore is on an amygdaloid in the 600' South lode. The shaft is said to carry heavy copper.

The shaft shows 51' of ore in No. 3 lode, 64' from the surface. New work in 1916 amounted to 10,000' of drifts on lodes being 5,119'. In Sept., 1916, the output of the Lake mine on South lode No. 1 was raised; this improves ventilation and also increases production.

The South Lake installed all machinery and a compressor in 1915, and completed its new shaft in 1916.

Production: commenced May, 1916. The ore is sent to the Franklin mill, yielding 285,600 lbs. In 1917, production was at the rate of 10,000 lbs. per day. The property has a decidedly promising property upon the surface.

SOUTH RANGE MINING CO.

Out of business. Property sold, 1916, for \$100,000.

SOUTH SIDE MINING CO.

Office: 68 Devonshire St., Boston, Mass.

Officers: Ashley Watson, pres.; Fred C. Watson, vice-pres.; with Harry F. Fay, John C. Watson and Charles C. Watson.

Inc. 1859 in Michigan, and reincorporated in Massachusetts by limitation in April 11, 1919. **Cap.,** \$1,000,000. \$9.70 paid in. The company levied assessments in 1911 and April, 1912, paid a cash dividend of \$1.00 per share of a share of stock of the Naumkeag Co. The remaining lands sold to that company. A final dividend was declared Nov. 6, 1916. Annual meeting held in 1916.

Lands: were about 200 acres, lying in the town of Houghton, of the old Naumkeag properties, immediately north of the village of Houghton, with the exception of about 31 acres of surplus land, which is the supply of the village of Houghton, for the remaining stock of the Naumkeag Co. The remaining lands of the village of Houghton were sold in July, 1916.

SUPERIOR COPPER CO.

Controlled through ownership of the Calumet & Hecla Mining Co.

Office: 12 Ashburton Place, Boston, Mass. Mine address: Houghton, Mich.

Officers: Rodolphe L. Agassiz, pres. gen. mgr.; with C. F. Ayer, F. L. Higginson, vice-pres.; Endicott, sec.-treas.; H. L. Bennett, ass.

Inc. July 23, 1904, in Michigan. Cap., \$2,500,000; shares \$25 par; fully issued and \$1 paid.

Report for 1916 showed a net profit from mining operations of \$331,933, and balance of assets of \$434,313. In 1915 the company acquired 18,836 shares of the Lake Milling, Sm. & Ref. Co.'s stock for \$240,000. Shares are listed on the Boston Stock Exchange. Old Colony Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Annual meeting, second Tuesday in April.

Dividend No. 1 of \$1 per share, amounting to \$100,000, was paid in Oct., 1916. A like amount was paid in April, 1917.

Property: 400 acres, carries about 6,000' of the strike of the Baltic amygdaloid bed, between the Isle Royale and Atlantic mines. It embraces Sec. 15, of T. 54 N., and R. 34 W. The tract has room for 3 or 4 shafts, and as a light overburden, the bed being proven by trenches at intervals of 100', showing an amygdaloid of 35 to 40' average width, with extensive carbonate stains, due to weathering, and a little fine copper near surface. The property has been trenched to the eastern sandstone.

The mine has 2 workable copper lodes, the Baltic, locally known as the Superior, and the West lode, discovered in 1911, a formation independent of the Superior, 14 to 30' thick, which, however, cannot be stoped until the Superior lode is mined. On the Superior lode all ground above No. 15 level has been stoped out. Reserves in the west lode at end of 1916 were estimated at 250,000 tons.

Development: by 2 shafts, sunk in the footwall of the lode, insuring solid ground, but necessitating crosscuts at each level. Owing to the great depth of the copper-bearing stratum, it is necessary to crosscut along the lode at 100' intervals. The Superior mine is opened on the northern extension of the Baltic amygdaloid bed, though some call this the Superior lode, not being satisfied that the correlation is correct. The Baltic bed, in the Superior mine, carries copper impregnations in the footwall, always an evidence of strong mineralization, and there is a conglomerate bed under the foot that carries a small amount of copper. The stamp rock is remarkably deceptive in appearance, as the copper oxidizes readily, and when it has been broken a few weeks, appears lean, unless a fresh fracture shows its true nature. As a triangular tract of land intervening between shafts No. 1 and 2 is owned by others, they cannot be connected above the 12th level. The mine had about 10 miles of workings at the end of 1916. Underground work for 1916 totaled 5,136', compared with 4,199' in 1915, and 1,854' in 1914.

No. 1 shaft, about 1,200' south of the northern boundary of the property, is 2,905' deep and develops the Superior and West lodes, the first level on all levels, and the second lode from the 12th to 26th inclusive. Both lodes carry copper in exceptional quantity. Improved values have been encountered with depth, and the workings of No. 1 shaft give a good showing. The ground, especially in the upper levels, is very treacherous, and requires careful attention and close timbering.

This shaft was sunk 437' during 1916. Bad ground retarded progress. Further sinking, from No. 29 to 33rd level is contemplated.

No. 1 shaft has a frame shaft rock house, of the Calumet & Hecla type, equipped with Westinghouse engine and two 23x36" crushers. The hoist is rated for 1,000'.

The equipment at No. 1 shaft includes a combination boiler and engine, two 60" DeLaurie boilers, a hoist, and 10-drill and 18-drill air compressors. No. 1 shaft is connected with the main line of the Atlantic railway by a 1,000' spur, and also with the Isle Royale railway.

No. 2 shaft, 2,540' S. W. of No. 1 and 2,400' from the southern boundary sunk 40' in the footwall, at an angle of 53°, is 1,628' deep. Equipment at No. 2 includes a steam hoist, formerly used at No. 1, and a shaft rock house having 2 crushers and a Westinghouse engine, with rated capacity of 1,00 tons daily.

Exploration on the West lode in 1916 totaled 4,377', from No. 19 to No. 25 level. Only about 20% of the ground opened is profitable to mine.

Buildings include an office, warehouse, smithy, change house, and a number of dwellings for employees at a small town site lying between the shafts.

Production: (begun Jan., 1909)

	Tons R'k Stpd.	Lbs. Cu. per Ton	Cost p. Ton(b)	Lbs. Cu. Produced	Cost per Lb.	Rec'd per Lb.

(a) An excellent return, and materially above the average secured from the good amygdaloidal mines of the Lake Superior district. (b) The high cost of mining is largely accounted for by the comparative newness of the mine; costs include mining, transportation, stamping and taxes.

Production was lessened in 1913 and 1914 by the strike of the Western Federation of Miners, lasting from July 23, 1913, to April 12, 1914, and from Sept. 1, 1914, to Feb. 1, 1915, the mine operated on a three-quarter time basis on account of the condition of the copper market following the outbreak of the European war. Superior has thus far been a disappointment; the copper yield per ton rock is lower than originally calculated, and production remains below the 4,000,000-lb. mark. It cannot reasonably be expected to do much better.

Copper production in the first 4 months of 1917 averaged 214,000 lbs. per month, ranging from 143,614 in April to 318,798 lbs. in January. The financial position of the company is improving satisfactorily.

TAMARACK MINING CO.

MICHIGAN

Out of business. Property sold for \$3,600,000, equal to \$60 per share to Calumet & Hecla Mining Co., on April 1, 1917. For history and description of property see Vol. XII. No report published for 1916.

TOLTEC MINE

MICHIGAN

Idle many years. Office: care J. M. Longyear, Marquette, Mich. Owners, Gogebic & Ontonagon Land Co. and Galen L. Stone.

Mine at Greenland, Ontonagon Co., Mich., 960 acres, carries the underlay of the Evergreen belt and the Calico and adjacent beds of the Michigan.

Production: 1851-1860, was 413,443 lbs. fine copper. Some diamond drilling was done, 1908.

TORCH LAKE MINING CO.

MICHIGAN

Idle. Office: 4-24 Exchange Place, Boston, Mass. Mine office: Leopold Bldg., Houghton Co., Mich.

Officers: Thatcher Loring, pres.; Clifton Cabot, sec.; F. W. Nichols, agt.

in Michigan. Cap., \$500,000; shares \$25 par; assessable. Area: 1,280 acres, Secs. 35 and 36-T. 56 N. R. 33 W., lying

the Tecumseh mine of the La Salle, and about midway between Calumet and Lake Linden. The property was slightly prospected, 1899-1900, by diamond-drill borings. Reported that exploration work will soon be resumed.

REMONT & DEVON MINING CO., LTD.**MICHIGAN**

Office: First National Bank Bldg., Hancock, Mich. Mine at Victoria, Ontonagon Co., Mich.

Officers: H. L. Baer, pres.; W. M. Gibson, v. p.; Chas. D. Hanchette, sec.-treas., with Claude Cooper, W. M. Gibson and Robt. T. Dunstan, directors.

Inc. Dec., 1908, in Michigan. **Cap.**, \$250,000; shares \$25 par; 6,000 issued; two 10c assessments levied to date.

Property: 680 acres, freehold, including the old Tremont and Devon mines, adjoining and directly W. of the Victoria, carrying about 1¼ miles the strike of the Keweenaw copper formation, and apparently in the horizon of the western extension of the Lake bed. The Victoria has a claim of some promise, outcropping about one-half mile from the Tremont-Devon line. A little work was done, in olden days, on shallow shafts at the center of the property, from which rock was taken, said to have yielded 500 lbs. fine copper per fathom of ground broken, which was better than 25 lbs. of finished copper per ton.

In Feb., 1916, the E. J. Longyear Co. began diamond drilling. Three shafts were put down; the first cut an unidentified lode lying above the Tremont lode; the third is said to have shown good values in the Victoria section.

OLD COLONY COPPER LAND & MINING CO.**MICHIGAN**

Office: 70 State St., Boston, Mass.

Officers: Harry F. Fay, pres.; Harold H. Anthony, Ezra H. Baker, Daniel Carr and Albert B. Merrill, all of Boston, and John G. Stone, of Woughton, Mich., directors; C. J. Morrissey, sec.-treas.

Inc. 1863 in Michigan; charter extended in 1893. **Cap.**, \$2,500,000; issued, \$900,000; shares \$25 par, \$2.06—2/3 share, paid in: Old Colony Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Stock listed Boston Stock Exchange. Annual meeting, fourth Thursday in March. Books close 20 days before, and reopen day following.

Dividends: in 1899 company paid 50c per share and ¼ share of stock Old Colony Copper Co. and in 1907 and 1908 dividends of \$2 and of 50c share respectively were paid; none since.

Property: 5,323 acres of land, carrying both surface and mineral rights, 1,043 acres additional of mineral rights only, divided into 200 or more claims in Keweenaw, Ontonagon and Gogebic counties, Mich. Company primarily a land-holding corporation, although its charter empowers it to carry on mining operations as well, and it has from time to time investigated various tracts to determine their mineral value. Greater part of the land is heavily timbered and is valued at \$125,000.

In 1910-11, exploratory work was done by diamond drill on 320 acres of land lying W. of the Allouez and North Kearsarge mines, with satisfactory results, especially on the Quincy-Pewabic amygdaloid, which yielded well in copper. The Allouez conglomerate was cut; also several beds carrying copper.

ONTONAGON COPPER MINING CO.**MICHIGAN**

Office: 60 Congress St., Boston, Mass. **Mine office:** Victoria, Ontonagon Co., Mich.

Officers: Fred H. Williams, pres.; Chas. D. Hanchette, v. p.; Jas. P. [unclear] [unclear], proceeding, with Willard S. Martin and A. W. Chesterton,

directors; Sydney S. Millet, sec. and transfer agent; George Hooper, sup-
Chas. D. Hooper, mill and power supt.; G. A. Braun, Jr., engr.; A. I.
Penberthy, clerk and purch. agt.

Inc. Jan 16, 1899, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; 100,000 issued; paid in, \$15. Last assessment \$1, April 15, 1914. Shares listed on the Boston Stock Exchange. First National Bank, Boston, registrar. Annual meeting, fourth Monday in February.

Statement for 1916 shows receipts totaling \$470,229, and expenditure \$384,898. Including previous balance the surplus was \$197,611. Since organization, the revenue totaled \$3,979,129, of which, \$2,311,963 was from copper sales. Mining expenses were \$1,769,484; equipment, \$584,156; real estate, \$387,862; surface, \$240,085; general, \$137,414; crushing, \$200,372; smelting, etc., \$234,961.

Property: 2,389 acres mining lands, in Secs. 19, 20, 29, 30 and 31, T. 50 N., R. 39 W., and Secs. 24, 25 and 36, T. 50 N., R. 40 W. This tract has an extreme E.-W. width of 2 miles, and a N.-S. length of 2 1/4 miles, lying on the W. of the Ontonagon river. It is practically all on the mineral belt, and about 100 acres lying on the eastern sandstone. The tract may carry the western extension of the amygdaloidal bed under development by the Lake Superior Copper Co. Neighboring mines, all idle for many years, are the Victoria in Minnesota on the N., National on the E., and Tremont-Devon on the S. The lands are well timbered, with an inexhaustible supply of good sandstone for building purposes. Nearest railroad is the C. M. & S. P., at Rockland, 3 miles distant.

The first known attempt at Lake Superior copper mining was made in the winter of 1770-71, on what is now Victoria property. In 1849, the property, known then as the Cushin, was opened on a line of prehistoric pits containing masses of native copper, one weighing upwards of a ton. The name was changed, 1850, to Forrest, and property reorganized, 1858, as the Victoria Mining Co. Under these titles the property made 373,279 lb of fine copper at a loss of about \$180,000. The mine was operated regularly on a small scale, 1849-55, and thereafter spasmodically. It was unwatered 1883, but remained idle until work was begun March 1, 1899, by the present company.

Geology: the mine is located on a high and steep hill, notwithstanding which the solid rock is covered with heavy sand and clay drift. The Forrest amygdaloid bed, on which the mine is opened, is 5 to 80' wide, averages about 12', but of very irregular width and dip, and very bunched in content. The average strike is N. 66° E., and dip 61° N. W., the lode having about 2 miles of outcrop on Victoria lands. The formation is much disturbed on surface, the bed being irregular in dip, but widening at depth, with more regular walls. The lode is low in average grade, but fairly regular in copper contents, carrying low-grade stamp rock, with best values near the hanging wall.

Development: the old mine was opened by 5 shafts, deepest 200' located at irregular intervals, with levels spaced at 55 to 65'.

The Victoria, or, No. 2 shaft, which was chosen for new operations, was enlarged to 2 compartments, and a third compartment was added 130' 16' E. of the skipway. The two skips will work in balance. The shaft is 2,716' deep, bottomed below the 27th level. Levels between the 6th and 24th have been opened at regular intervals of 100', below the 23rd at intervals of 150', with drifting on all levels. The total driftings on the Forrest bed, tributary to No. 2 shaft, was 45,270' at the end of 1915 and in addition there are 8,068' of crosscuts.

Short drifts have been opened from these crosscuts on various levels.

without much encouragement. The total openings tributary to No. 2 shaft are 60,647'.

The productive part of the mine tributary to Victoria or No. 2 shaft is on the Forrest bed, an epidotal amygdaloid having an average width of 4' to 12', widening to 80', at one point. Walls are quite regular, but where crush zones occur, the mineralization extends into the walls, giving an occasional maximum of 50' width of ore. The footwall bed underlying the Forrest, at a depth of 2 to 12', is well mineralized in places, carrying occasional masses from 100 lbs. to 3 or 4 tons in weight, but is very bunched, copper occurring mainly on the foot, with considerable epidote on the hanging. Underlying this epidotal bed, at a distance of 60', is a 6' amygdaloid showing much epidote and allied minerals, with a little stamp rock. Stopes opened on all levels from the 4th to the 22nd inclusive, give fairly uniform results.

The copper shoot developed by this shaft is 1,000 to 1,500' wide, with a slight rake to the S. W. The ore stoped is low in average grade, but fairly regular in contents, with main values in stamp copper. All levels down to 17th are connected by winzes, giving ventilation and safety.

Development: 1916, included 1,350' of drifts, with a total of 3,806' of ew work and 10,755 cubic fathoms stoped. The mine uses 35 power drills.

No. 6 shaft, 3,455' E. of No. 2, was started Dec., 1909, to develop the eastern end of the property, previously explored by diamond-drill borings. This shaft has three compartments with 2 skipways, designed for 6-ton tips and is 1,172' deep. There are 1,490' of drifts and crosscuts, showing broken and faulted ground, barren of copper, excepting for about 100', a short distance W. of the shaft.

The mine also has 419', 150' and 724' crosscut tunnels, the latter showing the contact between the Keweenaw trap beds and the eastern sandstone with several amygdaloidal beds exposed on which 176' of drifting give a little encouragement.

Considerable diamond drilling has been done N. of the Forrest bed, a total of 15,292' of holes having been drilled, in 2 cross-sections, disclosing several beds that may warrant future attention.

No. 2 shaft has a new shaft house, equipped with a duplex 32x72" cylinders, with conical drum, Nordberg hoist, good for 5,000', and a 5-ton traveling crane for handling skips, man cage and timber.

Equipment is now sufficient to take care of exploration to a depth 5,000', the present depth being 2,716'.

The rock house has storage bins for stamp rock and waste, with chutes, dumping gates and air lifts, and there is a pneumatic hammer for mass cop-

The boiler house is for heating purposes only. A steam power plant being added to use as a reserve when water supplying the hydraulic plant is low.

Buildings at No. 2 shaft include machine and carpenter shops, smithy, engine house, hospital, warehouse, general store, mine office, boarding house, 76 dwellings, sawmill, lathe, shingle and planing mill. Water for domestic use and fire protection is pumped from a well having a storage tank about one-half mile from the mine.

Hydraulic Plant: a large water power has been developed from Glenn Falls, on the W. branch of the Ontonagon river, about 1 mile from the mine at a cost of \$250,000, to Dec 31, 1916. This is the best natural water power of the Lake Superior copper district, the stream dropping about 100' on the company's property, by a series of small falls, between which are numerous rapids, with sandstone bottoms. The company utilizes 72'

of this drop. Power is developed by means of a dam, canal and hydraulic air compressor.

The dam is 225' between abutments, has an extreme height of 24', is 14' wide at the bottom and 8' at the top, and has a 320' main section with wings of 100' and 160', giving a total length of 580', built with an arch up stream. It is provided with two 44" flush gates, for drainage and flushing out silt, a log chute, waste weir and sand fence.

The canal diverting water from the dam is 4,800' long, 10' deep at the head gates, with a bottom slope of 1" in 100'. At the end the canal opens out in a forebay, at the extreme end of which the compressor shafts are located. The canal is equipped with drainage gates, slush gates, overflow weirs and submerged measurement gates.

The 3 intake shafts of the compressor are 5' in diameter, spaced 19' from center to center. The shafts were sunk through solid sandstone, by means of 5" preliminary holes, bored to the required depth of 343', then enlarged from 5" to 5' in diameter.

The shafts, lined throughout with concrete, formerly drew air through 5,000 special $\frac{3}{8}$ " tubes. This proved unnecessary as the water falling down each shaft sucks air with it and this air is carried through 280' of air chamber cut in the rock at the bottom of the shaft. A water seal at the intake end is formed by $\frac{3}{8}$ " steel shells, firmly concreted into the bottom of the shafts. The air chamber is 281' 6" long, and 18' wide, with minimum of 21' and maximum of 26' height, having a maximum capacity for 80,264 cu. ft. of compressed air. The water seal at the upflow end is formed by an arch of rock, 40' long, below which a tunnel 10' high leads to the upflow shaft, which is 16x18' in section, sunk at 72°, with a vertical depth of 271' leading to surface, where the water is again discharged into the river. The power head developed is 72', and the pressure head 271', giving maximum air compression of 117 lbs. per sq. inch. Imprisoned air, carried down the shafts by suction and swept along the tunnel in bubbles, by the rushing water, is released in the chamber where the constant accession of bubbles causes compression, escape backwards being prevented by the $\frac{3}{8}$ " steel shells connected in the shafts. The chamber, known as the compressor, is connected with a 12" pipe line to mine and mill. Extra pressure is relieved by a safety or blow-off pipe.

The Taylor hydraulic-pneumatic plant was completed, March 1909, furnishes 4,000 to 5,000 h. p. under a full head of water, and has shown an efficiency of 82% under test. It is the largest single-unit air compressor in existence and the fifth installation of the sort in the world. It is possible to operate 1, 2 or 3 of the inlet shafts if so desired, with corresponding variation of energy developed, but only 1 unit is in regular use. The compression is automatic, practically isothermal, and the air as delivered is unusually dry.

An extensive topographical and hydraulic survey of the company lands and the watershed made 1909, by the J. G. White Co., of New York shows that an average of 15,000 h. p. can be developed on the western branch of the Ontonagon river, but the expense of development necessarily will be large. During the drought of 1910, the water supply fell far below normal and additional storage for water was secured on the western branch of the Ontonagon river, near the outlet of Lake Gogebic.

The mine and mill are connected by a 4,800' tram line, in 2 sections, the upper with 6%, and the lower with a 12% grade. A stationary double sheave hoist, at the top of the incline, serves to pull the empty cars up the steeper grades, but otherwise trains are operated by gravity, in counter balance.

Mill: the stamp mill, on the bank of the river, near the hydraulic works, is a single 24x24" Allis-Cuyahoga stamp. The stamp of 650 tons daily capacity, has $\frac{5}{8}$ " mortar screens, and all oversize above $\frac{3}{16}$ " is run to a set of 16x36" Traylor rolls. The washing floor contains 22 Hodge jigs, 5 Willy tables, 6 Card tables, 1 Standard table, hydraulic separators and settling tanks. Machinery is driven by a 12x12" piston-valve engine. The mill went into commission June, 1906, tailing losses running only 0.1 to 0.15% pper. Extraction is about 81%. Mineral (concentrate) formerly smelted by the Calumet & Hecla Co. is now smelted by the Quincy smelter at Pley, thereby effecting an appreciable saving in transportation.

Production:

Year	Ton R'k Stamped	Lbs. Cu. per Ton	Cost per Ton(a)	Copper Produced Lbs.	Cost per Lb. Cts.

6.....	39,185	13.9	546,334	18.7

(a) Mining and Milling. (b) High cost due to the labor strike and high footage, 7,428', of development.

Tonnage costs are low, but finished copper costs are high, owing to exceedingly low average tenor of the rock stamped which is only about 11%, and returns would be absolutely ruinous, and the mine hopeless, were it not for the great advantage that the property enjoys through the cheap power that is had by any copper mine in this or any other district. It is obvious that the Victoria needs 15 cent copper to break even on its present basis of production. With the larger ore supply procurable through the new skipway in No. 2 shaft, even the present phenomenally high average cost will be bettered, and the Victoria placed in a position to handle rock of lower average grade than perhaps any other mine in the Superior district. The company's holdings are extensive, exploration work is being conducted with vigor, and the management has displayed both courage and good judgment in its operations.

SHINGTON COPPER MINING CO.**MICHIGAN**

Office: Calumet, Mich. Mine near Delaware, Keweenaw Co., Mich.

Officers: Chas. A. Wright, Jr., sec.-treas.; Thos. F. Cole, Spencer R.

G. G. Hartley and Thos. Hoatson, directors.

Inc. in Michigan. Cap., \$2,500,000; shares \$25 par; issued \$1,500,000.

Controlled, through ownership of a majority of issued stock, by the Keweenaw Copper Co. Annual meeting, fourth Tuesday in March.

Property: 1,050 acres, on the western shore of Mosquito lake, on which extensive work has been done at intervals in the past. Idle since 1901.

ST MINNESOTA MINING CO.**MICHIGAN**

Defunct. John Coughlan, receiver, 68 Devonshire St. Boston, Mass. about 1854 in Michigan. **Cap., \$500,000; shares \$25 par.** Was an old

long inactive company owning 550 acres lying mainly W. of the

upper river. Property sold May, 1916, to F. W. Nichols of Houghton,

Michigan, for T. W. Cole. Sale ordered because company's charter

WETTERHORN LAND CO.**MICHIGAN**

Idle. W. H. Garlick, agt., 990 W. Kensington Road, Los Angeles, Cal agent.

Lands: 760 acres, in Secs. 21 and 22, T. 51 N., R. 42 W., Ontonagon county shows 14 copper-bearing beds of 4 to 9' average widths, the most important being an 8' bed of cupriferous sandstone, carrying native copper and silver said to have given assays of 2.6 to 6% copper and 1 to oz. silver per ton. An amygdaloid opened by 84' shaft shows a small amount of copper.

WHEALKATE MINING CO.**MICHIGAN**

Address: R. C. Pryor, mgr., Houghton, Mich.

Officers: N. F. Leopold, pres.; R. R. Goodell, v. p.; R. C. Pryor, sec. A. F. Leopold, treas., with J. H. Rice, directors.

Inc. 1902 in Michigan. **Cap.**, \$50,000; \$25 par; all issued and paid.

Property: 240 acres in and adjoining village of South Range, Mich. Company only conducts a real estate business. Part of its mineral rights were sold to the South Range Copper Co.

WHITE PINE COPPER CO.**MICHIGAN**

(Subsidiary of Calumet & Hecla Mng. Co.)

Office: 12 Ashburton Place, Boston, Mass. **Mine address:** Ontonagon Ontonagon Co., Mich.

Officers: R. L. Agassiz, pres.; Jas. McNaughton, v. p.-gen. mgr., preceding with D. S. Dean, Benj. Joy, F. L. Higginson, J. M. Longyear and E. V. R. Thayer, directors.; G. G. Endicott, sec.-treas.; H. L. Bennett asst. sec.-treas.; Thos. H. Wilcox, supt.

Inc. 1909. **Cap.**, \$5,000,000; shares \$25 par; in 150,000 common share and 50,000 5% cumulative preferred shares; issued 85,320 common and 34,759 preferred. Is controlled by the Calumet & Hecla Mng. Co., through ownership of 34,259 shares of preferred stock and 42,602 shares of common stock.

Preferred stock, numbering 4,759 shares, was retired by purchase of \$25 a share on Jan. 2, 1917.

Annual report for 1916 gives balance of quick assets, \$613,908, compared with \$139,786 in 1915. Mine expenses were \$534,137 and receipts \$1,124,934.

A dividend on preferred shares, equal to \$116,676, was paid Jan. 1917.

Property. the White Pine mine and surrounding lands, formerly owned by the Keweenaw Association and others. The White Pine mine, 80 acres is in Sec. 5, T. 50 N., R. 42 W., 3 miles E. of the Nonesuch mine at the extreme south end of the Keweenaw mineral belt. The other property was paid for by stock. A 9 mile railroad line connecting the property with the Chicago, Milwaukee & St. Paul R. R., was completed in Dec., 1915.

Geology: property as a whole shows eruptive rocks with interbedded sandstone and conglomerates of the secondary Keweenaw series. It also holds what F. E. Wright called epidote veins which are epidote melaphyrs crossing the face of the cliffs parallel to the sandstones, but showing evidence of faulting and crushing. There is also a second set of minor, nearly vertical epidote veins which, unlike the first, are barren of copper. The sandstone beneath the melaphyr is a fine-grained, dark red almost quartzitic rock that is jointed and has numerous calcite veins and occasional threads of malachite which extend down a few feet from the contact. The rock is, however, usually concealed by talus from the cliff. Native copper also occurs in a very fine-grained sandstone-conglomerate which is said to run from 5 to 10%. The dip of the bedded formation

towards the S. E., varying from 8 to 35°. The so-called Nonesuch formation consists of 2 parallel beds of sandstone running from 4 to 8' in thickness and separated by a 5' bed of slate. The entire copper-bearing ground has a width of about 40'. The beds carry considerable finely disseminated native copper which is as a rule very flaky. This formation is badly faulted and ground is said to have been thrown so that the payable lode abutted directly against the unpayable one. Besides the 2 veins described, there is a third which lies about 45' back in the footwall.

Development: includes 4 shafts; No. 2 temporary shaft was 324' deep and had 3,501' of openings, Jan. 1, 1917. It connects with the old White Pine shaft. The main working shaft (called No. 3), located between the two temporary shafts (Nos. 1 & 2), is an incline 1,090' deep, with 6,744' of underground workings, Jan. 1, 1917. It is equipped with 5-ton skips.

The No. 4, an inclined shaft west of No. 1 shaft, is sunk in the hanging at a considerable distance above the lode. On Jan. 1, 1917, it was 977' deep and had 10,783' of underground workings. It is also equipped with 5-ton skips. New workings totaled 5,288' in 1916, 8,605' in 1915, and 4,721' in 1914. The rock is soft and can be mined and crushed cheaply. The property has been extensively diamond-drilled, more than 110 holes having been made since work was begun in 1907. Considerable drilling was done in 1916, showing that the lodes S. of the fault lie from 600' to 700' lower than those immediately N. of it. Generally, exploration in 1916 revealed only fair ground.

Equipment: includes a power plant and compressor at the mine. A 200-k. w. electric turbine on Iron River, 1½ miles from the mine and mill, supplies water for the mill.

In 1915 a 1,000-ton mill was completed and put in operation. Instead of the steam stamps common in the Lake Superior copper country, it is equipped with gyratory crushers, rolls and Hardinge mills. Concentration is effected on Wilfley tables and the tailing saved, as future regrinding and leaching will undoubtedly be used in reclaiming the copper content. The mill is near the working shafts and connects with them by means of chutes over which rock is transferred from the shaft rockhouses to the crushing plant at the mill. An extraction of but 67% is being made at present, the copper lost in the tailing consisting partly of sulphides, but mostly of fine flaky particles of native copper.

A 50-ton flotation plant, Minerals Separation type, was erected in 1917, to try and save fine copper.

Production:

	Tons R'k	Lbs. Cu.	Mine Cost	Lbs. Cu.	Cost	Rec'd
	Treated	p. T.	p. T.	Prod.	per Lb.	per Lb.
1916.....	188,890	22.27	\$2.082	4,207,449	12.70c	25.26c
1915.....	114,039	24.76	2.182	2,824,145	16.64c	18.353c

1915 production is for 8 months only.

Mine costs include mining, transportation, stamping and taxes per ton of rock treated.

Property is decidedly promising and a long life assured by discovery in diamond drill work of high-grade rock at 2,100' depth; at the same time, development in 1916 might only be termed fair.

Costs showed a drop of nearly 4 cts. during 1916. Copper output in 1917 is averaging 335,000 lbs. monthly.

WHITE PINE EXTENSION COPPER CO.

MICHIGAN

Offices: 15 William St., New York, and Pinex, Ontonagon Co., Mich.

Officers: J. R. Stanton, pres.; F. L. Smith, v. p.; G. W. Drucker, sec.-treas.; foregoing with Angus Smith, Gerrit Smith, L. P. Yandell, Theo.

Dengler, and J. H. Hurley, directors. Theodore Dengler, mgr.; Wm. R. Bolly, supt.; John Jacka, mine capt.

Inc. June, 1915, in Mich. Cap., \$3,750,000; shares \$25 par; assessable; in treasury, 65,000 shares. American Trust Co., Boston, transfer agent; Boston Safe Deposit and Trust Co., registrar.

Annual meeting first Tuesday in March.

Financial: revenue from June, 1915, to Jan., 1917, amounted to \$851,073 from 85,000 shares sold at \$10 each, and interest. Property purchases absorbed \$600,000, development in 1915, \$71,603, and in 1916, \$113,834. Surplus at end of 1916 was \$48,233, and in March, 1917, further financing was being considered.

Property: 1,440 acres mineral land in the White Pine district, Ontonagon Co., 5 miles west of the White Pine property of the C. & H. Mng Co. The company owns the leases and exclusive mining rights for 5 years, paying a sliding scale royalty. These leases were purchased from F. L. Smith of Detroit, and associates, who received 60,000 shares of stock in payment for their lands and the development work done prior to June 1, 1915.

The property is similar to that of the White Pine Copper Co. in that it shows sandstone and soft shales and slates. Considerable copper glance was found during diamond drill exploration work the copper in the core of one hole showing glance only, no native copper being present.

Development: little underground work has been done, but thorough diamond drill development has been completed. It consists of one line of holes, spaced 1,000' apart, which cut the copper-bearing beds about 400' below the surface and on their dip; a second line of holes, similarly spaced cut the beds about 600' in depth; the third line of holes, also 1,000' apart cut the beds at a depth of 1,100'. The second line was located half way between the holes of the first; the third line holes were put down 250' from those of the second line. Drilling has disclosed very uniform values for a distance of 4,000' along the strike of the formation and at an average depth of 300'.

The first of the five shafts planned, 1,495' from the E. boundary was sunk 242' in 1916. It has 4 compartments, 21' 14" x 11' outside timber with ultimate hoisting capacity of 1,500 tons per day. Driving and cross cutting, 1916, totaled 900'. This work reveals that the ground carries a shale (No. 1), 5' on the foot-wall assaying 15 lb. copper per ton; the 6' of barren sandstone; followed by shale (No. 2) 4½' wide, containing 22 to 30 lb.; 9' below this is 18 to 24" of fine-grained sandstone, returning up to 60 lb. per ton. Work indicates that these veins will outcrop on the property for 2½ miles.

Concentration will undoubtedly be by means of the flotation system experimental work showing possibilities of an 85% extraction. Plans for a 100-ton testing mill were being considered during early part of 1917. Slime tables and flotation are the main features.

In Feb., 1917, the N. drift was 532' long, and the S. drift 556'. Shaft sinking continues.

Equipment: 60' head-frame, 329' trestle, shaft-house, hoist of 500-ton daily capacity to 1,000' depth, 12-drill compressor, 3 boilers, machine-shop, saw-mill, fire system, water-supply, 26½-mile telephone line, and dwelling etc., for 67 men. A 9-mile railway is to be constructed.

Possibilities of this mine are good, and exploration is in capable hands.

WILMOT MINING CO.

MICHIGAN

Office: 990 W. Kensington Rd., Los Angeles, Cal. Mine near Ontonagon, Mich. W. H. Garlick, pres.; W. B. Gouber, sec.

Inc. in Michigan. Cap., \$500,000; shares \$25 par. Paid dividends

\$17,000, from sale of timber lands, with mineral rights reserved, and has received \$1,500 from assessments. Owns mineral rights to 3,520 acres in Ontonagon county. No mining done.

WINONA COPPER CO.

MICHIGAN

Office: 705 Sears Bldg., Boston, Mass. **Operating office:** Houghton, Mich. **Mine office:** Winona, Houghton Co., Mich.

Officers: Chas. J. Paine, Jr., pres.; Geo. P. Gardner, v. p., with W. A. Paine, Walter Hunnewell, Jas. H. Seager and W. Cameron Forbes, directors. A. E. Coe, sec.-treas.; Rex. R. Seeber, supt.

Inc. 1898, in Michigan. **Cap.,** \$2,500,000; shares \$25 par; increased 1911 to \$5,000,000; issued 166,667 shares, fully paid. Last assessment of \$1 was paid July 2, 1914. The company 1911 acquired the property of the King Philip Copper Co., issuing 166,667 shares of Winona stock therefor. Boston Safe Deposit & Trust Co., registrar; American Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting last Tuesday in March.

Report for 1916 shows receipts totaling \$712,407, including \$473,583 from copper and \$223,324 balance from 1915. Expenditures totaled \$545,202, including \$472,769 mine expenses. Balance of assets at end of 1916 was \$330,045.

Property, 2,608 acres, with timber rights to 1,768 acres additional, lying 3 to 5 miles S. of the mine.

Geology: the main tract carries the outcrop of the Winona amygdaloidal bed for about 2 miles. The mine was discovered 1864, by a line of old Indian pits along the outcrop, and a single shallow shaft was sunk, but owing to entire lack of transportation facilities little was accomplished. The property was leased in 1880 and worked for mass copper, but did not pay and was closed, until the present company began work April, 1908, when the old shaft was cut down, retimbered and deepened, and 3 new shafts sunk. The Winona bed is an amygdaloid of 12' minimum, 20' average and 46' maximum width, striking N. 59° E., and having an average dip of about 70°. The Winona amygdaloid greatly resembles both the Baltic bed and the Knowlton bed of the Evergreen belt, carrying considerable epidote, calcite and quartz, with a limited amount of both mass and barrel copper, though the bulk of the metal occurs in stamp rock. Diamond-drill borings have located several other cupriferous beds on the Winona tract, all lean where cut. The mine is on a spur of the Copper Range railway.

The older workings show mineral of the lighter grades, with somewhat heavier copper at depth.

Development: No. 1, the discovery shaft, has 3 compartments, is 400' deep, with 4 levels opened, which shows a little heavy copper and some stamp rock in the northern drifts, but is of little promise and has been idle since 1901.

No. 2 shaft is 1,000' deep, with 9 levels opened, showing good copper at depth of about 200', but with poor ground below, and has been idle since early 1906.

Old No. 3 shaft, 750' deep, has been idle for years.

New No. 3 shaft, 1,650' S. W. of No. 2, is bottomed at the 13th level. The 3d to 10th levels, inclusive, have been extended to No. 4 shaft at depth of 1,272' showing alternations of good and poor ground. The openings, as a whole, show rock carrying 12 to 15 lbs. fine copper per ton, allowing for judicious stoping and reasonable selection of ground broken.

Equipment at N. 3 shaft includes a steel shaft rock house, equipped with two 18"x24" crushers, pneumatic steel gates, and pneumatic trolley

During the first 9 months of 1917 the mine yielded an average of 166,000 lbs. copper monthly at a cost of 27c per lb. With copper selling at 23½c fixed price a loss would be made, so the mine was let on tribute to the superintendent and others on a royalty basis in October, 1917. The daily production is now 450 tons.

WOLVERINE COPPER MINING CO.

MICHIGAN

Office: 15 William St., New York. Mine office: Kearsarge, Houghton Co., Mich.

Officers: R. Stanton, pres.; Geo. W. Drucker, sec.-treas.; preceding with Jas. S. Dunstan, L. P. Yandell, and Theo. Dengler, directors. Theo. Dengler, supt.; F. W. Hartmann, asst. supt.; Chas. L. Noetzel, clerk; David L. Vivian, mill supt.; Arthur Williams, mine capt.; A. Floetter, engr.; A. B. Holtenhoff, master mechanic.

Inc. 1890 in Michigan. Cap., \$1,500,000; shares \$25 par. The company owns \$80,000 stock in the Michigan Smelting Co. Old Colony Trust Co. Boston, registrar; American Trust Co., Boston, transfer agent. Annual meeting, first Monday in August.

Financial statement for fiscal year ending June 30:

	Receipts	Tot. Exp.	Profit	Div.	Tot. Sur.
1917.....	\$1,707,441	\$681,036	\$1,026,405	\$780,000	\$1,108,933
1916.....	1,369,286	634,068	735,218	660,000	862,528
1915.....	929,193	610,991	318,201	360,000	787,311
1914.....	484,061	402,936	81,075	829,100
1913.....	1,326,501	724,987	601,514	600,000	748,034
1912.....	1,327,030	713,840	613,180	540,000	746,530

Surplus at end of last financial year was \$1,108,933, including cash \$313,000, Liberty bonds, \$355,000; copper \$360,000; equal to \$18.48 per share.

Dividends: the first dividend was paid Oct. 1, 1898 and 38 dividend disbursements, to Oct. 1, 1917, aggregated \$9,930,000.

Property: 320 acres, 280 acres freehold, and 40 acres mineral rights carries 3,100' of the strike of the Kearsarge amygdaloidal bed, on which the mine is opened. Neighboring properties are the North Kearsarge on the N., Mayflower on the E., Mayflower and South Kearsarge on the S. and Centennial on the W.

The Kearsarge bed averages about 16' in width on the Wolverine property, and this mine was for many years the richest amygdaloidal mine in the Lake Superior district, second in richness only to the Calumet & Hecla among all Lake Superior copper mines. All shafts are sunk at an angle of 41°, and skip tracks have been given crossies, in place of longitudinal stringers, following the plan introduced in the Calumet & Hecla, which permits the use of a cheaper grade of timber and allows quicker repairs. All levels, except some of the very upper ones, are opened at 100' intervals. Owing to the uniformity of the cupriferous bed all levels from the 1st to the 23d, inclusive, are opened through the entire property, connecting all 4 shafts to the bottoms of No. 1 and 2 and connecting Nos. 3 and 4 only below the 17th level. With production at the rate of 6,500,000 lbs. fine copper yearly, the life of the mine is estimated at about 12 years. The new lease on life is due to the reworking of the footwall rock of supposedly worked out stopes, throughout the mine. The total width of the lode is 15' to 20'; in the original work only 12' was mined, so there remains 3' to 5' of rock which contains about 18 lbs copper per ton.

Development: several parallel lodes have been prospected, an exploratory crosscut being driven for 2,000' across the formation on the 14th level reaching the Kearsarge conglomerate on the W., where it was barren.

Another exploratory crosscut, 1,600' long, driven E. on the 28th level, intersects the Old Colony lode 1,489' E. of the Kearsarge amygdaloid and cuts other cupriferous beds. A little drifting on the Old Colony lode failed to disclose payable ground. The West lode lying 80' W. of the Kearsarge has been opened by several levels, with some payable ore on the 13th and 14th.

The Wolverine lands also carry the Osceola amygdaloid, but it proved non-commercial in a 631' shaft with drifts on 5 levels.

No. 1 shaft near the Kearsarge line, was abandoned years ago. No. 2 shaft, next S., is bottomed at 1,700' and is used for handling men and supplies.

No. 3 shaft sunk in the footwall, is bottomed at the 39th level, total depth 4,005'. Sinking was stopped at the 39th level as the hoist had reached the limit of its rope capacity. It is proposed to open and mine the remaining 100' below the 39th level by means of a winze 600' S. of the shaft. This inclined winze will eventually attain a depth of 700' in order to reach the boundary of the property. It will take 5 years to reach this point and 15 years to exhaust the ground. Shafts No. 3 and 4 are connected by drifts down to and including the 33rd level.

No. 4 shaft sunk 45' in the foot, to guard against drawing, has reached the 43rd level, total depth 4,500', the bottom of the mine.

Development in 1916-1917 amounted to 1,924'. New openings exposed good ore, and indications for No. 41, 42 and 43 levels are also good.

Equipment: at No. 3 shaft duplicates that of the Mohawk mines. That at No. 4 includes a 14"x60" Nordberg duplex-cylinder hoist with double conical drum having a maximum diam. of 18', capable of raising 4-ton skips from 1 mile depth, with a 1¼" steel cable. There are 20-drill and 22-drill compressors, and 3 Stirling water-tube boilers, with American automatic stokers and a Green fuel economizer.

Mine has Knowles electric pumps, 3 at No. 2 shaft, and one at shafts Nos. 3 and 4, three pumps having an average lift of more than 1,000' each.

The principal mine buildings are at No. 4 shaft, but there is a model changing house at No. 3 shaft. A telephone system connects underground pump stations and all buildings. The company maintains a 6-ward hospital and staff, and owns a large number of substantial dwellings, the location being exceptionally prosperous in appearance.

Rock is transported between the mine and mill by the Mohawk & Traverse Bay railroad, with a down-grade haul of 13 miles.

Mill is near the mouth of Tobacco river, on Traverse bay, Lake Superior, and adjoins the Mohawk mill, both being served by a single pump and managed by a joint superintendent. The mill has 2 Nordberg heads and uses Wilfley tables. Mineral from the heads and wash is sluiced to the basement through iron pipes, going to the works of the Michigan Smelting Co. at Houghton. A Jackson tailings plant provides for settling out the water and stacking the tailings 800' from the mill by belt conveyor.

The boiler house houses a battery of 200 h. p. Stirling water-tube boilers, equipped with American automatic stokers.

The pump house, owned jointly by the Wolverine and Mohawk, has a 20,000,000-gal. Snow horizontal triple-expansion pump, with 18", 33" and 54" steam cylinders and 22" water plungers, with 36" stroke, besides an auxiliary 8,000,000-gal. Nordberg triple expansion water-end pump, with 3 plungers. The pump house is located on the river, near its mouth, the intake being protected by timber cribs running 300' into the lake to prevent clogging from floating bark and anchor ice.

Average number of men employed at mine and mill is 370.

Recent Production: (fiscal year ending June 30).

	Tons R ^k Hoisted	Cost per Ton	Tons R ^k Stamped	Cost per Ton	Lbs. Cu. per Ton	Mineral Lbs.	Ref. Cu. Lbs.	Cost per Lb. (c)
1917.....	354,899	\$1.54	352,845	\$1.63	16.59	8,753,945	5,856,889	11.62(c)

1910.....	405,790	1.55	390,837	1.61	24.96	12,359,000	9,757,101	7.413

(a) Mine was closed from July, 1913, to April, 1914, on account of the Western Federation of Miners' strike.

(b) Cost per pound includes construction.

In July, 1917, the output was 363,888 lbs. from 27,557 tons of ore, or 14.12 lb. per ton, a decided decrease on a few months ago.

With a 12-year life, as estimated by the directors, and an annual yield of 6,500,000 lbs. of copper figured at a total of 78,000,000 lbs., the profit with 15c copper and 9.4c cost would be \$4,368,000, equivalent to \$72-per share, or \$6 per year.

WYANDOT COPPER CO.

MICHIGAN

Office: 68 Devonshire St., Boston, Mass. **Operating office:** Houghton, Mich. **Mine office:** Winona, Houghton Co., Mich.

Directors: Ashley Watson, pres.; Jos. Dorr, v. p.; Chas. E. Adams, sec.-treas. and Frank L. Van Orden, mgr. Louis La Rochelle, mg. capt.

Inc. Feb. 3, 1899, in Michigan. **Cap.**, \$2,500,000; shares \$25 par; paid in, \$13. Has levied assessments of \$700,000 since organization. Shares are listed on the Boston Stock Exchange. State Street Trust Co., Boston, registrar; Federal Trust Co., Boston, transfer agent. Annual meeting, second Monday in May.

Property: 1,065 acres, adjoins the Winona, in Secs. 16, 20 and 21, T. 52 N., R. 36 W. Exploratory work, begun Feb., 1899, was done in search of the Winona bed; later to locate the southern extension of the Baltic amygdaloid, after which attention was turned again to the Winona bed, and latterly to development of an amygdaloidal bed, the No. 8 lode, lying about 2,300' E. of the Winona lode. The average strike of the Keweenawan formation on this land is N. 53° E., with an average dip of 65°, and the Wyandot lands carry the strike of the Keweenawan bedded series for about 1½ miles.

Development: by several shafts, No. 1, 1,000' deep, located in the S. E. ¼ of Sec. 21, T. 52 N., R. 36 W., is sunk in the footwall of the Winona bed.

No. 11 exploratory shaft is sunk 710' on a stratum paralleling the Winona bed, at a distance of 1,200'. This bed looked good when first opened, and diamond-drill cores were rich, but the bed proved poor under development. A crosscut driven S. E. from the bottom of No. 11 shaft for 2,640', intersects 13 distinct amygdaloidal beds, Nos. 3 and 8 showing copper. Drifting done on No. 3 bed disclosed considerable mass and barrel copper, but No. 8 is the more promising.

Miscellaneous work of the past includes a 102' vertical shaft, sunk on a lean amygdaloidal bed, known as the Misery river bed, in Sec. 16, T. 52 N., R. 36 W., but nothing of value was developed. Some years ago a vertical shaft was sunk on lands held under option, near the W. quarter post of Sec. 28, T. 52 N., R. 36 W., to depth of 250', and crosscuts driven both E. and W. with about one-half mile of workings. This work crossed the horizon of the Baltic bed, but what was deemed the Baltic amygdaloid was found highly altered, and worthless, as was the whole country in the neighborhood.

Extensive diamond drilling has been done on the property and a core, taken 1904, from the horizon of the Lake bed, showed a little copper, but was not considered important at that time. The ground has been carefully prospected again by diamond drill, in Secs. 16 and 21. Holes Nos. 21 and 22 showed beds offering encouragement, and some trenching was done

on 1 bed, 48' wide, carrying a little copper from foot to hanging. Another trench, 1,500' N. E. disclosed the bed under only 16' of overburden, and a shaft known as the Sec. 16 shaft, was sunk to a depth of 65'. A crosscut at this depth shows the bed to be 38' wide, carrying finely-disseminated copper for about 10', with small masses along the footwall.

Recent activity has been centered in development work in the No. 8 lode, 1,100' S. E. of the No. 11 shaft. This lode is opened by the long crosscut on the 700' level, and below this depth by a 115' winze, with about 800' of drifts on the 815' level, 400' of drifts on the 900' level and drifts have been started on the 1,000' level, the bottom of the winze. The showing on these levels has been varied and sufficient work has not been done to fully demonstrate the value of the lode.

Equipment: includes a steam plant with Lidgerwood hoist, good for 1,000' and compressors of 12 drills aggregate capacity.

Work at present is confined to drift-stopping, preparatory to regular stoping, both N. and S. of the winze on the 800' level. Gratifying results have been obtained and if present developments are indicative of the general mineralization of the lode, the future of the property looks good. About 25 men are employed. Two drills were working on No. 10 level in August, 1917.

The Wyandot company has worked faithfully and with skill for more than a decade to make a profitable mine, and, though not yet successful, has not exhausted the possibilities of its holdings.

Two mill tests have been made, the second of 654 tons being completed in Sept., 1917. This averaged 21.62 lbs. copper per ton. Another lot of 500 tons is to be milled. Operations are kept going by assessments, one of \$1 per share being called for Sept. and March (50¢ each).

IRON MINES OF MICHIGAN

Arranged alphabetically and embracing the important mining companies operating in Gogebic, Menominee and Marquette ranges.

BREITUNG IRON CO.

MICHIGAN

Office: 11 Pine St., New York.

Officers: E. N. Breitung, pres. and gen. mgr.; Wm. A. Hamilton, sec.-treas.; the preceding, and H. H. Seaman, Norman Merriman and R. M. DeVoe, directors; C. B. Dunster, mgr.

Inc. May 4, 1917, in Delaware. **Cap.**, common stock, \$15,000,000; par value, \$100; authorized and outstanding; pfd. 7% cumulative; convertible, \$3,000,000. Redeemable at option of corporation at \$110 per share and accrued dividends. Convertible share for share into common stock at the option of the holders. Quarterly dividend payable on the first day of Jan., April, July and October. Privilege of conversion up to thirty days, prior to date fixed for redemption. No bonds.

The various subsidiary companies and their locations are given below, together with the percentage of capital stock of each one held by the B. I. Co., other than directors' qualifying shares.

Names of Subsidiary Operating Companies	Location	Iron Ore Range	% Capital Stock Owned
Mary Charlotte Mng. Co.....	Negaunee, Mich.	Marquette Range	95
Breitung Hematite Mng. Co.....	" "	" "	95
Jublet Iron Co.....	" "	" "	100
Lucky Star Mng. Co.....	" "	" "	70
Washington Iron Co.....	Humbolt,	" "	51

Loon Lake Mng. Property.....	Wilde, Ont., Can.	Algoma Range	80

Under date of April 1, 1917, the American Appraisal Co., of 120 Broadway, appraises the properties of the subsidiaries at \$8,631,073, including in permanent equipment and development, \$1,227,563; mineral lands and leases, \$7,078,250; investments in ships, \$325,260; current assets, \$3,620,648 and the liabilities as, \$1,622,978. The Appraisal company notes that these values are very conservative. The B. I. Co. estimates that net earnings for 1917 will be \$800,000 and in next 3 years about, \$1,750,000 annually.

A Surplus Fund is to be created from earnings remaining after payment of preferred dividends in each year, up to Jan. 1, 1920, to be maintained at an amount equal to that existing on that date, either in property or otherwise, so long as any of the preferred stock is outstanding. No dividends can be paid on the common stock until Jan. 1, 1920, and after that, 25% of all surplus earnings remaining after payment of preferred dividends in each year shall be applied to the redemption of preferred stock at \$110 and accrued dividends.

Property: over 1,300 acres in one solid group in the Negaunee district of the Marquette Iron Range in the Lake Superior region, and properties in other districts. The company operates a boat line from Superior ports to lower Lake ports.

Subsidiary Properties

Mary Charlotte Mining Co. holds leases on 120 acres of iron ore lands estimated to contain over 4,000,000 tons of high-grade Bessemer and Mary ores, disclosed by development work and drilling, and large tonnage of lower grade ores. Mine has operated since 1903.

Breitung Hematite Mining Co., Ltd. has 50-year leases on more than 175 acres of iron ore lands estimated by development and drilling to contain 4,000,000 tons of high grade Bessemer and non-Bessemer ores. Company has recently spent \$400,000 for new shaft and development to permit steady production. Has produced since 1906.

Juliet Iron Co. holds fifty-year lease on 960 acres in the Negaunee Basin iron formation and adjoins and almost surrounds the Breitung Hematite No. 1 mine; practically undeveloped except by shallow workings that show promising prospects. From one tract of 80 acres, known as the Milwaukee-Davis, 700,000 tons were produced.

Lucky Star Mining Co. owns 150 acres northeast of Breitung Hematite; property is crossed by a very rich orebody. Drill holes show more than 4,000,000 tons. A shaft has been sunk to within 200' of the ore, and company reports that it should be producing within two years.

Washington Iron Co. owns in fee and operates the Barron mine in the Humboldt district of the Marquette range. Since 1908 property has produced 350,000 tons. There are 1,120 acres situated in the iron formation with known ore developed to present time of 400,000 tons.

Hopkins Mining Co. holds 46-year lease on 80 acres in Cuyuna range near Ironton, Minn. Drilling in 1914 showed 468,566 tons of Bessemer and manganese ore. Later work in that section indicated a larger tonnage. At present time shaft has been sunk 145'.

Clifford Extension Iron Co. holds a 24-year lease on 80 acres in the Menominee range where ore bodies are known to go to great depth. Above the 135' level 2,500,000 tons are estimated with large reserves below that level. Property is being opened up by a shaft and ore will be mined by open pit milling method. Ore is Bessemer grade of specular hematite.

Loon Lake Mining Property is held in fee by a subsidiary company. There are about 1,000 acres in the Algoma Iron Range, 20 miles north of Sault Ste. Marie, Ontario. Property is being prospected.

BRISTOL MINING CO.

MICHIGAN

Office: E. W. Hopkins, mgr., Wade Bldg., Cleveland, Ohio.

Property: on the Menominee range, Mich. Ore: hard, brown, non-Bessemer hematite, containing 49.48% iron, 3.96% manganese, 0.6% phosphorus and 7.25% silica.

Mining method: by stoping to 1,060'.

Production: 462,559 tons in 1916 and 4,606,922 tons to date.

CASCADE MINING CO.

MICHIGAN

Address: 728 Security Bldg., Minneapolis, Minn.

Officers: Fred B. Snyder, pres.; J. F. VanDerlip, v. p.; R. M. Bennett, treas.; O. B. Warren, gen. mgr. T. J. Nicholas, supt., Palmer, Mich. Pickands, Mather & Co., Cleveland, Ohio, sales agents. Operated as a close corporation.

Property: Isabella mine, Marquette county, developed by shafts and tunnels to vertical depth of 940', showing an iron ore deposit in jasper-diorite and quartzite. The ore is mined by the square set and stoping systems.

Production in 1916: 134,938 tons, the product being a Bessemer and non-Bessemer hematite.

CLEVELAND-CLIFFS IRON CO., THE MINNESOTA-MICHIGAN

Office: Cleveland, Ohio. M. M. Duncan, mgr.

Officers: W. G. Mather, pres.; M. M. Duncan, v. p.; R. C. Mann, treas.; S. L. Mather, sec., with T. H. Newberry, C. W. Bingham, Samuel Mather, J. H. Wade and B. F. Bourne, directors; C. G. Heer, asst. treas.; E. H. Jaynes, asst. sec.; and C. D. Mason, aud.

Inc. in W. Virginia. Cap., \$10,000,000; shares \$100 par; 995,740 issued. Funded debt outstanding. \$1,575,000 1st collateral trust gold 6s.

Statement for 1916 shows an income from all sources of \$5,827,787, of which \$1,645,374 was profit. Cash assets at end of year were \$6,624,320 and current liabilities, \$3,387,715.

Dividends: 2½% per quarter.

Property: iron mines in Michigan and Minnesota that yielded 2,275,796 tons in 1916. The principal ones are:

Mine	Range	Mining System	Ore	Iron Content, Per Cent	Shipments, 1916, Tons	Total Tons
Crosby...	Mesabi	Open pit and side-slicing	Bessemer	56.89	110,652	1,374,285

Stephenson	"	"	"	51.88	355,166	1,480,615

The Maas is worked to a depth of 1,290'.

The above figures represent the season's shipments, May 1 to December 1, or the season of Lake navigation. Actual production goes on all the year, and the ore is stocked at the mines. It frequently happens that in one year production figures are considerably larger than shipments; and in other years the reverse.

DAVIDSON ORE MINING CO.**MICHIGAN**

Office: 403 White Bldg., Buffalo, N. Y. Mine office: Iron River, Mich.

Officers: F. N. Beagle, pres.; Geo. Davidson, v. p.; T. F. Hildreth sec.-mgr.; L. R. Davidson, treas. Rudolph Ericson, supt.

Inc. 1910 in Michigan. Cap., \$500,000; shares \$25 par; \$400,000 shares outstanding.

Property: 120 acres, includes the Davidson No. 1 and No. 2 mines, near Iron River. Ore is a non-Bessemer hematite.

Development: by 550' vertical and 252' incline shafts.

Equipment: includes 3 hoists, 2 compressors and a Marion steam shovel.

HANNA & CO., M. A.**MICHIGAN-MINNESOTA**

Office: Leader-News Bldg., Cleveland, Ohio.

Officers: L. C. Hanna, R. L. Ireland, M. Andrews, H. M. Hanna, Jr. F. B. Richards, Wm. Collins, R. F. Grant. Operated as a close corporation and does not furnish reports for publication.

Controls the following operating companies: Virginia Ore Mining Co. Virginia, Minn.; Consumers Ore Co., Mountain Iron, Minn.; La Rue Mining Co., Nashwank, Minn.; American-Boston Mining Co., Diorite, Mich. Richmond Iron Co., Palmer, Mich.; Hollister Mining Co., Crystal Falls, Mich.; Wakefield Iron Co., Wakefield, Mich. Also operates 32 vessels of 8,915 average tonnage on the Great Lakes.

Company is sales agents for the following:

INDIANA MINE**MICHIGAN**

John M. Thomas, owner, Milwaukee, Wis.; G. A. Richards, supt., Iron Mountain, Mich.

Is an iron property producing ore carrying 40.4% iron and .007% phosphorus. Uses electric hoist, pump, tram and steam driven compressor.

JUDSON MINING CO.**MICHIGAN**

Alpha, Mich. M. E. Richards, gen. mgr.; T. D. Held, pres., Chicago; Carom Hartly, v. p., Duluth, Minn.; A. H. Anderson, sec.

Inc. 1912 in Mich. Cap., \$750,000; shares \$10 par; all issued.

Property: Judson mine with 80 acres iron ore land having 2,000,000 tons hematite ore with 50% iron and 0.5% phosphorus content, blocked out.

Development: by 450' incline shaft and 5,000' of workings.

Equipment: includes Lake Shore hoist, 2,200 cu. ft. Ingersoll compressor, 1,000 gal. pump and motor tramway. Also a Bucyrus steam shovel.

Production: from 100,000 to 500,000 tons annually.

LAKE SUPERIOR IRON & CHEMICAL CO.

MICHIGAN

Address: W. H. Matthews, mgr., Bessemer, Mich., E. W. McRandle, supt.

Property: the Yale mine on Gogebic range, Michigan. **Ore:** 3 grades, all soft red, one a Bessemer, the second non-Bessemer and the third silicious hematite. The best ore contains 52.6% iron, 0.043% phosphorus and 5.43% silica. Ore is mined by caving to depth of 1,780'.

Production: 149,155 tons in 1916 and 1,013,486 tons to date.

LORETTO IRON CO.

MICHIGAN

Office: 1400 Fulton St., Chicago, Ill.

Officers: Wm. A. Amberg, pres.; D. F. Bremner, v. p.; T. J. Amberg, sec.; J. W. Amberg, treas.; C. H. Baxter, supt., directors.

Inc. in Ills. Cap., \$400,000; shares \$10 par; all issued. Is a close corporation and makes no figures public.

Property: 280 acres leasehold on Menominee range at Loretto, Dickinson Co., Mich., opened up in 1892. Main orebody averages 10-40' in width and is about 1,000' long with an overburden of above 25'. Ore varies greatly in iron content.

Development: to vertical depth of 800'.

Production: 174,173 tons in 1917. Total output to date, 1,912,453 tons.

MINERAL MINING CO.

MICHIGAN

Office: 910 Wells Bldg., Milwaukee, Wis. **Mine office:** Iron River, Mich.

Officers: G. D. Van Dyke, pres.; W. D. Van Dyke, v. p. and treas.; E. F. Brown, mgr. and sec.; above are directors.

Inc. May 7, 1904, in Wisconsin. Cap., \$100,000; shares \$100 par; 90,000 issued. Annual meeting, first Tuesday in May. Company is a close corporation.

Property: the Osana, Wauseca, Nanaimo and Breen iron mines near Iron River, Mich., first two being worked at present.

Production: capacity 500,000 tons yearly. Output of "James" ore averages 55.3% iron and 0.45% phosphorus.

NEGAUNEE MINE.

MICHIGAN

Address: M. M. Duncan, mgr.; G. R. Jackson, supt., Ishpeming, Mich. **Sales agents:** Cleveland-Cliffs Iron Co., and Pickands, Mather & Co., Cleveland, Ohio.

Property: in Marquette Co., Mich., has been worked since 1887.

Development: ore mined by caving system to vertical depth of 1,180'.

Ore: two grades: Negaunee, a soft, red, Bessemer hematite, containing 52.04% iron, 0.083% phos., and 6.72% silica; and Negaunee Bessemer, assaying 53.59% iron, 0.053% phos., and 6.72% silica. Moisture is 12% in both. Cargo analyses in 1916 averaged 59.20 to 60.90% iron, 0.094 to 0.060% phos., 7.65 to 7.12% silica, and 0.31 to 0.27% manganese.

Production: 523,736 tons in 1916, and total of 6,176,287 tons to date.

NEVADA MINING CO.

MICHIGAN

Address: M. E. Richards, gen. mgr., Alpha, Mich.

Inc. 1916 in Michigan. Same directorate as Judson Mining Co.

Property: about 80 acres, in Iron county, Michigan, includes the Amasa Porte mine, carries a typical replacement deposit in slate, that is reported to average 55% iron.

Developed by shaft to 550' vertical depth with 3,000' of underground workings, said to contain 700,000 tons of ore, with 200,000 tons blocked out
Equipment: includes Sullivan hoist, compressor, Prescott steam pump and 600-ton mill.

Production: to date amounts to 150,000 tons.

NORRIE-AURORA MINE.

MICHIGAN

Address: Oliver Iron Mining Co., Ironwood, Mich. J. H. McLean mgr.; O. C. Davidson, gen. supt.

Property: in Gogebic county, Mich., was first opened in 1885, and developed to 2,034' vertical depth.

Production: 1,885,863 tons in 1916, making 33,522,636 tons to date. Ore is of 5 grades, all soft, reddish brown, Bessemer hematites, and one grade of non-Bessemer hematite. Average in mine is 54.31% iron, 0.036% phosphorus, 6.21% silica, and 10.86% moisture.

PENN IRON MINING CO...

MICHIGAN

Address: Vulcan, Mich.

Officers: A. C. Dinkey, pres.; H. F. Black, v.-p.; D. H. Gehly, sec.-treas., with Wm. Kelly, directors. Wm. Kelly, mgr.

Inc. in Michigan. Cap., \$1,000,000, shares \$100 par, all issued.

Property: in Menominee range, Dickinson county, includes the Cyclops, Norway, West Vulcan, Brier Hill and Curry mines. Developed to depth of 1,600' by vertical shafts. **Ore:** Bessemer and non-Bessemer hematite, 56.77% iron. Reserves estimated at 1,200,000 tons, August, 1917.

Production: the rate of 425,000 tons iron ore per year, a total to date of 11,109,692 tons.

PEWABIC CO.

MICHIGAN

Office: 910 Wells Bldg., Milwaukee, Wis.

Officers: G. D. Van Dyke, pres.; W. D. Van Dyke, sec.-treas., with N. P. Hulst, J. H. McLean and D. G. Kerr, directors. E. F. Brown, mgr.; W. G. Monroe, supt.

Inc. Jan. 1, 1887, in Wis. Cap., 8,000 shares; \$25 par, all issued. Is a close corporation.

Owns the Pewabic, Walpole and Millie iron mines at Iron Mountain. Dickinson Co., Mich. Ore carries from 38% to 63% iron and from .007 to .012% phos. Ore reserves: estimated at 50,000 tons in the Walpole and 500,000 tons in the Genoa.

REPUBLIC IRON & STEEL CO.

MICHIGAN

See same title under U. S. section of this book at beginning of Chapter VI.

SPRING VALLEY IRON CO.

MICHIGAN

Address: E. H. Willis, mgr., Wellston, Ohio. J. E. Looney, supt.

Property: on the Menominee range, Iron Co., Mich., opened in 1907. **Ore:** a soft, red, non-Bessemer hematite, assaying 51.75% iron, 0.461% phosphorus, and 6.3% silica. Ore is mined by top slicing system to depth of 350'.

Production: 145,716 tons in 1916, and 916,661 tons to date.

VERONA MINING CO.

MICHIGAN

Office: C. H. Munger, mgr., Cleveland, Ohio.

Property: 3 mines on the Menominee range, Mich. **Ore:** hard, red, non-Bessemer hematite.

Mine	Depth, ft.	Tons in 1916	Tons to date
Baltic.....	553	110,965	1,788,651
Bengal.....	280	140,960	208,923

WAKEFIELD IRON CO.**MICHIGAN****Address:** J. D. Ireland, Wakefield, Mich. W. C. Hart, supt.**Property:** Andrews and Duane mines on Gogebic range, Gogebic Co., Mich.; first opened in 1913. **Ore:** a soft, red, non-Bessemer hematite and soft dark brown non-Bessemer hematite, carrying, respectively, 52.06 and 47.93% iron, 0.08 and 0.09% phosphorus and 4.25 and 5.31 silica.**Mining** is by open pit and by underground work to depth of 400'.**Production:** 1,061,730 tons in 1916 and 2,041,343 to date.**WASHINGTON IRON CO.****MICHIGAN****Address:** W. B. Pattison, supt., Negaunee, Mich.**Property:** the Washington mine, opened in 1860, on Marquette range, Mich. Has 4 grades of hard, gray non-Bessemer specular and magnetite ores, which are concentrated before shipment. No. 2 ore assays 56.83% iron, 0.136% phosphorus and 15.47% silica. Ore is mined by stoping to 730' depth.**Production:** 6,631 tons in 1916 and 360,322 tons since 1908.**WICKWIRE MINING CO.****MICHIGAN****Address:** E. C. Bowers, Buffalo, N. Y. H. Duff, supt.**Property:** the Virgil and Wickwire iron mines on the Menominee range, Iron Co., Mich. **Ore:** yellow-brown and red-brown non-Bessemer hematite, the former containing 51.04% iron, 0.396% phosphorus and 6.32% silica. Ore mined by sub-stopping, to 273' in the Virgil and slicing and caving to 313' in the Wickwire.**Production:** (tons)

MINNESOTA COPPER MINES**GREAT NORTHERN COPPER CO.****MINNESOTA**Idle since 1911. **Office:** 504 Globe Bldg., Minneapolis, Minn. Mine at Hinckley, Pine Co., Minn. Fully described Vol. XI, Copper Handbook.**J. BENNETT SMITH MINING CO.****MINNESOTA**

Company now entirely in hands of R. D. Lacoé of Oceanside, San Diego Co., Cal., who advanced most of the money for development. Former office Kingston, Pa. Mine address: Pine City, Pine Co., Minn.

Property: 500 acres of copper-bearing ground, along Snake river, a mile below Cross lake, in Pine county, Minn. The lands show the western extension of the Keweenawan copper-bearing beds of Lake Superior, the bedded formation having a strike of about N. 20° E., with dip of about 72° S.-E., showing the beds to be on the northern fold of the syncline.**Development:** includes 560' shaft; also several shallow pits and shafts. Several of the amygdaloidal and conglomerate strata, showing native copper, have been proven by test pitting and diamond-drill borings. Company reports having expended about \$50,000 on exploratory and development work since 1879.**LYCOMING CO.****MINNESOTA****Office:** 708 Lonsdale Bldg., Duluth, Minn. Was a securities-holding company. Inactive and no assets.**IRON-MANGANESE MINES OF THE CUYUNA RANGE****ALGOMA MANGANESE CO.****MINNESOTA****Address:** Ferguson Bldg., Duluth, Minn. W. A. McClaren, mgr.; A. A. MacKay, supt.

SULTANA MINES CO.**MINNESOTA**

Address: H. H. Bradt, mgr., Sellwood Bldg., Duluth, Minn. A. R. McGuire, supt.

Property: an iron mine on Cuyuna range, Crow Wing Co., Minn., opened up in 1915.

Ore: hard and soft, dark brown non-Bessemer, manganiferous hematite, limonite, etc. Average analysis in natural state is 33.8% iron, 0.146% phos., and 7.84% silica. Dried samples of cargo shipments assay 39.3% iron, 0.17% phos., 8.54% silica and 13.43% manganese. Mining by sub-level slicing method to 130' depth.

Production: 35,169 tons in 1916.

*IRON MINES OF THE GOGEBIC RANGE***BROTHERTON IRON MINING CO.****MINNESOTA**

Office: C. H. Munger, mgr., Cleveland, Ohio.

Property: the Brotherton on the Gogebic range, Minn.

Ore: Bessemer and non-Bessemer hematite, carrying 51.65 to 53.26% iron, 0.023 to 0.091% phosphorus and 11.65 to 12.73% silica.

Mining by underground method to depth of 1,342'.

Production: 107,813 tons in 1916 and 2,401,926 tons to date.

COLBY MINE**MINNESOTA**

Address: Corrigan, McKinney & Co., Cleveland, Ohio.

Ore: soft, blue, Bessemer and non-Bessemer hematites, assaying 53.70 to 53.98% iron, 0.039 to 0.047% phosphorus and 5.89 to 6.05% silica. Mined by underground method.

Production: 423,553 tons in 1916 and 4,269,083 tons to date.

MONTREAL MINING CO.**MINNESOTA**

Office: E. W. Hopkins, mgr., Wade Bldg., Cleveland, Ohio.

Ore: soft, red Bessemer and non-Bessemer hematites, assaying 55.36% iron, 0.041% phosphorus and 6.48% silica. Mined by slicing and caving method to 2,300'.

Production: 530,813 tons in 1916 and 4,662,938 tons to date.

NEWPORT MINING CO.**MINNESOTA**

Office: E. L. Cullen, mgr., First Natl. Bank Bldg., Milwaukee, Wis.

Property: on the Gogebic range, Minn. Ore: soft, red, Bessemer and non-Bessemer hematites, carrying up to 55.45% iron, 0.08% phosphorus and 10.58% silica. Ore is mined by sub-silicing method to 2,274' depth.

Production: 1,315,980 tons in 1916 and 12,570,584 tons to date.

PLYMOUTH MINE**MINNESOTA**

Address: Coates & Tweed, Duluth, Minn. C. A. Myers, supt.

Property: iron mine on the Gogebic range, Gogebic Co., Minn., carries soft, non-Bessemer hematite, containing 53% iron, 0.069% phosphorus, and 4.34% silica.

Development: by open pit system.

Production: started in 1916, and totaled 330,427 tons.

*IRON MINES OF THE MESABI RANGE***ADRIATIC MINING CO.****MINNESOTA**

Office: R. M. Sellwood, mgr., Cleveland, Ohio.

Property: on Mesabi range, St. Louis Co., Minn.; opened in 1906. Ore: soft, red, non-Bessemer hematite, containing 49.31% iron, 0.067% phosphorus and 10.48% silica. Ore is mined by underground slicing to depth of 180'.

Production: 220,818 tons in 1916 and 1,041,268 to date.

ARTHUR IRON MINING CO.**MINNESOTA**

Office: E. E. Hunter, supt., St. Paul, Minn.

Property: the Leonard mine on the Mesabi range. Ore is a non-Bessemer averaging 51.61% iron, 0.057% phosphorus and 5.51% silica. Mined by open pit and underground methods to 253' depth.

Production: 816,468 tons in 1916 and 9,598,827 tons to date.

BALKAN MINING CO.**MINNESOTA**

Office: C. H. Munger, mgr., Cleveland, Ohio.

Property: Belgrade mine on Mesabi range, opened in 1908. Ore: soft, red, Bessemer and non-Bessemer hematite, containing 47.54 to 52.27% iron, 0.062 to 0.037% phosphorus, and 7.01 to 8.04% silica. Ore is mined by underground slicing system to 260' vertical.

Production: 180,532 tons in 1916, and 1,157,214 tons to date.

BANGOR MINING CO.**MINNESOTA**

Office: C. H. Munger, Cleveland, Ohio.

Property: Bangor mine on Mesabi range, opened in 1910.

Ore: soft, red, non-Bessemer hematite, assaying 49.39% iron, 0.059% phosphorus, and 9.10% silica. Ore is mined by underground slicing to 307' vertical.

Production: 223,576 tons in 1916, and 998,057 tons to date.

BENNETT MINING CO.**MINNESOTA**

Is controlled by Pickands, Mather & Co., Cleveland, Ohio.

Property: the Bennett mine, formerly owned by the Keewatin Mining Co., in Sec. 24, T. 57, R. 22, Itasca county, Minnesota, developed to 137' depth. The mine was opened in 1912. Product is a Bessemer hematite, non-Bessemer hematite, and a manganeseiferous non-Bessemer hematite.

Production: 88,931 tons in 1913; 25,868 tons in 1914; 50,475 tons in 1915; 672,572 tons in 1916.

CLEVELAND-CLIFFS IRON CO., THE**MINNESOTA**

See same title under Michigan Iron mines.

COMMODORE MINE**MINNESOTA**

Address: Corrigan, McKinney & Co., Cleveland, Ohio.

Property: on Mesabi range, Minn., opened in 1893. Ore: soft, blue Bessemer and non-Bessemer hematite, carrying 51.83 to 57.32% iron, 0.048 to 0.032% phosphorus, and 7.67 to 6.01% silica. Ore mined by open pit system.

Production: 579,285 tons in 1916, and 2,860,349 tons to date.

CORSICA IRON CO.**MINNESOTA**

Office: C. H. Munger, Cleveland, Ohio.

Property: on Mesabi range, Minn., opened in 1901.

Ore: soft, red, Bessemer and non-Bessemer hematite, assaying 52.74 to 47.47% iron, 0.043 to 0.056% phosphorus, and 7.76 to 7.27% silica. Mined by underground slicing system to 248' vertical.

Production: 292,228 tons in 1916, and 1,951,477 tons to date.

CRETE MINING CO.**MINNESOTA**

Office: C. H. Munger, mgr., Cleveland, Ohio.

Property: Albany mine on Mesabi range, opened in 1903.

Ore: soft, yellow, non-Bessemer, soft, red Bessemer, and soft, blue, non-Bessemer hematite, assaying from 46.81 to 53.52% iron, 0.015 to 0.047% phosphorus, and 6.65 to 3.71% silica. Mined by milling and underground slicing systems to 260' vertical.

Production: 468,291 tons in 1916, and 3,734,109 tons to date.

GREAT NORTHERN IRON ORE PROPERTIES.**MINNESOTA**

Offices: 1st Nat'l Bank Bldg., St. Paul, Minn., and 32 Nassau St., New York.

Inc. Dec. 7, 1906. Is a trust created by directors of and approved by shareholders in the Great Northern Railway Co.

Trustees: Louis W. Hill, James N. Hill, Walter J. Hill and E. T. Nichols.

The Lake Superior Co., Ltd., which held securities and properties in the interest of the Great Northern Ry. Co. shareholders, turned over to the trustees of the Great Northern Iron Ore Properties, stocks in 10 iron ore mining companies, worth \$1,738,400. Any dividends declared by the **Alouet Bay Dock Co.**, or by **Duluth, Superior & Western Terminal Co.**, up to Dec. 31, 1912, were to be paid to the trustees, to be applied by them to the uses of the trust.

When the trust was created, the trustees issued certificates of beneficial interest, amounting to 1,500,000 shares to holders of the Great Northern Ry. The trustees' income has come from dividends from stocks held and from interest earned. From this revenue, organization expenses are deducted, the balance being available for distribution on certificates of beneficial interest.

Income: in 1916, from Proprietary companies (the West Missabe, Arthur, Fillmore, Harrison, Jackson, Polk, Tyler, Van Buren, North Star, and Leonard iron mining companies), totaled \$2,100,000. Other revenue made a total of \$2,178,548. Total income to 1917, \$17,472,901. Administration of the Trust cost \$89,663.

Dividends: to holders of certificates of beneficial interest were 50 and 75c per share, or \$1,875,000 in 1916; total to 1917, \$12,375,000. The surplus at end of 1916 was \$4,340,183.

Assets: \$20,413,233, including \$8,124,380 cash (trustees and Proprietary companies); lands and leases, \$1,513,545; mine expenditures, \$4,065,170; and securities, \$2,301,483. Liabilities include total surplus of Proprietary companies and trustees, \$17,566,957; current expenses, \$929,912; and capital stock, \$1,738,400.

Property: 65,091 acres of iron-ore land in the Mesabi district, Minn. In June, 1917, the trustees leased 3 mines to Jones & Laughlin of Pittsburg, the yearly output for 20 years being reported as worth \$6,000,000.

Production: shipments in 1916 were 3,207,091 tons, of which 2,202,359 tons were from the Mahoning mine. The average royalty was 17.5c per ton, giving a total of \$562,706.

General: the trustees contemplate the coming year with hopefulness for the metal trade. Prices of ore increased in 1916 to \$4.20 per ton at Lake Erie ports for Bessemer, \$3.55, for non-Bessemer, against \$3.45 and \$2.80 per ton, respectively, in 1915. Prices in 1917 were \$5.70 and \$5.05 for the two grades. On the other hand, production costs have risen considerably.

M. A. HANNA CO.

See same title under Michigan iron mines.

HANNA ORE MINING CO.

MINNESOTA

Office: Duluth, Minn. J. D. Ireland, gen. mgr.; E. E. Hunter, asst. mgr.; F. H. Cohoe, supt. Company is a newly organized subsidiary of the M. A. Hanna Co., to operate a lease on Great Northern ore lands at Buhl, Virginia, Hibbing and Crosby, Minn.

HOBART IRON MINING CO.

MINNESOTA

Office: C. H. Munger, mgr., Cleveland, Ohio.

Property: Elba mine on Mesabi range, Minn., opened in 1898. Ore: soft, red, Bessemer hematite, containing 53.79% iron, 0.04% phosphorus, and 6.24% silica.

Mined by underground slicing to 316' vertical.

Production: 130,384 tons in 1916, and 2,819,760 tons to date.

INLAND STEEL CO.**MINNESOTA**

Office: Room 1105, First Natl. Bank Bldg., Chicago, Ill.

Officers: A. W. Thompson, pres.; E. M. Adams, sec.

Inc. Feb. 6, 1917, in Delaware, as successor of an Illinois corporation of same name. Cap., \$30,000,000; \$100 par; \$25,000,000 issued. Bonded debt: \$1,650,000—6% gold bonds of old company being balance of 3,000,000 issue, due 1928. Also 4,380,000, due July 1, 1942. The 1916 report shows, total assets, \$36,352,599; surplus, \$16,359,410; current assets, \$10,861,080; net working capital, \$9,113,800. Earnings for 1916 were \$11,365,477, compared with \$4,498,024 in previous year.

Property: valuable ore leases on 5 producing mines in Minnesota, two on the Mesabi range near Hibbing, three on the Cuyuna, at Crosby, Mina, with 30 years' ore reserves at each mine. Furnaces are at Indiana Harbor, Ind., and Chicago Heights, Ill.

In 1917, company purchased 2,000 acres of coal land near Dorseyville, Pa., and a lease on further ore lands from the Great Northern Iron Ore Co.

INTER-STATE IRON CO.**MINNESOTA**

Office: Mark Elliott, supt., Jones & Laughlin Bldg., Pittsburgh, Pa.

Property: the Lincoln mine on the Mesabi range. Ore, both Bessemer and non-Bessemer containing 45.75 to 56.60% iron, 0.025 to 0.053% phosphorus and 6.94 to 9.20% silica. Ore mined by top slicing and caving to 237' depth.

Production: 286,128 tons in 1916 and 3,894,178 tons to date.

LEETONIA MINING CO.**MINNESOTA**

Office: Mark Elliott, supt., Jones & Laughlin Bldg., Pittsburgh, Pa.

Property: the Leetonia mine, opened in 1902 on the Mesabi range. Ore: soft, red, non-Bessemer hematite assaying 50.3% iron. Ore mined by top slicing and caving and steam shovels to 182' depth.

Production: 656,876 tons in 1916 and 5,905,849 tons to date.

MACE IRON MINING CO.**MINNESOTA**

Address: O. B. Warren, mgr., 710 Security Bank Bldg., Minneapolis, Minn. J. A. MacKillican, supt., Hibbing, Minn. Pickands, Mather & Co., Cleveland, O., sales agents. Operated as a close corporation.

Property: Mace No. 1 and No. 2 mines in St. Louis county, Minnesota, carry a chamber shaped deposit of iron ore in taconite. Developed by shaft and open pits to 120' depth. Underground workings total 6,000'.

Equipment: includes steam hoist and Cameron pump.

Production: Mace No. 1, 1914, 160,815 tons; 1915, 120,906 tons; 1916, 163,353 tons. Mace No. 2, 1916, 307,496 tons.

MAHONING ORE AND STEEL CO.**MINNESOTA**

Office: W. C. Agnew, Hibbing, Minn.

Property: Mahoning mine on Mesabi range, Minn.

Ore: soft, blue Bessemer, and soft, brown, non-Bessemer hematite, containing 57.18% iron, 0.037% phosphorus, and 2.39% silica. Mined by open pit system to 200' vertical.

Production: 2,215,788 tons in 1916 and 23,832,886 to date.

NORTH HARRISON MINE.**MINNESOTA**

Address: Butler Bros., St. Paul, Minn. Cooley Butler, mgr.

Property: an iron mine on Mesabi range, Itasca county, Minn., developed by open pit system. Total shipments since 1914 amount to 592,773, of which 422,825 tons were produced in 1916. Both soft Bessemer and non-Bessemer hematite is mined, assaying from 51 to 54% iron, 0.075 to 0.036% phosphorus, and 8.6 to 9.01% silica.

Same concern operates the Harrison mine, which yields similar ore. Production: in 1916 was 32,876 tons; total since 1914 is 426,683 tons.

OLIVER IRON MINING CO.**MINNESOTA**

Office: Eveleth, Minn. J. H. McLean, gen. mgr.

One sixth interest in stock owned by U. S. Steel Corporation; remainder owned by Carnegie Steel Co. Is a close corporation, owning, controlling and operating mines in Michigan, Minnesota and Wisconsin. Has interests in the following mining companies. Lake Superior, Regent, Great Western, Braddock, Homestead, Duquesne, Alleghany, Hope, Neville, Monongahela, Lorain, Agawain, Ambridge, Morewood, Pencoyd, Munhall, Monessen, Somerset and Lebanon.

Production: in season of 1916 was 647,132 tons from Marquette range, Mich.; 996,983 tons from Menominee in Mich.; 2,369,460 tons from Gogebic in Mich.; 1,314,002 tons from Vermilion in Minn., and 24,928,039 tons from Mesabi range in Minn.; a total of 33,355,169 tons. In 1915 the quantity was 23,669,676 tons, 17,34,981 tons in 1914 and 28,738,451 tons in 1913.

Some of the mines are as follows:

Mine	Range	Mining System	Ore	Iron Production		
				Content, % ¹	1916, Tons	Total Tons
Pioneer.....	Vermilion	Underground	Bessemer and non-Bessemer	58.05	507,086	10,328,756

ORIENTAL GRANITE & IRON CO.

MINNESOTA

Office: 30 N. La Salle St., Chicago, Ill.

Officers: Edw. Romberg, pres.-treas.-mgr.; S. Romberg, v. p.; G. A. Hail, sec.; above with G. Silverman, L. B. Lehman and H. J. Grannis, directors.

Inc. April, 1887, in Minn. Cap., \$80,000; shares \$2 par, 38,000 issued.

Owns the Spring iron mine, in St. Louis Co., Minn., and other unexplored iron lands. Ore of the Spring mine reported to assay 50% iron, 34% phosphorus and 22% silica.

PITT IRON MINING CO.

MINNESOTA

Address: G. B. Levan, mgr., Steubenville, Ohio.

Property: Miller and Wacootah mines on Mesabi range, St. Louis county, Minn. Ore: soft, brown, non-Bessemer hematites, containing 8.73 and 48.43% iron, 0.065 and 0.071% phosphorus, 6.05 and 5.45% silica. Ore is mined by shafts to 212' at Miller and stripping to 200' at the Wacootah.

Production: in 1916, 354,374 tons; total to date, 3,712,222 tons.

QUINN MINING CO.

MINNESOTA

Office: New York Life Bldg., St. Paul, Minn.

Property: the Quinn mine in Sec. 31, T. 57, R. 22, Itasca county, is worked by steam shovel and open pit systems. The product is Bessemer and non-Bessemer hematite.

Recent production: 49,251 tons in 1914; 91,007 tons in 1915; 226,360 tons in 1916.

REPUBLIC IRON & STEEL CO.

See same title in U. S. section.

SHADA MINING CO.**MINNESOTA**

Address: 1107 Alworth Bldg., Duluth, Minn. C. K. Quinn, mgr.

Property: iron mine on Mesabi range, Itasca Co., Minn., carries a soft red Bessemer hematite, containing 54.01% iron, 0.036% phosphorous and 7.28% silica. The washed product from concentrators assays 59.35% iron, 0.04% phos., and 8% silica.

Development: by steam shovel methods. Will produce in 1918.

SHENANGO FURNACE CO.**MINNESOTA**

Address: E. J. Maney, Pittsburgh, Pa.

Property: Shenango, Tioga and Webb iron mines on Mesabi range, St. Louis Co., Minn., opened in 1904, 1916 and 1905, respectively.

Ore: all three produce soft, brown Bessemer and non-Bessemer hematites, containing 53.23, 50, and 53.52% iron; 0.041, 0.039, and 0.051% phosphorus and 4.75, 10.97, and 6.13% silica, respectively. Ore is mined by underground and open pit methods to 300' in the Shenango, underground to 200' in the Tioga, and underground and stripping to 250' in the Webb mine.

Production in tons:	Shenango Mine	Tioga Mine	Webb Mine
1916.....	979,658	4,275	140,279
Total.....	8,102,906	4,275	980,049

TOD-STAMBAUGH CO., THE**MINNESOTA**

Address: C. A. Thompson, mgr., Cleveland, Ohio. Sales agents for the following iron mines:

Property	Range	Mining System	Ore	Iron Content, %	Production, Tons
Biwabik.....	Mesabi	Bessemer and non-Bessemer	55.09 to 50.75	428,944
Dean-Itasca....	"	Open pit	Bessemer and non-Bessemer	51.51 to 50.10	687,878
Dunwoody.....	"	"	non-Bessemer	New mine
Morton.....	"	Underground	50.46	44,940
North Eddy....	"	"	non-Bessemer	104,710
Pennington....	Cuyuna	Open pit	"	51.11	206,085
Warren.....	Mesabi	"	"	New mine

*In 1916.

The Biwabik, opened in 1893, has produced 11,559,883 tons; the Dean Itasca in 1915, 1,048,250 tons; the Morton in 1912, 139,490 tons; and the North Eddy in 1915, 107,369 tons.

WISCONSIN STEEL CO.**MINNESOTA**

Office: B. W. Batchelder, supt., Nashwauk, Minn.

Property: Agnew mine on Mesabi range, Minn., opened in 1902.

Ore: soft, red Bessemer hematite, containing 53.19% iron, 0.03% phosphorous, and 5.76% silica, which is concentrated to 61.44% iron. Mined by open pit system to 230' vertical.

Production: 102,150 tons in 1916 and 1,643,894 to date.

IRON MINES OF THE VERMILLION RANGE, MINNESOTA**CONSOLIDATED VERMILLION AND EXTENSION CO.****MINNESOTA**

Office: 609 Sellwood Bldg., Duluth, Minn.

Officers: T. J. Wash, pres.-treas.; J. M. Christie, v. p.; A. M. Oullette, sec.; the president, M. C. Williams and Angus Cameron, directors.

Inc. Sept. 1911, in Minnesota. **Cap.**, \$900,000; \$2 par; \$620,000 outstanding, no bonds. Stock transferred at company's office. No dividend.

Property: consolidation of the Vermillion Steel and Iron Co. and the Extension of the Vermillion Steel and Iron Co. Operates under 50 year leases.

Company estimated, June, 1917, 20,000 tons of iron ore in stockpile with production of about 200 tons a day. Developed tonnage is claimed to be 600,000 tons at a depth of 440'. A sample from stockpile is said to assay 69.85% iron and 0.76% manganese.

SECTION THIRTY MINING CO.

MINNESOTA

Address: Sellwood Bldg., Duluth, Minn.

Officers: G. A. St. Clair, mgr.; H. G. St. Clair, supt.

Property: iron mine in the Vermillion range, Lake Co., Minn. Ore is a hard, blue Bessemer and non-Bessemer hematite, containing 59.85 and 55.67% iron, 0.044 and 0.080% phosphorous and 7.13 and 11.14% silica, respectively. Ore is crushed, and cargo analyses show 63% iron in Bessemer and 58.6% in non-Bessemer.

Development: by open pit and sub stoping methods to 650' vertical.

Production: 868,826 tons since 1909, including 226,089 tons in 1916.

SOUTH CHANDLER MINE

MINNESOTA

Address: B. M. Pattison, lessee, Sellwood Bldg., Duluth, Minn. W. J. Nicholls, supt.

Property: iron mine on Vermillion range, St. Louis Co., Minn. Worked in 1888, abandoned 1905 and reopened 1913, mainly re-using ground already worked.

Ore: hard, red Bessemer hematite, containing 54.08% iron, 0.042% phos., and 8.3% silica. This is crushed and shipped, assaying 58.78% iron.

Mining by slicing system, to 800' vertical.

MISSOURI

The State contains two distinct metalliferous districts, viz., the Joplin and the Southeastern regions. These are described independently in two sections.

JOPLIN DISTRICT

Joplin, in southwestern Missouri, is the center of a district, covering 3,000 sq. miles, partly in Oklahoma and Kansas. The ore deposits are found at comparatively shallow depths in chert and limestone, the ore carrying both zinc and lead. Over 4,000,000 tons of 2.25% ore treated yearly, mostly by small companies, the metal output for 1916 having a value of over \$35,000,000. The geology of this region is described by H. A. Buehler, and ore treatment by C. A. Wright, in Bull. 130 of the A. I. M. E., 1917. The average mine's total costs for 1917, are \$1.32 per ton, a rise of 28c in two years.

ADIRONDACK MINING AND MILLING CO.

MISSOURI

Address: W. 11th St., Joplin, Mo. W. H. Roberts, mgr.

Inc. 1916, to operate a lease on 20 acres of mineral land owned by the City of Joplin. Developed by 200' shaft, and equipped with 300-ton mill.

AMALGAMATED ZINC & LEAD CO.

MISSOURI

Inc. in New Jersey. **Cap.**, \$200,000. Operates on land of the Granby

Evans, v. p.; Jos. Hummel, Jr., sec.; T. S. Brown, Jr., treas.; above, with J. B. Swift, chairman, F. L. Perin, J. E. Webb and Fred Hertenstein, directors.

Inc. June, 1916, in Ohio. Cap., \$9,000,000 com., and \$1,000,000 6% non-cumulative pfd.; \$100 par; \$7,000,000 com., and \$1,000,000 pfd. outstanding. Pfd. dividends payable quarterly; initial dividend of 1½% paid July 12, 1916. Central Trust & Safe Deposit Co., Cincinnati, transfer agent. Annual meeting in January.

Company is a consolidation of the Eagle White Lead Co., of Cincinnati, Ohio, and the Picher Lead Co.

The Eagle Picher Lead Co. is the third oldest corrodor of white lead by the old Dutch process in the United States, having been established in 1843 as the Eagle White Lead Co. and in continuous operation ever since.

The Picher Lead Co. is one of the oldest concerns in the Joplin district, having been chartered in 1867. To-day it is one of the largest lead producing companies in the State. For many years the product was white lead and oxides of lead. During last 3 years company has entered the mining field, taking over extensive leases in Oklahoma.

In 1917 erected "G" plant at Picher, a 300-ton mill, having sand jigs with 6 cells, each 32x42', a 12-table sludge house, and two 50' Dorr thickeners.

EAST HAMPTON DEVELOPMENT CO.

MISSOURI

Office: Carthage, Mo. Mill office: Wentworth, Mo. S. B. Matlack, pres. and treas.

Company is developing 160 acres of land, ½ mile south of Wentworth, Mo., and has sunk 3 shafts. Ore is zinc and is said to occur at 70', 90' and 135' in depth.

Mill built by company can handle 350 tons and is counting on enough ore from the property to keep it busy several years.

EDGAR ZINC CO.

MISSOURI

Office: Boatmen's Bank Bldg., St. Louis, Mo. Company has large zinc smelting works at Cherryvale, Mo. O. F. Garrison, mgr.

From 1907 to 1917, one furnace with 600 retorts, was in continuous operation, producing 29,136 tons of spelter.

EIGHT FRIENDS MINING CO.

MISSOURI

Reported to have taken over the Denver-Miami mine, near Miami, Mo. in 1917.

Mine said to have a large body of zinc ore.

FLANNERY ZINC CO.

MISSOURI

Pittsburg, Pa., and Sarcoxie, Mo. Acquired the Boyd zinc properties at Sarcoxie, 1915, and spent \$40,000, rehabilitating the mine and mill.

Equipment: includes a 1,000-ton concentrator and a Diesel engine. The ore is blende, but some calamine is also mined.

FRANKLIN MINING CO.

MISSOURI

Webb City, Mo. Owns a tract of "sheet ground," carrying zinc ore at depth of 200'. Is equipped with 880' air-compressor and a 600-ton mill.

GEORGETTE MINING CO.

MISSOURI

Address: Wentworth, Mo.

Property: 400 acres in Newton Co., Mo. Thirty-five drill holes have been put down, showing ore 60' thick. Three shafts are in use. A modern mill yields 63% zinc concentrate from 7 to 10% ore.

GILT EDGE MINING CO.

Company held lease on ore lands, 2 miles E. of Tipton, Mo. Lease was transferred, June, 1916, to Wade Mining & Operating Co., operating ½ mile from Gilt Edge mine.

ADEN RULE MINING & MILLING CO.

MISSOURI

Fred Kincannon, mgr., Granby, Mo.

Inc. in Missouri. Cap., \$8,000.

Company leasing and operating 30 acres land at Granby, developed by shafts, 100' deep.

Equipment: 100-ton concentrating mill, compressor and steam power. Produces zinc-lead concentrates.**RTFORD MINING CO.**

MISSOURI

Address: 305 Miners Bank Bldg., Joplin, Mo.

Officers: L. A. Barbour, pres., Hartford, Conn.; H. H. White, sec., Joplin, with S. B. Griswold, Carthage, Mo., and C. C. Spencer, Joplin, directors; H. H. White, gen. mgr., Joplin, Mo.; Geo. Elliott, supt., Lawrence, Kan.

Inc. 1906, in Missouri. Cap., \$100,000; shares \$100 par; all outstanding.

Output: zinc-lead concentrates; production not available.**WEBB CITY UP MINING CO.**

MISSOURI

Webb City, Jasper Co., Mo.

Property: in the North Webb City sheet-ground district, said to show zinc ore occurring at depth of 200'. A 300-ton mill on the property, rating almost continuously for 10 years, is to be dismantled and replaced with one of 400 tons capacity in 10 hours. Company hoisting ore from the Florence shaft, 1,000' N. E. of the mill.**WEBB CITY PLANT MINING CO.**

MISSOURI

Webb City, Mo.

Inc. in Missouri. Cap., \$50,000. Has a lease on 40 acres of mineral land belonging to the Guinn Investment Co., in Sec. 7, T. 28, R. 32, Jasper Co., Mo.

Property: developed by 3 shafts to depth of 180'.**Equipment:** includes 300-ton concentrating plant, a 200-gal. per minute pump, 8 drills, hoist, crusher, compressor, boiler and steam power.**CLINE MINING CO.**

MISSOURI

Controlled by Tom Walker & Co., Webb City, Mo. Has a lease on part of the lands belonging to the Center Creek Mining Co., in Sec. 17, T. 28, R. 32, between Webb City and Cartersville. Developed by 5 shafts to depth of 150', showing lead and zinc ore.

Equipment: includes 2 concentrators of 500 tons capacity, pump, boiler and steam power.**JASPER COUNTY LAND & MINING CO.**

MISSOURI

Frank Dangle, supt., Webb City, Mo.

Property: the McKinley mine, near Cartersville, Jasper Co., Mo., developed by 2 shafts, mining a large body of zinc blende and lead ore at depth of from 190-210'. A 350-ton concentrating mill, erected in 1914, started operations in April, 1915.**JOPLIN-KENTUCKY LEAD & ZINC CO.**

MISSOURI

Joplin, Mo.

Inc. in Kentucky. Cap., \$50,000. Operates a lease on 33 acres of mineral land owned by the St. Louis-Joplin L. & Z. Co., in Sec. 32, T. 28, R. 33, at Joplin.

Development: by 3 shafts to depth of 150'.**Equipment:** includes 125-ton concentrating plant, 2 pumps, 3 drills, steam power, 3 hoists, Cartersville crusher and 2 Wilfley tables.**OPBLY ZINC METALS CORPORATION**

MISSOURI

Office: 74 Broadway, New York, and Joplin, Mo.

Officers: E. P. Hoyt, pres.; Geo. Neighbor, v. p.; C. W. Gould, sec.; J. F. Farrier, Count, treas., with E. M. Farrier, Albert Higson and J. F. Farrier, directors; Austin Allen, mgr., at Joplin.

Inc. Feb. 9, 1916, in New York. **Cap.**, \$1,500,000; in \$750,000 com., as \$750,000 pfd. 7% shares; all the former issued and \$250,000 of the latter shares \$10 par.

Property: six 40-acre leases at Spring City, near Joplin, Mo., that have produced over 30,000 tons of blende and lead during 25 years. 300-ton mill is to be erected.

KANSAS CITY-JOPLIN MINING CO.

MISSOURI

Office: West Fourth St., Joplin, Mo. Is reopening the Red Lion mine zinc at Joplin, Mo. Has a 200-ton mill on the property.

KENEFICK ZINC CORPORATION

MISSOURI

Controlled by United Zinc Smelting Corporation, which see.

Office: 99 John St., New York.

Officers: R. H. Cowles, pres.; Arthur Day, v. p., with C. Bucknan, C. L. Graff, A. L. Davis and P. H. Easby, directors; Gustave Ross, sec. T. C. Davidson, treas.

Inc. Feb. 2, 1916, in New York. **Cap.**, \$5,000; 7% preferred shares at \$10 par and 200,000 shares of common stock of no par value; all issued. Stock listed on New York Curb.

Dividends: five of 10c each were paid on common stock to Aug., 1916. After payment of a 7% dividend on preferred and \$1.20 annually on common stock, 50% of net earnings are to be applied to the retirement of the preferred stock at par. Empire Trust Co., New York, transfer agents. Bankers Trust Co., New York, registrar.

Property: includes 5 producing zinc mines; the Airedale and Coyote mines at Joplin, the Media, Milan and Electrical at Webb City, and the Coronet mine at Baxter, Kan. Company also owns and operates 5 mills with total daily capacity of 4,200 tons.

Production: in 1915 was 30,000 tons of high-grade zinc concentrates assaying 60% zinc with only a small percentage of lead.

Apparently no change of operating capacity during 1916.

LARSH LEAD & ZINC CO.

MISSOURI

Address: Commerce, Mo.

Property: N. E. of Commerce. Company is erecting a 750-ton mill including an 18" crusher, 36x30" rolls, 4 jigs, 8 concentrators, compressor and steam plant.

LITTLE MARY MINING CO.

MISSOURI

Webb City, Jasper Co., Mo.

Cap., \$100,000. Operates a lease on 40 acres of mineral land, owned by D. S. Weaver, in S. 6, T. 29, R. 32. Developed by 3 shafts to depth of 175'.

Equipment: includes 500-ton concentrating mill, pumps, 3 drills, 2 hoists, steam power and Ingersoll compressor. Employs 25 men. No record of production received.

LONE ELM DEVELOPMENT & MINING CO.

MISSOURI

Address: N. of E. St., Lone Elm Road, Joplin, Mo. Holds a lease on 240 acres of Granby M. & S. Co.'s land and 80 acres of Picher Lead Co.'s land, N. of Joplin, Mo. Company unwatered the ground, sub-leases its holdings in small tracts and operates a 150-ton custom mill.

LONGACRE-CHAPMAN MINING CO.

MISSOURI

Address: 14 Unity Bldg., Webb City, Mo.

Inc. in Missouri. **Cap.**, \$56,250.

Company operates a lease on 10 acres of mineral land owned by the Reliance Mng. Co. in Sec. 8, T. 29, R. 32, Jasper Co., Mo. Developed by 2 shafts to depth of 185'.

Equipment: includes 200-ton concentrator, pumps, 2 air-drills, steam

power, Carterville crusher, and compressor. Employs 25 men. Production figures not available.

LOWER LEVEL MINING CO.**MISSOURI**

Sarcoxic, Mo. Is a reorganization of the Bearcat Mining Co.

Directors: J. W. Boyd, J. J. Stephenson, Geo. Spiva and Sam Tamblyn.

Property: the Cameron mine on J. W. Boyd land, at Sarcoxic, 20 miles E. of Joplin, Jasper Co., Mo., is a zinc producer. Developed by 278' and 200' shafts.

Equipment: includes compressor, boilers and 400-ton mill. Company plans deep development work.

LUCKY MINING CO.**MISSOURI**

Address: J. G. Marcum, sec. and mgr., Joplin, Mo.

Company states that it has 8 active mines in the district with the best equipment and costs lower than the average.

LUCKY TIGER MINING CO.**MISSOURI**

Property transferred, 1916, to Utah-Missouri Mines Co., which sec.

MEDIA MINING CO.**MISSOURI**

Address: N. Allen St., Webb City, Mo.

Has a lease on Guinn land, north of Webb City, covering the site of the old Hold Out mine.

Ore: zinc sulphide, in sheet ground formation at a depth of 230', with ore faces 9' high. Company recently completed one of the largest mills in the Missouri-Kansas-Oklahoma district, capacity 600 tons per ten hours.

Equipment: mill includes two 18" crushers, 3 sets of 42" rolls, two 48" x 96" trommels, jigs and tables. Mill can treat 2% ore profitably. Concentrates assay about 59% zinc, with only a trace of lead. Steam power is used.

MISSOURI ZINCFIELDS CO.**MISSOURI**

Office: 805 Chambers Bldg., Joplin, Mo. W. L. Chambers, mgr.

Inc. in Missouri.

Property: 1,100 acres in Joplin, Jasper Co., Mo. Ore carries blende, calamine and galena.

Development: by shafts from 40' to 200' deep.

The property is operated by lessees. There are three mills on the ground owned by the Fifteenth St. Mng. Co., Yellowstone Mng. Co. and Mary L. Mng. Co.; also a custom mill owned by the Gager M. & M. Co.

MISSOURI ZINCFIELDS CO.**MISSOURI**

Address: Geo. J. Kusterer, mgr., Webb City, Mo.

Officers: J. N. Smith, pres.; W. E. Colley, sec.-treas., Boston, Mass.

Inc. 1898 in Maine. Cap., \$400,000.

Gross returns from ore sales in 1916, totaled \$500,000.

Property: 400 acres at Webb City and Carterville, Mo. Company does not operate any mines but owns the fee title and leases properties to others.

Ore: assays 3% zinc and lead. Shafts are 100 to 200' deep.

In 1916 output of concentrates was 6,000 tons, containing 60% zinc and 40% lead, respectively.

MISSOURI ZINC MINES CO.**MISSOURI**

Office: 608 Sellwood Bldg., Duluth, Minn.

Office: 422-23 Frisco Bldg., Joplin, Mo. Albert M. Plumb, manager, Platteville, Wis.

Officers: E. A. Lamb, pres.; H. J. Kruse, v. p. and gen. mgr.; B. F. Osborne, sec.; W. W. Fegan, treas.; Guy E. Neault, mine supt.; David Shoemaker, mill supt.

Inc. July, 1916, in Delaware. Cap., \$500,000.

Ore sales in 1916 amounted to \$155,000 and operating expenses to \$55,000. Dividends earned in 1916 and 1917 were 30% and total, \$500,000 from the Quick Seven, 1909, and Teximo mines.

Property: 78 acres at Neck City, Mo., including the Quick Seven Teximo and 1909 mines.

Ore: carries high-grade zinc blende and no lead. The deposit is 900x400' and is opened by 8 shafts to 160' depth.

Equipment: includes three 250-ton mills using Blake crushers, Cornish rolls, jigs, screens, etc.

Production: from one mill is 500 tons of 60% zinc concentrate per month. Cost of mining by open pit is 50c per ton.

NAPOLEON MINING CO.

MISSOURI

Joplin, Mo.

Inc. in Missouri. Cap., \$10,000. Operates a lease on 40 acres of mineral land owned by E. N. Perry in S. 22, T. 28, R. 33, Joplin, Jasper Co., Mo. Developed by 2 shafts to depth of 200'. Production in 1915 came from the 180' level.

Equipment: includes 250-ton concentrating plant, 450' aerial tram, steam power, pump and hoist. Output is lead-zinc concentrate. About 35 men employed.

NATIONAL ZINC & LEAD CO.

MISSOURI

Offices: 53 State St., Boston, and 420 Main St., Joplin, Mo.

Officers: W. R. Brown, pres.; F. G. Wright, sec.; J. J. Hammers, treas.

Cap., \$500,000; shares \$1 par; 300,000 shares issued. Stock is listed on New York and Boston Curbs. Company has paid dividends of 42%, or \$126,000, from Nov., 1915, to May, 1917.

Properties at Dixie, Neck City, and Webb City, Mo., are developed by shafts, 85'-225' deep, sunk in pay ore. Company operates four large mills on ore from its mines.

Company is operating the Slim Jim zinc mine in the Picher district of Oklahoma, showing rich ore at 227'. One of the mills was moved from Missouri to this mine. For week ended Aug. 11, 1917, mine produced 32 tons of concentrate.

NEW ENGLAND ZINC CORPORATION

MISSOURI

Address: Belle Center, Joplin, Mo.

Inc. in Connecticut. Cap., \$100,000.

Operates a lease on 160 acres of mineral land owned by C. W. Edwards in S. 23-24, T. 28, R. 34, Joplin, Jasper Co., Mo. Developed by 3 shafts to depth of 150'.

Equipment: includes 150-ton concentrating plant making a mill recovery of from 20-25% zinc; pumps, air drills, steam hoists, and compressor. Employs 11 men. Company also reported operating a lease on the Leckie land at Klondike, Mo. Output is lead-zinc concentrate.

NORTH AMERICAN ZINC CO.

MISSOURI

Officers: Dr. J. W. Boyd, pres., Sarcoxie, Mo.; Geo. Saunders, sec-treas., with M. C. Goodwin, J. B. Gorman, directors. Operates a lease on 40 acres of mineral land at Wentworth, Newton Co., Mo., said to show a 30' deposit of zinc ore at 100'. Developed by 3 shafts to depth of 114'.

Equipment: includes electric power, 250-ton mill, office and change room.

NYMO ZINC & LEAD CO., INC.

MISSOURI

Office: 34 Wall St., New York.

Officers: Benj. L. Love, pres.; John L. Morrison, principal owner, v. p. and sec., Germantown, Phil., Pa.; above with W. H. Johnson, Douglas Fenwick and Hugh T. Halbert, directors; E. R. Cowan, treas.

Inc. Feb. 25, 1916, in New York. **Cap.**, \$100,000; shares \$5 par; outstanding, \$50,000. Douglas Fenwick & Co., 34 Wall St., New York, transfer agent. Franklin Trust Co., New York, registrar. Listed on New York Exchange. **Dividends:** 1%, paid April, 1916.

Financial statement of April 21, 1916, shows cash, \$1,865. Gross receipts from ore sales, \$7,004; cost of production, \$3,523.

Property: formerly known as the Brattleboro mining lease, 6 acres, in the Joplin mining district, has lead-zinc ore occurring at 65'-86' in depth, to be proven by 6 drill holes.

Development: a shaft with drifts east and west for only 30'.

Equipment: includes hoist and 2 boilers.

NAMENA MINING CO.

MISSOURI

Address: Box 71, Webb City, Mo.

Officers: Geo. J. Kusterer, pres. and mgr.; Thos. H. Noonan, v. p. and sec.; C. G. Talcott, sec-treas.

Inc. 1913 in Missouri. **Cap.**, \$40,000.

Gross returns in 1916 were \$422,000, and operating expenses \$313,387.

Property: 150 acres at Duenweg, Mo., which carries a 3% zinc and lead in a blanket deposit 20' thick. Shafts are 210' deep.

Equipment: 400 ton mill (10 hours) using Webb City crusher, rolls, sizer and cleaner jigs, and Arbuthnot tables. Concentrate contains 62% zinc. All costs are \$1.30 per ton.

F. & L. MINING CO.

MISSOURI

Duenweg, Jasper Co., Mo.

Inc. in Missouri. **Cap.**, \$30,000. Operates a lease in S. W. $\frac{1}{4}$ of N. E. of Sec. 5, T. 27, R. 32, Duenweg.

Development: by two 200' shafts. **Equipment:** includes 250-ton concentrating plant, boiler, pump, steam power, Freeman crusher. One hundred men employed. It is a steady producer.

Company's former holdings in Sec 3 were sold to the Baltic Mining Co.

ICE MORE MINING CO.

MISSOURI

Office: 119 W. 4th St., or Box 299, Joplin, Mo.

Officers: J. A. Cotton, pres.; Jno. Cowell, v. p.; H. Connelly, sec-treas. **Inc.** July, 1915, in Missouri. **Cap.**, \$24,000.

Property: is a tract in the sheet-ground district of West Joplin, carrying an ore deposit of 16' to 18' thick, opened by shafts 145' and 182' deep. The ore has an average zinc and lead content of 3%.

Equipment: Sullivan angle-compound compressor, Freeman first-motion hoist, 250-ton mill (10 hours), one 25 and two 100 h. p. G. E. motors. Concentrate assay 62% zinc and 83% lead.

ORONOGO CIRCLE MINING CO.

MISSOURI

Entire stock issue owned by Connecticut Zinc Corp'n., which see.

ORONOGO MUTUAL MINING CO.

MISSOURI

Guy H. Waring, mgr., Oronogo, Jasper Co., Mo.

Property: 40 acres of zinc bearing land, includes the Old Judge mine on the Elliott land, the Hockaday tract, purchased from the American Z. L. Sm. Co. and mining rights of city lots at Oronogo. The Old Judge is developed by 2 shafts, 165' and 170' deep.

Equipment: includes 16 air drills, 2 electric hoists, 2 compressors, Carville crusher and a new 500-ton electrically driven concentrating plant with 2 sets of jigs, slime tanks and 11 tables.

Installed \$70,000 steam power plant, 1917, consisting of 2 boilers, condensing engine and 2,600' Corliss compressor.

Production of concentrates was begun the latter part of 1914, and was at the rate of 45 tons of lead concentrate (80% metal) per week in Oct., 1917. About 85 men employed.

OTIS MINING CO.

Sold its property to the Consumers Mining Co., which see.

OWOSSO MINING CO.

H. H. Culver, mgr., 1409 Wall St., Joplin, Mo. The mine is owned by J. L. Harris, Daniel Fisher, Jas. Fisher, Jr., T. G. Shubert, all of Hancock Mich., and H. H. Culver.

Property: a 10-year lease on 1 claim, 40 acres, on Baker land, in S. E. $\frac{1}{4}$ of Sec. 33, T. 28, R. 32, Jasper Co., Mo., carrying lead and zinc ore in sheet ground formation. This is a virgin mine in the sheet ground field in Duenweg between the Lincoln and Coahuila mines.

Development: by 2 shafts deepest 242' in sheet ground, with 20' or face, 1917.

Equipment: includes compressor, 8"x8" steam hoist, 3 Gardner pump and 200-ton concentrating mill with jigs, crusher, rolls and tables. Is reconstructing 200-ton mill at Duenweg which will double capacity.

Production: for 1915, begun in Sept., 1915, amounted to 4,240 tons of ore, or \$9,872. Concentrates averaged 58% zinc and 78% lead.

PHOENIX MINING CO.

Not incorporated. E. N. Cunningham, mgr., Joplin, Mo.

Property: 40 acres in S. W. $\frac{1}{4}$ N. W. $\frac{1}{4}$ Sec. 22, T. 28, R. 33, Jasper Co. Mo., carries lead-zinc ore in a soft limestone formation.

Development: by 176' vertical shaft and total workings of 600'.

Equipment: includes steam power, hoist, pump and 150-ton concentrating mill.

Production: in 1913 was 3,222,450 lbs. zinc and 1,003,450 lbs. lead; in 1914 5,524,310 lbs. zinc and 428,080 lbs. lead.

Mine was idle from Oct., 1914, to Dec., 1915. Diamond-drill exploratory work in progress in 1916.

PICHER LEAD CO.

Merged, June, 1916, with the Eagle White Lead Co., of Cincinnati, and a new company organized called the Eagle Picher Lead Co., which see.

PLAYTER BROS. MINING & REALTY CO.

Office: 315 Wall St., Joplin, Mo. C. C. Playter, pres.; G. H. Playter sec.-treas.

Inc. 1914, in Missouri. **Cap.** \$30,000. Company engages in prospecting and development and when ore is opened and mining started, operations are then controlled by separate organizations.

PROSPERITY MILLING CO.

Prosperity, Mo. Operates a lease on 40 acres of mineral bearing land belonging to W. E. Saum, in Sec. 21, T. 28, R. 32, at Prosperity, Jasper Co., Mo.

Development: by 5 shafts to depth of 175'. **Equipment:** includes 150-ton concentrating plant, 3 air drills, steam power, Carterville crusher and air compressor. About 25 men employed.

QUICK SEVEN MINING CO.

Alba, Mo. **Inc.** in Mo. **Cap.**, \$105,000.

Operates a lease on 78 acres of mineral bearing land owned by J. Richardson, in Sec. 6, T. 29, R. 32, Jasper Co., Mo. Is reported to be the largest producer of zinc concentrate in the Alba district.

Development: by 3 shafts to depth of 150'. Equipped with 200-ton concentrator, pumps, drills, compressor and steam power. About 45 men employed.

ST. REGIS MINING AND SMELTING CO.

Duenweg, Jasper Co., Mo. E. R. McClelland, pres.-treas. **Inc.** in Sept., 1915. **Cap.**, \$100,000.

MISSOURI**MISSOURI****MISSOURI****MISSOURI****MISSOURI****MISSOURI****MISSOURI**

Company took over the 40-acre lease of the old American Beauty mine, E. W. of Duenweg, which had been idle for some time owing to low price of spelter. The company unwatered the property which is developed by two 208' shafts in sheet ground formation; said to have a 20'-25' ore face, and built a 350-ton concentrator.

Equipment: includes 4 gas engines, 2 compressors, two 100-h. p. boilers and a change house.

SCHOOL HOUSE MINING CO.

MISSOURI

Joplin, Jasper Co., Mo.

Inc. in Mo. Cap., \$100,000. Operates on 40 acres lead-zinc land near Cartersville.

Development: by 3 shafts, average depth 167'. Equipped with 800-ton concentrator. Does not reply to requests for information.

SHORT CREEK ZINC & LEAD CO.

MISSOURI

F. A. Hornaday, mgr., Joplin, Mo.

Inc. April, 1916, in Missouri. Cap., \$100,000; \$1 par.

Dividends: paid 1½¢ per share, regular May, July and 2% extra, or ½¢ in three months. Stock dealt in on New York and Boston Curbs.

Property: lease on 115 acres of zinc land, 2 miles from Joplin, Mo. Mines have been in active operation since 1914, producing concentrates, returning \$107,000 October, 1914, to Dec., 1915.

SPIRAL LEAD & ZINC CO.

MISSOURI

Chas. Dudley, supt., Joplin, Mo. J. S. Mullen, pres., Ardmore, Okla.

Property: the Martha Ball mine, bought for about \$30,000; a sheet-ground mine W. of Chitwood, S. W. of Sparkler mine and E. of La Nora mine, with ore 195' deep.

MULLIVAN ZINC MINING CO.

MISSOURI

Inc. by Harry Kingsbury, Allen Dorsey and R. D. Talmadge, Jan., 1916, to take over a 20-acre lease at Joplin, Mo., on sheet ground. The workings are 180-205' deep. Company has a new 150-ton mill.

Letters returned in May, 1917.

TENNESSEE ZINC & LEAD CO.

MISSOURI

Office: 220 Miners Bank Bldg., Joplin, Mo.

Officers: P. H. Corbett, pres.; R. H. Allen, v. p.-treas.; W. V. Fox, gen. supt.

Inc. 1916, in Missouri. Cap., \$100,000. Gross income from Jan. 1, 1917, to Oct. 31, 1917, was \$100,426; expenses were \$41,325.

Property: 62 acres, 8 miles N. W. of Joplin, Mo. Ore: carries zinc lende from 3 to 20%, the average in 1917 being 7.15%. The deposit is 12' thick, 600' long and is opened by 92 and 123' shafts.

Equipment: includes 100-ton mill, using Rogers rolls, crusher, jigs, screens and Arbuthnot tables.

Production: 70 to 335 tons of 63% zinc concentrate, with up to 0.16% lead per month. Costs are \$1.90 for mining, 32.9c for milling, a total of \$2.23 per ton.

WIN CITIES MINING CO.

MISSOURI

Address: Geo. Moore, mgr., Webb City, Mo.

Inc. in Mo. Cap., \$50,000. Is a merger of the Laura Alice and Ben Franklin mining companies.

Operates lands leased from Daugherty & Davey, in Jasper Co., on Carter Creek, between Webb City and Cartersville, using the 175-ton Davey No. 1 mill. Developed by two shafts, steam power being used.

WINDERWRITERS LAND CO.

MISSOURI

Address: Joplin, Mo.

Officers: G. H. Worthington, pres.; A. Good, sec.; F. N. Bendelari,

treas.; F. R. Harrington, gen. mgr.; with J. W. Gibbons, A. E. Bendela directors.

Inc. 1901. **Cap.**, \$1,000,000; shares \$1 par; outstanding \$1,000,000; non-assessable. Annual meeting in February. No bond issues. **Transfer office** 812 Hippodrome Bldg., Cleveland, Ohio. **Registrar:** Delaware Trust Co. Wilmington, Del. Dividends in 1916 were 6%.

Property: 240 acres, leased and 232 acres, in fee, in Jasper Co., Mo., and Ottawa Co., Okla. The blende ore is hoisted by vertical shaft, total dept of working, 250'. Two concentrating mills yield 62% zinc concentrates.
U. S. LEAD & ZINC CO. **MISSOURI**

Promoted by C. L. Glass & Co., Vandergrift Bldg., Fourth Ave., Pittsburgh, Pa.

Directors: P. S. Chambers, D. A. Rees and W. S. Maxey.

Inc. in Delaware. **Cap.**, \$600,000; shares, \$1 par; non-assessable.

Property: one 20-acre lease in Joplin district, opened by 190' shaft and several drifts, and one 24-acre lease opened by two 120' shafts, two 5' shafts, and drifts, all in high-grade ore.

Equipment: each mine has a 150-ton mill for concentrating the zinc lead ore.

UNITED ZINC SMELTING CORP.

MISSOURI

Office: 99 John St., New York.

Officers: R. A. Cowles, pres.; Arthur Day, v. p.; with M. M. Pearlman, Otto Proelss, A. L. Davis, G. M. Pynchon, B. Lissberger, W. E. Reis, and Harry Raymond, directors; Gustave Ross, sec.; T. C. Davidson, treas.; M. M. Pearlman, mgr. at Clarksburg; Otto Proelss, mgr. at Moundsville; and J. A. Skinner, mgr. at Joplin.

Inc. April, 1916, in New York. **Cap.**, 600,000 shares without par value but offered for subscription at \$12.50 per share; 565,684 outstanding. No funded debt. Bankers Trust Co., New York, transfer agent. Equitable Trust Co., New York, registrar. Listed on New York Curb.

Statement for the first year's operations, ended April 30, 1917, shows gross earnings of \$807,026, less \$51,342 for operating and \$116,727 for depreciation, leaving \$638,957 net. Dividends are expected in the near future.

Controls through stock ownership all of the assets of the Pearlman Co. Inc., and the Clarksburg Zinc Co., and a substantial majority of the common shares of the Kenefick Zinc Corporation.

The Pearlman Co., Inc., owns a large zinc mill and refining plant at Clarksburg, W. Va., comprising 3,648 retorts with capacity of 30,000,000 lbs. of spelter per year; a pottery plant with a capacity of 500 retorts per day; a power plant and a refining plant with a capacity of 15,000,000 lbs. of spelter per year; all the capital stock of the Clarksburg Zinc Co.; owns patent controls brands and trade-marks.

United Zinc has at Moundsville, W. Va., one Hegeler roaster, 172 retorts, pottery, gas producers, nitric acid works, plant producing 50 tons of 60° sulphuric acid daily, and power plant. These works were ready in Sept., 1917.

The Kenefick Zinc Corporation is the largest producer of zinc concentrates in the Joplin, Mo., district, the capacity of its mines and mills being 25,000 to 30,000 tons of concentrates per year. The United Zinc Corporation offered to exchange 1¼ shares of its stock for each common share of the Kenefick Zinc Corporation.

Properties operated by the Kenefick Corporation, Electrical Zinc & Lead Mining Co. and Milan M. Co., north of Webb City; the Coyote Mining Co., and Airedale Mining Co., west of Joplin, and the Coronet mine at Baxter, Kansas.

At the Media mine, ore occurs in 17 acres of land, and the mill treats 1,500 tons daily. The Milan produces the highest grade ore in the district and treats 600 tons daily. The Electrical yields 600 tons of ore daily, and since 1904 has not varied 0.25% in its zinc recovery. At the Coyote the ore deposit is 18' thick, supplying 800 tons daily. In 8 acres the Airedale has 18' of ore, yielding 700 tons daily.

UTAH-MISSOURI MINES CO.**MISSOURI**

Address: Neck City, near Joplin, Mo.

Property: the Big Four and Lucky Tiger mines, the latter transferred from a Utah company early in 1916.

Development: at Big Four by 2 shafts to 315', yielding sphalerite; and at Lucky Tiger by 2 shafts to 276'.

Equipment: at the Lucky Tiger is a 250-ton mill, etc., which treats ore from both mines. Property is fully equipped.

VACATION MINING CO.**MISSOURI**

Address: Duenweg, Mo. Has a 40-acre lease with Miami field 2 miles E. of Duenweg. Seventeen drill holes cut ore from 90 to 123' depth, averaging 15% blende and lead. A mill may be erected if development warrants it.

VESUVIUS MINING CO.**MISSOURI**

Address: M. V. Eardley, mgr., or S. Drake, supt., Carthage, Mo.

Officers: C. W. Lambourne, pres.; W. H. Eardley, v. p.; M. V. Eardley, sec.-treas.; with Chas. Lange and Geo. Blood, directors.

Inc. 1916, in Utah. Cap., \$75,000; shares \$1 par; all issued; 50,000 assessable.

Gross earnings in 1916 were \$45,000, and expenses \$44,000.

Property: lease on 54 acres, 4 miles N. W. of Carthage, Mo. **Geology:** dissemination of zinc blende in blue flint, or chert. Ore yields 3% blende.

Development: by 200' shaft and 2,000' of workings. Reserves blocked out are given as equal to 36,000 tons of concentrate, containing 60% zinc.

Equipment: small Freeman hoist, 12x16" Norwalk compressor, 8" Pomona pump, electric power (purchased), and 500-ton mill.

Production: in 1916, 18,000 tons of 'dirt' (ore) yielded 650 tons of concentrate containing 60% zinc.

Is a new mine that should be very profitable under present conditions.

WACO MINING CO.**MISSOURI**

Address: 319 Frisco Bldg., Joplin, Mo.

Officers: Robt. Law, Jr., pres.; Jas. A. Dunn, sec.; P. B. Butler, mgr.; R. S. Butler, mine supt.; W. S. Estes, mill supt.

Inc. in Missouri.

Property: 346 acres in 8 leases at Waco in the Lawton district. **Ore:** carries 8% blende. The deposit is 400x600' in area, and is opened by shafts, 160, 138, 90, 128 and 127' deep.

Equipment: No. 1 mill, started work in August, 1917, has 600-ton capacity, while No. 2 of 800 tons was under construction in November. Crushers, rolls, jigs, trommels and tables are used.

Production: 500 tons of 63% zinc concentrate monthly. Costs are \$1.75 per ton for mining and 25c. for milling, a total of \$2 per ton.

WADE MINING & MILLING CO.**MISSOURI**

Offices: St. Louis and 629 Joplin St., Joplin, Mo.

Officers: C. E. Brenton, pres.; Frank Boehm, v. p., St. Louis; and E. W. Buskell, treas., Joplin.

Property: a lease formerly held by Gilt Edge Mng. Co., on the Wade farm, 120 acres, 3 miles W. of Diamond and 3 miles E. of Tipton Ford, Mo.

Is a lead and zinc mine, the proportion being 33% lead and 66% zinc,

of the metallic contents of the ore. Two shafts, drifts and drill holes have been opened. Ore is treated in a 150-ton mill.

WALLOWER MILL**MISSOURI**

Built in 1914 by F. C. Wallower, 100 Neill Bldg., Joplin, Mo., to treat lead and zinc ores of Prosperity Camp, Joplin district. Capacity, 300 tons per 10-hour shift.

Equipment: includes 100-h. p. electric motor, 16" crusher, rolls, screens, jigs, classifiers, Deister tables and slimers. Operated steadily in 1916 and opened another shaft in order to supply the mill with ore.

WASHINGTON LAND & MINING CO.**MISSOURI**

Address: W. Maclay, mgr., Bliss, Mo.

Officers: A. L. Shapleigh, pres.; J. D. Filley, v. p.; R. W. Shapleigh, sec.; the foregoing are directors.

Inc. about 1880 in Missouri. **Cap.**, \$50,000; \$100 par; all issued.

Owens 6,250 acres lead and baritic lands in Washington Co., operate on royalty basis.

WILSON MINES CO.**MISSOURI**

Address: Webb City, Mo.

Cap., \$10,000. **Dividends:** 10% in April, 1916, 5% May 1. Stock held mainly in Milwaukee, Wis.

Operates under lease, 150 acres of land of the Boston Duenweg Mining Co., Webb City, Jasper county. Has developed extensive ore bodies by drilling, operating 2 shafts and producing the bulk of the output of Boston Duenweg holdings. Has invested \$30,000 in plant, capacity 500 tons daily.

WINGFIELD MINING CO.**MISSOURI**

Address: Webb City, Mo.

Inc. in Missouri. **Cap.**, \$32,000; investment, \$48,222.

Operates, under lease, 50 acres sheet-ground lands of Scott, Bowman & Ware, working through 3 shafts. Capacity, 1,000 tons daily. Mill equipment includes Webb City crusher and 4 tables.

WINNIE-LAWSON ZINC CO.**MISSOURI**

Highly advertised in the Joplin papers January, 1916, as an "investment offering of great significance and importance." The company claims to have under lease, 270 acres of land in the "most promising portions of the southwest lead and zinc district," and that it has let a contract for a 400-ton mill. Edward Lawson is the promoter. No reports of big undertakings on the part of this company have come from other sources.

Letters returned unanswered in July, 1917.

LEAD & ZINC MINES OF SOUTHEASTERN MISSOURI

The mining region in St. Francois county is the most important lead producer, not only of the United States, but of the world.

In 1915 the output was 183,906 tons of lead, a little more in 1916 and probably a considerable gain will be shown in 1917. The area is 70 miles south of St. Louis, with Bonne Terre and Flat River as the principal centers. Over 20,000 tons of ore is treated daily. Deposits consist of ore in dolomite averaging 4% to 6% lead. All concentrating mills employ flotation methods.

Geology is described by H. A. Buehler and ore treatment by A. F. Watt, in Bull. 130 of the A. I. M. E., 1917, while mining was discussed by H. A. Guess in the A. I. M. E. Transactions of 1914.

BAKER LEAD CO.**MISSOURI**

Address: Leadwood, St. Francis Co., Mo.

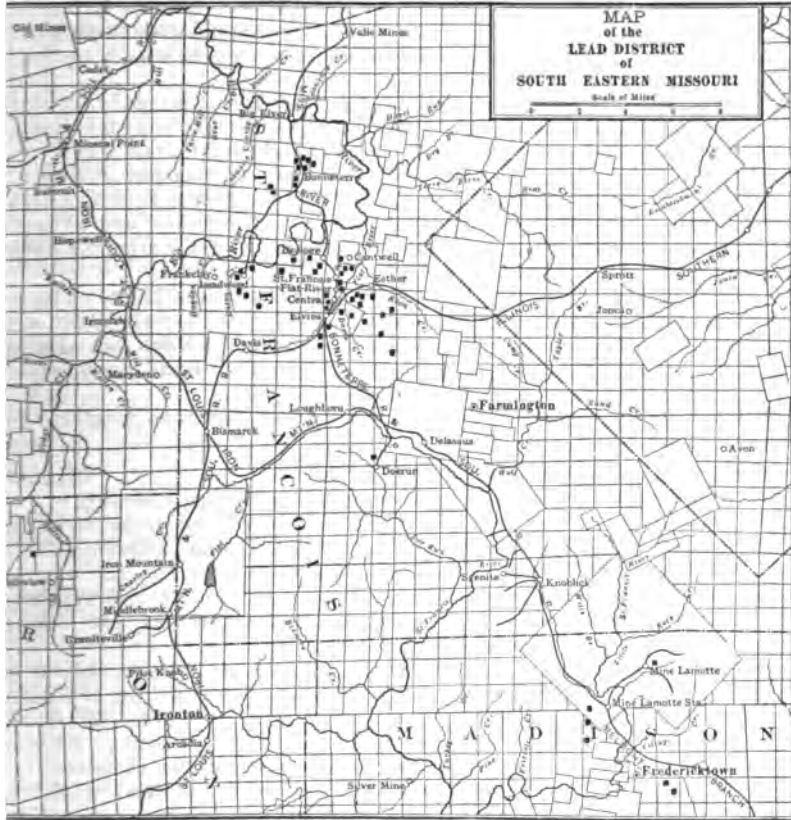

Property: the old John Day tract of the St. Francois Lead Co. a

wood, and the Jones tract at Elvino. Company has no mill, but ships to the St. Louis Sm. & Ref. Co.'s plant at St. Francois.

TON-ELVINO LEAD CO.

MISSOURI

Address: Elvino, St. Francois Co., Mo. Ore shipped to the St. Louis & Ref. Co.'s plant at St. Francois.

LOGE CONSOLIDATED LEAD CO.

MISSOURI

Address: Desloge, St. Francois Co., Mo.

Inc. in Missouri. Cap., \$1,000,000, with almost \$2,000,000 invested in
and plant.

Property: 4,704 acres, developed by several shafts, 2 of which are 300' and another 500' deep. Two of the shafts are near Desloge, but No. 4 near Leadwood.

Equipment: a 1,700-ton concentrator equipped with Wilfley tables, Frue vanners, rolls, Chilean mills, and a 780-k. w. steam turbine; also a smelter equipped with Flintshire-Tarnowitz reverberatory furnaces. Flotation is employed in the mill. Employs about 500 men.

ERUN LEAD CO.

MISSOURI

Absorbed in 1916 by the St. Joseph Lead Co.

27 lode claims and 6 placer claims in the French Gulch district, Deer Lodge Co., Mont., and 89 lode claims in the Elkhorn district, Beaverhead Co. Mont. Company will practically control all these districts.

Both French Gulch and Elkhorn were opened in 1865, in the rush which followed the discovery of gold at Bannack, a few miles to the south, in 1861.

The French Gulch group of claims includes 1,100 acres, patented, water rights to 5 streams and 15 miles ditches and flumes. About \$750,000 is said to have been spent in development work. The claims have been opened up by shafts and tunnels, principally upon the Spain, Lucky Strike, Golden Crown and Leo. The work on the Spain consists of a 900' tunnel and 200' shaft, with 800' of drifting on the 200' level. The drift tunnel is about 35' below the apex and shows the vein to carry from a few inches to 4' of sulphide ore, averaging \$17 a ton, according to estimates made by James E. Beveridge, E. M. Ore is said to be blocked out to the value of \$500,000.

The Lucky Strike has a 200' tunnel following a contact vein reported to be 20' to 40' wide, and 100' shaft with 300' of drifting on the vein whose thickness is reported to be 35', with a paystreak of ore running from \$41.5 to \$80 gold, 5 to 7 oz. silver and 2½% copper.

The vein has been opened to the west by another 100' shaft, with 600' of drifting, showing an orebody 12' wide averaging \$18 a ton, according to the management. Eight hundred feet of tunneling on the Golden Crown claim shows a 1' to 3' vein said to carry \$8 to \$20 ore.

Besides these there are numerous smaller shafts and tunnels on the various claims in the French Gulch group.

The Elkhorn property consists of the Central and other groups, including the Idanha, Park, Aspen, Blue Eyed Annie and other mines, about 1,500 acres, all adjacent, either owned or held under bond and lease. This tract is crossed by numerous big, strong, well-mineralized quartz veins cutting quartz monzonite and showing narrow zones of alteration adjacent to the veins. In the western part of the estate the veins are silver bearing and were opened, and high-grade ore extracted many years ago, a mine being erected on one property. The ore contains gray copper and high grade silver sulphides and occurs in shoots whose size and extent is as yet undetermined, since the workings are shallow, seldom exceeding 100' in shafts or tunnel backs. The veins appear to belong to two distinct systems, one E. W., the other N. E.-S. W., the latter having a southerly and flatter dip and being the larger veins.

The eastern claims include the Park, a large N. E.-S. W. vein, 20' to 30' wide and dipping 75° N. W., traceable across four claims. It is formed of hard white brecciated quartz with altered granite streaks and carries shipping ore with copper and lead sulphides, having gold-silver value. Samples from a number of open cuts for a distance of 250' along the vein average 1.7% copper and 13.6 oz. silver, and the lead ore from these cuts carries 7.5% lead, 3% copper and 11 oz. silver for 4' across, the full width of the vein not being disclosed. An old 250' shaft sunk to develop the vein, encountered a fault and did not reach the vein. High-grade ore has also been found in several shallow shafts and cuts to the S. W., but the development does not permit a definite estimate of amounts.

Copper ore occurs in the Idanha or Mono vein, a great lode 20' to 30' wide with a dip of 55° to the south. This vein is parallel to the Park and ½ of a mile N. W. of it. It is a copper-bearing quartz pyrite vein, which resembles the older veins of the Butte district. It is developed by a 900' tunnel, giving a 250' back at the face. This tunnel cuts the ore at a point 600' from the portal and crosses the vein at a slight angle, crosscuts exposing its full width. Eight samples show an average of 2.9% copper and 10 oz. silver per ton for 10', there being a persistent hanging wall band and two other bands of sulphide ore.

The Aspen is an E.-W. cross vein, and is said to be faulted by the other system. It is 2' to 5' thick and has been exposed for 600' by a drift tunnel, showing for this distance a 12" pay streak of silicious ore carrying bornite, chalcopyrite and gray copper. This ore shows values of 0.9% copper, 40 to 60 oz. silver and \$10 gold per ton.

The Mary-Montreal vein, developed by a 250' tunnel; the Red Sky vein, opened by a 100' shaft and long drift tunnel, and the Elkhorn vein, with half a dozen shallow shafts close together, all show high-grade oxidized silver ore. The Blue Eyed Annie vein is said to carry 15' of \$15 ore on the 200' level. There are also half a dozen other veins of promising outcrop, but slight development.

The main working tunnel intersects the veins from 1,000' to 1,200' beneath their outcrops. This tunnel is 2,065' long with branches east and west from near its face that intercept the Park and Idanha veins, the total tunnel workings aggregating 5,637'. High-grade ore was cut in one vein and milling ore in the other in September, 1917.

Reports from property Dec., 1917, state that high grade ore has been cut in the Park vein.

Company controls the Southern Montana Railway, now being built as narrow gauge line from Divide on the Oregon Short Line (Union Pacific system) to the mine on Wise river.

The company's plans are daring and ambitious and the properties long known, but heretofore unworkable for lack of cheap transportation. The property is regarded as promising and the management competent.

BOSTON & MONTANA MILLING CO. MONTANA

Sub. of Boston & Montana Dev. Co.

Inc. in Oct., 1916. Cap., \$250,000; \$25 par; divided into 5,000 shares \$1 preferred, and 5,000 shares common stock; preferred stock all sold.

Boston & Montana Dev. Co. will hold B. M. M. Co. stock in treasury, offering to redeem the preferred stock on Jan. 1, 1919, at \$27.50 a share, and to give one share of B. & M. D. stock as a bonus.

Company was formed to provide money for the erection of a concentration-flotation mill, to handle the ore developed in the big haulage tunnel.

BUTTE-ARGENTA COPPER CO. MONTANA

Probably dead. See Vol. XII.

BUTTE & VIPOND GOLD MINING & MILLING CO. MONTANA

Office: 34 Owsley Bldg., Butte, Mont.

Officers: Jas. M. Hinkle, pres.; Thos. P. Manley, v. p.; Wm. Worth, as.; preceding officers are directors; Wm. E. Carroll, sec.

Inc. May 14, 1910, in Montana. Cap., \$600,000; shares \$1 par; outstanding 363,412 shares. Annual meeting 3d Tuesday in May.

Property: 5 claims, unpatented, at Vipond Park, Beaverhead Co., Mont., said to show free milling gold ore in fissure veins 4' to 7' wide in granite. Ore is said to have an average assay of \$10 per ton.

Development: 200' vertical shaft and 400' tunnel, with total underground workings of 680'.

Equipment: includes boiler, hoist and pumps. Little work was done in 1915. Company expects to resume operations at an early date and will connect the tunnel with shaft workings. Value of property remains to be proven.

HECLA (CONSOLIDATED) MINE. MONTANA

Glendale, Beaverhead Co., Mont. Mine worked by lessees until 1912. Then it was taken over by the Longmaid Bros. of Helena, who installed electric power.

Property: the Atlantis, Cleves and other mines, formerly owned by Hecla Consolidated Mining Co., which for 20 years was a large producer of silver and lead, with considerable gold and copper, latter reaching 1,000 lbs. fine copper yearly. Property paid dividends of \$2,250,000 on original investment of \$40,000, but was bought, 1906, at sheriff's sale, \$28,000. About 65 men employed for a year or two, but the little ore and was low grade, and the mine was again closed down, and abandoned, or some \$300,000 had been spent.

HECLA QUEEN MINING & SMELTING CO. MONTANA

Idle. Office: Butte, Mont. Mine near Apex, Beaverhead Co., Mont.

Officers: Thos. F. Stephens, pres., treas. and gen. mgr.; Wm. Robertson, v. p.; Thos. W. Ellis, sec.; A. H. Stephens and T. J. Ellis, directors.

Inc. July, 1904, in Montana. Cap., \$450,000; shares \$1.50 par; non-assessable; issued, \$228,000.

Lands: 2 claims, 40 acres, and a 3-acre millsite, in the Utopia district known as the Indian Queen mine. Owned jointly by this company and the Anaconda Copper Mining Co. The property shows granite, quartzite and dolomite, having 2 contact deposits between granite and limestone, of 8 to 10' average width, carrying malachite, azurite and chalcocite, estimated by management to average 8% copper, 10 to 12 oz. silver and \$1 to \$4 gold per ton. Mine was opened 1867, and has been worked intermittently by lessees.

Development: by shafts of 150' and 220', and 820' tunnel, with about 1,600' of workings.

LOST RANCH & TUNNELSITE MINE.

MONTANA

Address: Harvey Sullivan, Grant, Beaverhead Co., Mont.

Property: 9 claims in the Bloody Dick section, in Upper Horse Prairie, 5 miles from Brenner, shows gold, silver, lead, copper ore in narrow fissure veins (2" to 3') in porphyry. The ore carries brittle silver, argentite and mixed sulphides in streaks 8" to 12" thick, the ore as shipped carrying 44 to 1,300 oz. silver, 4 to 20% copper, 60% lead.

Development: totals 1,300', including 420' tunnel, with 300' back, blocking out 100 tons of ore with 39 tons stoped.

MONTANA MINES CO.

MONTANA

Formerly the Beaverhead Montana Copper Mining Co. holdings were taken over, share for share.

Ray A. Cobban, Butte, Mont., sec.-treas.

Cap., \$100,000; shares \$1 par. Company obtained a lease and bond on the old Jack Rabbit mine, in Argenta, Beaverhead Co., Mont.

Developed: by a shaft 100' deep.

Equipment: includes a gasoline hoist.

Company shipping, 1917, from the Jack Rabbit mine, shipments in April said to have returned 10% copper and 12 oz. silver.

MONTANA OREWAY MINING CO.

MONTANA

No recent returns.

Office: 522 Postal Telegraph Bldg., Chicago. **Mine office:** Bristol, Beaverhead Co., Mont.

Officers: W. P. Jahnke, pres.; J. B. Scott, v. p.; Fred W. Scott, sec.; J. D. Rankin, treas.; preceding, with Frank Kimball and B. F. White, directors.

Inc. 1909 in Arizona. **Cap.,** \$1,000,000; shares \$1 par; issued, 950,000.

Property: 5 claims, patented, 100 acres, and a 25-acre millsite, known as the Straight Tip group, in the Big Hole basin. Claims show several fissure veins averaging 10' thick in quartzite and contact deposits between quartzite and serpentine. Opened by a 3,025' tunnel driven to cut a mineralized diorite dike carrying copper oxide ores, with lead and small silver and gold values.

Equipment: includes a 35-h. p. steam plant, with 1-drill air compressor. These are 6 small buildings. Mill to be erected, at last accounts.

ORIGINAL BANNAK MINING CO.

MONTANA

Office: 302 D. F. Walker Bldg., Salt Lake City.

Officers: Lorenzo Price, Jr., pres.; A. J. Bruneau, v. p.; E. F. Mobley, sec.-treas.; with W. L. Smith and Ambrose Nord, directors.

Inc. in Utah. **Cap.,** \$1,000,000; shares \$1 par; assessable; 600,000 shares outstanding. Listed in Salt Lake City.

Property: 9 patented claims in the Bannack mining district, Bannack, Beaverhead Co., Mont., adjoining the Bannack Gold Mining Co., and said to have the extension of the latter's ore zone. Credited with a production of \$350,000. Management claims there is an ore-shoot 1,800' long and from 50 to 125' in width, containing "hundreds of thousands of tons of ore, that will average \$11 per ton," values mainly in the gold content, with some copper, a statement that is considered to be a gross exaggeration.

Reported that property has been equipped with new machinery, including a 325 cu. ft. compressor and a 25-h. p. gasoline hoist.

Development work under way and shaft down 300'.

SAGINAW COPPER CO.**MONTANA**

Jackson, Beaverhead Co., Mont.

Officers: Geo. North, pres.; E. M. Frank, sec.-treas.; with Elmer North and Kenneth Campbell, directors.

Inc. Jan., 1916, in Montana. Cap., \$125,000; shares \$25 par.

Property: 5 claims, including the Saginaw mine, in Beaverhead Co., shows fissure veins in porphyry, with E.-W. strike, dip 35° and 3' average width. Developed by a 300' incline shaft.

Equipment: includes steam hoist. Shipped 19 cars ore in 1915, average assay, 11% copper.

SELWAY-BOND COPPER GROUP**MONTANA**

Address: Herbert B. Selway, or H. A. Bond, Armstead, Beaverhead Co., Mont.

Property: 12 claims, 240 acres, situated 1½ miles from Armstead, Mont. Claims cover 4,000' on the course of several E.-W. fissure veins, 3' to 3½' wide that cross beds of quartzite, schist and limestone. The ore carries 1%-9% copper.

Development: by 130' shaft and several shallow openings, all said to show ore. Two shafts at water level show 3½ to 10% ore. An open cut has yielded 250 tons of ore.

SILVER FISSURE MINING CO.**MONTANA**

Idle. Sec., A. W. S. Cochrane, 30 Broad St., New York. Mine near Polaris, Beaverhead Co., Mont., known as the Polaris mine, formerly operated by F. Aug. Heinze, carries silver, gold and copper ores, latter produced in small quantities as a byproduct.

Equipment: includes steam and electric power, and a 100-ton smelter. Shut down 1915, 1916 and 1917.

BROADWATER COUNTY**BROADWATER COUNTY MINING CO.****MONTANA**

Idle. **Officers:** J. J. Fisher, pres., Harlowton, Mont.; Len Jobb, sec.; John A. Matthews, treas.

Inc. 1910. Cap., \$225,000; shares \$1 par.

Property: 7 claims, includes the Evening Star, Copper Glance and Lomard, about 5 miles west of Townsend, on the Radersburg road. Claims show good outcrops and development is said to disclose veins 4' to 12' wide, with chalcocite assaying up to 60% copper, 6 oz. silver with gold and lead values. Management plans having property prospected and reported on with a view to resumption of operations in near future.

CASTLETON COPPER CO.**MONTANA**

Address: Helena, Mont. **Mine office:** Canyon Ferry, Mont.

Officers: O. W. McConnell, pres.; F. M. Bowers, sec.; W. A. Castleton, mgr.

Inc. 1916, in Montana. Cap., \$50,000; shares \$1 par. Gross earnings Jan. 15, 1917, given as \$141,073, all from ore sales.

Mine optioned to Furnace Creek Oxide Copper Co., et al., for \$223,000 January, 1917, and property operated by that company, which see.

Property: 5 claims, 2 patented, in Hell Gate Canyon, Broadwater county, shows a fissure vein in shale and limestone, running N. 70° E. with dip of 80° N. Ore occurs in shoots, said to be 12" wide and to average 25% copper for the 1st class ore and 2% for the 2nd class.

Development: by 3,000' of underground workings, including shafts and tunnels.

Equipment: includes compressor, hoist, pump, steam power and 50-ton concentrator.

Production: about 2,000,000 lbs. copper from 1903-1907. Inactive until

Mining Co. Stockholders voted, May, 1910, by a large majority, to sell the property to the Anaconda Copper Mining Co. at the ratio of 15 shares of Alice for 1 of Anaconda, and deed to property was given May 31, 1910, the company receiving in return 30,000 shares of Anaconda stock.

A suit by minority stockholders to set aside the sale, resulted in a decree annulling the sale and ordering a public resale, Nov. 10, 1915, no bid to be less than \$1,904,391. No bid being made, the sale was declared off, which under the decree confirmed the previous sale. The U. S. Circuit Court upheld this decree on Oct. 1, 1917.

Property: The Alice, Magna Charta, Curry, Valdemere, Rooney and many other claims on the Rainbow lode and its neighbors.

The mine had a 1,500' shaft, and was operated actively, 1880-1893, and intermittently thereafter. The mine was worked for its zinc ore in 1917, but closed down in October owing to scarcity of labor and because the Emma mine (Butte Copper & Zinc) could supply the demand for zinc ore.

Minority stockholders will appeal the case to the U. S. Supreme Court. **ALLIANCE COPPER CO. MONTANA**

Idle several years. **Mine office:** 3 Lewisohn Bldg., Butte, Silver Bow Co., Mont. Donald Campbell, pres.

Inc. May 19, 1906, in Montana. **Cap.**, \$400,000, fully issued, shares \$2 par. Statement of Dec. 31, 1914, gave debts of \$129.19.

Property: is very small acreage in the northeastern portion of the Butte district, with surface rights to sundry town lots.

Development: is by shaft, sunk jointly by the Alliance and Farrell companies, and a little ore of good grade was shipped, 1907, from the 200' level. Stock listed on Butte Exchange.

ANACONDA COPPER MINING CO. MONTANA

Office: 42 Broadway, New York City. **Mine office:** Hennessy Bldg., Butte, Mont. **Smelting works:** Anaconda, Mont., Great Falls, Mont., Tooele, Utah, and Miami, Ariz.

Officers: John D. Ryan, pres.; B. B. Thayer, v. p.; C. F. Kelley, v. p.; A. H. Melin, sec.-treas.; R. D. Cole, asst.-sec.; J. T. Roberts, gen. aud.; D. B. Hennessy, asst. treas. **Directors:** John D. Ryan, B. B. Thayer, George H. Church, Nicholas F. Brady, Wm. Rockefeller, C. F. Kelley, J. Horace Harding, Andrew J. Miller and H. H. Rogers.

Operating officials:

Inc. June 18, 1895, in Montana, as successor of Anaconda Mining Co. cap., \$150,000,000, shares \$50 par, 2,331,250 issued. **Funded debt:** \$16,000,000, 2-year 5% gold notes, due March 1, 1917, were paid off in cash at maturity. Company has a very broad charter, permitting it to acquire, mortgage, lease, assign and transfer the capital stock, bonds or securities of any other corporation. National City Bank, N. Y., transfer agt.; Bankers Trust Co., N. Y., registrar. Pogson, Peloubet & Co., auditors. Annual meeting, rd Wednesday in May at Anaconda. Stock listed New York, Boston, London.

Dividends paid quarterly; 13% in 1901, 4% in 1902, 1903, 1904; 11½% in 1905, 19½% in 1906, 26% in 1907, 8% in 1908 to 1911, inclusive; 9% in 1912, 2% in 1913, 10% in 1914, 6% in 1915, 14% in 1916, and 12% to Sept., 1917.

Assets total \$224,013,841, and excess of current assets over liabilities, 39,810,110. Surplus at end was \$48,395,863.

Early in 1916 the following companies were organized under the laws of Delaware, the Anaconda owning 78% of the stock of the first named and 11 that of the other two companies:

Andes Copper Mining Co., cap., \$50,000,000; shares \$100 par; Andes Copper Co., cap., \$50,000,000; shares \$25 par; and Potrerillos Railway Co., cap., 5,000,000; shares \$100 par. These companies are operating in Chile, and development so far shows 100,000,000 tons of 2¼% copper ore.

Anaconda's investments in sundry companies, not entirely owned, are alued at \$18,936,376. During 1916, \$7,968,836 was spent in purchasing 20,740 shares of Alice Gold & Silver Mining Co., making the holding 382,912 shares out of 400,000 issued; 26,100 shares of Greene Cananea Copper Co., making 56,900 held; 50,000 shares of Inspiration Consolidated Copper Co., making 200,000 held, and 188,300 shares of Butte Copper & Zinc Co.

Finances of the company are well diagnosed by W. R. Ingalls in the *Engineering and Mining Journal* of June 16, 1917:

Net earnings, 1905-1916, were: \$146,480,402, or \$62.83 per share, and divi-

dends paid \$35.29 per share, averaging \$2.94 annually. Earnings for 1916 were \$58,892,980, or \$25.26 per share; while those for 1917 are expected to be about \$26,000,000.

Gross Revenue: \$61,258,755 in 1913; \$51,533,659 in 1914; \$87,273,886 in 1915; \$150,540,688 in 1916.

Assets, Dec. 31, 1916, amounted to \$224,013,841, or \$96.90 per share of stock compared with \$75 in 1915.

Production—	Copper lbs.	Silver oz.	Gold oz.	Zinc lbs.
1917**	258,000,000
1916	331,893,273	11,837,769	92,099	20,906,439
1915	254,311,574	9,005,618	106,702
1914	223,720,292	8,314,116	99,651
1913	270,303,644	10,321,296	64,898
1912	294,474,161	11,014,737	61,314
1911	259,407,092	9,731,561	48,950
1910	266,608,461	9,534,888	57,260

** 233,000,000 lbs. for 11 months, and December estimated.

Production and operating costs can be summarized as follows:

	Tons Ore Mined	Mining Costs p. t.	Reduction Costs	Trans- portation
1916	5,589,157	\$4.420	\$3.430*	\$
1915	4,383,339	3.930	2.440	0.235
1914	3,904,883	4.134	1.612	0.274
1913	4,651,445	4.124	1.679	.320
1912	4,579,957	3.912	1.749	.308
1911	3,848,673	3.766	1.820	.331

* Reduction and transportation not given separately.

Copper content in 1915 averaged 2%, and costs are estimated at 17c per lb. of metal sold.

Smelting operations of company are shown in the following table:

Plant:	Smelteries					
	Ore Smelted tons	Copper lbs.	Silver oz.	Gold oz.	Lead tons	Zinc lbs.
Washoe	5,193,573	287,082,079	10,624,727	81,393	8,320,522
Great Falls	813,196	44,811,194	1,213,022	10,706	12,585,917
Tooele	863,952	20,041,089	5,549,777	41,009	58,988
Miami	332,966	181,518,396	257,543	2,882
Total	7,203,687	533,452,758	17,645,069	135,990	58,988	20,906,439

The zinc produced was from the electrolytic treatment of 196,680 tons of ore and concentrates, 54,456 tons being from other companies.

Of the 5,007,069 tons treated in Montana, 724,355 tons were from other companies. Precipitate amounting to 7,081 tons was also smelted.

Tonnage treated by the four plants in 1915 totaled 5,559,050, 320,352,417 lbs. copper, 14,165,773 oz. silver, 155,545 oz. gold, 56,501 tons lead, and no zinc that from experimental work.

Production in 1917 was at the rate of 27,000,000 lbs. monthly, but after troubles curtailed this considerably, the works being closed for

	Refineries				
	Copper lbs.	Silver oz.	Gold oz.	Lead tons	Zinc lbs.
.....	8,320,522
27,620,000	1,213,022	10,706	12,585,917
162,666,262	4,168,775	20,580	54,100
.....	18,606,866	167,024
.....	24,288,663	198,310	54,100	20,906,439

The East Chicago works also yielded 15,682,151 lbs. of antimonial-lead. The figures for the refineries duplicate to a large extent those of the smelteries, the difference representing bullion that was refined for other smelters.

As company reports do not give details of operating costs, the actual cost of producing a pound of copper can only be calculated from the figures given, which gives an apparent cost of 10c per lb. of copper produced.

This cost was obtained by dividing 331,893,273 lbs. of copper into expenses of mining and depreciation, ore transport, treatment and depreciation, metal transport, refining and selling and administration, a total of \$52,266,097. But there is included in this the cost of reducing purchased ores, credits from gold, silver, and zinc. A mere study of the published figures cannot reveal the actual cost of producing copper, which is thought not to exceed 9c per pound.

In the first six months of 1917, the output was usually large, that of March being 31,300,000 lbs., and of May, 28,400,000 lbs. A disastrous fire in June lowered the output.

After June, operations were seriously curtailed by labor strikes and consequent shortage of workers, and greatly reduced production, culminating on August 25 in a complete shut down from that date to September 27. The production for the year, 1917, will not, therefore, be more than 70% of that of 1916.

The Anaconda properties for years produced 1/3 of the copper output of the United States, and 1/6 of the world's production. The splendid technical force and equipment of the company, and the excellent showing of its mines, indicated that it will maintain its pre-eminence for years to come.

Property: Company owns 1,168 acres mineral claims at Butte, including all the property formerly held by the following companies: (1) Boston & Mont. Cons. C. & S. Mng. Co.; (2) Butte & Boston Cons. Mng. Co.; (3) Red Metal Mng. Co.; (4) Washoe Copper Co.; (5) Parrot Silver & Copper Co.; (6) Alice Gold & Silver Mng. Co.; (7) Trenton (formerly Colorado) Mng. & Dev. Co.; (8) Big Blackfoot Lumber Co.; (9) Diamond Coal & Coke Co.; (10) Original Cons. Mng. Co.; (11) Colusa Parrot Mng. & Sm. Co. It acquired the International Smelting Co. in 1914, together with its subsidiaries, the Tooele Valley R. R., a lead refinery at East Chicago, the Raritan Copper Refinery. In 1915 it acquired the United Metals Selling Co., 150,000 shares Inspiration Copper, 30,800 shares Greene Cananea and 1,100 shares Mountain Trading Co. It owns the Southern Cross Gold Mines near Anaconda. In 1915 it bought the Alex Scott mine at Butte, and in 1916 the Pilot Butte mine, the latter purchase ending all existing apex litigation at the camp. Company owns 1,100,000 acres lumber land (Big Blackfoot Lumber Co.) and sawmills at Bonner and St. Regis, Mont., and 13,280 acres coal lands at Diamondville, Wyo.; Washoe, Belt and Sand Coulee, Mont. The Raven mine was bought Aug. 4, 1915, for \$65,000. Company has a 5-year lease on the Emma mine (Butte Copper & Zinc Co.) and owns 88,300 shares of the stock thereof, operated as a zinc producer and bought the Czarroma claim fraction, containing the continuation of the Emma vein for \$225,000 late in 1915. Company stopped work on the low-grade gold property, called the Porphyry Dike, near Rimini, Mont.

Options were secured on several placer claims in the S. W. part of Butte. The E. portion of the Alex Scott claim, and the Little Annie claim, were purchased for \$750,000.

The reduction plants at Great Falls and Anaconda, including the new zinc plant, are described later. The Anaconda plant produces fire and building brick and sulphuric acid, as well as copper, zinc, gold and silver, with a small amount of arsenic, and in the future probably bismuth. Through ownership of the International Smelting Co., the Anaconda owns the Tooele, Utah, and Miami, Ariz., smelters, the East Chicago and Raritan refineries (described under International Smelting Co.)

By the merger of the Anaconda and Boston & Montana, both among the six largest copper producers of the world, and the addition of a num-

ber of other mines of second and third rank in productive capacity. The Anaconda became the largest copper company in the world, employing about 12,000 men, at high wages, and with a payroll in Butte alone of over \$1,000,000 monthly, with very large additional payrolls, at its works in Anaconda and Great Falls. Since the absorption of the other mines in Butte has practically eliminated property lines, so far as underground work is concerned, and workings have been so connected as to permit the most economic mining regardless of claim boundaries, the property can be most usefully described in sections called by the familiar names used under former ownership, or by the names of the 22 operating shafts of the company.

The mines of the company produced in 1916, 5,582,077 tons of ore and 7,081 tons of copper precipitate, compared with 4,376,556 tons ore and 6,783 tons precipitate in 1915. The 1917 output is much less, owing to labor strikes and the partial shut down of the mines.

The Anaconda mine was opened, 1880, as a silver producer, but at about 150' depth the oxidized silver ores were succeeded by high-grade copper ores, mainly chalcocite and bornite, while at depth there is a large amount of enargite. Net earnings of the mine, during the 15 years, 1880-1894, are unknown, but may be safely estimated at not less than \$50,000,000. At a depth of about 1,600' quartz pyrite veins of the Anaconda showed impoverished values, there being considerable pyrite, but the fault veins showed large ore-bodies at depths of 1,200' to the deepest levels yet reached in mining which is 3,400' in the High Ore mine. The various mines of the Anaconda have immense reserves of ore of all grades.

The Anaconda mine proper has a 3-compartment shaft, 2,800' deep, connected underground with the Never Sweat, St. Lawrence, Bell, Belmont and Moonlight mines. Considerable trouble has been had, at times, with gases, from the adjoining St. Lawrence mine, and the fire has crept from the St. Lawrence into several of the upper levels of the Anaconda. The mine has electric locomotives for tramping, installed 1907, on several levels. Hoisting is by 8-ton skips, swung under double-deck cages and worked in counter-balance.

The St. Lawrence mine has a 2,600' three-compartment main shaft, connected underground with the Anaconda, Never Sweat, Mountain View and Pennsylvania mines. The St. Lawrence has been on fire since 1889, in an extensive area above the 1,100' level. The fire has been fought constantly, and walled off by cement bulkheads wherever possible, but cannot be extinguished, and must be allowed to burn itself out, though it is possible to control its progress to a considerable extent. While the fire is troublesome, it does not result in the loss of copper, as the sintered ore remains after the burning of the sulphur can be mined later, and the mine waters are strongly charged with copper, much of which is recovered by precipitation on surface where it is run over scrap iron and "cement" copper made. The hoist has 32"x72" cylinders, raising 5-ton skips swung under single-deck

Never Sweat mine has a 2,500' three-compartment main shaft. Timbering is used in stoping, as well as back filling. Some trouble has been had with fire from the St. Lawrence. The surface plant includes a double drum Nordberg hoist, raising 3-ton skips swung under

mine, about 1 mile south of the main shaft of the Anaconda. The lower, has a new 2,400' four-compartment working shaft in the district. Connections have been made with other mines. An ore bin erected. Equipment includes a powerful new hoist 2,300', taken from the Corra mine.

mine has a 3,400' three-compartment shaft, developing to the bottom level. Equipment includes single-deck cages with 5-ton skips. of the deepest in Butte, having a 3,400' three-compartment shaft. High-grade chalcocite. The High Ore does

the pumping for a number of connecting mines of the Anaconda, handling all water from the Anaconda, Washoe and Parrot properties. The mine has 9 electric pumps, each good for 600 gals. per min., with 1,200' lift. These are located on the 1,200', 2,200' and 2,800' levels. Relief pumps to run by steam or air are also installed on different levels.

The Modoc mine has a 2,500' three-compartment shaft, connected with the 2,800' level of the High Ore mine. The Modoc has several veins besides the one of this name, its chief ore supply coming from the veins, which are stoped up to the North Butte Co.'s boundaries on the north and to the Ballaklava mine on the south.

The Mountain Chief mine, area 1.15 acres, lies next north of the Butte-Ballaklava, and is said to have produced about \$1,500,000 worth of ore from a shallow shaft. The Mountain Chief is developed to 500' by its own shaft, but its deeper levels are worked through the High Ore mine.

The Parrot group of properties includes the former holdings of the Parrot Silver & Copper Co., 19 fractional claims, area 40.6 acres, embracing the Parrot, Little Mina, Bellona, Original No. 6 and the Oro Butte, Champion and Copper Reef mines, and various other small properties. Main shaft of the Parrot mine is now used as an air shaft, and the ground is worked from the West Steward and Never Sweat shafts.

The Little Mina 1,200' shaft is now used for air only.

The Original, Steward and Gagnon shafts are on a western continuation of the Anaconda and Steward veins, and in 1912 a continuous ore shoot of good grade, over 2,700' long, was opened in the bottom level of these mines.

The Original mine has a 3,100' shaft with three compartments below 1,100'. The mine was located, 1864, in the first stampede to the new Silver Bow diggings and was the first mine patented in Butte.

The Steward mine has a 3,200' vertical shaft, showing, in the bottom workings, a 30' vein, carrying ore of good copper tenor, with fair silver values. Equipment includes a 120' steel headgear and a 34"x72" first-motion duplex hoist, good for 3,500'.

The Pilot mine, purchased for \$1,125,000 cash, in 1916, is now part of the Badger State mine.

The Gagnon old 2,800' three-compartment incline shaft, sunk at an angle of 74°, is now used as an auxiliary shaft, all ore being hoisted through the Original shaft. The new vertical 2,800' shaft, near the west end of the property, is as yet used for ventilation only. Equipment includes a 22"x48" Dickson hoist.

The Gagnon is the westernmost of the productive copper mines of Butte. Its ores have carried more silver than those of the mines farther east and have held a number of minerals, such as hübnerite, unusual elsewhere in the camp.

The Moonlight mine, once the principal producer of the Washoe Co., has ore averaging about 1 oz. silver for each unit of copper. The Moonlight has a 1,700' three-compartment shaft, connected underground, with the Blue Jay, Never Sweat and Anaconda.

The Poulin mine, formerly owned by the Washoe Co., has a 1,200' shaft, but is operated through the 1,500' Buffalo shaft, and is to be operated for zinc ore.

The Silver Bow No. 1 mine has a 1,000' shaft, connected with the Pennsylvania, Berkeley and No. 3 mines. It has been a good producer for many years.

The Berkeley 1,500' three-compartment shaft has a 28"x48" double drum Nordberg hoist, handling 3-ton skips in each compartment.

The Rarus mine has a 2,800' three-compartment shaft, connected with the Tramway mine. The veins have divergent branches, and constitute a sort of stockwork, with an ore zone up to 300' in width, in places.

The Tramway mine, formerly owned by the Healy-Rarus Butte Coalition and two-thirds by Butte & Boston, is being made the central shaft for the Minnie Framway shaft, 2,800' deep, has 3 compartments,

each 5'x4'x2" in the clear. The first of the new levels in the Minnie Healy is the thirteenth, about 50' below the old 1,500' level, in which fire was burning, 1908-1909. The Tramway has numerous bodies of ore, of 5 to 6% copper tenor, with good gold and silver values, the really great orebodies coming in between the 1,300' and 1,400' levels, and on the 1,700' level there is an orebody up to 75' in width, averaging nearly or quite 7% copper.

Equipment: at the Tramway mine includes a 92' steel headgear with 12' sheave wheels. A 34"x72" Allis-Chalmers 2-cylinder Corliss hoist, with 12' drums, using 1½" round wire cables, has capacity to raise 7-ton skips from a depth of 3,500'. Each compartment has 5-ton skips changeable to 4-deck cages, for lowering men, an auxiliary hoist being used for sinking and handling supplies through the third compartment. The main surface plant of the department, at the Tramway shaft, includes a boiler house, engine house, carpenter shop, machine shop, office buildings, warehouse and changing house with hot and cold water and shower baths.

The Nipper mine of the Red Metal group, includes the Nipper, Chief Joseph, Balm and L. E. R. claims. The Nipper mine, area 15.18 acres, has 2 shafts, of 1,000' and 1,200' depth, with 12 exits, being connected underground with the Parrot, Never Sweat and Little Mina' mines, and has been operated to some extent through the Parrot shaft.

The Green Mountain mine has a 2,200' three-compartment shaft, not deepened for several years.

The Mountain Consolidated mine has a 2,500' three-compartment shaft, with a good ore showing on the 1,400' level and below, and an especially good showing on the bottom level, at 2,500'. The mine has a 28"x72" Union Iron Works hoist, operating 2 four-deck cages. The East Grey Rock shaft is used for ventilation only.

The West Grey Rock mine, producing ore carrying values mainly in gold and silver, with a small percentage of copper, has a 1,826' shaft, the 1,800' being the deepest level open in 1916. The veins, though small, carry good ore, rich in silver. The Corra shaft is kept open for ventilation.

Coal mines of the company in Montana produced 325,300 tons of coal, and those in Wyoming 638,821 tons. Of this, 282,417 tons were sold. The lumber department cut 105,495,846' in 1916, and bought 30,005,910'. Of the total, 80,800,144' were sold. Stocks amount to 50,971,698'.

The Leonard has an old 1,800' shaft, used for men and supplies, and the main, or No. 2, a new shaft of 4 compartments, 2,800' deep. Mine is timbered with 12x12" and 14x14" square sets, requiring monthly an average of about 1,000,000' of mine timber, board measure. The 2,000' level shows equally large and good orebodies. Water from the Mountain View, Pennsylvania, Tramway, East Colusa and West Colusa mines drains to the 1,200' level of the Leonard and is forced thence to surface by 4 electric pumps. Valves are of pot form, and the entire water end is phosphor-bronze, columns being lined with wood, thoroughly soaked in oil, to withstand the corrosive action of the mine waters.

The Leonard surface equipment is the show plant of Butte, and is very complete, including a 152' steel headgear and 2,000-ton ore bins. The power is furnished by two 250-h. p. boilers, and a 34x72" Nordberg hoist, good for 3,500' depth. There are 5-ton skips swung under, with 1½" round cable. The sinking engine is a 12x14" Risdon sinking engine. Plant includes 3 air compressors of 4,000 and 5,000 cu. ft. capacity per minute, respectively, and 200 ft. each.

The Colusa mine has a 2,200' three-compartment shaft, with levels at 1,000' depth of 1,200', and thereafter at 200' intervals. Shaft was sunk nearly in 1910, and cut down to 3 compartments, being given a 24" diameter oblique squeezing, which caused much trouble in the past. The shaft is timbered with 10x10" and 12x12" square sets, and shows vein matter in the lower part. Connection is had underground with the Mountain View mine. Surface equipment includes a 23x60" Nordberg hoist, 2 four-deck cages, a tramway and a 28x48" Nordberg

The East Colusa mine has a 2,000' three-compartment shaft with levels opened at 100' intervals from 300' to 700'. The mine has a vein of about 65' width, formerly averaging 3 to 4% copper, but mine is now an important producer of zinc ore for the new electrolytic zinc plant. Production is about 200 tons daily.

The Pennsylvania mine has a 2,800' three-compartment shaft, with levels at 100' intervals from 100' to 1,000', and at 200' intervals below. This property has extensive stopes above the 600' level, ore lying nearer surface than in most of the Butte mines. Equipment includes a 350-gal. electric pump on the 1,800' level, forcing water to a crosscut to the Leonard mine, whence it goes to the precipitation plant. Surface equipment includes 2,000-ton ore bins, a 34x72" Allis hoist, operating 2 5-ton skips and a 28x48" single drum Nordberg hoist sinking engine.

The Badger State mine in the northwestern part of the camp, develops the Badger State, Jessie, Edith May, Emily and several other veins. Mine has a 2,800' four-compartment shaft with extensive orebodies opened up on the 1,100', 1,300', 1,400', 1,600', 2,000' and 2,200' levels. The Emily shaft, auxiliary to the Badger, was deepened from 400' to 917', or 1,000' level of the Badger and connection made in 1912. Property is now an important producer of copper-and-zinc ore.

The Mountain View mine has a 2,249' three-compartment shaft, and a 2,000' air shaft. The Mountain View shows 6 veins of 8' to 60' width, ore averaging nearly 5% in copper tenor, being among the richest mines in the camp. Equipment includes 4,500-ton ore bins, a hoist good for 3,000' depth, and a 28x48" single drum auxiliary hoist.

The Tropic shaft on one of the most easterly claims of the company is 900' deep and mine is now a producing property.

The Greenleaf mine, located east of the proven ore zone of Butte, has a 1,000' shaft, with about 800' of lateral workings. Work was suspended, July, 1908, but the property is by no means devoid of promise.

The Southern Cross mine, situated in the Georgetown district, west of Anaconda, purchased 1912, for \$370,800, is a gold property developed by a 500' shaft, equipped with electrical machinery. Is extensively worked because its oxidized ore is good iron flux.

Butte hill is a network of metalliferous veins, the older with nearly east and west strike being displaced by a number of northwest fault veins cut in turn by still later northeast fault veins and these all cut by the Rarus fault. The geology is fully described in Prof. Paper 74 of the U. S. Geol. Survey, which can be had free of charge from that bureau. The matter of clearly defining apex and extra-lateral rights, under the present Federal mining laws, is one of the greatest possible difficulty, and in the past had led to litigation costing millions of dollars, all of which ultimately had to be paid out of the profits from copper produced. In 1916 the mines now owned by the Anaconda were developed by 42.06 miles of new openings, of which 2,879' was shaft-sinking.

The mine waters are highly charged with copper, and precipitation tanks have been built at practically all of the big mines merged in the Anaconda. Old scrap iron, tin cans and wire rope are used as precipitating agents, these articles commanding a standard price of 1 ct. per pound. The low of the water in the precipitation tanks and launders is much more rapid than is the case in the large Spanish lixiviation plants. The principal plant, at the Leonard mine, cost about \$20,000, and treats water from all of the Boston & Montana mines. It has a building for drying and shipping the copper precipitate.

The air-compression plant at the High Ore mine has 8 1,200-h. p. Nordberg air compressors, each with a capacity of 7,500 cu. ft. of free air per minute. The air is compressed to 90 lbs. and is used in the hoisting engines of steam. A building 300' long, contains 25 receivers, each 10x30' round, for the compressed air, this air-storage plant having reserve for 8 hours. In connection with this plant is the largest steel water-

Electric power, supplied by the Montana Power Co., is brought from Great Falls, 130 miles, and from Canyon Ferry, near Helena, 70 miles distant, current being wired to the mine with a primary voltage of 50,000 volts, reduced to 2,000 volts in a transformer station, just outside of Butte, power being distributed to the various workings from a main station at the Never Sweat mine, the current being used at 440 volts.

The Washoe Smelter: At present this plant can treat 16,000 tons of ore per day using 500 tons coke, 900 tons coal for reverberatory furnaces, 3,000 tons limestone flux and 260 tons coal for power and heating. Sixty million gals. of water are used each day and 42,000 gals. per minute. 3,200 men are employed at a monthly wage of \$400,000 in and around the works.

The accompanying illustration shows the course of the ore through the plant. From the storage bin the ore passes through an automatic sampler; thence to the concentrator plant of 2 great buildings, each housing 4 units comprising Black crushers, Harz jigs for coarse and Evans jigs for medium and fine concentrates, 4 sets of 55x24" rolls, 8 Wilfley tables using Butchart riffles, six 8' Anaconda classifiers, six 7½'x72" Hardinge mills, each with 225-h. p. motors and using steel linings and steel balls; 6 Dorr classifiers, 4 Mineral Separation flotation machines, each having 15 agitators and 14 spitzkasten with 150-h. p. motors.

No. 1 section differs from the other 7 in having Hancock instead of Evans jigs, and 8x12' tube mills using Forbes liners and pebbles.

The coarse concentrate goes to the blast furnace; the fine to settling tanks, the flotation concentrate to Dorr thickeners, 12x50', discharging 60% solids to Oliver filters.

The slime treatment is very fully described in the Mining World, Mar. 4, 1916, and in Transactions of A. I. M. E. for 1916.

There are 2 roaster divisions, one having Evans-Klepetchko type of McDougal roasters, each handling 215 tons per day of fine concentrate, fine lime rock and first-class screenings. A Ruggles-Coles dryer prepares concentrate for the acid plant and for converter. Roaster No. 2 contains 28 Anaconda roasters, a modified Wedge-McDougal furnace and treats material from the Tank house and Oliver filter cake.

The reverberatory furnace plant is in 2 buildings, each with 4 furnaces and 5 boiler sets. Each furnace is 143x23' and handles 700 tons material per day when burning 100 tons coal in 24 hours. The coal previously ground in Raymond Bros. 5-roller pulverizer to 100 mesh, is blown into furnaces through Warford burners under 16 ounces pressure. Coal dust firing is much more efficient than grate firing and each furnace develops 6½ boiler h. p. per ton coal burned, hot gases passing through Sterling boilers. Furnaces are fed from top, banking concentrates against side walls. Slag flows off continuously instead of being intermittently skimmed and matte is tapped at intervals into 10-ton ladles trammed direct to converters.

The building contains two 51' furnaces, and one 87' long.

The latter handles 3,000 tons per day, the other

cooled and condensed arsenic trioxide removed by a second Cottrell treatment, the fine powder being discharged by a screw conveyor into barrels.

A brick plant making 11,000 standard fire brick per day and another making 15,000 building brick from retreated tailings is one of the newer features of the works.

The reverberatory costs have been reduced from \$1.75 to \$1.25 per ton of ore by coal firing and other changes in practice, as compared with \$1.35 per ton of charge for the blast furnaces, but so much limestone has to be used in the blast furnaces charge that the cost, per ton of copper ore, is higher.

It has been found that leaching produces cleaner tailings than flotation, though other factors equalize the 2 processes, since for leaching the roasting costs are 25c-30c, excavating 14c, hauling 8c, and other costs 33c, a total of 80c per ton, using 65 lbs. of 60% acid for 9 lbs. copper.

Leaching plant in 1916 treated 525,501 tons of tailing from the concentrator dump, yielding 3,648 tons of cement-copper. When more acid is available the capacity will be greater.

Full descriptions of the new plant and the technical treatment have been published in the *Trans. Am. Inst. M. E.* and in *Mining & Scientific Press*, Feb. 26, 1916, and *Mining World*, Mch. 4, 1916.

The acid plant produces 150 tons a day of 60% acid, but a much bigger plant will be built in the next few years to supply acid for the zinc plant and other uses. In March, 1916, the leaching plant and zinc plant used 75% of the acid output, the balance being sold.

The changes in the Great Falls plant have been equally important. The refinery has been enlarged 50% and now turns out about 200,000,000 lbs. of refined copper a year.

Probably the most important event of 1916 was the commencement of production on a large scale of high-grade electrolytic zinc. The 10-ton test plant showed such good results that a 2,000-ton concentrator, using flotation, was erected at Anaconda, and a refinery of 100-ton capacity of metal per day at Great Falls. Both company and custom ore is treated, the total last year being 196,680 tons, yielding 20,906,439 lbs. of zinc. The refinery is being increased to 150 tons of spelter daily. In two years plant improvements at all points cost \$13,645,908. Changes in practice are ably described by Frederick Laist in *Engineering and Mining Journal* of October 7, 1916.

The Washoe smelter, where all the Anaconda ore is now concentrated and most of it smelted, is about 2 miles from Anaconda and 26 miles from Butte, all ore being hauled by electric power over the Butte, Anaconda & Pacific R. R., owned by the company. In 1914-15 the entire plant was remodeled, the capacity increased to 15,600 tons per day, leaching and flotation plants installed, an acid plant erected, a zinc plant put in operation and brick works built, the improvements costing, it is said, over \$6,000,000. The results are so remarkable as to be almost startling. The great items of saving of the remodeled plant comprise coal dust firing of reverberatory furnaces with greatly increased capacity (583 compared with 239 tons per day) with less slag loss; the abandonment of briquetting and blast furnace smelting in favor of the new reverberatory practice; the treatment of all ore in the Anaconda concentrator, instead of sending it to Great Falls; the introduction of flotation and the operation of the leaching plant. The saving has been increased from 75% to 96%, the tailings formerly carrying 0.62% copper now carry but 0.1% copper—that is, 2 lbs. of copper to the ton. The savings amount to 8.4 lbs. copper per ton, and paid the entire cost of reconstruction in the first half year of operation. This work has put the Anaconda company in the ranks of low cost producers and is a great triumph for its metallurgists.

In November, 1917, it was announced that the company engineers expect to have the copper rod and wire manufacturing plant, under construction at the Boston & Montana works at Great Falls, Mont., in operation by May 1, 1918. W. A. Wood of New York, who designed the mill, announces that the installation of machinery would begin in January.

This will be the first rod and wire plant to be built in the west, and will mark the entrance of the Anaconda Co. into a new field, that of manufacturing.

The Chicago, Milwaukee & St. Paul system will require large quantities of wire and rods in connection with future electrification plans, as will other northwestern railroads, and to meet this demand was one of the reasons promoting the construction of the Great Falls plant, the manufacture of rods and wire at Great Falls obviating the expense incident to shipping refined copper products from eastern plants to northwest points.

With the proposed 25% increase in the capacity of the zinc reduction plant at Great Falls, which now is capable of producing around 7,000,000 pounds of spelter monthly, the proposition of establishing brass works at Great Falls is expected to be considered by the Anaconda, as freight charges east would cost the Anaconda no more than a brass product, which is made up of an alloy of copper and zinc.

This cost was obtained by dividing 331,893,273 lbs. of copper into expenses of mining and depreciation, ore transport, treatment and depreciation, metal transport, refining and selling and administration, a total of \$52,266,097. But there is included in this the cost of reducing purchased ores, credits from gold, silver, and zinc. A mere study of the published figures cannot reveal the actual cost of producing copper, which is thought not to exceed 9c per pound.

In the first 6 months of 1917, the output was unusually large, that of March being 31,300,000 lbs., and of May 28,400,000 lbs. A disastrous fire in June lowered the output and after that time operations were seriously curtailed by labor strikes and consequent shortage of miners, until on August 25th, matters culminated in a complete shut-down which lasted until Sept. 27th. The 1917 production will therefore not be more than 70% of that of 1916. September output was 2,800,000 lbs., compared with 11,175,000 lbs. in Aug.; October followed with 22,360,000 lbs., and 21,600,000 lbs. in November, with 25,000,000 lbs. expected in December.

The Anaconda properties for years produced one-third of the copper output of the United States and one-sixth of the world's production. The splendid technical force and equipment of the company and the excellent showing of its mines indicate that it will maintain its pre-eminence for years to come.

ATLANTIC MINES CO.

MONTANA

Company dissolved, May, 1916, and properties sold to Anaconda Copper Mining Co., Nov. 1, 1916. Fully described, Mines Handbook, Vol. XII.

BAMAR COPPER CO.

MONTANA

Idle. Mine office: 410 Daly Bank Bldg., Butte, Mont.

Mine office: 410 Daly Bank Bldg., Butte, Mont.

Officers: Dr. M. J. Scott, pres.; F. H. Butler, v. p.; J. B. Frisbee, sec.; M. A. R. Scott, treas.

Inc. Sept. 24, 1910, in Montana. Cap., \$1,500,000, shares \$1 par, non-assessable. Annual meeting, 1st Tuesday in June.

Lands: 12 claims, 230 acres, in the Summit Mountain district, near Buxton Switch, in the foothills of Fleecer mountain, 13 miles southwest of Butte. Claims were bought of Butte & Buxton Copper Mining Co. for 150,000 shares of Bamar stock. Lands carry several veins, of which 1, of 30' estimated average width, opened on surface for 6,000', was mined 1890, by several shallow shafts, for silver-lead ores. Country rock is granite, markedly similar to that at Butte, covered by 1' to 8' of wash, with a mineralized zone of about one-half mile width carrying 4 veins, with a fluorite dike to the northward. Shallow pits and trenches show continuity of the veins, which are leached at surface, carrying a little carbonate ore below commercial tenor.

Development: a 180' two-compartment Linda shaft, connecting with the 700' Linda tunnel, a total of about 1,000' of workings. The tunnel shows a ledge, carrying a mineralized 10' streak along the footwall showing mainly pyrite, with some argentiferous chalcopyrite and occasional carbonate

stains and a highly silicious gangue. Property has yielded ore carrying 1 to 36% copper and 43 oz. silver per ton, with up to \$2.50 gold, also galena assaying 11% lead, 24 oz. silver and \$1 gold per ton.

Equipment: includes a 40 h. p. boiler, 20 h. p. hoist good for 500', 2-dril air compressor and several mine buildings. Company plans deepening shaft, drifting and crosscutting.

BLUEBIRD COMPANY (THE)

MONTANA

Office: 706 Sears Bldg., Boston, Mass.

Officers: W. B. Dickerman, v. p.; Clarence W. McGuire, sec.-treas. with F. M. Stone and H. K. McHarg, directors.

Inc. 1893, in New York. **Cap.**, \$500,000; shares \$5 par; 66,667 shares issued.

Property: 237 acres, in Butte, Mont., shows silver, copper and zinc ores. Company has never operated its property. See W. H. Weed, U. S. G. S. Prof. Paper 74 for geology, etc.

Reported Nov., 1917, that property had been bonded by the Lee Higginson interests to a syndicate which proposed immediate reopening of the mine.

BLUE VEIN COPPER MINING CO.

MONTANA

Office and mine: 17 Owsley Blk., Butte, Silver Bow Co., Mont.

Officers: F. L. Melcher, pres.; Lewis A. Smith, sec.; W. F. Noyes, treas.

Inc. June 21, 1906, in Montana. **Cap.**, \$1,000,000; shares \$1 par.

Property: 9 claims, patented, being the Little Boulder, Valentine Bunker Hill, Blue Vein, Blue Vein No. 1, Myrahl, North Star No. 1, the Ozone and Columbia lode claims in the southern part of the Butte district. Idle since Nov., 1909.

BONANZA-BUTTE MINING CO.

MONTANA

Care: John Kenoffel, 111 S. Main St., Butte, Mont.

Inc. June, 1915, in Montana, with Chas. H. Lane, Wm. Youlden, J. J. McCarthy, H. H. Walrath, Wm. Meyer, John and Geo. E. Johnson, directors. **Cap.**, \$500,000; shares \$1 par. Mine is under lease and bond to a syndicate of Butte people, who have already made one substantial payment on the property.

Property: the Bonanza, Bonanza Extension, and Ruth claims, 4 mile north of Butte. The Bonanza vein is opened by a 55' shaft and 300' cross cut tunnel. A new tunnel being driven, 166' lower than old tunnel, is now over 1,000' long and has exposed 5 different but parallel E.-W. tourmalin veins, showing stringers and spots of galena. This tunnel cut (Sept. 1917) the downward extension of the oreshoot exposed in the winze sunk below the upper tunnel. The shoot shows bunches of high-grade silver-lead ore as fine grained and dense galena, with no copper. Selected samples carry quite high silver values, but average samples are too low-grade to work even for mill feed. The known ore-shoot is too low-grade to be profitably worked. The vein is in a granite area surrounded by rhyolitic rocks, near the B. & M. reservoir, on the road to Lowland Creek. The ore carries little gray copper, but the bulk of the black material seen in it is tourmalin and not copper glance.

BOSTON-BUTTE COPPER & ZINC CO.

MONTANA

Hon. W. W. McDowell, pres., Butte, Mont.; W. E. Reynolds, sec.-treas.

Inc. 1913, in Montana. **Cap.**, \$1,000,000; shares \$1 par.

Property: 12 patented claims at Butte, adjoining the Anaconda Copper Mining Co. property on the N. E. and South. Idle and undeveloped.

BULLWHACKER COPPER CO.

MONTANA

Reorganized as Butte Bullwhacker Mng. Co., which see.

BUTTE-ALEX SCOTT COPPER CO.

MONTANA

Dissolved. **Property:** 4½ acres at Butte, Mont., sold to Anaconda Copper Mining Co., for \$750,000 cash, on Feb. 10, 1916. Stockholders receive end of \$10 a share, and a further small dividend is expected. There are 79,311 shares outstanding and \$80,000 in the treasury. See Copper book, Vol. XI.

BUTTE & BACORN MINING CO.**MONTANA**

Owned by Great Butte Copper Co., which see.

Office: 53 Silver Bow Block, Butte, Mont. **Pittsburgh office:** 331 Fourth Ave. Chas. Hyde, treas.

In June, 1916, company was reorganized and sold its property to the Great Butte C. Co., which company paid indebtedness and exchanged 400,000 shares of its stock in ratio of 4 to 1. Stock being distributed. See Vol. XII.

BUTTE-BALLAKLAVA COPPER CO.**MONTANA****Office:** 510 Sellwood Bldg., Duluth, Minn. **Mine office:** Butte, Mont.**Officers:** Gust Carlson, pres.; I. Freimuth, v. p.; with J. G. Williams, M. W. Lee, F. J. Pulford, P. A. Lignell and J. C. Morrell, directors; C. J. Zachow, sec.-treas.; J. H. Manwaring, supt.

Inc. Mar. 15, 1907, in Arizona. Cap., \$2,500,000, shares \$10 par; non-assessable; fully issued. Bond issue of \$200,000, 7%, dated Jan. 1, 1916, authorized with \$95,200 issued. Listed on Boston and Butte Stock Exchanges. Paid a 50c dividend Aug. 1, 1910. Boston Safe Deposit & Trust Co., transfer agt.; Federal Trust Co., Boston, registrar.

Interest on bonds due June 1, 1917, delayed because company had no money on hand. The directors have under consideration the reorganization of the company and taking in of a new property.

Property: the Burke and Ballaklava claims, about 6½ acres in eastern part of Anaconda hill, adjoining Mountain Chief, Modoc and High Ore mines of the Anaconda Copper Co. Property willed to Bishop Carroll of the Catholic Church, who sold it for \$400,000 cash to this company.

Claims form a narrow tract 1,860' long running with the veins on the northeastern slope of Butte hill. The Burke vein crosses the claim of that name and has been worked in the Modoc mine. There are 4 veins, but one of which is generally workable. This vein is generally correlated with the Jessie, but complex geologic conditions led to a lawsuit with the Anaconda Co. for ownership of the rich orebody mined on the 800' level. This suit was settled by a division of the orebody, Nov. 28, 1913.

Development: 1,625' three-compartment shaft with 12 levels. The mine has been connected on the 800' level, for ventilation and safety, with the Modoc mine of the Anaconda, and on the 1,200' level with the West Colusa. This crosscut is used for drainage.

The veins on the 100' and 300' levels show ore carrying 5 to 8.5% copper and 45 to 60 oz. silver per ton, from which small shipments were made. The 500' level shows pyrite and a little high-grade silver ore, and the 700' level shows stringers of massive bornite, pyrite, glance and some chalcopyrite, all argentiferous. Principal ore production has come from the 800 to 1,600' levels, inclusive, ore being mainly chalcocite, carrying good silver values. The vein ranges up to 34' in width, carrying rich ore on the 800' level; the 1,200' level shows the vein up to 20' in width, with ore averaging to 4.5% copper, and the 1,400' level carries 9' of chalcocite and bornite of about 7.5% average copper tenor. This vein has been stoped westward to the workings of the High Ore mine, whose stopes are continuous with those of the Butte-Ballaklava mine.

Development: by a drift from the High Ore mine, run by the Anaconda Co., opened up a fine body of commercial ore, but inability to reach it with its own shaft and a crowded capacity at the High Ore has retarded ore extraction. Above the 1,680' level the mine has been practically worked out and the proceeds used to pay off current debts without keeping up development work, with the result, that the company must now be content with a smaller production while new ore is opened up.

The 2,200' and 2,400' levels are worked from the Modoc shaft of the Anaconda Co., satisfactory arrangements having been made.

Early in 1916 a winze was sunk from the 1,600' to the 1,800' level and a crosscut run to the vein. It was reported that 24' of 3% copper ore had been found and drifting started.

Electric power is used throughout, an auxiliary steam plant being held in reserve for emergencies.

Equipment: includes a double-drum Lake Shore hoist, operated in counterbalance, driven by a 300-h. p. General Electric motor, designed to hoist an unbalanced lead of 5 tons, at a speed of 800' per minute, from a depth of 3,000'. There also are a 165-h. p. auxiliary double-drum hoist, good for 1,500', and a 10x12" auxiliary steam hoist, 2 Ingersoll-Rand air compressors, with cross-compound air cylinders, each driven by a 100-h. p. General Electric motor, and an electric station pump. The auxiliary steam plant includes a cooling tower for water.

Buildings include an engine house, office with warehouse on the ground floor, carpenter shop, smithy, and steam-heated changing house.

Production: begun April, 1910, was continued until stopped by injunction, granted the Anaconda Copper Co., in Aug., 1910. During this period shipments to the Pittsmont smelter were about 125 tons daily, of ore assaying about 8% copper and 12 oz. silver per ton, this being the highest average grade of ore produced by any Butte mine for that year. Producing about 250 tons daily, 1916, mainly from 800', 1,000', 1,200' and 1,600' levels.

Company has had a checkered career, being successful at first, then involved in bitter litigation with the Anaconda C. M. Co., which was finally compromised; succeeded by operations which paid expenses until stopped by the big fire in the Modoc-High Ore mines in 1917.

BUTTE BULLWHACKER MINING CO.

MONTANA

John E. Corette, sec.-treas., Hennessy Blk., Butte, Mont.; Wm. F. Love, pres.; Henry Meloy, v. p.; G. A. Lauzier and P. W. Clark, directors. Inc. Oct. 24, 1914, in Washington. Cap., \$1,000,000, \$1 par; assessable: all issued. Annual meeting 2nd Monday in Jan., at Butte. Security Transfer & Registrar Co., New York, transfer agents and registrar. Listed on New York Curb. Dividend of 1c per share declared payable, Oct. 25, 1917.

Property leased for one year to East Side Mining Co., inc. by I. A. Heilbronner and Patrick Wall, April, 1916. Lease calls for royalty of 25% and shipments of not less than 1,000 tons a month. Controlling stockholders also gave an option on 51% of entire stock at 50c a share, payments in 30 and 90 days and at intervals for 18 months.

Company is a reorganization of the Bullwhacker Copper Co., whose stockholders received share for share in the new company on payment of 15c a share in six months' installments. This wiped out a debt of \$131,200 due the sons of Patrick Clark (Clark Bros. & Klein) and put \$20,000 in the treasury. Mine was profitable when leased, but ran into debt for an experimental leaching plant. The Mines Operating Co. secured control by buying three-fifths of East Side stock at 75c per share.

Property: one claim, 20 acres, on the east side of the Butte district near the Pittsmont smelter. Easterly part of claim covers a zone of granite impregnated with oxidized copper ores, mined in an enormous open pit 275' across and 75' deep, from which 30,000 tons of 4.07% copper ore were extracted by lessees in 1912-13. It is a highly siliceous ore.

Development: by an old 300' shaft with crosscuts beneath the orebody at that level, also several new shafts, proving an extension of the orebody beyond the open pit.

Equipment: includes hoist, compressor plant and a 75-ton leaching plant, which as yet has not been successfully operated (described in detail by P. E. Peterson in Mining & Engineering World, Oct. 4, 1913, p. 584).

The orebody is extensive and, though probably not deep, has a large tonnage from which much money should be made. Deep development is expected to show veins carrying sulphide copper ore.

BUTTE CENTRAL COPPER CO.

MONTANA

Austin M. Pinkham, trustee in bankruptcy, 27 State St., Boston, Mass. Holdings sold to Wm. G. Burns and transferred to Butte Central Mng. & Mfg. Co., the operating company for the Butte-Detroit Copper & Zinc Mng. Co., which see. Company was a raw promotion, fully described Vol. X, Copper Handbook. Judgment of \$50,000 in favor of D. W. Strong, Butte, Mont., had not been satisfied on July 16, 1917, as there was an appeal from the District Court, and case is pending in the Supreme Court.

BUTTE CENTRAL MINING & MILLING CO. MONTANA

See Butte Central Copper Co. and Butte Detroit Copper & Zinc Mining Co.

BUTTE-CONCORDIA MINING CO. MONTANA

Inc. Sept. 8, 1915, in Montana. Cap., \$50,000; shares 25 cts. Directors: F. Pitman, G. W. Deniger, G. Widmer, S. V. Wilking, 615 Phoenix Blk., Butte, Mont. E. C. Schwarzwaldner, O. J. Olson, Geo. W. Wall, F. A. Kean and Fred Pearson, all of Butte, Mont.

No further details obtainable.

BUTTE COPPER CO. MONTANA

Address: care James H. Rowe, pres., 120 West Granite St., Butte, Mont. E. T. Lawlor, v. p., Brookline, Mass.; W. M. Hanson, sec.; preceding officers, R. L. Rhule and B. J. Keenan, M.D., directors.

Inc. March 20, 1906, in Montana. Cap., \$1,500,000; shares \$1.50 par; fully paid and non-assessable.

Company owns two-thirds interest in the Robert Emmet claim Nos. 1 and 2; the remaining third being owned by the Anaconda Mining Company. Company also owns approximately one-half of the Anselmo, Anselmo No. 1 and Trifle claims, balance being owned by the Hauswirth family. Property lies directly west of the Gagnon mine and is supposed to carry the extension of the rich veins mined in that property. The group has produced about \$700,000 worth of gold and silver ore, the principal development being the 700' Trifle shaft in which a large vein carrying copper ore was found at a depth of 375'. The Robert Emmet shaft, 375' deep, is reported to contain 7% copper ore.

The company has been dormant for several years and its relations to Butte Copper Mining Co. and Butte Copper Montana are not fully understood, though the latter company is supposed to control this one through stock ownership. The president reports, May, 1917, that the property is under lease and bond to Eastern interests who are now operating and developing the ground through the Trifle shaft.

BUTTE COPPER CZAR MINING CO. MONTANA

Address: Butte, Mont. C. F. Murphy, pres.; R. M. Green, mgr. Cap., \$100,000.

Property: in the Butte district, developed by 300' tunnel reported to have cut the main vein at 100' depth, containing 4' of 1-6% copper ore.

Equipment: includes hoist and air compressors.

Management plans sinking 300' two compartment shaft and installing winding plant, 1917-18. Property reported on by Arthur V. Corry.

BUTTE COPPER KING MINING CO. MONTANA

Address: care Beebe Grain Co., Butte, Mont. C. E. Beebe, pres.; A. Henningsen, sec.

Inc. April 19, 1906, in Montana. Cap., \$1,500,000; shares \$1.50 par.

Property: 3 fractional claims, 28 acres, known as the Frenchman No. 1 and 2, are Steak and Missouri Girl, west of the Jennie Dell mine. Idle since nationalization.

BUTTE COPPER & ZINC CO. MONTANA

Office: 61 Broadway, New York. Mine at Butte, Mont. Control of company is vested for a period of 5 years in the following trustees: A. J. Frenchman, Albert Fries, J. Oppenheim. Additional directors, Chas. Oppenheimer, A. S. Bailey and I. N. Spiegelberg.

Inc. 1904, in Maine. Cap., \$2,500,000; shares \$5 par; 411,700 outstanding; fully paid and non-assessable. Shares listed on New York Curb.

Property: known as the Emma mine, about 16 acres, is in the Butte district, 1½ miles from the main properties of the Anaconda Copper Mng. Co.

Mine was formerly developed to 800' level, but due to low copper and low zinc content of the ore, was idle for several years. Development resumed by Anaconda C. M. Co. by virtue of an option and lease,

made July 8, 1915, given to that company. Terms of lease are as follows: Anaconda Co. acquired an option for 9 months on all or part of the

property of Butte Copper & Zinc Co. stock remaining in the treasury

of the latter company, at a price of \$1 per share. The A. C. M. Co. take a lease on the Emma mine for 5 years with privilege of renewal for an additional 5 years, and agrees to install equipment and to unwater mine to the 800' level. For expenditures actually made by the A. C. M. Co. in developing the Emma mine, the Butte Copper & Zinc Co. agrees to make payment in its capital stock in lots of 10,000 shares or fractional part thereof, but total payment to the A. C. M. Co. for work and equipment shall in no case exceed 50,000 shares of Butte C. & Z. Co. stock. The A. C. M. Co. shall have a right to abandon the leased premises if it finds working them impractical, or impossible, in which event all machinery or equipment installed and permanently attached to the Butte property shall belong to that company. Any profits arising from sale of the output of the lease property shall be divided equally between the two companies. Further stipulations are provided in the event of a renewal of the lease.

The A. C. M. Co. has fulfilled the terms of this lease and taken up 100,000 shares optioned to April, 1916. An additional option which expired July 1916, on 100,000 shares, has also been exercised.

Development: aggregates several thousand feet from a 1,000' shaft with levels at 200', 400', 500', 800' and 1,000'. The vein for a width of 21' on the 200' level is said to show 11% zinc ore containing fair values in gold, silver and lead. The 400' level has nearly 1,000' of workings, and a strike of 16' of 18% zinc ore reported, Oct., 1917. There is a 150' crosscut on the 520' level which does not reach the vein. The so-called 800' level (720' deep) has 795' of work with 465' in ore. The vein is 125' wide and is said to show a 20' width of 18% zinc ore. Two bands of ore were developed by drifting, an 8' band at 60' from the footwall with 185' of drifting, said to show an average of 22% zinc, 8% lead, \$2.20 gold and 12 oz. silver. The 1,600' level which is being developed through workings of an adjacent property cut early in May, 1917, a body of ore 8' wide, assaying 29% zinc, 12% lead and 23 oz. silver, at a place several hundred feet from where the main vein should be. This orebody is supposed to be a spur from the Emma orebody on the 1,200' level. Up to May 1, 30,000 tons of ore averaging about 16% zinc, 6% lead, 7 oz. silver, had been shipped.

With the completion of a crosscut to the Gagnon 1,800' level and development of the Emma in depth, there is reason to believe it will be a great zinc producer.

The mine now supplies the Anaconda Co. with the bulk of the ore needed by its zinc department.

BUTTE-CURTIS & MAJORS COPPER MINING CO. MONTANA

Idle. Address: Geo. D. Curtis, 35 W. Granite St., Butte, Mont.

Company organized upon a lease and bond to purchase the surface and mineral rights of the Curtis and Majors addition to the City of Butte, the bond price being \$125,000. The company went bankrupt and still owes about \$700 labor claims. There are no legal assets and having defaulted on bond payment past due, the company has no rights thereunder, save the sentimental courtesy extended by John Curtis and associates who would like to see the company rehabilitated and refinanced.

BUTTE DETROIT COPPER & ZINC MINING CO. MONTANA

Office: Dime Bank Bldg., Detroit, Mich. Is a promotion of Davison Co., 27 State St., Boston, Mass.

Officers: J. F. Austin, pres., Detroit; Louis A. Codorette, sec., Montreal; J. S. Pishon, treas., Boston; W. L. Creden, managing director, Butte, Mont.; other directors. Col. Sir Henry M. Pellatt, Toronto, Can.; Ellery C. Wright, Brockton, Mass.; Walter Coulson, Lawrence, Mass.; Jos. Renihan, of Grand Rapids, Mich.; J. E. Simpson, and Chas. A. Wilcox, Federal Trust Co., Boston, transfer agent; State Street Trust Co., registrar.

Inc. March 7, 1916, in Delaware. Cap., \$2,500,000; shares \$1 par; with 900,000 shares paid for stock control of the Butte Central M. & M. Co. This stock control, amount not stated, is the only holding of the company. As the Butte Central has a bond issue of \$300,000 outstanding as a preference secured by a mortgage filed in 1914 for this amount covering a

nerals, mill and surface in the entirety, of the Ophir property, besides an satisfied judgment of \$50,000, it is easy to see that this one claim must develop ore in large amount and great value to pay off the bonded debt and be worthy of the 900,000 shares of stock paid for control. Should the mine make good, the Butte Central M. & M. Co.'s bonds being convertible will be changed to stock, and if Butte Detroit owned all the remaining stock of its subsidiary, the Butte Central, it would get but 60% of this theoretical profit. In other words, if the Ophir mine should be lucky enough to make the extraordinary profit of \$1,000,000 a year, the owner of a share of stock in the Butte Detroit Co. would get 24 cents.

The subsidiary or operating company is known as the **Butte Central Mining & Milling Co.** W. R. Macdonald, pres., 50 Congress St., Boston, Mass.; W. G. Burns, v. p. and sec.; R. H. Gallagher, treas., 96 Franklin St., Boston, Mass.; W. L. Creden, mgr., Butte, Mont.

Inc. Aug. 11, 1914, in Delaware. **Cap.** \$750,000; shares \$5 par; \$450,000 paid, balance held for conversion of \$300,000 bond issue, all outstanding.

Property: the Ophir claim, 20 acres in Butte, Mont., formerly owned and developed by the Butte Central Copper Co., a rank promotion in which nearly \$700,000 was obtained from the public by near-fraud methods. Possibly one-half of this amount was spent on the property, the mill being financed by separate funds derived from a bond issue.

The Ophir lode is a big quartz and replacement vein, carrying fairer values for several hundred feet below the surface and irregular, rich bodies of impure zinc and lead ore at greater depth. Some 40,000 tons of siliceous silver ore said to average \$7 per ton are reported to exist on the upper levels.

Development: by a 3-compartment shaft 1,065' deep on the Ophir with levels at 100', 200', 300' and 500', upon all of which mining has been done on each of which considerable ore is now blocked out. Company plans to sink shaft to a depth of 2,500'; a station hoist will be put in at 1,500', and later a new surface hoist will be installed. The company expects zinc well as copper, as a body of zinc ore running 14% was encountered on the 500' level of the mine. The owners of the mine hope the Ophir may equal the performance of the Butte & Superior and the Emma, which latter property is distinctly a zinc mine, located a short distance north of Ophir, and being developed by the Anaconda company. There are said to be several known veins in the 20 acres of the Ophir claim, including the main veins known as the north and south veins, and a cross-fissure vein called the Blue vein. The mine is said to have about 3½ miles of workings; on the 300' level two parallel veins have been opened for a combined length of 1,100', and on the 500' level for 700'. Drifting has started on the 1,000' level to the Ophir vein.

Equipment: mine has full equipment, including 200-ton mill, a hoist and derrick for 2,000' depth, a 330-h. p. steam plant and a seven-drill Rand air compressor. There are seven buildings, including engine house, carpenter shop, smithy and office.

The concentrating mill, designed to treat 200 tons zinc ore daily by heavy concentration and oil flotation, has been altered to handle manganese ore exclusively. Mineral Separation process is used. A Sullen gyratory shaker and tube mills are used for crushing. Mill treating ore from Davis & Copper Co. and other custom ore.

The manager, W. L. Creden, whose experience and reputation ensure confidence, has unwatered the mine and will sink the shaft to the 2,500' level where the full extent of the ground will be explored in hopes of finding large orebodies near the Rarus fault or in the veins cut by it.

The manganese ore treated in the mill comes from various sources, the ore is averaging 25% manganese; the concentrate carries 46.2 to 48% manganese with 10% silica. Extraction is about 80%. Concentrate is to be wetted. Product is handled by Rogers, Brown & Co., New York.

THE DULUTH MINING CO.

MONTANA

Chas. M. Everett, receiver, Lewisohn Block, Butte, Mont. Mine at

The company agreed Dec. 24, 1912, to accept a contract with Thos. F. Cole, for the transfer of all its property to a new company, the Greendale Exploration Co., with a capitalization of \$200,000, to be organized by him. The terms of the contract provide that in consideration of sinking the shaft to 1,600' level, running crosscuts north and south 2,500' the entire width of the property, and doing other stipulated development work, Mr. Cole is to receive 51% of the stock of the new company, one-half to be paid as the work progresses, the balance remaining in escrow until the work is finished. Mr. Cole spent \$300,000 on this development, and contract was completed. Failing to find shipping ore in commercial quantities the property was closed down.

BUTTE MAIN RANGE COPPER MINING CO. MONTANA

See Tuolumne Copper Co., which controls and operates the Butte Main Range property.

BUTTE-MILWAUKEE COPPER CO. MONTANA

Assets sold 1914 to Butte & New York Mng. Co. a Butte & Superior subsidiary, for \$500,000. Stockholders were obliged to exchange their stock at the rate of 2½ old for 1 new share, or 30c cash per share. Company paid a liquidating dividend of \$0.3278 per share in July, 1914, and is now in course of liquidation. Fully described under Butte & New York Mining Co.

BUTTE MINE EXPLORATION CO. MONTANA

Officers: Clinton C. Clark, pres., 408 West Granite St., Butte, Mont. C. P. Connolly, sec., at last accounts.

Inc. 1901. Cap., \$250,000; shares \$1 par.

Is no relation to the company of same title formerly holding the Sullivan O'Clock property, in Butte, or to the Butte Mines Exploration Co., formerly having property at Tecoma, Box Elder Co., Utah. Property is the Pacific quartz lode claim, on which considerable work was done, 1901-02. Company practically defunct, but property reported under option to the North Butte Mng. Co.

BUTTE-MINNESOTA MINING CO. MONTANA

Officers: Peter E. Peterson, pres.; Angus McLeod, Butte, Mont., William Vuoti, J. E. Porthan, A. W. Havcla, John Kukko, Emmanuel Autio, John Lampi, Ade Herranen, directors. Mines near Butte and Helena.

Inc. June, 1912. Cap., \$750,000; shares \$1 par.

Owns 6 claims, about 1 mile south of Rocker, at the western end of the Butte district. Ground shows well-defined veins, 1 of which is traceable for 3,000' across the surface. The country rock is granite and part of the same mass as that in which the mines of Butte occur.

Development: 400' tunnel on the vein and an incline shaft 35' deep sunk on the vein disclosing well-defined walls, 6' apart, from which ore has been taken carrying 0.5% copper, 8% lead, 12 oz. silver, and \$28 gold, per ton. The property is equipped with a gallows frame, boilers and hoist.

Late in June, 1913, the company bought a group of mining claims in the Wolf Creek district, 40 miles east of Helena, Mont. Reports state that development on these claims shows more than 100,000 tons of ore assaying 4 to 25% copper blocked out. A mill was to be built, but company has not reported any recent work.

BUTTE MONITOR TUNNEL MINING CO. MONTANA

Idle. Address: care C. J. Kelly, Daly Bank & Trust Co., Butte, Mont. Inc. in Montana. Cap., \$3,750,000; shares \$1 par; 1,013,000 in treasury. 2,736,500 issued.

Lands: 8 claims, the Monitor, Sunlight East, Fraction, Alta, Emporium Ironside No. 1 East and Burner patented claims in the eastern section of the Butte district. The usual Butte monzonite is cut by a great quartz porphyry dike on this group; the veins run E.-W. and are of the quartz vein type with wall alteration.

Development: by the 1,412' Monitor tunnel, which passes for 445' through other property. In the Sunlight claim 2 veins, the No. One, 5' and No. Two, 4' wide, are cut; the 4' Sunlight discovery vein is cut 250'

yond. A winze on the vein at 700' from the portal showed 12' of ledge
atter, and according to John R. Ryan, assays 6% copper and 4.2 oz. silver
r ton.

A 230' crosscut tunnel on the Burner claim cuts a 12' vein, said to carry
to 20" band of shipping ore in a 30' winze, from which 22 tons shipped
turned 8% copper, and 8½ oz. silver, per ton. The remainder of the
in is reported to average 1.5% copper, and 1.4 oz. silver, per ton.

JTTE & NEW YORK COPPER CO. . . MONTANA

Subsidiary of the Butte & Superior Mng. Co., which see.

JTTE RAMSDELL MINING CO. MONTANA

Address: Care Patrick Wall, Hirbour Block, Butte, Mont.

Inc. 1917, in Montana.

Owms the Maud S., or Ramsdell, claim, and has lease on ½ of Lizzie
d the Red Chief claims of the Davis Daly Co. The Ramsdell claim has
ex of vein on which a new shaft, 150' deep, Oct. 30, cut 9' of ore.

JTTE & RED EAGLE COPPER CO. MONTANA

Officers: Fayette Harrington, pres., Missoula, Mont.; Jas. A. Canty,
treas., Butte, Mont.

Inc. May, 1907, in Montana. Cap., \$5,000,000; shares \$5 par.

Lands: 7 claims, patented, S. E. of the Butte & Bacorn and N. E. of the
tte and Superior, the Red Eagle claim having a 400' tunnel, showing a
le ore. Shut down since 1907, but company still alive.

JTTE STANDARD COPPER MINING CO. MONTANA

Address: Care H. G. Klenze, Box 377, Butte, Mont.

Officers: H. G. Klenze, pres.; A. M. Stephens, v. p.; J. W. MacLane,
Butte, Mont.; with J. L. Templeman and H. H. Griffith, directors.

Inc. in Montana. Cap., \$1,000,000; shares \$1 par; 350,000 shares in
asury. Stock being offered at 12½c, August, 1917.

Owms 2 claims in the northern outlying section of the Butte camp and
atented claims at Amazon, Jefferson Co., Mont., both partially developed
l said to carry commercial orebodies. Selling stock in 1917.

JTTE-SUMMIT COPPER CO. MONTANA

Address: Supt. Hornet Mine, Hornet St., and Excelsior Ave., Butte,
nt.

Officers: Ed. A. Blomgren, Geo. P. Arnold and Wm. H. Smith, all of
wistown, Mont., directors.

Inc. April, 1916, in Montana. Cap., \$3,000,000; shares \$10 par.

Property: the Hornet claim on the Yellow Jacket vein and a second
n 180' to the south.

Development: by 200' shaft, with levels at 100' and 200'. Oreshoot on
level. Yellow Jacket 13½' wide, with 4' of ore assaying high in lead
l silver, with over 20% zinc. On the 200' level 7' of commercial ore
opened Oct., 1917, on downward extension of shoot cut on 100' level.

JTTE & SUPERIOR MINING CO. MONTANA

Office: 25 Broad St., New York. Mine office: Butte, Mont.

Officers: N. Bruce MacKelvie, pres.; D. C. Jackling, v. p. and managing
ctor; K. R. Babbitt, v. p. and gen. counsel; A. J. Ronaghan, sec.; C.
Peters, treas.; N. Bruce MacKelvie, K. R. Babbitt, D. C. Jackling and
L. Ames, directors. J. L. Bruce, gen. mgr. Angus McLeod, mine supt.
S. Shimmin, mill supt. C. Bocking, asst. mgr. and cashier.

BUTTE & SUPERIOR MINING CO.

on application.

HAYDEN, STONE & CO.

Members New York, Boston and Philadelphia Stock Exchanges.

25 Broad Street, NEW YORK

87 Milk Street, BOSTON

Inc. Oct., 1906, in Arizona. Cap., originally \$6,000,000; shares \$5 par reduced Dec. 3, 1910, to \$2,500,000; shares \$10 par; non-assessable; increase Sept., 1912, to \$3,500,000. Outstanding Dec. 31, 1916, \$2,901,872. Outstanding bonds, Dec. 31, 1915, none. Stock listed on Boston, New York and Butte Exchanges and on the Paris Bourse. Name changed May, 1916, as new stock issued.

Controls the North Butte Extension Development Co., through ownership of 80% of the stock; also controls the Butte-New York Copper Co. through ownership of more than 55%. Equitable Trust Co., New York and Old Colony Trust Co., Boston, transfer agents; Guaranty Trust Co. New York, and National Shawmut Bank, Boston, registrars. Annual meeting 3rd Friday in April, at New York.

Comparative General Balance Sheet: Years ending Dec. 31:—

Assets—	Prop.,	Invest's.	Current	Deferred	Total.	
	Equip. & Devel.					Charges
1916.....	\$5,245,260	\$692,063	\$4,393,668	\$542,163	\$10,882,15	
1915.....	4,458,133	574,295	5,267,080	486,129	10,785,63	
1914.....	4,190,872	338,567	1,269,633	274,330	6,073,40	
Liabilities—	Cap. Stock		Prem. on Sales		Undiv.	Total
1916.....	\$2,901,872	\$1,155,337	\$1,214,222	\$5,610,722		\$10,882,15
1915.....	2,726,970	606,317	1,214,386	6,237,965		10,785,63
1914.....	2,726,089a	111,384	1,213,985	2,021,944		6,073,40

(a) Includes \$5,900 first mortgage bonds.

On September 30, 1917, net quick assets were \$2,425,268, of which \$1,078,341 was cash.

Dividends: in 1914, \$611,908; in 1915, \$4,908,115, in 4 quarterly payments of 75c each and extra payments of \$15 per share; in 1916, \$9,490,472 in quarterly payments, 2@75c, 2@\$1.25, ea. and extra of \$30.00 per share; 1917 paid \$1.25 quarterly, for first three quarters, \$1.25, extra for first two, and Red Cross of 40c, a total of \$6.65 for the year. No further dividends can be paid until litigation with Minerals Separation Co. is concluded.

Property: 27 mining claims, 164.90 acres, about 2 miles N. E. of the business section of Butte, with the exception of 4 claims, Peake, Parker Prescott and Pardee, which lie about 3 miles N. W. of Butte. In addition fractional interests equivalent to 8.88 acres are owned in 11 claims, 60.1 acres, and surface rights only for 34.15 acres. The North Butte Extension Development Co. owns 4 claims and a fractional interest in a fifth, amounting in all to an equivalent area of 29.48 acres.

Geology: ore consists of zinc blende, galena and small quantities of pyrite and chalcopyrite occurring with gangue material, mostly quartz silicified granite, rhodochrosite and rhodonite as vein replacement of the granite. The ore occurs in parallel or branching ore shoots ranging in thickness from narrow stringers up to orebodies as much as 100' wide within the limits of a broad general zone of mineralization known as the Rainbow Lode. Near the surface the commercial ore consisted principally of silver ore, which was mined in the early days of Butte mining. The commercial zinc ore shoots as developed during recent years occur downward from approximately the 500' level, and as far as disclosed by present development increase in horizontal area and in importance as greater depth is gained. Ore actually blocked out ready for mining is maintained at about one million tons, greater development than this being inadvisable owing to the difficulty in maintaining developed drifts and crosscuts for any considerable period before actual mining operations are to be conducted.

The ore carries from 10% to 30% zinc, averaging about 18% zinc, 1.23% lead, 0.2% copper, 8 oz. silver and 30c gold. The small amount of iron, lead and copper contents permits of the production of a good grade of zinc concentrates, but the very fine dissemination of the mineral requires fine

rinding for efficient concentration, and most of the zinc mineral is afterwards recovered by oil flotation.

Development: to end of 1916 was chiefly from the Black Rock shaft. Considerable work was done on the Sellers claim of the Butte-New York and fair bodies of ore developed. All concentrating operations subsequent to June, 1912, have been conducted in the mill of the company, located upon its property immediately adjoining the mine. The Black Rock shaft is now 1,900' deep, with considerable openings down to that level. Work in 1916 totaled 21,838', making 102,445' in all.

The October, 1917, reports show that on the 1,800' level the Rainbow rebody in the Black Rock mine continues into the Four Johns claim, the rift on that level extending in the latter property about 700' east of the old line of the Black Rock, the shoot maintaining a width of about 55' with the grade around 17% zinc with from 8 to 9.5 oz. silver.

The mill has been developed from an originally designed capacity of 600 tons per day to the present capacity of 1,800 tons per day, and zinc recoveries range from 93% to 96%, depending upon the tonnage treated and the character and grade of ore and concentrates.

Part of the concentrates are sold under contract to the American Metal Company for treatment at their smelters in the Oklahoma gas fields. The balance of the concentrates are treated in plants of the American Zinc, Lead & Smelting Co. in the Kansas gas fields under a toll basis, though small quantities have been disposed of by sale to various zinc retort smelters throughout the country or to the Anaconda Copper Mining Co. for treatment at its electrolytic plant at Anaconda, Mont.

Figures for the production of the property prior to 1913 are not available, but the results of operations since that time are as follows:

	Tons Milled	Oper. Cost	Tons Concts.	Assay Concts.	Lbs. Zinc	Zinc Rec.	Aver. Price	Net Total	Profit per share
17(a)	275,672	\$7.25	80,191	46.82%	75,101,771	88.57%	\$9.60c	\$4,316,549	\$7.08
16...	627,370	6.34	171,747	52.87%	181,624,842	93.10%	12.63	8,873,446	30.57
15...	522,300	5.10	158,171	53.61%	165,382,921	93.00%	12.34	9,125,947	33.47
14...	327,210	5.33	101,383	53.16%	108,644,120	88.71%	5.04	1,417,128	5.21
13...	296,940	5.70	106,443	49.00%	102,997,916	88.43%	5.52	942,988	3.47

(a) First half of year.

The suit against the company over the use of the flotation process of concentration is still in the courts. An adverse decision by Judge Bourquin in September, 1917, has been appealed, but the Court enjoined the company from disposing of its assets, excepting ordinary current business expenditures, until termination of the suit. The order prevents further distribution of dividend payments.

The apex controversy with the Elm Orlu Mining Co., owned by Hon. A. Clark and his son, was decided by the U. S. District Court in the latter's favor, but giving the Butte & Superior Co. all rights to the Rainbow lode east of the point where it enters the Black Rock claim; the company thus loses only the westernmost 301' along the vein claimed by it, but subject to the prior rights of the Pyle vein of the Elm Orlu company low its junction with the Rainbow. This will be argued in 1918.

In 1912 the controlling interests of the company passed into the hands of Hayden, Stone & Co., who have been closely identified with the Utah Copper Co., Chino, Ray and other of our greatest and most successful mining companies, thus ensuring ample finances and competent direction.

Labor conditions at Butte resulted in a large decrease for the third quarter of 1917. From 60,106 tons treated, the net profit was only \$95,320, against \$947,901 in the same period of 1916. In November, the output was 4000 tons of ore, yielding 12,000 tons of 49% zinc concentrate. Operations were 88% of normal.

In Nov., 1917, a syndicate, known as J. L. Bruce Trustees, was formed to acquire for the Butte & Superior 200 acres of zinc-lead ground W. of the Emma mine of the Butte Copper & Zinc Co.

Butte-New York Copper Co.

Controlled through stock ownership by Butte & Superior Mining Co.
General office: 25 Broad St., New York.

Officers: M. M. Ferguson, pres.; R. J. Schaefer, v. p.; W. G. Sargent, sec.-treas., New York; M. M. Ferguson, L. B. Holloway, Philip Lawrence, G. M. Minton, A. J. Ronaghan, W. G. Sargent and R. J. Schaefer, directors. Annual meeting 2nd Monday in January.

Inc. Oct. 17, 1906, in South Dakota. Previously a holding company controlling over 95% of the capital stock of the Butte-Milwaukee Copper Company. In 1914 it purchased all the assets of that company, comprising four claims in the Summit Valley mining district, Silver Bow Co., Mont., adjoining the property of the Butte & Superior Mining Co., and three claims in the Argenta mining district, Beaverhead Co., Mont. Claims aggregating 53 acres. **Cap.**, authorized, \$1,000,000; outstanding, \$582,172; par value \$1. The former authorized capital stock was \$4,000,000, consisting of 800,000 shares of par value of \$5 each; the stockholders, however, voted April 16, 1915, to change the par value from \$5 to \$1 per share, and to increase the amount of stock by 300,000 shares, making \$1,100,000 authorized. The Butte & Superior Mining Co. owns \$323,655 of the stock. Stock transferred at company's office. Registrars: Empire Trust Co., New York. No dividend paid.

Bonded Debt: \$150,000 First Mortgage Convertible Income Gold 6% dated June 1, 1916; due June 1, 1925; int. J & D 1 (up to and including June 1, 1920, interest is payable only out of income at rate of 6%, but is cumulative for that period; thereafter interest will be paid unconditionally). Coupon, \$100, \$500, and \$1,000. Authorized, \$500,000. The unissued bonds are reserved for future requirements. Convertible at any time prior to maturity into stock of the company at par. Subject to call on and after June 1, 1918, at 105 and interest. First offered (\$150,000) to stockholders of record April 19, 1915, at par, on the basis of \$100 bond for each 400 shares of stock held. Normal Income Tax deducted from interest.

Holdings consist of 4 claims, patented, known as the Pollock, Colonel Sellers, Florence and Bird, lying immediately north of the Butte & Superior, and 3 lode mining claims in the Argenta district, Beaverhead Co., Mont.

The Colonel Sellers claim has a promising surface showing with strong persistent quartz veins in granite. The Butte & Superior completed the sinking of the 1,200' Milwaukee shaft on Colonel Sellers claim and connected it by crosscutting with 1,200' level of Black Rock mine. This work was continued beyond the Colonel Sellers shaft so as to open the Mastodon vein on the Florence claim. The Milwaukee shaft is well equipped with power plant and hoist. The Butte & Superior Co. has spent \$24,000 in development work on the Butte-Milwaukee property and in return received 205,000 shares of the capital stock of the Butte & New York Co. Development work said to have proved good zinc orebodies.

Surface outcrop on Bird claim is 100' wide and resembles outcroppings of the typical fault veins of the district.

The Pollock mine has 4 veins, 2 more or less developed by a short tunnel and a 730' three-compartment shaft. A silver vein was opened on the 300' level and mine is said to have produced, years ago, about \$400,000 worth of ore, with values mainly in silver and gold, from above the 200' level. A little ore running 2% copper and 15 oz. silver per ton, with small gold values was produced, 1906.

BUTTE & ZENITH CITY MINING CO.**MONTANA**

Office and mine address: 30 E. Broadway, Butte, Mont.

Officers: I. Freimuth, pres.; G. T. Paul, v. p.; Sol. Genzberger, sec. John Killorin, treas.; preceding officers, W. D. Gibson, C. O. Baldwin and L. S. Loeb, directors, Wm. D. Gibson, supt.

Inc. Oct., 1912, in Montana. **Cap.**, 300,000 shares; \$10 par, issued. In 1915, 50,000 shares of treasury stock were offered for sale at \$3 per share to provide funds for further development work.

Property: 320 acres patented ground, all in a compact group in Secs. 19 and 20, T. 3., R. 8 W., about 2 miles west of the developed section of the Butte district and a short distance south of Silver Bow junction, where railroads meet. Ground shows Butte granite and aplite cut by numerous strong and persistent quartz veins and also the later fault veins which in the copper district of the Butte camp have proven so productive.

Development: by shaft, 1,500' deep, Oct., 1917, with a crosscut at 460' and crosscuts at 1,000' level showing good indications, with all surface veins in place. Shaft is being sunk to 1,500' level before developing the veins by drifting. Company hopes to finish this work in 1917. The veins show occasional values at the surface, but not in commercial quantities. The quartz veins are of the silver type, but the cross veins are similar to the copper veins of Butte. Samples taken from the shaft are said to assay 10% copper and 4 oz. silver. Equipment includes electric hoist, air compressor, and new electric pump of 400 gal. capacity and 1,000' head, which has been installed on the 1,000' level.

Property considered promising, and the work a meritorious mining venture.

AYUGA DEVELOPMENT CO.

MONTANA

Office: 616 Lyceum Bldg., Duluth, Minn. **Mine office:** Divide, Silver Bow Co., Mont.

Officers: C. T. Fitzsimmons, pres.; Nels Anderson, v. p.; E. J. Rourke, sec.; Max P. Shapiro, treas.; John Helehan, gen. mgr.; preceding officers, Jacob Stein and Jas. L. Norman, directors.

Inc. April 4, 1910, in Minnesota. **Cap.**, \$150,000; shares \$1 par, non-assessable; issued, \$65,000.

Lands: 4 claims, 80 acres, in the Fleecer district, 15 miles southwest of Butte, near the Oregon Short Line railway. Property shows granite, with dikes of porphyry, aplite and quartzite, carrying veins with a generally E.-W. strike, main vein being estimated to range 50 to 125' in width, payable for 2,000', carrying cuprite, melaconite, malachite, azurite, chrysolite, chalcopyrite, chalcocite and bornite.

Development: by 100' tunnel, and shafts of 45', 125' and 150', showing assay values up to 30% copper, and from a trace to 70 oz. silver per ton. The 125' shaft has crosscuts of 150' and 180', cutting the vein for an apparent width of 30'. The vein at this depth is nearly vertical. Idle, and no work reported done since 1912.

ARK MONTANA REALTY CO.

MONTANA

Address: 20 Exchange Place, New York City.

Is a close corporation, controlled by Hon. W. A. Clark, as a holding company for the Ophir mine, Utah; ½ interest in the Elm Orlu mine, Mont.; ½ interest in the Timber Butte Milling Co., Butte, Mont.; Sunset mine, Wallace, Idaho, and in general all the Clark properties in the northwestern States.

COLUSA-LEONARD EXTENSION COPPER CO.

MONTANA

See Tuolomne C. M. Co.

Officers: W. W. McDowell, pres., 804 W. Park St., Butte, Mont.; Guy Plepton, v. p.; Meyer Genzberger, treas.; W. E. Reynolds, sec.; preceding and J. Kaufman, directors.

Inc. Oct. 1, 1906, in Arizona. **Cap.**, \$5,000,000; shares \$5 par.

Property taken over May, 1916, by the Tuolomne C. M. Co. under an agreement whereby the T. C. M. Co. acquires a 51% interest in the C. L. property for sinking shaft from present depth of 800' to 1,600' and driving crosscuts on the latter level to the N. and S. boundaries of the group.

Property: 5 claims, patented, 42 acres, consisting of the Maggie placer, Hidden Hematite, Little MacQueen, Undine and Snow Bird placer, about one mile east of the Colusa and Leonard mines, and near the Pittsmtont of the East Butte Copper Co. There is an 800' three-compartment shaft on the Little MacQueen claim lying about the center of the group, which has cut several small stringers of ore assaying up to 9% copper, and one of commercial size, and there is a 7' vein of 2% ore carrying a

14" paystreak said to range 8 to 10% in copper tenor, with small gold and silver values and some lead and zinc.

Equipment: includes a good air compressor, a temporary hoist and a 400-gal. electric pump.

Property reopened August, 1916, and operated as a unit of the Tuolomne Co.

COLUSA-PARROT MINING & SMELTING CO.

MONTANA

Office: 503 Miner Bldg., Butte, Silver Bow Co., Mont.

Officers: Hon. Wm. A. Clark, pres.; Wm. C. Siderfin, v. p.; W. C. Messias, sec.

Inc. Nov. 26, 1897, in Washington. **Cap.**, \$500,000; shares \$50 par. Company is practically out of business, its only present property being lands, platted as an addition to the city of Butte. Has an asset of considerable value in a million-ton tailing dump at the Butte Reduction Works, which is being treated at the present time.

CONSOLIDATED CENTRAL BUTTE COPPER CO.

MONTANA

Office: care R. M. Cobban, sec., Butte, Mont.

Officers: R. R. Jones, pres.; R. H. Wearing, v. p.; D. J. Charles, treas. and E. E. Hershey, directors.

Inc. Oct. 29, 1906, in Montana. **Cap.**, \$1,200,000; shares \$1 par, assessable; issued 446,000 shares. Has levied 3 assessments, aggregating 6¼ cts. per share, or about \$28,000. Annual meeting, second Thursday in January.

Owms a one-third interest in the North Star, South Star and January claims, patented and mineral and mining rights in about 110 acres of patented placer claims. The North Star, South Star and January claims are developed by a 225' shaft, said to show an orebody 3 to 6' wide. Idle several years for want of working capital.

CRYSTAL COPPER CO.

MONTANA

Office: 85 Devonshire St., Boston, Mass. **Mine office:** 74 Hirbourn Block, Butte, Mont.

Officers: W. W. Clarke, pres.; Bowdoin S. Parker, v. p.; Eugene H. Walker, sec.; Walter Harvey Weed, managing director, with Geo. W. Clement, Louis H. Goddu and John E. Allen, directors.

Inc., 1916, in Maine. **Cap.**, \$1,000,000; shares \$1 par; 610,000 shares outstanding, May 31, 1916. Stock listed on New York and Boston Curb. Federal Trust Co., Boston, Security Transfer & Registrar Co., New York, transfer agents; Old South Trust Co., Boston and Security Transfer & Registrar Co., New York, registrars. Annual meeting, April 1.

Property: the Goldsmith mine, 16 acres, at Butte, Mont., held under bond and lease. Mine has shaft 367' deep developing 3 veins from which about \$1,500,000 worth of silver ore has been produced. Mine covers the western split of the Rainbow lode and lies west of the Moulton, Alice, Magna Charta mines on Butte's richest silver belt. Company will deepen shaft and develop veins on the 450' and 550' levels.

Also owns an undivided half interest in the Commerce, Crystal, Jack Fraction and St. Lawrence claims and all of the Mammoth claim, total of 84.59 acres, in Cataract district, Jefferson Co., Mont., 8 miles N. of Basin, on the Great Northern R. R., located about 25 years ago. It lies within the quartz monzonite area extending northward from Butte to Helena, which contains many old mines, notably the Comet, with a production of several millions, only a few miles N. of the Crystal and the Alta, which produced \$17,000,000, still further N., at Wickes.

The Crystal vein is a typical compound fissure vein 30' to 40' thick between granite walls; it extends for about 4,650' through the property, and where exposed for 1,200' in the mine workings contains footwall ore shoots that yield 3 to 6% copper, \$8 to \$9 gold, and \$6 to \$13 silver, per ton. The nature of the vein appears to indicate persistence of its present character in depth and along its course. Developed by 1,200' Crystal tunnel and the 890' Mammoth crosscut tunnel, 200' below the upper tunnel level.

The lower Mammoth tunnel cuts the vein at 871' from the portal and allows it for 600'. Low-grade material was encountered for the first 250', and at 400' from the crosscut ore carrying 1½% copper, 14.6 oz. silver, and 3.40 gold, was cut. It appears that the ore shoots dip W.

For geology, see Eva May and Bullion mines, Bull. 527, U. S. Geological Survey, pp. 122 and 124, 1913.

In the block of ground above the Crystal tunnel for 50 to 150' there is ore available for milling. The real value of the property can only be determined by deeper development and an extension of the two tunnels west to prove vein below the other claims.

Shipments up to June 1, 1917, representing a year's development work and extraction from a small stope above the upper tunnel, aggregated over \$4,000 net smelter returns, values running between \$12 and \$22 per ton for the copper ore. About 150 tons of lead ore was also produced from an ore band parallel to the copper ore and about 5' from it.

It is planned to erect a rope tramway to eliminate 2 miles of steep wagon haul for the ore and if development warrants it, to put up a concentration mill.

In September, 1917, all the copper ore above the upper tunnel had been stoped out, but zinc ore was exposed in considerable amount and shipments of this and of silver lead ore were begun. Shipments of zinc ore in October aggregating about 400 tons, yielded \$3,965 net, smelter returns.

DAVIS-DALY COPPER CO.

MONTANA

Office: 79 Milk St., Boston, Mass. Mine: Butte, Mont.

Officers: H. M. Burton, pres.; Wm. Bloom, v. p.; Charles G. Schirmer, sec.-treas.; preceding with F. M. Kimball and F. A. Schirmer, directors. E. L. Creden, gen. mgr. Wm. Frazier, mine supt. Federal Trust Co., Boston, transfer agt.; State Street Trust Co., Boston, registrar.

Inc. Sept. 14, 1908, in Maine, as successor of Davis-Daly Estates Copper Co. Cap., \$6,700,000; shares \$10 par, assessable; issued, \$6,000,000; paid \$50. Annual meeting 4th Tuesday in September.

For the earlier chapters in the history of the company, readers are referred to description of the Davis-Daly Estates Copper Co., in Vol. VIII, and to a spicy account by Stevens in Vol. X, of the Copper Handbook.

Comparative Balance Sheet: June 30, 1915 to June 30, 1916, shows: assets, mining property, \$4,106,680 in 1915; \$4,106,671 in 1916; construction and equipment, \$110,159 in 1915; \$108,083 in 1916; development, \$1,359,366 in 1915; \$1,404,392 in 1916; investments, \$14,800 in 1915 and 1916; accounts receivable, \$12,867 in 1915; \$31,986 in 1916; cash, \$66,236 in 1915; \$93,831 in 1916. Liabilities: capital stock, \$4,800,000 in 1915; \$5,100,000 in 1916; notes payable, \$65,000 in 1916; accounts, wages and taxes payable, \$20,475 in 1915; \$35,778 in 1916. Income and expense account for fiscal year ending June 30, 1916; total income accrued (ore sales, \$229,789), \$236,991; mining cost, \$194,667; development, \$62,460; misc. expenses, \$26,997; deficit for year, \$47,335.

In first quarter 1917, ore sales amounted to \$250,396; misc. income, \$817; total disbursements, \$179,547; profit for 3 months' operations was \$3,666, compared with a deficit of \$27,504 for same period in 1916. In second quarter, 1917, ending June 30, net profits were \$75,732. Treasury balance was \$160,000. In third quarter, 1917, there was a deficit of \$12,010, on a gross revenue of \$109,560 and expenses of \$121,750.

Property: a small surface area and mineral rights of 320 acres under the city of Butte, adjacent to, but south and west, of the known productive area.

Development: consists of the Colorado shaft, 2,542' deep, with drifts and crosscuts. Development work for fiscal year 1915-1916, amounted to 9000'. The chief workings are on the 1,000', 1,200', 1,400', 1,500', 1,700', 2,000', and 2,500' levels, 60% of the ore mined during 1916 coming from the 2,500' level.

Geology: two main veins have been developed, running in N. W.-S. E.

direction corresponding to the Blue Vein system of which the Jessie, Edith May and other very productive fault veins belong. There are also several east and west veins on which but a small amount of development has been done until recently. The first ore developed was on the "Fisher stopes" on the 1,400' level, 350' west of the Colorado shaft, showing an orebody 400' long, 7½' thick and 100' high, averaging 2.9% copper and 5.6 oz. silver per ton. The same vein was extensively developed down to the 1,700' level.

The veins are frequently faulted and a careful study of geological conditions is necessary to successful recovery of veins beyond the faults. The shaft was sunk to depth of 2,035' in 1912, and new crosscuts showed ore in several small fault veins, barren on the 1,700' level.

The Hesperus vein, the principal ore producer of the mine, was opened 1913 by a crosscut 85' south from the old Heinze workings on the 1,400' level, where it showed 12' of high-grade ore beneath the Hesperus claim. Drifting on this, together with crosscuts at other points, proved an orebody 12' to 14' wide, averaging 4.43% copper and 7 oz. silver per ton, for 325' in length. This ore shoot thinned out to a non-commercial width a few feet below the 1,200' level. Efforts made to find the faulted section of the vein beneath the Rarus fault, on both 1,400' and 1,500' levels have so far been unsuccessful. The Hesperus ore shoot was mined in V form for a height of about 300' and an average length of 150' and produced more than 60% of the total tonnage mined by the company since its organization to 1913.

Results of mining operations on upper levels, 1913-1914, being disappointing, the company decided to discontinue mining and to sink the shaft 500' deeper, for which a 50c assessment was levied. Shaft sinking started in May, and was completed to 2,500' level in December, 1914. During fiscal year ending June 30, 1915, no development of any consequence was done above the 2,500' level and the ore extracted from drift development, came from this level. While driving the crosscut to the No. 1 Hesperus vein on the 2,500' level a vein of good ore was reported to have been found. This vein was drifted on for 450' during 1916 and with exception of short stretches of faulting, the orebody has proved continuous throughout this distance, although of somewhat lower grade. No. 1 Hesperus vein was reached in August, 1915, 670' from the shaft. At this point, commercial ore, 10' wide, is said to have been cut and shipments made of ore coming from drift development work. Company owns 2,500' on the length of vein.

Shaft has recently been enlarged from 1,700' to 1,900' level, making it 3 compartments from the 2,500' level to surface.

The western half of the property is practically undeveloped. A long crosscut from the Original mine explored the ground, but failed to develop commercial ore. Upon the Silver King claim, 2,500' N. W. of the Colorado shaft, the Sutton shaft, 310' deep, developed ore, shipments of 489 tons carried 3% copper, 2½ oz. silver, and 86 cts. gold. As this western half of the property was entirely undeveloped, an arrangement was made with the Anaconda Co., to drive a crosscut south from the West Gagnon mine at a depth of 1,900'. The result was disappointing.

Besides the 2 shafts already mentioned, there are several old openings on the company property. The Smokehouse shaft, across the street and south of the Thornton hotel, is 700' deep and lost the vein on the 500' level. The Mount Moriah mine has a 640' three-compartment shaft and the ground is explored by a crosscut 2,000' long from the 1,800' level of the Original mine. When seen by the writer, the veins cut in this crosscut showed no payable ore, but not a foot of drifting had been done to disclose conditions along the strike of these veins. Leasors at the Mt. Moriah shaft reported 7' of ore on the 250' level, assaying 28 oz. silver, 18% lead and 18.2% zinc, October, 1917. There are various other shallow workings on the property held by this company, which it must be remembered, is a tract 1¼ miles long by one-half mile wide. These old workings yielded considerably over \$1,000,000, principally in silver from the enriched surface ore.

Considerable work is being done at the Hibernia mine developing the manganese orebodies. The mine adjoins the Nettie of the Anaconda Co. Old workings being reopened are reported to have exposed silver ore at 600' depth, Oct., 1917.

Equipment: a new hoist was installed early in 1917, with a capacity of ½ tons per trip and speed of 2,000' per minute at depth of 4,000'. There is an electric-driven air compressor, and a large battery of boilers ready for action, in case electricity is cut off. The ground around the shaft being limited, the output at the mine is conveyed several blocks over a narrow-gauge surface tram to ore bins alongside the Northern Pacific railroad.

Production: the 1916 output amounted to 20,511 tons, averaging 4.04% copper and 5.366 oz. silver, and giving net smelter returns of \$11.20 per ton. Mining cost per ton was \$7.22. Shipments for first quarter, 1917, amounted to 12,503 tons, yielding 1,126,921 lbs. copper and 68,830 oz. silver. For second quarter ending June 30, produced 12,326 tons, yielding 1,158,356 lbs. copper and 71,535 oz. silver. For third quarter, 4,275 tons yielded 498,111 lbs. copper and 26,075 oz. silver.

The Davis-Daly ground has been generally considered to contain only low-grade and base zinc-pyrite ores and to be outside the copper section of Butte camp. Developments show, however, that good copper ores exist and that the extensive area of unexplored ground will make this property profitable one. Under Mr. Creden's management the property will certainly receive proper exploration and development and it is believed the company will eventually be a dividend payer.

AGLE MINING CO.

MONTANA

Idle. Care Harper McDonald Co., Lewisohn Block, Butte, Mont. Hon. Patrick Mullins, Arthur V. Corry and Thos. Bryant, directors.

Inc. March 10, 1906, in Montana. **Cap.**, \$150,000; shares \$1 par; is supposed to have increased capitalization, April 29, 1907, to \$250,000, shares 1 cts. par.

Property: north of Walkerville, has a 250' shaft, showing a 5' vein. Mine is dismantled, but worthy of further prospect work.

EAST BUTTE COPPER MINING CO.

MONTANA

Office: 85 Devonshire St., Boston, Mass. **Mine and works office:** Butte, Silver Bow Co., Mont.

Officers: Robt. H. Gross, pres.; Hon. Jas. H. Reed, v. p.; Wm. P.verts, sec.; Frank P. Son, treas.; Oscar Rohn, gen. mgr.; preceding, with Ward Paine and Wm. A. Paine, directors; Andrew J. Ray, mine supt.; John E. Rothwell, mill supt.; Julius H. Warner, engr.

Inc. Oct. 14, 1905, in Arizona. **Cap.**, \$3,000,000; shares \$10 par; increased, May 11, 1909, to \$6,000,000, shares \$10 par, non-assessable; issued \$1,100,000. Has about 2,500 shareholders. State Street Trust Co., Boston, registrar; American Trust Co., Boston, transfer agent. Stock is listed on the Boston Stock Exchange and N. Y. Curb. Annual meeting, 1st Monday April. Initial dividend of \$1 a share paid Jan. 29, 1917.

The East Butte Copper Mng. Co. has no indebtedness. It owns all of the outstanding bonds and all preferred stock of the Pittsmtont Copper Co., the latter amounting to \$1,000,000 par value; also four-fifths of the common stock, amounting to \$4,000,000 par value. East Butte Co. works the property the Pittsmtont Copper Co. under an operating agreement.

Annual report for year ending Dec. 31, 1916 shows net surplus on operations of \$1,565,769 as compared with \$782,997 in 1915, \$222,252 in 1914 and \$531,772 in 1913. It shows cash and copper, \$2,214,568, accounts receivable, \$11,928, with accounts payable, \$1,219,600.

The 1917 operations were curtailed by six weeks shut down due to labor strike. For the fiscal year ending June 30, 1917, net proceeds were \$257,213 compared with \$1,070,069 in 1916. Though ore extraction was 9,385 tons, or but 265 tons greater than in previous year, its gross value was \$6,064,418, or \$24.32 per ton, contrasted with \$4,503,700, or \$18.76 per ton in 1916.

Property: the Dutton group, 134 acres, held by placer patent, is in the S. E. part of the Butte camp near the Pennsylvania mine.

Miscellaneous holdings include the Swissmont group of 6 claims, near Elkhorn, Jefferson Co., Mont., and the Chamounix group near Austin, Lewis & Clark Co., Mont., including the Christina group of 6 claims and the Fannie Parnell group of 33 claims. The Swissmont group has developed a considerable tonnage of low grade oxidized gold ore carrying an excess of iron over insoluble material, which ore has had value from its combined fluxing character and gold content.

The Chamounix group has shipped some silver-copper ore in the past but is now idle. Company also has timber operations at Feely, Mont.

A mill was erected at the Elkhorn property in 1917, but owing to scarcity of labor and increased cost of cyanide, operations were postponed until conditions become more favorable.

Geology: the Pittsmtont claims cover 280 acres of flat valley bottom, about $1\frac{1}{2}$ miles east of Butte and extending outward from the footslopes of the continental divide mountain ridge. The ground is a filled-in valley, the sandy wash and debris being in places several hundred feet deep, so that no outcrops of any kind exist on the ground. The underlying rock is the normal Butte granite (quartz monzonite) which is cut by 3 systems of veins: Northwest, corresponding to the Blue Vein series of Butte; Northeast, and an East-West vein series. Ore shoots occur in veins of each series.

Development: 2 shafts, Nos. 2 and 3, 1,830' and 1,240' deep, respectively. Shaft No. 2 in the working shaft. Levels are opened from it at 800', 1,000', 1,200', 1,500' and 1,800'. The 1,500' level is producing 25% of mine output, while some ore has been developed on the 1,800' level. The zone of oxidation and leaching of copper values extends from 500' to 700' below the surface. Underground workings amount to about 16 miles. There are some 12 principal veins on the property that have been productive. While these veins are not wide, usually under 5', the ore shoots are long and persistent. At least 2 veins on the 800' level have been stoped almost continuously for 1,500' in length. Though the 800' level has been the most productive level opened to date, due both to an increase primary mineralization and secondary enrichment which has affected the lower levels to a much lesser extent, the lower levels continue to yield strong ore shoots of commercial grade, though lower in values than ore from upper levels. Development for 1916 consisted of 12,027' of drifting and crosscutting.

Orebodies between the 600' and 800' levels on number 6 vein were largely exhausted in 1916, and although development work is being done, prospects are not favorable for maintaining 1916 output in 1917. Below the 800' level the major portion of the strong E. W. vein from which principal production has come, will dip outside of East Butte property.

Equipment: consists of hoisting plant, milling flotation plant and smelter. The above includes a 2,000-h. p. steam plant, 2,000-h. p. electric plant, 600-h. p. steam hoist good for 2,000', and 50-h. p. steam hoist good for 1,500'; a 25-drill Nordberg and 25-drill Rand air compressor, and 50 power drills. Electric power is used for practically everything except hoisting. There are about 20 buildings, which include the smelter, sinter plant, 2 engine rooms, change house, boiler room, concentrator, flotation plant, carpenter, machine and electric shops, sampling mill, laboratory and office building. The smelter building contains one 600-ton blast furnace and one 300-ton furnace with 3 basic lined converters. The sintering plant contains one 42" Dwight-Lloyd sintering machine. Concentrator is equipped with crushers, jigs, tables, etc., and flotation plant is equipped with tube mills and Janney flotation machines. The capacity of concentrator is 600 tons and of flotation plant 800 tons, the additional capacity of flotation plant to be used in reworking tailings.

The Pittsmtont reduction plant is the only operating smelter in Butte and does a considerable amount of custom business, treating ore from several independent mines.

Operations compare as follows:

	1916	1915	1914	1913
tons ore mined	258,899	150,911	72,853	105,071
assay value	3.67%	4.28%	4.72%	5.16%
cost min. per ton, incl. develop....	\$5.46	\$4.37	\$5.39	\$5.08
Tot. tons ore tr'd	336,057	181,063	110,992	186,813
lbs. copper prod.....	18,340,713	12,542,058	9,175,579	14,401,108

oz. gold prod.....	3,844	2,696	2,219	8,803
cost inc.....	\$5,523,688	\$2,753,587	\$1,455,454	\$2,645,568
Total costs	3,198,317	1,699,602	1,048,856	1,881,112
Balance	2,325,371	1,053,985	406,597	764,455
cost add. to equip., expl. & devel..	294,191	214,691	136,101	188,619
surplus	1,565,769	782,997	222,252	531,772
price per lb. rec.....	28.1978c	19.3143c	13.5685c	15.085c
cost prod. per lb.....	16.8878c	11.8538c	11.11c	11.04c

Average assay of ore mined in 1916 was 3.67% copper as compared with 8% in 1916. This is due to the fact that with increased metal prices, lower grade ore was mined.

Increased cost of production is due to abnormal labor and material charges which were 30% above normal in 1916.

Production for 11 months of 1917 totaled 17,749,348 lbs. copper, against 102,260 lbs. in that period of 1916. During July and August, 1917, the plant was closed for 6 weeks.

EAST BUTTE EXTENSION COPPER MINING CO. MONTANA

Idle. Office: 113 Hamilton St., Butte, Silver Bow Co., Mont.

Officers: Chas. J. Schatzlein, pres.; Philip A. Breen, v. p.; Frank H. Honey, sec. and gen. mgr.; Dr. C. E. Blackburn, treas.; preceding, with as N. Joyce, directors; A. F. Munroe, engr.

Inc. April 10, 1906, in Arizona. Cap., \$1,000,000; shares \$1 par; issued, 6,000. Paid, Oct. 1, 1906, a 1% dividend, amounting to \$2,486.

Stock listed on Butte Exchange.

Property: various fractional claims, 4 acres, lying between the Belmont, Pennsylvania and Ground Squirrel mines of the Anaconda developed 6 shafts, deepest the 250' two-compartment No. 6 shaft, begun 1909, with out 500' of crosscuts. The Westlake and Wall mines are said to have been produced, under former ownership, about \$300,000 worth of ore. The two-compartment No. 1 shaft is 170' deep, and the 200' No. 2 shaft shows ore averaging up to 13% copper and 1 oz. silver per ton. No. 3, formerly known as the Westlake, has a small precipitation plant.

Lessee's shipments of 40 tons daily, with net smelter returns of \$37,21, yielded the company a net royalty of \$12,881.83 in 1907. Company owns a divided one-half interest in the Centerville claim, and undivided interests as follows: one-half in Malone; eleven-sixteenths in Little Evelyn; one-sixth in Valley Forge; one-half in Gregory; one-fourth in Simon; one-eighth in Eureka First; three-fortieths in Lost Fraction, and three-fortieths in Katy T.

Lessees operating in 1916 shipped several carloads of 8% copper ore on the 200' level. East Butte Extension is reported to receive 15% royalty on all ore shipments.

W ORLU MINING CO. MONTANA

Office: Miner Bldg., Butte, Mont. W. A. Clark, Jr., pres. and gen. mgr.; A. Clark, v. p., owners; W. D. Mangam, sec.-treas.; J. C. Pyle, cons.

Inc. 1907. Cap., \$100,000; shares \$10 par. Statements filed with Assessor Silver Bow County for years ending May 31:

Ore Tons	Value per Ton	Costs				Net Profit
		Mining	Const.	Trans.	Reduct.	
175,236	\$22.65	\$846,568	\$199,439	\$492,375	\$1,563,745	\$867,333
200,752	18.52	1,011,537	18,029	408,823	1,783,352	495,751

Company owns the Elm Orlu mine and claim of that name adjoining the Butte & Superior holdings, the Badger State mine of the Anaconda Copper Co. and the Pilot Butte mine, all in the N. E. section of the Butte district. The Poser claim is owned by a separate company.

The Elm Orlu covers part of the Rainbow lode and several other veins containing large bodies of copper ore and immense bodies of zinc ore. Copper occurs as copper glance both in secondary fault veins and in veins of the Rainbow lode, and also as chalcopryrite mixed with zinc ore. The mine has a 2,100' shaft and several miles of workings, principally below the 900' level.

The output of the mine is handled in the mill of the Timber Butte Milling Co. (which see), also owned by Senator and W. A. Clark, Jr.; zinc concentrates go to the National Zinc Co.'s plants at Bartlesville, Okla., and Springfield, Ill. The copper ore is shipped direct to the Anaconda smelter the mine yielding from 50 to 100 tons a day during 1915.

The apex controversy with the Butte & Superior Co. was decided by the U. S. District Court in favor of the Elm Orlu Co., giving this company the westernmost 301' along the vein and Butte & Superior all rights to the Rainbow lode east of the point where it enters the Black Rock claim (B. & S. Co.); subject, however, to the prior rights of the Pyle vein of the Elm Orlu Co. below its junction with the Rainbow.

Timber Butte Milling Co.

Affiliation of Elm Orlu Mining Co., Butte, Mont. Owners: W. A. Clark, Jr., pres. and gen. mgr.; W. A. Clark, v. p.; W. D. Mangam, sec.; J. K. Heslet and A. J. Johnston, directors; W. N. Rosenberg, supt.

Cap., 1,000 shares; \$100 par. A close corporation.

The mill was erected to concentrate zinc ores of the Elm Orlu mine. Capacity 750 to 1,000 tons daily. Process, gravity separation and flotation. Crushing is by rolls and Hardinge mills; separation by tables and Mineral Separation, Ltd., flotation machines. Electric power is supplied by the Montana Power Co. Mill began operations about May 1, 1914. Recovery over 93% and concentrates average 52% zinc.

FARRELL COPPER CO.

MONTANA

Idle. Mine at Butte, Mont.

Officers: W. C. Lewis, pres.; Carlton H. Hand, v. p.; J. D. Slemons, sec.-treas.; above, with A. T. Morgan, Walter C. Lewis, Donald Campbell, W. H. Hall and Daniel Tewey, directors.

Inc. July 24, 1906, in Montana. Cap., \$1,000,000; shares \$2.50 par.

Property: 17 acres, in the S. E. part of the Butte district, has a 200' shaft, sunk jointly with the Alliance Copper Co. Crosscut on the 200' level shows a little ore carrying copper, lead, zinc and silver values.

GIRARD COPPER CO.

MONTANA

Idle. Officers: George J. Kirby, pres., Willimantic, Conn.; Geo. R. Grantbam, sec., Kimball Bldg., Boston, Mass.; E. C. Denton, supt., Warm Springs, Mont.

Inc. 1913, in South Dakota. Cap., \$10,000,000; shares \$10 par; 601,120 issued; 501,000 shares pooled. Admitted to quotation on Boston curb, for 1913. Officers, Jan., 1913. Annual meeting in Jan. First Nat'l. Bank, Boston, Ex. Trust Co., Boston, transfer agents.

Property: 20 claims, partly patented, 400 acres, 5 miles from Warm Springs, and 10 miles N. W. of Butte. Ore occurs as a sulphide in 5' to 10' vein, between monzonite and aplite, assaying 4-8% copper, 1/2 to 1 oz. and 2 oz. gold.

Development: by 60' Jack Pot shaft and 150' tunnel. Assessment work done.

BUTTE COPPER CO.

MONTANA

Successor of Butte & Bacorn Copper Co.)

Address: 53 Silver Bow Block, Butte, Mont.

Officers: F. W. Bacon, pres.; H. H. Robinson, sec.; C. Hyde, treas.; the

ove (excepting C. Hyde) with J. B. Finley, W. B. Schiller, C. W. Brown, Henry Fownes, R. C. Patterson and C. G. McIlvain, directors.

Inc. 1916, in Montana. **Cap.**, \$1,000,000; shares \$1 par; 850,000 outstanding; non-assessable.

Is a reorganization of the Butte & Bacorn Copper Co. The Great Butte took over the property in July, 1916, paying 400,000 shares of its own stock, and liquidating the Butte & Bacorn debts.

Property: 23 patented claims, one mile N. of the Butte & Superior line. Holds under option the Calumet, Moonlight, and Jasper Lode claims of 46 acres. Shallow workings said to show profitable copper ore. Veins are large and numerous.

Development: on 1,500' level is now underway. Company has enough cash to do 5,000' of horizontal work.

GREENDALE EXPLORATION CO.

MONTANA

See Butte & London Copper Dev. Co.

Controlled by Rainbow Lode Development Co. When the Rainbow Lode Dev. Co. wished to acquire the Butte & London property at Butte, Mont., several years ago, it was not practicable to recall a majority of the outstanding stock of that company; the Greendale Exploration Co. was organized to meet the emergency. The property of the Butte & London was transferred to this company, the Rainbow Lode Dev. Co. receiving 75% of the stock in return for certain development work (see Rainbow Lode Dev. Co.); the remaining 49% is held by Butte & London Copper Dev. Co.

MINES OPERATING CO.

MONTANA

Office: H. A. Frank, sec., Daly Bank Bldg., Butte, Mont.

Officers: Alfred Frank, pres. and gen. mgr.; C. W. Whitely, v. p.; with W. MacGinniss, and E. L. Newhouse, Jr., directors; G. D. Deshler, supt. Inc. 1916, in Delaware. **Cap.**, \$100,000; shares \$1,000 par.

Operating the Butte-Duluth and Bullwhacker mines on E. side of Butte, under bond and lease. Ores average about 1.4% copper, and are treated by acid leaching at rate of 300 tons daily. See Butte-Duluth Mining Co.

NORTH BUTTE EXTENSION DEVELOPMENT CO. MONTANA

Office: 25 Broad St., New York. **Mine office:** O'Rourke Estate Bldg., Butte, Mont.

Officers: H. G. Bell, pres.; A. J. Ronaghan, sec., with I. A. Heilbronner, Bruce MacKelvie, Elbridge L. Adams, David Angus and C. W. Peters, directors.

Inc. Oct. 10, 1908, in Maine. **Cap.**, \$1,500,000; shares \$1 par; issued, \$49,036. Is a reconstruction of the North Butte Extension Copper Mng. Co., which was a reorganization of the North Butte Extension Mng. Co. Controlling stock interest of \$800,000 was sold, March, 1910, to the Butte Superior Mng. Co. Annual meeting in September.

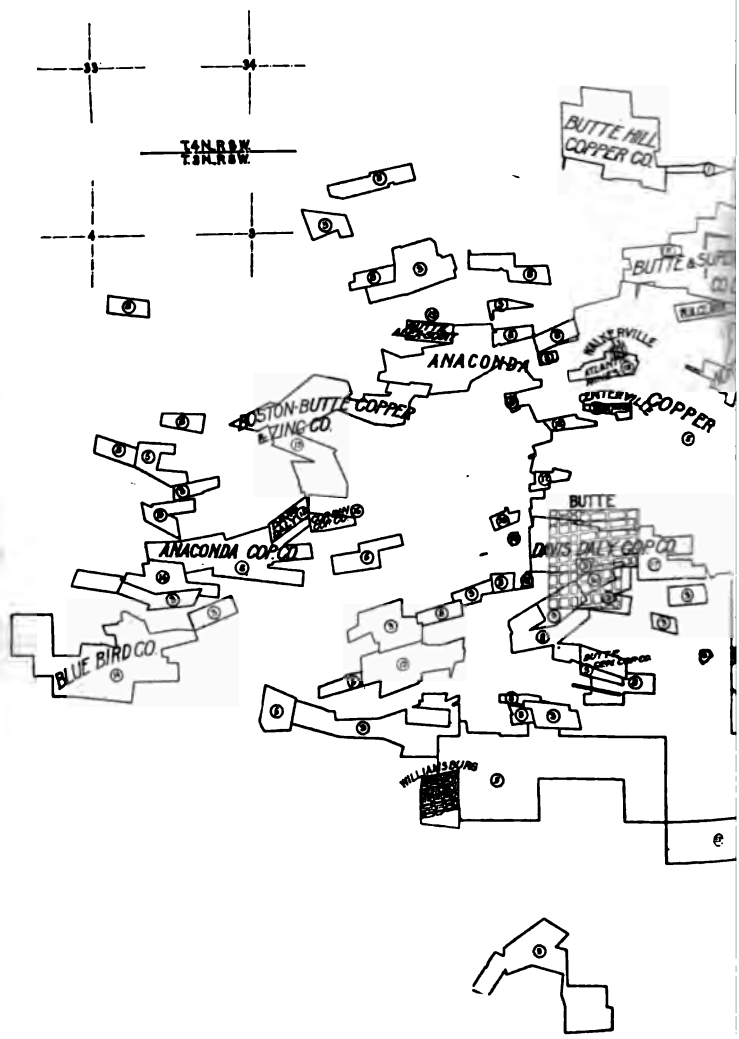

Suit was instituted by the Butte & Superior interests against the promoters of the North Butte Extension Development Co. to recover shares of stock claimed to have been illegally issued and a proposal to return 50,000 shares was made and accepted by the company.

Apparently the company's only present property is the Overman claim, Black Crow fractional claim of 2½ acres and the Clipper and Assay sites.

Development: by a 700' shaft, planned to be deepened to 1,000'.

The ground on which the various North Butte Extension companies organized was held only under options which were forfeited. A claim was developed by a long crosscut from the Butte & Superior, but nothing of importance was found and after payments the claim was abandoned. Much of the original ground held by the company is now owned by the Rainbow Development and Butte & Superior companies.

According to the contract with the Butte & Superior, the latter company will have a crosscut on the 1,200' level through the Four Johns claim

PROPERTY MAP OF

- Holdings are as follows: (1) Butte & Bacorn; (2) Butte Duluth; (3) Largey Estate; (4) Rainbow Lode Development; (5) Anaconda; (6) A. V. Corry; (7) North Butte; (8) W. A. Clark; (9) Rampart Mountain; (10) A. V. BUTTE GREAT FALLS.

W. COPPER CO.

4.

7E, MONTANA

1917 production of Butte to the end of 1917 is approximately as follows: copper, 1,000,000 lb. worth \$1,020,000,000; gold, 1,600,000 oz. worth \$32,000,000; lead, 1,000 lb. worth \$2,000,000; silver, 310,000,000 oz. worth \$220,000,000; and zinc 10,000 lbs. worth \$65,000,000; the total value being \$1,342,000,000.

and through the entire length of the Overman claim belonging to the North Butte Extension Co. The total exploration E. of the 1,221' crosscut of the Butte & Superior was 3,318', after which work was abandoned at the property.

NORTH BUTTE MINING CO.**MONTANA**

Business office: Suite 3300, 120 Broadway, New York. **Statutory office** 1500 Alworth Bldg., Duluth, Minn. **Mine office:** 14 West Granite St., Butte Mont.

Officers: Thomas F. Cole, pres.; Robert Linton, 1st v. p.; Joseph B. Cotton, 2nd v. p. and gen. solicitor; Frederic R. Kennedy, sec.-treas.; Henry B. Paull, auditor; Norman B. Braly, gen. mgr.; Leslie D. Frink, supt. **Directors:** Robert Linton, Francis DeC. Sullivan, William D. Thornton, Joseph B. Cotton, William F. Bartholomew, G. Ashley Tomlinson, Thomas F. Cole, Henry B. Paull and Frederic R. Kennedy. Transfer agent: American Trust Co., Boston. Registrar: Old Colony Trust Co., Boston. Stock is listed on Boston Stock Exchange.

Inc. April 5, 1905, in Minnesota. Cap., \$9,000,000; shares \$15 par 430,000 issued.

(d) Deficit.

Dividends paid since organization of company per share: \$1.25 in 1905; \$7.25 in 1906; \$6 in 1907; \$3 in 1908; \$4 in 1909; \$1.10 in 1910; \$1.20 in 1911; \$1.70 in 1912; \$2 in 1913; \$1.50 in 1914; 90c in 1915; \$2.50 in 1916, and \$2.50 to Oct. 30, 1917; total \$34.90 per share, or \$14,226,500. Dividends reduced to 25c quarterly, Oct., 1917.

Property: consists of two groups of claims, one of about 220 acres on Butte Hill and the other about 790 acres on the Butte East Side mineral area.

Also owns a smelter site consisting of 1,376 acres, and water rights 20 miles from Butte, 8 miles from Anaconda and near the tracks of M. & St. P. Railway and Northern Pacific Railroad.

In order to give a more regular outline to the company's property and to avoid controversies over extralateral rights, exchanges of acreages have been made between the North Butte and Anaconda companies and agreements have been made between the N. B. and Tuolumne companies covering ownership and rights to certain parts of the Jessie vein. An undivided one-half interest in the Granite Mountain claim was acquired from the Wisconsin, the company to sink at its own expense the existing shaft from the 500' to the 2,000' level and make certain connections and explore for the title to the shaft remaining with the North Butte company. During 1912 and 1913 company purchased by cash payments and 20,000 shares of the company's stock, the entire and undivided interest in the lode claim

ted in the Butte East Side mineral area. This area lies about 2 miles of Anaconda hill, between the bed of Silver Bow Creek and the Conital Divide, and is adjacent to the A. C. M. Co.'s Tropic mine and the smont mine of the East Butte Company. Development is now in progress on the property by shafts and tunnels.

The Speculator group, or Butte Hill property is traversed by a number of fault veins, mostly belonging to the Blue vein series. These veins carry high-grade ores in shoots, which have thus far been remarkably persistent in depth. The ores carry much primary chalcocite, frequently associated with considerable quantities of enargite and smaller proportions of various sulphides. All ores carry silver and lesser gold values. The veins are "heavy," requiring close attention and timbering with square sets, the timber used being about 1,000,000' board measure. No waste is used, all being used for dry-filling. Waste is largely low-grade ore, a portion of which may be available for smelting at some future date and which can be extracted easily.

The exploration of the vein system has shown the necessity of thorough work along the veins at considerable depth and development on all levels down to the 3,000' has opened up profitable orebodies.

The principal ore supply comes from the following veins, named in order of occurrence from the south boundary of the mine northward: Speculator, Adirondack, Edith May, Hancock, Jessie, Gem, South Croesus, North Croesus, Snowball and Berlin. Of these 9 veins the Speculator, Adirondack, South Croesus and Snowball belong to the older vein system, Hancock possibly so, and the others are well known members of the Blue vein, or Northwest fault vein series. The Edith May and the Jessie were the principal ore producers of the North Butte in the early operation of the company.

The Edith May is 18' to 42' in width above the 2,600' level, opened at intervals from the 800' level downward. Below the 2,000' level the thickness of ore in the vein is 8' to 12'. The vein was of little value until the 2,000' level was reached, after which there was a marked improvement, resulting in the 1,800' level, which developed a vein up to 42' wide, carrying phenomenally high-grade ore, many of its stopes being practically all high-class ore for a distance of about 1,000' along the floor. The 2,000' level showed a slight decrease in average value, as well as in the length of the shoot.

Work on the 2,400' level has disclosed a 6' footwall band of 4.25% ore 25'. Besides this the vein has a fine hanging-wall orebody which, on the 2,600' and 2,800' levels, shows 4½' of 4 to 4.5% ore for several hundred feet.

On the 3,000' level the hanging-wall side of the vein has been developed for 365', ore averaging 5' in width and assaying 5.1% copper. The main side is about 3½' in width, assaying about 3.7% copper. The Edith May vein divides east of the shaft, showing no commercial ore in the main branch, but these branches unite some distance west of the shaft. On the 2,000' and 2,200' levels there are 2 fault planes, defining the limits of a better grade of ore, these faults diverging in their downward course. The Jessie vein ranks next to the Edith May in production and promise. It was opened on the 700' level in the Gem crosscut, the Jessie showed a shoot of about 10' width with bunches of 6% ore. The ore shoot found on the 2,000' and 2,200' level was high grade, 8' wide and nearly 1,000' long, showing in character below this depth and showing considerable sphalerite in drifts to the west. On the 2,200' level, the vein is about 12' wide, carrying some ore up to 5% in copper tenor, but averaging materially lower than the ore in the workings above. The west drift on the 2,000' level developed a 150' ore shoot, 6' wide, carrying 6% copper and 7.5 oz. silver. The 2,600' level shows low-grade ore only. The 2,600' drift west showed 4' of ore displaced by a fault 15' from the crosscut and not yet recovered. On the 2,800' level of drifting east disclosed small bunches of high-grade ore. On the 3,000' level, vein where cut by a crosscut from the Granite Mt. shaft showed a total width of 6', with 3' high-grade ore assaying 11% copper and silver per ton.

The North Croesus vein is opened by drifts on all levels from the 1,600' to the 2,600', developing a large and important orebody. On the 1,800' level the ore shoot is $8\frac{1}{2}'$ wide, averaging 3% copper and 8 oz. silver per ton; on the 2,000' level the shoot is 300' long, averaging 10' thick, 3% copper, and 6 oz. silver. This shoot has been developed down to 2,200' and on the 2,400' level another shoot, 300' east of the one just mentioned shows 2' of 3% ore with 7 oz. silver per ton. This shoot has been opened on the 2,600' level for a length of 400', varying in width from 3' to 5', and averaging $3\frac{1}{2}\%$ copper. The vein also contains considerable quantities of zinc ore from which shipments are being made regularly.

The South Croesus vein has been mined from the 1,600' to the 2,400' level, with the best showing at 2,200'. Here two shoots are developed one 270' in length with an average width of 3', the ore containing 5.5% copper and 5.5 oz. silver; the other, 240' long, averaging $3\frac{1}{2}'$ in width and assaying 3.2% copper and 4 oz. silver. On the 2,400' level a 3' body of ore has been driven on for 200', averaging $2\frac{1}{2}\%$ copper.

The Gem vein showed no ore of commercial importance above the 1,600' level, and the 1,800' level had about 6' of 4.5% ore. It is developed to a small extent on the 18th, 20th, 26th and 28th levels, both value and width increasing with depth, the 2,800' level showing 12' of 5.3% ore carrying 2.2 oz. silver per ton. The vein is irregular in size and grade and where developed has been broken by cross faults.

Adirondack vein, like the Gem, shows no commercial ore above the 1,600' level, but has been mined from this point down to 2,800'. On the 2,400' level the ore has been opened for 600', varying in width from 2' to 12', and averaging 4% copper. On the 2,600' level the shoot is over 200' long, varying in width from 4' to 7' and containing 3% copper. On the 2,800' level there is a width of 4', averaging 3% copper. About 500' west on the 2,000' level a new shoot has recently been opened, which has been opened for 119', showing an average width of 5' of ore, assaying 4% copper and 2.1 oz. silver.

The Snowball vein has characteristically high silver contents. It was first cut on the 18th level in 1910, since which time it has been developed and worked from the 1,400' down to the 2,600' level. The shoot varies in length from about 800' to over 2,000'. On the 2,200' level it has been worked for a length of over 2,000', of which 740' averaged 5' of ore assaying 8% copper. On the 2,600' level the shoot is over 1,000' in length, varying in width from 2' to 4' and averaging about 4% copper.

A new ore shoot was opened in the Berlin vein in 1916 and has been developed on the 1,800', 2,000', 2,200' and 2,400' levels. On the 2,200' level the shoot is 400' long, averaging 4' of ore which assays 6.7% copper and 1 oz. silver per ton. On the 2,400' level the vein encountered in the crosscut shows 2' of ore assaying 9.2% copper and 30 oz. silver per ton.

Development: is extensive, aggregating many miles of workings. New development for 1916 amounted to 21,694', compared with 15,333' in 1915. The four-compartment Granite Mountain shaft, the principal working shaft is 3,700' deep, and crosscuts have been started on the 3,200', 3,400' and 3,600' levels. A new electric hoist was put in operation in 1915; it is the largest electrically driven hoist in America, designed to handle 200 tons per hour from a depth of 4,000'.

Early in June, 1917, a disastrous fire occurred at the Granite Mountain shaft, starting at a depth of 2,400'. The cause was accidental, but the result was a terrible loss, as 162 men were killed and immense damage done. In Sept. work was begun lining it with steel and concrete from 3,000' depth to surface. Expected to be completed by Christmas, 1917.

The Speculator, the other operating shaft, has been deepened to 2,800' with levels at 200' intervals, from and below the 1,400' point, developing all the veins worked in the mine. The Speculator shaft has a 128' steel head gear standing on a 41'x60' concrete foundation, equipped with self-dumping skips and pockets, with daily capacity of 1,500 tons of ore, no waste being hoisted, as it is used for underground filling.

The 500' Jessie and 500' Adirondack shafts are idle, and of no present

1c. The Gem shaft, 1,600' deep, is used as a ventilating shaft, and a connection has also been made with the Rainbow shaft on the 2,000' level, purposes of ventilation. These two shafts, as well as the Speculator ft. are provided with reversible fans.

Hoisting from 350 to 400 tons of ore daily through the Speculator ft. Nov., 1917.

Equipment: the main machinery plant and buildings are at the Speculator shaft. The engine house has a 20-ton traveling crane, and a 32"x72" Berg Corliss duplex-cylinder hoist, operating 2 cages in counterbalance, two 8-ton Kimberly skips swung under, and good for depth of 3,500'. 18"x36" duplex cylinder auxiliary hoist operates a double-deck cage, in third compartment, for handling men, material and timber, and the shaft a fourth compartment for ladders and pipes.

The compressor house has an air compressor with piston efficiency .482' of free air per minute reduced to a pressure of 70 lbs. per sq. inch capable of operating 40 to 50 rock drills; also a 4,000 cu. ft. compressor. boiler house has two 500-h. p. and five 100-h. p. boilers. Miscellaneous buildings include a machine shop, smithy, carpenter shop, planing mill and a shop for repairing skips.

Employed an average of 1,160 men in 1916. The North Butte ore is mined by the Washoe works of the Anaconda under a contract by which the company pays the smelter charges to the Anaconda Co. and the copper mined over to the North Butte Co. and sold by the United Metals Mining Co. for its account.

Production:	Ore	Copper	Silver	Gold	Copper per Lb.	
	Tons	Lbs.	Oz.	Oz.	Net Cost	Sell. Pr.

.....	408,528	25,267,092	988,190	1,196	10.36c	12.77c

Zinc production in 1916: 1,652 tons of ore for 412,953 lbs. spelter.

Although the grade of the ore mined is lower than that produced in the early years of the company's operations, the total amount of copper produced in 1916 was nevertheless little below the record year. The high grade of copper made it possible to mine ores of a grade much lower than previous years, and these ores will be continued to be mined as long as the price of copper will justify it, although by so doing the average grade of the ore is obviously lowered and the cost of production raised.

NORTH BUTTE MINING CO.

MONTANA

Office: Daly Bank Bldg., Butte, Mont.

Property: sold to Anaconda Copper Mining Co. for \$1,125,000 in 1916, cash distributed to stockholders. Company dissolved. Fully described in Vol. XI, Copper Handbook, p. 715.

WEST MONT COPPER CO.

MONTANA

Controlled by East Butte Copper Co., through ownership of all the stock and 4/5 of common stock.

Office: 1126 Farmers Bank Bldg., Pittsburgh, Pa. **Mine office:** Butte,

Officers: R. H. Gross, pres.; J. H. Reed, v. p.; F. Ward Paine, sec.-treas.; R. T. Rossell, asst. sec.-treas.; Oscar Rohn, gen. mgr.; preceding Wm. A. Paine, directors.

1c. April 21, 1906, in West Virginia, as Pittsburg & Western Copper and changed name, Jan. 21, 1908, to present title. Cap., \$6,000,000; value \$5, divided into 1,000,000 shares common stock and 200,000 shares cumulative preferred stock, all issued.

The East Butte Copper Co. owns \$4,002,800 of the common and all the red stock. \$910,716 bonds outstanding Dec. 31, 1915, were retired, 1917. Annual meeting, 1st Monday in April, at Pittsburgh.

The 1916 report showed \$136 cash; \$911,730 accounts receivable; supplies, \$265,388.

Company acquired the property of the Pittsburg & Montana Copper Co., under foreclosure proceedings, July, 1909, selling it to the East Butte Copper Mining Co., which agreed to purchase bonds enough of the Pittsmt Copper Co., to fund its floating debt, aggregating at that time \$2,300,000, and also agreed, until these bonds were fully paid for, to advance a funds necessary for development and operation of the property and interest on the company's indebtedness. In consideration of this agreement the Pittsmt Copper Co. contributed \$4,000,000 of its common stock to the East Butte Copper Mining Co., the latter purchasing \$1,000,000 of Pittsmt preferred stock and \$110,000 of demand notes, issuing its own stock therefor.

Under this agreement made April 8, 1909, and renewed subsequently the East Butte Copper Mining Co. operates the company's property and the net proceeds have been paid as rentals to apply, deducting interest in payment of the outstanding Pittsmt Copper Co. bond issue. This debt is now entirely paid. See East Butte Copper Co.

RAINBOW LODE DEVELOPMENT CO.

MONTANA

Office: 807 Lonsdale Bldg., Duluth, Minn. Mine office: 14 West Grand St., Butte, Mont.

Officers: Edward C. Congdon, pres.; G. A. Tomlinson, v. p.; James Wanless, sec.-treas.; preceding with Thomas F. Cole, Walter B. Congdon directors. John D. Pope, gen. mgr.

Inc. Nov. 9, 1912, in Delaware. Cap., \$1,500,000, increased June 1, 1911 from \$800,000; shares \$10 par, issued \$800,000. Bonds: \$400,000, 1st mortgage 5-year convertible 6% due June 1, 1920, convertible into stock at par. and \$80,000 2nd mortgage authorized, \$47,000 issued. Annual meeting, 1st Tuesday in June.

Property: 10 claims, including the Third Sphinx, Michigander, Moral Valley Queen, Carn Brea, Sarah, Wedge, Hidden Treasure and Wand claims, with fractional interest in the Lone Star Claim. The group lies east of the Butte & Superior property and is supposed to carry an extension of the Rainbow lode.

Equipment: at Rainbow shaft includes a 300-h. p. double drum hoist good for 2,500', 2 electric hoists, air compressors, combined capacity of 1,650 cu. ft. per min., one 400 gals. and one 200 gals. pump, blacksmith shop, carpenter shop, change house and office.

During 1916 the company completed its Butte & London contract and now owns 51% of the Greendale Exploration Co. stock, which latter company owns the Greendale Placer claim and the Six O'Clock claim immediately south. It paid for this stock according to the contract by sinking the Butte & London shaft to 1,600' and crosscutting to the north and south boundaries of the Greendale Placer claim on the 1,500' level.

The crosscut at the 1,500' level of the Rainbow shaft was extended to the north boundary and a few feet of drifting done from it along vein which looked promising. The drainage drift on that level from the North Butte was completed.

While favorable indications of the possible proximity of ore chutes were found, according to the statement of engineers familiar with Butte camp, no ore of any commercial grade was discovered. The indications above mentioned consisted of quartz filled veins of various dimensions and in several parts of both the Rainbow and Butte & London cuts which gave trifling assays of gold, copper and zinc, nowhere running over 8% zinc or 2% copper or an ounce or so of silver.

In order to complete the Butte & London contract, it was found necessary to raise more money than was provided for in the first mortgage. Consequently, the second mortgage was authorized, and the amount outstanding on it, viz.; \$47,000, was advanced by two of the large stockholders so that the contract might be completed and the Rainbow company get control of the Glendale Placer claim.

The company is now idle, as it seemed best to await possible developments in the neighborhood of its property which might renew the interest of the stockholders of the company to an extent which would lead them to invest in further necessary financing.

While developments have been disappointing in that no ore has been found to a depth of 1,500' on the Rainbow group and 1,600' on the Green-Placer claim, nevertheless, the officers seem to feel that still deeper development will reveal pay ore.

MPART MOUNTAIN MINING CO.

MONTANA

Office: 821 Security Bldg., St. Louis, Mo.

Officers: H. D. Laughlin, pres.; Felix Costa, v. p.; J. P. Meyer, sec.

Cap., \$500,000; shares \$1 par; \$250,000 outstanding.

Property: 10 patented claims, 125 acres, in Park Canyon, Silver Bow Mont., about 4 miles east of Butte, said to show fissure veins in situ. Ore contains gold-silver-copper values. The Rocky Mtn. claim reported to show a vein about 100' wide, supposedly the continuation of "Spread Delight" vein of the Main Range.

Development: by 1,500' of workings to depth of 400'. Tunnel said to show copper ore assaying up to 7% with high silver values.

MPEN COPPER CO.

MONTANA

Property sold, Aug., 1915, to the Anaconda Copper Co., for \$65,000, and company is in process of liquidation. Fully described in Vol. XI, Copper Handbook.

MANCE MINING & MILLING CO.

MONTANA

Officers: D. M. Adams, pres.; Box 386, Butte, Mont.; Frank Eichelberger, v. p.; P. H. Kenny, sec.; preceding, with J. C. Lane and J. W. Jones, directors.

Inc. April 17, 1913, in Mont. Cap., \$150,000; shares 10c par; non-assessable; 1,325,000 issued. Control reported in hands of John C. Norvell, 1916.

Property: 3 claims, in the Moose Creek section, Silver Bow County, 18 miles south of Butte, show a vein of copper-silver-lead-zinc ore in carbonaceous limestone, opened by a 180' shaft. Has produced 22 tons to date; returns, \$2,611. Plans to deepen shaft and crosscut on 175' level.

MEHOUSE MINING CO.

MONTANA

Subsidiary of the Davis-Daly Copper Co., Butte, Mont.

MTH BUTTE MINING CO.

MONTANA

Butte, Mont. John G. Williams, M. E. Riley and Arthur Howell, directors, at last accounts.

Inc. May 25, 1906, in Minnesota. Cap., \$500,000; shares \$100 par. Company was organized by the Great Northern railway interests and has had litigation, with various individuals and corporations, including the Central Copper Co., East Butte Mining Co., P. D. Morgan and others, involving practically all of the suits. Property was leased to the Montana Consolidated Mining Co., but nothing of particular value was developed, and the latter-named company was liquidated.

Claims: include the Surprise placer claim, but company's chief assets consist of mineral rights to a narrow strip along the Great Northern of-way. Idle.

MICATE COPPER CO.

MONTANA

Controlled by Tuolumne Copper Mining Co., Hirbour Block, Butte,

Officers: W. W. McDowell, pres.; G. W. Stapleton, v. p.; W. E. Reynolds, sec.-treas.; with J. W. Pratt and P. A. Gow, directors.

Cap., \$100,000; shares \$5 par; non-assessable; 9,800 shares held by A. Leonard Extension Copper Mining Co., and 10,200 shares held in part by Tuolumne Copper Mining Co., for delivery as work progresses. Property: 42 acres in Butte district, Mont.

MN MINING CO.

MONTANA

Inc. Controlled by Jas. A. Murray and the estate of Silas F. King, of Mont.

Property: 1 fractional claim, about 2 acres, lying between the Bell and Wild Bill mines of the Anaconda and the Speculator and Edith May claims of the North Butte. Mine has a 700' incline shaft on the vein with levels opened at 300', 500', 550' and 600', said to show 4' of good ore in the bottom. Work was stopped by an injunction, secured by the Anaconda Copper Mining Co. in 1908.

TUOLUMNE COPPER MINING CO.

MONTANA

Mine office: 73 Hirbour Bldg., Butte, Mont.

Officers: Ed. Hickey, pres.; W. P. Jahn and Ed. J. Hickey, v. p's.; J. J. Harrington, sec.; P. A. Gow, mgr.; with T. E. Murray and J. A. Canty, directors. L. S. Roscow, treas. Walter Harvey Weed, cons. engr.

Inc. June 4, 1906, in Arizona. **Cap.**, \$800,000; shares \$1 par, of which \$400,000 in stock was given for the property, and 210,000 shares were sold on the Butte market at par, increased May, 1916, to \$2,500,000; \$1 par. Shares are listed on the New York Curb, Boston, Spokane and Butte stock exchanges. State St. Trust Co., Boston, transfer office. Beacon Trust Co., Boston, registrar. Annual meeting, June 20.

Balance sheet: as of Dec. 31, 1916, shows assets of \$2,114,053; this includes, Tuolumne property and equipment, \$826,118; current, \$190,183; investments (capital stock "trust" exchanged and cash paid for Butte Main Range and Colusa-Leonard Extension, stocks, under options, etc.), \$192,498; Butte Main Range and Syndicate Copper stocks received and due for development done under options, etc., \$154,006; Butte Main Range and Syndicate Copper properties under options, etc., for which 500,900 shares of Tuolumne is still held in trust for further development and acquirement of these properties, \$750,900. Liabilities include capital outstanding, \$2,000,000; current, \$31,991; reserve, \$47,451; and suspense, \$31,460.

Profit and loss statement: for year ended Dec. 31, 1916, shows \$220,231 gross smelter returns, and a loss of \$17 for the period. There was \$47,451 placed to reserve for depreciation. The previous deficit of \$35,000 was wiped out.

Dividends: 15c per share in 1911; none in 1912, and two 10c dividend in 1913.

Property: the Tuolumne mine and a controlling interest in the Colusa Leonard extension and Butte Main Range companies. Under terms of the agreement Tuolumne must do development work estimated at \$500,000. This work includes sinking the Colusa-Leonard shaft from 800' to 1,600' depth and crosscutting to the side lines of the claim about 1,500'.

Under the Colusa-Leonard Extension contract, the property of this company has been deeded to the Syndicate Copper Mining Co., and 519 of this stock is held in trust for delivery to Tuolumne as the prescribed development is done. Assets of Colusa-Leonard consist of 49% of the capital of Syndicate Copper. Main Range and Colusa-Leonard Extension mines were examined by W. H. Weed in March, 1917.

The Tuolumne mine contains the Jessie vein with large oreshoots. The mine has a main 3,000' shaft, developing an orebody of 12 to 15' width which carried ore ranging from 5 to 12% copper with an average of about 7% down to 2,000', but in the lower levels the vein consists mainly of pyrite, with low copper values. In 1916-17 all development was confined to the 2,400' level, and mining done on the 800', 2,000', 2,200' and 2,400' levels.

Production: from the old Tuolumne mine in 1916 came from the Jessie vein above the 2,000', 2,200', 2,400' and 2,600' levels, and from filling in of stopes above 1,400'. The old levels were reopened and repaired. All ore has been extracted between 2,400' and 1,800'. Ore at 2,600' is bunchy though of good grade, and better than at 2,400'. Eighteen to thirty inches of good ore was opened at 1,200'. The Jessie vein is being developed at 2,800' and 3,000' from the 2,600' winze. In Sept., 1917, 15' of 16.6 oz. silver ore was reported as having been cut on the 700' level.

Equipment: includes a steam plant with six 150-h. p. Erie City boilers delivering steam at 150 lbs. pressure per square inch. There is a power hoist, Jordberg hoist, good for 3,600' depth and a 20-drill compressor.

Comparative Statement of Production.

(a) Last 5 mos. *Not reported.

The east holdings of the company embrace 10 claims, 80 acres, covered by wash, but containing several strong veins, proven by development work from the Sinbad and the Colusa-Leonard shafts to contain commercial orebodies. Moreover, the tract lies in line with the extension of the valley bottom of several of the known productive veins of the Butte and Anaconda holdings, and the claims lie west of the big placement known as the Continental fault. (See pages following.)

This tract is very favorably regarded, and development has already used a large and profitable orebody.

With its new ground the company has started on an active campaign of development which will, it is believed, make it an important producer of dividend payer.

Butte Main Range Copper Mining Co.

Office: Hirbourn Bldg., Butte, Mont.

Officers: J. J. Harrington, pres.; A. F. Rice, v. p.; Frank X. Giard, Jr.; Geo. E. Palmer, sec.; with Chas. R. Leonard, Lyman J. Roscow, J. Pratt, C. C. Willis and P. J. Brophy, directors.

Incorporated, 1912, in Montana. Cap., \$1,500,000; shares \$1 par; 666,461 shares, divided as follows: Butte Main Range Copper Mining Co., stockholders, 292,953 shares; Tuolumne Copper Mining Co., 373,461 shares; set aside for T. C. M. Co. for delivery as work progresses, 833,586 shares.

In May, 1916, 2/3 of the stock of the company was optioned to the Tuolumne Copper Co. for \$650,000, to be spent in deep development of the company's property. The company therefore becomes a subsidiary of the Tuolumne, which at the same time takes over 51% of the Colusa-Leonard division. Under this contract 180,000 shares of Butte Main Range stock have been put in the Tuolumne treasury for \$92,173 advanced up to Dec. 31, 1916, which with 193,461 shares acquired by exchange of stock makes the Tuolumne Co. the owner of 56% or 666,461 shares of the Butte Main Range division.

Property: 37 acres, includes the Sinbad Lode, Tentpeg, Spread Delight, Rory O'More, Kingstella and larger fractional part of the Lillie vein, at the mouth of Horse Canyon, Butte, Mont.

Development work was begun June 1, 1916, the power and surface equipment being installed and the Sinbad shaft unwatered, retimbered and enlarged to a standard 3-compartment shaft. The 500', 600' and 700' levels were cleaned and the 334' crosscut on the 700' level extended south, cutting the Spread Delight lode at 654' from the shaft. The lode is 125' across, showing north or hanging-wall vein, 18' wide, containing 3½% of commercial grade that is separated by 30' of altered mineralized "vein granite" from the main vein of the lode. This main vein is 30' wide and carried 3½% copper with 6 oz. silver per ton across its entire width in the crosscut walls. In addition to this, the main vein of the lode, there is 39' of vein granite, carrying copper and silver values, before fresh granite is reached.

The Spread Delight vein has been opened for 250' along its course by a crosscut and by stopes above it, where the ore has been found from 10' to 25' wide, the ore averaging 3½% copper, and 9 oz. silver per ton. This great vein resembles the Leonard of the Anaconda properties and is believed to ensure a long and profitable life to the mine.

driven 1,600', has cut the vein 460' below the old workings and intersects several veins. A 200' raise gives ventilation with the upper workings now abandoned. The main workings total 5,000'.

Equipment: includes an 80-h. p. boiler, 25-h. p. hoist and 6-drill duplex air compressor. There are several small mine buildings and a sawmill. About 40 men are employed.

Production: in 1913 was 40 to 50 tons daily, shipped to Utah smelters. A new 125-ton lead-silver concentrator erected, 1914, and development work in progress, 1916-17.

DEER LODGE COUNTY

BOSTON & MONTANA DEV. CO.

MONTANA

See same title under Beaverhead County.

BUTTE-CABLE COPPER & GOLD MINING CO.

MONTANA

Idle.

Officers: Louis Feldman, pres.; Nicholas Bossonitz, v. p.; preceding officers, Wm. Henthorne, John Strasser, J. G. Kimball and Dan Kowsky, directors. G. W. Peterson, Anaconda, sec.

Inc. Nov. 21, 1906, in Montana. **Cap.**, \$1,000,000, shares \$1 par.

Property: 6 claims, 4 patented, 15 miles west of Anaconda, near Cable Consolidated Mining Co., show a 3 to 4' vein carrying about 2' of commercial ore, giving assays of 11.9% copper, 156 oz. silver and 0.6 oz. gold per ton. Property closed down. Sullivan & Peterson, of Anaconda, offered stock at 15 cts. a share, Feb., 1913, to raise money for patenting claims.

CABLE CONSOLIDATED MINING CO.

MONTANA

Office: 52 Silver Bow Blk., Butte, Mont. **Mine office:** Cable, Deer Lodge Co., Mont.

Officers: I. M. Fickeisen, H. Terheyden and S. Robinson, directors. Pittsburgh, Pa.

Property: 700 acres, 15 miles west of Anaconda, include the Cable gold mine, in vicinity of the Southern Cross mine. The Cable mine, worked since 1870, with varying success, has produced about \$4,000,000 worth of ore, with values mainly in gold, but has auriferous copper ore on the tunnel level.

Equipment: includes steam power, air compressor and a 30-stamp mill. In process of reorganization, successor will be Cable Mining Corp'n.

FERGUS COUNTY

ST. PAUL MONTANA MINING CO.

MONTANA

Office: Maiden, Fergus Co., Mont.

Officers: O. L. Taylor, pres.; Chas. W. Ames, v. p.; D. W. Taylor, sec.; W. K. Braden, treas.; with L. P. Ordway and E. B. Coolidge, gen. mgr., directors.

Inc. in Arizona. **Cap.**, \$50,000; shares \$100 par; 500 issued.

Property: 2 patented claims, at Maiden, said to show gold ore in contact deposits between porphyry and limestone. Developed by a 450' vertical shaft, with 5,000' of underground workings. Ore claimed to assay \$30 to \$30 per ton and property is said to have produced \$4,000,000. Has recently been under lease.

Equipment: includes hoist, air-compressor, and 50-ton cyanide mill in full operation.

FLATHEAD COUNTY

COMET MINING & MILLING CO.

MONTANA

Office: Coeur d'Alene, Idaho. **Mine:** near Whitefish, Flathead Co., Mont.

Officers: Dr. Max A. Dorland, pres.; Fred Eppinger, v. p.; J. H. W. gert, sec.; at last accounts.

Inc. 1909. Cap., 1,000,000 shares. Developed by a short tunnel. Presumably idle.

FLATHEAD DEVELOPMENT CO.

MONTANA

Address: Gen. Chas. S. Warren, 73 Hirbour Blk., Butte, Mont. Mine: Coram, Mont.

Officers: L. O. Evans and John M. Murphy of Butte, Fred Oliver and J. Williamson of Spokane. Dr. W. H. Campbell and A. Ingraham of spell, organizers.

Property: Big Copper, Nos. 1, 2, 3 and 4 and Noble Copper claims ring veins 10' to 20' wide, on Felix Creek, a tributary of South Flathead r., 30 miles south of Coram, a station on the G. N. R. R.

Claims practically abandoned in 1917, because of the great distance to a railroad and the high cost of opening up the property.

FLAT NORTHERN COPPER CO.

MONTANA

Owms the Great Northern mine, 1 mile north of Tava, Flathead Co., t.

Developed: by several tunnels, 200' to 500' long, on the strike of the

Ore: principally gold and copper.

FLYING WAGON MINING CO.

MONTANA

Whitefish, Flathead Co., Mont.

Officers: George Hoffman, pres. and mgr.; Mike Sullivan, v. p.; Pete man, sec.; with E. Boettcher and John Roeder, directors.

Inc. 1906 in Montana. Cap., 500,000 shares; par value 15c; 250,000 d.

Property: 160 acres, about 14 miles W. of Whitefish. Developed by shaft, showing a well defined vein of copper ore, 3' wide in porphyry limestone, said to assay 2% copper, 3 oz. silver with a trace of gold. a small steam hoist and air compressor. Idle since 1911 owing to of funds.

GALLATIN COUNTY**INTERNATIONAL MINING CO.**

MONTANA

Office: Bozeman, Gallatin Co., Mont.

Officers: J. W. Wilcox, pres.; S. J. V. B. Henderson, v. p. and treas.; Mel F. Walker, sec. and gen. mgr.; preceding officers, Harvey M. Farnard A. Badgley, directors, all of Bozeman, Mont.

Inc. Oct. 2, 1902, in Montana. Cap., \$600,000; shares \$100 par, fully and non-assessable.

Property: 12 claims, 240 acres, well timbered, in Springhill mining ct., Gallatin Co., Mont., said to show gneiss, quartzite and shale, fissure and contact veins, opened by 380' to 1,800' tunnels, and 5 shafts of 800', showing sulphide ores.

Company developing an ore shoot, at last accounts, said to carry lead, 8 oz. silver, and \$8 to \$67 gold per ton. The Lone Star group operating the International is practically under the same ownership. Letter either answered nor returned, so it is safe to say company's affairs are not prosperous.

GRANITE COUNTY**BUENA VISTA MINES CO.**

MONTANA

Officers: G. F. Russell, bus. mgr., 1303 Dean St., Spokane, Wash.; J. G. Gney, opr. mgr.; identified with the organization are W. P. Russell, Chickering, F. Leslie, J. Millspaugh, G. P. Larson, J. P. Boyd, G. Russell, D. K. McDonald, V. Rapp, Wm. Coleman.

Property: 3 patented claims, known as Buena Vista mine, Maxville, Granite Co., Mont. Has been idle for 20 years until present company developed and lease. Principal values in silver.

BUENA VISTA & ANACONDA CONSOLIDATED M. & M. CO. MONTANA
Office: P. O. Box 138, Anaconda, Mont.

Officers: J. C. Keppler, pres.; J. Winterhalter, v. p.; Andrew Fieger, sec.; John J. Wegener, treas.; with W. R. Allen, directors.

Inc. 1908, in Montana. **Cap.**, \$1,500,000; shares \$1 par; assessable 900,015 shares outstanding. Company is a consolidation of the Flint Creek Mining Co., and the Golden Eagle M. & M. Co.

Property: 9 patented quartz claims, 3 unpatented placer claims and 2 millsites, about 240 acres, in Flint Creek Gulch, Granite Co., Mont., 1 mile from a railroad. Claims show quartz veins with gold-silver values in part as tellurides. Average assays said to run \$25 per ton. Developed to depth of 450' by 2 shafts and 2 tunnels, 900' long. Idle, owing to lack of necessary working capital.

GRANITE BI-METALLIC CONSOLIDATED MNG. CO. MONTANA

Office: 821 Security Bldg., St. Louis, Mo. **Mine office:** Philipsburg, Mont.

Officers: J. P. Meyer, pres.; E. S. Orr, v. p.; F. D. Fusz, sec.; G. J. Tansey, treas., with C. G. Ewing, J. P. Hartnett, C. D. McLure, L. M. Rumsey, Jr.; A. L. Shapleigh, W. C. Uhri, and F. Whitaker, directors. T. B. Holmes, supt.

Inc. April 6, 1898, in Montana. **Cap.**, \$10,000,000; shares \$10 par; not assessable.

Property: over 2,500 acres at Philipsburg, Granite Co., Mont. Is consolidation of the Philipsburg and Granite Bi-Metallic properties, which yielded over 4,000,000 oz. silver per annum in early days, total output being \$50,000,000, of which \$14,000,000 was distributed as dividends. Decline in price of silver resulted in practical suspension of work.

Geology: gold, silver, copper deposit in granite, overlying large area of limestone near west end. Best ore-shoot is said to be 4,400' long. Ore is mostly sulphide.

Development: by 3 shafts to 1,800' depth, and 2 tunnels, longest 8,900'. Greatest depth of workings, 2,250'. Considerable work contemplated for 1917.

Equipment: old mill dismantled and 300-ton plant proposed. Calloway flotation system being tried.

Is a large property with good chances.

NANCY HANKS-MONTANA MINING CO.

MONTANA

Office: H. A. Bellows, 62 Broadway, New York. **Mine office:** P. J. McCree, supt., Garnet, Mont.

Officers: C. G. Grossman, pres.; J. O. Delamater and J. T. Thatcher, directors; W. E. Gourlay, sec.; H. A. Bellows, treas.

Inc. Oct. 28, 1916, in Maine. **Cap.**, \$1,000,000; shares \$1 par; not assessable; 954,009 issued.

Property: 8 claims, 3 patented, at Garnet, Granite Co., Mont., 12 miles from Bearmouth.

Geology: quartz vein in granite, from 1' to 8' wide, said to carry ore-shoot from 100' to 130' long. Ore has gold, silver and copper values and is reported to average \$68 per ton, partly in free gold and partly telluride of gold, associated with pyrite, etc.

Development: by 100' and 500' shafts. Total workings of 2,500' 3,000'.

Ore reserves: estimated at 1,500 tons blocked out and 3,000 tons expected between No. 5 and 7 levels, all high-grade ore.

Equipment: 2 cylinder Anaconda hoist, 3-drill compressor, pumps. Proposed to erect a 20-ton mill and machinery for 1,500' depth.

Production: The Nancy Hanks mine was opened 20 years ago. It yielded \$500,000 from workings to depth of 80'. After an 18 years' strike down, a new company secured a lease and option on a large block of ore, sunk the shaft to a depth of 400', and mined ore yielding between \$100,000 and \$200,000. The present company purchased the lease and option stock, Nov., 1916, sunk 100' deeper, extracted \$45,000, and expects to produce \$300,000 more. At end of May, 1917, bins contained 425 tons of high-grade ore. In Jan., 285 tons yielded \$20,000. Total output is about \$200,000. Costs are \$15 per ton.

YMPIA MINING CO.**MONTANA**

Office: Princeton, Granite Co., Mont.

Property: Owns Lillian and Banner claims in the Philipsburg district. Incl said to cut 3 veins, one 20' wide, carrying galena, silver and gold ores.

Developing: 1917.**ILIPSBURG MINING CO.****MONTANA**Office: 821 Security Bldg., St. Louis, Mo. **Mine office:** Philipsburg, Granite Co., Mont.

Officers: John P. Meyer, pres.; John H. Dieckman, v. p.; Jos. P. Hart, sec.; F. D. Fusz, treas.; with John J. Taussig, Max Kotany, L. M. Tsey, Jr., H. S. Rumsey, E. S. Orr, A. L. Shapleigh, Edw. Barklage, directors.

Inc. 1910 in Missouri. **Cap.**, \$50,000; shares \$1 par; all outstanding. **Operational** meeting, 4th Friday in March.

Property: 450 acres at Philipsburg, said to show ore in contact deposit quartz fissure veins between limestone and granite. Ore carries gold, iron, copper, zinc, lead and manganese. Company is largest producer of manganese ore in Montana.

Development: by several shafts, deepest 500', and a number of tunnels. Company is successor to Hope Mining Co., one of the earliest companies formed in Montana. Mine is credited with past production of 0.000 in silver. Also has a deposit of copper ore, but faulted segment not yet been located.

Production: shipping about 100 tons of manganese ore daily, 1917.

ROYAL BASIN MINING CO.**MONTANA**Office: Makeever Bros., 170 Broadway, New York, and Journal Bldg., Boston, Mass. **Mine office:** Maxville, Granite Co., Mont. Walter Neal,

Cap., \$2,000,000; shares \$1 par; fully paid and non-assessable. The Montana Phosphate Co., formed in 1915 to treat phosphate beds near Maxville, is controlled by same interests as Royal Basin.

Property: the North Star mine of 2 lode claims, 90 acres, in Wymansville, within the Missoula forest reserve and 3 miles east of the Drummond branch of the N. P. R. R. Also owns the Northern Bell mine, a property near Princeton. Claims show a fissure vein 15' to 40' wide, upper tunnels, 100' vertically apart. A new lower tunnel is being opened which cut the vein 800' in and at a depth of 700'. At this point the vein carries concentrating ore 12' wide with a paystreak of sulphide ore, containing 7½% copper, and 5 to 70 oz. silver, per ton. The smelter returns over 1,100 tons shipped showed 5.14% copper.

The line is equipped with a leaching plant using sulphuric acid to get the iron into solution and depositing electrolytic copper as cathode plates on tanks direct from the solution, by electric current. This plant was designed by J. D. Fields, who built a similar plant for Capt. A. B. Wolvin at the Butte-Duluth mine in Butte, Mont; also one, a failure, in Arizona.

While we have no details of this plant, the process, though simple and all that is claimed for it in the production of electrolytic copper, is a cheap one when acid and electric power have to be purchased. Proposals considered promising, but advertising matter of fiscal agents is not fully regarded.

Reported leased for 5 years, from April, 1916, to Northwest Cons. Co., Spokane, Wash., and shipping in July, 1916.

In July, 1917, owners refused to give any information, considering our work in Vol. XII unjustified.

STIKA MINING CO.**MONTANA**

Address: Philipsburg, Granite Co., Mont. W. W. Williams, mgr.

Officers: W. I. Power, pres.; F. R. Andrus, v. p.; C. E. Hansen, sec.; J. Kroger, treas.; the officers are the directors.

Inc. April, 1913, in Montana. **Cap.**, \$500,000; shares \$1 par; 407,043 shares outstanding.

Property: 3 claims, 1 patented, known as the old Basin mine, and held under long term option, shows a 4' vein of argentiferous copper ore, oxidized to carbonates near the surface, exposed for 100' on the 150' level.

Development: consists of a 190' shaft, and 200' of drifts. Ore averages 4% in copper, 1½ oz. silver, 50c gold per ton.

Equipment: includes electric hoist good for 500', compressor and Cameron pump.

Mine was closed down in 1914, but efforts were being made at last accounts to increase capitalization and resume operations.

WASA (or Hollander) GROUP.

MONTANA

Is a property promoted by Makeever Bros., 170 Broadway, New York City, and Journal Bldg., Boston, Mass.

The public was asked to subscribe to shares in an Exploration Syndicate at \$1 a share, with bonus of 4 shares of pooled stock of a corporation to be formed to take over the Hollander, or Wasa group of claims near Hall, Granite Co., Mont.

In April, 1917, Walter Neal, chief engr., advised that he could not recommend further expenditure in developing the mine and it has presumably been relinquished.

See Mine Exploration Syndicate.

JEFFERSON COUNTY

ANGELICA MINING & DEVELOPMENT CO.

MONTANA

Address: Wickes, Montana.

Officers: C. d'Autremont, Jr., Duluth, Minn., pres.; Chas. D. Horton, v. p.; C. M. d'Autremont, sec.-treas.; preceding officers, T. T. Hudson and Geo. W. Wilson, directors. Geo. W. Wilson, mgr. Chas. D. Horton, supt.

Inc. Jan., 1915, in Montana. Cap., \$200,000; shares \$10 par; non-assessable; outstanding, August, 1917, 14,320 shares.

Earnings: Gross income from ore sales in 1916 was \$49,536; operating expenses \$64,714.

Property: 6 claims, 110 acres, in Colorado mining district, 2 miles west of Wickes, Jefferson Co., show a contact vein in andesite and rhyolite strike N. 80° W., dip 75° N. The ore, sulphides below the 400' level, contains lead, silver and gold, occurring in shoots 100' to 300' long, with average width of 3'. Average assay of shipping ore, \$20.00.

Property has been examined and reported on by E. J. Collins, T. J. Field and Reno Sales.

Development: 3,050' tunnel and levels at every 100' to 800' level; total underground workings, 5,100'.

Equipment: includes air compressor, capacity of 360 cu. ft. Was planned for construction of a 200-ton concentrating mill. Production in 1917 amounted to 6,711 tons, containing 1,012,176 lbs. lead, 65,526 oz. silver, 933 oz. gold.

The property was closed down June 1916, but operations were resumed March, 1917.

BALKAN BUTTE COPPER MINING CO.

MONTANA

Office: 13 N. Wyoming St., Butte, Mont.

Officers: Chas. Steele, pres.; Paul Germolgez, v. p.; Thos Tomich, sec.-treas.

Inc. Jan. 26, 1907, in Montana. Cap., \$450,000; shares \$1 par.

Property: 4 patented claims, 80 acres, in Elk Park, Jefferson Co., Mont., shows gold, silver, copper, lead ore. Idle.

BALTIMORE COPPER MINING CO.

MONTANA

Office: 49 W. Park St., Butte, Mont.

Officers: R. L. Clinton, pres.; J. Maher, v. p.; T. J. Fenlon, sec.-treas.; preceding with B. E. Calkins, D. J. Charles, P. H. Began and E. Renisch, directors.

Inc. in Montana. Cap., \$2,500,000; shares \$1 par; 2,500,000 shares outstanding. No bonds.

Property: five patented claims in Boomerang Gulch, near Boulder, mt., showing an ore zone 40' wide, with silver-lead ore in lenticular pts. Ore said to contain about 3% copper, 20 oz. silver, 12% lead and n gold. Recent shipments reported to have averaged \$20 per ton.

Development: by 5 tunnels, 100' vertically apart, longest 700'. Prop- under lease, yielded \$1,560 from royalties in 1916, with operating nses of \$307.

BNICE RED ROCK MINING CO.

MONTANA

Address: Bernice, via Basin, Mont.

Officers: H. D. Fagon, v. p.; N. B. Lewis, sec.-treas.; J. B. Anderson. 1924 13th St., Washington, D. C.

Property: 4 claims located in Sec. 10, T. 6, N. R. 6 W., 3 miles from nce station on Gr. Northern Ry. 26 miles from Butte, shows a large with scattered mineralization of lead carbonate and sulphide ore, but average values, containing gold, \$0.40 to \$1.60, silver 2 to 7 oz., 0.5% er, lead 2%, and zinc 5%. Course of vein is N. 70° W. with dip 70° S., where exposed has a width of 8' in the upper tunnel, and 23' in lower el.

Development: 2 tunnels, upper one 150' long, the other 100' vertically v the upper, cut the vein at a distance of 200' from the portal. A 20' e was sunk on the vein from the lower level. The ore can be cheaply d and is capable of flotation, but value is low. Company officers and holders are all colored men.

TY ALDEN MINING CO.

MONTANA

losed down and company probably dissolved. Fully described, Vols. II.

FOOT MINING CO.

MONTANA

nc. Sept., 1917, in Montana. Cap., \$3,000,000; shares \$5 par.

Property: a group of 7 claims in the Big Foot district, Jefferson Co., , about 12 miles from Boulder. Claims said to show ore carrying , lead and zinc values.

Development: by several shafts from 50' to 200' deep, all under water. line has been closed down for many years and is now being de- ced and reopened.

E BIRD-CORBIN GOLD, SILVER & COPPER M. CO.

MONTANA

lle. **Address:** Wickes, Jefferson Co., Mont.

Officers: Wm. Q. Ranft, owner and mgr. John W. Johns, supt.

Property: about 4 miles west of Wickes, is one of the old mines of the t. taken over in 1911 together with the Penn Yan claim. Claims 2 veins of 4' to 14' in width, carrying ore shoots averaging 5% cop- % lead, 25 oz. silver, and \$1.50 gold, per ton. Ore occurs in a tour- zed vein in andesite tuffs and diorite along a contact with a 50' wide dike that forms the footwall.

Developed: by 2,248' tunnel and 225' shaft, with levels at 100' and 200'. ped with electrical power. No recent returns secured.

ION & ALTA COPPER CO.

MONTANA

Address: care Geo. H. Hill, Helena, Mont. **Mine:** near Corbin, Jeffer- o., Mont.

Officers: John Joyce, pres.; Marcus L. Hewett, v. p. and gen. mgr.; H. Innes, sec.-treas.; above with Walter Callender, Warren Curtis, & G. Gregg, Archibald S. Spriggs, Wm. Tatham and Chas. B. Van ind. directors; Richard M. Atwater, Jr., cons. engr.

c. Nov., 1909, in West Virginia. Cap., \$3,000,000; shares \$10 par; as vor of Alta-Montana Copper Co. to take over and work the Alta whose output of \$12,000,000 has made it one of the big mines of the

ve Alta mine, passing 50% of the original owners to the Hudson Min- Reduction Co., was the ... The Alta Montana Co., Kelly & Reduction Co., ... Co. and Boston & Alta Co., owned properties ... Mexican holdings of

the Kelly Smelting & Refining Co. were segregated holdings of present company being exclusively in Montana.

Property: 640 acres, including the Alta group of 8 claims, carrying about 7,000' of Alta or mother lode of the Corbin camp.

Property under bond and lease to Max W. Atwater, Basin, Mont. and is being reopened, 1917. Fully described in Vol. XII.

BOSTON & CORBIN MINING CO.

MONTANA

Office: 67 Milk St., Boston, Mass.; C. R. Jeffers, sec.-treas. **Min office:** Corbin, Jefferson Co., Mont.

Officers: Harry M. Stonemetz, pres.; R. C. Grew, v. p.; preceding officers, Chas. H. Cole, E. S. Goulston, Ellis L. Dresel and Wm. M. Bradley, directors. Dan J. Courtney, mgr.

Inc. Aug., 1913, in Maine. **Cap.**, \$1,000,000; shares \$5 par; non-assessable; issued, 198,042 shares. State Street Trust Co., Boston, registrar. Boston Safe Deposit & Trust Co., transfer agent.

Company was formed to take over the property of the Boston & Corbin Copper & Silver Mng. Co. and shares of the new company were exchanged for securities of the old company on basis of 75,200 shares for \$200,000 6% convertible bonds and 100,000 shares exchanged share for share upon payment of a subscription of \$1.50 per share for the old stock.

Balance sheet, Aug., 1916, showed: current assets, \$36,841; current liabilities, \$14,424. The first profit from operations in October when \$3,400 was made. Profits have been about \$2,000 monthly since.

Mine was closed down from Nov., 1913, to Jan., 1916. Expenses during shut-down were \$13,525 and cost of reopening property was \$12,483.

Property: the Bertha mine and 12 patented claims aggregating 100 acres, about 1 mile west of Corbin, having about 4,500' of the strike of the Bertha vein.

Geology: country rock is granite with intrusive porphyry rocks, carrying a vein system consisting of a number of parallel fissures. The geological conditions are often called similar to those of Butte, but ore is mainly chalcopryrite, instead of chalcocite, as in Butte, with some enargite and little bornite of good grade, all argentiferous and slightly auriferous. Lands said to have 16 veins, of which 3 are under development. The Bertha vein is a well-defined, but narrow fissure in granite, varying in width 2' to 5' wide with strong walls. The concentrating ore is pyritic and of low grade, the concentrates running up to 7% copper, 8.6 oz. of silver per ton with \$2.38 for excess iron; a total value of nearly \$20 per ton. Foreign estimates proved too optimistic as to values, development being disappointing. Property examined by Frank H. Probert in March, 1913.

Development: mine is developed to a depth of 1,200' and has 150,000 cu ft of workings, not including 4 short discovery tunnels, the Boston Fracture crosscut tunnel, 1,500' Corbin crosscut tunnel and 880' Bertha drift tunnel.

An agreement was made with the Chicago & Alta Extension Mining Co., by which company will develop at depth the vein shown on the Corbin claim. Work was begun, November, 1916, on the 1,200' level.

A 200-ton concentrator, costing \$125,000, was finished and put into operation March, 1913, but operations of mine and mill were suspended in October, 1913, on account of the low grade of ore. Results obtained during the period the mill was operated are as follows: tons ore treated, 100,000; copper assay, 1.85% per ton; silver assay, 2.4 oz. per ton; cost per ton mining, \$2.87; cost per ton, concentrating, \$1.11; production, 611,000 lbs. copper and 45,950 oz. silver. The mill should never have been built. Development of the mine did not warrant it, but directors acted on the advice of their engineers and managers.

Results were unsatisfactory, only half the copper shown was treated. In August, 1913, the company made tests with the mill and in August a new mill was put into operation.

Ore reserves: none of closing down 1913. Reserves are small, presumably the same as the ore mill.

Equipment:

a depth of 2,000', at the rate of 900' per minute, and a 15-drill Inger-Rand air compressor, direct-connected to a 150-h. p. motor. Power is gotten from the Montana Power Co. at a considerable saving over steam. There are 19 buildings, including a boiler house, engine house, compressor house, bunk house, boarding house, changing house, warehouse, office, laboratory, smithy and dwellings. Cost of wagon freight to railway is \$1.50 per ton on concentrates.

Production: for year ending July 31, 1917, amounted to 36,910 tons, including 8,945 tons concentrates, containing 810,677 lbs. copper and 48,254 lbs. silver. Cost was 25.564c per lb. copper, and selling price was 29.512c per lb.

With present high price of copper and an 80% recovery of the metal contents of the ore, company should be able to make a fair profit.

TE & BOULDER MINE.

MONTANA

See Shields & Ironsides Mining Co.

TE CONSOLIDATED COPPER MINING CO.

MONTANA

Mine: at Corbin, Mont. Idle and apparently waiting for developments of the Bertha mine of the Boston-Corbin Co. to prove this property. See XI, Copper Handbook.

TE & CORBIN CONS. COPPER MINING CO.

MONTANA

Id.

Officers: J. L. Templeman, pres.; Lewisohn Block, Butte, Mont.; Lee Adams, v. p.; J. B. Fitzpatrick, sec.-treas.; at last accounts.

Incorporated May 1, 1907, in Montana. **Cap.**, \$700,000; shares \$1 par; non-assessable; issued \$469,000. Annual meeting Feb. 4.

Property: 5 claims, 82 acres; also 10 acres timber lands in the Corbin, Colorado district, on the eastern side of Valparaiso mountain. The ore is a complex mixture of lead, copper and zinc, occurring in short shoots of pure veins in granite. Vein reported by company to average 8' 4" in width, and to carry 4% copper, 6% lead, 2% zinc, 8 oz. silver, and \$1 gold per ton.

Development: by shaft and the 500' Rarus tunnel, which cut a 10' vein of ore from the portal, assaying 2.5% copper, with paystreak carrying 10% copper, averaging 6% copper, 8 oz. silver, and \$6 gold per ton. A body of ore was reported found in June, 1912, and the Great Northern was asked to put a siding on this property. Amount of ore on dump, valued at \$10, according to Ropes & McIntyre, of Helena, Mont., reported on property.

TEGO & ALTA EXTENSION MINING CO.

MONTANA

Office: H. P. Skiles, pres.; 22 N. State St., Chicago, Ill. **F. I. Foote,** Helena, Mont. **Mine:** at Corbin, Mont.

Officers: Dr. H. P. Skiles, pres.; H. H. Ebert, sec.; Helena, Mont.; Wm. Leavitt, treas.; with F. I. Foote, J. E. Smith, E. F. Rinear and J. Dole, directors.

Incorporated Oct., 1907, in Montana. **Cap.**, \$600,000; \$1 par; \$10,000 in treasury. **Property:** 2 claims, 36 acres, at Corbin, Jefferson Co., adjoining the Boston & Corbin Mng. Co. property on the E., shows fissure veins in granite. The veins are from 1' to 10' thick, averaging about 4', and carry large shoots of copper, silver and lead ore, reported to assay \$48 per ton.

Development: by 900' shaft with crosscuts and drifts cutting 4 ledges of ore level. Also has a 1,200' tunnel. Underground workings total 2,000'. Equipped with a 50-h. p. electric hoist and compressor.

Work is being done through the Boston & Corbin shaft, crosscutting entire claim and reported, Oct., 1917, to have cut 5 ledges and to have started a tunnel. Ore is milled in the B. & C. concentrator and a plant is being built with this company.

MONTANA

Mine office: Butte, Mont.

Officers: R. M. Edwards, pres. and gen. mgr.; Henry Tolman, treas. Newton, Mass.; with S. L. Powers, Jos. C. Walker and H. B. Byrne, directors.; A. L. Wyman, sec.

Inc. Dec. 24, 1908, in Michigan. **Cap.**, \$3,750,000; shares \$25 par; assessable; amount issued, 130,000 shares; amount outstanding, 26,000 shares; amount in treasury, 124,000 shares; \$8 per share paid in. Company sold 15,000 shares of treasury stock, early 1910, at \$10. Federal Trust Co., Boston, registrar; American Trust Co., Boston, transfer agt. Stock is listed on the Boston Curb. Annual meeting, third Tuesday in April.

Three assessments levied: \$65,000 due Feb. 11, \$65,000 due April 22, \$130,000 due Nov. 14, 1913. Poor response was made to these and the company was forced to borrow \$95,000 on its notes, giving, as guarantee, the unpaid assessments. Owing to lack of funds all work was stopped on Corbin property early in 1914.

Property: company owns 57 mining claims, 45 patented, near Corbin in Jefferson County, explored under lease and bond, 6 claims at Rochester, Madison County, and the Gambrinus, Belcher and Welch claims at Butte, Mont.; \$150,000 was paid for the Butte claims.

The Corbin group lies at the head of Clancy Creek, a few miles west of Corbin, on the western side of an andesite hill across from the Boston & Corbin mine. This property carries several strong fissure veins in andesite on which considerable exploration work has been done with disappointing results. A vein opened for 800' in the Rosalie tunnel carries up to 20 oz. silver and 7% copper, but is only 18" wide.

The Montana tunnel shows a pyritized conglomerate with andesite dacite and aplite cobbles, the matrix containing small silver values in the upper tunnel, while the winze in the lower tunnel shows considerable pyrite. The Bonanza tunnel is driven on a tourmalinized granite dike in andesite and in places the tourmaline rock carries galena and chalcopyrite with small amounts of zinc-blende and pyrite. The Corbin property is not considered favorably.

Equipment: includes steam and electric power, commercial current being taken from the Missouri River Power Co. Buildings include a general office, laboratory, warehouse, three smithies, barn, boarding house, bunk houses and 6 dwellings.

A 100-ton mill, near the portal of the Bonanza tunnel, at Wickes planned as the first unit of a larger mill, was completed July, 1910, and is idle for lack of ore.

The Butte property lies about 800' west of the Gagnon shaft of the Anaconda Co. and is believed to carry the extension of the vein worked in that mine. A shaft, sunk on the Gambrinus, was 345' deep when the work was stopped in 1914. At a depth of 85', a crosscut was driven south 45' to prove the apex of the vein and found it to consist of 2' of quartz and 10' of vein matter, carrying silver-lead ore. On the 200' level N. and S. crosscuts were run. The south crosscuts cut the vein 7' wide here, 9' from the shaft. Better assays were obtained here than on the 80' level. The north crosscut at 180' from the shaft cut a 5' vein, which showed lead, zinc and copper. About 400' of drifting and crosscutting were done in the mine.

The Rochester group shows a strong quartz outcrop, the vein being developed by a 523' shaft in which a crosscut at the bottom level encountered 2 parallel veins, 15' apart, that assay 3 to 7% copper. The property is locally known as the Blowout mine. No work has been done here for about two years. The company's most promising asset is this Butte property.

In 1917 it is reported that the company will sink the shaft to a greater depth as soon as the necessary funds are available.

CORBIN-COPPER KING MINING CO.

Office: State Savings Bank, Butte, Mont. **Mine address:** Corbin, Jefferson Co., Mont.

Officers: W. H. Hall, pres.; W. D. Gibson, v. p.; R. M. Edwards, sec.

preceding officers, I. A. Heilbronner, Wm. Gemmell and M. H. [unclear], directors.

1911, in Montana, as successor to the Montana-Corbin Copper Co. \$1,000,000; shares \$5 par; issued, 199,994 shares. Stockholders of the Montana-Corbin Co. received a new share for old on payment of 25 cts. re.

Property: 2 claims, 26 acres, about 1 mile from Corbin, in Picnic Gulch, 4 well-defined veins carrying bornite and chalcopyrite averaging 10% copper, 20 oz. silver and 50 cts. gold per ton.

Development: consists of a 2-compartment shaft, 400' deep, with about 100' workings on the Hidden Treasure claim, and several pits and shafts on the Copper King claim. There are also several short tunnels.

Equipment: includes two 60 h. p. boilers, a 15 h. p. hoist, a 5-drill air compressor. Idle since organization.

Full report on this property was made, 1911, by Alfred Frank, E. M., mentioning earlier reports by E. P. Jennings, E. M., and L. S. Ropes.

IN METAL MINING CO.

MONTANA

Office: Pittston, Pa. **Mine office:** Corbin, Jefferson Co., Mont.

Officers: J. H. Foye, pres.; John Hoy, v. p.; and gen. mgr.; Thos. Ghlin, sec.; M. W. O'Boyle, treas.; at last accounts.

1907 in Montana, as Corbin-Montana Copper Co., changing name, 1910, to present title. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; \$400,000. Company apparently is a twin of the Jefferson-Montana

Mines Co. Windsor Trust Co., New York, registrar and transfer agent. Annual meeting, second Tuesday in April.

Property: 11 claims, 176 acres, known formerly as the Baldwin mine, S. E. of Corbin, in the Colorado district, shows 5 fissure veins from a few inches to about 8' in width, cutting granite. Ores carry pyrite, bornite and galena, estimated by company to average 4% lead, 5 oz. silver, and \$2 gold per ton.

Development: by 500' 2-compartment incline shaft with considerable ore on 500' level, cutting a small orebody carrying lead-zinc-copper ores, and by several short tunnels.

Equipment: includes electric hoist, good for 1,000' depth, and a 10-drill air compressor, taking current from the Missouri River Power Co. There are also buildings, including carpenter shop, smithy and change house. Idle since 1907.

N-VALPARAISO COPPER MINING CO.

MONTANA

Presumably defunct. See Vol. XI, Copper Handbook.

Y COPPER MINING & SMELTING CO.

MONTANA

Address: Wickes, Jefferson Co., Mont. **Wm. W. Dailey, pres.;** Robertson, v. p.; C. H. Dailey, sec.

Feb., 1907, in Montana. **Cap.**, \$1,500,000, shares \$10 par; \$800,000 of which amount \$800,000 is intact.

Property: the Atlas group of 4 claims, patented in 1905, is said to show well-defined fissure veins in and about 12' estimated average width, carrying pyrite, bornite and chalcocite, estimated to average 12 oz. silver, and \$1 gold per ton. No lead or zinc.

Development: a 340' shaft, with 2,000' of workings, but no ore blocked out.

The owners shipped about \$30,000 worth of ore in 1907. Estimates ore to average about 3% copper.

No shipments have been made for several years. The company claims it needs a larger surface equipment for several years, owing to inability to

operator.

Reports made and property endorsed by F. L. Stewart and J. C. Kenzie.

Gulch groups, opened by 3 two-compartment shafts, said to make a good showing of medium-grade ore.

Reported in October, 1916, that a plant costing \$30,000 was to be erected to treat mine and custom ores.

NORTHERN VALLEY MINING CO.

MONTANA

Officers: S. F. Mallette, pres.; Godfrey, Ill.; Walter K. Mallette, v. p. Anaconda, Mont.; H. W. Wilson, sec.-treas., Twin Falls, Idaho.

Inc. 1912, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; 600,000 shares issued. Controlled by the American Metal Mining Ass'n of Arizona.

Property: consists of the holdings of the defunct Amazon-Montana Development Co. in Amazon district, Jefferson Co., Mont. Idle and no work contemplated in near future.

PRICKLY PEAR MINING CO.

MONTANA

Office: care J. C. Murray, pres., Helena, Mont. Mine P. O.: Jefferson City, Jefferson Co., Mont.

Officers: J. C. Murray, pres.; Lee Dever, v. p.; H. M. Brooks, sec.-treas.

Property: the Prickly Pear mine, 2 miles from Jefferson, opened by 350' tunnel, showing gold and silver-bearing copper ore. Has no power equipment. Production not reported.

ROBERT EMMET COPPER CO.

MONTANA

Idle. Mine at Amazon, Jefferson Co., Mont. Wm. Q. Ranft, pres. at last reports; John J. Schmitt, sec.-treas.

Cap., \$3,000,000; shares \$5 par.

Lands: 6 claims, patented, 90 acres, carrying veins in granite, not to from the andesite contact. The main vein has a generally N.-E. strike developed by a 500' shaft, showing a shoot of ore on the 350' level. 1,200' tunnel having about 1,000' of laterals shows a 10' vein carrying copper, silver and lead ore.

Equipment: includes 10-drill air compressor, electric plant, with transformers, for 60,000-volt current, taken from the Montana Power Co., the Robert Emmet Co. furnishing power to the Comet mine.

SHEILS & IRONSIDE MINING & MILLING CO.

MONTANA

Office: Dr. F. A. Ironside, 16 North Main St., Butte, Mont.

Officers: John Sheils, pres.; Stanley Ironside, v. p.; F. A. Ironside sec.-treas.

Inc. 1913, in Montana. **Cap.**, \$500,000; shares \$1 par; 446,000 issued.

Property: 6 claims, 2 patented, 120 acres, situated 13 miles N. E. Butte, and an equal distance from Boulder, Jefferson Co., Montana. Claims show a fissure-vein with ore shoots 250' and 90' long occurring in granite. This granite is cut by an almost vertical dike, greatly altered and mineralized, having a maximum width of over 50'. The ore occurs entirely in the dike, not as a segregation, but in quartz veins running with the dike within it or at its margin. Orebody is 3' to 5' wide and carries silver, lead, copper, zinc and some gold values.

Reported on by W. L. Creden, H. D. Morse, C. J. Stone; also by S. Morris, in Aug., 1917.

Development: by 3 tunnels, main one 1,850' long, with several stopes and a 50' winze with 200' of drifting at the bottom.

Equipment: includes hoist, 3 drills, electric power, and a 100-ton concentrating mill.

Ore reserves: 5,000 tons of milling ore on dump.

Production: for 1915-16 amounted to 476 tons averaging 4.3% copper, 26.6 oz. silver, and \$4.40 gold.

Shipping about 40 tons of concentrates monthly, 1917.

WAR EAGLE GOLD & COPPER MINING CO.

MONTANA

Property: 3 claims, 7 miles from Alhambra, Jefferson Co., Mont., shows strong fissure vein. The vein is in paystreaks in soft altered granite, the ore is a little chalcopryrite, whose value is mainly in silver.

Development: by a 300' tunnel, planned to be extended to 1,500' and give a back of about 500'. Presumably

HINGTON MINE

See Angelica Mining Co.

INTERN RESERVE MINING CO.

Office: Youngstown, O. Mine office: Basin, Mont.

Officers: F. S. Merwin, pres.; C. Livingston, v. p.; H. F. Duesinc, sec.; the foregoing and C. J. Burns, J. E. Richardson, A. F. Schontz, E. C. h, J. W. Kuhns, directors. J. H. Hildebrand, supt.

nc. in Ohio. Cap., \$100,000; shares \$1 par; non-assessable; no bonded tendness; annual meeting, February 1. Transfer office: Youngstown, O. Property: 3 claims, at Basin, Jefferson County, being developed for gold, lead and copper. The quartz veins in granite strike E. W. and dip N. ore occurs in large and small bodies as shoots and streaks showing des.

Development: by 2,700' tunnel, greatest depth being 660'.

Equipment: includes a steam compressor. Future work includes driving 10' tunnel and erection of concentration plant. Developing in 1916 and 1917.

WHITEHALL MINING, MILLING & DEV. CO.

Office. Address: Whitehall, Mont.

Officers: T. T. Gates, pres.; N. D. Root, v. p.; C. W. Hatch, sec.; with Ryan, Jesse Johnson, L. B. Knight, R. Edwards, J. M. Borden and Ryan directors.

inc. June, 1914, at Whitehall, Mont. Cap., \$500,000; shares \$1 par; 100,000 shares in treasury; 250,000 shares were given for the mining pro-

Property: 5 claims, about 3 miles N. E. of Whitehall, Jefferson County, reported to have an orebody 36' wide from which shipments have averaged 100 tons.

WES-CORBIN COPPER MINING CO.

Office: 21-25 Union Bank Bldg., Helena.

Officers: S. A. Balliet, pres.; A. Major, v. p.; L. C. Henry, sec.-treas.; operating with N. Salvail and T. A. Grimes, directors.

inc. July 9, 1907, in Montana. Cap., 5,000,000 shares; 10c par; non-assessable; outstanding 3,633,900. Annual meeting, 3rd Tuesday in June.

Property: 7 claims, 3 patented, 140 acres, 20 miles S. of Helena, and a mile S. of Wickes, Mont. The claims show N.-S. and E.-W. fissure cutting granite, aplite, andesite and dacite. Ores carry gold, silver, and zinc.

Development: by Bunkerhill tunnel, 1,030' long and Tulare tunnel, 700'; 8' shaft. Total workings, about 2,500', greatest depth, 350'.

Production: test lot of 31 tons in 1917 returned 4.87% copper, 17.6 oz. and 0.01 oz. gold, equal to \$24.94 per ton. The cost was \$4 per ton.

LEWIS & CLARK COUNTY**LEWIS & CLARK COUNTY**

Office, on Ten Mile creek, near Helena, Mont., and about 2 miles west summit of Mount Helena, is developed by a 300' shaft.

Property: shows a 30' vein in diorite, traceable but carrying some ore with small gold and silver values. Work on claims of lessees in 1915, but now inactive.

LEWIS-KING DEVELOPMENT CO.

Helena, Mont.; L. B.

Sannon mine.

inc. 1907, in Montana.

C. & Registrar Co., New

Tuesday in March. Sta-

Balance sheet Dec. 31, 1916, shows assets of \$2,464,292, which includes properties and options, \$2,299,707; buildings, supplies and bullion in process, \$54,802; bullion in transit, \$74,395; accounts receivable, \$663; cash, \$34,726; liabilities include a surplus of \$324,825.

Dividends: 7½ cts. a share was paid March, 1916, and June, 1916. A 10c dividend was declared payable November 15, 1917. Total to date is \$100,000.

Net profits have been as follows: in 1913, \$24,700; in 1914, \$150,419; in 1915, \$147,968; in 1916, \$96,338; \$337,488 for 9 months ended Sept. 30, 1917. Operating profits of the North Mocassin property were \$40,255 in 1916 and \$35,971 for 9 months of 1917; of the Shannon property, in 1916, \$96,021 and \$178,268 for 9 months of 1917; the Piegan-Gloster property operated at a loss of \$22,362 in 1916 and earned \$25,391 to Oct. 1, 1917.

Property: originally owned and operated by the company, consists of the Barnes-King group of claims at Kendall, developed by the Barnes King mine.

In 1912, after working spasmodically for several years and spending considerable time and money in an unsuccessful search for new orebodies the mine was closed permanently, with about \$300,000 left in the treasury. The management now determined to acquire a good property for the company. In 1912 the North Mocassin property, covering about 2,000' in length along the ore-bearing formation adjoining the Barnes-King on the north and the Kendall on the south, was purchased for \$150,000; \$5,000 cash, and the remainder to be paid from net working profits in no prescribed time. In addition a working option was obtained on the Piegan-Gloster property located near Marysville, Lewis & Clark Co., Mont. Title to this property was obtained in 1913; purchase price paid for it was \$100,000, with an additional cost of \$8,200 for 5 adjoining claims. The Gloster mine had been worked from 1880 to 1888, when the pumps were pulled. It is credited with a production of several million dollars of gold and silver bullion.

In 1915 the company bought all the property of the Kendall Gold Mine Co., adjoining the North Mocassin on the south, for \$100,000, and an option was taken on the Shannon mine, 2½ miles southwest of Marysville; purchase price is \$228,574, payable from mine profits. Final payment was made during third quarter of 1917.

At the end of 1916 the company owned, or had under option, the following properties: At Kendall, the Barnes-King group, 23 claims, 286 acres; North Mocassin group, 6 claims, 67 acres; Kendall group, 21 claims, 2 acres; total, 50 claims, 619 acres; at Marysville, the Piegan-Gloster group, 34 claims, 391 acres, and the Shannon group, 6 claims, 92 acres, exclusive of 2 claims purchased late in 1915. In Jan., 1916, the company took an option and lease on 2 claims, known as the Parker-Brownlow group, in the Rosebud district, 22 miles from Helena. After spending \$20,495 and exhausting 1 shipping ore, the option was relinquished in Sept., 1916. The orebodies at Kendall are irregular replacement deposits in limestone, dipping 25°. The ores are mostly soft and well oxidized.

Development: the North Mocassin group was first worked through the Barnes-King shaft; later the Santiago shaft was completed to the surface and it is now the main working shaft. Orebodies have been developed on different levels to a depth of nearly 800'. In 1916 underground workings at 6,600'. The Kendall mine was closed by former owners when they had exhausted all known orebodies to a depth of 500'.

The old Gloster mine had been opened by a shaft to a depth of 500', and a winze sunk 300' below the 500' level. The mine had been developed by tunnels. The B. K. Co. has opened up the mine to the 800' level and opened up the Piegan orebody by the Norman tunnel, connecting the No. 4 Piegan tunnel with the tramway to the mill, was driven 900'. All the orebodies in the Piegan-Gloster and Shannon ground averaged 800' in depth.

The Shannon mine, previous to the time of its purchase by the B. K. Co., was opened by a tunnel with 2,000' of drift.

ly on the vein which, in the tunnel, is 300' long, from 4 to 10' wide, averages \$15 in gold per ton. The B. K. Co. has sunk a 215' winze on vein, dip 70°, and opened up the 200' level for a distance of 400' to the end 122' to the E. The vein is in slate, and where crosscut on the 100' is said to have a width of 15'. Ore taken out in drifting amounted to tons of ore, assaying \$16 per ton. The Shannon mine is 13,400' from Gloster mill, with which it is connected by an aerial tramway.

Equipment: at the North Moccasin there is a double drum electric compressor, and a 1,400' electric tramway from mine to mill, which the original B. K. group, and has a nominal daily capacity of 200 tons, and a 10-days leaching period. There is also a small oil fired roaster treating the black unoxidized ore found in the eastern ore shoot. There is a 600-ton cyanide plant on the recently acquired Kendall property. The Logan-Gloster equipment includes a double drum electric hoist, 100-h. p. and compressor at the Gloster shaft. The old Gloster 60-stamp mill has been equipped with a N. 5 Symons disc crusher, three 10' Chilean 2 Wilfley tables and a cyanide plant. The mill is to be connected to a slime treatment plant with a daily capacity of 150 tons. The Shannon mine has a 75-h. p. electric driven compressor.

Power: the purchase of the Kendall property included a 400-h. p. hydroelectric plant on Warm Springs creek, 6 miles from the mine. This plant has power for the Kendall properties, and also supplies the towns of Logan and Kendall with lighting facilities. The Logan-Gloster and Shannon properties obtain power from the Montana Power Co.

....14,956	7.34	85.2	6.94	\$1.07	

Earnings in September, 1917, show a decrease from August of \$18,226, September earnings from all properties being \$98,774 against \$117,000 August. The original property of the company, known as the Barnes mine, is not being worked. An adjoining property, the North Moccasin, purchased by the company and paid for out of its own earnings, yielded \$22,204 from 2,476 tons of ore in September, while the Gloster and Shannon mines, near Helena, yielded a total of \$70,569 from 4,676 tons of ore. Both the Gloster and Shannon were also purchased and paid for out of their own earnings.

During third quarter of 1917, the North Moccasin yielded \$22,204 from 2,476 tons and \$18,838 profit; \$48,587 from the Gloster and \$22,204 from the Shannon; and \$177,071 from the Logan-Gloster and Shannon mines.

\$10,933 was paid for the purchase of the Logan-Gloster property on the Woodrow Wilson property. The results thus far are as follows:

ON HILL MINE
 S. Earnest, Spokane
Property: 9 claims, in
 Harrison, Helena
Development: by 250'
 shaft to assay \$18 per
 shaft with 20' drift, shal-
 low to \$111 per ton.
 to carload shipments year-
 men. Has a 6-h. p. gasol-

CRUSE CONSOLIDATED MINING CO.**MONTANA**

Address: Marysville, Mont. R. A. Weisner, sec.; Jas. J. Cruse pres. E. D. Phelan, v. p.

Cap., \$1,500,000; shares, \$1 par.

Property: several mines in the Marysville district, and in Grass Valley near Helena, Mont., including the Looby and Rock Rose mines. Ores contain lead, silver, and copper. The Looby vein is parallel to the Rock Rose. The Rock Rose mine has 200' shaft showing 6'-8' vein with 2' paystreak running 35% lead, 31 oz. silver, the ore averaging \$32 per ton. The Looby incline shaft is 160' deep and shows lead-silver ore of unknown extent.

CUPRITE COPPER MINING CO.**MONTANA**

Mine near Marysville, Lewis & Clark Co., Mont.

Officers: P. L. Reece, pres. and mgr., Helena, Mont.; J. B. Waltz, v. p. F. J. Rixon, sec.-treas.; preceding officers, P. B. Moss, Geo. M. Sipler, directors.

Cap., \$300,000; shares, \$1 par; non-assessable.

Property: 10 claims, about midway between Helena and Marysville. Two well-defined veins on property; one, a gold-silver-lead vein, 4' to 6' wide, the other, a gold vein of promise. The unpatented claims have been surveyed for patent.

Development: by 200' shaft, 100' of drifting on this level, and a vein 100' deep, with 340' of drifting on the 300' level, which will cut the vein at depth of 340'.

Equipment: includes a steam hoist and air compressor.

EASTERN BELLE MINING CO.**MONTANA**

Address: Helena, Mont.

Officers: Geo. Huffaker, pres.; S. T. Hill, v. p.; Geo. H. Hill, sec.-treas. Inc. 1916. Cap., \$100,000; shares \$1 par. Bought the Eastern Belle mine from Helena Bureau of Mines.

Property: 2 claims, 40 acres, in the Scratch Gravel camp, near Helena. Claims show quartz, carrying free gold.

Present management plans to sink incline shaft several hundred feet.

ECONOMY GOLD MINES CO.**MONTANA**

Address: East Helena, Mont.

Officers: J. L. Kessner, pres.; S. Rosenfield, v. p.; I. Rosenfield, v. p. E. J. Hyman, treas.; directors.

Inc. in Montana. Cap., \$1,500,000; shares \$1 par; 280,000 issued.

Property: 180 acres, patented, 6 miles from East Helena, shows fissure veins in diorite, andesite and granite. Chief vein has an E. dip, strike, with 75° dip. Ore, containing gold, silver and copper, occurs in shoots said to average 3' in width and from 35' to 150' in length.

Development: by 2 shafts about 300' deep.

Equipment: includes boilers, 3 gasoline hoists, two 75-h. p. compressors and complete electric equipment installed, 1917, and an 8-stamp mill.

Ore: developed on 300' level is same shoot of high-grade ore stopped at the 100' but wider and varying from \$10 to \$235 per ton.

FRANKLIN MINING CO.**MONTANA**

Address: Helena, Mont.

Inc. 1915, in Montana. Cap., \$1,000,000; shares \$1 par. Owned by Jas. of Thos. Cruse.

Property: in the Scratch Gravel district near Helena, Lewis & Clark Co., Mont., adjoins the property of the Scratch Gravel Gold Mining Co. on the W. The mine is said to have made total profits from 1915 to June, 1916, of \$196,498.

Claims show 2 veins, crossing, one carrying high-grade silver ore, the other free gold, the other silver ore. The gold vein is developed on the E. passes into the lands of the Scratch Gravel Co. Values of property. Employs 50 men.

FURNACE CREEK OXIDE COPPER CO.

Office: c/o John E. Corrette, sec., Hennessy Bldg., Helena, Mont. Burrell, mgr., Argo mine, Canyon Ferry, Lewis & Clark Co.

Officers: Chas. W. Goodale, pres.; John D. Haines, v. p., with A. H. [unclear] and R. C. Monahan, directors.

Inc. Oct. 23, 1906, in Arizona. Cap., \$5,000,000; shares \$5 par; 170,325 treasury, Jan. 1, 1917.

Company was organized to operate in the Death Valley district, Inyo Cal., but abandoned original holdings after unsuccessful attempts to locate commercial orebodies. In 1916 acquired 51% of Argo mine in Hell canyon, about 30 miles E. of Helena, Montana. Property was formerly owned by the Eclipse-Argo Co., producing 2,000,000 lbs. of copper, 1903-1916.

In 1916 was bought by Castleton Copper Co.
Property: 5 claims, 2 patented, held on bond and lease for \$245,000. It has a well defined fissure vein, 13" thick, traversing shale and limestone, with dip of 75-80°. Ore occurs as massive chalcopryrite assaying copper and is mineable and clean.

Ore reserves: estimated October, 1916, at 2,060 tons of 25% ore in place. Mine fully equipped. Reported on in 1916 by F. A. Linforth.

Shipments by former owners to Washoe Reduction Works, up to July, 1916, said to have netted \$114,071.

Operations for 1916-17 are satisfactory and bond will be taken up in installments, 19 miles by wagon to Louisville on the N. P. R. R. to August 1916, amount to 720 tons of ore that assayed 24.75% copper, or 356,400 lbs. Property small, but excellent and management competent.

HELENA MINING BUREAU, INC. MONTANA

Address: L. M. Rheem, sec.-treas. and mgr., Helena, Mont.

Officers: S. A. Balliet, pres.; M. H. Gerry, Jr., v. p.; preceding with E. Randegge, F. M. Smith, J. P. Bahnsen, C. E. Dalton and T. O. Hamlin, all of Helena, directors.

Inc. April, 1914, in Montana. Cap., \$100,000; shares \$5 par; 8,000 shares outstanding. Annual meeting 2nd Monday in January.

Bureau was formed for the purpose of advertising and creating a vested interest in mining industries in the Helena district. Each citizen wished to do so, subscribed \$5 a month, receiving a share of stock each subscription for the term of three years or longer. This public enterprise has been most beneficial to the mining industry of the section. It has created great mining interest all over the country in the Helena district and many newcomers have taken advantage of the mining opportunities.

In January, 1917, the Helena Mining Bureau took over the operation of the Helena mine, located in Grass Valley district. This mine is fully equipped with a 300' shaft and is making regular shipments.

Output: lead, silver and gold with a net smelter return around \$23 per ton. **Production:** averages 3-4 cars monthly which it is expected will soon be increased.

DEN SCRATCH GRAVEL MINES CO. MONTANA

Address: Helena, Mont.

Officers: Jas. Madden, pres.; [unclear] v. p.; [unclear] sec.-treas.; above, with Theo. Sartorius, directors.

Inc. March 16, 1916, in Montana. Cap., \$170,000. Annual meeting [unclear]

Property: 3 patented claims, 30 acres, Helena, Mont., near Scratch Gravel Hills, 8 miles [unclear]

Veins in granite. The mine was developed in a [unclear] manner by Jacques [unclear]

Development: 160' incline, [unclear] to develop the property [unclear]

LOUISVILLE GOLD MINING CO. MONTANA

Address: A. B. Wolvin, Dubois, Mont.

Officers: Geo. O. Freeman, pres.; [unclear] v. p.; [unclear] sec.-treas.; [unclear] engr.

Inc. 1911, in Montana. Cap., \$100,000. Annual meeting [unclear]

Property: 30 claims, 430 acres, [unclear]

Helena, Mont. This region was practically dead for years, but is reviving through the efforts of the Barnes-King, St. Louis, and other companies. Marysville Co.'s principal mine is the Blue Bird-Hickey.

Development: mainly by tunnels. About \$120,000 said to have been spent in recent exploration.

Ore reserves: estimated by company at 200,000 tons of \$10 ore. Because the 500' level of the Shannon mine of the Barnes-King Co., adjacent to the Marysville Co.'s mine, shows rich gold ore, the Marysville Co. claims indicated reserves of several millions, which is an unsafe assumption.

Milling expected to commence at end of 1917. Is considered a meritorious property.

MONTANA COPPER-SILVER CO.

MONTANA

Idle. Address: E. R. Purnell, supt., Helena, Mont.

Mine in Scratch Gravel hills, Lewis & Clark Co., Mont., 8 miles from Helena, shows quartz veins in quartz-monzonite, carrying ores with pyrite and chalcopryrite and gold-silver values.

Development: by shaft and drifts. Equipped with hoist. Is not favorably regarded.

NEW COPPER SILVER CO.

MONTANA

Address: Helena, Mont.

Officers: W. C. Bardon, pres.; Z. B. Melborn, v. p.; J. R. Wine, sec. treas. Company acquired the holdings of the defunct Copper-Silver Montana Mining Company at receiver's sale in 1914.

Property: 7 claims, 130 acres, adjoining the Lexington and Sacajewea in the Scratch Gravel district, 1 mile from Great Northern railway, and miles north of Helena. Claims show granite and monzonite, reported to carry numerous fissure veins, dipping N. W. and S. E. All veins are reported mineralized at surface, carrying melaconite, azurite and malachite. Mine has a 500' shaft, cutting at 300', a vein estimated to average 45% copper, 12 to 100 oz. silver, and \$1 to \$55 gold per ton.

Equipment: includes a 30-h. p. steam hoist and a gasoline engine. Operations have not yet been resumed by this company.

NORTHWESTERN METALS CO.

MONTANA

Shared the fate of all Marcus L. Hewitt promotions. Bankrupt. Entire property reported sold by court for \$22,000, July, 1916. Fully described Vol. XI, Copper Handbook.

O. & M. MINES CO.

MONTANA

Office: W. W. Tolman, sec., Old Natl. Bank Bldg., Spokane, Wash.

Officers: M. C. Banfield, pres.; Frederick Keffer, v. p.; Rich. Marsden, Jr., treas.; Henry Johns, mgr., Hutton Block, Spokane.

Inc. in Montana. Cap., \$1,000,000; shares \$1 par; 900,000 issued. 150,000 shares were offered the public, April, 1917, at 50c each. Final payment \$100,000 on lease and bond, due Sept., 1917.

Reported Sept. 24, 1917, that the company had insufficient funds to make the payment due on the Mike Horse group and forfeited the property. Failure was result of inability to cut fuel owing to severity of winter weather, early in 1917, and consequent inability to earn the bond money.

Property: 9 claims held under bond and 14 claims located by company unpatented, known as the Mike Horse Group, 40 miles north of Helena, the Silverton camp, Lewis & Clark Co., Mont. Mine was worked 20 years ago for its high-grade silver lead ore, but the ore becoming base with copper it was abandoned.

Development: by tunnels aggregating 3,400', has proven up 3 miles the main, or Mike Horse vein, estimated to contain 55,000 tons of ore with average assays of 15% lead, 10 oz. silver, 12.5% zinc, 1% copper and .03 gold per ton. A new tunnel, 130' lower, is being driven to reach the veins at depth.

Equipment: includes 100-ton concentrator.

Production: during 1916 totaled 325 tons of silver-lead concentrate netting about \$12,700.

Haulage charges of \$14 per ton were paid, 1916.

PHYRY DYKE GOLD MINING CO.**MONTANA**

Address: James Breen, gen. mgr., Helena, Mont. Operating the Phry Dyke gold mine at Rimini, Lewis & Clark Co., Mont. Mill being remodeled; Sept., 1917. S. R. Brown, mill supt.

K ROSE MINING & MILLING CO.**MONTANA**

Officers: J. M. Nilan, pres., Helena, Mont.; H. C. Krug, v. p.-treas., Pa.; Andrew Weisner, sec., Helena, Mont.; R. A. Weisner, asst. L. S. Ropes, cons. engr. nc. in Montana.

Property: 6 claims, 3 patented, adjoining Fort Harrison on east, near Pa, Mont., and 3 claims under option. Dandy claim has 117' shaft with drift and crosscut exposes 2 veins, one of silver-lead, the other of gold Galena vein is 6" to 4½' wide, averaging 2½'.

Price: silver lead carrying \$14.07 to \$57.79 per ton. A total of 196 tons of ore shipped in July, 1906, June, 1907, July, 1908, yielded \$4,234 smelter value.

Development: by 300' shaft with a 125' drift, exposing ore for 75', in lead and in part copper ore that carries 4½ to 10% copper. The gold is 2-3' wide and reported to average \$25 per ton, though none has been mined. The vein is traceable by 6-7 pits for 378' across the claim. Located in Aug., 1917, that good ore was opened at 200'. The ground covered by many veins and porphyry dikes.

Equipment: 80-h. p. boiler, compressor, etc., complete. Buildings in engine house, ore sorting house, boarding and bunk houses. The cost rate is but \$1 per ton for team, R. R. and loading. Water is handled by 2 hours pumping each day.

Property adjoins and is east of Helena Mine & Christmas Gift. Although lessees only shipped 190 tons hand picked ore in 2 years, the mine is profitable and worthy of development.

District is an old one, but ore-shoots heretofore developed have faded with depth.

JEWEL GOLD & COPPER MINING CO.**MONTANA**

Office: 11 Broadway, New York. Mine near Helena, Mont. Col. Henry N. Anson, pres. and gen. mgr.; W. J. Anson, sec. Capital, \$5,000,000; shares \$10 par.

Property: 47 claims in the Scratch Gravel district, adjoining the Copper River Montana Mining Co. Idle some years, but work resumed 1916.

LOUIS MINING & MILLING CO.**MONTANA**

Address: Marysville, Mont.

Property: the famous Drumlummon mine, now yielding 100 tons of ore daily with gold values.

Equipment: 25-stamp mill and cyanide plant.

SCRATCH GRAVEL GOLD MINING CO.**MONTANA**

Address: Helena, Mont.

Officers: W. E. Cullen, pres., Spokane, Wash.; J. B. Cullen, v. p.-treas.; T. B. Miller, sec.; about 1917; Larson, supt.

nc. Nov. 5, 1915, in Montana. Capital \$1,000,000. Operating since Jan. 10, 1916; Security Trust Co., Helena, Mont., office and registrar. Listed on New York Stock Exchange. Operating statement for period Oct. 1, 1916, to Oct. 1, 1917: from ore sales, \$119,947 net, from 2,000 tons of ore.

Property: known as the Head property, located on same fissure vein as the Cruse estate.

Development: to 500' depth, by 3 inclines and drifts. Only high-grade ore is being mined for the mill which was constructed from the property nearby.

Reserves: estimated in Jan., 1917, by C. G. Cruse, 9 in ore blocked out and \$1,939,311 probable value. In Aug., 1917, rich ore was being sent to smelter.

UNITED SMELTING & REFINING CO.**MONTANA**

Is controlled by American Smelting & Refining Co.

Property: the East Helena, Mont., silver-lead smelting plant.

VALLEY FORGE MINING CO.**MONTANA**

Address: S. A. Mendenhall, mgr., Rimini, Mont.

Company operates gold, silver, lead, zinc property in Ten-Mile district, 14 miles W. of Helena, but at present only dumps are being treated by the New York Montana Engineering & Testing Co., at its plant at Helena. Shipments are 80 tons daily.

WHITLATCH MINE.**MONTANA**

Owned by C. W. Young, Chicago, Ill. Worked since 1912 under lease by Sherman Bros. (H. C., A. R. & Wm.), of Helena, Mont.

The mine, 3½ miles south of Helena, Mont., located in 1864 and operated intermittently to date, has been a good and profitable gold producer. The veins carry silicious gold ore, containing small silver value, developed by a 500' shaft; recent work is mostly between the 400' and 500' levels.

Equipment: includes tramway, compressor, pump and hoist. Only 1 stamp of the 20-stamp mill and cyanide plant were at work in 1916, treating both Whitlatch and custom ores. In Sept., 1917, ore from the 400 level was being crushed.

LINCOLN COUNTY**BANNER & BANGLE MINING CO.****MONTANA**

Address: Leo Greenough, Old Natl. Bank Bldg., Spokane, Wash.

Property: Mine 5 miles from Troy, Lincoln Co., Montana, said to have an ore shoot 1,000' long, developed by 5 tunnels over a vertical height of 2,500', with commercial ore on each level. Ore contains lead and zinc.

Company owns a water right which will be utilized for developing electric power; dam now under construction. A railroad will be built from Troy to the mine and a 250-ton mill was erected 2 miles from Troy. Employs 300 men at present. Improvements estimated to cost \$500,000.

Under lease and bond to Snowstorm Mines Cons., which see.

BEAR CREEK PLACER CO.**MONTANA**

Address: E. G. Mellander, agent, Libby, Lincoln Co., Mont.

Property: Company paid \$150,000 for Libby Placer Mining Co. and \$40,000 for Comet Placer Co.'s properties. Now owns 10 miles of gravel flats along Libby Creek, beginning 18 miles above the town.

Installing a \$410,000 dredging plant, 1917, and will prospect gravel thoroughly before beginning operations.

MONTANA MORNING MINING CO.**MONTANA**

Address: Troy, Mont.

Officers: W. Hogan, pres.; G. W. Stannard, v. p.; S. T. Wood, treas.; with G. B. Harrington, J. Rosslow, E. S. Williamson and D. Wood, directors.

Cap., \$300,000; shares 20c par.

Property: 12 claims at Troy, Lincoln Co., Mont., reported to show well defined veins, partly developed by shafts. Ore opened assays high in lead, zinc, and silver. Present work consists of driving on the contact veins. Compressor installed.

MONTANA SILVER-LEAD MINING CO.**MONTANA**

Address: 605 Dekum Bldg., Portland, Oregon.

Officers: H. G. Lougee, pres. and treas.; R. Naylor, v. p.; O. E. Hirsch, sec.; with J. Bingham and C. B. Roosa, directors.

Inc. Oct. 17, 1906, in Washington. Cap., \$1,000,000; shares \$1 par; non-assessable; 900,000 issued.

Property: 6 claims, 120 acres, in the Cabinet range, near Libby, Lincoln Co., Mont., 16 miles from railroad.

Geology: contact vein in quartzite and slate. Orebody said to be 100' to 20' wide, and pay-shoot on surface 600' long. Ore is a sulphide, assaying upwards of 5% lead, 5 oz. silver, \$2 gold and 4% zinc.

Development: by 2 tunnels, 750' and 1,300' long, reaching depth of 1,100' total workings of 2,050'. Lower tunnel being extended to cut ore ed above.

E CONSOLIDATED MINING CO.

MONTANA

Address: Libby, Lincoln Co., Mont.

Officers: H. H. Phipps, pres.; Sidney Shonts, v. p.; with H. Childs, r Nordquist and P. S. Rose, directors.

Property: a gold-tungsten mine near Libby, equipped with mill, was ned Aug., 1916.

Production: over \$15,000 up to May, 1917.

SNOWSTORM MINES CONSOLIDATED.

MONTANA

Officers: Leo Greenough, pres. and gen. mgr., Old Natl. Bank Bldg., ane, Wash.; J. W. Greenough, v. p.; W. J. Beaton, sec.-treas.; with M. all, James Broad, H. E. Chaney and R. E. Walters, asst. gen. mgr., tors.

Inc. in 1916. Cap., 2,500,000 shares; 25c par.

Property: Company organized to take over the Snowstorm Mining Co. to acquire under bond and lease the Banner and Bangle claims, at Lincoln Co., Mont., which see. Of the capital stock, 1,500,000 shares issued to Snowstorm Mining Co. stockholders in full payment for orporation's assets. Proceeds of sale of 1,000,000 shares stock not ferred to the former Snowstorm Co. stockholders, has been devoted veloping and equipping the Banner and Bangle property. Reports the Banner and Bangle mine announced that 6 tunnels are all in ore 00 men employed. The work blocks out 400,000 tons of ore, averaging lead; 8.5% zinc, and 4 to 5 ounces silver per ton. It looks as if the storm stockholders had acquired an excellent property, which should put the stock on a dividend basis. New concentrator started work y, 1917, and was treating 250 tons daily in August.

MADISON COUNTY

R GULCH MINING CO.

MONTANA

Office: care of Alex. Johnston, Clark Brothers' Bank, Butte, Mont. : at Twin Bridges, Madison Co., Mont.

Property: the Montana View group, carrying auriferous and argentifer-opper ores, opened by tunnel about 3,000' long. Has steam power and ompressor. Property has little ore and is not on the contact zone; ief value is for a tunnel site for the Moffat claims, which adjoin it. re being worked, 1917, by Charles J. Stone, former manager of the Scott Mine at Butte. The Moffat Mine has developed a granite low ct with basic carrying magnetite that varies from 5' wide at the tunnel, to 100' wide near the face. This ore, average 10% r. was shipped (1916) to the East Butte smelter. Trammings \$2.00, railroad freight \$1.75 and smelting charge \$3.75 per ton.

H. MINES & MILLING CO. (not inc.)

MONTANA

Owners: N. J. Bielenberg and W. I. Higgins, Deer Lodge. iddicombe, engr. and supt.

Property: known as the Bielenberg-Higgins, consists of 1,000 aced, 360 acres, 3 patented millsites and 1 unpatented. Gulch, 14 miles from Twin Bridges, Madison Co., of the N. P. R. R.

ore: complex sulphides, occurs in porphyry and allied known veins, said to be traceable for 4,000' and to contain iron and copper values. Veins strike E. W. with dip 15° to 30°. as work progresses; 4 veins have been extensively worked. 1 to be from 7' to 105' wide and continuous at depth. Commercial value, said to average \$4 per ton. Ores average 11 oz. silver, 25% lead, 2% zinc, and 0.5% copper, with iron. Estimated approximately at 200,000 tons of \$4 to \$10 ore.

MONTANA-ILLINOIS COPPER MINING CO.**MONTANA**

Office: 450 Phoenix Blk., Butte, Mont. **Mine address:** Jefferson Island, Madison Co., Mont.

Officers: J. W. Brown, pres.; Benj. W. Wilson, v. p. and sec.; W. G. McCormack, treas.; preceding, with L. H. Stanhope, Wm. Meyer, H. Sultzer and A. D. Clark, directors.

Inc. 1907 in Montana. **Cap.**, \$2,000,000; shares \$1 par; non-assessable; issued \$2,000,000.

Bonds: \$300,000 authorized, at 8%; issued, \$80,000. Annual meeting first Thursday in July.

Property: the Bismark mine, 20 miles south of Jefferson Island, in the Ruby mountains; 10 quartz claims, patented; three 5-acre millsites; a water right and 320 acres placer ground, contested by the Forest Reserve, total of 550 acres, including part of the former holdings of the Bismark Copper Mining Co. Claims show granite and gneiss carrying 3 fissure veins, under development, with N.-W. strike of about 4' average width. Veins carry chalcopryrite and bornite estimated by management to average about 5% copper, 2 oz. silver, and \$1 gold per ton. Flotation concentrates average 22% copper.

Development: by tunnels of 400', 200', 500' and 1,900', with about 3,000' of workings.

Equipment: includes a 5' Pelton wheel and a 10x12" six-drill air compressor. There are 12 mine buildings. A concentrator, completed in 1914, has a Blake crusher and a modern oil flotation plant.

In June, 1915, a 3-year lease on the property was taken by the Iowa Mont. Dev. Co. This company re-equipped the mill, installing a 100-ton flotation plant and started operations, but was soon compelled to shut down on account of insufficient water supply. Electric power is being installed. Company is producing.

WHITE CHIEF COPPER CO.**MONTANA**

Mine: near Jefferson Island, Madison Co., Mont.

Incorporators: Lewis Schmuck, Mrs. Helen Schmuck and Ben. W. Wilson.

Inc. Sept. 1913. **Cap.**, \$1,000,000; shares \$1 par.

Property: 7 claims, in the Whitehall district, developed by a 600' upper and 100' lower tunnel showing copper, silver, lead and gold ore. A drift at depth of 82' disclosed a 5' vein, assaying 13% lead and \$14 gold.

Development: has been hampered by lack of working capital.

WILLOW CREEK MINING CO.**MONTANA**

Address: P. H. McDermott, chief owner, Helena, Mont.

Property: Owns the Mountain Meadow Group, 4 miles from Post, Madison Co., Mont., on Willow Creek. Mine shows a 12' fissure vein in granite carrying a free gold with pyrite and chalcopryrite, both with gold values, in quartz gangue. Has a small mill. Regarded as promising.

A small shipment was made in July, 1917.

MEAGHER COUNTY**DURANT MINING & SMELTING CO.****MONTANA**

Address: Spring Gulch via Martinsdale, Meagher Co., Mont. C. M. Durant, supt.

Property: 14 miles from Martinsdale, shows fissure veins carrying copper sulphide ore with gold values.

Developed: by 200' 2-compartment shaft. No recent returns secured.

MINERAL-MISSOULA COUNTY**PENA COPPER MINING CO.****MONTANA**

Office: Wallace, Idaho. **Mine office:** Saltese, Mineral Co., Mont.

Officers: C. W. Beale, pres.; A. H. Featherstone, sec.-treas.; preceding, Alex. Muir and A. P. Cochrane, directors.

Mine: in the St. Joe district, near the Monitor, and 2 miles from the r on the Milwaukee railroad, is developed by 2 long tunnels and shaft, ing a 2' vein of quartz with chalcopyrite. At last account face was from ore shoot exposed on surface, which is goal of present work.

Equipment: includes several buildings. No recent returns secured.

ZON DIXIE MINING CO.

MONTANA

Property: at Sildix, Missoula Co., Mont., is really in Coeur d'Alene ct, Idaho, and is described thereunder.

HUR MINING CO., LTD.

MONTANA

Address: Saltese Supply Co. Saltese, Mineral Co., Mont.

Officers: D. S. Dickson, pres.; Frank H. Bell, v. p. and purch. agt.; J. Luedke, sec.; C. A. Keating, treas.; preceding officers, Peter Peter- and A. J. Matthiessen, directors.

Cap. \$1,500,000; shares \$1 par. Annual meeting, last Saturday in April. **ands:** 5 claims, adjoining the Last Chance mine, 3 miles from a rail- showing a fissure vein, in quartzite, of 10' to 60' width at surface.

Development: by 3 crosscut tunnels, the lower, of 1,100' cutting a vein ing silver lead and gray copper ores. Property considered a prom- prospect.

No recent returns secured.

ELK MINING CO.

MONTANA

Office: Wallace, Idaho. **Mine office:** Saltese, Mineral Co., Mont.

Officers: Peter Peterson, pres. and gen. mgr.; Carlton Fox, v. p.; A. urtherstone, sec.-treas.; preceding officers, Geo. K. Garrett and W. S. n, directors. C. F. O. Merriam, mg. eng.

ic. April, 1909, in Idaho. **Cap.** \$2,000,000; shares \$1 par; assessable; issued. Last assessment 1 mill per share, July 22, 1914.

roperty: 15 claims, 300 acres, unpatented, on Bald Mountain, in the e district, showing 3 fissure veins in St. Regis quartzite, various es exposing veins with 4' thickness carrying streaks of chalcopyrite pathic iron, in spar and quartzite. A carload shipment, to Helena, in 18' prospect shaft, returned 28.7% copper, 28.9% iron, 15% sulphur, oz. silver, per ton. A 125' upper tunnel and a 200' lower diagonal ut tunnel show chalcopyrite and bornite, carrying small gold values.

., M. & St. P. R. R. crosses property. Management considered good roperty promising. Four men employed continuously.

TRAVELER COPPER MINING CO.

MONTANA

Office: Mullan, Idaho. **Mine:** near Saltese, Mineral Co., Mont.

Officers: Oliver Roof, pres. and gen. mgr.; Chas. Bryant, v. p.; J. au, sec.-treas.; with R. E. Seysler and F. J. Luedke, directors. **Cap.** \$1,500,000; shares \$1 par; 746,000 issued; assessable, Dec., 1913.

ands: 6 claims, 3 miles N. E. of Saltese, near the Salt

. & M. Co., show 2 parallel veins, 1, of about 6' x

gossan.

velopment: by 2 crosscut tunnels, the upper tunnel cut width, carrying copper ore, mainly chalcop

ut 3%, with richer streaks assaying up to 32.4% with traces of gold. The 1,200' lower tunnel

o reach the vein, cut a vein, 1913, showing 30' gossan.

ON-COLBY COPPER MINING CO.

ne P. O.: Saltese, Mineral Co., Mont.

Officers: Peter Peterson, pres.; Hon. Andrew Flinn, Minneapolis, Minn., sec., gen. mgr. and principal owner.

z. Sept. 16, 1903, in Montana. **Cap.** \$1,500,000; shares 10 treasury shares, 200,000 still in treasury.

roperty: 9 claims, unpatented, 180 acres, and a 5-acre tract of the Butte-Coeur d'Alene Copper Mining Co., in the Coeur d'Alene, in the East Coeur d'Alene, formerly known as St. Joe

Lands have 2 copper-bearing veins, No. 1 of about 40' width, showing a great iron capping, and No. 2, to the south, of about 3' width, carrying mainly chalcopyrite, with some bornite, of good average grade.

Development: by 2 crosscut tunnels, upper of 400', lower of 900' length with about 500' of drifting in both tunnels, said to show chalcopyrite streaks in blue hematite ore. Property crossed by C., M. & St. Paul railroad. Wood and water are abundant. Assessment work only has been done for several years owing to lack of funds.

CAPE NOME COPPER MINING CO.

MONTANA

Office: 1 Dixon Bldg., Missoula, Mont. **Mine office:** Clinton, Mont.

Officers: Edw. Donlan, pres.; F. H. Woody, v. p.; H. T. Wilkinson, sec.-treas. and gen. mgr.; preceding officers and A. L. Coffey, directors.

Inc. Nov., 1906, in Montana. **Cap.**, \$1,000,000; shares \$1 par; issued, \$924,000. Annual meeting, first Monday in June.

Lands: 3 claims, patented, 40 acres, adjoining the Aladdin Mining Co. show 4 fissure veins in granite 1 of 8' average width, traceable 800', being opened by 500' double compartment, vertical shaft, and 4 crosscut and 5 drift tunnels, with 3,750' of workings.

Equipment: includes two 60-h. p. boilers, a 40-h. p. Lidgerwood hoist and a 12-drill Ingersoll air compressor. There are 6 buildings.

Property: considered promising, but has been idle for several years.

COEUR D'ALENE PACIFIC MINES CO.

MONTANA

Idle. Officers: Dr. Jas. Sutherland, pres., 212 Peyton Bldg., Spokane Wash.; E. A. Patrick, v. p.; M. N. Stratton, sec.-treas.; preceding with J. A. Reinhardt and N. E. Jesseph, directors.

Inc. in Washington. **Cap.**, \$1,000,000; shares \$1 par; non-assessable.

Property: 2 claims, 40 acres, near the Silver Cable mine, Mineral Co. Mont., giving fair surface indications of lead and copper ore, with a short tunnel.

COPPER AGE & EDISON MINING CO.

MONTANA

Idle. Officers: Chas. J. Heidenreich, Spokane, Wash., pres.; Morton Webster, Wallace, Idaho, sec.-treas.; L. N. Hyde, supt.

Inc. 1906, in Washington. **Cap.**, \$250,000.

Property: 12 claims, 4 miles south of Saltsee, is an eastern extension of the Richmond mines, carrying extension of copper-bearing outcrop of that mine, the vein paralleling the Monitor. The vein is exposed for some 700' in the tunnel just east of the divide; it averages 10' thick, is nearly vertical and carries a very little chalcopyrite and chalcocite in a siderite gangue.

Development: includes a main 1,160' crosscut tunnel, with back of 600' showing sulphide ore assaying up to 30% copper, and \$14 gold per ton.

COPPER HILL MINING CO., LTD.

MONTANA

Idle. Office: Wallace, Idaho. **Mine:** near Quartz, Missoula Co., Mont.

Officers: Morton Webster, pres.; A. T. Ryan, v. p.; P. L. Eberhard, sec.-treas.; preceding, with Howard K. Welch and Jas. Howarth, directors.

Inc. March, 1908, in Montana. **Cap.**, \$250,000; shares 25c par; non-assessable.

Property: 7 claims, 125 acres, in the Sunrise district, on the Montana side of the Montana-Idaho divide, showing an altered zone of highly silicious rocks of 25' to 50' width, carrying fine disseminations of copper carbonates and sulphides. Mine has a 75' tunnel, showing ore said to be somewhat similar to that of the Snowstorm, and assaying about 4% copper.

COPPERSMITH MINING & MILLING CO.

MONTANA

Idle. Mine: near Lothrop, Mont.

Inc. Jan. 23, 1909, in Idaho. **Cap.**, \$3,000,000; shares \$1 par; non-assessable; issued, \$2,200,000.

Property: 8 claims, unpatented 160 acres, the Copper Smith claims and the Inverness group of 2 claims, also a water right, about 6 miles up Petty Creek from Lothrop. Property is now idle. The Copper Smith claim shows limestone and

ated width of about 400', and length of about one-half mile, with out-
yielding 3 to 20% copper ore.

Development: by prospect shaft and crosscut tunnel, said by manage-
ment to cut merely 300' of silicified limestone averaging 1% copper. Prop-
erty also has a number of open cuts and pits, and a 50' shaft, bottomed in
limestone to average better than 6% copper, with small gold and silver
values. The Coppersmith was formerly reported to show 3 main veins, one
reported to be over 100' wide at surface, giving ore assaying 2 to 3% cop-
per. The Exty vein, parallel with and 500' from the Coppersmith, is re-
ported as 15' wide.

The Inverness group, 3 miles from Lothrop, has a vein of 3' to 4'
in quartzite and slate, carrying malachite, chalcopryrite and chalcop-
rite, giving assays of 15 to 17% copper and \$10 to \$12 per ton in combined
lead and silver values. Property has 4 buildings. Idle except for annual
management work, and property not considered encouraging.

BY MINING AND MILLING CO.

MONTANA

Address: S. C. Bean, mgr., Mullan, Ida.

Officers: S. C. Bean, pres. and mgr.; L. Fogel, v. p.; M. J. McHugh,
cash.; above with J. A. Ghormley and W. W. Trumbull, directors.

Inc. March, 1907, in Idaho. Cap., \$1,000,000; shares \$1 par; 400,000

Property: 10 unpatented claims, 200 acres, near Keystone, Mineral Co.,
about 4½ miles from a railroad. Said to show a fissure vein in quartzite
bearing lead and silver values.

Development: by 3 tunnels, longest 600'.

by a prospect

MEMORA GOLD & COPPER MINING CO., LTD.

MONTANA

a dormant corporation owning 6 lead and copper claims, one-half
mile from N. P. R. R., near Taft, Mineral Co., Mont. Described Vol. X.

COEUR D'ALENE MINING CO.

MONTANA

Address: care Harry Hogan, pres.; Mullan, Idaho; T. A. Westervelt,

Property: a group of claims a few miles north of Haugan, Mineral
County, showing a 30' vein carrying a 2' pay streak with some copper ore re-
ported to carry 8% copper and good gold values.

Development: by short tunnels and drifts.

CROWN MINING CO., LTD.

MONTANA

probably dead. Described Vol. XII.

LITON-MONTANA GOLD MINING CO.

MONTANA

Office: Richard Daxon, mgr., Hamilton, Mont.

Property: Company owns group of claims in Mineral Co., Mont.

Developed: by 400' crosscut, driven to intercept a vein of copper and
silver.

See at last accounts.

LOCK SILVER-LEAD & MINING CO.

MONTANA

Address: Saltese, Mineral Co., Mont. Walter J. Hughes, pres.

Inc. 1907, in Montana. Cap., \$150,000; shares 10c par.

Property: 3 claims, on Packer Creek, 1½ miles from Saltese, is an
open prospect, worked by tunnels. Present management sank a shaft 150',
in 1914 crosscut 220' to the lode, which is claimed to be 60' wide and
to carry silver and lead ore.

Development: Friction in the management is said to have delayed opera-
tion. At last accounts, Feb., 1916, the shaft was being worked and ship-
ments were supposed to start. Another shaft was then in sight.

See later returns. Probably

MIN TREASURE GROUP

Inc. 1916. Peter Porter,

Property: near Clinton

in Mineral district, said to

carry 2 to 20% copper

and is being developed for shipments

Development: mainly on Hidden Treasure and Cascade claims, includes 2 tunnels in a steep mountain side, uppermost 558' on vein claimed to be 50' wide. Ore cut 80' from portal and extends to face. Lower tunnel, 1,400' long, follows, the east vein, said to be 50' wide. Crosscuts develop 1 other vein of 13' width and drifts have opened up some rich spots and several hundred feet of concentrating ore. Total work 3,600'. Shipments began 1899 and ceased in 1907 and property has had but little development since.

HUGO GOLD & COPPER MINING CO.

MONTANA

Address: Saltese, Mineral Co., Mont.

Officers: Richard W. Seideman, pres.; A. G. Kearns, v. p.; A. G. Seideman, sec.-treas., with A. B. Atwater and Peter Weber, directors.

Inc. 1907, in Idaho. **Cap.**, \$1,000,000; shares 10c par; assessable; 770,000 issued.

Property: 3 claims, carrying the extensions of the Boston-Colby vein system, next E. of the New York & Brooklyn mine, and one-half mile E. of Saltese. Claims carry 2 parallel veins, 300' apart, 1 about 15' wide, said to show copper carbonates, bornite and chalcopyrite, giving assays, from selected specimens of 2 to 57% copper. The second vein, proven by trenching, is said to be about 12' wide, carrying a 3' paystreak of ore assaying 12% copper, 6 oz. silver, and \$8 gold per ton.

Developed: by 2 drift tunnels, 1,350' long, that follow the vein. An overshot water wheel, taking water, under a 12' head, from the St. Regis river runs a 4-drill air compressor. Only assessment work done in 1916. Is a prospect.

INTERMOUNTAIN COPPER MINING CO.

MONTANA

Address: Wallace, Idaho. **Mine office:** Iron Mountain, Mineral Co. Mont.

Officers: Edward Evans, pres.; W. J. Griffith, v. p.; H. H. Phipps, sec. H. M. Childs, treas.; with Oscar Nordquist, directors.

Inc. 1915, in Montana, to take over the holdings of the Amador Copper and Gold Mining Co. **Cap.**, \$2,000,000; shares \$1 par.

Property: 6 patented and 6 unpatented claims on Cedar Creek, 10 miles S. of Iron Mountain, Mont., said to show a vein of copper and silver ore in quartzite, dipping 60° with E.-W. course. Shoots are from 2' to 11' wide. Average assay is 15% copper.

Development: 700' vertical, 3-compartment shaft, with levels at 200, 460' and 700', and long drifts on each level.

Ore reserves: estimated at 50,000 tons blocked out.

Equipment: includes a 2-mile flume and pipe line, delivering water under a 310' head, and steam power, with 2 hoists, compressor, pumps, saw mill, and about 15 mine buildings. A 100-ton concentrator was constructed in 1915. Has a Callow flotation unit.

Future outlook is considered good, dividends being expected at an early date.

IRON MASK MINING CO.

MONTANA

Office: St. Maries, Idaho. **Mine:** near Carter, Missoula Co., Mont.

Officers: T. B. Huey, pres.; Leon Demers, v. p.; P. Martin, sec.-treas. preceding, with F. Perrier, J. J. Bouchard, directors.

Inc. May, 1908. **Cap.**, \$1,000,000; shares \$1 par; 3500,000 outstanding. Assessment No. 3 of 2 mills per share, levied June, 1913.

Property: 6 claims, well timbered and watered, 3 miles from a town. are said to show a 10' vein of concentrating ore, with an 18' vein of smelting ore.

Development: by tunnel 1,700' long, with back of vein, and drifting on the vein in the various tunnels. The ore is said to be a lead ore of good average grade, with a small percentage of silver.

Equipment: includes gasoline power and necessary machinery. Letters returned from St. Maries, Idaho, 1913.

N MOUNTAIN TUNNEL CO.**MONTANA**

Purchased in July, 1915, by Federal Mining and Smelting Co., which

T CHANCE COPPER MINING CO.**MONTANA**

Address: W. H. Nichols, sec., 50 Broad St., New York.

Officers: Geo. Champagne, pres.; Dr. T. C. Witherspoon, treas., Mur-

hospital, Butte, Mont.

Cap., \$1,200,000; shares \$1 par.

Property: 2 claims, patented, adjoining the Ben Hur mine, 4 miles

of Saltese, Mineral Co., Mont.

Mine: is developed by shallow shafts and a 2,300' tunnel, the workings

to show a 30' vein, faulted in the tunnel, but a winze shows an 18"

of ore said to carry about \$100 per ton in values. Company reports

shipments of about \$150,000, one carload shipped giving returns of

copper, 394 oz. silver and \$12 gold per ton. Tunnel was driven in

1916 to reach the rich oreshoots from which shipments were made.

to later returns.

ROY GOLD & COPPER MINING CO.**MONTANA**

Office: Wallace, Idaho. Mine office: Saltese, Mineral Co., Mont.

Officers: Hon. Herman J. Rossi, pres.; G. F. Dann, v. p.; C. E. Clark,

treas., with Wm. Fissenger and Chas. Bollinger, directors.

Property: adjoins the Monitor mine, and survey for the extension of

monitor tunnel runs through this property. Assessment of 2 mills per

acre called Aug., 1915, and development work resumed after several years

cess.

MOND MINING, MILLING & REDUCTION CO.**MONTANA**

Office: 404 Sherwood Bldg., Spokane, Wash.

Officers: J. E. Codd, pres.; Chas. Heidenreich and W. S. Norman, v.

p.; W. McGowan and P. T. Sweeney, directors. B. C. Redhead, sec.

Sharp, mgr.

Cap. in Washington. Cap., \$1,000,000; shares \$1 par; 800,000 issued.

Net assets on Oct. 31, 1917, totaled \$32,288; and current liabilities,

Net earnings in October were \$30,000.

Property: on Idaho-Montana line, 6 miles from Saltese, Mineral Co.,

and 1½ miles from Adair, Idaho, connected with C., M. & St. P.

by 8,800' aerial tram. Company owns 6 claims, 2 patented, and

2 unpatented.

Dividends: 2c per month, equal to \$16,800. Total to Oct., 1917, \$84,000.

and payment suspended in October.

Development: 2,200' of tunnels, 500' of shafts, 2,000' of drifts, and 600'

of ore. Lowest depth is 370'. Vein shows on surface for 2,200', of which

1,000' has been developed. Reserves are estimated as sufficient for 50 tons

or a year.

Equipment: hoist, compressor, 8,800' aerial tram of 240 tons daily

capacity, etc.

Production: to July, 1917, \$100,000; since then 50 tons of ore daily

valued about \$1,000, according to price of copper.

Property seems to make fair profits on small output and pays regular

dividends.

L. MINING CO.**MONTANA**

Address: Mohawk Bldg., Spokane, Wash. Mine office: Potomac, Mis-

souri, Mont.

Officers: John H. Wourms, pres.; J. M. Long, v. p.; J. H. Pettitur,

treas., with Reardon, v. p., and L. K. Church, directors.

Nov. 10, 1917, Washington. Cap., \$1,000,000; shares \$1 par;

1,000,000 issued.

Property: 11 claims, 20 acres, 6 miles N. of Clinton on

C., M. & St. P. R. R. Mont. on C., M. & St. P. R. R.

known to be rich. Estimated \$18,000 worth of ore

years ago.

Inc. Jan. 10, 1917, in Montana. Cap., \$250,000; shares 25c par; 600,000 shares issued.

Property: 11 claims, at Jardine, Park Co., Mont., said to have over 1,600' of underground workings exposing gold-bearing veins that vary from 2' to 36' wide, which occur in pre-Cambrian schistose rocks. In October, 1917, company had cut 5 veins and opened the Big vein, 43' wide, showing 3' of \$28 ore. Six men are employed.

The company is being promoted and stock sold by W. H. Nichols & Co., New York.

COOKE MINING & REDUCTION CO.

MONTANA

Idle. Mine near Cooke, Park Co., Mont.

Developed: by tunnels, showing auriferous and argentiferous copper ores. Has a small steam plant. District is remote from transportation being on N. E. border of the Yellowstone Park.

COPPER KING MINING CO.

MONTANA

Address: Cooke City, Park Co., Mont.

Property: the King and Queen group, developed by tunnels, showing an extensive orebody, with fair values in gold.

GREAT WESTERN MINING & MILLING CO.

MONTANA

Address: Chico, Mont. H. F. Lawrence, mgr.

Property: 6½ miles from Chico Hot Springs, Park Co., Mont., at 7,500 elevation. Nearest railroad is at Emigrant, 10 miles away.

Development: tunnel reveals a brecciated and somewhat altered, fine grained, light-gray porphyry in which fine-grained molybdenite intimately associated with pyrite forms the matrix and permeates the individual fragments of brecciated material. Ore contains 5% molybdenite, and deposit is extensive.

A mill using flotation was erected, but no recent news is available.

JARDINE GOLD MINING & MILLING CO.

MONTANA

Idle. Address: 4 Silver Bow Block, Butte, Mont.

Officers: W. S. Hunnewell, pres. and treas.; H. C. Bacorn, v. p. and mgr.; S. D. Bacorn, sec.; above, with J. E. Healy, directors. T. J. Walker, supt.

Inc. 1914 in Arizona. Cap., \$2,000,000; shares \$1 par; non-assessable.

Property: 26 claims, 21 patented, at Jardine, Park Co., Mont. From the 80's to 1907, the mine produced gold ore worth \$3,000,000; also 300 tons of tungsten (scheelite) ore and concentrate. Litigation tied up everything until Jan., 1917, when the present company was organized to take over the property. Management is cleaning-up and re-timbering, and will resume on a large scale. The plant will be increased to 400 tons daily capacity.

Geology: quartz vein in schist, dipping up to 45° W. and pitching N. and S. Ore is partly oxidized and partly arsenopyrite, and will average \$5 per ton.

Development: by tunnel with total workings of 3 miles to a depth of 500'.

Equipment: Ingersoll-Rand compressor, 125-ton mill and cyanide plant for gold ore and 20-ton concentrator for tungsten ore.

Production: 13½ tons of 62.35% tungsten ore was shipped in Jan., 1917. Employs 60 men.

Seems a meritorious property, and with care the treatment of low grade ore should be profitable, plus the tungsten output.

MONTANA SCOTCH BONNET COP. & GOLD MG. CO.

MONTANA

Idle. Office: 603 Jamieson Blk., Spokane, Wash. Mine office: 200 Park Co., Mont.

Officers: S. A. Gibson, pres. and gen. mgr.; C. E. Mallett, v. p.

Inc. March, 1902, in Washington. Cap., \$300,000; shares \$1 par; non-assessable; fully issued.

Property: 17 claims, partly fractional, 200 acres, 65 miles from a railway.

Development: by tunnel with about 1,500' of workings. Ore is a sulphide ores of lead and silver, containing 3.7% lead, 4 to 5% silver, and 10% copper.

nder option early 1916 to John H. Wourms, Wallace, Idaho, chief l for the Day interests.

ERN SMELTING & POWER CO. MONTANA

Office: 610 Northern Bank Bldg., Seattle, Wash.

Officers: G. L. Tanzer, pres.; Alvin Hemrich, v. p.; J. J. Black, sec.-with G. B. Baker, C. J. Steeple, E. W. Gaylord, Joseph Schlenker, Good and C. A. Swartz, directors. H. C. Reagon, supt.

inc. 1911, in Washington. Cap., \$5,000,000; shares \$1 par; non-assess-957,624 issued. Annual meeting 1st Saturday in March. Expenses in 1916 were \$89,592.

In March, 1917, company was said to be erecting a 300-ton custom smelter at Park Co., Mont. Ore reserves given as over 1,000,000 tons, containing copper, gold and silver. Cooke City has yearned for smelter since it ought to support this long deferred plant.

POWELL COUNTY

E & ELLISTON GOLD & COPPER MINING CO. MONTANA

Office: 113 Hamilton Block, Butte, Mont. Mine near Elliston, Powell County.

Officers: J. H. McOmney, pres.; D. G. Bertoglio, v. p.; F. H. Cooney, asst. pres.; preceding officers, J. E. Homple and C. S. Jackman, directors. Cooney, mgr.

inc. 1906, in Arizona. Cap., \$1,000,000; shares \$1 par; fully paid and assessable; issued, 575,000. Dividend of 1% paid 1907, since when companies been inactive.

Property: 1 claim, patented, 17 acres, in the Ontario, or Elliston mining district, known as the Big Ditch mine, 6 miles from Elliston on the side of the mountain. Claim shows diorite having 6' fissure vein developed by 100 ft and 1,000' of workings.

Assay: said to average 31 oz. gold, 15 oz. silver and 10% lead, with some lead and copper. A new 1,230' tunnel now being driven will intersect vein at bottom of the shaft.

Equipment: equipped with 25-h. p. hoist, compressor, pump and surface buildings.

Production: by lessees in 1914-15 netted the company \$1,246 in royalties, total to date of \$83,000.

Property now under lease and bond to a private company owning the surface claims, who are driving the tunnel to connect with the old shaft.

OLD MINING CO. MONTANA

Office: Deer Lodge, Powell Co., Mont.

Officers: J. C. Conlin, pres.; Tobias Schurtz, treas.; with J. E. Neville, asst. pres., S. P. Wilson, directors.

inc. March, 1913, in Montana. Cap., \$800,000, \$1 par; assessable. Shares issued.

Property: 2 claims, 1 patented, 20 acres, 10 miles S. E. of Deer Lodge and 5 miles N. of Butte, Mont. Claims show small stringers of oxidized surface which at depth of 40' are reported to assay from 4-7% gold and 7-14 oz. silver per ton.

Development: by 100' shaft. Shipped 15 tons of ore in 1915 netting \$30,000.

Prospect, needing money for developing.

INDENCE GOLD & COPPER MINING CO. MONTANA

Office: Deer Lodge, Powell Co., Mont.

Officers: Eldred, pres. and gen. mgr.; C. H. Williams, v. p.; E. Larabee, treas.

Cap., \$900,000; shares \$1 par. Assessments to date \$100,000.

Property: in Deer Lodge mining district, 12 miles S. of Deer Lodge

NEVADA

The great mining centers of Nevada are Goldfield, Esmeralda county; Virginia City (Comstock lode), Storey county; Tonopah, Nye county; Ely White Pine county; Yerington, Lyon county, and Rochester, Humboldt county. The mines of each of these districts, like those of other sections of the state, are arranged by counties.

CHURCHILL COUNTY

BOYER COPPER MINES CO.

NEVADA

Mine P. O.: Boyer, Churchill Co., Nev. Arthur Howe Carpenter, con engr., 210 Noble Ave., Crafton, Pa.

Property: 49 claims, 1,000 acres, also a 10-acre mill site and 160 acres of placer lands, at Boyer, about 30 miles from Wonder, Nev., and 75 miles south of the S. P. R. R. at Winnemucca, in the copper belt of the Piute mountains, formerly developed by Alva Boyer, now controlled by Croft Umacke, of Reno, Nev.

Property: covers a mile of the western end of a contact between whitish andesite and an underlying greenstone, or andesite, which shows copper pyrite peppering the rock. The ore bed has a dip of but 20° and thickness of 100' and is much altered, the footwall being a hard, siliceous band. The lower 30' carries 5% copper, but the orebody developed was figured by Prof. Carpenter and A. H. Carpenter to assay 1.7% copper and about 70 cts. per ton in gold. High-grade ore occurs in small iron-capped veins which extend up through the porphyry and carry a breccia of rock fragments cemented by copper glance and bornite.

Development: by tunnels, now inaccessible. Present company has done about 500' of work on Treasury Box hill and exposed a faulted bed of 200' length, 100' width and with 500' depth on the dip, assaying as above. Property promising when railroad facilities are provided. Only prospecting done.

CHURCHILL MILLING CO.

NEVADA

Subsidiary of Nevada Wonder Mining Co., which see.

FAIRVIEW RED ROCK CONSOLIDATED MINES

NEVADA

Office: J. A. Wright, financial agent, Exchange Bldg., Denver, Col. H. A. Riedel, pres.

Inc. in Arizona. Cap., \$2,500,000; shares \$1 par; non-assessable. Stock being offered at 5c per share cash, or 5½c per share in 10 equal monthly payments, March, 1917.

Property: the Red Rock group, 15 claims, 230 acres, near Fairview P. O., in the Fairview mining district, about 42 miles E. of Fallon, the nearest railroad point. The mine shows 2 parallel contact veins, about 100' apart, between limestone footwall and porphyry hanging wall, said to be from 2-8' wide at surface for about 1,500' and to carry ore averaging 1.5% copper per ton in gold-silver-copper. The veins have an E.-W. strike, dipping about 65°.

There is no equipment and the property is merely a prospect as yet.

FORTUNA GRUBSTAKE MINING CO.

NEVADA

Inc. 1917, in Nevada. Cap., \$500,000; shares \$1 par; 125,000 shares of stock being offered at 25c, April, 1917.

Property: in Churchill county, Nevada, said to be rich in lead and silver. Developed by 350' tunnel.

MINNESOTA NEVADA INVESTMENT CO.

Office: Endicott Bldg., St. Paul, Minn. Churchill county, Nev.

Officers: Alf. Patterson, pres.; O. S. Deringer, sec.; M. P. Ryan, treas.;

enable sinking it to 1,900'. An electric tractor moves ore from stopes at 1,300'.

Production: in 1916, 72,241 tons of ore averaging 18.72 oz. silver, 0.159 oz. of gold and worth \$15.40 per ton. This yielded 1,243,753 oz. silver and 10,933 oz. gold, worth \$1,031,243. The recovery was 92.67% of total value at a cost of \$8.90 per ton for all departments. In 1915 the cost was \$7.26 per ton.

Churchill Milling Co.

Is a subsidiary of the Nevada Wonder Mining Co. with same directorate. Operates a 100-ton mill at Wonder, Churchill Co., Nev. Treated from Oct. 1, 1915, to Dec. 31, 1916, 72,241 tons of ore of \$1,112,835 gross value, showing a 95.35% recovery of the gold contents, 91.95% of the silver contents and 92.67% of the total value, or 11,466 oz. gold and 1,352,615 oz. silver. Total cost per ton was \$2,761, compared with \$2,268 in 1915.

Annual report for 15 months ending Dec. 31, 1916, showed: assets, \$237,122, which include property, \$80,889; accounts receivable \$78,032 and liabilities \$14,579, leaving a surplus of \$68,543. During same period \$352,091 was paid in dividends, making a total of \$915,205.

AZALIA MINING CO.

NEVADA

Address: F. M. Berry, sec.-treas., Union Oil Bldg., Los Angeles, Calif.

Officers: F. W. Cole, pres.; S. E. Vermilyea, v. p.; preceding officers, John Woodson and S. L. Carpenter, directors; Dee W. Minier, supt.

Cap., \$1,000,000; shares issued, 700,000.

Property: 4 claims, 8 miles N. W. of Platina, Yellow Pine district, covering a vein in limestone, containing zinc-silver ore, for 3,000'. Developed by an 80' incline shaft which passed over the ore, said to be 6' thick and faulted at a depth of 30'. Operated under lease by C. E. Cree in 1917.

Company is developing a group of 9 claims about 1 mile below the Cerro Gordo mine, in the Cerro Gordo mining district, Inyo Co., Calif. A tunnel, 750' long., in June, 1917, is being driven to reach the contact.

AZURITE MINING CO.

NEVADA

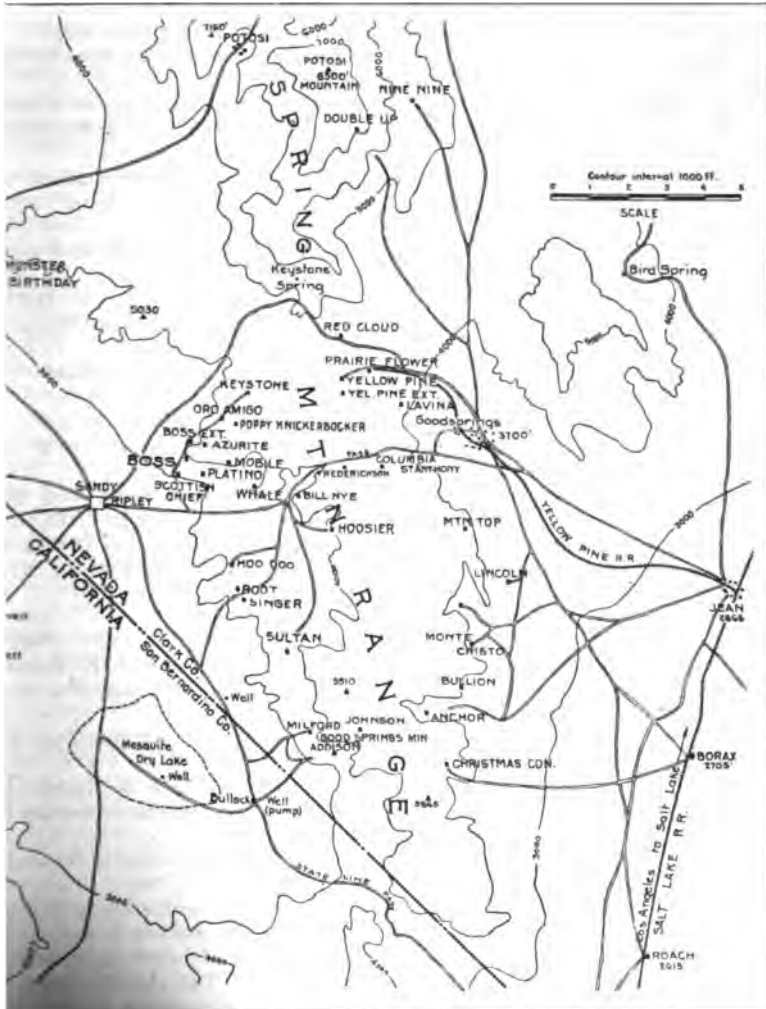

J. W. McFtridge, mgr.-sec.-treas., 941 W. 35th St., Los Angeles, Cal. **Mine address:** Goodsprings, Clark Co., Nev. A. C. Black, pres. and purch. agt.; T. D. Knights, v. p.; preceding officers, M. P. Erwin, M. M. McFtridge and Samuel Yount, directors.

Inc. Feb. 7, 1911, in Nevada. **Cap.,** \$1,000,000; shares \$1 par; nonassessable; issued 440,879 shares.

Property: 9 claims, 174 acres and a 3-acre smelter site, in the Yellow Pine district, sections 26, 27, 34 in T. 24 S.; R. 57 E., 12 miles from Goodsprings and 20 from Jean on the Salt Lake railroad. The mines adjoin the Boss mine on the east.

Ore: carries plumbojarosite, a very rare mineral, carrying gold and platinum (see U. S. Geol. Survey Bull. 620). The Shenandoah, Jolly Boy and Copper Chief mines, all producers, adjoin the Azurite. A 150' tunnel, 80' below the incline shaft, at the Azurite mine, will give working ground for stopes. Claims show ores carrying gold, silver, copper, lead, zinc and

...m, lowest assay at the copper mine said to be \$3.60 gold, \$4.50
 27% copper, .03 oz. platinum. Ore occurs in replacement orebodies
 :gular size and shape, the largest 35x40' and 8 to 10' thick. These
 ements occur in thick bedded limestones cut by porphyry dikes.
 evelopment: the Azurite copper mine has a 78' and a 20' shaft.

SOUTH-EASTERN NEVADA, INCLUDING YELLOW PINE DISTRICT

 ...block out 8,800 tons of 20% copper ore and 30%

...Nevada Copper Realty property, Feb. 7, 1911. The
 ...ch of the Salt Lake Route from Jean to

Gross earnings for 1916 were \$13,000 and operating expenses were about \$10,000. About 150 tons of ore were shipped.

Property: 6 claims, about 120 acres, on the south and east slopes of Olcot Peak, Yellow Pine mining district, ten miles north of Goodsprings, Clark Co., Nev.

Ore: is a high grade copper carbonate occurring in chambers and kidneys embedded in limestone. The highest assay of the 5 cars sorted ore shipped was 25% and the lowest was 14% copper.

Development: by 6 adits with total of 600', the longest being 150'. Property has been worked intermittently for a number of years and efforts are now being made to finance some consistent plan of development.

DUPLEX MINING CO.

NEVADA

Office: 501 P. E. Bldg., Los Angeles, Cal. **Mine office:** Searchlight, Clark Co., Nev.

Officers: Geo. L. Craig, Long Beach, Cal., pres.; C. W. Ennis, v. p.; Geo. R. Colton, sec.; G. F. Colton, pres.

Inc. May 7, 1915, in Nevada. **Cap.**, \$500,000; shares \$1 par. All stock issued is assessable.

Property: 7 patented claims, 101 acres, is a well-known gold mine, with veins in quartz monzonite, carrying gold-silver ores, changing to copper, lead and zinc at depth. Orebodies from 2.5' to 5' in width.

Development: by 600' vertical shaft, a 45° incline shaft 400' deep, and a 74° incline shaft 300' deep, with about 2,500' of underground workings. Assay results from carload lots are 0.9 oz. gold, 4.9 oz. silver, 8.6% lead, 2.3% copper, 1.3% zinc. Company claims that on the lowest levels the amount of lead is diminishing and copper increasing. The first copper ore mined in commercial quantities in the district was shipped from this mine in Aug., 1913. Gross earnings from ore sales in 1914-1915 were \$7,500, with operating expense of \$10,500. Property equipped with stamp mill, which will resume operations when property is opened up between 500' and 700' levels. Company planning to remodel mill and install an oil flotation plant.

Leasers reported to be shipping ore, 1917.

DUPONT COPPER MINES CO.

NEVADA

Office: N. H. Wheeler, 7 East 42d Street, New York. **Mine address:** Searchlight, Nev.

Officers: S. J. Kistler, pres.; Wm. D. Miller, v. p.; Chas. M. W. Keck, sec.-treas.; with Geo. S. Fenwick and A. M. Marshall, directors. G. B. Hartley, supt.

Inc. Feb., 1916, in Ariz. **Cap.**, \$2,500,000; shares \$1 par, non-assessable; 1,500,000 issued. Security, Transfer & Registrar Co., N. Y., transfer office. Metropolitan Trust Co., N. Y., registrar.

Property: the Sazarac group, formerly owned by the Gold Coin Mining Co., defunct 1907, and the Bornite group. These holdings comprise 23 claims, 8 patented, 410 acres, at Camp Dupont, 18 miles from Searchlight, Clark Co., Nev.

Geology: the mineralized dikes or veins at the property occurs in a batholith of granite porphyry (or quartz monzonite), which intrudes a pre-Cambrian granitoid complex, overlain by Tertiary volcanics. A contact between a white microcline aplite and a greenish basic granite is observed, the basic rock being invaded by great tongues of the former and by M. S. pegmatite dikes paralleling the vein system.

Ore: carries copper and gold in silicified quartz porphyry with iron and spathic iron and occurs in the N. S. Sazarac vein, specular hematite in silicified quartz porphyry at contact. The vein is 15' wide on 200' level. The Bornite vein, 5' wide, occurs

porphyry gangue on surface. Four per cent Hill is a stockwerk of s, making a possible disseminated or porphyry orebody.

Development: 216' shaft on the Sazarac, 92' and 141' shafts on the e, and 100' shaft on the Copper Queen claims.

Reported on by Carl Anderson, E. M., and by W. W. Wishon, E. M., Angeles, in 1916.

Property regarded as promising.

ERN COPPER CO.

NEVADA

Office: 805 H. W. Hellman Bldg., Los Angeles, Calif. Mine address: Thomas, Nev.

NEVADA

Office: 1202 Hollingsworth Bldg., Los Angeles, Calif. Mine at Jean, Co., Nev.

Officers: Frank A. Keith, pres.; Philip Wiseman, v. p.; R. I. Rogers, I. Mattern, sec.; with Seeley W. Mudd, directors. Roy W. Moore,

Dec. 20, 1913, in Nevada. Cap., \$1,000,000; shares \$1 par; issued, . Annual meeting, second Monday in May.

1916 earnings in 1916, \$111,359; in first 4 months of 1917, \$34,940. Total ds to June 1, 1917, \$147,285.

Property: 7 patented and 1 unpatented claims at Jean, said to show ic ore occurring as replacement deposits in limestone, strike N.-S.,

Developed by 212' winze from a 110' tunnel; greatest depth of gs 400'; total underground workings, 1,600' of drifts.

Equipment: 15-h. p. oil hoist, 3-drill compressor, 2,000' gravity tram, dry mill using Stebbins tables.

Production: in 1916, 872 tons crude zinc ore, 472 tons crude lead ore tons lead concentrate.

1st 4 months of 1917 yielded 178 tons of 37% zinc ore, 136 tons of lead rying 59.1% lead and 5.61 oz. silver, and 208 tons concentrate assay- % lead and 12.62 oz. silver.

MONSTER MINE.

NEVADA

Office: Phoebe A. Hearst Estate, 410 Hearst Bldg., San Francisco. C. , mg., Goodsprings, Nev.

orebodies up to 15' in width. Developed by 2 incline shafts, 240' and 175' deep, located 500' apart.

Equipment: includes 2 gasoline hoists and an aerial tram 850' long.

Production: to June, 1915, reported as \$60,000. Reported shipping one car of ore every 6 weeks during 1916.

SULTAN MINE

NEVADA

Address: Henry Robbins, owner, Goodsprings, Nev.

Property: in Goodsprings district, Clark Co., Nev., is said to show a replacement orebody in limestone. Minerals are zinc and lead carbonates, averaging $\frac{1}{2}$ to 1 oz. silver to each 1% lead. Surface outcrops are said to be extensive.

Equipment: includes 50-ton dry concentrating plant, separating the lead, making a 50% lead and 25 oz. silver concentrate. Tailing carries 15% zinc, 4% lead and 4 oz. silver per ton. Only the lead is being saved. From 15 to 20 men employed.

TECHATTICUP MINE

NEVADA

Address: R. T. Walker, lessee, Nelson, Nev. Owned by Joseph Wharton Estate, Philadelphia, Pa.

Property: 9 claims, 8 patented, 1 mile E. of Nelson, Clark Co., Nev., said to show a quartz vein in monzonite, dipping 19 to 80° and pitching E. W. Ore is a sulphide.

Development: by 600' incline shaft, and 3,000' of workings.

Equipment: 25 h. p. gasoline hoist, 3 compressors and 50-ton cyanide mill.

Production: in 1916 was 7,676 oz. gold and 58,393 oz. silver.

WHALE MINE

NEVADA

Goodsprings, Nev.

Officers: T. A. Varden, mgr.; J. M. Hays, sec.; R. M. Salisbury, C. W. Whitley, L. Greene, trustees.

Property: the Whale mine, 6 unpatented claims, 120 acres, 8 miles W. of Goodsprings, Clark Co. The mine has deposits of zinc ore which occur in limestone and dip 45°, the pay ore being found in shoots 2' to 5' wide. Mine is worked by a 600' tunnel. Greatest depth of workings, 300'. The mine is still in development stage.

Equipment: includes 10"x10" compressor. A shipment of carbonate ore, said to have averaged 38% zinc.

YELLOW PINE EXTENSION CO.

NEVADA

Office: Goodsprings, Nev.

Officers: A. J. Robbins, pres.; E. B. Critchlow, v. p.; Reynolds Robbins, sec.-treas., with A. J. McDermott and G. A. Fayle, directors.

Inc. in Utah. **Cap.**, \$100,000; shares 10c par; assessable; 575,000 issued. Revenue in 1916 was \$22,000, of which \$16,000 was from ore production. Expenses totaled \$20,000.

Property: 12 claims, 190 acres, in Yellow Pine district, Clark Co., Nev., said to show a chamber deposit in limestone, dipping 45° W., with N.-S. course. Ore shoots are 2 to 8' wide and 10 to 40' long. Ore contains carbonates of zinc and lead, with some copper and silver; zinc content is 35%.

Development: by 500' incline shaft, 200' tunnel and total of 4,000' of workings. A new shaft has been sunk.

Production: about \$100,000 in value in 1916 being \$35 per ton.

Production: \$100,000 in 1916. **Cap.**, \$100,000. **Shares:** 10c par; 575,000 issued.

c. 1905, in Nev. Cap., \$1,000,000; shares \$1 par; non-assessable; all

No bonded indebtedness. Stock transferred and registered at my's Los Angeles office. Annual meeting, third Wednesday in Jan. on Los Angeles Stock Exchange.

oss earnings, year ending Jan. 10, 1917, \$1,017,613; receipts from sale \$1,011,730; operating expenses, \$219,857; cash, \$152,133; dividends \$800,000. Total dividends to Sept., 1917, \$1,983,000.

operty: 13 patented claims, about 240 acres at Goodsprings, Yellow istrict, Clark Co. Ore occurs as carbonate and oxide in limestone erage 30% zinc, 14% lead and 12 oz. silver. The main deposit dips 30° and strikes N. S. The ore consists principally of lead and zinc ates and silicate. Sulphides are almost entirely absent as evidenced fact that the smelter returns on the lead concentrates show only % sulphur.

Sept., 1916, the Charleston claims, 36 miles from Las Vegas, were nder option. Three feet of 45% lead-zinc ore was opened.

velopment: by an inclined shaft, 900' deep, greatest depth of work- ing 950' and linear extent 25,000'. During 1916 new work amounted 8', costing \$9.31 per foot. In July, 1917, an extensive shoot was at 700', several feet assaying 34.6% zinc and 18.3% lead. By Sept., been opened for 150'. A winze has been sunk to determine its Ore is mined by square set stoping.

ipment: includes 40 h. p. electric hoist, compressor, 12 miles of 36" railway, with Shay locomotive; 75 h. p. semi-Diesel engine, etc.

l: the 100-ton mill is, strictly speaking, a separator rather than a rator. The ore is a high-grade lead-zinc material, and in the treat- t this plant no rejection is made, all products of the mill being

om the mill bin the ore is fed to a short conveyor, on which the pieces of waste are sorted out. This conveyor dumps over a 1" and the oversize goes to an 8" by 16" roll-jaw crusher. Grizzly and reaker both discharge to a chain elevator, which dumps to the bin.

: fine ore is delivered to a set of 16" by 36" Cornish rolls set to ¼". discharge to a wet elevator, which raises the ore to the top of the here it passes successively over ¼" and ⅛" impact screens. The oversize is treated on two 2-compartment Harz jigs, which make ncentrates from the bed and hutch of the first compartment and gs through the second compartment and over the tailboard. The gs from the coarse jig are returned to the first set of rolls and om the finer jig to a second set, both of which discharge to the and to the impact screens.

undersize of the second screen goes to a 5-compartment Richard's r, which makes 6 products, each of which goes to an Overstrom he tables make only 2 products, lead and zinc concentrates. The s to tubs and the zinc, with all slime to settling bins beneath the oor. The lead is shoveled to small cars, the zinc is drawn off gates and the slime overflows to ponds from which it is shipped sufficient amount accumulates.

uction:

Ore	Lead %	Zinc %	Silver oz.	Cost P. T. Shipped			
				Mining	Milling	Transp'n	General
	10.5	30.4	4.53	\$5.418	\$1.546	\$0.860	\$2.095
	10.2	31.8	5.40	1.530

DARKEY MINE**NEVADA**

Owned by W. S. Holmquist and M. W. Johnson, Ely, Nevada. W. S. Elliott, mgr.; Walter Geddes, supt.

Property: 9 claims, 180 acres, in Elko county, about 9 miles E. of Decoy, developed by 65' shaft, shows a blanket deposit of manganese ore, in limestone formation. Owners shipped 562 tons of ore, averaging 45% from Oct. 1916 to March, 1917.

Property leased to W. S. Elliott and W. Geddes, for 2 years from March 1917. Installed a hoist and plans shipping 15 tons per day, 1917, from Decoy on the Nevada Northern R. R.

EASTERN STAR MINING CO.**NEVADA**

Office: Winnemucca, Humboldt Co., Nev. **Officers:** E. Reinhart, pres.; Chas. F. Spilman, v. p.; L. G. Campbell, sec.-treas.; above, with Daniel Craig and R. S. Bolam, directors.

Inc. 1911 in Nev. **Cap.**, \$1,500,000; shares \$1 par; outstanding, 1,340,000.

Property: 5 claims, 70 acres, in Gold Circle mining district, Elko Co. Nev., with a 4½' gold quartz vein, in andesite.

Development: 280' incline shaft with levels at 75', 160' and 240'.

Equipment: includes two 25 h. p. gasoline engines.

The secretary L. G. Campbell, attorney, Winnemucca, Nev., writes us in 1917 that the company is not responsible for statements made by the G. S. Johnson Co., of San Francisco and that company has had no connection whatever with the nauseous Thousand Member Gold Mining Association, so luridly advertised by the Johnson Co., in 1914.

Examination and report by a mining engineer estimates \$100,000 worth of ore in sight averaging \$20 a ton.

ELKO MINING CO.**NEVADA**

Property at Jarbidge, Nev., inactive.

H. L. Hollis, cons. engr., 1925 People's Gas Bldg., Chicago, Ill.

ELKO PRINCE LEASING CO.**NEVADA**

Out of business. Was operating property of the Elko Prince Mining Co. (which see), and when indebtedness to J. N. V. Dorr was paid off, the mine was taken over by the present company.

ELKO PRINCE MINING CO.**NEVADA**

Address: L. L. Savage, Golden Gate Mfg. Co., New York, pres.; Paul Ehlers, v. p.; L. S. Jackson, sec., with R. P. Jackson, directors.

Cap., \$1,150,000; shares \$1 par; 1,108,566 issued.

Dividends: 3½% paid Oct. 23, 1917; to be paid regularly at 2½% quarterly thereafter. Net earnings said to be at the rate of \$64,000 per quarter. On October 1, cash and bullion in transit were valued at \$70,000, and supplies at \$30,000.

Property: 9 patented claims at Midas, Gold Circle district, Elko county, Nevada, 50 miles N. E. of Golconda on the S. P. R. R., and 35 miles from Red House on the W. P. R. R. Examined by H. V. Winchell and F. F. Sharpless.

Geology: the Gold Circle formation consists chiefly of rhyolite, andesite and bostonite. Ore occurs in vertical fissures in the rhyolite. The hanging wall of the Elko Prince mine is bostonite, the foot wall is rhyolite. The ore carries gold and silver, as 65% and 35% respectively. Ore averages \$20.50 per ton.

Development: by tunnels, shafts and winzes to depth of 750'. On the 300' level the shoot is 15" wide and 630' long; on 600' level it is 810' long, and to Nov., 1917, 30" wide and 230' long at 750', with good indications for greater length than at 600'. All ore above 300' has been broken and 66% removed. Below 300' and above 600' most of the ore is broken, and 66%

N. of the shaft, the S. end being intact. In the June Bell, a parallel to the Elko Prince, reserves are estimated as 5,000 tons of \$16.35 ore, five times this quantity probable. The shoot is 30" wide and 200' long. Reserves are valued at \$700,000.

Equipment: includes complete mining plant and mill employing 4' mill, 5 by 14' tube mill, Dorr classifier and thickener, Oliver filter, p. Allis-Chalmers oil engine, 10,000' water pipe line, etc., the whole at \$150,000.

Production: from Oct., 1916, to Sept., 1917, the mill extracted \$381,689, of which \$255,862 was profit. To Oct., 1917, the mill treated 31,954 tons of ore. In Sept., 1917, from a yield of \$27,300, \$17,605 was profit.

YUKON MINES CO.

NEVADA

Subsidiary of Yukon Gold Co., which see.

Office: 120 Broadway, New York. **Mine office:** E. A. Austin, Jarbidge, Nev.

Officers: William Loeb, Jr., pres.; C. K. Lipman, v. p. and sec.; with Perry, Charles Earl, R. W. Straus, W. E. Bennett, E. L. Newhouse, Foraker and Louis Sloss, directors; Leopold Frederick, treas.; O. Perry, cons. engr. and gen. mgr.

Inc.: Sept., 1916, in Delaware. **Cap.,** \$1,000,000; shares \$5 par; non-assessable; all issued. D. A. Crockett, 149 Broadway, New York, trans.; Guaranty Trust Co., of N. Y., registrar. Annual meeting third day of January.

Property: the Long Hike and O. K. groups of 52 claims in Jarbidge district, Elko county, Nev. In the Long Hike there is a strong fault in porphyritic rhyolite. Alteration, leaching and replacement has place in the brecciated vein material and walls. Ore consists of magnetite and solid quartz, adularia and silicious rhyolite, carrying free gold, and little silver.

Development: by 1,500' tunnel to depth of 600' in the Long Hike, 300' in the O. K. Ore blocked out was estimated early in 1917 at 100,000 tons, averaging \$15 per ton.

Equipment: electric hoist, 2 Ingersoll-Rand compressors, pumps, tram being constructed, also 100-ton mill employing counter-current flotation system of cyanidation.

Costs are estimated at \$4.50 per ton.

CONSOLIDATED COPPER CO.

NEVADA

Office: 414 Judge Bldg., Salt Lake City, Utah. **Mines:** Ruth, via Ely, and Elko, Nev.

Officers: S. M. Levy, pres.; D. B. Shields, v. p.; Gideon Snyder, sec.; William H. Ingree, treas.; with Grant Snyder, directors. C. W. Geddes, cons. engr. and mgr., Merchants Bank, Salt Lake City. R. M. Kellogg, supt.

Inc.: Oct. 2, 1906 in Utah. **Cap.,** \$1,500,000; shares \$1 par; non-assessable; \$1,000,000 issued; changed Jan., 1917, from \$1,000,000, shares \$1 par; of which 300,000 shares were donated to treasury by in-

corporation stock listed on Salt Lake Stock Exchange and New York Stock Exchange and transfer agent, United States Corporation Co., 34 Broadway, New York.

Property: 3 groups, 20 claims, 370 acres, in the Ely district and bond on the Copper Queen mine, Elko, Nev., and the Jarbidge adjoining property.

The Ely property, 15 claims, about 300 acres is on the southern general belt, near the Ruth and Jupiter groups of the Nevada district. Developed by 3 vertical shafts. The 625' Brilliant shaft

silver-lead ore on the 400' level, and near the bottom is said to show 100' bed of disseminated copper ore, below commercial grade. The American shaft is 500' deep.

Development: in recent years has been at the 725' Zack shaft in the western end of the group. Orebody on 500' level reported to be 19' wide. From 500 to 700' levels, ore flattened, being 264' farther south on the 6th than on the 5th level. Ore consists of bunches of copper glance with some oxide and carbonate in white, clayey gouge and decompose rock. Crosscut on 700' cuts monzonite, but too deep for pay ore. Car load shipment in 1913 netted \$21.65 per ton, averaging 3.3% copper, 15 oz. silver and 12.2% lead.

The Copper Queen group, 18 claims, in the Merrimac district, 1 1/2 miles N. W. of Elko, Nev., shows a gossan outcrop, 500x600', carrying 40 to 50% iron; also 2 veins, one of them traceable a mile, showing surface exposures of shipping ore. Work was begun on this property in March, 1913, and shipments in May and June averaged 100 tons per week. Smelter returns showing 7.40% copper, 7.9 oz. silver per ton, 40 cts. gold, 28% iron and about 35% silica. The ore is hauled by automobile truck.

The Baltimore group, 12 claims, 6 patented, includes, the Cuag and Morgan mines, taken under bond June, 1913, on 15% royalty, with no cash payment until 1914, appears to be a valuable acquisition. The Cuag workings contain ore blocked out and the shaft has been enlarged, re-timbered and is now reported to show high-grade bornite ore. The Morgan mine shows 4' of ore and shipments have carried 3% copper, a varying percentage of lead and 7.8 oz. silver. Developed by Morgan tunnel driven to open up Morgan vein on 200' level.

After an expensive campaign of development at the Ely-Nevada property, it was realized that the property could not be put on a paying basis under existing conditions and the policy of the company was changed and new properties sought. In March, 1913, the Copper Queen mine, near Elko, Nev., was purchased, for \$50,000. In May the Peterson group, Pine Valley was bonded and in June the property of the Pacific Consolidated Mining & Smelting Co., near the Copper Queen, was taken over for \$30,000 bond and lease.

The Peterson group, bonded in 1913, is located at Lone Mountain midway between Elko and Tuscarora, 8 miles from Hale Crossing station on the railroad with which it is connected by good wagon road. Property shows veins with ore shoot carrying high-grade copper ore and old workings carry 5% copper ore from which shipments were being made. The Pacific Consolidated Mining and Smelting Co. property, now held under lease and bond, consists of a 300-acre group of claims on which shipping ore was also found. About 350' from portal of Morgan mine a 4' copper vein was opened up with reported values of from \$12 to \$15 per ton. A copper-zinc vein was also being developed, 1915-16.

Company has a practical business man looking after its affairs and seems now to be operated on safe lines. For several years past, extravagant statements concerning the company were issued by brokers and misleading assays were published of the value of the ore developed in the Zack shaft. It is now known that the orebody is low-grade and cannot be profitably mined. The company has a large capitalization and the new management and new properties appear likely to bring the property to a self-supporting, if not a profitable basis.

Shipments started in 1917 and in July, company was shipping 100 tons of concentrates weekly. Earnings in March are reported to have been \$70,000.

any has installed a 500-ton flotation plant and plans to double capacity, 1917-18.

GOLD CIRCLE QUEEN CO.**NEVADA**

Office: L. G. Campbell, Winnemucca, Nev.

President: J. E. Pelton, pres.; R. S. Belam, v. p.; L. G. Campbell, secretary; G. S. Pelton, directors.

Capital: 1,000,000 shares, \$1 par; 840,000 outstanding.

Property: 5 unpatented claims, in Gold Circle district, Elko, Nev., on lease.

Geology: lodes and fractured zone in rhyolite, containing shoots up to 100 ft. Ore carries gold, silver, and some manganese, averaging 100 lbs. per ton.

Development: by 130' shaft, and 2 tunnels 180' and 210', with total work of 100,000 ft.

Reserves: estimated at 4,000 tons above 132', worth \$65,000.

Equipment: 15 h. p. Fairbanks-Morse gasoline hoist. Proposed to install a mill and deepen shaft, 1917. Production: ore sales in 1916, 1917, \$16,970. Recovery by amalgamation alone, 80%.

GOLD CIRCLE MINING & MILLING CO.**NEVADA**

Office: Edw. R. Holden, pres., 524 S. 4th St., Los Angeles, 1916 in Nev. to take over leases and bond on properties of Tussock M. Co. and in Nevada rights of the Holden patents for concentrating and reducing ores. Cap., \$500,000; shares \$10 par.

GOLD CIRCLE CENTRAL MINES CO.**NEVADA**

Office: Jarbidge, Elko Co., Nev.

President: J. P. Duncan, pres.; Angus McDonald, v. p.; W. W. Fisk, John MacRae, Ira Brackitt and H. O. Milner, directors.

Property: ct. 5, 1911, in Nev. Cap., \$1,500,000; shares, \$1 par; non-assessable 100,000 issued.

Geology: 9 unpatented claims in Jarbidge district, said to show a lode in rhyolite, dipping 85° S. W. and pitching S. 32° E. Average assay is \$15 to \$20 per ton.

Development: by vertical shaft to 65' and by 2 tunnels 175' and 225' work in 1916 cost \$5,000, done on an option. A prospect.

MIZPAH CONS. COPPER & GOLD MINING CO.**NEVADA**

Office: 272 Grant St., Salem, N. J. Mine office: East Ely, Nevada.

President: R. T. Seagrave, pres.; H. M. Loveland, v. p.; F. Eldridge, Jr., Bassett, treas.

Property: n. 15, 1917, in Delaware, Cap., \$100,000; shares \$1 par; non-assessable 4,950 issued. Annual meeting 1st Thursday of March.

Geology: 15 claims, unpatented, 300 acres in the Mizpah Mining district east of Mizpah, on Nevada Northern railroad. Claims show large veins in granite and contact deposits between granite and rhyolite of which is estimated by the management at 200' width, carrying bornite and chalcopyrite ore.

Development: property relocated above property, formerly owned by Mizpah Consolidated Gold Mining Co., when latter failed to do its annual assessment for 1915.

Equipment: by 70' two-compartment shaft, showing a 3' orebody, with maximum assays of about 15% copper, 8 oz. silver and \$18 per ton, which are not to be considered as average ore values. At present the company was driving a tunnel 1,387' long, expected to cut out 1,450'.

MIZPAH DEVELOPMENT CO.**NEVADA**

Office: Elko Co., Nev. Officers: John [redacted], W. M. Brad-

ley, v. p.; Newton A. Dunion, sec.-treas. and mgr.; R. J. Deighton, asst sec.; preceding with 'B. F. Beaur and Wm. Pischell, directors.

Cap., \$1,000,000; shares \$1 par.

Property: 28 miles from Currie, on Nevada Northern railroad, shows limestone cut by parallel N.-S. fissures, which carry copper ore at the south end of the property and lead ore 1½ miles north. Has been worked intermittently by lessees for past few years. Has steam plant, 3 hoists, compressor and a concentrating mill erected 1909. Presumably idle.

LONE MOUNTAIN MINING CO.

NEVADA

See Alaska Improvement Co., p. 1072.

MIZPAH CONS. COPPER & GOLD MINING CO.

NEVADA

Out of business: property operated by Jersey Cons. C. & G. M'ng Co.
NEVADA-BULLION MINES CO.

NEVADA

Mine near Bullion, Elko Co., Nev. Company often called the Bullion-Nevada Mines Co., owns a group of claims adjoining the Nevada-Bunker Hill Mining Co. holdings and a half interest in the Kerr & Peterson lease on that company's ground.

Development: by a 1,970' tunnel, which will be extended 200' further to cut the vein opened in old mine workings. Lessees were shipping ore, 1916, but property is now tied up in litigation.

NEVADA-BUNKER HILL MINING CO.

NEVADA

Address: Box 477, Elko, Nev.

Officers: J. A. McBride, pres.; W. W. Booker, v. p.; Frederick Davis, sec.; John Henderson, treas., with O. T. Williams, R. H. Mallet and G. S. Brown directors.

Inc. April 28, 1905, in Nevada. Cap., \$2,000,000; shares \$1 par; fully paid and non-assessable; 600,000 shares reserved in treasury for sale for development. Annual meeting, first Wednesday in May.

Gross earnings in 1916 were \$24,404, of which \$18,860 was from lessee royalties. Expenses balanced revenue. Current assets, May, 1917, were \$1,236, and liabilities, \$15,409.

Property: 16 unpatented claims and 6 patented claims, in Railroad district, Elko Co., Nev., 28 miles S. W. of Elko. Claims said to show copper-silver ore in porphyry contacts, silicious copper ore in porphyry intrusions, and silver-lead ore in limestone.

Development: numerous tunnels and shafts and a deep tunnel 2,550 long, to tap veins at a depth of 500 to 800' below deepest workings, 350 further work will bring it to the Tripoli and 1,350' further to the Standing Elk fissure. Workings total about 2 miles.

Production: about \$3,000,000. In four years: 1912-1915, lessees shipped 4,570 tons yielding \$114,102; in the winter of 1915-1916, they produced 60 tons valued at \$32,000; and in year ended May 1, 1917, 3,767 tons worth \$110,751, royalty being \$18,860.

Ten sets of lessees are working at present above 800' level. Royalty derived is put into company's development work.

Property has been reported on by Chas. E. Van Barneveld, H. L. Huston and by Prof. Chas. H. White of Harvard University.

NEVADA-BUTTE MINING CO.

NEVADA

Martin Benson, pres.

Inc. 1913. Cap., \$1,000,000; shares 25c par.

Property: 15 claims in Dolly Varden and Mizpah districts, Elko Co., Nev., 7½ miles from Ely, said to be on the northern end of a great belt of mineralized porphyry and to carry fissure and contact deposits.

Development: by several shallow shafts, showing indications, but property still in prospect stage. Drilling on neighboring property shows commercially mineralized porphyry.

TA COPPER MINING, MILLING & POWER CO. NEVADA

Office: Tacoma, Wash. Mine at Contact, Elko Co. Nev. **Officers:** Messinger, pres., Tacoma, Wash.; Henry Smith, v. p. and gen. mgr., Nev.; E. S. Price, sec.-treas.; M. K. Price and C. Smith, all of directors.

May 5, 1905, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assigned, \$1,500,000.

Property: 52 claims, patented, in Salmon River district, better known as Contact district, shows Paleozoic sediments cut by granite with ore along the contact. Several hundred tons of high-grade ore are in place awaiting shipment by auto truck to Rogerson, Idaho, en route to the coast. In 1915 a 100-ton flotation plant was erected, following a series of diamond-drill explorations. Property and geology fully described in U. S. Geol. Survey.

A LEAD MINING CO. NEVADA

Officers: H. L. Brooks, mgr., Cobre, Nev.

Officers: B. F. Woodward, pres.; H. C. Eldridge, sec.; with Jasper Sturges, E. E. Fisher, directors.

Property: 11 miles from Cobre, Nev., and 7 miles from Loray, on the Pacific R. R., said to show ore in limestone-quartzite contact. A vein of 80' is said to be 18" of ore assaying 40% lead, 20 oz. silver old per ton. Several carloads have been shipped.

A ZINC CO. NEVADA

Officers: Bemis, Tobar, Elko Co., Nev., gen. mgr.

Property: the Polar Star group near Tobar, has a zinc-lead deposit, and opened for 600' on surface. Ore said to average from 30-35% zinc from 4-5% lead. Developed by tunnel and shaft, down 500' in 1917. Producing at the rate of 200 tons per month in 1917. Total production 4,000 tons since Utah people acquired mine.

TUSCARORA MINING CO. NEVADA

Officers: Tuscarora, via Elko, Nevada. **Officers:** W. J. Craig, pres.-v. p.; R. Austin, v. p.; W. J. Wolstenholme, sec.-treas., with E. L. Barnhart and P. D. Fenkell, directors.

Cap. \$50,000; shares 5c par; 500,000 issued.

Property: 4 claims in the old Tuscarora district, Elko Co., Nev.

Development: a tunnel (in 482', July, 1917,) is being driven to cut the shallow shafts said to show ore with high gold-silver values.

THE COPPER CO. NEVADA

Officers: T. W. Smith, supt., Bullion via Elko, Nevada. Owen Gold-Co., Elko, Nev., are largely interested, but company is controlled by Mass.

Property: the old Heckla & Silver King mines, 2 claims, patented, at Cobre, Nev., held under bond and lease. In May a large body of high-grade copper ore was found in cleaning out an old tunnel; four 40-ton carloads of copper ore were shipped, May 22, 1916. Property is an old mine, idle for many years.

PANTHER CITY MINING CO. NEVADA

Office: c/o M. R. Sanguinet, sec.-treas., 1st National Bank Bldg., Fort Collins, Wm. Bryce, pres.

Property: 7 patented claims in 2 groups, the Panther City and Olinda, in the Salmon River mining district, Elko Co., Nev. Ore said to carry copper, with a trace of gold. Planned to start development work in 1917.

SALMON RIVER MINING CO. NEVADA

Office: 19 West Granite St., Butte, Mont. Mine near Contact, Elko Co., Nev. Shows gold and silver-bearing copper ore. Had gasoline power and a belt. Not yet started accounts.

the 1,750' level. This vein is 40' to 100' wide, runs N. S. and dips at 45°. The ore is pyritic with tetrahedrite, and varies from gold ore, free from copper, to ore carrying 9% to 14% copper. The great ore shoot thus far shows bands of medium grade shipping ore, but is, as a whole, a low-grade concentrating ore that may average \$8 per ton, besides a shoot of shipping ore 6'-15' thick that averaged \$20 per ton. The orebody is proven for 110' upward and for 380' on the strike having been opened on the 1,660' level and by a winze below the 1,750' level. Early in 1917 a promising strike of 6' of \$50 ore was made on the 1,750' level.

Production: began April, 1915. Total shipments in 1916, from the 1,750' level, 239 tons, netting \$1,347.

The geology of the district is described in Prof. Paper No. 66 of the U. S. Geological Survey, 1909, by Ransome, and by J. E. Spurr, in Econ. Geology, Feb., 1916. Property promises to be an important producer of low-grade concentrating ore from which it should be able to make profits.

BLUE BULL MINE

NEVADA

Described under Reorganized Blue Bull Co.

C. O. D. CONSOLIDATED MINING CO.

NEVADA

Goldfield, Nev. L. K. Koontz, pres.

Inc. May, 1908, in South Dakota. Cap., \$3,000,000; shares \$1 par. Treasury, 1,000,000 shares. Listed on New York Curb. Inc. as a merger of the Goldfield C. O. D. and the Gold Bar Mining companies, taking over the C. O. D., Golden Eagle and Zoe from the C. O. D. Co.; the Gold Bar from the Gold Bar Co., and the Victor and Victor fraction from the Goldfield Cons. Last two claims were obtained by purchase, others by exchange of stock. Claims form a compact group, 90 acres at Goldfield. Controlled by Goldfield Cons.

Development: 350' shaft and several thousand feet of workings. Was operated under 5-year lease by Nevada Co-Operative Company, and under option in 1915 to Tonopah Mng. Co. and Tonopah Belmont Dev. Co. Said to have a total production of \$75,000 with \$250,000 milling ore on the dumps. Plan sinking shafts to 500' level.

CUPRITE COPPER CO.

NEVADA

No recent returns. Described Vol. XII.

CUPRITE SULPHUR CORPORATION.

NEVADA

Office: 50 East 42nd St., New York City. J. E. Bowman, pres., Greenwich, Conn.; F. S. Taggart, v. p.

Inc. 1917 in Delaware. Cap., \$2,000,000.

Owns and operates sulphur property near Cuprite, Nevada. Output of 100 tons per day shipped to Coast. Retorting plant to be installed 1917.

DIAMONDFIELD BLACK BUTTE REORGANIZED MNG. CO.

NEVADA

Office: 406 No. Columbia St., Goldfield, Nev. **Officers:** L. L. Patrick, v. p.; Harry B. Ruhl, sec.-treas., P. O. Box 1515, Goldfield, with T. C. Damskey and M. Fenwick directors. Andrew J. Canavan, supt.

Inc. 1905, in Nevada, reinc. April, 1910. Cap., \$2,000,000; shares \$1 par; 1,300,000 outstanding. Transfer office, U. S. Corp. Co., New York, and home office. Annual meeting, July. Listed on Salt Lake and San Francisco Stock Exchanges. Two assessments, ½c in April and 1c in August, 1914, have been called, to meet operating expenses.

Property: the Black Butte mine, 60 acres, in the Goldfield district, Esmeralda Co. **Ore:** gold, in numerous veins in fine grained andesite. Up to the present time the main producers have been the "Quartzite" and the "Flat" veins. The former is said to have produced \$500,000 under

ease operations, but values ended within 150' from surface. The "zite" orebody was cut off by a fault and its downward extension been found. The "Flat" vein apparently ends at the tunnel level. **Development:** tunnels and shafts; the main shaft is 300' deep and the rich shaft, 350' south of the main shaft, is 200' deep, but little work done below the 110' level.

Equipment: includes two 15 h. p. gasoline hoists and a 3-drill air com-

pecting by Calyx drill in 1917, to explore shale-latite contact, of 1,000'. Lessees are taking out rich ore on 150' level. Property fully described by Chas. D. Wilkenson, E. M. See Geol. Survey Paper No. 66, by Ransome.

GOLDFIELD DAISY GOLD MINING CO. NEVADA
Goldfield, Nevada. Inc. 1910, as reorganization of the Goldfield Daisy Co., of Goldfield, Nev. Property was under lease to the Justice Mines Co.

GOLDFIELD MINING & MILLING CO. NEVADA
Company operated a lease on the property of the Goldfield Great Mining Co. Practically merged into the Great Bend Co. in 1915.

GOLDFIELD TRIANGLE MINING CO. NEVADA
Goldfield, Nev.

after reorganization as Reorganized Diamondfield Triangle Mng. Co.
NORRIS GOLDFIELD MINING CO. NEVADA

Locations: Goldfield, Nev., and Denver, Colo.

Officers: A. D. Parker, pres. and treas., P. O. Box 4561, Denver, Colo.; Birmingham, v. p.; S. G. Arscott, sec.; preceding, with S. W. Morris, C. Turner, directors. H. B. Clapp, receiver.

April 28, 1905, in South Dakota. **Cap.**, \$1,250,000; outstanding, \$1,250,000; shares \$1 par. Stock transferred at company's office.

Bonds: 1908, 40%; 1909, 20%; 1910 and 1911, 10% each; none since meeting, March 1st, at Goldfield, Nev.

Company went into receivers' hands Feb. 1917 and was reported reorganized under Wingfield control, July, 1917. In Sept., the entire milling plant, including flotation plant, was ordered sold to satisfy creditors'

Financial statement for year ending Dec. 31, 1916, shows: cash \$66,451; assets, \$29,231; interest, \$580; misc. \$1,051; decrease in material and \$5,171, a total of \$102,485. Expenses amounted to \$75,146; taxes \$1,500; misc. \$335; additions and deductions to property acc't. \$38,706; total \$141,442. Cash on hand Sept. 1917, \$7,927.

Property: 67.7 acres at Goldfield. The main shaft was sunk 1,200' years ago; at this depth the vein was mineralized, but ore was not of commercial grade and the shaft was allowed to fill with water to this level. Work since then has been above this level. The ore body was furnishing the shipping ore played out in Sept., 1915; no more has been made since. Management claims there are 100,000 tons of low-grade sulphide ore, averaging \$4 to \$6 per ton in gold, silver and copper, opened up in the mine.

In Oct., 1915, a 2-year lease on the surface dumps was granted to the Nevada Metals Extraction Co. who organized the Nevada Metals Extraction Co. to erect a mill and treat the low-grade ore by flotation. Mill started operation in April, 1916, and reported an extraction of 92% gold and 99% silver. Operating costs were reported under \$2.25. Dumps have been estimated to contain 50,000 tons of \$5 ore. The Nevada Metals Ex. Co., has since been sold away.

Production: for 1915, 3,194 tons ore, average value \$17.42 per ton; compared with 8,029 tons, average value \$26.39 in 1914.

Company inoperative, but 14 sets of lessees are working from surface to 660' level, and royalties amount to \$2,000 monthly, 1917.

GOLD MOUNTAIN MINING & MILLING CO.

NEVADA

Properties: about 13 miles from Bonnie Claire and 6 miles from Horn-silver, Nev., operated under lease by J. W. Crane. Veins are silver-gold deposits carrying copper. Developed by two 240' shafts and connected by a 200' drift. Estimated reserves, 2,000 tons of milling ore, valued at \$20 per ton, blocked out on the 200' level. An outcropping oreshoot 20' wide said to have yielded ore assaying from \$100 to \$500 per ton.

GOLD PRINCE MINING & LEASING CO.

NEVADA

E. L. Luker, sec.-treas., Grand Island, Neb. **Officers:** Dr. A. H. Farnsworth, pres.; Jos. Kotik, St. Paul, Neb., v. p.; Chas. O. Orr, Goldfield, Nev., gen. mgr.; with E. L. and E. S. Luker, directors.

Inc. in 1914. **Cap.**, \$500,000; shares \$1 par.

Has lease and bond on the Gold Crater mine, formerly owned by the Gold Crater Cons. Mng. Co., about 30 miles S. E. of Goldfield, Nev. **Ore:** gold, milling grade, said to run about \$15 per ton.

Development: 265' shaft and crosscuts. Management claims large ore reserves in sight.

Equipment: includes a 12 h. p. hoist and small mill.

GOLDFIELD BLUE BELL MINING CO.

NEVADA

Address: Austin, Nev.

Officers: D. S. Johnson, pres.; B. W. Ward, treas.; J. M. Hiskey, sec.

Property: 3 fractional claims at Goldfield, under lease to Spearhead Gold Mining Co., reorganized; Cotter mines (10 unpatented claims) at Golden Arrow, 50 miles E. of Tonapah, Nev.; Berlin mine (16 patented claims) Berlin, Nev.; Richmond mine (3 patented claims), 1 mile S. of Berlin; Shamrock mine (10 patented claims), 6 miles N. of Berlin; Downeyville and Sullivan mines (6 patented claims), 5 miles S. of Lodi, Nev.

Development: Cotter 450' deep; Berlin (gold), 364'; Downeyville (silver-lead), 250'; Richmond (gold, silver, copper), 75'; Shamrock (gold, silver), 350'; Sullivan (gold), 100'. The Goldfield (950') is the only mine worked at present, but others are to be operated soon.

Equipment: Berlin has 2 steam hoists, 2 compressors, assay-office, store machine-shop, complete 30-stamp mill, etc.

A group of mines like these ought to develop something.

GOLDFIELD CONSOLIDATED EXPLORATION CO.

NEVADA

Office: Crocker Bldg., San Francisco, Cal.; E. A. Julian, engr-in-charge. Subsidiary of Goldfield Consolidated Mines Co. (which see), formed in 1916 to examine and develop properties submitted for sale.

Properties: 717 submitted, 111 examined, several optioned, none purchased, development on only one in Peru.

GOLDFIELD CONSOLIDATED MINES CO.

NEVADA

Office: Goldfield, Nev.

Officers: Geo. Wingfield, pres.; J. D. Hubbard, v. p.; A. M. Howsec.-treas.; J. W. Hutchinson, gen. mgr.; with J. H. Carstairs, F. M. Mason, and H. M. Hoyt, directors. J. B. Kendall, mine supt.; J. B. Lain, mine supt.; R. H. McLoughlin, chief engr.; B. B. Beckett, elec. engr.; E. J. Moore, purch. agt.; R. J. Davey, cashier.

Inc. Nov. 13, 1906, in Wyo. **Cap.**, \$50,000,000; shares \$10 par; issue \$35,591,480. Stock listed on San Francisco and Salt Lake Exchanges at

ork and Boston Curbs. Stock was stricken from N. Y. Stock
e list, Dec. 26, 1914.

ends: to date, \$28,998,831. John S. Cook & Co., Goldfield, Nev.,
Company office, Goldfield, transfer agt. Annual meeting, third
in March.

ny is a merger of Goldfield-Mohawk, Red Top, Jumbo, Laguna
, Goldfield and Combination mining companies. In 1911, com-
purchased Vinegerone Fraction and the Bull Dog and Jumbo Fractions.
owns entire stock of the Goldfield Cons. Milling and Transporta-
25% stock interest in the C. O. D. Cons. Mining Co., and 87%
erest in the Aurora Cons. Mines Co., of Aurora, Mineral Co.,
cribed under that title; also the Goldfield Consolidated Exploration
ch see). Reported to have bought the Sure-ease gold mine near
Calif., in Sept., 1917.

al report for 1916 shows gross value of ore treated, \$2,548,426,
\$428,620 was profit, a big reduction compared with \$1,558,308 profit
Cash on hand, Dec. 31, 1916, was \$1,021,086, plus \$358,700 loaned
aries.

ends: 20c in 1907; 90c in 1909; \$2 in 1910; \$2 in 1911; \$1.60 in
in 1913; 30c in 1914; 45c in 1915, and earnings at rate of about 12c
in 1916, but no distribution made.

erty: 26 patented lode claims, and 1 unpatented claim, 390 acres,
ld, Nev., with 6 working shafts, Combination, Mohawk, Red Top,
ermont, Jumbo No. 2 and Laguna, 46% of the ore coming from
wk shaft. Deepest shaft is 1,450'. Output is from several mines
issure veins whose stoping width varies from a few feet to as
0 or even 30'. Veins show orebodies with variations in which the
al limit is not dependent upon structural planes, the shoots swell-
id pitching with but slight relation to the vein walls.

gical: development has shown that (1) most of the orebodies have
red as oxidized masses under silicified outcrops, invariably turning
le ore; (2) silicification always accompanies mineralization, but
es of breccia are barren; (3) whenever ore is known in latite,
ays been first exploited in the overlying dacite, and is a continu-
ward of the one ore-shoot; there is marked falling-off in value
te is reached, and practically all ores thus far mined in the latite
des; (4) the bonanzas have been confined to the dacite, with the
of the Engineers' lease and a few isolated shoots in the similar
andesite; and (5) no pockets have as yet been proved under
t lake beds, all known orebodies being indicated by surface ex-

ppment: during 1916, 28,333' of work was done at an average cost
r foot. **Ore reserves:** estimated Jan. 1, 1917, at 85,000 tons of
0,000 tons should be extracted before the mine is depleted.

5 there was no important work done in the low-grade copper-
reas. A system of leasing outlying parts of the property on a
sis was decided upon. Several lessees mined good ore.

ment: is excellent and complete for daily output of over 1,000
e. The 100-stamp mill treated 928 tons per day, recovering
xperiments resulted in a 500-ton flotation plant being installed.
17, when the yield was \$10,186 net from 23,300 tons, 500 tons was
flotation and 500 tons by cyanidation, daily. Flotation is saving
gold and more in copper values.

tion: from 6 shafts aggregated 338,680 tons in 1916, valued at
ross and \$428,620 net.

Production, Costs, and Profits Since Completion of Mill:

	Ore, Tons	Rec.		Total Cost		Operating Profit		Dividends
		per Ton	per Ton	per Ton	per Ton	per Ton	Total	
1916.....	338,680	\$7.52	\$5.18	\$2.34	\$792,511			
1915.....	390,054	10.37(c)	5.16	1,558,308		\$1,601,617	
1914.....	338,192	11.61	6.19	5.42	1,835,224		1,067,700	
1913.....	349,465	14.14	6.32	7.82	2,731,945		2,491,800	
1912(a).....	415,786	18.40	6.65	11.75	4,886,399		5,694,000	
1911(b).....	330,549	30.74	7.97	22.77	7,526,846		7,118,200	
1910(b).....	266,867	38.50	10.97	27.53	7,347,692		7,118,200	
1909(b).....	194,479	34.72	8.88	25.84	5,026,620		3,301,200	

(a) 14 months ending Dec. 31, 1912. (b) Year ending Oct. 31. (c) Average value per ton.

In 1917 production is averaging about 20,000 tons monthly.

As a stock investment the buyer is taking a chance on a rapidly liquidating proposition, for the irregularity of the gold in the orebody makes it impossible to give an accurate estimate of ore reserves; the mill covers each year about balance extraction and the records show a well sustained yearly average tonnage treated, but the ore shows decreasing value ranging from \$38.50 per ton in 1910 to \$7.52 in 1916.

Company has ranked as one of the greatest mines in the world, producing \$49,437,847 in 8 years, disbursing \$28,998,831 to shareholders. A few more dividends may be paid. Shares sold under \$1, 1917.

GOLDFIELD GREAT BEND MINING CO.

NEVADA

Office: 302 News Bldg., Goldfield, Nev.

Officers: C. S. Sprague, pres.; J. K. Turner, v. p.; S. A. McCandle, sec.-treas.; preceding, with H. G. Mayer, directors.

Inc. May 8, 1915, in Nevada. Cap., \$1,500,000; shares \$1 par; assessable all issued.

Property: 7 patented claims in Diamondfield section of Goldfield Esmeralda Co., Nev., said to show a quartz vein in andesite, dipping 20° with E.-W. course. Oxide and sulphide ores occur in shoots averaging 6'x40'x70' in size, and \$60 per ton.

Development: by vertical shafts to 400' depth. Total underground workings, 5,000'. Ore reserves estimated at 10,000 tons of \$20 ore. Operating expenses in 1916, \$28,720.

Equipment: 75-h.p. Fairbanks-Morse hoist, Ingersoll-Rand compressor, Cameron pump and an old mill which will probably be re-built.

Shipments: 5 carloads from 160 to 300' levels during 1917, averaging 100 tons per ton; last lots \$26.

GOLDFIELD MERGER MINES CO.

NEVADA

Address: Goldfield, Esmeralda Co., Nev. John Mocine, supt.

Inc. 1908 in Washington. Cap., \$6,000,000; shares \$1 par.

Property: St. Ives and Velvet claims, the latter causing considerable litigation with the Jumbo Extension during 1916, for which see Vol. 2.

Development: by shaft to 1,750', opening veins with shoots of copper, gold-silver ore. Recent work of 1,350' developed 2% copper ore, 3% gold.

Judging by results at other mines in the district, death holds a promise.

GOLDFIELD ORO MINING CO.

ty: consists of the Paragon and Jumbo A claims in Gold Moun- ct, Esmeralda Co., Nev., held by location.

April, 1916, the Grandma claim in Goldfield district was decided by ana Mining Co. to the Grandma Consolidated Mines Co. (which

pany has no assets consisting of the Gold Moun-

et. holders may be interested in the

Cons. Mines

Costs amounted to \$23.92 per ton. The Goldfield Consolidated, adjoining, mines and treats ore for under \$5 per ton.

It is evident that the property has been forced to pay dividends for stock market effect. The Bonanza orebody, 150' long and 56' vertical, was greatly over-estimated. The boosting of the price to \$4 a share was a case of rank market rigging by brokers, the real value being believed to be less than \$1.00.

An exploration department was organized in Aug., 1916, and over 100 properties have been submitted, of which 35 were examined. Only one was considered worthy of serious development, the Copper Mountain of 340 acres, 15 miles from rail at Nolan, Mineral Co., Nev. Three shafts have opened good copper ore, 2 carloads being shipped in June, 1917. The mine is properly equipped and leases have been granted on several blocks. Possibilities of this property are considered good—\$22,726 was spent on it during the past fiscal year.

On Oct. 29, 1917, the company stated that developments indicated that the Copper Mountain would become a large producer and it was deemed advisable to organize a company to look after it. The Jumbo Copper Mountain Mining Co., which sec, was incorporated for this purpose, Jumbo Extension holders receiving one new share of assessable stock for each share held, free of cost.

JUMBO JUNIOR MINING CO.

NEVADA

Address: Goldfield, Nev.

Officers: J. L. McCarthy, pres.; A. I. D'Arcy, v. p.; Floyd Cable, sec. treas.; with Joseph Bruder and H. E. Clark, directors.

Cap., \$1,500,000; shares \$1 par, non-assessable. Stock listed on San Francisco Exchange.

Property: the Spearhead Fraction claim, 6 acres, located between the Jumbo, Kewanas and Spearhead properties at Goldfield, purchased of the Spearhead Fraction Mining Company.

In 1917 development was centered on ground below the 880' level. In June, 1917, ore was opened for a few inches to 36" in width and the first carload of gold-silver-copper ore was shipped in July.

Possibilities, though small, seem brighter than a year ago.

JUSTICE GOLD MINING CO.

NEVADA

Goldfield, Nev. Officers: O. M. Justice, pres.; John La Foe, v. p.; Mrs. A. B. Hays, sec. treas.; C. W. Hays, gen. mgr., with J. R. West directors.

Inc. 1914, in Nevada. Cap., \$1,000,000; shares, \$1 par. Stock listed on San Francisco Stock Exchange.

Property: the Gold Coin Extension claim in the Diamondfield section of the Goldfield district and a lease on the adjoining property of the Diamondfield Daisy Gold Mining Co., which carries a 2½' vein of gold-copper ore running from \$18-\$39 per ton.

Development: by 265' Daisy shaft, which crosscuts, drifts and sweeps. Several carload shipments in 1915 from stope above the 265' level reported to have yielded \$70 per ton.

KEWANAS EXTENSION MINING CO.

NEVADA

Inc. 1915, in Goldfield, Nev. Cap. \$1,000,000. Is a small property, 18 acres, adjoining Kewanas mine at Goldfield. Is controlled by the California men who have underwritten the

y 25,000 shares of stock for a sideline agreement, thus avoiding n.

reserves in June, 1917, were reported to be of fair quantity.

... a consid-
... a part

property of the Spearhead Gold Mining Co., a small part of one claim of the Lone Star Cons. Mining Co., a considerable part of the property of the Goldfield Merger Mines Co., and other miscellaneous claims and fractions.

As a result of this litigation an agreement was entered into with the Lone Star Cons. whereby subsequent litigation between them was obviated; production from the Goldfield Cons. ground had been at a time so that recovery for the bulk of the proceeds was found to have been barred by the statute of limitations. From Jumbo Extension the Reorganized Booth Co. received \$15,000 cash and 300,000 shares stock; from the Reorganized Kewanas the company received 250,000 shares stock; from the Goldfield Merger 750,000 shares stock. With regard to the Lone Star Cons., the north end line of the Booth claim only touched one corner of the Lone Star, which happened to contain the working shaft of that mine; a settlement was effected for a nominal consideration only. No settlement, as yet, has been effected with the Spearhead Gold Mng. Co. On Dec. 1, 1915, the company had disposed of 135,400 shares of Jumbo stock in the market, for which it received \$187,316; up to the present it is said to have disposed of at least 224,000 shares.

Property: formerly owned by the old Booth Mining Co., consists of 100 acres adjoining the Red Top and Laguna mines of the Goldfield Cons. Co., 1915, all development work was suspended and it was reported that management would endeavor to purchase another property.

The company is said to have the distinction of being the only non-ferrous mine that receives an income without incurring the slightest expense for operating.

REORGANIZED CRACKER JACK MINING CO.

NEVADA

Goldfield, Nev.

Officers: E. P. Junor, pres.; Geo. K. Cremer, v. p.; H. G. McMahon, sec. and mgr., with C. H. Shirts and J. A. Erickson, directors.

Dec. 18, 1915, in Nev. as a reorganization of the Cracker Jack Co. **Cap.**, \$150,000; shares 10c par; assessable; all outstanding. Property being financed by assessments. Listed on San Francisco Exchange.

On Dec. 21, 1915, a call of 1c per share was made, each stockholder of the old company being required to pay the assessment before receiving a share for share of the new company.

Property: 5 claims, 2 patented, 140 acres, at Goldfield, adjoining the Kendall on the east; said to have had \$50,000 expended on it for development. In Jan., 1916, the company purchased the adjoining 300 acres, formerly owned by the Adams Gold Mining Co., which is sold for taxes. Adams group has a vertical shaft 320' deep with 115' and 300' depth, said to show gold-silver ore in a 20' vein. Work on the 300' level has been carried to a point 500' from the shaft and is being still further advanced to determine value of the property.

Equipment: includes electric hoist, compressors and drills. Property well equipped.

REORGANIZED DIAMONDFIELD TRIANGLE MNG. CO. NEVADA

Officers: Ben Gill, treas., Goldfield, Nev.; J. K. Turner, cons. engr. Dec. 1917, in Nev. **Cap.**, \$2,000,000; shares \$1 par. Is a reorganization of Diamondfield Triangle Mng. Co.

Property: 7 claims in Diamondfield district, developed by vertical shaft 1 to show a promising quartz vein.

Dec. 1917, pending refinancing of company. Stockholders are invited to exchange their stock, share for share and payment of 1c assessment.

The indebtedness against the Diamondfield company to be liquidated is \$4,849.

REORGANIZED KEWANAS GOLD MINING CO. NEVADA

Address: A. H. Howe, sec.-treas., Goldfield, Nev.; Geo. Wingfield, pres.; A. I. D'Arcy, mgr.

Inc. July, 1913, in Nevada. **Cap.**, \$1,500,000; shares \$1 par; all outstanding; assessable. Assessment No. 2, 1c per share, delinquent, Aug., 1916. Listed in Salt Lake City; traded on New York Curb.

Company is a reorganization of the Goldfield Kewanas Mining Co., which became bankrupt in 1913. As a result of the apex suit filed in 1915 by Reorganized Booth Mining Co., which see, the latter company received 250,000 shares Kewanas stock.

Statement issued June 25, 1916, showed: receipts—assessment No. 1, \$14,508; misc., \$209. Disbursements: \$7,257, which includes mine development, \$6,195; bank overdraft, March 15, 1916, \$9,281; leaving overdraft, June 25, 1916, \$1,822.

Property: 2 claims and a fraction, about 40 acres, east of the Laguna group of the Goldfield Cons. at Goldfield.

Development: by means of the winze on the Kewanas ground below an east crosscut into it from the 700' level of the Laguna shaft of the Goldfield Cons. Work up to July, 1917, consisted of exploration of the vein exposed on the 840' level; 550' N. of the winze the vein split, one branch strikes N. W., the other N. E., with shale between. Both branches have been explored about 800' N. of the winze and work said to have disclosed a 3' vein, giving "good assay returns in gold, silver and copper." Assay results not reported. To date, no "large bodies of commercial ore have been exposed, but with the size of vein and values that have been obtained from portions of the vein, and the amount of unexplored ground still available along the strike of the vein on Kewanas claims, it would seem that the possibilities of encountering bodies of good ore are favorable." Development has been continuous and is to be extended to the southern part of the property to connect with the Jumbo Junior workings. Property is a prospect.

REORGANIZED ORIGINAL BULLFROG MINES SYNDICATE

NEVADA

Ben Gill, sec., Goldfield, Nev. Is a reorganization of the Original Bullfrog Mines Syn., the new company assuming an obligation of \$13,000, to be paid off with funds derived from assessments. Stockholders in the old company united to exchange their stock share for share in the new company upon payment of the assessments.

Cap., \$2,000,000; shares \$1 par; assessable; 1,500,000 shares reserved for conversion of stock of the Original Bullfrog company. The treasurer reports, May, 1917, 1,500 tons of \$12 ore on the ground, to be treated at the Sunset Mining & Development Co.'s mill at Rhyolite, 4 miles distant.

ROYAL CONSOLIDATED COPPER CO. NEVADA

Letter returned, 1915, from St. Louis, Mo., address. **Mine office:** Hawthorne, Esmeralda Co., Nev.

Officers: L. L. Crisp, pres. and gen. mgr.; G. L. Werth, v. p.; R. E. Drake, sec.-treas.; B. H. Martens, supt.; preceding, with Robt. W. Alt and Albert Lawson, directors.

Inc. April 27, 1907, in Arizona. **Cap.**, \$2,500,000; shares \$1 par; non-assessable; issued, \$1,434,477, Dec. 31, 1910.

Bonds: \$300,000, authorized, at 7%; issued, \$2,300, Dec. 31, 1910. Annual meeting, first Monday in April.

There are two companies of this title; one an Arizona, the other a

a corporation; the Arizona company apparently holding stock in the a operating company.

roperty: 10 claims, 1 fractional, 200 acres, 8 miles from Luning and es from Hawthorne and Mina. According to the company's former the formation is "dyarite," porphyry and limestone, with large " of iron gossan, the ore deposits consisting of copper, gold and lying in a fissure "cutting" a contact of porphyry and lime, the ly being claimed to be 250' wide.

e company's past literature contains some ridiculous and misleading ents. Fully described Vol. XI., Copper Handbook. Unfavorably ed.

STORM-KENDALL CONSOLIDATED MINES CO. NEVADA
ldfield, Esmeralda Co., Nev.

icers: Geo. Wingfield, pres.; A. H. Howe, treas.; A. I. D'Arcy, mgr. n. in Nev. **Cap.**, 1,500,000 shares; \$1 par; assessable; outstanding 4. Listed in San Francisco.

roperty: 70 acres at Goldfield, developed by shaft to 500' with a winze 700' level.

es: gold in contact deposit between andesite and rhyolite. In 1917 npany was doing development work on and above the 350' level, Sept. was prospecting at 260' to find ore that yielded well years ago. e mine is a prospect undergoing development.

RMINES CORPORATION, THE NEVADA
ce: 302 Nixon Bldg., Reno, Nev. **Mine office:** Hornsilver, Esmer- n., Nev.

icers: S. H. Brady, pres. and gen. mgr.; G. B. Thatcher, v. p.; evens, sec.-treas.

. in Nevada. **Cap.**, \$1,500,000; shares \$1 par; non-assessable.

roperty: owns 85% of capital stock of Southwestern Mines Co., which aims at Hornsilver, 28 miles S. W. of Goldfield. The company also other claims, the townsite of Hornsilver, telephone line to Gold- d a 150-ton cyanide plant, built, 1917, to treat Southwestern com- ore. Reserves are reported as ample for a considerable time.

ipment: 45 h. p. hoist, 6 drill compressor, 200 h. p. Fairbanks- semi-Diesel engine and 120 k. w. generator and modern cyanide company also owns a 5" pipe line from Lida to Hornsilver, 8½ ng. See Southwestern Mines Co.

R PICK CONSOLIDATED MINES CO. NEVADA
ce: Goldfield, Nev.

icers: Herman Zadig, pres.; E. S. Van Dyck, v. p. and gen. mgr.; lney, sec.-treas.; G. F. Dyer, supt.

Sept., 1911, in Nev. **Cap.**, \$1,500,000; all outstanding. Shares traded n Francisco Exchange and New York and Philadelphia Curbs.

roperty: 5 claims at Goldfield, Nev., being developed from 1,100' i the Deserted claim and a 280' shaft on North End claim. At large body of low-grade sulphide ore is exposed in the Deserted. ood assays were obtained, but there is no quantity of commercial Work is under way at 300' in the old Von Polenz lease.

WESTERN MINES CO. NEVADA
ce: 302 Nixon Bldg., Reno, Nev. **Mine office:** Hornsilver, Esmer- n., Nev.

icers: G. B. Thatch, pres.; S. H. Brady, v. p. and gen. mgr.; C. F. sec.-treas.

in Nev. **Cap.**, \$1,250,000; shares \$1 par; non-assessable. Silver- orporation, a holding company, controls 85% of shares in the stea, and built a 150-ton cyanide plant.

Property: 9 claims, 135 acres, at Hornsilver, 28 miles S. W. of Goldfield, formerly known as the Great Western mine. Claims said to show silver-gold ore with silver predominating, occurring as chlorides and bromides, the gold being free milling. The veins occur in limestone and shales intruded by diorite dikes, the largest vein said to vary from 5' to 20' in width and to traverse the property for 4,000'.

Development: by 400' shaft with winze to 445' depth, and 3,000' of lateral workings. New 150-ton mill operating, Oct., 1917.

SPEARHEAD GOLD MINING CO. (REORGANIZED) NEVADA
Goldfield, Nevada.

Officers: Geo. A. Kernick, pres.; H. Berg, v. p.; A. A. Codd, sec. treas., Reno, Nev.; H. F. Bruce, supt., with C. M. Smith, directors.

Reorganized March 25, 1916, in Nevada. **Cap.**, \$1,500,000; increased from \$1,000,000; shares \$1 par; assessable; 1,000,000 issued. Listed in San Francisco and Salt Lake City.

Property: 2 claims, 27 acres, at Goldfield, adjoins the Kewanas, Jumbo Extension and Merger Mines Co. on the east. Several years ago lessees sank 4 shafts, 80' to 100' in depth. Mine was worked intermittently until Oct., 1915, with the idea of continuing the 240' shaft to the shale-lattice contact. A report, dated March 20, 1917, states that this formation was cut at 880' and the shaft bottomed at 910'. In sinking, 3 wide quartz veins of no value were passed through. Exploration of a dacite dike at 450' is under way. At 910' depth stringers containing chalcocite and chalcopyrite were cut, some said to assay \$30 per ton. New openings to March, 1917, amounted to 1704'.

Company has a 3 years' lease on the Never Sweat claim of the Blue Bull Mining Co. adjoining. Spearhead 450 and 910' levels are headed toward this claim.

Equipment: 60 h. p. hoist, compressor, drills, etc.

SYNCLINE GOLD-SILVER-COPPER MINING CO. NEVADA
Lida, Esmeralda Co., Nev.

Officers: L. Kershaw, pres., Tacoma, Wash.; H. C. Peet, v. p.; L. E. Campbell, sec. treas. and gen. mgr., with F. A. Campbell, B. A. Howes, E. P. O'Leary, E. B. Campbell and E. C. Peet, directors.

Inc. June 4, 1910, in Nevada, as successor of Washington-Nevada Mining & Milling Co. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; issued \$799,420. Annual meeting, first Monday in January.

Property: 11 claims, 3 patented, 57 acres, with 120 acres mill and smelter sites, 30 miles S. W. of Goldfield and 10 miles from a railway, in the Lida district. District shows Cambrian limestone and shale, cut by quartz monzonite, capped by volcanic rocks. The ores occur as impregnations and veins. The claims are reported by the management to carry 12 deposits, 4 under development of 4 to 20' average width, traceable 5,000', carrying a sulphide ore, said to give assays of 8.7% copper, 17 to 19% lead, 11% zinc, 11 oz. silver and \$1.90 gold per ton.

Development: by 9 shafts, of 31 to 120' depth, and by 6 tunnels, of 12 to 140' length; the tunnels are not being used. Owing to lack of rail transportation and complex nature of the ore; company is devoting attention mainly to the development of lead carbonate ores.

Equipment: includes a 15 h. p. gasoline hoist and 5 mine buildings. The management plans deepening the main shaft to 200'.

VERNAL MINING CO. NEVADA
Office: 351 Bullitt Bldg., Philadelphia, Pa. Mine office: Goldfield, Nev.

Officers: M. Schamberg, pres.; E. S. Van Dyke, treas.

Inc. in Arizona. **Cap.**, \$1,500,000; shares \$1 par; increased, 1915, from

00. Central Trust and Savings Co., Philadelphia, transfer office. on San Francisco and Salt Lake City Exchanges.

roperty: 2 claims, in Diamond district, Goldfield, is developed for a hundred feet, partly by lessees. Has shipped in a small way.

ORIA COPPER MINES CO.

NEVADA

dress: F. A. Stréhlke, sec., Goldfield, Nev.

roperty: the Victoria mine, an old copper producer now reopened shipped.

TONOPAH MINING CO.

NEVADA

ce: H. L. Williams, supt., Tonopah, Nev.

cers: M. R. Ward, pres.; R. E. Mulcahy, v. p.; J. A. Percy, sec.-with A. Hamilton, F. S. Glover, C. W. Buthmann and E. C. B. directors; J. G. Kirchen, mgr., Reno, Nev.

in Nevada. Cap., \$1,000,000; shares \$1 par; all issued; assessable. meeting, first Tuesday after first Monday in January.

roperty: 7 patented claims, 123 acres, in Esmeralda Co., Nev. Idle 07 to March 18, 1916.

ogy: quartz vein in trachyte and rhyolite, dipping 65 to 70°, with course. Ore contains gold and silver.

velopment: 1,050' shaft, to be deepened when water is overcome. level an 800' crosscut passed through the vein, which is to be d at depth.

ipment: 75 h. p. Hendrie and Bolthoff hoist, Imperial type 10 l-Rand compressor, 75 h. p. Aldrich triplex pump, ventilating fan,

ORN MINES CO.

NEVADA

orm, Nev. Property shut down permanently, Feb., 1916. Plant

l. dress: George Wingfield, owner, Reno, Nev.

ANTIMONY SYNDICATE**NEVADA**

Controlled by John Ross, Unionville, Nev. Gross earnings for 1916 amounted to \$9,200 and operating expenses were \$4,000.

Property: the Black Warrior and Bloody Canyon antimony mines, 2 claims, 40 acres, in Humboldt Co., Nev. The Black Warrior mine in the Buena Vista district is developed by several tunnels to depth of 150', with total workings amounting to 2,000'. Ore, partly oxide and partly sulphide, occurs in fissure veins in porphyry, with N. S. course and dip of about 80°. Equipment consists of 25-ton mill.

Output amounted to \$92,500 in 1915, and \$230,000 in 1916, the ore averaging 62½% in 1915, and 40% in 1916. Production for 1917 amounted to 161¼ tons.

The Bloody Canyon mine in the Star district is developed by 2,500' of tunneling to depth of 300'. Made one shipment of 54% ore in 1916. Management plans active development of both properties in 1917.

ASSOCIATED MINES DEVELOPMENT CO.**NEVADA**

Office: 617 Pacific Bldg., San Francisco, Cal. C. N. Miller, pres.; E. N. Bannon, sec.

Inc. in Nev. Cap., \$500,000; shares \$500 par.

Lands: at Rochester, Humboldt Co., Nev. Owns the Wild-Cat and Tiger patented claims, the Taylor Hill, Colorado and the Plainview-Plain-site group; also a stock interest in the Tohoqua mine, Gerlach, Nev. Claims to have \$200,000 worth of silver and gold ore in sight and no debts.

BONANZA MINING CO.**NEVADA**

Mine office: Winnemucca, Humboldt Co., Nev. Company controlled by Chas. Baagoe and D. F. Shiveley of Winnemucca.

Property: 5 claims, 5 miles from Winnemucca, shows a contact fissure vein 11'-22' wide and proven for length of 115', between diorite-porphry hanging wall and lime shale footwall. Development includes 3 shafts. deepest 215' with crosscuts, a tunnel driven east from No. 2 shaft, 37' deep and a winze sunk all in ore. Mine has no equipment.

BUFFALO VALLEY MINES CO.**NEVADA**

Address: Lovelock, Nev. John T. Reid, mgr.; O. P. Richards, supt. Volney, Nev.

Inc. Jan. 7, 1916, in Ariz. Cap., \$500,000; shares \$1 par; 185,000 shares outstanding.

Property: 26 claims, 500 acres, about 18 miles S. of Volney. Ore occurs in a quartz vein in limestone; is 1'-25' wide with N. S. course and dip 35° W. Pay ore occurs in shoots, 100' long and said to average \$7.75 in gold. Development by 300' shaft, reported to prove ore reserves of 25,000 tons.

Idle owing to lack of funds.

CHICAGO-NEVADA TUNGSTEN CO.**NEVADA**

Lovelock, Nevada. **Address:** care H. M. Byllesby & Co., 208 La Salle St., Chicago, Ill.

Property: the Ragged Top and Besson group, 11 miles from Toulon a station on the S. P. R. R., shows tungsten deposits. Ore will be treated in a mill planned to be put up at Toulon on the shore of Humboldt lake.

Production: 550 tons in May and June, 1916. The mill will handle bottom ores.

CROWN MINES**NEVADA**

Jos. H. Playter, mgr., Golconda, Nev.

erty: 15 claims, about 200 acres, 12 miles S. of Golconda, said to have a fissure vein in andesite, having a N. 15° E. course and dip of 30°. Ore occurs in shoots and is said to average \$6-\$10 in gold and silver.

Development: by about 2,000' of underground work, including a 600' shaft. A prospect.

WARRE MINING CO.

NEVADA

J. Hunter, mgr., Lovelock, Humboldt Co., Nev.

erty: 200 acres, in Seven Troughs district, near Vernon, Humboldt Co. Ore occurs in veins 5-7' wide, said to average \$18-\$20 per ton. Development: includes the Darby mill 4½ miles from the mine, said to produce 50 tons of \$20 dump ore per day. Management is planning to follow the Delaware veins at depth.

WY-SIX) COPPER MINE.

NEVADA

The first quartz mine located in Nevada, being staked out in 1856,

PROPERTY MAP OF ROCHESTER, NEVADA.

Vary. The mine is in the southern end of the Eugene mountains, about 10 miles from the Humboldt river and S. W. of Mill City. Idle.

NEW & WESTERN EXPLORATION CO., LTD.

NEVADA

Liquidation; Joseph Ralph, attorney for the liquidator, 65 I St., Salt Lake City, Utah. See Vol. XI, Copper Handbook, for details of organization, directors, property, etc.

Company went into voluntary liquidation April, 1913, and all operations ceased. In April, 1913, the company owned the Montreal mine, Lander Co., Utah; Copper Canyon, and Copper Basin mines, Lander Co., Utah; the Star property, White Pine Co., and Adelaide mine, Humboldt Co. The Montreal, Copper Canyon, and Copper Basin mines were operated as subsidiary interests and fully described in the Copper Handbook.

The Star, Adelaide and Copper Canyon mines have been sold out to the Copper Canyon Mining Co., which see; for the Montreal and Copper Basin, half of purchase price has been paid under working agreement. By Oct., 1917, the last asset is expected to be realized upon.

IDA GOLD LEDGE MINING CO.

NEVADA

Address: 202 Sharp Bldg., Kansas City, Mo.

NATIONAL MINES CO.**NEVADA**

Office: 39 Board of Trade Bldg., Chicago. **Mine office:** National Humboldt Co., Nev.

Officers: J. G. Snyder, pres.; L. G. Campbell, v. p.; C. V. Buckley, sec.; S. C. Scotten, treas.; Perry G. Harrison, supt.; H. L. Hollis, cons. engr.

Inc. in Wyoming. Cap., \$1,000,000; shares \$1 par; non-assessable; 817,427 shares outstanding.

Property: 6 patented claims and a fraction at National, Humboldt Co. shows gold-silver ore in quartz fissure veins, traversing a rhyolite-andesite formation. Orebody runs N.-S. and dips 45-70° W. Geology and vein system fully described in U. S. G. S. Bull. 601.

Development: by 10 adits from 150'-2,500' in length and 3 shafts, 450', 350' and 800' deep. Underground workings, April, 1916, total about 7 miles.

In April, 1917, it was reported that rich ores had been found in new shaft sunk 500' below No. 5 tunnel, but little authentic new is available.

Equipment: includes 2 electric hoists, aerial tram, 100-ton mill for amalgamation and concentration of ore. Mill treated 4,463.4 tons of ore in 1912; 47.3 tons in 1913; 2,763.5 tons in 1914; 18,662.2 tons in 1915; a total production to date of 36,000 tons, or \$6,000,000, mainly from the National gold shoot, intercepted at depth of 40' below the surface and which averaged \$20-\$30 to the pound.

In June, 1917, lease on company's plant was given the adjoining National Leasing Co. for exploration of their ground through the National Mines.

NENZEL CROWN POINT MINING CO.**NEVADA**

Office: 702 Mutual Bank Bldg., San Francisco, Cal. **Mine office:** Rochester, Humboldt Co., Nev.

Officers: Jos. F. Nenzel, pres.; Chas. E. Stevens, v. p. and treas.; O. G. Stevens, sec. and supt.; C. L. Mauritius, asst. sec., with F. W. Aitken and P. G. Fielder, directors.

Inc. Jan. 15, 1913, in Nev. Cap., \$1,250,000; shares \$1 par; increased in April, 1917, to \$2,000,000; shares \$1 par; 1,250,000 issued. Bond issue authorized for \$300,000, to pay for cyanide plant. Registration Surety Co., San Francisco, registrar and transfer agent. Stock is listed on San Francisco Exchange. Annual meeting, second Wednesday in February.

Property: 7 unpatented claims, 110 acres, in Rochester mining district, shows gold-silver ore as contact deposit and in fissures traversing rhyolite and felsite formation.

Development: in 1916, shaft was sunk 200' and 500' of raises and winzes, 1,000' of drifting and 3,000' of crosscutting was accomplished. Five well-defined veins are being opened by drift-tunnels. Ore has been opened to 750' vertically and over 1,000' on dip of veins. General average is \$15 per ton and total reserves are estimated at \$4,000,000.

Equipment: 40 h. p. hoist, 500 cu. ft. compressor, both motor-driven, and 200-ton cyanide mill.

Like several other mines at Rochester, this one seems to have a hopeful future.

NEVADA HUMBOLDT TUNGSTEN MINES CO.**NEVADA**

Address: Lovelock, Nev., or Mill City, Nev.

Officers: C. J. Jones, H. E. Loufek and P. J. Murrish, incorporators. **Cap., \$1,000,000; shares \$1 par.**

Property: claims near Mill City, said to show a deposit 5' wide of ore carrying 4% tungstic oxide, for length of 130'.

ty: 5 claims, unpatented, 90 acres, in Rochester mining dis-
 oldt Co., adjoining the Nevada Packard ground, shows a shear
 olite with fissure veins, said to be 3-15' wide, with N. E. strike
 from 30-30°. Veins carry silver chloride and free gold. David
 engineer for the Packard Extension, reports that the

claims owned by the company cover the actual extension of the Packard ore shoots on the downward rake in a course to the S. W., and that the great ore zone of the Packard mine should be found in Extension ground at a depth of about 250-300' beneath the surface.

Promoted by F. G. Cox & Co., Los Angeles.

PACKARD NORTH EXTENSION MINING CO.

NEVADA

Lovelock, Nev.

Officers: T. P. Ebert, pres.; Frank Margrave, v. p.; J. W. Kromer, sec. and gen. mgr.

Inc. 1916, in Nevada. Cap., \$1,000,000; shares \$1 par.

Property: 4 claims, adjoins the Nevada Packard ground, at Lovelock. Management reports: "Our property is so closely associated with that owned by the Nevada Packard Mines Co., that a description of their vein system is practically a description of ours. Their veins run N. and S. and presumably all enter our ground, though but one outcrops. It is on this vein we are working and upon which our lessee is working. It is our intention to drive a tunnel which will cut all veins at considerable depth." The vein was cut in tunnel B, about 250' from the portal and drifts run N. and S. for 125', in March, 1916. In August, 1916, work on company account ceased and the superintendent, J. W. Kromer, was reported as operating the mine under lease. Property is still in the prospect class.

PROVIDENCE EXTENSION GOLD MINING CO.

NEVADA

Office: Morris, Ill.

Officers: I. F. Hatcher, pres.; W. F. Buck, v. p.; G. A. Leach, sec-treas., with O. M. Barker, directors.

Inc. 1908, in Nev. Cap., \$1,500,000; shares \$1 par; 1,100,000 shares outstanding.

Property: 3 patented claims and a fraction at Seven Troughs, Humboldt Co., Nev., reported by management to show high-grade free milling quartz ore in fissure veins, 4" to 2' wide and to carry from \$14 upwards in gold per ton.

Development: by 170' vertical shaft. Idle, pending refinancing of the company.

Examined by F. A. Wheeler.

RAGGED TOP MINE

NEVADA

Address: care H. M. Byllesby Co., 208 So. La Salle St., Chicago, Ill.

Purchase price reported to have been \$250,000. Mine workings said to expose a 50' face of ore, from which 20,000 tons of tungsten ore was shipped to Utah Minerals Concentration Co., Eureka, Utah, yielding a 67% concentrate. A 75-ton concentrator was erected at Toulon in November, 1916.

ROCHESTER BUCK & CHARLEY MINES CO.

NEVADA

Lower Rochester, or Manhattan, Nev.

Officers: C. H. Moyer, pres.; Frank L. Reber, v. p., sec. and treas. with John Fant, C. E. Bugg and Wm. Lane, directors; F. L. Reber, mgt.

Inc. in Nevada. Cap., \$1,000,000; outstanding, \$750,000; shares \$1 par. Annual meeting, first Wednesday in April.

Property: 8 claims, 150 acres, in Rochester mining district, shows contact deposits 6-16' wide between rhyolite and limestone, said to carry gold, silver and some lead ore. Was discovered in 1913.

Development: 220' tunnel, with 600' of underground working.

Equipment: includes electric hoist. Property worked by lessees.

Production: 100,000 lbs. gold.

ROCHESTER BUCK & CHARLEY MINES CO.

Lovelock and J. W. Wilkey; Packard (C)

ers: L. A. Friedman, pres.; O. H. Hicks and H. F. Murrish, J. O. Nenzel, sec.-treas., with W. J. Flynn, P. S. Vanderkloot, nes, Wm. Adams and V. A. Twigg, directors.

Jan. 6, 1917, in Nevada. Cap., \$3,000,000; shares \$1 par; non-asses-500,000 issued.

erty: 86 claims, 1,000 acres, at Packard, near Rochester, Nev.

ogy: fault-contact between rhyolite and rhyolite-tuff.

lopment: by tunnels to depth of 400'. Orebody is said to be 107' l reserves are estimated as worth \$2,000,000. Ore carries silver

. A geologic examination is being made.

pmment: complete, with 300-ton mill, designed by K. Freitag, to in November. Plant includes crushers, ball and tube mills, current decantation cyanidation and filters.

reported closed, Dec., 1917, owing to lack of ore for mill.

STER ELDA FINA MINING CO.

NEVADA

ss: 702 Mutual Bank Bldg., San Francisco, Calif., and Rochester,

ers: Jos. F. Nezel, pres.; Clay Peters, v. p.; with O. G. Stevens, ctors.

Feb. 8, 1915. Cap., \$1,500,000; shares \$1 par. Annual meeting, nesday in April. Management states operating expenses in 1915 00.

erty: 2 claims, 30 acres, adjoining Rochester Mines Co., on the to show contact deposit 4' to 5' in width between rhyolite and rrying gold-silver ore.

opment: 4 shafts, deepest 190', each on a separate vein and all in e is also being developed to a depth of 500' by drifts through el Crown Point company's workings.

ment: includes a hoist. Property is a prospect undergoing de-

TER HOME TRAIL MINES CO.

NEVADA

ss: G. S. Johnson, Co. (Inc.) Reno, Nev.

rs: G. S. Johnson, pres.; C. C. Higgins, v. p. and mgr.; A. J. ec.-treas., with E. W. Orr and W. F. Hentschel, directors. A. ons. eng.

016, in Nevada. Cap., \$1,000,000; shares \$1 par; 600,000 issued.

ty: in Rochester district, adjoining the Buck & Charley, a lucer. Home Trail is said to have all the "earmarks" and geo-acteristics of the district. Ore opened assays from \$15 to \$75 silver and gold. Other richer ore is reported to have been

i. S. Johnson promotion, honestly worked, but receives rather publicity.

TER MERGER MINES CO.

NEVADA

Rochester, Nev.

ss: H. G. Humphrey, pres.; C. A. Heller and J. E. McCreary, H. McIntosh, sec.-treas.; with B. R. Binnis, directors:

ct. 20, 1915, in Nevada. Cap., \$2,000,000; shares \$1 par; 178,471 -assessable. Listed on San Francisco Exchange. Annual meet- Monday in November.

ty: 25 claims, 450 acres, in 4 groups; original Rochester, Roches- it, Florence and Crown Point Extension. 2 groups in tal district, Humboldt Co. The original Rochester and B groups are contiguous and adjoin Rochester Mines Co.

Examined by O. H. Hershey, H. V. Winchell, W. H. Wiley, A. C. Lawson, and Fred Searles, Jr.

Geology: quartz veins in rhyolite, dipping 35 to 50°, with N.-S. course. Ore is both oxide and sulphide, assaying 50c to \$5 gold, 1 to 70 oz. silver, 1 to 5% copper, 1 to 5% lead and 1 to 6% zinc.

Development: by two tunnels, the Friedman tunnel crosscutting Rochester Merger ground for 1,560' before entering Rochester Mines Co. property and the Pitt tunnel (900' long), 1,200' north of the Friedman, supposed to cut the Broughton vein at a vertical depth of 500' and horizontal distance of 1,200'. The Pitt tunnel is reported by the management to have cut 2 veins, one of which has been drifted on for 265', in ore for 130', width 50' and average assay \$15 per ton. The Friedman tunnel, over 1,500' long, will serve both the Rochester Merger Mines Co. and the Rochester Mines Co. It is said to have cut 10 veins, 12' to 15' in width and drifting is being done on a few of these veins. The four tunnels, on Sept., 20, 1917, were 1,500, 1,430, 550 and 200' long. To a depth of 1,000' workings totaled 7,500'. Surface exploration has been extensive.

Equipment: compressed air hoists, 12-drill Chicago Pneumatic compressor, and electric motors.

ROCHESTER MINES CO.

NEVADA

Lovelock and Rochester, Nev.

Officers: L. A. Friedman, pres. and gen. mgr.; H. J. Murrish, sec.-treas. with W. C. Pitt, J. P. O'Brien, B. H. Conkling and Richard Hartley, directors.

Inc. Dec. 17, 1912, in Nev. Cap., 2,250,000 shares; \$1 par; outstanding May 15, 1916, 2,148,791 shares. Secretary, Lovelock, Nev., and Security Transfer & Registrar Co., New York, transfer agts. Stock listed on San Francisco and Salt Lake City Exchanges and on New York Curb.

Mortgage: 8%, trust deed to C. Uniacke and A. John for \$70,000, dated Nov. 9, 1914, to cover 14 notes for \$5,000 each.

General Balance Sheet (May 15)

Assets:					
	Prop.-Dev.	Equip.	Current	Miscel.	Total
1916.....	\$2,028,157	\$133,586	\$40,722	\$1,133	\$2,203,598
Liabilities:					
		Cap. Stock	Surplus	Current	Total
1916.....		\$2,148,791	\$24,451	\$30,356	\$2,203,598

Property: 14 claims, 3 patented, on Nenzel Hill, in the Rochester mining district, Humboldt Co., includes Weaver Mining Co. property bought 1915. Ore on Nenzel Hill was first discovered a decade ago, but little work was done at that time. In 1912 large bodies of \$50 to \$60 silver-gold ore were found and shipments started in a small way; in the Winter of 1913-1914 these shipments attracted attention and the town of Rochester came into existence.

Geology: ore deposits of Nenzel Hill occur as replacement veins, fissures and shear zones in sheeted rhyolite; veins vary from a few feet to 40' in width and range from 100' to 3,700' in length; strike N. to N. 30° E. dip 60° W. The west vein is the main ore carrier, showing a length of 750' long, and shoot being 20' wide and averaging \$21 per ton of 300'. The east vein shows a length of 225' and the south vein 2' long.

1 feet of raises and drifts, with estimated ore reserves of 118,000 the Friedman tunnel, crossing Rochester Merger ground on the 1,560' will be used jointly with that company by the Rochester Co. This tunnel cut the veins at a depth of 1,200' several hundred feet below the present workings.

In April, 1917, high-grade ore was cut on 700' level. At 800', north of the Todd winze, 8 to 9' of \$158 ore was reported as opened. This ore was cut to 14' in July. On the 900' level there was 25' of good ore in place. This is known as the Adams vein. A winze is to be sunk to

Development: In March, 1915, company completed an up-to-date 10-stamp cyanide mill in Rochester Canyon, almost 3 miles from the mines, which is connected by the Nevada Short Line narrow-gauge road. Mill designed to treat 100 tons ore daily, but has been treating 120 to 150 tons daily, weigh 1,550 lbs. each, drop 100 times per min., extraction as about 92.87%; continuous counter-current decantation is employed. This plant was enlarged to treat 200 tons per day, 1916. Ore is hauled from mine to mill by a 12,000' aerial tram.

Production: 1913 and 1914 reported as 52,282 tons, yielding \$1,015,345.00 in silver; average value for entire production, \$19.52 per ton. In 1915 mill operated 205 days, treated 23,090 tons ore, lessee and company, yielding 3,131 oz. gold, and 545,959 oz. silver; ore averaged \$11.50 per ton. In 1916, \$373,857.

Costs: per ton, 1916 (5 mos); mining, \$3,221; milling, \$2,288; indirect, \$1,000; **Power:** electric, obtained from the Nevada Valleys Power Co. In July, 1917, the yield was \$75,000, compared with \$58,400 in July. The company is treating 180 tons of \$14 ore daily, with 93% recovery.

ROCHESTER RAVEN MINES CO.

NEVADA

at Rochester, Humboldt Co., Nevada.

Officers: J. J. Morely, pres.; Frank L. Reber, v. p.; T. J. D. Galter, and res. agt.; preceding, with E. S. Howard, Frank Towelly and W. H. Bradley, directors.

1,000,000 shares, 25c par.

Property: 3 claims, in Lower Rochester district, operated by lessees. Reported as shipping ore with values of \$34 per ton in gold and estimated to have shipped \$10,000 gross worth of ore in first few months. Geologic conditions are similar to those of district in general. G. S. Bull, 580, p. 325.

included driving tunnel to prove orebodies to depth of 600'.

ROCHESTER TREASURE MINING CO.

NEVADA

Officers: J. E. McGovern, sec.-treas., Rochester, Nev.; J. C. Colligan, and v. p.; John Golden and Harry J. Murrish, directors. In April 14, 1913, in Nevada. Cap., \$1,500,000; \$1 par; 500,750 issued; \$1.00 par value.

Property: the Old Relief mine, 5 claims, 100 acres in Relief canyon in Humboldt district.

Property: a silver-bearing quartz vein 12 to 25' wide, cutting limestone in Humboldt Co., dipping 55° west with a pay shoot 10 by 25'.

Development: by tunnels 75 to 450' long. Workings to depth of 300'

Other mines: examined by J. C. Bray.

WESTERN UNITED MINES CO.

NEVADA

Plant Bldg., San Francisco, Calif. **Mine office:** Rochester, Nev. **Officers:** W. W. Davis, pres.; W. W. Davis, v. p.; B. W. Linderman, and sec.; with A. D. Cox, mgr., directors.

that the lessees operated in 1915 at a loss to themselves of over \$40,000; he claims there is nothing in the mine it will pay the company to work and that it will not pay to sink deeper.

By Sept., 1917, stoping was being done on the 700 and 800' levels. Ore worth \$400 to \$450 per ton is shipped, while the Darby mill at Mazuma is to treat 2,500 tons of dump ore. Prospects at 800' depth said to be favorable, and a large shoot was found between 600 and 700' on Sept. 29.

SILVER BELL & ALPHA CONSOLIDATED MINES CO. NEVADA

Officers: Lorin Hall, pres., Salt Lake City; Clinton D. Ray, sec.; C. B. Smith, supt., Rye Patch, Nev.

Inc. 1915, in Utah. Cap., \$1,000,000; shares \$1 par; 450,000 in treasury; 100,000 were to be sold June, 1916, to erect a mill.

Property: two noted silver-gold mines at Rye Patch, Nevada, with reported production of \$11,000,000. Mine is 3.6 miles from railway.

Development: by shaft sunk through old workings and tapped by 1,000' working tunnel, with reserves of 200,000 tons of ore in old workings, said to assay 5 to 30 oz. silver per ton with 40c to \$1.40 gold per ton. Company figures \$2 mine and transportation costs and was to erect a mill in 1917. A strike of ore was reported July, 1916, carrying 2,520 oz. silver per ton in brittle silver and black sulphurets.

SILVERFIELDS MINING CO., LTD. NEVADA

Letters returned in 1917 from secretary's address: J. M. Hamilton, Suffolk House, London, E. C., Eng. Mine near Golconda, Humboldt Co., Nev.

Inc. Dec. 27, 1906, in Great Britain, as Golconda Consolidated Co., Ltd., and changed name to present title Feb., 1909. Cap., £250,000; shares £1 par; issued, £143,353, fully paid.

Property: sundry claims, with a third interest in the Honolulu group, balance of which is owned by the Golconda-Nevada Copper Co., in the Kennedy and Battle Mountain districts, 8 miles west of Millers.

Development: by a 250' shaft showing a 3' vein in limestone said to assay, 8% copper, 26% lead, 390 oz. silver and \$4 gold.

Equipment: includes a 25 h. p. hoist and necessary mine buildings. Idle.

TOY TUNGSTEN MINE. NEVADA

Mr. Beck, supt., Toy, Humboldt Co., Nev. Property: 6 claims known as St. Anthony mine, formerly owned by Peter and A. M. Anderson, said to show a 5' vein of 4% ore.

Development: 100' shaft, 100' winze and an adit. A 50-ton mill, 2 miles S. E. of Toy, erected 1915, has crushers, steel ball mills and concentrating tables.

WARMACK GOLD MINING CO. NEVADA

Office: S. C. McIntyre, 110 S. Dearborn St., Chicago, Ill. H. Warren Winnemucca; and G. R. Stevens, supt., Golconda, Nev.

Officers: J. T. Cawthorn, pres.; Harry Warren, v. p.; S. C. McIntyre, sec.; also directors.

Inc. March 31, 1916, in Arizona. Cap., \$200,000; shares \$1 par; none assessable; all issued. Annual meeting, April 15.

Property: 945 acres of placer ground, 12 miles S. of Golconda, Nev. Examined May 1912. St. Clair, editor of "Inside Investments."

Ground is estimated to contain 1,000,000 cu. yds. with a probable gold value of \$1,000,000. Work is under way, but a clean-up of rich material is being done in the disintegrated quartz for

actually occurs it is good. They will find it true.

RD MINES CO.**NEVADA**

Lovelock, Nev.

Officers: F. H. Bird, pres.; J. T. Goodwin, v. p.; R. Nenzel, sec.; V. G. treas., with L. A. Friedman, D. C. Wheeler, directors. H. H. mgr. and supt.

in Nev. Cap., \$1,000,000; shares \$1 par; non-assessable; outstanding \$100,000. No bonded indebtedness. Annual meeting, third Wednesday of each year.

Property: 3 unpatented claims, 8 miles E. of Lovelock, Humboldt Co., which show a vein carrying pay ore in shoots.

Development: by several shafts, deepest 50', and a 70' tunnel. Ship-ment of \$54 per ton in gold and silver.

Reports returned unanswered, 1917. Property in a district that was in 1915, but the fever subsided in 1916.

MUCCA MOUNTAIN MINING CO.**NEVADA**

Winnemucca, Nev.

Officers: H. A. Swanson, pres.; W. G. Adamson, sec.-treas.; John R. supt.; Roscoe F. Allen, asst.

Capital, \$2,000,000; shares \$1 par; outstanding, \$1,200,000; non-assessable; no bonded indebtedness.

Property: 25 claims, 2 patented, 7 miles from Winnemucca, Humboldt Co., including 9 claims owned by the Winnemucca and Bonanza companies merged with the present organization. The claims show a wide fissure vein, traceable through the property for 3,000'. This vein is shale intruded by dikes of diorite and andesite. The orebody is 3' to 30' in width, and ore carries gold and small silver values. Produced and retained 3,000 tons of \$15 ore.

Development: In 1917, company purchased 6 potash bearing claims, in Coal Hill, 10 miles from Lovelock, for \$100,000.

Development: by 5,000' of tunnel work. The working tunnel, 425' long, has a fault zone at a point 29' below an ore-shoot 175' long and 30' wide. This work defines 15,000 tons of indicated ore said to average \$15

per ton. In 1917 a shaft was sunk below 300' and good ore was reported as

Development: includes electric hoist, compressor and a 50-ton cyanide plant. Property is a prospect.

PINE COPPER CO.**NEVADA**

Property: E. S. Deardorf, mgr., Winnemucca, Nev.

Property: 15 claims, 300 acres in Harmony or Sonoma Mts., 5 miles from Winnemucca, shows 5 veins, carrying copper ore with silver and

Development: merely a 65' shaft showing gold ore in the bottom.

A new shaft was reported to have begun, June, 1916.

Development: includes gasoline hoist.

LANDER COUNTY**PINE KING MINE.****NEVADA**

Property: owned and operated by J. M. Pine.

Property: 8 miles S. of Austin, in Cottonwood canyon, Battle Mountain district, has been worked intermittently since 1871, and by present owner since

Development: occurs in true fissure vein, filled with white and dark limestone, with azurite and traceable for 900' on the surface. Country rock is a massive, bluish limestone, bluish-gray in color, with a little

continuing shaft sinking to 500' level and also building a cyanide plant. Reports on property have been made by Paul W. Meyers, Geo. Kislingbury and Kirby Thomas.

BRISTOL CONSOLIDATED MINES & SMELTING CO. NEVADA

Frank Sullivan Smith, 60 Wall Street, New York, receiver.

Company originally owned 21 or more patented claims in the Bristol mining district, Pioche, Lincoln Co., Nev. In 1911 practically all this property was transferred to the Day Bristol Cons. Mines Co. In 1914 the latter company went into receivers' hands and the property finally passed to the Cons. California-Nevada Co., which company was recently merged with the Internat'l & Intercontinental Mng. & Ref. Co., holding company (Uvada Copper Co., operating company), which see.

CHEROKEE CONSOLIDATED COPPER CO. NEVADA

Officers: D. W. Jeffs, pres.; W. P. Silver, v. p.; R. T. Thurber, sec-treas., the preceding with M. E. King and R. A. Brown, directors, all of Salt Lake City.

Property: four patented claims and a mill site in Lincoln county, Nev., 30 miles south of Caliente and six miles east of Leight Station on the Salt Lake Route.

Development: three shafts, 150', 90' and 250' in depth.

Company recently organized, July, 1917.

CONSOLIDATED CALIFORNIA-NEVADA MINING CO. NEVADA

Office: 40 Cedar Street, New York, and Pioche, Nevada. Geo. W. Bent, former supt. In receivers' hands.

Inc. 1915, to take over the Day Bristol properties, bought in by bondholders' committee at sheriff's sale in 1915. Company started work at Gypsy mine with 50 men, and shipped 800 tons copper-silver ore in November, 1915, deepening Gypsy shaft, and installing engine, hoist and compressor at Hill-side and Tempest shafts. Company had 8,300' rope tramway in operation.

In Feb., 1916, owing to inability to ship ore already mined and to secure funds from sale thereof, mines closed down and company went into receivers' hands.

The International & Intercontinental Mng. & Ref. Co., inc. 1916 as holding company, with the Uvada Copper Co. as operating company, were formed to operate the properties. (See two companies named.)

CONSOLIDATED NEVADA-UTAH CORPORATION. NEVADA

Office: 63 William St., New York. Mine at Pioche, Lincoln Co., Nev., and Frisco, Beaver Co., Utah.

Officers: Chas. H. Clarkson, pres.; Victor I. Cumnock, treas.; Wm. T. Roberts, sec.; Jos. W. Kay, F. A. Dillingham, W. J. Palmer, Wm. B. Randall, directors. H. R. Van Wagenen, mgr.

Inc. 1913, in Virginia. **Cap.**, \$6,000,000; shares \$3 par; issued \$3,900,000 in treasury, \$1,163,004; reserved for bond conversion, \$900,000; authorized bond issue \$90,000, 1st mtge., 6%; issued, \$499,867.

Company is a reorganization of the Nevada-Utah Mines & Smelters Corporation, which went into bankruptcy in 1912 and whose holdings were sold under judgment proceedings for \$100,000 to the new company. Stockholders in the old company who subscribed 50 cts. in cash for each share held and deposited their old stock, received bonds for the cash paid by them and 200 shares of stock in the new company for each \$100 subscribed.

Property groups of the company are controlled through control of subsidiary companies in the group, including several productive workings that are being developed by the group at Frisco, including the

at Frisco, Beaver Co., Utah.

consolidated Pioche Mines

part, of which Mr. H. R. Van Wagenen, of Trippe & Co., is president of the stock is owned by the Consolidated Nevada-Utah. The Pioche group comprises 38 claims, 33 patented, also 51 townships and 1,528 acres miscellaneous lands. The mines at Pioche (formerly owned by the Pioche Con.) include silver-lead properties that were produced, 1870 to 1876, and suspended operations 1893, being populated with a past production of \$20,000,000 gross, which probably a high estimate. The May Day mine of this group has a 1,100' depth and there are 2 shafts on the Yuba mine adjoining. The Meadow Creek claim has a 400' three-compartment incline shaft. The old Independence shaft is said to show a 40' body of sulphide ore between the first and fourth levels.

Development: to March, 1915, consisted of 800' of crosscuts and drifts on the 400' level with stopes on the 1,200, 1,300 and 1,400' levels. About 100,000 lbs. of milling ore blocked out between these levels.

Production: for 13 months ending June, 1915, was 4,199 tons zinc ore and 13,200 tons lead ore shipped to smelter and 13,200 tons milling ore on the May Day mine. Ore shipped assayed 40% zinc, 25 oz. silver, with some gold and copper averaging \$26 per ton. A new contract was made with the U. S. Geological Survey for purchase of ore and concentrates after July 1, 1915.

In 1917, company was actively prospecting at N. 1 mine, a new shaft being cut on the 420' level to facilitate development N. and E.

High-grade silver lead ore found by the Greenwood leasers makes further development advisable.

The mill is still idle, awaiting the actual blocking out of a substantial quantity of ore.

Equipment: includes 700' Leschen aerial tramway, steam power and a compressor. New mill put in commission April, 1916, treating 50 tons per day.

Property: company also owns several other groups. The Half Moon group of 6 claims, 42 acres, lies 1½ miles west of Pioche. It is intended to be the policy of the new company to lease the upper levels and develop the deeper workings itself. The Telephone claims and the Imperial Group are operated by lessees on a royalty basis.

The Mack Rabbit group is connected with the Pioche by a 20-mile narrow-gauge railway, and Pioche is connected with the San Pedro railroad by a mile branch line known as the Caliente & Pioche, completed 1907. The company owned 48% of the stock in the Day and Bristol mines, operated by the Day-Bristol Cons. Mng. Co.; this property was sold at receiver's sale in 1914 for \$99,200 (see Uvada Copper Co.) and the Nevada-Utah Co. decided to lose their holdings rather than expend money on an unproven property.

The Imperial group, near Frisco, Utah, is a copper property formerly owned by the Imperial Gold & Copper Mining Co. It was purchased at a sale by the old Nevada-Utah to satisfy its claim of \$100,000 against the Imperial Co.

Developed by tunnels showing carbonate ores. The Cactus mine, belonging to the Nevada-Utah Mining Co., a single shaft opening the Cactus, is said to carry a continuation of the Cactus vein. The Newhouse Mines & Smelters Co. The mine has a single shaft 60' depth, sunk on gossan carrying about 1% copper. The adit to the Cactus mine is opened by a 6,000-ft. tunnel and the development of the mine would necessitate an even longer tunnel or an extensive shaft.

The Nevada-Utah Co. also owns all the capital stock of the Pioche and all the capital stock of the Manhattan Copper & Smelting Co.

Sept. and Dec. 1. Company is a holding company, the Uvada Copper Co. being the operating company.

Balance sheet of March 24, 1916, shows assets of \$3,124,671, which includes: accounts receivable, due from Cons. Calif.-Nev. Co. stockholders and claims against Cons. Calif.-Nev. Co., \$29,082; contract rights, \$1,617,835 (under contract International is entitled to receive 304,757 shares out of 600,000 shares outstanding of the Uvada Copper Co. stock); investment in capital stock of the Cons. Calif.-Nev. Co., \$1,476,215; cash, \$723; organization expense, \$816. Liabilities include: contract liability, \$84,545; notes payable, \$6,560; debenture bonds cftts., issued and reserved, \$33,566.

Reported in March, 1916, that "Negotiations are now pending with Francesco Madero for the purchase by this corporation of certain mining properties belonging to the former in Mexico."

F. C. Richmond, pres. of Uvada Copper Co., writing from Salt Lake City, Utah, 1916, says that he knows nothing of the I. & I. M. & R. Co.

MANHATTAN COPPER MINING & MILLING CO. NEVADA

Idle. Pioche, Lincoln Co., Nev. Company succeeded the Manhattan Gold & Copper Mining Co. and is owned by the Cons. Nevada-Utah Corporation, successor of the Nevada-Utah Mines & Smelters Corporation.

Property: 7 claims, one in the Ely mining district, developed by 130' shaft, showing manganese, iron, silver, lead ore. The other 6 claims are at Stampede Gap in the Highland district of Pioche and show small veins of silver-lead and copper ore. Developed by 130' shaft.

MENDHA-NEVADA MINING CO. NEVADA

Idle and probably dead. **Former address:** Commercial Bldg., Salt Lake City, Utah. **Mine office:** Pioche, Lincoln Co., Nev. T. J. Osborne, pres.; M. C. Godbe, sec.

Cap., \$1,000,000; shares \$1 par.

Property: is said to have produced \$500,000 under its former ownership. The mine is reported to have a vein 3 to 15' thick, averaging 6', practically vertical and showing silver and gold-bearing lead and copper ores on 700' level. Development is by a 900' incline shaft.

Letters returned, 1917.

NEVADA-UTAH MINES & SMELTERS CORP. NEVADA

See Consolidated Nevada-Utah Corporation.

PIOCHE-BRISTOL MINING CO. NEVADA

Address: Jos. J. Daynes, Jr., pres., 1542 S. Fifth St., E., Salt Lake City, Utah; John Stringham, sec.-treas.; Harry L. Parker, supt.

Inc. Feb. 19, 1916, in Utah. **Cap.,** 1,000,000 shares; 5c par; 615,000 shares issued. Stock listed on Salt Lake Exchange.

Property: 6 claims, surveyed for patent, in the Jack Rabbit mining district, adjoining the Day Bristol, near Pioche, Lincoln Co., Nev. Claims said to show lead-silver-copper ore. Shipped 300 tons of ore 1915-16, reported to have netted \$15,000.

Idle 1917. Reorganization of board of directors imminent and mine development to be started soon.

PIOCHE METALS CO. NEVADA

Address: F. B. Cooke, treas., 1009 Newhouse Bldg., Salt Lake City, Utah. Company levied an assessment of 1c a share in March, 1915.

Property: at Pioche, Nev., has been shut down save for annual representation work.

PRINCE CONS. MINING & SMELTING CO. NEVADA

Office: 1118 Newhouse Bldg., Salt Lake City, Utah. **Mine office:** Pioche, Lincoln Co., Nev.

, \$2,000,000; shares \$2 par. Stock listed on Salt Lake Exchange.
ual report for 1915 shows total receipts, \$311,234, which includes
hand, \$119,650; profit from operations, \$158,544; notes receivable,
expenditures amounting to \$154,465, included development, \$69,-
s payable \$54,070; dividends Nos. 1-4, \$124,924. Net operating profit
year was \$158,554.

ends: to Sept. 1, 1917, total, \$550,000; paid since July 1, 1915.

erty: 14 claims S. W. of Pioche, in Ely mining district, contains
bodies of iron manganese, outcropping on surface for 800', having
gate thickness of 120', width of 500' and proven for a length of
The ore occurs as large deposits in bedded planes of lime and
d is reported to average 3-4% lead, 34% iron, 13% manganese,
er and some gold, 3% lime, 11% insol. and 14% silica, valued at
0 to \$9.50 per ton. Owing to large percentage of iron, the ore
ully valuable as a flux to the lead smelters, the iron commanding
over the cost of smelting, with silver, gold and lead values com-
a profit. From this source alone the ore yields \$3-\$4 per ton.
any also owns the Pioche King group of 9 claims, and about
s of patented land at Dry Valley and Bullionville, 12 miles from
aid to contain 120,000 tons of tailings on dumps, showing 5.34%
oz. of silver, 0.11 oz. gold per ton and estimated to average \$5
rofit. A 200-ton oil flotation mill was erected to treat these tail-
16.

Prince mine is developed by 550' main shaft with several miles of
body of high-grade lead-silver sulphide ore, said to be 16' wide,
rospected by diamond drilling on the 550' level and a 3-comparte-
ze sunk from this level to the 800' level. **Ore reserves:** estimated
imately 1,000,000 tons.

ond drilling was underway, and in July, 1917, a hole put down
600' level cut sulphide ore assaying \$19.32 per ton. This work
ontinued to 2,000' depth.

ment: includes oil power, hoist, compressor and 9-mile standard
way connecting with the Salt Lake Route from Pioche. Freight
75 per ton.

ng 12,000 tons of ore per month in 1916. Employs 80 men. Pres-
ement deserves credit for putting the mine on a dividend paying
a large ore reserves and \$100,000 cash surplus in less than 3
ough present high prices are largely responsible for augmented
f company.

ly production is over 600,000 lbs. of lead and 25,000 oz. of silver.

COMET MINING CO.

NEVADA

1, Lincoln Co., Nev.

s: E. D. Smiley, pres.-mgr.; F. W. Russell, v. p., 811 Center
1, Mass.; M. J. Smiley, sec.; J. W. Baker, treas., with W. A.
rectors, all of Boston, except E. D. Smiley.

n., 1913, in Nevada. Cap., \$500,000; shares \$1 par. Annual meet-

Operating expenses for 1914-15 reported as \$30,000; no profits.

ty: 5 unpatented claims, 100 acres, in the Comet mining district,
Ore: gold-lead-silver-tungsten, occurs in nearly vertical fissure
artzite, said to assay \$30 per ton in gold, silver and lead. De-
145' vertical shaft, with 950' underground workings.

ment: includes a gasoline hoist and 50-ton mill completed in 1915;

a garnet-limestone gangue, there being practically no oxidized ores, even at the outcrop. Ore is uniform in character, and after a light roast is well adapted to magnetic separation. Drill holes prove that ores extend to 750' depth.

Equipment: includes a 50 h. p. hoist and a 35-drill electric air-compressor. A 100-ton mill pulverizes the ore, in rolls, to pass an 8-mesh screen, after which ore is slightly calcined in a tower roaster, to magnetize the pyrite. Roasted ore is then passed through a Wetherill magnetic separator, which takes up the mineral, and discharges the waste, giving a concentrate of about 15% copper. Magnetic separation is claimed to have given a 95% extraction, though 85%, under working conditions, will be satisfactory.

Company built $2\frac{1}{2}$ miles of railroad from Mason to the mine, 1916.

The magnetic concentrating plant ran in 1916 and the furnace was enlarged. Company spent \$250,000 in development and equipment of property. Management is able and property considered valuable.

Production: about 600 tons daily, early in 1916, increased to 1,000 tons, 1917, shipped to Mason Valley smelter.

BURLINGTON-NEVADA COPPER CO.

NEVADA

Address: Yerington, Lyon Co., Nev. Property at Mason Pass, a few miles from Yerington, is developed by a 100' shaft, from which ore was shipped to the Mason Valley smelter, 1913. Equipment includes a gasoline hoist.

BUTTE & YERINGTON COPPER CO.

NEVADA

Office: care W. E. Wright, sec.-treas., 410 Phoenix Bldg., Butte, Mont. Mine at Yerington, Lyn Co., Nev. W. C. Siderfin, pres.; D. C. Bard, v. p.; preceding officers, Dr. Thos. B. Moore, Dr. Donald Campbell, John D. Pope, and Wm. Mitchell, directors; L. W. Trankle, supt.

Inc. Jan. 29, 1907, in Montana. Cap., \$1,000,000, shares \$1 par, fully paid; issued, \$351,520. Annual meeting, third Wednesday in January.

Property: 2 groups of patented claims, one of 14 claims, about 4 miles east of and across the valley from Yerington and south of the Copper Mountain mine. The land has very attractive surface showings, but is without deep development work.

The second group of 9 claims, is in the heart of the camp adjoining the big Mason Valley mine and the Yerington Malachite Co.'s ground. This property is well located and has attractive showings of ore in the tunnels and on the surface outcrops. It has been idle during the past two years.

DAYTON PLACER RECOVERY CORPORATION

NEVADA

Office: E. N. Greenleaf, 609 Kearns Bldg., Salt Lake City, Utah.

Officers: G. T. Hansen, pres.; B. Binnard, v. p. and treas.; E. B. Critchlow, sec.; above, with D. C. McIntyre, directors. G. W. Wood, cons. engr.

Inc. June, 1916, in Utah. Cap., \$500,000; \$1 par; 435,000 issued.

Is treating mill tailings at Dayton, Nev., and making a 90% gold and 50% mercury extraction.

Management estimated 500,000 tons of tailings with average assays of \$1.50 gold, $3\frac{1}{4}$ oz. silver and 3 lb. mercury per ton. Total cost per ton estimated at \$1.25.

Equipped with 150-ton all slime cyanide plant. Started operations Aug., 1917.

EMPIRE-NEVADA COPPER MINING & SMELTING CO.

Mine near Yerington, Nev. Wm. Gelder, supt.

with argentiferous contact deposits in the contact zone near the granodiorite. Property has 4 orebodies, 2 under development averaging 25% in width and carrying about 3.5% copper.

Development: by 400' shaft and 3 tunnels. **Equipment:** includes a 25 h. p. hoist, 7-drill air compressor and 8 buildings.

Production: 1912, was 1,074,289 lbs. fine copper, secured from 16,284 tons of ore smelted and at a total cost of about 14 cts. per lb. No later information received. Property regarded as good.

MINNESOTA-NEVADA COPPER MINES CO.

NEVADA

Address: Otto Taubert, Yerington, Nev.

Formerly the Wabuska Copper Mines Co. Near Wabuska, Lyon Co. Nev.

Property: the Minnesota group, 13 claims, 16 miles from Yerington, said to show a contact deposit, between limestone and granite, of about 20' average width, carrying sulphide ore assaying 1 to 30% copper.

Development: by 2 shafts, 1 of about 500' depth, showing ore said to average better than 3% in copper tenor.

Reported in Aug., 1917, that company was developing a large iron-ore deposit, and proposed erecting blast furnaces for pig-iron production at either Reno or San Francisco.

MONTANA YERINGTON COPPER CO.

NEVADA

Yerington, Lyon Co., Nev. **Property:** a group of claims said to show orebodies in porphyry with 4-7% copper, unlike other Yerington deposits.

Development: 420' shaft. The 160' level east was run 500' to daylight, making a main working tunnel. Crosscut on 400' level said to encounter ledge 6-7' thick, showing shipping ore in face. Under option to Geo. Wingfield, Goldfield, Nev., 1913, and Mason Valley Mines Co., in 1914, but was relinquished. Is being worked by Messrs. Archer, Ehrman and Kremmel, who control the company.

Ore Reserves: estimated at 15,000 tons containing 3% copper. Shaft shows chalcopryrite ore at bottom.

Output in 1916 was 2,050 tons of 6% ore.

NEVADA BONANZA COPPER CO.

NEVADA

Main office: 159 Main St., Salt Lake City, Utah. Mine at Morningstar City, Lyon co., Nev.

Officers: Freeman Morningstar, pres. and gen. mgr.; Sereno B. Tuttle, v. p.; Fred C. Dern, sec.-treas.; Walter C. Tuttle, asst. sec.-treas.; preceding, with Robt. J. Deighton, H. P. Clark, W. D. Mathis, Thos. J. N. Nippur, M. S. Woolley and P. L. Williams, directors.

Inc. 1906. Cap., \$2,100,000; shares \$1 par; issued, 1,448,000 shares.

Property: 12 claims, 7 patented, 250 acres, adjoining the Nevada Douglas ground, about a third of a mile from Ludwig, on Nevada Copper Belt railroad, in the Yerington district. J. C. Dick, E. M., of Salt Lake City, reports 3 fissure veins crossing property; the Green Dutchman vein being about 5' wide and assaying well in gold and copper. The vein on the Copper King claim has been developed by a 3-compartment, 115' shaft, said to show copper ore its entire depth.

Property is still in the prospect stage, but further development is expected to make it a mine.

NEVADA-CALUMET COPPER MINING CO.

NEVADA

Out of business. Mine owned by John L. Washing, Box 13, Bridgeport, Conn.

NEVADA-CALUMET MINE

NEVADA

Address: John L. Washing, Box 13, Bridgeport, Conn.

Lands: 17 claims, patented, 340 acres. 4 miles N. E., of Buckskin and

N. W. of Yerington. Property shows diorite, porphyry and silicified limestone, and has 3 contact deposits, 3-4' wide, showing cuprite, azurite, chalcocite and chalcopyrite, giving assays of 2-4%

Development: by 2 main shafts, 1,200' apart, No. 2 on the Yellow claims, 60' deep, shows 9' of 2.75% ore. About 300' of work on 400' and 225' of laterals on the 500' level, show small bunches and stringers in a leached zone, with fair indications of workable values at greater

Equipment: includes two 25 h. p. Witte gasoline hoists, and a 20-room engine house. Property reported on by T. M. Hammond and Arthur

NEVADA DOUGLAS CONSOLIDATED COPPER CO. NEVADA

Incorporated in Nevada, by Orem & Co., 79 Milk St., Boston, Mass. General office: 222 S. Temple St., Salt Lake City, Utah. Mine office: Ludwig, Lyon Co.,

Officers: A. J. Orem, pres.; James G. Berryhill, L. H. Curtis, vice-pres.; F. M. Orem, sec.-treas.; W. C. Orem, gen. mgr.; preceding J. J. Corum, H. I. Moore, F. J. Curtis and J. G. Berryhill, Jr., directors; Archie J. Orem, gen. supt.; L. L. Turner, mill supt.; N. B. Ludwig, purch. agt., Ludwig, Nev.

Organized March 4, 1915, in Utah. **Cap.**, \$5,000,000; shares, \$5 par; assessable; unissued. Bonds, \$2,000,000; \$299,100 outstanding. Federal Trust Company, registrar; State Street Trust Co., Boston, transfer agent. Registered office on Boston Curb.

The new company is a reorganization of the Nevada Douglas Copper Co. and the Moore Mng. Co. The new consolidated company assumed the liabilities of the old companies, \$525,000 of Nevada Douglas Copper Co. and \$57,000 of Moore Co. Nevada Douglas stockholders received one share in stock of new company and the Moore Co. received 10,000 shares of stock. To date 7 assessments of 10c a share have been levied, one in June, 1916. The old Nevada Douglas Copper Co. paid a dividend of \$125,000 in 1913.

Report of the old Nevada Douglas Copper Co., Feb. 28, 1915, shows a property investment of \$4,670,152, exclusive of the Ludwig plant, \$51,992; current assets, \$35,060; profit and loss, \$581,660; liabilities, \$101,905; accrued liabilities, \$17,150; deferred credit items,

Report of Nevada Douglas Cons. C. Co., dated Dec. 31, 1916, shows a net worth of \$451,438, of which \$438,883 was from ore sales. Expenses totaled \$40,443 for milling, \$47,062 for interest, depreciation, and maintenance and general. Net income was \$139,931. In the quarter ended, June 30, 1917, was \$41,122 net.

The balance sheet shows \$303,552 current working assets, less \$105,058 debit items; and \$202,151 current liabilities, plus \$7,279 accrued liabilities, less \$10,246 deferred credits.

Property: about 950 acres, with 2 mill-sites, 80 acres, and miscellaneous lands, including water-rights, giving total holdings of about 1,070 acres on the western slope of the Mason mountains. Lands include former holdings of the Ludwig Copper Mine Co., the Douglas C. Mng. Co., which was merged with the Douglas M. & S. Co., the Nevada Douglas Copper Co. and the Moore Mng. Co. Holdings of the Nevada Douglas C. Co. consisted of the following distinct mines, the old Douglas mine, the Amalgamated Mine, the Ludwig Copper mine, being the original holdings of the Ludwig mine. Country rock consists of limestone

intruded by granodiorite with large contact orebodies and fissure veins. There is also one claim at Buckskin, 7 miles distant, which carries fluxing ore.

The Moore Mng. Co. owned the Moore group of claims, a prospect with about 450' of development work and "considerable oxidized ore blocked out in a way that it cannot be measured." Property of the old Western Nevada Copper Co., described in Vol. X, has been fully paid for by Nevada Douglas.

The Ludwig mine, about 1 mile N. W. of the Douglas, includes 2 claims, on which the mine is opened, and a 40-acre tract in Smith Valley, on which there is a well and pumping station. The Ludwig was opened 1865, and was a shipper for some years of small quantities of high-grade ore, production including some very handsome malachite and azurite, a portion of which was sold to lapidaries, and considerable bluestone was produced also for the mines of the Comstock Lode.

The ore occurs in a fissure vein with a white limestone footwall and a silicious limestone hanging wall, which changes to a garnetiferous limestone, heavily impregnated with sulphides in places. Where crushing has permitted surface waters to work downward, large bodies of carbonates and copper glance ores are found as replacements in the footwall limestone. The vein proper has an average width of about 30' and has been developed along its course for 1,300' and to a depth of 800' by levels, along hanging wall, every 100'. The orebody on the 700' level is 50' wide and 300' long and runs 6% copper. The shoots, or pipes, of high-grade secondary ore, running from 16 to 30% in copper, form chamber deposits in the limestone near the porphyry contact, proven down to 800' level. Ore reserves are estimated at 200,000 tons of 2% copper ore.

In addition to copper ore, the Ludwig has a very large deposit of gypsum, on the footwall, said to 3,000' long, 500' wide and 400' deep, which figures seem high. This deposit of gypsum is of commercial value, and some has been mined and shipped.

The Douglas mine is working a typical contact metamorphic deposit in which garnetized limestone carrying copper sulphides and their resultant oxidized ores occur in very irregular orebodies in limestone which have a tendency towards a horizontal rather than a vertical extension. The mineralized area is about 700' wide and 2,000' long with numerous parallel fissures which seem to control the mineralization. This mine has been developed by a main working tunnel and a deeper haulage tunnel with numerous crosscuts and drifts netting the property. The working tunnel 4,290', has an average depth of 120' beneath the surface and the ore is in places continuous to the surface. Four 50' winzes show the downward extension of the ore. Claimed to have 75,000 tons of ore blocked out.

The Casting Copper mine shows a large area of garnet-epidote limestone constituting low-grade carbonate ore, which will be extensively mined. This mine has a vertical 350' shaft and a 500' tunnel. Claimed to have 100,000 tons blocked out. When shipments were being made to the smelter the ore averaged 5% copper as compared with 3% in the Douglas mine.

At the Amalgamated mine very little development work has been done but the surface exposures indicate the existence of similar large contact metamorphic deposits.

Ore reserves: in all properties are estimated at 550,000 tons blocked out, and 2,000,000 tons partly blocked. A report says that "Engineers estimated probable ore several times the latter amount." Present mine carries 3% copper, with a fair quantity of high-grade material.

Property as a whole has about 8 miles of workings.

ent: includes four 100 h. p. hoists, good for 1,000' depth each, and Imperial air compressor. Electric current is taken from the Nevada General Electric Co. Water is secured from artesian wells in the valley, brought to the mine by a 17,000' pipe line.

The leaching plant, begun 1914, was in full operation September, 1917. Sulphide and oxidized ores are treated separately and by entirely different methods. The chief value in the process lies in the fact that the copper is removed, but the iron and sulphur as well, are made use of as marketable products, and that in the treatment of 50 tons of oxidized ore, enough sulphuric acid is obtained at an abnormally low cost to treat 100 tons of oxidized ores. This plant cost \$475,000, and is expected to cost \$1.25 to \$1.50 per ton.

The outline of the process is as follows: sulphide ores are subjected to sulphuric acid treatment under pressure in a closed receptacle, in which the sulphides of copper and iron are converted into the soluble sulphates and taken into solution. This solution is then decanted and passed through the electrolytic cells or over scrap iron, where the copper is removed. The remaining iron sulphate solution is sent to an evaporating tower, where the water is evaporated off and the ferric sulphuric crystals are allowed to crystallize out. The sulphate crystals are then introduced into a dryer and subjected to a temperature sufficiently high to drive off all the water of hydration, after which the dried sulphates are submitted to a roast in muffle furnaces; sufficient heat being applied to decompose the iron sulphate. The greater portion of the gases coming off in the form of iron dioxide, which is collected in the absorption towers and made into sulphuric acid to be used in the leaching of oxidized ores. The residue of ferric oxide is then drawn off and prepared for market. The residue of the oxidized ores is carried on in Pachuca tanks, where it is agitated with air and leached with the sulphuric acid obtained from the preceding sulphate roast. The solution is then decanted and sent through electrolytic cells, where the copper is taken out, after which the water is evaporated off and the sulphate crystals dried and sent to the muffle furnace, as before outlined. The total cost per ton of oxidized ore treated is \$5.18. As the general average of oxidized ore treated is a little above 3% in copper, the ore will have a value of \$15 per ton in copper. The total cost of producing a ton of sulphuric acid by this method should not exceed \$2, and the cost of the acid at this price, oxidized ore running as low as 1% in copper, should be at a profit.

Output for 1916 was 11,135 tons of 7½% copper ore, sent to Utah in eight charges were \$8 per ton. Output in 1917 is 200 tons to the Thompson smelter, 250 tons to the leaching plant and 50 tons to the smelter, from which a total of nearly 17,000,000 lbs. copper is anticipated.

100 men.

The leaching plant is a success it will prove the salvation of the property. The policy of handling the property has not met with favor and as a result financing and development have been slow. It is believed to be competent and making every effort to put the property on a dividend basis. Estimated that \$1,000,000 has been spent since 1912, of which \$475,000 went to the leaching plant, \$250,000 to the Thompson smelter, buildings, etc., the remainder in development, etc. The year 1918 should show the property's merits.

LYON GOLD MINING CO.

NEVADA

Lyon Co., Nev.

Officers: C. M. Woodbridge, pres.; F. H. Woodbridge, sec.-treas.; J. G. Hudson, mgr.

Property: 400 acres mineral land and 600 acres miscellaneous land at Wellington, shows gold-silver-lead ore, said to assay from \$10-\$147 per ton. Developed by 2 shafts, 100' and 300' deep. At last accounts, June, 1917, mine was producing after being idle for some time. Property is 8 miles from Masonic, Lyon Co., Nev.

NEVADA QUEEN COPPER CO.

NEVADA

Idle. **Office:** 405 Mining Exchange Bldg., Colorado Springs, Colo. Mine near Yerington, Lyon Co., Nev.

Officers: Duncan Chisholm, pres.; John Matthew, v. p. and treas.; R. G. Riddett, sec.; preceding, with H. Hironemous and D. P. Randall, directors.

Inc. Oct. 5, 1906, in Colorado. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; issued, \$1,107,350. Is operated as a close corporation. Annual meeting second Monday in October.

Property: 28 claims, patented, 467 acres, lying immediately north of the Nevada Douglas and Yerington Central Copper companies. Developed by shafts of 186' and 210', showing copper ore said to assay 1.5 to 28%. Management plans operating if arrangements can be made with the Nevada Douglas Co. to treat the ore in its leaching plant.

NEVADA UNION COPPER MINES CO.

NEVADA

Office: F. D. Goodale, 407 Central Savings Bank, Denver, Colo. **Mine office:** E. E. Hoff, supt., Yerington, Nev.

Officers: F. D. Goodale, pres. and treas.; Paul Esch, v. p.; M. H. Muller, sec., with Robert Kettmor, J. B. Braidwood and A. M. Goodale, directors.

Inc. in Colorado. **Cap.**, \$600,000; shares 10c cash; non-assessable; 3,500,000 issued.

Property: 12 claims, 200 acres, in Yerington district, Nev.

Development: by several shafts, one 120' deep, and some lateral work. The Union Blue is the principal vein, being described as a porphyry intrusion between diorite walls. At 120' depth, a drift opened 3' of 2% ore. Further sinking is to be done. On surface between a streak of high-grade ore and one of white talc there is said to be 32' of mineralized diorite porphyry.

Prospectus says that this looks like a sure winner and soon should be in the class of the big dividend payers, which is not evident from the facts so far known.

NEW YERINGTON COPPER CO.

NEVADA

Office: 1511 Walker Bank Bldg., Salt Lake City, Utah. **Mine address:** Yerington, Lyon Co., Nev.

Officers: Chas. N. Strevell, pres.; Joseph E. Caine, v. p.; W. B. Outcalt, sec.; J. H. Paterson, treas., with W. B. Outcalt, H. P. Clark, H. C. Edwards and W. H. Caine, directors; T. L. Walden, supt.

Inc. Aug., 1911, in Utah. **Cap.**, \$1,000,000; shares \$1 par; assessable, at rate not to exceed 1c for each 90 days. Listed on Salt Lake Stock Exchange. Is a reorganization of the Yerington Copper Co., whose stockholders received 1 share of new for 2 shares of old stock.

Property: 12 claims, 4 miles due east of Yerington, shows porphyritic granite cut by diorite dikes. There are 3 distinct, nearly parallel veins, 50 to 300' apart, following the dike contacts. The oxidized ores extend downward about 100' and are underlaid by enriched glance changing to depth to shoots of chalcopryite and pyrite.

Development: chiefly on the middle, or Yerington vein by a 450' in-

t. The 250' level exposes an ore shoot 1 to 3' thick from which have been made intermittently. The east drift shows a soft vein a narrow shoot 3 to 5' thick of chalcopryrite ore in an altered The west drift shows another shoot of 8% ore. The Marsal 520' the same vein encounters another ore shoot at 340', that is 1½ and has 3% ore extending to top of 90' raise. In 1914 company 1,350' of development work on the main tunnel and on the 100- Shipments thus far have not quite covered expenses. Ship- 1914 averaged from 9-13% copper.

ment: includes a 40 h. p. gasoline hoist, 320 cu. ft. compressor 40 h. p. gasoline engine and a pumping plant jointly owned with ay Co. Property regarded as promising.

oper, Receiver, Yerington, Nev. H. L. Van Valen, representing dders, 410 Advertising Bldg., Chicago, Ill.

12, in Nev. Cap., \$2,000,000. Placed in receivers' hands Oct. bts were about \$17,000. Reported Jan. 5, 1916, that obligations rapidly paid off; it is expected that the Receiver will be dis- about 60 to 90 days from present date."

y: 23 claims, 467 acres at Yerington, said to show gold ore in a osit between andesite and porphyry; width of ore, 6" to 3' with y reported of \$16.80 per ton. Claims 60,000 tons ore in sight.

ments: 200' incline shaft, with 900' of workings. Equipment: 1 p. gasoline hoist and a 6-drill compressor.

returned in May, 1917. Presumably receiver had cleared up debts,

PPER CO.

NEVADA

n, Nev. Title changed to Standard Copper Co., in 1912.

UTAH-YERINGTON MINING CO.**NEVADA**

Reorganized as the Mason-Yerington Mines, which see.

WALKER RIVER COPPER CO.**NEVADA****Officers:** 45 Broadway, New York and Yerington, Nev.**Officers:** M. M. Upson, pres.; David Provost, v. p.; Wm. Gelder, sec. treas., with W. H. Alexander, gen. mgr., W. T. Mayer and J. A. Martin directors. J. E. Gelder, supt.; J. H. Banks, New York, cons. engr.**Inc.** June, 1915, in Nevada. **Cap.**, \$1,000,000; shares \$5 par; outstanding \$750,000 com. and \$22,000 pfd. In treasury \$228,000 pfd., 7% cumulative.**Transfer office:** 15 Exchange Place, Jersey City, N. J. Registrar & Transier Co., New York, registrar. Annual meeting, first Monday in June.

Balance sheet as of June 21, 1917, showed cash assets totaling \$99,496, of which \$77,735 was from sale of 15,547 shares of pfd. stock. There was owing \$57,191, \$34,939 being for mill construction.

Property: 15 claims, 250 acres, including mill site, near Yerington, Lyon Co., being developed in conjunction with the Empire Nevada mine. Claims show a low-grade porphyry copper deposit said to cover an area 1,000x4,000' so far as drilled.**Ore:** is said to assay Cu, 3%; S, 0.5; SiO₂, 72%; Fe₂O₃, 5%; Al₂O₃, 11%; CaO, 2%; MgO, 1%.**Development:** 175' vertical shaft and a 900' tunnel through the orebody. drilling is said to have proved the orebody to extend to 500' depth. Present work is done by quarrying.**Ore reserves:** management claims 550,000 tons 2½% ore proven by drilling and surface and underground work. At the Pennington shaft in 1917 there was reported to be 10' of 6% ore and 40' of 4% ore.**Equipment:** includes a 40-ton leaching plant built to use the Midland wet chloride process.**Production:** in 1915 lessees shipped 5,000 tons of 3 to 5.9% copper ore. Total production to date, 10,000 tons.

Company planned drilling an additional 200 acres during 1917. Property has been examined by Louis A. Wright and John H. Banks.

YERINGTON BULLION MINING CO.**NEVADA**

Idle, and mail returned from former address, Ludwig, Nevada Co., Nev.

Officers: A. J. Schmidt, pres.; J. A. Knox, sec.-gen. mgr.; J. M. Moyle, treas.; with J. A. Sisk, E. W. Brush, F. S. Stanley and Henry Hertz, directors. W. F. Pfeleger, supt., at last accounts.**Inc.** May 31, 1909, in Nev. **Cap.**, \$2,500,000; shares \$1 par; 1,000,000 shares preferred stock, fully paid and non-assessable; 300,000 shares issued; 1,500,000 shares common or promotion stock; assessable, 1,275,759 shares issued.**Property:** 56 mining locations, 1,120 acres, 2 miles N. of the Nevada Douglas property in Yerington district. Developed by 400' main working shaft and 2 tunnels 300' long, E. and W. of the shaft on the 300' level, showing a deposit of sulphide ore with gold and copper values.**Equipment:** includes a smelter, 2 hoists, compressor and tools.

Company is apparently without funds and its literature is of a suspicious character. Letters returned, 1916.

YERINGTON CONSOLIDATED COPPER CO.**NEVADA****Office:** 312 McCornick Bldg., Salt Lake City, Utah. **Mine:** Mason Lyon Co., Nev. **Officers:** Frank J. Hagenbarth, pres.; John Dern, v. p.; M. B. Johnson, sec.**Inc.** Feb 11, 1917, in Utah. **Cap.**, \$100,000; shares 10c par; non-assessable; issued, 725,000 shares. Debentures, \$100,000 at 6%, authorized. Annual meeting second Monday in July.**Property:** 14 claims, patented, in 2 groups, known as the Copper King

er Deposit, the former, lying between the Bluestone and Mason Valley developed by a 70' shaft and 2 tunnels of 500' and 600', showing car- es.

TON MALACHITE COPPER CO.**NEVADA**

: 414 Judge Bldg., Salt Lake City, Utah. Mine office: Yering- Co., Nev.

rs: Grant Snyder, pres. and gen. mgr.; H. J. Mayer, v. p.; Gideon c.-treas.; with S. M. Levy and W. T. Snyder, directors.

Oct., 1906. Cap., \$5,000,000; shares \$5 par; assessable; issued, 666,333

erty: 11 claims, patented, adjoining the Mason Valley mine, show 3 d zones of 20 to 150' width, proven on surface for a distance of eobodies are fissure veins in limestone, carrying oxidized ores to about 100' below which ore minerals are mainly chalcopyrite, asso- epidote and garnet.

opment: by numerous short tunnels, shafts, etc., totaling 3,800', on ith the Mason Valley workings. Ores as mined average about 6% n examination, 1917, reported to have revealed 800,000 tons of 2% to a depth of 100'; where the sulphide zone commences.

ment: includes a 125-h. p. General Electric motor, steam hoist 600' depth. Rand Imperial compressor, and Hendrie & Bolthoff etric power is taken from the Truckee River Power Co. There mine buildings.

ction: was begun May, 1912, and company shipped ore, returning copper to the Mason Valley smelter, in 1913. No later output

TON MINES & EXPLORATION CO.**NEVADA**

: Yerington, Lyon Co., Nev.

rs: C. S. Durand, pres.; B. F. Kurz, v. p.; V. B. Durand, sec.; illis, treas., with W. S. Weaver and Wm. Cramer, directors.

eb. 27, 1909, in Nevada. Cap., \$1,000,000; shares \$1 par; non- issued \$735,000. Annual meeting, first Monday in March.

ty: 24 claims, unpatented, including the Effie May group of 2 gold Copper Flat group of 10 copper claims, and the Mohawk group copper claims, latter being the principal property, located 1 mile erington.

ohawk group is developed by a 125' incline and several shallow ' to 80' depth, sunk in the copper-bearing formation. Development way at incline during 1917. A 15-h. p. gasoline hoist has been added ment work is now in progress. A carload in 1916 yielded 4.45%.

opper Flat group, 1 mile E. of Yerington is developed by about shallow shafts, deepest 60', showing malachite and cuprite of about tenor. Shipments in 1917 averaged 6.46% copper.

he May group is a gold prospect developed by a 135' shaft, with tons of ore blocked out. Property is on the Nevada Copper Belt

ON MOUNTAIN COPPER CO.**NEVADA**

: J. G. Kirchen, mgr., Reno, and W. L. Taylor, supt., Gol-

s: J. G. Kirchen, pres.-mgr.; E. M. Kirchen, v. p.; P. S. Booth, with H. J. Toner, W. A. Krasselt, H. R. Cooke and E. J. Haug,

eb. 10, 1912, in Nevada. Cap., \$3,000,000; shares \$1 par; non- issued \$2,300,000. First Natl. Bank of Tonopah, Nev., and U. S. n Co., New York, registrars and transfer agents. Listed on Curb.

Property: 46 claims, 920 acres, in the Mountain View district, 9 miles N. W. of Schurz and about 12 miles E. of Yerington, fissures in granodiorite, that run N. 40° E., and dip 65°. Ore minerals are mainly chalcocite, with chalcopyrite, chrysocolla, malachite, cuprite and occasional native copper. Ore assays 4½ to 8% copper, 2 to 4 oz silver and 80c to \$2 gold per ton.

In July, 1916, company purchased the Adelaide mine, near Golconda, Humboldt Co., Nev., from the Glasgow & Western Dev. Co.

At the Adelaide mine there is a contact deposit in limestone and granite, opened by a 300' shaft and 1,450' of tunnels, with a total of 6,500' of openings. In Aug., 1917, the orebody on the 200' level was 20' wide, and monthly shipments were 200 tons of 5% ore.

Development: at the Yerington by a vertical 300' main shaft, and 1,200' of tunnels, with about 8,000' of openings. A crosscut below the Levine tunnel in 1916 was developing a good body of ore. The Azurite tunnel was 1,000' long, June, 1916; it is being driven from the other side of the mountain to cut ore exposed in the Levine tunnel and at 400' greater depth. Tunnel discloses ore in bunches and streaks. The Beach tunnel yields a good grade of shipping ore of about 5.5% copper.

Equipment: includes Fairbanks-Morse and Ingersoll-Rand gasoline hoists, 2 Chicago Pneumatic compressors, pumps, etc.

Production: in 1916 was from 400 to 600 tons per month.

MINERAL COUNTY

ANDERSON GROUP.

NEVADA

Address: Luning, Nev.

Property: 5 claims, 4½ miles east of Luning and adjoining Nevada Champion Copper Co. ground. Development by tunnels and 120' shaft.

Was under lease and bond to Nevada Champion Copper Co. in 1916.

ARGENTUM MINING CO. OF NEVADA

NEVADA

Company inactive. Mines and mill leased to F. C. Beedle, Belleville, Nev., 1916-17, who is operating the mine and shipping 25 tons of silver ore daily. Mr. Beedle also has bond and lease on the holdings of the Mt. Diablo M. & M. Co. and the Esmeralda Water & Mfg. Co.

Property: Northern Belle and Holmes Mines, with mill and water rights and the Lucky Hill Mine (owned outright by Threlfall) in camp of Candelaria, Mineral Co., Nev., 9 miles from Redlich, on Tonopah & Goldfield R. R.

Ore: gold-silver. Country rock is lime with rhyolite intrusions; ore occurs as oxides in lenses as an alteration of lime and rhyolite, carrying chlorides and from 60c to \$1 in gold values. Vein system said to be 4,000' long and proven to cover entire ground.

Development: 60 miles of old workings, consisting of shafts, tunnels and crosscuts.

Ore reserves: estimated after a resurvey and sampling, 400,000 tons in mines and ore dumps, besides 2,000' of unprospected mineralized ground on the Lucky Hill.

Equipment: 40-stamp mill and cyanide plant. Company plans erection of new 60-ton mill and aerial tramway for ore haulage.

AURORA CONSOLIDATED MINES CO.

NEVADA

Is a subsidiary of the Goldfield Cons. Mines Co.

Office: Goldfield, Nev. Mine office: Aurora, Mineral Co., Nev.

Officers: Geo. Wingfield, pres.; J. H. Miller, v. p.; A. H. Howe, treas.; J. W. Hutchinson, gen. mgr.; with H. M. Hoyt, Chas. E. Knox and F. M. Manson, directors. R. A. Hardy, supt.

in 1912, in Utah. **Cap.**, \$100,000; shares 10c par; 685,550 shares June 30, 1914, 87% of the issued stock of the Aurora Cons. Mines sold to the Goldfield Cons. Mines Co. for \$763,000, by Jesse Knight ciates.

erty: at Aurora, Nev., shows gold-silver ore in fissures in ande-

lopment: 400' vertical shaft, connecting with main working tun-
' long.

and cyanide plant: 40-stamp with daily capacity of 500 tons, weight
s 1,580 lbs.

ations for 1916 show a net profit of \$39,781 from the treatment of
ns of ore. Ore in sight Jan. 1, 1917, is stated to be 336,978 tons,
t per ton is not given by the company. Neither tonnage nor
cks the original estimates made of the mine, but there is promis-
id yet unexplored.

A MINES CO.

NEVADA

ess: 300 Severance Bldg., Los Angeles, Cal. **Mine office:** Aurora,
Co., Nev.

rs: Wm. R. H. Weldon, pres.; C. H. Chrisman, v. p.; F. C. Lang-
John H. F. Peck, treas.; preceding officers and J. Frank Mer-
rectors. Wm. B. Davis, supt.

rganized March, 1913, in Nevada. **Cap.**, \$1,000,000; shares \$1 par;
0,000. Annual meeting March 19th.

erty: 13 claims, patented, 150 acres, located in the Esmeralda min-
it, Mineral County, comprise some of the mines worked in early
high-grade gold-silver ore in fissure veins.

opment: several tunnels. The Monarch tunnel cut the veins at
, and 260' of drifting was done. Work was then started on a
' lower, already 900' long. At present the tunnel has a length of
400' farther to go to cut the veins. There has been no produc-
te.

LLIC MINE

NEVADA

l by M. G. Bradshaw, Crown King, Yavapai Co., Ariz., and P. A.
na, Mineral Co., Nev. Mine is located at Candelaria, Columbus
neral Co., Nev. Management claims gross earnings from ore
14 were \$33,000, with operating expenses of \$17,000.

erty: 3 claims, 47 acres, unpatented, shows a vein in slate; course
N. 5° W., dip 65°. Ore occurs in shoots and lenses, and is said
28 oz. silver.

pment: 2 incline shafts, 280' deep, equipped with gasoline hoist.
closed down in 1914, owing to drop in silver, but owners plan
perations.

AGLE MINING CO.

NEVADA

O'Brien, mgr., 2740 Telegraph Ave., Berkeley, Calif.

ty: Black Eagle mine and mill at Rawhide, Mineral Co., Nev.,
ow gold ore. Employs 20 men. Treating 50 tons daily at the
reports.

HT COPPER CO.

NEVADA

s: care C. W. Marsh, pres., Washington, D. C. **Mine office:**
ral Co., Nev.

s: **Henry L. Dollman**, v. p.; **F. M. Baker**, Carson City, Nev.,
C. Osborne, treas.; preceding officers, Chas. N. Van Cleave,
Stegemeier, directors.

s: successor of Blue-Light Mining Co.

A tunnel, 1,016' long, Jan. 1, 1916, was expected to tap the vein at 417' vertical depth.

No later returns.

IROQUOIS COPPER CO.

NEVADA

Goldfield, Nev.

Officers: H. B. Lind, pres.-mgr.; J. M. Fenwich, sec.-treas., with M. A. Lind, directors.

Cap., \$12,000; shares \$1 par. All the stock is owned by the Nevada & Boston Copper Company, a Wyoming corporation.

Property: 10 unpatented claims, about 180 acres, in New York Canyon, Sante Fe mining district, Mineral County, 4½ miles E. of the S. P. R. R. and 7 miles S. E. of Luning.

Development: by crosscut tunnels, said to show an orebody averaging 4% copper and \$2 silver per ton. Shipments commenced in 1914 and to date amount to about 2,000 tons of ore carrying from 5-12% copper. Mine being worked by lessees in 1917.

JUMBO COPPER MOUNTAIN MINING CO.

NEVADA

Office: Ben Gill, sec., Goldfield, Nev. J. K. Turner, supt.

Inc. November, 1917, in Nevada. **Cap.,** \$2,500,000; shares \$1 par; assessable. Company is a subsidiary of the Jumbo Extension Mng. Co. (which see), holders in the latter receiving one new share for each Jumbo Extension share held, free of charge. Vendors of the Copper Mountain mine took \$25,000 worth of shares in the new company at 25c each.

Property: the Copper Mountain mine, 15 miles from railroad at Nolan, Mineral Co., Nev.

Development: by 80', 200' and 300' shafts. A crosscut from No. 1 has opened 3' of 7% and 5' of 4% ore and from No. 2, 3' of 8% and 4' of 4% ore. The higher grade is being extracted for shipment.

The Murphy tunnel has opened 4' of 4% ore. Other shallow workings have exposed 5% ore. Lessees on block 5 are shipping over 8% ore from a vein 4' wide. From No. 1 lease the company can ship 7% ore at once. Considerable concentrating ore is available and a mill with flotation is planned.

LAST HOPE MINE

NEVADA

Owned and operated by Chas. Koegel, Chas. Huber and C. Pike. Mine adjoins the Queen Regent Mines Co. on the W., at Rand, Mineral Co. Nev., and is reported to carry an extension of the Queen Regent vein.

Development: by 250' double-compartment shaft.

Shipments: in 1915, said to have averaged \$80 per ton, amounted to \$30,000. No recent returns.

LOUISIANA CONSOLIDATED MINING CO.

NEVADA

Offices: Room 2851, No. 120 Broadway, New York, and Mt. Montgomery, via Mina, Mineral Co., Nev.

Officers: Walter E. Trent, pres.; T. F. Bonneau, v. p.; L. A. Deane, sec.-treas., with Capt. A. B. Wolvin and H. C. Cutler, directors. H. C. Cutler, cons. eng., Reno, Nev.

Inc. May 17, 1912 in Nevada. **Cap.,** 1,000,000 shares; 10c par; outstanding, 600,000; 200,000 shares set aside for bond conversion. Registrar & Transfer Co., New York, transfer agt. and registrar. Listed on New York Curb and Stock Exchanges. Annual meetings, Dec. 15.

Bonds: authorized \$1,000,000; \$100,000 in American bonds dated May 1, 1916, due May 1, 1921; \$100,000 in Nevada bonds dated May 1, 1916, due May 1, 1921; \$100,000 in Nevada bonds dated May 1, 1916, shows \$40,000 in treasury stock, \$40,000 in

nts, \$5,000; cash, \$3,200. Liabilities show: capital stock, \$100,000; 0,000; surplus, \$128,200.

erty: 3 claims and a fraction, 65 acres, including the Louisiana, or nine, at Mt. Montgomery, Oneota district, 5 miles from the S. P. gauge R. R., running from Mina, Nev., to Keeler, Cal. Also has on the Brownie mine, 5 claims, 100 acres, 1,500' W. of the Lou-roperty formerly belonged to the old Thorndyke-Bley Mining dead.

., 1917, the old Tybo mine, 50 miles east of Tonopah, was leased rs, 30% of the profits to be paid the owners. The Tybo is cred- a production of \$3,300,000 in silver-lead-gold ore from about 300'

gold-silver occurs in N.-S. veins, dipping 60° E., with andesite nd rhyolite hanging-wall. Company's claims cover 4,500' along eins; two veins in each mine, the footwall vein, 6' wide, and hang- ein, 2½' wide. In the Louisiana, veins are 5' apart, but at times ther, forming ore widths of 12' to 16'. Veins are 20' apart in the ine.

ypment: tunnels, with 1,000' of underground workings. In the mine most of ore above 120' level has been mined; a 100' winze ift below tunnel level said to show \$7 to \$9 ore. Management isiana mine should produce 10,000 to 20,000 tons of ore for each th, with a profit of \$3 to \$4 per ton; and the Brownie mine 25,000 c for each 100' in depth. Brownie ore said to average \$7 to \$9

eserves: claims 5,000 tons blocked out and 10,000 tons partially ore.

ina is said to have produced \$120,000., of which 75% was in gold; er; all from above 120' level.

ment: includes 10-stamp mill, cyanide and bullion refinery plants. 5 tons per day; steam plant using fuel oil; 75 k. w. generator and ist. Water is obtained from 2 springs, 2 miles from the mill. ny also purchased the Pearl and Zenda silver-gold mines in Cal., in 1917. Ore reserves estimated at 300,000 tons in sight \$3 a ton. Mill capacity being enlarged to 250 tons daily.

A. Trent, reporting on September operations at the Tybo lead- zinc property in Nevada, states that the mine was dewatered ast 19 and the workings cleared and ready for ore extraction

During September, there was removed in the course of de- work, without attempt at stoping, 1,000 tons, averaging \$40 a -silver-gold (allowing nothing for about 11 per cent zinc), of tons was stored on the dump for milling, and 325 tons shipped ters in Utah and having a gross value of \$20,000. The smelter the 325 tons shipped showed \$5,000 profits over and above all development expense for the month, sorting, transportation,arges and smelter deductions. The company installed a new or, mill house, pipe lines, bunk houses, and other modern equip- rchased the 100-ton Atkins-Kroll concentrator which is now om Sodaville, Nevada, to Tybo. Satisfactory prog- the Zenda-Pearl gold property in California.

NEVADA ORE & COPPER CO.

NEVADA

H. H. Hill, supt., Acme, via Mina, Mineral Co., Nev.

Property: a group of claims in the Fitting district, said to show copper ore in replacement deposits. Developed by shaft and extensive workings, opening up lead ores. Reported in April, 1916, that a mill would be built.

NEVADA PACIFIC MINES CO.

NEVADA

L. P. Patrick, pres., Goldfield, Nev. **Mine office:** Mina, Mineral Co., Nev.

Property: the Mayflower group in New York canyon, N. E. of Mina, shows copper ore 150' wide, exposed by surface work, from which 15 tons daily were shipped to the Wabuska smelter in 1913. Reported under bond and lease to the U. S. Smelter Co.

NEVADA RAND MINES CO.

NEVADA

Address: Box 152, Reno, Nev. **Mine office:** Rand, Nev.

Officers: Charles Huber, pres.; Charles Koegel, v. p.-supt.; W. V. Ruderow, sec.-treas., with J. J. Turney, directors.

Inc. July 8, 1916, in Nevada. **Cap.**, \$1,000,000; shares 10c par; non-assessable; 796,700 issued. Annual meeting, July 9.

Property: 5 unpatented claims, 70 acres, in Rand district, Mineral Co., Nev., said to show a fissure vein in andesite, with pay-shoot said to be 200' long and 40' wide. Ore contains silver chloride with \$5.25 gold and a total value of \$15 per ton.

Development: by shaft to 450' depth, with total workings of 1,800'. Ore reserves estimated at 30,000 tons, 1,200 tons of \$17 ore on the dump. In 1914 high-grade ore worth \$30,000 was shipped. Mine examined by S. E. Montgomery of Reno, in Aug., 1917, who advises erection of 25 to 50-ton cyanide mill. Total costs are estimated at between \$4 and \$5 per ton.

Company appears to have a promising mine in a district that has produced extremely rich ore.

Ten-stamp mill being erected late in 1917.

NEVADA REGENT MINES CO.

NEVADA

Provo, Utah.

Officers: Jesse Knight, pres.; J. H. Miller, v. p.; W. Lester Mangum, sec.-treas.; P. H. O'Neil and A. S. Proskey, directors.

Inc. June, 1915, in Utah. **Cap.**, \$1,000,000; shares 10c par.

Property: in Regent district, Mineral Co., Nevada.

NEVADA STANDARD COPPER CO.

NEVADA

Officers: Wilbert E. March, pres., P. O. Box 24, Mina, Nev.; C. S. Korthe, v. p.; L. H. Marsh, sec.-treas., with B. H. Wyant and Matthew W. King, directors.

Inc. 1912, in Nevada. **Cap.**, \$100,000; shares \$1 par; non-assessable; 82,355 issued.

Property: 11½ claims and a mill-site, near Luning, in Santa Fe district, Mineral Co., Nev., 8 miles N. E. of Mina, on the Goldfield branch of the S. P. R. R. Claims cover low rounded hills at about 6,000' elevation. The rocks are leached porphyries underlain at 20' depth by low-grade oxidized copper ores. Ore contains bornite, chalcocite and chalcopyrite. Assays reported from 12 to 25% copper, with small gold and silver values.

Development: by 12' shaft on Mystery claim, which cuts out a fault plane. The 104' level. Crosscutting the 11' of low-grade ore. Main shaft on 11' of low-grade ore. Main shaft on 11' of low-grade ore. Main shaft on 11' of low-grade ore.

and lime. An incline is being sunk to explore this conglomerate, it is reported as "looking fine." Property examined by W. R. H. Wiley and C. W. Clark.

ment: includes a 4 h. p. gasoline hoist, pump, blacksmith shop and tools for men. There are 3 springs, 2½ to 5 miles distant. A 25 h. p. engine is to be installed. \$2,915 spent on development in 1916.

WEAT MINE**NEVADA**

owned and operated by E. C. Watson of Luning, Nev.

Property: 3 unpatented claims, about 50 acres in Santa Fe mining district, York canyon section, Mineral Co., Nev., shows copper-silver contact deposit in limestone monzonite formation. The orebody is 100' wide and from 50'-200' long, strikes N., dips W. and is said to give assays of 9% copper and 1-7 oz. silver.

Development: includes main tunnel being driven to the contact. Proved reserves about 1,500 tons. Recent work has been almost entirely on the contact.

Examined by F. B. Weeks for U. S. S. R. & M. Co. and by H. H. Wiley for Sherwood Aldrich.

WUNGSTEN MINE**NEVADA**

Silver Dike mine.

WUNGSTEN MINES CO.**NEVADA**

Owned by Omco, Mineral Co., Nev.

Officers: E. G. McConnell, pres.; A. Corrigan, v. p.; G. J. Panario, sec.; J. C. Emery St., San Francisco, Cal.; Italian-American Bank, S. F., v. p.; above with Jas. P. Nelson, directors. F. J. Siebert, mgr.; J. C. Emery, supt.

Organized May, 1916, in Nevada. Cap., \$200,000; shares 10c par; 1,200,000 shares.

Property: 9 claims, 160 acres, formerly known as the Royal George mine, 1½ miles N. E. of Mina, Mineral Co., Nev., in the Bell mining district.

Old-silver occurs in a fissure vein in rhyolite to 150' depth.

Development: by 225' incline shaft with total of 2,500' underground. Estimated by manager to block out 28,000 tons of ore. Total ore estimated at 40,000 tons of \$23 ore.

Development: includes 25 h. p. gas engine and compressor. 70-ton mill and operating in 1917.

WUNGSTEN GOLD MINES CO.**NEVADA**

Headquarters: Carson City, Nev.

Officers: E. H. Walker, pres.; H. R. Mighels, v. p., with F. M. Baker and Geo. McDonald, directors. Geo. L. Hedges, supt., Schurz, Nev.

Organized April 11, 1916, in Nevada. Cap., \$1,000,000; shares \$1 par; 630,000 shares.

Property: 7 claims, about 120 acres, in Mineral County, four miles from Station, said to show a quartz vein in andesite, with N. E. and S. W. trending and giving average assays of 2½% copper and several dollars silver.

Development: by 224' tunnel. Further development planned for 1917.

WUNGSTEN COPPER CO.**NEVADA**

Headquarters: 60 Wall St., New York City.

Officers: W. B. Andrew, sec.-treas., gen. mgr.; Chas. P. McColm, v. p.; W. B. Andrew and L. C. Warner, directors. J. C. Skuse, cons.

Organized May, 1916, in Nevada. Cap., \$7,600,000; \$1 par; 3,095,000 treasury shares; 7,600,000 common shares. N. Y., transfer office. Listed on N. Y. Stock Exchange.

SPARTA MINING CO.

NEVADA

Mina, Mineral Co., Nev. W. E. Bell, pres.

Cap., \$1,000,000; shares \$1 par. Listed in Salt Lake City.

Property: 19 unpatented claims in Gold Range mining district, with about 300' of development work, said to show 3,000 tons silver-lead ore. Is a prospect.

TODD MINING CO., R. B.

NEVADA

Office: 203 Nixon Bldg., Reno, Nev.

Officers: Robt. B. Todd, Sr., pres.; W. M. Gardiner, v. p.; V. C. Baker, sec.; with L. E. Aubury, H. F. Norcross and C. W. Bradley, directors.

Inc. Jan. 12, 1916, in Nev. Cap., \$250,000; \$1 par; 120,000 issued. Is the successor of the Luning Gold Mines Syndicate.

Operating expenses in 1916 were \$6,000.

Property: 18 claims, 300 acres, adjoining Luning Idaho group, in Santa Fe district, 5 miles N. E. of Luning, Nev. Claims reported to show quartz diorite cut by a 4' fissure vein dipping 45° with N. W.-S. E. course. Ore is partly sulphide, and is said to assay \$25 per ton in gold and silver.

Development: by 300' shaft with others 100 and 120' deep; also two 700' tunnels and other shorter ones. Workings total 5,000'. About 7,000 tons of ore blocked out and now being mined for shipment.

Equipment: aerial tram and mill contemplated.

Production: \$25,000 to 1913. Shipping ore in 1917.

WALL STREET COPPER CO.

NEVADA

Address: W. S. Norris, Luning, Nev.

Controlled by A. H. Howe, W. Norris and C. Evans of Goldfield, Nev.

Property: said to be one of the best in the Luning district, having shipped \$600,000 worth of ore in 18 months to Sept., 1917. Present production is 600 tons per month. Development amounts to 8,000' and the vein in one stope is 4' wide.

WEDGE COPPER CO.

NEVADA

Luning, Nev. H. H. Hunter, managing director, Lovelock, Nev. Mark Walser and H. O. Howard, directors. Knud Freitag, cons. engr.

Inc. March, 1916, in Nevada. Cap., \$1,000,000; \$1 par.

Property: 6 claims, 8 miles from Luning, Mineral Co., is developed by crosscut tunnel cutting copper ore at 800' depth. Said to show 2' of 2% ore in a 6' vein.

In April, 1917, rich ore was reported as cut in No. 1 tunnel, and in September ore was to be sent to smelter.

NYE COUNTY**AFTER ALL MINES CO.**

NEVADA

Address: Tonopah, Nev.

Officers: Chas. E. Knox, pres.; Herman Zadig, v. p.; M. E. Albert, sec. & treas., with J. H. Evans and E. A. Keenan, directors.

Inc. March 27, 1917, in Nev. Cap., \$1,000,000; shares \$1 par; 700,000 shares authorized, all assessable. Annual meeting, April 3rd.

Property: 18 claims, about 72 acres, formerly owned by the Umatilla Tonopah Mining Co. of the Montana Tonopah M. Co. in Tonopah mining district.

Assessment has been made, and the mine will be developed by the company from the shaft of the Victor shaft to the ridge.

The company is to share the expense.

NEVADA

Spangler, v. p.; Dr. C.

Property: 16 patented claims, 270 acres, in Manhattan mining district. Ore contains gold and silver and is said to average \$15 per ton. Lessees reported to have produced \$40,000 worth of ore from the Union No. 4 claim.

GOLDEN CHARIOT MINING CO. NEVADA

Address: Jamestown, Nye Co., Nev. Carl Feutsch, pres.

Property: 24 miles from Las Vegas & Tonopah R. R.

Ore: said to contain high values in copper, gold, and silver. Ore will be shipped to a point 6 miles south of Goldfield.

GREAT WESTERN CONSOLIDATED MINING CO. NEVADA

In 1915, control of this company was acquired by the Greenwater Copper Mines & Smelter Co.

Property: 11 unpatented claims, about 300 acres, at Tonopah.

Development: by a 2-compartment shaft, 1,150' deep, which enters one of the ore-bearing formations at about 1,000'. Considerable exploration work was done on the 860' level, but it is said to have been all in cap rock and commercial ore was not found. The new management intends to explore the ground thoroughly by crosscutting. Water hindered exploration during the early part of 1917.

GREENWATER COPPER MINING & SMELTER CO. NEVADA

Lloyd E. Marsden, sec.-treas., Room 515-E, 30 Church St., New York.

Chas. R. Miller, pres.; M. R. Ward, v. p.; preceding, with Max E. Bernheimer, Chas. Gold, W. G. Denham, Clyde Milne, Oscar A. Daube, F. L. Mallory, B. H. Campbell and W. H. Drayton, 3rd, directors. John McGee, supt., at Tonopah.

Inc. Dec. 12, 1906, in Delaware. **Cap.**, \$25,000,000; shares \$5 par. Was a securities holding company only, and owned stock in a number of Greenwater promotions, all dead, described Vol. VIII, Copper Handbook. **Company, on** Dec. 31, 1910, had \$144,727 invested in choice bonds, after losing about \$170,000 through the failure of Chas. Minzesheimer & Co., New York brokers, who failed Oct. 15, 1910.

Reorganized Oct., 1914, and capitalization reduced to \$500,000; shares 10¢ par; 3,000,000 issued. Stock listed on the N. Y. Curb. Annual report Dec. 31, 1916, showed cash assets of \$52,630, less expenses and loss on \$4,960, leaving \$47,670 net. Corporation Trust Co., Jersey City, N. J., transfer agents. Annual meeting 2nd Friday in February.

In August, 1911, company took over the O. K. and Supply groups, gold mines at Dale, Calif. Considerable work was done on the Supply mine. In 1915 a crosscut on the 700' level cut the Armenian and Jeane veins, showing practically no values. Two winzes were sunk and drifts extended on the 800-1,100' levels of the Supply vein with negative results. The values decreased with depth and on the 1,200' level no pay ore was found. All development and prospect work gave unsatisfactory results and the property was abandoned in Oct., 1915.

In November, 1915, the company acquired stock control of the Tonopah Bonanza Mining Co. and the Great Western Cons. Mining Co., at Tonopah, Nev.

The cost of shares and assessments in first-named company to end of 1915, \$11,867, and of latter company \$14,910. For the Ruby claims, 125,000 shares at par, 10¢ each, was paid.

Property: 25 claims, is extensively developed and located on the Armenian and Jeane veins. Company now hopes to recoup losses sustained in California through the holdings described under their respective titles.

GREENWATER COPPER MINING CO.

NEVADA

Office, 30 Church St., New York

Residence, Tonopah, Nev.

n Nevada. **Cap.**, 1,250,000 shares. Four assessments have been called.

San Francisco and Salt Lake City exchanges.

Property: 53 acres in Tonopah mining district, Nye Co., Nev., said to be ore. Ledge is from 1 to 5' wide. Formation is rhyolite, quartz and

Development: by 1,370' shaft. On the 1,350' level a crosscut was run several hundred feet. At 247' from the shaft a 4' vein was cut with 8" to 18" in width. A winze, being sunk on this vein, was down to level, 1916.

X TONOPAH MINING CO.

NEVADA

Address: 1008 Kearns Bldg., Salt Lake City, and Tonopah, Nev.

Officers: F. M. Smith, pres.; Thos. Kearns, v. p.; F. J. Westcott, sec.; J. H. Briskie, treas.; preceding, with Clyde A. Heller, directors. B. F. Johnson, gen. mgr., Syndicate Bldg., Oakland, Cal. J. W. Sherwin, supt.

History: Sept. 27, 1902, in Utah. **Cap.**, \$2,000,000; outstanding, \$1,895,000; \$100 par. Stock transferred at company's office. Registrar & Transfer Company, 100 Nassau St., New York, registrar. Annual meeting, 2nd Tuesday in March. Listed on San Francisco Exchange.

Property: 4 patented claims, 81 acres, adjoining the central portion of the Belmont property on the east.

gold-silver, occurring in trachyte. For geology of Tonopah district see U. S. G. S. Prof. Paper, 42, or Jim Butler company following.

Development: by vertical shaft, 1,734' deep, with the deeper levels at 0', 1,400' and 1,700'. The 1,000' crosscut picked up the easterly end of the Belmont vein and ore shipments were made. After considerable work a vein was lost through faulting.

At a vein reported to be about 20' wide was encountered on the 1,200' level. This vein has been stoped and drifted on and furnishes the bulk of the ore

now being produced. The company drove a long crosscut for ventilation purposes on the 1,200' level in 1917, with the Buckeye-Belmont workings. Is raising and crosscutting the 700' level, 1917.

Production: shipping about 200 tons weekly to the West End smelter.

The Belmont Consolidated Co. is reported to be in charge of development and carrying treasury stock in payment.

YACK MINE

NEVADA

Property owned by the Hasbrouck Mining Co., but abandoned after doing some work and bought at sheriff's sale by Geo. Kernick of Tonopah, 10 miles south of Tonopah. Shipments of gold ore were made during

1915. No returns received.

YACK SYNDICATE TRUST

NEVADA

Property at Hotcreek, via Tonopah, Nye Co., Nev. Victor Barndt, gen. mgr., Lawton Butler, sec. Is not incorporated.

Property: 32 claims, unpatented, in Rattlesnake canyon, shows limestone and chert, carrying replacements in limestone near porphyry contacts, and several orebodies reported by company to be 2 to 25' in width and 100 to 400' or more than 2,000' deep.

Development: by about 1,000' of workings, showing copper ores said to contain 25% copper, 3 to 10 oz. silver and \$1 gold per ton. Ore at water level is magnetite, chalcopyrite, of concentrating grade.

YACK TONOPAH MINING CO.

NEVADA

501 Bullitt Bldg., Philadelphia, Pa.

Officers: Clyde A. Heller, pres.; Wm. M. Potts, v. p.; K. Kitto, sec.-treas.; J. H. Briskie, treas.; C. B. Taylor, gen. counsel.

Late in 1917 the mine and mill were reopened. Good developments on the Ohio vein in the West End mine adjoining led to exploration for this shoot in November. The first month's run yielded silver worth \$23,400.

MANHATTAN BIG FOUR MINING CO.**NEVADA**

Harry B. Ruhl, sec., Goldfield, Nev. L. K. Koontz, pres.; J. H. Thatcher, v. p.; C. Wilson, treas., with W. G. Saunders, directors.

Inc. 1906, in Nevada. Cap., \$1,000,000; outstanding, \$784,000; shares \$1 par. Listed on San Francisco Stock Exchange.

Property: 60 patented claims at Manhattan, Nye Co., Nev.

Development: to 500' level by shafts. High-grade ore was extracted by early lessees and the ore remaining is exceedingly low-grade. About the only way to treat it profitably would be to mine the entire Big Four hill by steam shovels and even this method is uncertain. At last accounts Mushett and Wittenberg were trying to find the extension of the high-grade orebody.

Owens 100-ton mill, closed down 1913, but active, 1917.

MANHATTAN CONS. MINES DEVELOPMENT CO.**NEVADA**

Address: Tonopah, Nev.

Mine office: Manhattan, Nev.

Officers: W. J. Douglass, pres.; A. J. Zwort, v. p.; C. C. Boak, sec.-treas.; with E. J. Erickson, J. H. Miller, and R. P. Stenson, directors. M. N. Page, supt.

Inc. 1913, in Nevada. Cap., \$1,500,000; shares, \$1 par; assessable; 1,350,000 issued.

Property: 5 patented claims, 82 acres, in Manhattan district, Nye Co., Nev. Litigation with White Caps company was settled in 1917, after 5 years.

Geology: ore occurs as shoots up to 42' wide in contact and chamber deposits in lime-shale. Assays from \$18 to \$30 per ton.

Development: by 300' shaft and 2,000' of workings, said to have blocked out 10,000 to 15,000 tons of \$16 ore. Rich pockets of gold and manganese were found on No. 2 level. East orebody on No. 2 level said to be 28' wide of good value.

Equipment: 50-h. p. electric hoist, 6-drill compressor, and triplex pump.

MANHATTAN DEXTER MINING CO.**NEVADA**

Manhattan, Nev.

Officers: S. R. Moore, pres.; C. F. Wittenberg, v. p.; Percival Nash, sec.-treas.

Inc. in South Dakota. Cap., \$1,500,000; shares \$1 par. Stock listed on San Francisco Exchange.

Property: 1 patented claim, at Manhattan, Nye Co., Nev., operated intermittently by lessees in 1915-17. Union No. 9 claim has 5 sets of lessees, who are mining gold ore. Dumps are also leased and ore is treated at the Big Pie mill.

MANHATTAN MUSTANG MINING CO.**NEVADA**

Manhattan, Nye Co., Nev. Property is mostly held by Tram-Chase lessees who are mining rich ore.

MANHATTAN RED TOP MINING CO., REORGANIZED**NEVADA**

Office: 120 Russ Bldg., San Francisco, Cal.

Mine office: Manhattan, Nev.

Officers: H. Zelig, pres.; W. E. Colburn, v. p.; C. E. Hudson, sec.-treas.; also directors, J. E. Cannon, supt.

Inc. Oct. 1912, in Nevada. Cap., \$1,000,000; shares, \$1 par; 1,000,000 issued; assessable. Cash on hand, \$100,000.

Property: 60 acres in Manhattan district, Nye Co., Nev.

Development to date has been in blue limestone. It is expected

ipment: 40-h. p. hoist, Ingersoll-Rand compressor, drills, etc., electric

ospect whose shares have been largely traded in on the San Francisco
change.

IRY MINING CO.

No. 8, 1c per share, levied June 21, 1917. Stock transferred at
lce. Listed on San Francisco Exchange.

sheet for 1916 shows assets \$1,584,925, which includes: mine prop-
971; treasury stock, \$55,137; supplies, \$374; cash on hand, \$4,303.
include: assessments paid \$82,394; unpaid accounts, \$2,359. Receipts
118; of which assessments furnished \$28,090 and cash, Jan. 1, 1916,
nt, etc.; labor, \$12,130; vouchers, \$14,684.

Development: by 430' vertical tunnel and over 15,000' of workings. In 1916 development work totaled 1,000' of drifting and crosscutting. New work is progressing on the 200-300' levels in 1917.

Equipment: includes electric power, 3-drill compressor, 40-h. p. hoist and 10-stamp 30-ton amalgamation and cyanide mill. The mill operated 10 months in 1916, on \$5 ore. The Nevada California Power Co. discontinued furnishing power to this part of Nevada in Dec., 1916, and company plans installation of its own power plant. Recovery by amalgamation is 60%, tailings being impounded for future treatment.

Total production to date reported at \$500,000.

Four lessees are operating on a 15 to 30% royalty basis.

PIONEER EXTENSION MINES CO.

NEVADA

Office: 107 Boston Bldg., Denver, Colo. **Mine Office:** Pioneer, Nye Co., Nevada.

Profits: 1915, \$100,000; 1916, \$100,000. A dividend of 2¢ per share was paid in 1916. The surplus was \$33,247.

Property: 80 acres, at Tonopah, Nev. A 1,100' shaft was sunk by an 1,100' shaft on the 950' level, which is said to be in ore. The 950' level, it is

ents are made to the West End mill and prospects are considered

MOUNTAIN MINING CO.

NEVADA

1011 First National Bank Bldg., San Francisco, and Round Nye Co., Nev.

Pres. and gen. mgr.; J. R. Davis, v. p.; H. G. c.-treas.; with W. H. Weber and W. H. Eardley, directors. Est. supt.; E. J. Hannah, mill supt.

March, 1906, in Nev. Cap., \$1,000,000; increased to \$1,500,000 in 1913. Par \$1; outstanding, \$1,320,630. Stock transferred in com. office. Anglo-California Trust Co., San Francisco, registrar. Meeting 3rd Monday in February. Listed on San Francisco and exchanges.

Assets: total \$363,965; the last one, 4c per share, was paid in 1913.

Balance sheet at end of 1916 showed assets totaling \$1,987,603, including \$384 for property, \$261,021 for plant, \$24,042 for supplies, and \$1,418,556 for cash. Liabilities included bills payable, \$20,000; due Round Mountain & Water Co., \$120,000, and net realization undistributed, \$347,603.

Accounting year has been changed to conform with the calendar year, April 1, 1915, to Dec. 31, 1916, results were as follows: revenue from operations, \$503,508; expenditure on operations, \$1,488,861; depreciation, \$35,631; amount allowed under Federal Income Tax on depletion of ore deposits, \$23,970; making total deductions of \$1,987,603. The profit was \$145,221 in 21 months.

Property: 985 acres, 347 patented, at Round Mountain, 60 miles N.E. of the nearest railroad point. Claims show large low-grade gold-silver deposits mined both by lode and placer operations. The deposits are in veins along fissures and sheeted zones in rhyolite, with E.W. dip 15°, average width of lode ore, 8'.

The company took over the Round Mountain Sphinx Mng. Co., after several years of litigation involving apex rights in the Los Angeles district. Several properties were acquired during 1916.

Development: by 1,000' incline shaft, with about 10 miles of workings.

Production: it reports a large tonnage of \$2 to \$7 ore blocked out in the past operations toward the end of 1916 resulted in a loss. Extra

operations disclosed a large sulphide orebody at 900'. Selective mining was

undertaken, which raised the grade to \$7.10 per ton in 1916 and in 1915, \$6.57 in 1914 and \$5.28 in 1913. Four years lode mining

operations were conducted at a small profit with the 180-ton mill, less than 500 tons should be treated daily. Large low-grade

deposits at surface and underground. They are the result of disintegration of gold throughout strongly silicified zones in the rhyolite mass

mountain. In many places the rhyolite is much altered. Past operations have shown better parts of this ore yielded \$4 per ton. Enrichments occur

and the mass will be profitable, so a large expenditure on this property is justified. The ore is free milling and should yield 90% of

its value in simple amalgamation. Large scale tests are to be made. Costs are \$5.56 per ton.

The company has several hundred acres of placer ground and estimates 800,000 tons of gold-silver; 67 acres have been tested and show values of \$1

per ton. The property is being used, tearing down and sluicing 1,200 to 1,500

feet long with two 600' laterals. The high grade material is being milled in spiral steel, commencing with 30" and

gradually increasing to 48" with 400 miner's inches of water.

Comparative General Balance Sheet: Tonopah Belmont Dev. Co. and Belmont Milling Co., year ending March 1:

Assets—

	Property	Invest's	Def. Chgs.	Supplies	Ore On Hand	Current	Total
1917..	\$1,360,717	\$20,125	\$1,078,525(c)	\$212,800	\$89,159	\$1,255,044	\$4,016,370

1916	2,160,522	1,184,865	975,657	1,047,768	796,756	251,012	2,084,741
1915	2,806,369	1,318,306	1,488,063	1,562,695	1,568,500 (b)	5,805	1,963,286

(a) includes dividends; \$750,018, \$750,016, and \$1,462,504. (b) Deficit.

Dividends: 20c. in 1906; 20c. in 1907; none in 1908-09; 15c. in 1910; 90c. in 1911; \$1 in 1912; \$1.10 in 1913; \$1.10 in 1914; 50c. in 1915; 50c. in 1916; 37½c. for 9 months in 1917. Total to date, \$9,330,558.

Properties: 11 claims, 161.5 acres, adjoining Montana Tonopah and Tonopah Mining on the east, at Tonopah, Nev.; the Surf Inlet Gold Mines, on Princess Royal Island, B. C.; option on this property was exercised Dec. 31, 1915; the partly developed Bull Moose gold mine, near Carrara, Nye Co., Nev., taken under a 2-year option, the Biddiscombe mine, near the Bull Moose, taken under a long-term option.

Reported in April, 1915, that an option had been taken on the Potosi gold mine owned by the Tonkey Mining Co., in Nicaragua, 20 miles from the Tonopah Mining Co.'s Eden mine. If the option is exercised it is proposed to organize a \$3,000,000 company, of which Tonopah-Belmont will own 51% and the Tonkey Mining Co. 49%. Reported in May, 1916, that an option had been taken on the Emma gold mine in the Cone mine district, Dolores Co., Colo.

The Exploration Report for 1915, 11 pages, was submitted on March 200 submitted and filed in the office of the State Engineer, Sacramento Co., Cal., on March 20, 1916. It covers the claims E. of the Belmont claims.

The Eagle-Shoof mine, near the Belmont claims, has a probable reserves amounting to \$4,500,000. Future development of the main ore shoot of the mine will require a series of closely joined shafts of length of 490' on the vertical. The probable reserves amount to \$4,500,000. Future development will be treated when developments are made.

Emma mine, at Dunton, Dolores Co., Colo., is operated through the vein, the lowest, No. 5, being 3,285' long. This shows ore in 5 shoots. Future lies in ore below this tunnel and exploration by shaft.

Geology: (at Tonopah) the district is made up of a thick series of andesitic rocks, which is faulted in a very intricate manner, with the accompanying veins. The deposits are quartz veins, and in part replacement, intersecting the earlier andesite and not entering into the underlying rhyolite. Principal ore minerals are pyrite and polybasite, with small amounts of chalcopyrite, galena, blende and gold. Veins vary in width from 3' to 25'. The principal producer of the Tonopah Belmont has been the Belmont vein, at 1,500' depth by the Mizpah fault; the veins now producing are productive as they were.

Development: at Tonopah, by 3-compartment vertical shafts. The Belmont workings had an 1,127' shaft and 36,758' of workings, March 1, 1917. The Belmont workings have a 1,718' main shaft and 121,116' of workings. New work amounted to 19,276' in fiscal year ending March 1, 1917, compared with 21,362' during the previous year.

Production: totaled 98,694 tons, March 1, 1917, compared with 142,164 tons in the previous year. Recent developments at 800' and 1,100' have been productive. In July there was treated 10,782 tons of ore, yielding \$98,738 worth of silver, 10,087 tons of ore yielded 116,758 oz. silver, 1,138 oz. gold and a profit.

Plant: includes the old reduction mill at Millers, Nev., operated by the Belmont Milling Co. and the 60-stamp mill of the Belmont Milling Co., at operations started July, 1912. For a detailed description of this plant see Trans. A. I. M. E., August, 1915. To treat custom ore, this mill was enlarged, Nov., 1917.

Production: Tonopah plant, year ending March 1:

Production—Oz.	Profit	Extr.	T. Costs	Oper. Costs	Value	tons
Gold	p. Ton	%	Mill	Mine	p. Ton	Produced
27,831	\$8.64	93.35	\$2.76	\$4.65	\$17.54	762
2,968,565	6.59	92.97	2.68	3.92	13.88	157
3,714,862	92.99	2.56	4.02	16.74	424
4,251,746	8.83	94.45	3.05	4.35	21.08	398
3,826,399	12.42	94.43	3.66	4.35	24.21	359
4,535,762	14.31	3.36	4.85	20.84	349

Millers plant treated 47,795 tons of custom ore, yielding a profit of \$1,000,000 to the company. This plant is being dismantled and re-located at the Eagle Shawmut mine in California.

Due to the decreasing production of the original claims at Tonopah, the company has been branching out, acquiring new properties, thus making a permanent organization independent of the life of the Tonopah Belmont. With silver at around \$1 per oz., the Belmont can be operated at a profit; it is apparent that reserves are not keeping pace with production.

and publishes results in great detail.
NEVADA
 CO.
 1915, by the Greenwater Cop-

at Tonopah, Nev., increased the Belmont property, 40 acres, in the western section of the Belmont. The new company took

over the property and some crosscutting had been done on the 600' level but no commercial ore had been developed.

Latest advices state that in April, 1917, the shaft was 1,650' deep and a pump was being installed.

TONOPAH EXTENSION MINING CO.

d Flin Flon lake district in Ontario and is doing considerable drill work there; also owns 92% of the Tonopah Canadian Mines Co., 92% of the Tonopah Nicaragua M. Co. and the Mandy Co., of which Tonopah Canadian owns 85%. For descriptions see respective titles.

geology of the Tonopah district, see Tonopah-Belmont Mining Tonopah Extension.

Development: to a depth of 1,500', chiefly through the Mizpah, Desert Power Top and Red Plume shafts. The Mizpah shaft is bottomed but lateral development has not been done at depth. Yearly development work during the past few years has been at the rate of about 100,000 ft of workings aggregate 40 miles, mainly above the 650' level.

In 1916 the Red Plume shaft was shut down and the hoist moved to the Grass, which is 1,500' deep and is connected with the 1,170' level through the larger shaft. Monthly advance about 200', Sept., 1917.

Production: for 10 months (financial year altered) ending Dec. 31, 1917, 81,782 tons of ore averaging \$15.65 per ton. It contained 15,636 lbs. and 1,387,557 oz. silver, of which 94.2% and 90.3% was extracted, respectively. Manganese silver compounds interfered with treatment to the extent of 0.2%.

Reserves: estimated Dec. 31:

Tonnage	Value		Tonnage	Value
.. 200,702	\$3,062,661	1915	53,493	\$ 798,789
.. 172,761	2,485,795	1916	72,100	1,206,821
.. 102,056	1,525,731			

Plant: 100-stamp mill at Millers, Nev., 12 miles from the mine, under name of Desert Power & Mill Co., employs the concentrating and sliming processes.

Production:

Tons Treated	Value p. Ton	Costs Per Ton				Metal Loss	Profit p. Ton
		Mine	Mill	M't'g	Total		
81,782	\$15.65	\$4.61	\$3.16	\$0.94	\$8.71	\$1.34	\$5.60
136,246	13.66	3.87	2.94	.97	7.78	1.11	4.77
143,432	16.25	4.40	2.96	1.15	8.51	1.23	6.51
163,387	17.79	3.28	2.81	1.32	7.41	1.96	8.42
173,336	18.16	3.27	2.67	1.25	7.19	1.85	9.12

March 31; (b) to Dec. 31.

In 1917, the profit from 7,452 tons of ore was \$40,300. In October, 1917, the plant yielded bullion worth \$100,450, and \$17,075 profit.

Costs include cost of handling dump ore. Marketing costs included in profit.

The productive life of the Tonopah property is nearing an end; to this end and to make a permanent dividend-paying organization, plans have been acquired. There is no doubt that the plan will be successful, as the management is thoroughly experienced and capable.

In 1917, J. E. Spurr, in charge of the Exploration Department, discontinued the department was discontinued. From Jan., 1912, to Jan., 1917, it cost \$261,108, and total value of results, \$7,858,601.

Address: J. G. Kirchen, Reno, Nev. **Mine office:** Manhattan, Nev.

Officers: J. G. Kirchen, pres.; J. H. Miller, v. p.; A. G. Raycraft, sec-treas., with Hugh H. Brown and W. L. Mangum, directors.

Inc. 1917, in Nev. **Cap.**, \$200,000; shares 10c. par; assessable; 1,595,005 issued.

On June 30, 1917, assets amounted to \$191,074, of which \$130,384 was for property and plant and \$60,720 cash and accounts receivable. Current liabilities were \$462.

Property: 13 claims, in Manhattan district, said to show ore deposits occurring as chimneys in limestone, with 50° dip. Ore carries gold and a trace of silver.

Development: by 560' vertical shaft.

Equipment: includes 50 h. p. Hendrie-Bolthoff hoist, Chicago Pneumatic compressor, drills and pump, all motor driven.

Property: is in development stage, but is backed by strong interest and regarded as promising.

WHITE CAPS MINING CO.

NEVADA

Offices: J. G. Kirchen, Reno; J. A. Cole, supt., Manhattan, Nev.

Officers: A. G. Raycraft, pres.; C. F. Wittenberg, v. p., with H. R. Cooke, J. G. Kirchen and C. J. Blumenthal, directors. P. S. Booth, sec-treas.

Inc. June 7, 1915, in Nevada. **Cap.**, \$200,000; issued \$160,000; shares 10c. par. U. S. Corporation Co., New York, transfer office and registrar. Listed on New York Curb, in San Francisco and on the Nevada Exchange.

Balance sheet of April 30, 1916, the last available, shows assets: property and equipment, \$248,069; cash, \$10,336; accounts receivable, \$5,712. Liabilities show surplus April 30, 1916, end of fiscal year, \$118,659; current liabilities, \$13,549.

Property: 2 claims, near Manhattan, Nye Co., Nev. Apex litigation has been started by the Morning Glory company adjoining.

Geology: the ore is a replacement of limestone by quartz, pyrite, arsenopyrite and stibnite. Calcite is abundant, also realgar. Faulting is common. In the upper levels ore averaged 1.02 oz. gold and 0.62 oz. silver per ton. The sulphide is refractory, requiring special treatment.

Development: by a vertical shaft with levels at 210', 310', 435' and 500', also an old 225' incline. Two ore shoots opened in 1916, showing 10' of \$40 ore and 3' of \$172 ore. Below 230' level occur primary sulphides. Work was done in 1916, 1917 and 1918. In February, 1917, the east ore shoot was opened, showing \$172 per ton. On this level the ore was assayed at \$172 per ton. This shoot was opened in 1916, showing \$24.80 to \$28.40 per ton.

Equipment: includes hoist, 50 h. p. Hendrie-Bolthoff hoist, 50 h. p. eron pump, all motor driven, 50 h. p. steam engine, 50 h. p. steam boiler, roasting furnace, tube-mill and 50 h. p. steam engine. Treatment problem at this mine was discussed in the E. and M. Journal of November, 1916. The ore was milled at a milling cost of \$2 per ton.

Production is said to total 13,000 tons of ore, valued at \$1,000,000 per ton, all from above the 210' level.

ide ore treatment commenced on August 22, 1917, but it was late in September that the plant was working well. By 1918 could be made, providing the ore yields to present treatment. From to June the shares were dealt in at San Francisco in large number price rising over \$2. Company is backed by well-known Ne-

\$4,000,000 in assessments. In 1911, the present management obtained control from the stock brokers who formerly mismanaged things so badly on the Comstock, and having resolved to prospect the hanging-wall for fractures, were rewarded by finding an orebody yielding over \$1,400,000 which enabled them to build a modern mill, equip the mine, contribute heavily toward the pumping of the Comstock lode, and pay two dividends aggregating nearly \$200,000.

The Comstock lode is a great fissure vein filling a fault plane. The main body of the lode is a belt of quartz and vein matter, 10,000' long and several hundred feet broad with a general strike N. 15° E. At each extremity of this main fissure the lode ramifies into diverging branches. The east or hanging-wall is diabase throughout the entire 10,000' of the main lode, and for some distance on the S.E. and N.E. branches. It is 1,500' or more in width, and includes numerous lenses of diorite. These are generally harder than the diabase, which, in most places, is in an extreme state of decomposition. The foot wall of the main fissure is diorite for more than $\frac{3}{4}$ of its length, but at the southern end is chiefly composed of metamorphic slates; it is much less altered than the hanging. Accompanying the vein for half its length is the narrow dike of younger diabase called the "black dike." Contents of the vein are simple, on the whole consisting of country rock in fragments varying from very small, to several thousand feet in length, clay, quartz, and argentiferous minerals. With few exceptions all of the orebodies of any importance were found close to the contact of the diabase with the main fissure, or within the belt of diabase which forms the hanging wall.

The Gold Hill bonanzas rest upon metamorphic rocks. The geology is described in detail in U. S. G. S., Monograph No. 3, which, according to Whitman Symmes, requires some important corrections.

Development: the principal mining now being done is on the 5 north end mines; from north to south these mines are the Sierra Nevada, Union Mexican, Ophir and the Cons. Virginia. At present ore is being extracted on the 2,700' level of Con. Virginia, and 2,700' level and above in Union and Sierra Nevada. The 2,900' level has been unwatered, and is being opened up. Union has recently yielded \$500,000 from stopes between the 2,500' and 2,500' levels. The lode from which this ore was mined has not yet been developed at 2,700'. After having no ore for years, Con. Virginia is opening a strong gold vein at 2,700'. Ophir is looking for an extension of the orebodies above 2,500', from which about \$4,000,000 was taken in last 10 years, and is also exploring at 2,700'. The Mexican area which yielded \$1,400,000 was worked out 3 years ago on the 2,500' level. Recently good ore has been found on the 2,700' level directly below the above-mentioned ore. The 2,700' level has been unwatered, and ore extracted from the 2,700' level is being shipped to the 300' level at other local plants. In 1917, the 2,700' level yielded bullion worth \$1,400,000. The 2,700' level is being unwatered at Sierra Nevada, and Union.

The flow of water is from the north.

In 1917, water was pumped for 30 years.

Equipment: includes 4 electric pumps; two compressors; all slime cyaniding plant and

rs: Albert E. Humphreys, pres.; Joseph B. Cotton, v. p.; Thomas , sec.-treas.; Robert Linton, cons. eng. and gen. mgr.; Henry B. itor; with Isidore Hershheim, C. Laurence Perkins, I. W. Bern- B. Humphreys, Thomas A. Merritt, Arthur J. Selfridge, and R. Kennedy, directors.

May 20, 1913, in Delaware. Cap., \$8,000,000; shares \$5 par; non- : \$4,060,360 outstanding June 30, 1917. Bonds authorized \$3,- st mortgage 7% convertible, due 1928; \$1,437,000 outstanding, e by lot at 110 plus accrued interest on any interest day. Guar- t Company, New York, transfer agent; Bankers Trust Company, k, registrar. Stock listed on New York Curb.

ment of April 30, 1917, shows cash on hand, \$183,376.03; notes and receivable, \$535,359.02; inventory of copper, silver and gold, : other quick assets, \$120,770.95; quick assets over current lia- \$07,343.21.

erty: the Coppermines company owns in fee 1,151 acres of mining and claims, together with 2,565 acres of ranch lands having water rights. It also controls, through its stock ownership in Consolidated Mines Co., 2,000 acres of patented mining claims acres of ranch lands, which have valuable water rights; and s stock ownership in the Butte & Ely Company 209 acres of mining claims. The total area of claims, exclusive of the Mexican 3,360 acres of patented mining claims and 4,365 acres of

mine, the Mexican property of the Giroux company, 11 about 459 acres of mineral lands, includes the San Jose W. of Copete, in the Sierra de Oro, 25 miles E. of from Hermosillo. Property shows a contact between limestone and porphyry, opened by 3 shaft, sunk on an incline, 1,200' deep. At the bottom level, a vein of about 40' width, depth, succeeded by sulphides. The low-grade copper ore with fair gold was \$542,000. Mines have not political conditions in

occurring on the Nevada ore, similar to that various masses that can methods, others by ore and replace- contacts.

DOYLE MINING CO.**NEVADA**

Controlled by Atkins Kroll Co. Mine produces scheelite (tungsten) ores and company also owns a mill which was treating scheelite ore at the Bonita property on Snake Creek, near Garrison, Utah, 1916.

ELY AMALGAMATED COPPER CO.**NEVADA**

Company controlled since 1911 by Jesse Knight, pres., Provo, Utah, who owns 51% interest.

Inc. 1907, in Utah. Cap., \$100,000; shares 10c. par.

Property: 6 claims, and a townsite, about 1 mile from the Steptoe smelter, of the Nevada Consolidated Copper Co., at McGill, White Pine Co., carries silver-lead ores. Several carloads of ore have been shipped and property under development.

ELY BELL MINING CO.**NEVADA**

Letters unclaimed at Ely, Nev., and Salt Lake City, Utah. Company probably dead. Stock worthless. Fully described Vol. XI, Copper Handbook.

ELY COPPER CO.**NEVADA**

Office: 815 Ernest & Cranmer Bldg., Denver, Colo. No representative at Ely, Nev. Idle since 1907. Fully described Vol. XI, Copper Handbook. Unfavorably regarded.

ELY GIROUX COPPER CO.**NEVADA**

Kimberly, White Pine Co., Nev. Windsor Trust Co., New York, trustee.

Inc. 1909, by B. W. Coleman, Graham F. Putnam, and Roswell S. Nichols. Cap., \$5,000,000; shares \$5 par. In Nov., 1912, majority holdings were pooled, and \$75,000 shares treasury stock offered public, proceeds to be handled by Windsor Trust Co. as trustee, exclusively for payment of contractors sinking shaft on company's property at Ely, Nev.

Property: in Robinson mining district. Stock listed on the New York Curb, as a prospect, 1915. No returns secured, and company advertised delinquent for \$91 taxes in Jan., 1916.

ELY-MIZPAH COPPER CO.**NEVADA**

Property: the Modoc group, near Ely, Nev. Assessment work neglected and property probably forfeited. See Vol. XI, Copper Handbook.

Principal booster or promoter was A. M. Kearns, 1st Natl. Bank Bldg., Denver, Colo.

ELY REVENUE COPPER CO.**NEVADA**

Idle.

Office: 830 Equitable Bldg., Denver, Colo.

Officers: F. C. Goudy, pres.; L. F. Twitchell, v. p.; J. P. M. Humphrey, sec.-treas.; above, with C. C. Eddy and A. E. Reynolds, directors.

Inc. 1907 in Colo. Cap., \$1,000,000; shares \$1 par. International Trust Co., Denver, registrar. Annual meeting 1st Tuesday in March.

Property: 132 acres, known as the Revenue group, at Ely, White Pine Co., near the Chainman and Altman mines. Operations to be resumed.

ELY VALLEY MINING & MILLING CO.**NEVADA**

Pioche, Lincoln Co., Nev.

Officers: George Weddell, pres.; W. E. Harrison, v. p.; Edward Thimmarson, sec.-treas. and gen. mgr.; C. L. Warren, supt.; James W. Abbott, mg. engr.

Inc. Jan. 1, 1908, in Nevada. Cap., \$1,000,000; shares \$1 par, fully paid non-interest-bearing stock and 400,000 treasury, 20%

in May.

erty: 200 acres, 16 claims, part patented and balance held by in Ely mining district, shows ore in vertical contact veins be-mestone and quartzite. Vein reported to be 7' wide, to strike nd to be proven to a depth of 500'. A vein of 10% copper ore in shaft at 480' depth. Average assays claimed to have been 20% oz. silver and \$2 gold per ton.

velopment: by 4 shafts and 400' tunnel at last accounts.

ment: includes gasoline hoist, air compressor, pump and air-plant. S. P. L. A. & S. L. R. R. 2½ miles from property. neither answered nor returned.

IRDI COPPER CO.

NEVADA

Wingfield, pres., Goldfield, Nev. Mine near Ruth, via Ely, Nev. tors: S. R. Roberts, John Berry, of Ely; A. P. Sawyer and Leslie e, of Goldfield; M. R. Brown and H. S. Anderson, of Pierre, S. D. May, 1912, in South Dakota. Cap., \$5,000,000; shares \$5 par. Is a ation of company of same name that was listed on New York 1909.

erty: a large group of claims south of the Copper Flat steam- of the Nevada Consolidated. Only assessment work being done.

TCH COPPER CO.

NEVADA

Mine near Ely, Nev.

rs: J. E. Bamberger, pres., 163 So. Main St., Salt Lake City, Utah; rman, v. p.;-treas.; H. Cohen, sec.; Ernest Bamberger, gen. mgr.; with H. G. McMillan and W. W. Armstrong, directors.

Nov. 22, 1906, in Maine. Cap., \$5,000,000; shares \$5 par.

erty: 7 claims, 1 fractional, 54 acres, patented, bought for \$275,000, he porphyry zone between the Ruth and Cumberland-Ely mines vada Consolidated, shows large blowouts of iron-stained porphyry.

opment: by 300' shaft, with levels at 100' intervals, and by tun- 200', 600' and 1,050', with 3,500' of workings. Development was ing, for, while claims cover the main monzonite belt of the he underground work on 300' level showed values too low to illing by Nevada Consolidated Co. is the logical thing to do and any can probably work this property since it is now handling t a profit. Company was a speculative promotion at time Nevada ted was floated, and proving lean on development, has been idle

L ELY COPPER CO.

NEVADA

: 26 Mining Exchange Bldg., Salt Lake City, Utah. Mine Office:

rs: J. A. Cunningham, pres., at last accounts.

914 in Utah. Cap., \$5,000,000; shares \$5 par; assessable; 12 as- levied to March, 1915. Stockholders plan reducing company's ion to \$150,000 in 1916.

erty: 21 claims, 3 fractional, 400 acres, also the Huesser ranch of 15 miles north of Ely, in the Steptoe valley, bought 1906, and a Mining lands are the Panama claim, bought 1909, for \$10,000, t one-half mile north of the Star Pointer shaft of the Nevada ed; 8 claims north of the Nevada Consolidated; 3 claims between rland-Ely and Turner-Ely, and the Queen of the West group, in eason. Company is said to have paid \$225,000 for its lands.

erty: property north of the Nevada Consolidated shows limestone g to the east, said to be underlaid by cupriferous monzonite, and parallel shear zones, each about 400' in width, 600' apart, showing per and lead ore. The limestone capping on the Savage claim is

- said to carry lead ore. Churn-drill borings are said to have given a satisfactory showing of ore, and there also was some test-pitting and surface trenching.

Development: by tunnels aggregating about 1,600' and 4 shallow shafts, 3 said to show copper sulphides at depth of 100', the main shaft said to be near the contact of 3 ore zones, which seems peculiar, if the ore zones are parallel, as claimed.

The Queen of the West shaft shows, at depth of 110', a sulphide orebody of considerable size, averaging 3% copper, 1 to 2 oz. silver and 40 to 50 cts. gold per ton. The Kessler shaft, about 100' deep, near the tunnel, shows lead carbonates of fair tenor. Mine has a small steam plant.

Company has done little save levy assessments for several years, doing barely enough work on the claims to meet annual assessment requirements. Their claims were surveyed for patent in 1912 and reported partly patented in 1914. No recent returns.

FORT SCHELLBOURNE MINING & MILLING CO. NEVADA

Office: 521 Felt Bldg., Salt Lake City, Utah. Mine Address: Dan Doyle, Supt., Schellbourne, Nev.

Officers: F. W. Snyder, pres.; Hugh H. Tarbet, v. p.; E. H. Snyder, sec.-treas.; with Howard Phelps and J. E. Hepworth, directors.

Inc. Sept. 27, 1916, in Nev. Cap., \$100,000; shares 10c. par. \$650,000 issued; assessable. Operating expenses, 1916, \$2,000. No income, save stock sales.

Property: McMahan mines, 7 claims, 140 acres, unpatented, in Schellbourne mining district, White Pine Co., Nev., 8 miles from Nevada Northern R. R. (Cherry Creek Station). Lands show a fissure vein on a limestone shale contact, with 15-20' orebody. Ore in streaks carries \$1 gold and 12 oz. silver per ton, in quartz calcite gangue.

Development: by 500' tunnel with 280' back and 1,000' of work. Company plans tunnel to cut ore at greater depth. No production since 1875.

GIROUX CONSOLIDATED MINES CO. NEVADA & MEXICO

Office: 1400 Alworth Bldg., Duluth, Minn. Mine Offices: Kimberly, Nevada, and Carbo, Sonora, Mexico.

Officers: Robert Frothingham, pres.; Henry B. Paull, 1st v. p.; Ernest R. Grochau, 2nd v. p.; Joseph B. Cotton, general counsel; Frederic R. Kennedy, sec.; Thomas B. Adams, treas.; foregoing with Samuel Brenner, Chas. H. Maddien, Albert E. Humphreys, Jr., Chas. d'Autremont, Jr., directors; Edwin F. Gray, gen. mgr.; Samuel L. Healet, supt., Mexican mine.

Inc. April 14, 1903, in Delaware. Cap., \$7,500,000; shares \$5 par; issued \$7,207,100, with \$292,900 in treasury for conversion of bonds. Bonds outstanding \$292,900. American Trust Co., Boston, transfer agents. Boston Safe Deposit & Trust Co., registrar.

The Giroux is now controlled exclusively by the consolidated Coppermines Co., through exchange of stock. The latter company is a Nevada corporation. The former company's stock outstanding. For details see consolidated Coppermines Co. report.

GLENDALE MINING, MILLING & DEVELOPMENT CO.

Glendale, Calif. Mine: near Glendale, Calif.

A jitney auto man, named [redacted], was killed in an accident, and in our opinion, result of [redacted] Leishman, Templeton, Calif., was [redacted] advisory capacity in the early days [redacted]

Very unfavorably regarded.

HAMILTON POWER, MINING & DEVELOPMENT CO.

Mine in Rocco canyon, near Hamilton, Nev.

v. p. and sec.; Wm. Harwood, mgr.; preceding, with R. G. Henke Blair, directors at last accounts.

erty: the Grand Prize group, 5 claims and power rights on Illipah re is a carbonate carrying copper, lead and silver.

velopment: by 235' tunnel cutting ledge at 165' with 36' winze in 125' shaft sunk on the vein, showing a 12" paystreak of shipping amounts in 1913, of 20 tons sacked, averaged \$84 a ton, assaying copper, 20.5% lead and 107 oz. silver. Shipments averaged 60 tons during 1914.

ably dead.

INDEPENDENT SCHEELITE CO.

NEVADA,

ss: Scheelite, via Ely, Nev.

erty: tungsten producer in the Snake Range district, 26 miles

A 30-ton mill was erected in 1916.

VALLEY MINES CO.

NEVADA

ester, Mass. W. Prince Catlin, mgr., Battle Mountain, Lander

erty: in Kimberly or Hill Top district, 23 miles from Battle Mountain comprises the Jersey Valley group, and the Gray Eagle claims, acquired, 1913, from the Gray Eagle Mining Co. Four sets of lessees give out ore from the last named claims at last reports.

ANG MINING & MILLING CO.

NEVADA

Continental Natl. Bank Bldg., Salt Lake City, Utah.

ss: A. P. Spitko, pres.-mgr.; Geo. F. Goodwin, sec.-treas.; A. Cigaret.

899. Cap., 300,000 shares; 10c. par; assessable; 254,000 shares stock listed on Salt Lake Exchange.

erty: 15 claims, 8 patented, 250 acres, in Duck Creek mining district Pine Co., Nevada, is said to carry high-grade galena ore with values, occurring in gray and blue limestone formation.

ements: to date total 10 carloads, netting \$20,000. Development completed 1917. Tunnel is 700' long.

DEPOSIT MINING CO.

NEVADA

ss: L. G. Hardy, pres.-gen. mgr.; J. P. Cahoon, v. p.; C. W. sec.-treas.; above with A. N. Olsen, directors.

arch 1, 1914, in Utah.

erty: 9 unpatented claims at Aurum, White Pine Co., Nev., said upper ore with some silver-gold values, running \$45-\$50 per ton. Development: by 175' crosscut tunnel cut along a porphyry dike said 200' across. The tunnel is being driven to reach depth of 300'.

from: in 1916, 65 tons were shipped. About 200 tons of ore shipped in 1917.

IDAHO COPPER CO.

NEVADA

Utah. Mine Address: J. P.

ss: Col. Enos A. Wall, preceding, with Frank J. F. P. Jennings,

assessable; 1915.

listed on the Salt

Property: 28 claims, patented, 325 acres, 19 claims held under bond and lease. Property, on the lime belt, in the N. E. part of the Ely district, carries 4 contact deposits, between porphyry and limestone, showing prominent iron outcrops. Management estimates veins as 20' wide carrying oxidized ores, assaying 1 to 40% copper, and about 80 cts. gold per ton.

Development: is by the 415' Wall tunnel, showing 21' of heavy iron. The mine as a whole has about 3,000' of workings.

Equipment: includes a 25-h. p. gasoline hoist, 40-h. p. steam hoist, and a 6-drill Ingersoll-Sergeant air compressor. There are 6 buildings, including necessary shops. A pumping plant and pipe line supply water from a spring at nearby ranch.

An old 50-ton mill, with rolls and cyanide plant, remains from a former ownership. The 100-ton concentrator has a gyratory crusher and 3 trains of rolls. In May, 1914, drifting was in progress. Ten men employed. Property considered promising. No recent information obtained.

NEVADA CONSOLIDATED COPPER CO.

NEVADA

Controlled by Utah Copper Co.

Office: 120 Broadway, New York. **Operating Office:** McGill, White Pine Co., Nev. Mine near Ruth, White Pine Co., Nev.

Officers: Silas W. Eccles, pres.; Daniel C. Jackling, v. p.; W. E. Bennett, v. p. and sec.; preceding with E. A. Guggenheim, H. F. Guggenheim, Chas. Hayden, Wm. B. Thompson, Chas. M. MacNeill, W. Hinckle Smith, W. C. Potter and C. B. Lakenan, directors; C. K. Lipman, treas.; C. B. Lakenan, gen. mgr.; C. V. Jenkins, business mgr.; Robt. Marsh, Jr., mine supt.; W. S. Larsh, underground supt.; E. E. Vanderhoff, pit supt.; Geo. C. Riser, mill supt.; R. E. H. Pomeroy, smelter supt.

Inc. Nov. 7, 1904, in Maine, as a merger of the Boston & Nevada Copper Co. and White Pine Copper Co. **Cap.**, \$10,000,000; shares \$5 par; non-assessable, original cap., \$5,000,000, increased Feb. 5, 1908, to \$8,000,000, and again increased Nov., 1909, to present figure. A former issue of \$3,000,000 first-mortgage 6% convertible gold bonds, due April, 1918, has been retired. Old Colony Trust Co., Boston, and Guaranty Trust Co., New York, registrars; Boston Safe Deposit & Trust Co., Boston, and D. A. Crockett, 120 Broadway, New York transfer agents. Shares listed on the New York and Boston stock exchanges. Annual meeting, third Friday in April.

Comparative General Balance Sheet: Nevada Cons. Copper Co. and Nevada Northern Ry. Co.—

Assets:

(b) After deducting \$3,229,205 for depreciation and ore extinguishment.

(c) Amount realized from Capital Stock and Securities sold in excess of par value or purchase price dividends paid. (d) \$8,136,219 deducted for ore and depreciation.

Comparative Table of Recoverable Developed Ore:

	Tons	Copper		Tons	Copper
Sept. 30, 1907....	14,432,962	1.97%	Dec. 31, 1912....	38,853,551	1.67%
Sept. 30, 1908....	20,000,000	1.94%	Dec. 31, 1913....	39,108,590	1.65%
Sept. 30, 1909....	29,000,000	1.94%	Dec. 31, 1914....	41,020,296	1.68%
Sept. 30, 1910....	40,360,823	1.70%	Dec. 31, 1915....	50,525,289	1.65%
Dec. 31, 1911....	40,853,371	1.66%	Dec. 31, 1916....	67,993,117	1.59%

Churn-drilling in 1916 totaled 45,222'; 103' holes were drilled, 19,704' being in the Ruth. Average depth in the mine was 469', and at Copper Flat 418'.

Electric power is used throughout, current being brought from the Steptoe smelter, at 40,000 volts, and stepped down to 600 volts by seven 200-k. w. transformers in a concrete station at the Ruth mine.

Ore is shipped to the Steptoe smelter, at McGill, separately described below, over a 27-mile standard-gauge railway, equipment including 400 self-dumping ore cars. This line is a part of the Nevada Northern railway, having a standard-gauge line of 165 miles in length, running from the mines and Ely to a junction with the Southern Pacific railway at Cobre station. The Nevada Northern Railway Co., controlled through stock ownership by the Nevada Consolidated, is capitalized at \$2,000,000, with a \$1,000,000 bond issue, at 5%, the line doing a general business in addition to handling the traffic of the Nevada Consolidated Copper Co.

Tonnage carried in 1916 totaled 13,240 daily, of which nearly 12,000 was ore.

Costs: the cost of stripping overburden was given at 30.09c. per cu. yd. for the fiscal year ending Dec. 31, 1916, with actual mining costs for ore of 12.42c. per dry ton, with an additional charge of 30c. per ton made to cover stripping redemption at the various pits. There was 3,982,600 cu. yd. of capping moved in 1916. Ore mined and treated during the fiscal year 1916 averaged 1.632% copper, by assay, with an average extraction of 73.87%. The cost of production for the fiscal year 1916 was given as 8.13c. per lb. of copper and 8.86 cts., covering all charges, including depreciation charges on Steptoe plant. It is not probable, however, although the Nevada Consolidated is one of the largest and best mines in the world, that the mine can continue to produce copper, for any great length of time, at much less than 8 cts. per lb., and, when all factors are taken into consideration and due allowance is made for the cost of improvements, that ultimately must be charged against costs, a net cost of 9 cts. per lb. for finished copper laid down at the seaboard, would be a fair estimate. Production is marketed through the American Smelting & Refining Co. commission basis.

The Steptoe Smelter
The Steptoe Smelter is owned by the
company, with a capacity of 100,000 tons
with a daily output of 10,000 tons
on the Nevada Northern Railway
and 22 miles from the mine.
The smelter is 100 feet
wide, on a site 100 feet
handling capacity of 100,000 tons
Duck Creek, and is
furnishing water to the mine.

The reduction of
present average
that it can be

re under way to increase the quantity to 15,000 tons. All main e of steel frame and the plant is built on the unit system, with or expansion.

l, nearly a mile from the smelter, is 378x756' in size. There are treating a total of over 12,000 tons of ore daily. Each section ated independently, but the plant is run in 4 units of 2 sections

l handles a moderately hard silicified altered porphyry ore con- specks of chalcocite, pyrite and some chalcopyrite and aver- copper. This is concentrated 8 into 1, with a recovery of f the assay value, the product containing 9% copper.

f the assay value, the product containing 9% copper. rse ore bins are of timber, 15' deep, 20' wide and 288' long with f 5,000 tons. They are built about the center line of the mill ind the center line of the fine ore bins. The ore is dumped of railroad iron with openings of 13.5".

e coarse ore bins the ore goes through chutes at the bottom ur 60" steel apron feeders driven at a speed of 2.2' per minute. acity of each feeder is 75 tons per hour. The two feeders in joining the center line of the plant can be run at 9' per minute, 00 tons per hour. The feeders, with the exception of these to two 60" steel pan conveyors, each 118' long, traveling at 28' per minute, and with a total capacity for the two of 1,700 r. The high speed feeders and pan conveyors deliver to two grizzlies of 3.5" openings and having a speed of 40' per minute.

from the grizzlies is delivered to two No. 8 McCully crushers. ge from the McCully crushers and the undersize from the levated by two 42" belt conveyors to two screens 6'x14' of 3/8" mesh, inclined at an angle of 36 to 48°. The oversize of is reground by two Garfield rolls, 72"x20". set for a 3/4" open- tge from the rolls and undersize from the screens is elevated ontal conveyors which distribute to the fine ore bins by means ers.

to avoid sliming the flow sheet is arranged for step grinding. e bins the ore passes by belt feeders over automatic scales 6"x15" rolls set for an opening of 3/4" and run at 85 r. p. m. roduced beneath washing to a pair of bucket elevators. The ese elevators are 8"x8"x18" and the elevators deliver to two diam. by 8' long, having one section of 3/16" and one of ions. The oversize goes to another set of rolls 36"x14" set ening and driven at 105 r. p. m. The undersize of 5/16" goes ll 30"x14", set for a 3/8" opening and run at 122 r. p. m. The 3/16" goes to eight 2 m. m. trommels 36" diam. by 8' long. of the 2 m. m. screens goes to a fourth set of rolls 36"x15" of 1/16" and driven at 160 r. p. m. All of the above rolls e elevators so that everything must finally pass 2 m. m. m. passes to 10 double deck Wilfleys making ollivars to five Wilfleys. The five Wilfleys make Wilfleys to the regrinding system. The tailings e pass to four Steptoe classifiers, having overflow is sent to a 50' Dorr thickener, ment and overflow to the reclaimed e goes to the regrinding system after e to four Wilfleys which make e regrinding system. The third eal concentrates, middlings to

old stalls with 96x150" shells of the barrel type built for acid linings, but now used with magnesite brick linings. There are also 2 Peirce-Smith barrel-type converters, both originally 25' 10" long by 10' diameter shell. One of these was lengthened at the smelter to 33' 11". They originally had 30 tuyeres each but these have been increased to 35 and 46, respectively. The blast pressure used is nominally 10-lb. gauge at an altitude of 6,327'. The Peirce-Smith converters produce about 60 and 50 tons of copper per day on 40% matte.

Blister copper is poured into ladles and transferred into a brick-lined steel cylindrical receiver. This is mounted on rollers and rotated on its own axis by an electrical motor, so that the molten blister copper is poured through a tilting pouring spoon into moulds on a horizontal straight-line chain and sprocket conveyor. These moulds discharge on a submerged apron conveyor which after traveling in the water horizontally for a few feet turns on an incline and raises the copper ingots out of the water and lands them on the loading platform. They contain 99.5% copper, weigh about 400 lbs., and after trimming and being weighed on accurate scales, they are shipped in box cars.

The converter's slag is taken back to the reverberatory furnaces in 10-ton side-tilting pots operated by compressed air. Flux for the converters consists of concentrator slimes and silicious carbonate ore from the Copper Flat pit, mixed and dried in 2 oil-fired rotary driers at the converter building and handled and charged by boats. The hoods from the converters lead to a balloon flue running along over the charge floor for the extent of the converter building covered by stalls. It is then connected by a circular flue 10' diam. to a brick dust chamber which in turn connects to a brick stack 100' from the ground, 10' diam. at top.

The power plant has 4 batteries of two 400-h. p. Babcock & Wilcox water-tube boilers each and one battery of two 600-h. p. Stirling water-tube boilers. Two batteries have Foster and 3 others have Babcock & Wilcox internal superheaters, and there is a separate Foster superheater for the steam supplied by the reverberatory waste heat boiler plant of ten 400-h. p. boilers. Steam is generated at 160-lbs. pressure and can be superheated 100° F. All boilers are fired by Green chain grate stokers, coal being fed from overhead bins by chutes direct to the stoker hoppers. Each double battery of boilers has a 9x40' steel stack with induced draught, furnished by 5 Sturtevant fans, each connected with a 30-h. p. Sturtevant slide-valve engine, running at 150 to 175 r. p. m.

Each battery of boilers is equipped with fuel economizers of about 3,360 sq. ft. heating surface, set between the boilers and the induced draught fans; they are damped so that they can be cut out for cleaning while the boilers are in service. A 3,000-gal. capacity Kennicott water purifier supplies make-up water for all boilers.

The engine-room, main floor, contains the generating engines, blowers 3 exciters and a switchboard, and the basement contains condensers, pumps and oil filters. The electrical equipment consists of two 1,100-h. p. 22x48x48" Allis-Chalmers Corliss cross-compound engines, with 800-k. w. Bullock a. c. generators mounted on the shafts; two 2,000-h. p. 31x66x48" Nordberg Corliss cross-compound engines with 1,500-k. w. Bullock a. c. generator mounted on the shafts, and one 2,500-k. w. steam-driven Westinghouse turbo generator. Current is generated at 600 volts and carried to a concrete transformer station, equipped with 7 200-k. w. Bullock water-cooled transformers, stepping the current up to 40,000 volts, for transmission to the mines; four 750-k. w. Westinghouse water-cooled transformers, and four 1,000-k. w. General Electric water-cooled transformers, stepping

to 13,200 volts for transmission to the mills; 13,000 and 40,000-coils and lightning arresters.

k. w. turbo-generator is being added to take care of increased sumption at the mill.

elter blast plant, in the engine house, includes a 350-h. p. 14x28 erg tandem-compound engine direct-connected to a No. 10 Conower with capacity of 300 cu. ft. of air per revolution, making

This is for the blast furnace. For the converters air is sup-lbs. gauge pressure by 1 Allis-Chalmers blowing engine, 16" and eam, 34" and 34" diam. air by 48" stroke of 6,000 cu. ft. capacity. 25" and 54" diam. steam, 52" and 52" diam. air by 48" stroke of . capacity, and 1 Nordberg 26" and 56" diam. steam, 54" and 54" . 48" stroke of 18,000 cu. ft. capacity. These are all of the cross steam, tandem, air and steam type.

) cu. ft. steam-driven turbo-blower was added in 1916 to supple-owing engine in supplying air for converters, etc.

law-Dunn-Gordon cross-compound air compressor with steam " and 21" diam. and air 21" and 12" diam. and 18" stroke of . displacement, compresses air to 100-lbs. gauge. This was or tamping converter linings but is now used for pneumatic ious kinds at the shops and the mill.

cu. ft. 2-stage, steam-driven compressor was added in 1916. ection with the works are a number of thoroughly appointed ding a boiler, machine and carpenter shop, foundry, warehouse use.

ptoe works were started in April and the finished copper shipped 3. Nearly 1,500 men are employed at the plant.

ion: was 33,283,348 lbs. fine copper in the fiscal year ending 09; 62,772,340 lbs. in the fiscal year 1910; 78,541,270 lbs. for the nding Dec. 31, 1911; 63,063,261 lbs. for the year ended Dec. 31, 329 lbs. in 1913.

Production:

Tons Treated	Cu. %	% Rec.	Ratio Conc.	% Cu. in Cncts.	Cost per Ton Mng.	Net Prod. Lbs. Cu.	Cost per Lb. Cts.	Sell. Price Cts.

on of gold and silver amounted to \$801,818 in 1916, compared 5 in 1915. Copper production for first six months in 1917 39,669,677 lbs.

perty has been splendidly developed and is being managed and success.

UNITED MINES CO.

NEVADA

441 Equitable Bldg., Denver, Colo.

W. J. Chamberlain, pres.; H. F. Crocker, v. p.; R. J. Pitkin, assler, treas., with H. B. Northrop, F. N. Bancroft, J. B. Grant arton, directors.

6, 1906, in Arizona. Cap., \$3,500,000; shares \$1 par; non-962,952 issued.

: 50 claims, 38 patented, about 600 acres, 18 miles from Ely. Co., Nev., said to show "chamber" deposits of lead ore in re contains lead, silver and iron.

ment: by tunnels totaling 2,400' to 350' depth. Mining is by

worked by Berger & Platt, of Denver, the present lessees. y, 1917, was 90 tons of ore daily.

NEW ELY CENTRAL COPPER CO.**NEVADA**

Main office: 907 Market St., Wilmington, Del. Business office: 16 State St., Boston, Mass.

Officers: John G. Gray, v. p.; Jonathan H. Brown, sec.; H. E. Lodge, treas., with J. Pearce Cann, directors.

Inc., Feb. 19, 1912, in Delaware. Cap., \$8,000,000; reduced to \$2,500,000; shares \$5 par; fully paid, non-assessable; issued, 500,000 shares. Bonds authorized \$500,000, 6%; \$175,000 issued. American Trust Co., registrar; Federal Trust Co., transfer agent. Annual meeting, second Monday in February.

This corporation was reorganized from the wreck of the Ely Central Copper Co., by about 1,600 of its stockholders. All the stock and bonds that have been issued are to the stockholders of the corporation which participated in the reorganization plan, except stock of the par value of \$5,550,000 which was issued in trust for treasury purposes.

At a special meeting of the stockholders held Dec. 20, 1913, it was voted to deed to the Consolidated Coppermines Co. the entire property of the New Ely Co., and in pursuance of this vote a deed was executed and delivered, the Cons. Coppermines Co. thereupon taking possession of all the property of the former company. The stock and bondholders deposited for exchange 475,464 shares of the 500,000 outstanding shares and \$167,550 of the \$175,000 outstanding bonds up to Dec. 31, 1915. The New Ely Central Copper Co. will be dissolved when all stock and bonds have been exchanged.

NORTH MOUNTAIN MINING CO.**NEVADA**

Controlled by John Dern, Box 1,418, Salt Lake City, Utah.

Property: 11 patented claims in Gold Canyon district, near Cherry Creek, White Pine Co., Nev. Idle many years.

OLD IMPERIAL MINING & MILLING CO.**NEVADA**

Cherry Creek, White Pine Co., Nev. Advertised sold for \$125 delinquent tax, Jan., 1916.

PILOT KNOB GROUP**NEVADA**

Property: 5 claims in Snake Creek range, 2½ miles S. of Osceola, White Pine Co., Nev., developed by 400' tunnel and 200' shaft.

Ore: tungsten, occurs in quartz veins in limestone formation. Equipment includes a 20-stamp mill.

Reported, June, 1916, that Uvada Tungsten Co. was to be organized by A. V. Taylor, L. Jeffs and C. H. Thompson, of Salt Lake City, to take over the property.

PITTSBURGH-ELY COPPER CO.**NEVADA**

Idle. Ely, White Pine Co., Nev.

Officers: H. P. Harder, pres.; Louis H. Bock, v. p.; J. A. Varney, sec.; Frank Straub, treas., trustee and gen. mgr.

Inc. Dec., 1916, in Arizona. Cap., \$5,000,000; shares \$5 par; non-assessable; 695,285 shares outstanding at last reports.

Property: 11 claims, unpatented, 220 acres, including the Keyboard group of 6 claims, 120 acres, near the Keystone mine of the Nevada Consolidated, and a small group near the Cumberland-Ely mine of the same company. Lands show porphyry and limestone, and company reports having copper oxides and sulphides, assaying 3 to 12% copper.

Development: by 2 shallow shafts and tunnels of 160' and 40'

Equipment: includes a 40-h. p. steam hoist. Inactive, except for annual assessment work, since 1907.

PRINCESS COPPER CO.**NEVADA**

Address: C. W. Freed, pres., 1007 First Ave., Salt Lake City, Utah

: Ely, White Pine Co., Nev. F. J. Austin, sec.; H. P. Clark,

11. **Cap., \$1,000,000; shares \$1 par.**

Property: 30 claims, about 550 acres, acquired of the Ely Resurrection in the Robinson district, lying a little north and east of Ely. Has 2 short tunnels and a 140' shaft, said to show 18' of ore assayable in copper, with gold and silver values, and some high-grade ore containing 46% lead and 110 oz. silver per ton, with gold values. Means resumption of development work.

THE TUNGSTONIA MINES CO.

NEVADA

212 Kearns Bldg., Salt Lake City, Utah. **Mine office:** Tungstonia Pine Co., Nev.

Officers: L. W. Robbins, pres. and gen. mgr.; Gustav Wissler, v. p., sec.; with G. H. Blood, S. T. Merrill and J. A. Rasmussen,

Property: 15 claims adjoining the Shepherd mine, in north end of Snake River, a number of veins 1"-48" wide, carrying hubnerite ores said to contain tungstic acid. The veins occur in granite, near a limestone

mill has been erected a 25-ton mill, using Marcy ball mill and Wilfley concentrator is said to contain 71% tungstic oxide.

A tunnel was 190' long in Sept., 1917, and had cut 3 shoots of ore within a total of 500' nine are expected to be cut.

TUNGSTEN MINING CO.

NEVADA

222 Judge Bldg., Salt Lake City. Raymond Ray, pres.; Ernest ...-treas.

Property: 6, in Utah. **Cap., \$50,000; shares 10c. par; assessable; outstanding shares.** Listed in Salt Lake City. Cash on hand, April, 1916, \$1,750 except a bond of \$1,750 due May, 1917.

Property: 3 claims, unpatented, in the Cherry Creek mining district, 8 miles from a railroad, said to show an 8' vein, containing tungsten ore. Work to May, 1916, consisted only of 24' of trenching and 20' of shaft. Evidently one of the mushroom tungsten companies brought into being. Tungsten was selling high.

DEVELOPMENT CO.

NEVADA

Property: near Ely, Nev., sold at delinquent tax sale, February, 1915. See Vol. XI, Copper Handbook.

VALLEY SMELTING & MINING CO.

NEVADA

Company dissolved 1914. Property owned and operated by Nevada ... Co., which see.

TUNGSTEN CORPORATION

NEVADA

Property: a mill for concentration of tungsten ore at Tungsten, S. of Ely, White Pine Co., Nev. The statement that this company is a subsidiary of the Tonopah Mining Co., or has any connection with it, is denied. The plant was advertised for sale, October, 1917. Fully paid. See Vol. XII.

TUNGSTEN CO.

NEVADA

Property: V. Taylor, Dooly Block, Salt Lake City, Utah. Is reported to have owned the Pilot Knob group near Osceola, Nevada. (See Pilot Knob group.)

Property: 5 claims, Pilot Knob group, 2½ miles south of Osceola, Nevada. Carries quartz veins in limestone, overlying quartzite. Underlain by ... carries tungsten.

Property: In June, 1917, that owing to low price of tungsten the property was allowed to revert to original owners.

ORFORD NICKEL-COPPER REFINERY **NEW JERSEY**
 Property of International Nickel Co., 43 Exchange Place, New York.
 Plant at Bayonne, N. J., treats nickel-copper matte from Sudbury smelter
 Robt. C. Stanley, supt. of plant; A. J. Wadham, asst. supt.

PERTH AMBOY SMELTER. **NEW JERSEY**
 Owned by American Smelting & Refining Co., at Perth Amboy, which
 see. Has 600-ton copper-lead smelter, 200-ton lead refinery and a 300-ton
 electrolytic copper refinery, employing about 2,000 men.

RARITAN COPPER WORKS. **NEW JERSEY**
 Owned by International Smelting & Refining Co., at Perth Amboy,
 N. J. A. C. Clark, supt.

UNITED STATES METALS REFINING CO. **NEW JERSEY**
 Office: 120 Broadway, New York. Works office: Chrome, Middlesex
 Co., N. J., and East Chicago, Ind.

Officers: F. Y. Robertson, v. p. and gen. mgr.; R. W. Deacon, supt.
 copper smelter and refinery, Chrome, N. J. Wm. Thum, supt. lead re-
 finery, East Chicago, Ind.

Inc. Nov., 1903, in New Jersey. Reorganized Oct. 15, 1906. Cap.
 \$4,000,000, shares \$100 par, half in 7% cumulative preferred and half in com-
 mon shares; issued \$3,100,000, half preferred and half common stock. Is
 controlled through stock ownership by the United States Smelting, Re-
 fining & Mining Co. Annual meeting, second Tuesday in May.

The Chrome works, which have had to be enlarged nearly every year
 since they were first built, include a complete smelting and converting plant
 for the treatment of ores, concentrates and mattes, with smelting capacity of
 15,000 to 18,000 tons a month, converting capacity of 3,500,000 to 4,000,000
 lbs. of blister a month, and an electrolytic refinery with a capacity of 250-
 000,000 lbs. annually.

The smelter has two 42x186" blast furnaces, two converter stand using
 84x120" basic-lined converters, one 60x6' rotary kiln for sintering fine mater-
 ial, and one Dwight-Lloyd sintering machine. The smelter is further
 equipped with a 500' steamship dock, with berth for 2 steamers, the most
 modern type of Fairbanks scales, having a sensitiveness of 10 lbs. on a load
 of 200,000 lbs., and a very complete automatic sampling mill equipped with
 Brunton samplers.

The refinery has two 225-ton and two 175-ton anode furnaces and three
 225-ton wire-bar furnaces, equipped with charging cranes, casting wheels,
 waste heat boilers and the most modern devices for mechanical handling.
 The tank house has 1,228 tanks arranged on the Walker system. The
 weighing is done on tandem Fairbanks scales, sensitive to 1 lb. in 15,000 lbs.

The power house is steam-driven and arranged for highest economy
 with economizer and superheater equipment, 3 compound condensing units
 and 2 triple expansion units, using exhaust steam turbines for the third
 expansion. Current is generated at the rate of 11,000 amperes. Three cir-
 cuits are carried in the tank house with a voltage of 115 volts each, 1 power
 unit being carried in reserve.

A new laboratory with the most modern equipment was completed in
 1917.

The anode slimes are refined by the usual processes, the doré bullion
 produced being parted electrolytically. Some of the rarer elements are
 recovered as by-products.

The Grasselli plant, consisting of a 100-ton electrolytic lead refinery,
 was the first electrolytic lead refinery in the United States. Has annual
 capacity of 72,000,000 lbs. lead.

The plants of the United States Metals Refining Co. are strictly modern

and equipment and are noted for the technical excellence of their and the purity of their commercial products. The Betts process is 1 permits the recovery of bismuth and other by-products.

NEW MEXICO

Active mining companies of this state are grouped by counties, as the Silver City, Santa Rita, Burro Mountain and Lordsburg all under Grant County, and the Kelly, Cooney or Mogollon and as districts under Socorro County.

COLFAX COUNTY

COPPER CO. NEW MEXICO
 Office: Elizabethtown, Colfax Co., N. M. Work resumed on this day, 1914. Developed by shafts and credited with past gold production \$200,000.

COPPER DEEP TUNNEL M. & M. CO. NEW MEXICO
 Beaver Falls, Beaver Co., Pa. Mine office: Elizabethtown, Col. M.

President: A. T. McIntyre, pres.: Jas. E. Glasson, v. p.; W. H. Martin, W. P. McIntyre, gen. mgr. and supt.; preceding officers and directors, directors.

Started 10, 1900, in New Mexico. Cap., \$200,000; increased 1912 to shares \$1 par, nonassessable; issued, \$250,000. Annual meeting held in July.

Location: in the heart of Cimarron range, on the west slope of Baldy 2,500' high, comprises 12 claims, 260 acres, in the Moreno district from the St. L. R. M. & P. R. R. at Ute Park. Orebody, a vein slate and monzonite, is developed by 2 shallow shafts and a drift tunnel, planned to penetrate the mountain with a final shaft 500', cutting 2 bodies of low-grade copper ore. Also said to contain molybdenite. Property operated part of 1916. Total work, 4,400'. Proposed to let contract for 300' tunnel.

Equipment: includes a 12-h. p. gasoline air compressor and 10 buildings; a mill. See U. S. Geol. Survey Prof. Paper, 68, p. 95, for geology district.

DONA ANA COUNTY

Locations: Black Mountain or Kent, Modoc, Organ and Texas creek

COPPER CO. NEW MEXICO
 707 Colorado Bldg., Washington, D. C. Mine office: Organ, Co. N. M.

President: Gen. H. H. C. Dunwoody, pres. and mgr.; C. C. Clements, J. K. Roberts, sec.-treas.; preceding officers, Col. M. C. Wyeth, J. H. Grey and Admiral C. H. Davis, directors.

Location: Arizona. Cap., \$1,000,000; shares \$1 par; nonassessable; 600,000 shares.

Location: 12 claims, 6 acres, in the Organ Mountain mining district, about a good road southeast from Las Cruces. Claims cover the limestone porphyry contact worked by the Modoc mine. De-are on the Orejon claim opened by a 140' 45° inclined shaft, 2 to 18" vein, reported to carry copper, silver, lead and zinc at \$40 per ton.

BENNETT-STEPHENSON M. & M. CO.**NEW MEXICO**

Officers: O. Jolliffe, pres.; Jas. C. White, v. p.; C. B. Gill, treas.; J. L. McCullough, sec. Annual meeting April 7th at Las Cruces. Controls through stock ownership the Organ Mountain Mining Co., which see. Fully described Vol. X.

Mines under 10-year lease to the American S. & R. Co.

BIG THREE MINES.**NEW MEXICO**

Situated 3 miles north of Organ, Dona Ana Co., N. M. Owned and operated by Capt. C. B. Gill, Geo. Luchen and Dr. J. H. Johnson.

Property: 7 claims shows copper, silver and lead deposits. Workings 116' deep, and equipped with 14-h. p. gasoline hoist. Plan sinking shaft on Rubyin mine to 200' depth and drifting. No recent information.

DONNA DORA MINING CO.**NEW MEXICO**

Organ, Dona Ana Co., N. Mex. Reorganized as Mineral Hill Mining Co., which see.

MEMPHIS MINING CO.**NEW MEXICO**

Office: 204 Mills Bldg., El Paso, Texas. **Mine office:** Organ, Dona Ana Co., N. M.

Officers: J. I. McCullough, pres.; W. N. Small, v. p.; Jas. C. White, sec.-treas., with T. S. Semple and Chas. E. Head, directors.

Inc. 1911, in Arizona. **Cap.,** \$1,000,000; shares \$1 par; 650,000 shares outstanding. Gross earnings in 1917 amounted to about \$7,500, all from ore sales.

Property: 5' claims, 100 acres, consisting of the Old Memphis mine, Contention and Copper Bow group.

Development: by 4 shafts with 2,000' of workings. Two years shipments said to have averaged 10% copper, 6 oz. silver, and \$3 gold per ton.

Property under lease to Phelps, Dodge & Co. for 5 years, from April 1, 1916. The Copper Bow shaft has been sunk to 300' and exploration work is underway.

MINERAL HILL MINING CO.**NEW MEXICO**

Office: 13 Arch St., Philadelphia, Pa. Samuel P. Hanson, pres. Is the successor of the Donna Dora Mining Co.

Property: on the eastern slope of the Organ Mts., near Organ, Dona Ana Co., N. M., is developed by 400' tunnel and shallow shaft sunk on a 5' vein containing copper, lead, silver and gold values. No recent returns received.

ORGAN MOUNTAIN MINING CO.**NEW MEXICO**

Office: 204 Mills Bldg., El Paso, Tex. **Mine Office:** Organ, N. M.

Officers: J. I. McCullough, pres.; J. H. May, v. p.; F. W. Campbell, sec. treas.; with J. C. White and T. S. Semple, directors.

Inc. 1913, in New Mexico. **Cap.,** \$2,000,000; shares \$1 par; fully paid and nonassessable; issued, about 1,225,000.

Property: 17 claims, 2 patented, 340 acres, 12 miles N. E. of Las Cruces and the A. T. & S. F. R. R. was formerly owned by the Bennett-Stephenson M. & M. Co. It includes the Stephenson, Henderson, Page and Bennett mines, showing 6 veins in carboniferous limestone, lying near or in contact with porphyry dikes. Veins are said to be from 5'-30' wide with ore-shoots opened up from 50'-600' in length. Ores are mainly lead, silver, copper, wulfenite, and zinc.

Development: consists of a 3-compartment shaft, 400' deep, 2,000' drainage tunnel and several thousand feet of drifting. Mine was discovered 1849, and closed 1911; is credited with a production to 1915 of about \$1,000,000.

Equipment: includes 200-h. p. plant at mine and 250-h. p. plant at —

with 3 hoists, pumps and 2 air compressors of 9-drill capacity complete includes 2 Joplin jigs, 3 Wilfley tables, 1 vanner and 2 slimers.

Dodge & Co. have a 5 years' lease on these properties, from 16, and have spent \$100,000 in preliminary prospecting. They are sinking shafts at the Stephenson and Bennett mines. Main descent is from 3-compartment shaft 550' deep. At 500', a crosscut was dug through the Bennett vein, which carried 15' of high-grade lead.

ANYON MINING & MILLING CO. NEW MEXICO

C. S. Cleaver, 5427 University Ave., Chicago, Ill. Mine Office: Supt., Organ, N. M.

: E. H. Bickford, pres.; C. S. Cleaver, sec.; H. R. Gottman, directors.

Incorporated Jan. 19, 1917, in New Mexico. Cap., \$100,000; shares \$100 par; 1,000 shares.

Property: 8 claims in Texas canyon, Organ mountains, 7 miles E. of Lordsburg, Ana Co., N. M. Examined by C. M. Becker.

Development: by short tunnels. Ore averages 0.43 oz. gold, 14.05 oz. silver, 2.3% copper. Faulting is evident through the property. Not yet worked. No work done to place any value on mine.

MINE

NEW MEXICO

: N. C. Foster and E. J. Foster, Fairchild, Wis., owners.

Location: in Organ Mountain district, N. M. Under lease to Phelps, Dodge, as are the Memphis and Organ properties, which see.

Development: several thousand feet to depth of 400' in search of lead.

MINING AND SMELTING CO.

NEW MEXICO

Property: Holdings bought by C. J. Boyd of Los Angeles at sheriff's sale, 1915.

Location: 2 groups, 1,000 acres, 20 miles apart, the Southern group in the Organ and San Andres Mts.; the other in Plomo district, San Juan Co., 35 miles N. E. of Las Cruces. Claims which show large silver-lead ores of milling grade were to be opened and developed.

GRANT COUNTY

Apache, Black Hawk, Burro Mountain, Central, Duncan, Little Gap, Georgetown, Hachita, Lordsburg (Pyramid), Pinos Altos, Rita, San Simon, Steins Pass, Steeple Rock and Virginia districts.

Mining Companies around Tyrone

The general area in the Burro Mountain mining district is being worked by numerous other strong mining companies. Some of these, the Austin-Amazon and the Giant Copper companies, are operating on a large scale and are steady shippers of copper ore.

Other companies besides the Burro Mountain Copper Company operating or planning to operate may be mentioned the Copper Co., Mangus Development Co., Burros Development Copper Co., Burro Grande Copper Co., Ocala Copper Co., Tyrone Copper Co., Tyrone-El Paso Copper Co., the Tyrone-New Mexico Copper Co., and the Tyrone-Copperfields.

EXPLORATION & MG. CO. MEXICO & NEW MEXICO

Property: all idle. Letters remain unanswered.

Office: 25 State St., Boston, Mass. Mine offices: Steeple Rock, Grant

SON-APACHE COPPER CO.**NEW MEXICO**

Anderson, El Paso, Tex., chief owner. Mine address: Hachita, N. M.

s: Hon. Geo. H. Neale, pres.; Harry Duey, v. p.; Chas. H. Howe, Arthur Houle, cons. engr.

me 1, 1907, in Arizona. Cap., \$500,000; shares \$5 par. Held a \$100,000 bond and lease, with \$20,000 paid.

ty: the Apache mine, 5 claims, 100 acres, 5 miles southeast of fine, opened 1883, was worked continuously until 1907, by leasers, approximately \$200,000. Property shows contact deposit 50'-150' en quartz-feldspar-hornblende-porphiry and carboniferous lime-ore, oxidized to present depth, and running 4 to 30% copper ounce silver to each unit of copper. Bornite ore occurs at the he shaft.

oment: by a 360' shaft, for a length of 400' and along the sur-, said to show 200,000 tons of ore, with about 40,000 tons blocked ing.

ent: includes a 25-h. p. Fairbanks & Morse gasoline hoist. Ship-v grade copper and silver ore with lime gangue are made inter-the El Paso smelter.

COPPER CO.**NEW MEXICO**

star & Augustine, owners, Lordsburg, N. M.

r: the Atwood mine, near Lordsburg, Grant Co., N. M., was to 85 Extension Copper Co., which defaulted in payment.

d by leasers, 1917, who paid 10% royalty, amounting to \$2,600.

MAZON COPPER CO.**NEW MEXICO**

116 Texas Bldg., El Paso, Texas; Room 4, Porterfield Bldg., N. Mex. Mine address: Tyrone, N. Mex.

Chas. E. Davis, Mayor of El Paso, pres.; M. W. Porterfield, Leavell, sec.-treas., with John M. Wiley and D. M. Jackson H. Shockley, mgr.

. 1, 1916, in New Mexico. Cap., \$1,500,000; shares \$1 par; standing. El Paso Bank & Trust Co., registrar and transfer ual meeting 2nd Tuesday in March.

: 15 claims, 500 acres, in Burro Mtns., Grant Co., N. M., 6 Tyrone.

lcopyrite occurs in contact and quartz veins, running N.E.-monzonite (quartz-diorite), and said to average 6% copper. eralized shear zone, in places 150' wide, is said to traverse s.

ent: 3,000' of shafts, drifting, etc. Over 30 shallow openings

it: includes 18-h. p. gasoline hoist and compressor. Ship-. 1st, 1917, 137 cars of 6.26% copper ore. Management plans 30' level in 1917-18, opening levels every 100', and doing work on the 83' level. J. H. Shockley reports that property one of the important copper mines of the West.

ING CO.**NEW MEXICO**

e: Tyrone, Grant Co., N. M. Employs 30 men, when in full ouis Kahn, pres.; M. D. Rothschild, sec.-treas., 14 Church St., Vm. Rogers Wade, supt.

in New York. Is operated as a close corporation.

0 claims, 1,800 acres, near the Burro Chief group of the per Co. Company sold 73½ acres, 1909, to Mangas Devel-

opment Co. Claims under option to Phelps, Dodge Corp'n, 1917. Company owns zinc-lead claims at Tres Hermanos, N. M.

Geology: the Burro Mountain property shows monzonite, quartz-porphry and granite, with fissure veins in granite and disseminated ore in porphyry, there being 7 orebodies with 2 under development. The Santa Fé vein is from 15 to 75' wide, averaging 40' and is traceable for 6,000'. This vein is developed by a 417' shaft, having 5 levels with 15,500' of workings showing gem turquoise as well as copper ore. The old turquoise mine has 2 tunnels and large open-cast workings.

Besides the Santa Fé vein, the property has disseminated ores, one orebody on the contact between granite-porphry and monzonite-porphry being 152' thick, developed for 500' in length and carrying 2½% copper present as disseminated particles of chalcocite. Property has been explored by churn drills and diamond drilling.

The mine was at one time the largest turquoise property in the world, systematic mining having begun in 1891. Gem production has practically ceased and the property is considered valuable for its copper ore alone.

Company is also developing the Tres Hermanos zinc mine in the Tres Hermanos district, 23 miles S. of Deming, Luna Co., N. Mex., said to show oxidized ores carrying zinc-lead-silver values.

Ore: occurs as blanket and chamber deposits in limestone, 2-5' wide, reported to assay from 30-35% zinc, 30-40% lead, and 6-8 oz. silver. Developed by several vertical shafts, from 30-100' deep.

Equipment: includes compressor and 20-h. p. gasoline hoist.

Production: in 1915, mainly from development work, was 720,000 lbs. zinc, 300,000 lbs. lead and 2,000 oz. silver. Further development planned.

Mine at Steeplerock, N. M.

Officers: August Heckscher, of New Jersey Zinc Co.; G. M. Heckscher, Sumner Girard, H. K. Welch and S. Makeever, directors. M. K. Welch, mgr.

Company has applied for articles of incorporation.

Property: formerly owned by Marshall Field, L. Z. Leiter and N. K. Fairbanks. Has produced \$6,000,000 in gold ores. Ores with depth turned into complex sulphides which were not amenable to metallurgical processes of the early '80s. Property has been idle for nearly 39 years.

Development: mine has been completely unwatered to 627' in shaft. On 500' level development work is progressing and it is reported that ore has been cut for 40' and no indication of walls in sight. Reported to be 500,000 tons of ore blocked out.

Equipment: a 125-ton unit of a 500-ton mill, being built by Messrs. David Cole and Hardinge, using oil flotation, electrostatic and wet concentration. The mill feed from development work has averaged \$12 gold, 3 oz. silver, 4% lead, 8% zinc, 1% copper. A 35-ton car of lead silver-gold concentrates and a 50-ton car of zinc-copper have been shipped to the smelters. Other equipment includes electric generators, motor pumps, air compressors, etc.

An assessment of \$100,000 called Oct., 1917, to provide for further development.

claims, attempting to perfect the title by obtaining U. S. patents, although patents had been refused by the Commissioner of the Land Office in 1870. Hayes' application was turned down in April, 1873. Between that date and the final decision of the Secretary of the Interior in November, 1873, title was obtained by Hayes from the surviving heirs of the original Spanish estate and final U. S. patent was obtained to the claims covering the Santa Rita del Cobre Grant. Title was acquired by the Chino Copper Co. from the Santa Rita Mining Co., since dissolved.

Geology: Santa Rita is situated in the Central mining district, Grant Co., New Mexico, on a branch of the Santa Fe system which connects at Whitewater with the Deming-Rincon division of the same railroad. The orebody and town of Santa Rita are located in a distinct basin and the rocks exposed in the district may be roughly divided as follows: 1, sedimentary; 2, intrusive; 3, extrusive. The sedimentary formation, of which there is a large area in comparison with the intrusive exposures, consists of limestones of more or less purity, and belonging to the sub-carboniferous and carboniferous series, there also being some isolated exposures of Devonian rocks. These beds vary from nearly pure limestones, through cherty limes and shaly limes, to shales. Through faulting there is also exposed a considerable area of Cretaceous sandstones and shales, the former in the immediate neighborhood of the intrusives appearing as quartzites. The principal intrusive rocks in the Santa Rita basin are granodiorite, a quartz-monzonite porphyry, and another of distinct porphyritic texture which may be classed as andesite. This latter rock intrudes the two general types as also the sedimentaries, in sills, lacoliths and dikes. The boundary forming the S. E. side of the Santa Rita basin is composed of two flows, the principal one being rhyolite and rhyolite tufa overlaying an older flow which is of an andesite nature.

The granodiorite is intrusive into and across the edges of the sedimentary series, which form a syncline dipping to the south from the northerly bordering ridges toward the lowest point of the basin. The area within the basin has been strongly faulted in wide zones and in two general directions. The intersections of the numerous faults have resulted in a roughly circular shear zone that has a diameter of $\frac{3}{4}$ of a mile. The shear zone on the southeastern side of the property has a width of some $\frac{3}{4}$ of a mile. The narrowest part is in the N. W. portion where it is some 400' wide. Generally speaking, the center, or core, is of granodiorite. As a result of the conditions mentioned, there is the center of the basin of granodiorite, surrounded by shear zones which affect it at times as well as the surrounding sedimentaries, the rhyolite tufa and quartz monzonite porphyry, the two latter rocks being on the S. E., E. and S. W. This shear zone has been the depository of the valuable copper minerals, chalcocite, cuprite and native copper. Bornite, chalcopyrite and cupriferous pyrite are also found, but to a much lesser extent than the previously named. There also occurs in small restricted areas, malachite and azurite with a very limited amount of chrysocolla.

The old workings, which are very extensive, have been practically eliminated by the steam shovel operations. During the year drills were moved from Northwest orebody to Sierra section in order to secure definition of that area. Churn drilling amounted to 13,161' for the year, making a total of 227,303' drilled to January, 1917, and mine was estimated to have 95,555,843 tons of ore developed, averaging 1.65% copper. Of the footage, some is from scout holes which indicate a considerable amount of the orebodies as now outlined.

Equipment: consists of 10 steam shovels, 21 locomotives, 10

10 cu. yd. capacity. Company operates about 24 miles of track, ss to the pits. There is also a primary crushing plant, equipped "jay crusher, together with bins for handling and breaking up erial loaded by shovels.

Concentration Plant—The concentrating mill at Hurley, 9 miles from n the Santa Rita branch of the Santa Fe railway, with original 5,000 tons per day, treated on an average of 8,455 tons per day d 9,461 tons daily for 1st quarter, 1917, due to the improved d methods. Two new sections are being added and will be by the end of 1917. Mill will then have a capacity of 12,500 000-ton tailings retreatment plant, later to be increased to 5,000 egin operations when the new turbo-generator is completely he first unit went into operation in Oct., 1911, and ore was run- the 5th and last section on Nov. 28, 1912.

delivered to bin of 18,000 tons capacity. In conjunction with ore bin is a coarse crushing plant, consisting of 2 sets gyratory sets 72"x20" Garfield rolls, and to which a second unit is l. From here material is delivered into the fine ore bins at ze of 3/4". Mill is equipped with 6 sets 16"x42" rolls for pre- nding, 9 Garfield Chilean mills for final grinding. Roughing nsists of Garfield tables, followed by Wilfleys and full equip- hards-Janney classifiers and Isbell vanners. Concentration is recovery of 66.6%, or 28.697 lbs. copper per ton of ore.

lant includes twelve 445 h. p. Heine boilers, three 1,250 k. w. irect-driven by Nordberg Corliss engines, and one 2,000 k. w. rs turbo-generator set. Primary water is secured from the

Spring, 3 1/2 miles south of Hurley, from underflow of White- Cameron Creek draw and Whiskey Creek draw. There is also age reservoir below the mill, the dam forming this reservoir built out of mill tailings and having storage area of nearly et.

it at Hurley includes in addition to mill and accessory build- ilding, store, school, shops and dwellings, town having popu- ut 3,500 people. Town of Santa Rita, on company ground, n of over 4,000.

Has taken an option on 29 claims near Hanover. Is operating company for Chino del Norte Copper Co., which see.

EL PASO MINING & MILLING CO. NEW MEXICO

Dr. J. E. Spencer, mgr.; J. W. Crowdus, cons. engr. and sec.; A. F. Kerr, pres., El Paso, Tex.; Louis Addoo and Mrs. J. W. Crowdus, directors.

Operating the Savannah Copper Co. group of 19 claims, including Pacific No. 2, at Pinos Altos, N. M., under lease. Shows gold bearing quartz in Skilacorn vein.

Has 75-ton concentration mill and flotation process, idle in summer, but operated, Sept., 1917.

EMMA MINE NEW MEXICO

S. L. Landon, supt. Mine at Fierro, Grant Co., N. M., is owned by the Copper Queen Consolidated Mining Co. and is being operated on a small scale by lessees, 1916.

ERNESTINE MINING CO. NEW MEXICO

Absorbed, June, 1915, by Mogollon Mines Co. Latter company wound up and holdings bought by Socorro Mining & Milling Co., which see.

GIANT COPPER CO. NEW MEXICO

Address: J. L. Burnside, Silver City, N. M.

Officers: F. R. Jones, pres., El Paso; J. L. Burnside, v. p.; D. C. Crowell, sec.-treas.; F. P. Jones, T. L. Lowe, J. Agee, T. W. Carter, D. C. Crowell and D. T. White, directors.

Inc. 1917, in N. M. Cap., \$3,500,000; shares \$1 par; 620,000 issued.

Property: 61 claims in the Burro Mountain district, N. M., including those of National Copper Co. Considerable development done to date.

GOLDEN LINK CO. NEW MEXICO

Probably dead. See Vol. XII.

Jackson, Grant Co., N. M.

Property: 8 claims, along the Big Dry canyon, 6 miles from Jackson in the Cooney, or Mogollon district, Socorro Co., N. M. J. G. Barnesdale, treas., Superior, Wis.

Development: by 3 tunnels, lowest 120' long, and a vertical shaft, all in ore, vein said to be 8' wide. Equipped with 100 h. p. water-power plant, 3-stamp mill and 500' tram. No returns secured. Probably idle.

EASTERN GROUP**NEW MEXICO**

Rita, Grant Co., N. M. Al. Owen, owner.
 Property: 8 claims, 160 acres, adjoining Chino Copper Co.'s lands on
 side of the Santa Rita basin. The S. W. side of the group shows
 capping and iron gossan, with limestone covering porphyry
 parts of the claim. Veins with a N. E. course outcrop and
 percentages of copper. Developed by shallow shafts. Owner
 ring to drill property in 200' blocks, at last accounts.

IR BESSEMER COPPER & IRON CO.**NEW MEXICO**

Is: Hanover, Grant Co., N. Mex. Is a close corporation owned
 by Penrose and associates of Philadelphia, Pa.

IR COPPER CO.**NEW MEXICO**

er, Grant Co., N. M. Geo. A. St. Clair, pres., Duluth, Minn.;
 cer, mgr.

19. **Cap.**, \$50,000; shares \$10. par.

Property: 18 claims, north of the Chino Copper property and near
 parts of the Philadelphia Copper Co. Mine has shafts of 70', 100'
 and tunnels of 40' and 60', showing copper and zinc ores. Equipped
 and compressor.

g 20-30% zinc carbonate and sulphide ore, 1917.

HARDSCRABBLE MINING CO.**NEW MEXICO**

accounts officers were: J. E. Lundstrom, pres.; E. S. Bruning;
 with S. H. Beach and J. T. Janes, directors; J. T. Janes, supt.
 1, in Colo. **Cap.**, \$150,000; outstanding, \$75,000; shares \$1 par.
 Property lease, dating from 1913, on the Hardscrabble mine, 1½ miles
 from Pinos Altos.

Property lease on the Hardscrabble mine near Pinos Altos, Grant Co.,
 now being operated by the United States Copper Co., which

PHILADELPHIA MINING CO., THE**NEW MEXICO**

652 South Spring St., Los Angeles, Calif. **Mine address:**
 N. M.

Property: R. E. Vandruff, pres.; John W. Wilson, v. p.; W. G. Wilbern,
 D. H. Reinhold, cons. engr.; Franklin Smith, geologist; E. K.
 mgr.

Property: 17, 1916, in Nevada. **Cap.**, \$850,000; shares \$1 par; treasury
 \$1,000; balance partly used in completely paying for 9 claims
 equipment and partly offered for sale (150,000), proceeds to be
 used for development. No indebtedness.

Property: 9 claims fully paid for, and another, the Bonnie Jean, under
 about 140 acres lying between the 85 and the Octo mines, 3 miles
 from Lordsburg, in Grant Co., and 2 miles from the Southern Pacific

Property: similar to that of the 85 and Octo mines. Country rock is
 gneiss. General geology fully described by Lindgren in Prof.
 S. Geological Survey. Outcrops conspicuous and form land-
 as Lee's Peak 500' from the Hecla, frequently mentioned

Property: Gangue very silicious and ore is therefore in demand for
 basic ores from Bisbee. Sulphides found near the surface.
 Several varieties occur, but main values lie in copper, gold and silver
 estimated to average over \$30 a ton before the rise in metal prices.

Property: **Development:** includes two 300' and several shallow shafts. One of
 shafts will be enlarged, retimbered and deepened. The topog-
 raphy lend itself to successful tunnelling.

Property: **Plant:** includes 250 h. p. boiler plant, 40 h. p. hoist, 700 cu. ft. air
 pumps, etc. Has produced some ore, amount not stated.

being the more promising, showing iron stains, with some copper stains, and slip zones.

The Midway group of 15 claims, 10 fractional, 254 acres, carries the N. W. continuation of the ore zone of the Chemung Copper Co., and also lies near the Burro Mountain mine, with conditions markedly similar to those existing on these adjoining properties, on which large quantities of ore have been developed, and are being treated.

The orebodies are a combination of stockwerk and impregnation deposits, carrying values mainly along a series of small intersecting veinlets, with occasional masses of solid chalcopryrite up to several inches in size, but ore occurring mainly as minute particles of chalcocite, in veinlets, and as films on gangue rock. See Geology of the Burro Mts. Copper district by R. E. Somers, Bull. Am. Inst. Min. Eng., May, 1915, p. 957.

Nothing has been done since 1910, being short of money. The ground requires drilling.

MANHATTAN MINE

NEW MEXICO

Operated by R. J. Doyle and associates.

Property: 10 patented claims, 200 acres, near Pinos Altos, Grant Co. N. Mex.

Ore: containing gold, silver and copper, occurs in a fissure vein in diorite-porphry, 18" to 5' wide, strike N. 15° E.; dip almost vertical. Average assay said to be \$20 per ton.

Development: 900' tunnel and 300' shaft below tunnel level. Claims to have shipped 1,200 tons of \$20 ore in 1915 and to have received \$26,000 from ore sales.

Preliminary development was undertaken by churn drills, with holes put down at 200' intervals. Drilling was suspended, 1910, but in 1911 an exploratory shaft was started on the eastern side of the Tulloch group, in high-grade carbonate ore, and reached sulphides at comparatively shallow depth. The Midway group when taken over, had 2 shallow shafts and a few pits, showing a little carbonate and silicate ore on the dumps.

Insufficient funds limited company's development plans, but management is good and property has a fair chance of developing into a large mine.

Over 30 men employed, Aug., 1917, including lessees. Ore being shipped to Douglas, Ariz.

MONTE RICO MINING & MILLING CO.

NEW MEXICO

Office: 428 Washington Trust Bldg., Washington, Pa. **Mine office:** Lordsburg, Grant Co., N. M.

Officers: Lawrence R. Boyd, pres.; F. B. Theakson, v. p.; Jas. V. Boyd, sec.-treas.

Inc. in Arizona. Cap., \$500,000; shares \$1 par; non-assessable.

Lands: 9 claims, 120 acres, on Lee's peak, in the Pyramid mountains, Virginia district, 4 miles S. W. of Lordsburg.

Geology: property shows diorite cut by andesite, and there is said to be a dike 100 to 200' wide mineralized throughout and forming the center of a network of veins. Ores at and near surface carry azurite and malachite, succeeded at depth by chalcopryrite, and there are also silver, lead and copper ores with small gold values.

Development: mine is reported to have upwards of 2,000' of workings with ore in sight estimated by the company at 500,000 to 1,000,000 tons, which is probably as true as the statement that its ores can be mined and milled at an expense of \$1.50 to \$2 per ton. In 1916 a tunnel was being driven.

The prospectus of the company is replete with misinformation, and

er things states that "this formation, as well as the character is identical with that found in the great copper mines at Tobe, Jerome and Cananea," but as is well known, the orebodies localities differ greatly in occurrence. In view of the many statements made, and the unreasonably large profits promised, the company must be regarded with much suspicion.

AL COPPER CO.**NEW MEXICO**

Chas. P. Laughlin, sec., Tyrone, Grant Co., N. M.

Feb., 1902. **Cap.**, \$1,200,000; shares \$100 par.

Property: 22 claims, 10 patented, 4 miles from the Chemung Copper Pitwater Canyon, Burro Mountain district, has a fissure vein, in 60' estimated average width, carrying mainly chalcocite, opened by shaft and a 360' tunnel having a 214' blind shaft. The mine shows several bodies of copper ore, mainly in disseminated sulphides of 2 per cent tenor, with some ore carrying up to 15 and 20% copper. **Plant:** includes steam power and a Norwalk air compressor. See in Copper Handbook, Vol. XI.

L GOLD & SILVER MINING CO.**NEW MEXICO**

W. Sherman, pres.

Property: the Beck mine, near Steins, Grant Co., N. M., developed with workings with a 300' shaft, showing a 12-18" vein of gold. Has steam power and 5-drill compressor, hoist, and a 50-ton engine. Worked steadily in 1915, 1916 and 1917. Shipments made by a small smelter are intermittent.

MICO ZINC & COPPER CO.**NEW MEXICO**

J. L. Ferry, mgr., Hanover, N. M.

Judge W. H. Winter, pres.; H. O. Bursum, v. p.; J. A. [unclear], sec.-treas.

Property: the Mountain Home zinc mines, 11 patented claims, 211 claims in the Copper Flat group, 52 unpatented claims, covering the [unclear] the first named group. Holdings adjoin Phelps, Dodge, [unclear], and are near Hanover Bessemer C. & I., El Norte Copper [unclear] producers.

Geology: contact deposits, shear zones and fissure veins in contact with areas of altered limestone near monzonite dikes and granitic intrusions.

R MINING CO.**NEW MEXICO**

Winnon, mgr., Steins Pass, N. Mex.

Property: in New Mexico, to take over a group of claims, including Fair and Louise, at Granite Gap, 12 miles S. of Steins Pass. Contains silver-lead-copper-zinc ore in veins in a contact between limestone.

Development: by shafts, tunnels and diamond drilling.

Plant: includes compressor and tramway. Has been an inter-est for several years.

NG CO.**NEW MEXICO**

2 East State St., Redlands, Calif. Mine at Lordsburg, Grant

E. W. Smith, pres.; G. S. Turrill, v. p.; F. E. Sanford, sec.; [unclear] treas.; O. H. Reinholt, cons. engr., directors; E. K. Davis,

15, 1912, in Calif. **Cap.**, \$500,000; shares \$1 par; issued, 300,000. [unclear] ng, third Thursday in December. In treasury, Sept., 1917,

Property: 8 claims, 125 acres, 3½ miles S. W. of Lordsburg, N. M., and 2 miles from the S. P. Ry. Geology is similar to that of the Eighty-Five and Hecla mines adjoining and is fully described in U. S. Geol. Survey, Prof. Paper, p. 68.

Ore: contains copper, silver and lead values.

Development: by several old and a 145' 3-compartment shaft to be sunk to 600'.

Equipment: includes 40 h. p. hoist, 6-drill compressor, 200 h. p. boiler plant, etc.

Several carloads of surface ore shipped are reported to have netted \$28 per ton.

PINOS ALTOS M. & M. CO

NEW MEXICO

Dead. Company had a bond and lease on 14 claims belonging to the Savannah C. Co., in the Pinos Altos district, N. Mex.

Claims show fissure veins 2' wide in diorite, carrying complex sulphide ores said to carry .25 oz. gold, 8 oz. silver, 2.5% copper, 10% zinc and 2% lead.

Fully described in Vol. XII.

PROGRESS MNG. CO.

NEW MEXICO

Address: Chas. F. Hanson, mgr., or John Evans, supt., Steeple Rock via Duncan, N. Mex.

Property: 14 miles N. E. of Duncan, shows quartz monzonite with chalcopryrite stringers and veins.

Development: by shaft, 105' deep, Jan., 1917, being actively sunk.

Equipment: includes 45 h. p. Stover gas engine.

REPUBLIC MINING & MILLING CO.

NEW MEXICO

Office: Harrison Blk., Philadelphia, Pa.

Inc. 1916.

Property: the Welch mine, east of the Empire Zinc concentrator at Hanover, developed by 150' double-compartment shaft and carrying a complex low-grade zinc ore. A new mill is to be erected, 1917.

RIVAL MINING CO.

NEW MEXICO

Office: Bisbee, Ariz. **Mine office:** H. M. Ziesemer, supt., Duncan, Ariz.

Officers: J. M. Ross, pres.; Arthur Notman, v. p.; R. A. Ziesemer, sec-treas., with W. H. Brophy, L. R. Budrow, M. J. Cunningham and Robert Rae, directors.

Inc. March 13, 1917, in Arizona. **Cap.**, \$500,000; shares \$1 par; non-assessable; 275,000 issued. Annual meeting first Monday in March.

Property: 8 claims, 160 acres, in Steeple Rock district, Grant Co., N. M. Examined by F. W. Smith, Arthur Notman and T. B. Joraleman.

Geology: quartz vein in andesite, with 70° dip and N. W.-S. E. course. **Ore:** carries gold and silver.

Development: new shaft being sunk 300'; old shaft, 150' to be deepened to 500'. These shafts, 1,800' apart, are to be connected at 500'.

Equipment: 18 and 25 h. p. hoists, 520 cu. ft. compressor and 100 h. p. gas engine.

Production: former owners shipped \$14,000 of ore, averaging \$40 per ton.

ROBERT LEE MINE

NEW MEXICO

Address: Pyramid Camp, via Lordsburg, Grant Co., N. M. Owned by Dan. Breil and Harry Small, of Lordsburg, N. M. Mine was operated 1885 and was later purchased by Dr. Bartlett, inventor of the Bartlett concentrating table, who erected a mill and milled \$97,000 worth of ore.

a well-defined quartz-calcite vein running N. E.-S: W. and E., lying in a zone of altered and chloritized diorite porphyry. **Development:** includes the old shaft, 250' deep, which has been re-shown in the lower level a streak of ore 2' thick, carrying 30% 500 oz. silver.

COPPER CO.**NEW MEXICO**

: Henry Hovland, Lonsdale Bldg., Duluth, Minn. Mine near M. I. J. Stauber and I. L. Wright, lessees.

Oct. 16, 1908, in Arizona. **Cap.**, \$2,000,000; shares \$10 par, half and half in part paid stock, latter \$5 paid. The company was the Copper Gulf Mining Co. and Comanche Mining & Smelt- also absorbed the Casa Grande Development Co., owning in all property formerly owned by the Comanche Mining & Smelt- holding all but 320 shares, or 99.36% of the stock issue of the Mining Co. In Jan., 1913, the company had 133,116 shares of stock outstanding. Cash balance, Feb. 1, 1913, was \$12,628.

Copper Gulf Mining Co. owns its property in fee and owes the \$124,464 for money borrowed to develop its claims. The com- panies consisted of 199 claims, about 4,000 acres, all in Grant Co., but in 5 districts. The company has 28 claims, 16 patented, Altos district, 4 patented claims in the Anderson district, 17 claims in Chloride Flat district and 1 patented claim in the 1 district.

Claims in the Burro Mountain group sold, Jan., 1916, to Phelps, D., for \$700,000, constituted the principal and most valuable in the Comanche group comprised 43 claims. The Copper Gulf owned 1,440 acres. The Jennie group of 4 claims, patented on Gila river, 35 miles N. W. of Silver City, is not worked owing to insubstantiality, and development on the Chloride Flat property has been limited to assessment work.

COPPER CO.**NEW MEXICO**

Les., pres. and mgr., Box 393, El Paso, Tex.; W. P. Stiles, v. p.; J. B. Wilcox, treas.

: includes the old King mine, 7 miles N. W. of Hachita, developed by a 300' shaft with workings on a vein said to show gold-silver-lead. Is a prospect.

COPPER MINING CO.**NEW MEXICO**

C. J. Plankenhorn, sec., Williamsport, Pa. Company successor to American Copper Co., described in Copper Handbook, Vol. 1. A part of the property was worked by lessees. In 1916, B. W. Williams developed the Nellie Bly mine under lease and bond.

near Lordsburg, 9 claims, patented, in the Pyramid and Pyramid districts, including the Nellie Bly and Cobre Negra groups. The property is andesite, diorite and trachite, having 8 orebodies, reported to be lying parallel with porphyry dikes.

Development: the Nellie Bly mine, in the Pyramid district, 8 miles S. of Lordsburg, has shafts of 450', 125', 65', 33' and 40', with about 100' workings. The 400' level shows a vein of 12' estimated width, containing malachite, azurite and chalcocite ore, said to average 5.8% copper and 5.5 oz. sil-

ver. The Cobre Negra mine, in the Virginia district, 6 miles S. W. of Lordsburg, is reported to carry melanconite, malachite, azurite and chalcocite. It is developed by shafts of 332', 180', 60', 85' and 85'. Idle

Equipment: includes a 40 h. p. hoist, good for 600', at the Nellie Bly mine, and several mine buildings.

Production: 1916, about 6 cars a month, of ore averaging 4.5% copper, and 4 oz. silver per ton, with 50% to 60% silica, 5% to 6% iron, and 8% to 10% lime.

TULLOCH GOLD & COPPER CO.

NEW MEXICO

Idle. Silver City, Grant Co., N. M. D. H. Tulloch, president.

Inc. 1907.

Property: 50 claims, 1,200 acres, on Edith mountain in the White Signal district, said to show good ore near surface. Developed by 2 shafts, 1 of 200', on the Dagger Point claim, showing ore claimed to average 14% copper. A crosscut tunnel on the Wild Horse claim, run along a dike of iron gossan, showed ore averaging 3% copper. No recent reports received.

TYNDALE COPPER MINING CO.

NEW MEXICO

Address: Lordsburg, N. M.

Officers: W. T. McCaskey, pres.; T. A. Lister, v. p.; J. P. Porteus, sec.-treas. and mgr.; also directors.

Inc. June 21, 1917, in New Mexico. **Cap.**, \$250,000; shares \$10 par; non-assessable; 10,800 issued.

Property: 10 claims, 180 acres, in Virginia district, adjoining the Bonney mine of the Lawrence Mining Co. on the east. Claims are said to show a fissure vein in andesite.

Ore: is oxidized to 275' depth and contains 5.02% copper, 0.25 oz. gold, and 5.57 oz. silver per ton.

Development: by shafts, deepest 270'; sinking to 630' and 1,500' of drifting to be done.

Equipment: 20 h. p. gasoline hoist.

Production: 350 tons of ore in 1916.

TYRONE—EL PASO COPPER CO.

NEW MEXICO

Address: 1115 N. Kansas St., El Paso, Texas. **Mine office:** Tyrone, N. M.

Officers: R. M. Dudley, pres.; T. Lia, v. p.; N. F. Work, sec.-treas.; with J. F. Ross, J. H. Maxey, R. K. Bell, H. L. Watson, J. B. DuBase and P. J. Mortinez, directors.

Inc. Nov. 31, 1917, in New Mexico. **Cap.**, \$1,500,000; shares \$1 par; non-assessable. Operating expenses in 1916 were \$1,600.

Property: 23 claims, 400 acres, 2 miles S. of Tyrone, N. M., said to show disseminated copper-silver-sulphide ore in porphyry, assaying 3.4% copper and 2 to 6 oz. silver per ton.

Development: by 200' shaft being sunk during Sept., 1917.

UNITED STATES COPPER CO.

NEW MEXICO

Address: P. A. Newman & Co., 20 Broad St., New York. **Mine office:** Hanover, New Mexico. J. D. Kohlmann, mgr. of Hanover mines; J. T. Janes, mgr. of Pinos Altos mines.

Officers: C. B. Manville, pres. and gen. mgr.; W. F. Barnes, sec.; A. C. Hoyt, treas.; with W. H. Park, John Orlebeke, N. A. Karsten, Geo. W. Rodenberg and Paul A. Newman, directors.

Inc. May 1, 1911, in New Mexico, as reconstruction of the Philadelphia Copper Mines Co. **Cap.**, \$1,500,000; shares \$1 par; 500,000 shares issued. Registrar & Transfer Co., New York, registrar; Security Transfer & Registrar Co., New York, transfer agents.

Property: at Hanover, 9 claims, 2 patented, including the Philadelphia mine; at Pinos Altos, 11 claims, including the Hardscrabble mine, all in Grant Co., N. M.

ent: at Hanover by 60, 65, 180 and 300' shafts; also tunnels, workings. The mine is equipped with steam plant hoist of capacity, compressor, drill-sharpener, assay office, houses and

1: is 300 tons of ore monthly, varying from 6 to 22% copper, and silver per ton. Shipments total \$125,000.

ent: at Pinos Altos, by 29 shafts from 20 to 150' deep, mostly veins. Two vertical shafts are being sunk. At 140' in one low-grade copper ore, carrying chalcocite and high silver

t: includes steam plant, compressor, etc., and 8,000' daily mill.

1 is reported as \$71,000.

oyant prospectus it is stated that the Chino, Hanover-Besic M. & M., Colorado Fuel & Iron, New Jersey Zinc, Calumet, St. Louis Smelters, General Electric, Hanover Copper and other properties closely surround the company's Hanover group, and the value of the property is given. With copper at 20c per lb., and 6% ore, a yearly income of \$1,296,000 is calculated. Property was examined by J. T. Tolthoff, J. H. Stewart, J. C. McKee, G. E. Coxe, J. D. Kohlmann, whose reports seem favorable. Regarding the Hardscrabble mine, Kohlmann said: "I have proved to my entire satisfaction . . . that the diorite dike has more merit in some respects than the now reported deposits."

Newman, who has been distributing the stock of this deceiving company, has started suit in New York against Jas. W. McCarty, president of the company, for \$100,000 damages for failure to deliver 100 shares of company's stock, as agreed. It is alleged that McCarty was delivered for which Newman paid \$66,000. The suit by Newman is reported to have stated that the company has large quantities of high-grade 22½% copper ore," had a large amount of ore and was "about to become a big shipper and mine and ad nauseum.

D. H.

NEW MEXICO

Silver City, N. M.

the Carlisle, East Camp, Jim Crow, New Year, and Summit mines in Steeple Rock district, N. M., acquired from the Steeple Rock Mining Co.; also the Billali mine.

Billali is under bond to the Carlisle Mining Co. of 170 Broadway, and the Jim Crow to another Eastern concern.

Billali and Jim Crow are all patented, developed and show gold and silver, the latter showing sulphide ore.

MINING & DEVELOPMENT CO.

NEW MEXICO

Billali is under option on the Bonney mine, but sold rights to the Billali Mining Co. (which see), which in turn sold an interest to the Billali Mining Co., which see.

GUADALUPE COUNTY

CONSOLIDATED COPPER CO.

NEW MEXICO

Supt., Santa Rosa, Guadalupe Co., N. Mex.

Covers a 12' layer of copper-bearing sandstone, overlaid by sandstone in Pintado canyon. Carload lots shipped to El Paso and yielded 3% copper. The ore is quarried, and leached in a 100-ton tank, erected 1916.

LINCOLN COUNTY

CHICAGO COPPER MINING CO.

NEW MEXICO

Office and mine: Oscuro, Lincoln Co., N. M.

Officers: E. G. Rafferty, pres., treas. and gen. mgr.; H. H. Miller, v. p.; H. E. Riddle, sec.; preceding, with H. R. Rafferty and M. Loquis, directors.

Inc. Jan. 31, 1906, in New Mexico. Cap., \$1,000,000; shares \$100 par; non-assessable.

Property: 22 claims, unpatented, include Copper Boy and Copper Queen mines, 18 miles from a railway, in the Oscuro mountains, also real estate in Oscuro. Developed by a 60' shaft, and tunnels of 60', 120', 227' and 1,550', with about 3,000' of workings, from which former owners shipped several carloads of ore, said to have returned \$270 per ton. Has steam power and a 2-drill Sullivan air compressor. Reported shipping ore.

WHITE OAKS MINES CONSOLIDATED, INC. NEW MEXICO

Office: Room 45, 45 Broadway, and 500 Fifth Ave., New York. Mine office: White Oaks, N. Mex. Richard Wightman, pres.

Inc. in New York. Cap., \$200,000; shares \$5 par. Traded in on New York curb. U. S. Corporation Co., 36 Nassau St., New York, registrar and transfer agent.

Property: about 300 acres in the White Oaks district, Lincoln Co., including the Old Abe mine, the North and South Homestake and the Welles claims, worked in the past for gold; also coal lands. Company claims in its literature to have produced 10 tons tungsten ore and concentrates per month since July 1, 1915.

Equipment: includes electric hoists, 2 stamp mills, and concentrating plant equipped with 5 Joplin hand jigs and one Richards jig.

In May, 1916, the stock sold up to \$16 per share; in June, the price broke from \$11 to \$5. Reported, 1916, that "internal dissension arose in the White Oaks Co.'s management, and rather elaborate plans for reopening the mines have apparently been abandoned."

LUNA COUNTY

NEVADA HILLS MINING CO. (Tungsten)

NEW MEXICO

Address: Gage, Luna Co., N. M.

Property: 8 claims, purchased in 1916 for \$15,000, in Victoria mining district, near Gage, said to show a vein 20' wide of tungsten ore in limestone formation with quartz gangue, opened on the 40' level. Developed by shafts, 130' and 90' deep. The property was formerly worked for silver values. Developing in 1916, and milling plant to be built.

MORA COUNTY

AZURE MINING CO.

NEW MEXICO

See under Grant Co., N. Mex.

CUCHILLA COMPANY

NEW MEXICO

Idle. Address: c/o Stephen B. Davis, Jr., East Las Vegas, New Mex.

Property: 1,500 acres of mineral land between the towns of Lucero and Guadalupe, Mora Co., N. M., slightly developed by tunnels and shafts. Company is inactive at present and has only nominal earnings and expenses.

REPUBLIC MINES CO.

NEW MEXICO

Office: 526 Exchange Bldg., Denver, Colo. Mine office: Lucero, Mora Co., N. M.

Officers: Felix J. Woodward, pres.; Walter Littlefield, v. p.; Marshall Finch, sec.-treas. and gen. mgr.

8, 1903, in Colorado. **Cap.**, \$500,000; increased, 1909, to \$1,000,000 par.

comprises about 7,500 acres, patented, half freehold and half lease. Claims are 30 miles from a railroad, stretching along Coyote creek, from Mora river to the adjacent mountains; a series of 3 parallel cupriferous beds of slate and arenaceous limestone, alternating with limestone, having an approximately N.-S. trend. Beds are said to include coal, limestone and iron ore deposits. There are 3 main beds, of 3 to 8' claimed average thickness, which are said to show considerable chalcocite, claimed to give assays of 8 to 17% copper, with an estimated average tenor of 12%. The company's "expert," Prof. Tyler, is said to have estimated the value of the orebodies, to depth of 350', at \$45,000,000. Though the surface is said to be attractive, the geological character of the property does not warrant a belief that the property will ever support such

development: by shallow pits, with a 50' shaft and several tunnels, with about 4,000' of workings.

The company, sec.-treas., writes in May, 1917: "We refuse to give an opinion in relation to our property, believing you to be incapable of making a fair, unbiased statement of facts." Our readers know that this company publishes absolutely unbiased and fair reports and may draw its own conclusions from Mr. Finch's attitude and his record. The public mine at Hanover is reported, 1917, to be developing a body of high-grade zinc-blende on the 100' and 150' levels. It is still a prospect, but a good one.

ANAS ZINC MINE

NEW MEXICO

Owned by Anas Mining Co. under Grant County, N. Mex.

OTERO COUNTY

Highrolls, Jarilla (or Brice, Oro Grande, Silver Hill) and other districts.

BRICE COPPER CO.

NEW MEXICO

Capitalization of the Jarilla Consolidated Copper Co. Mine at Jarilla, N. M.

President, E. Locklin, pres.; W. W. C. Spencer, treas. and gen. mgr.; J. J. Cowdy, G. E. Moffett and John Colthrop, directors.

located in New Mexico. **Cap.**, \$2,000,000; shares \$1 par; fully paid up; \$1,000,000 issued; \$1,000,000. Annual meeting, first Monday in

the month of August. The property consists of 40 claims, about 800 acres, in Jarilla (Silver Hill) district, Otero Co., carrying sulphide ore in contact deposits between limestone and quartzite porphyry. Vein said to be 3 to 30' wide, 300' to a mile long and proven to 170' depth, averaging 3 to 5% copper, 2 oz. silver and 1 lb. gold per ton.

Developed by 5 shafts, deepest 172', and the Harvey tunnel, 165'

The company is a merger of and holds the properties formerly owned by the Jarilla Cons. Co., Boston Jarilla Copper Co., Amarillo Mining Co. and the Placer Mining Co., whose combined capitalization of the property is valued at \$2,000,000.

JARILLA COPPER CO.

NEW MEXICO

JARILLA MINING & DEVELOPMENT CO.

NEW MEXICO

located near Orogrande, Otero Co., N. M., includes the Nashville

and Three Friends claims, said to carry a 4' vein of 4% silver-copper ore, also lead carbonate up to 50% in tenor. Controlled by Ben L. Farrar and associates of El Paso. No recent returns. Probably dead.

GARNET COPPER CO.**NEW MEXICO**

Address: Ohaysi, N. M.

Officers: James H. Parker, pres., and C. Jungk, sec.

Inc. in New Mexico, in 1916. Cap., \$60,000; shares \$1 par.

Company operates the Garnet, Mae Belle, James Fisk and Shoo Fly mines at Ohaysi, Otero Co., N. M.

Development: deepest shaft is down 450'. The deposit occurs in garnet-lime zone of altered sedimentaries at porphyry contact, and ore contains copper and gold values. Ore is sent to the El Paso smelter. From 25 to 30 men are employed.

IRON KING MINE**NEW MEXICO**

Operated by the Oro Iron Co., which see. Oro Grande, Otero Co., N. M.

JARILLA CONSOLIDATED COPPER CO.**NEW MEXICO**

Has been reorganized under name of Boston & Brice Copper Co., which see.

JARILLA COPPER SYNDICATE, INC.**NEW MEXICO**

Brice, via Oro Grande, Otero Co., N. M.

Officers: R. B. Hutchinson, pres.; J. J. Mundy, v. p.; T. B. Rains, sec. treas. and acting mgr.

Inc. July, 1912, in Arizona.

Property: the By-Chance group comprising the Stokes, Butterfly, Buckeye and By-Chance claims, all owned outright, is in the Jarilla district 4 miles from Oro Grande on the El Paso & S. W. railroad. District shows Paleozoic limestone and shale cut by intrusive masses of monzonite porphyry. The By-Chance claim, the only one operated, has a contact metamorphic deposit of chalcopyrite-hematite-garnet ore lying alongside of a porphyry mass with ore along a fracture zone in the limestone.

Development: includes 150' vertical working shaft with a level at 80' on which the blanket orebody, 12 to 30' thick, has been stoped. A 60' winze from this level is reported to show a second and lower orebody estimated to have an average assay value of 3% copper, with streaks of copper glance running up to 30%.

Production: to Oct. 1, 1913, 6,000 tons of ore shipped to El Paso and Douglas, averaging 2% copper and \$2 gold per ton. Shipments to middle of 1914 average 600 tons monthly with returns which just about covered development and operating expenses. Operations resumed late in 1914. No later information.

LA LUZ COPPER CO.**NEW MEXICO**

La Luz, Otero Co., N. M.

Officers: J. C. Yoes, pres.; W. T. Fulton, v. p.; Jas. G. Barrett, sec. mgr.; Otto Sergeant, treas.; with G. W. Wilson, directors.

Inc. Feb. 1, 1915, in New Mexico. Cap., \$250,000; shares \$1 par. Annual meeting April 1.

Property: 8 claims, 160 acres, about 4½ miles N. E. of La Luz, said to carry a vein 7' wide, averaging 6% copper with small gold and silver values. No development done, but management plans driving a tunnel. Letters returned, 1917. Property probably closed down.

LUCKY GROUP**NEW MEXICO**

M. D. Gayford, mgr., Brice, via Oro Grande, Otero Co., N. M.

Property: the Lucky, May, Copper King and Lincoln claims in Jarilla district said to carry malachite ore a few inches to 3" thick in bed.

ing seams and cross fractures. The ore averages 7% copper. ore 50' wide is said to carry \$4 to \$11 per ton in gold, largely

ent: by tunnel, exposing several orebodies at 300' depth. In experimental plant of the Dawson patent process was in mine and a tramway was constructed, 1914.

1: at the rate of 50 tons per day carrying 2 to 5% copper 0 gold with a bonus of \$2 for iron and lime. J. R. and H. D. ted to have bought a half interest in the mine. Employed 917 returns.

SANDOVAL COUNTY

COSSACK MINING CO.**NEW MEXICO**

Property: Lone Star Group, formerly owned by Navajo-Gold Mining Co., near Bland, Sandoval Co., New Mexico. A. J. Underwood, supt.

Ore: gold-silver, in veins, running nearly N.-S. and from 12 to 40 wide. Ore averages \$6 per ton in gold and is amenable to cyanide treatment.

Development: about 5,000' of workings, including crosscut tunnels.

Equipment: 100-ton cyanide plant and concentrating mill. No recent returns.

SEÑORITO COPPER CORPORATION**NEW MEXICO**

Office: 34 Pine St., New York. **Mine office:** Señorito, Sandoval Co. New Mexico.

Officers: H. B. Walmsley, pres.; W. E. Greenawalt, v. p.; J. A. Kern sec.; H. W. Webb, treas. J. T. McLaughlin, supt.; W. L. Bain and Oswald Becker, cons. eng.

Inc. Nov., 1916, in New Mexico. **Cap.,** \$1,250,000, in \$1,000,000 common shares at \$1 par, and \$250,000 cumulative 8% pfd. shares at \$10 par, convertible on call at par to common.

Property: 22 claims, 400 acres, in the Nacimiento district, Jemez mountains, 2½ miles from Señorito, N. M. The Copper Glance and Conglomerate No. 1 and 2 are the most important claims.

Development: considerable tunneling, etc., in 1903, exposing a large deposit of low-grade ore. A U. S. Geological Survey report in 1910 said that the Copper Glance claim ore consisted of sulphides, carbonates and silicate of copper in white, to reddish sandstone or grit. The ore bed aggregate about 100' thick. The average ore will probably be low grade. The same applies practically to the Conglomerate claims, where there was said to be 300,000 tons of 3% ore.

Leaching trials were made on the ore by W. E. Greenawalt of Denver producing copper at under 5c per lb., including mining and milling. An array of metallurgical talent watched the tests, according to names given in a prospectus. The property was sampled in Oct., 1916, by R. S. Ramsford for J. G. White & Co., resulting in a mill being built with a capacity of 250,000 lbs. of 99% copper per month. Taking copper at 20 to 35c per lb., it was assumed that the profit would be 10 to 25c, or \$300,000 to \$450,000 per year, allowing for a 10c cost, which is double that estimated. Property apparently has considerable merit, but it is in our judgment a mistake to figure on so low a cost of production for any considerable period of time.

SAN MIGUEL COUNTY

PECOS COPPER CO.**NEW MEXICO**

Office: the Arcade, Cleveland, Ohio. **Mine office:** Cowles, San Miguel Co., N. M.

Officers: Alfred H. Cowles, pres., Sewaren, N. J.; I. C. Gifford, v. p. Frederick W. Swan, sec.

Inc. 1904, in Michigan. **Cap.,** \$100,000; shares \$25 par; fully issued and fully paid. The company has a floating debt of \$65,000, owed to stock holders, of whom there are only 5, the company being a close corporation. Mine holdings under lease, since 1915, to Pecos Mines Co.

Property: 15 claims, 268 acres, and 552 acres including valuable veins and placer ground, all patented, in the Hamilton district, 12 miles

Fe. Holdings include water rights to the Pecos river for 2½, 2,000 h. p. available for development.

how lower Carboniferous limestone. The property carries a 1, vertical, 200' wide, outcropping for 750' and lying alongside chistose diorite. The band of shipping ore is 9' wide with 1 of concentrating material. The ore, being complex, is difficult.

ment: includes 370' Evangeline shaft. Report by W. E. Burdick, claims 168,304 tons blocked out on four levels. In 1915-17 development has been done by lessees, and the ore reserves are to be more than double those of 1907, the pay streak average width.

ment: includes a 165 h. p. steam plant, with 2 hoists, 1 good for 100 and a 3-drill Rand compressor.

9 claims, 100 acres, in the Cerrillos district, held under lease. Claims show orebodies in zone of crushed monzonite and are averaging 2-5' in width. Vein said to be continuous for 700'.

ment: by former companies, includes 3 shafts, 60 to 175' deep, 2 smelters, 317, 450 and 550' long, said to show ore carrying 0.30% lead, 14% zinc, 3 oz. silver and \$0.03 gold per ton. The Tom mine is the one now worked steadily, also the Eureka claim near

mine: includes a 12 h. p. hoist, several buildings and concentrator, 1 crusher, 4 Wilfley tables, 2 slime tables. Smelter, 6 miles from mine, has not been operated by present company, but mill has been continuously since July 1, 1915. Lead concentrate is shipped to Kansas and zinc concentrate to Kansas and Oklahoma plants.

RES MINES CO.

NEW MEXICO

located at 2837 Hennepin Ave., Minneapolis, Minn. Mine near Santa Fe Co., N. M.

owned by C. Thompson, pres.; Dr. Edw. Gorgen, v. p.; L. J. Hemen, R. Thompson, treas.; Geo. W. Churchill, gen. mgr.

incorporated 9, 1904, in New Mexico. Cap., \$2,000,000; shares \$1 par; all issued, \$1,500,000.

Property: 7 patented claims, 125 acres, shows a contact deposit between syenite and limestone, of 3' average width, N.-S. strike and dip of 15 to 25°. This deposit carries copper carbonates and chalcopyrite ore estimated by the management to average 3 to 12% copper, without lead or zinc, 15 oz. silver and \$2 to \$6 gold per ton. Lands are in 3 groups, 2 miles from San Pedro, adjoining the Santa Fe Gold & Copper Mining Co.

Development: by a 405' incline shaft, and tunnels of 300', 350', 200' and 450', estimated to show 1,000 tons of ore.

Equipment: includes a small steam plant and 20-ton concentrator with Dodge crushers, Huntington mill and 1 Wilfley table. Have no recent information from company, save as to area of property.

SANTA FE GOLD & COPPER MINING CO. NEW MEXICO

Office: 11 Broadway, New York. **Mine office:** San Pedro, N. M.

Officers: E. J. Macnamara, pres.; Edw. H. Eckhoff, treas., with Chas. N. King, Ernest W. Brown, M. Kaufman, Frederick C. Fischer, W. B. Anderson, E. C. Westervelt and Oscar B. Van Sant, directors.

Inc. Jan. 25, 1899, in New Jersey. **Cap.**, \$2,500,000; shares \$10 par. Old Colony Trust Co., Boston, transfer agent; State Street Trust Co., Boston, registrar. Shares listed on Boston Stock Exchange and New York Curb. Annual meeting, fourth Tuesday in January.

Property: the San Pedro mine, 36,400 acres land, consisting of 3,400 acres of copper claims, and 33,000 acres of miscellaneous lands, comprising the San Pedro Grant in Santa Fe, Sandoval and Bernalillo counties, New Mexico. The San Pedro mine is 17 miles from Stanley on the New Mexico Central railroad.

Development: by a single 200' shaft and 1,600' adit on a blanket vein of 150' average width dipping at an angle of less than 15°, about half the orebody being workable. Ore as smelted averages 3% copper. The metal occurs as chalcopyrite, in a garnet and quartz gangue and is almost self-fluxing.

Equipment: includes a steam plant with hoist and 15-drill air compressor. The smelter at the mine has one 125-ton blast furnace, burning Colorado coke and producing matte of about 50% average copper tenor which is shipped to El Paso, Tex., and Omaha, Neb., for conversion.

Employs 350 men, a good class of Mexican labor. Production started Jan. 1, 1901, but smelting has been suspended many times since that date with mining development alone carried on until copper prices warranted the resumption of ore extraction and smelting operations.

Production:

	Copper Lbs.	Silver Oz.	Gold Oz.	Cost per lb Copper (a)
1916.....	1,492,472	25,593	3,179
1915 (c).....	1,747,090	24,570	2,104	10.6c
1913.....	1,757,315	35,763	1,150
1912 (b).....	801,895	13,133	404
1907.....	1,223,457	17,625	786	14c
1903.....	370,483

(a) After crediting gold and silver. (b) Last 6 months. (c) May 31 to Dec. 31, inclusive.

Operations were suspended in 1914 at the inception of the European war; resumed May, 1915.

The property possesses a large tonnage of quite low-grade ore, besides a limited tonnage of smelting ore, recently developed. Company has no outstanding indebtedness, and can operate when copper prices are about

th the metal selling at a lower figure it is good policy to d conserve the cre supply.

917, smelting operations were suspended as the ore was too ment is being continued, and the future depends on results level.

NEW MEXICO

Offices: 115 Broadway, New York, and McLaughlin Bldg., Santa Fe, N. M.

Officers: Chas. E. Berner, pres.; Chas. W. Berner, v. p.; Gustave F. Ettensperger, sec.-treas.; with Sidney H. Hirsch and Francis C. Wilson, directors. Ricketts & Co., New York, mgrs.

Inc. Feb. 5, 1916, in N. M. **Cap.**, \$1,000,000; issued \$800,000; shares \$1 par. Security Registrar & Transfer Co., New York, transfer agent and registrar. Listed on New York curb.

Property: 500 acres in Hermosa, Palomas mining district, Sierra county, N. M. During 1916 company examined and developed under working options 8 out of 22 properties submitted. On the Antelope \$60,000 was spent for 1,260' of exploration with 232' of work in ore, and plant was overhauled.

Equipment: includes a concentrating plant, hoist, compressor, saw-mill, steam power and houses.

SOCORRO COUNTY

Includes Cooney, or Mogollon, Magdalena, or Kelly, Mill, or Hop canyon, Rosedale, San Andreas, San Lorenzo, Silver Mountain and Socorro districts.

ANACONDA SKOOKUM COPPER GROUP **NEW MEXICO**

Address: c/o E. H. Rodgers, 310 West Missouri St., El Paso, Texas. Owned by E. H. Rodgers, L. H. Davis and J. F. Dowling.

Property: 4 claims, unpatented, located at north end of the San Andreas Mts., Socorro Co., N. M., 26 miles west of Oscuro, on the E. P. & S. W. R. R. Claims are said to cover 6,000' of a quartz lode in granite, varying in width from 20' to 100', and to show disseminated copper sulphide ore, assaying 2½% copper, ½ oz. silver and \$2 to \$3 gold per ton.

Development: Opencuts and pits along the strike of the lode. Churn drilling and 100' tunnel are planned.

BEARUP GROUP **NEW MEXICO**

Owned by D. E. Bearup, Cooney, N. M. Located in the Mogollon-Cooney district, Socorro Co., N. M.

Claims: 4 on Gold Hill and 9 in western part of district. The Gold Hill claims show the Maud S. lode. Vein where opened has width of 2' to 13', and is said to assay \$12 per ton. There is also a narrow high-grade streak.

Development: by tunnels, longest 600'. Total amount underground workings, 1,500'. Small shipments have been made of ore extracted during development work, 50 tons said to assay \$98 to \$235 per ton and 20 tons shipped to concentrator said to assay \$21 per ton. There is a small 2-stamp mill and gasoline engine on the property. Employs 6 men. No recent returns secured.

Simpson, sec.; preceded with F. B. Street, J. Wm. Rice, Samuel Por-
r, Jas. B. Putnam and Halbert E. Parkhurst, directors;
Supt., at last accounts.

902. **Cap.**, \$3,000,000. Authorized a \$150,000 five-year 7%

100 acres, also coal lands about 16 miles distant. It has
at about \$250,000 has been expended on the mine, which
reveals high grade ore, carrying good values in copper, with a little
value in gold and silver.

Company has been very free with "estimates" and promised that
it was producing 14,400,000 lbs. of copper yearly, millions of dollars

Company's advertising was indefensible, and the state-
ment has been no such opportunity for investment since the
mine and United Verde were first put on the market" leads
to the belief that the promoters of the company were sadly lacking
in truth. At last accounts was endeavoring to settle with
creditors by giving them the property.

MINING & MILLING CO.

NEW MEXICO

Socorro Co., N. M.; Ed. Monroe, sec.;
J. E. Simpson, treas.

Property: 7 claims, in White mountains, 8 miles east of Carrizozo. Ore carries copper with silver and gold values in iron gangue, averaging \$12 per ton. Developed by shafts, tunnels and open cuts, exposing ore bodies of low-grade copper ore with gold values. Management plans sinking tunnel and acquiring adjoining properties, said to have promising showings of high-grade ore. No recent returns.

HEMBRILLO COPPER MINING CO.

NEW MEXICO

Mine in Socorro Co., N. M.

Officers: J. W. Eubanks, county surveyor, El Paso, Texas, pres.; W. M. Fly, Gonzalez, Texas, v. p.; H. C. Marks, sec.-treas.; John P. O'Connor, gen. mgr.

Inc. 1904.

Property: 12 claims, in Hembrillo canyon, on the eastern side of the San Andreas mountains, 35 miles W. of Tularosa, with a wagon road thereto, said to carry 3 strong veins with N.-S. strike converging to the S. The central or main vein is but a few inches wide at the surface, but widens to 6' in the shaft. Vein lies between quartz-porphry and limestone and is said to have a nearly vertical dip.

Development: by the Platte crosscut tunnel 1,000' long, in April, 1914, which has cost over \$20,000 and has cut the vein 500' below the outcrop. Before starting this tunnel company sank numerous pits showing copper ore, and a 150' vertical shaft in which the vein is seen to carry oxide and carbonate ores that average 12% copper and has a little chalcopryrite in the lower workings. The heavy flow of water led to the abandonment of this shaft. A 10-ton shipment to El Paso smelter in 1914 is said to have assayed 24% copper and 4.6 oz. silver per ton.

Idle. No recent returns.

NEW MEXICO

Office: 154 West Randolph St., Chicago. Mine address: Magdalena Socorro Co., N. M.

Officers: Alpheus McCallum, pres.; Elias G. Raffety, sec.-treas.; O. Curo, N. M.; above with Alexander McCallum and J. A. Pement, directors. J. A. McCallum, supt.

Inc. April, 1906, in New Mexico. Cap., \$1,000,000; shares \$10 par; non-assessable; 8,852 shares outstanding.

Property: 11 claims, 220 acres, 3 miles from Santa Fe R. R., in the Magdalena mining district, shows a shear zone in rhyolite running N. 20° W., with steep dip N. E. Surface shows thin seams of oxidized ore developed by 1,550' crosscut tunnel and shafts. Total amount of work about 4,000'. A test shipment made to El Paso in 1915 contained 7,025 lbs. copper and 12.9 oz. silver. Company said to be clear of indebtedness and expected to ship ore in 1916. No later returns. Government report states conditions do not warrant the expectation of finding important bodies of ore.

he Pacific, Hub and a portion of the Johnson groups, 500 ooney, or Mogollon district, about 80 miles by daily stage y, the nearest railway point. Also has a bond on 300 acres iding the Eberle, Deep Down, Maud S, Deadwood and ps.

ny is developing its mines and shipping ore, also driving l, which will start at Mineral creek and crosscut the Gray Pacific and other veins in its 9,800' length. It will be used age and haulage tunnel for the district. The Eberle, Mc- s., Deep Down and Johnson No. 7 mines are developing ed weekly to the Socorro mill.

TING & MINING CO.

NEW MEXICO

Canal Road, Cleveland, Ohio. Mine office: Magdalena, M. Philip Argall & Sons, of Denver, Colo., cons. engrs. ville, Montgomery Co., Kans.

o. A. Martin, pres. and gen. mgr.; Oliver Box, asst gen. isler, supt.; W. S. Stevens, mill supt.; W. E. Corts, smelter any is a subsidiary of the Sherwin-Williams Paint Co.

cludes the Graphic mine, 30 claims, 227 acres, with total acres, in the Magdalena district, showing limestone, shale ying contact ore deposits between limestone and schist, of width, 500' length, and known depth of 500'. The upper large quantities of lead and zinc carbonates, ores being ite and sphalerite, with some cerrusite and argentiferous ional cuprite and native copper. Ores are mainly low in ipal values in zinc. The ore-shoot, of about 500' length on 9th levels, is about 100' wide on the 9th level.

Development: is by a 300' shaft, and two 1,500' cross-cut tunnels, with about 8 miles of workings, the lower levels showing a slightly argentiferous sulphide complex of zinc, lead and copper. Property regarded as one of the largest zinc deposits of America.

Equipment: 125-ton mill was erected, 1912, to treat the large tonnage of low-grade complex zinc-lead-iron sulphide ore already developed, by the froth flotation process, using it as an adjunct to older methods of concentration. A 50-ton mill does dry concentration on ores above 20-mesh, and wet concentration on ores below that size. Electric power is used. Employs 400 men.

Production: mainly zinc ore, is shipped to the works at Coffeyville for the manufacture of lead and zinc oxides, as the base for pigments, of which the Sherwin-Williams Co., in control of this corporation, is one of the largest American manufacturers. Company also has an option on the Kelly mine at Kelly, N. Mex., owned by the Tri-Bullion Sm. & Dev. Co. and is working same with much success.

Lessees paying \$4,000-\$5,000 royalties monthly, 1917, and shipping 3 tons copper ore daily from the Kelly mine.

SOCORRO MINING & MILLING CO.

NEW MEXICO

Office: 200 Fifth Ave., New York. **Mine office:** Mogollon, N. Mex.

Officers: Wm. Childs, Jr., pres.; Harry Balfe, v. p.; Robt. T. Neely, v. p.; J. Diehl Fackenthal, sec.; Adam K. Luke, treas.; with Wm. A. Barber, Henry D. Hotchkiss, R. E. Dowling, A. L. Williams, David Lusk, directors.

Staff: W. Rowland Cox, cons. engr.; D. B. Scott, mgr.; G. C. Baer, sup. H. N. Reed, mill supt.

Cap., \$2,000,000; par, \$5.

Bought entire holdings of Mogollon Gold & Copper Co. for \$100,000 at public sale in Socorro, N. Mex., August, 1915. Sale ordered to satisfy judgment of \$416,626, obtained by Equitable Trust Co., New York, holders of bonds to that amount.

Property: 58 claims, partly patented, 1,100 acres, including the Cooney, Peacock, Little Charlie, Independence and Fluoride groups, sometimes known as the Silver Bar mine, in the Cooney district of the Mogollon mountains, 85 miles N. E. of Silver City, the nearest rail point. The Fanny is the principal mine.

The property shows porphyry and andesite, carrying the Fanny fissure vein of 5 to 10' average width, with a paystreak of about 3' average at 30' maximum width, having numerous narrow feeders, some of which carry high gold values. Ores include slightly auriferous and strongly argentiferous chalcopyrite, bornite and chalcocite, claimed to carry increasing silver values at depth, and the east vein has been said to show native copper at depth of 600'. The Cooney and Peacock mines are said to have produced \$1,250,000 worth of ore in the past.

Development: The company operates 3 mines, the Fanny, Johnson and Pacific. The Fanny mine has an 1,100' shaft and the Johnson mine, a mile west has two 500' incline shafts. There are also various tunnels on several groups with an approximate total of 30,000' of underground workings.

Reported in Sept., 1917, that high grade ore was being extracted from 1,100' level of the Socorro mine.

The Pacific mine was optioned to Socorro M. & M. Co. by the Fanny Co., 1916, and an aerial tram was erected to carry ore to the Socorro mine of 230 tons capacity.

Equipment: includes hoists, Imperial compressor, aerial tramway

with stamps, Huntingtons and Pachuca tanks. The power h. p. De La Vergne crude oil engine.

duction: 66,387 tons in 1914; 67,848 tons in 1915; 73,349 tons in June, 1917, was 35,000 oz. of silver.

mines at Mogollon are 75 miles from Silver City, the nearest, but little information is available concerning them.

os, N. Mex.

d S. Lewis, pres.; Wm. T. Hinde, v. p.; Congdon C. Lowe, with Wm. McKean and Alvin Burch, directors. L. O. Red River, N. Mex.

Inc. July, 1916, in New Mexico. **Cap.**, \$1,000,000; shares \$1 par; 420,000 shares outstanding. U. S. Corporation Co., New York, registrar and transfer agents.

Property: 4 claims, 80 acres at Red River, Taos county, N. Mex., said to show telluride ore in fissure veins in andesite. Values are gold and silver.

Development: by prospect shaft and several shallow tunnels. Developing, October, 1917.

CHAMPION COPPER CO.

NEW MEXICO

Offices: 7 Government St., Kittery, Me., and 1853 Commonwealth Ave., Boston, Mass. **Mine address:** Copper Hill Box, Dixon, Taos Co., N. M.

Officers: A. Morandi Bartlett, pres.; Benj. B. Earl, v. p.; Arthur M. Cripps, sec.-treas.; preceding, with Ralph Thompson, Chas W. Kokerda, directors. Jas. A. Burton, gen. mgr., Dixon, N. M.

Inc. July 7, 1911, in Maine. **Cap.**, \$200,000; shares 10c par; full paid and non-assessable. Listed Boston Curb. Annual meeting March. Commonwealth Tr. Co., Boston, transfer agt.

In report issued March 1, 1917, company reports assets of \$32,743 cash, \$136,302 in accounts receivable; \$2,159 as stockholders liability, and \$23,796 as cost of property, development and expenses to Dec. 31, 1916. Work at the mine was resumed March 6, 1915. In July, 1914, present corporation acquired the property at foreclosure sale for \$15,499.

Property: 5 claims, patented, 103 acres, also four 5-acre mill sites and a 40-acre water right, on Copper hill, in the Copper Mountain district of Taos county, 9 miles east of Embudo, the nearest railroad station, and 2 miles N. E. of Taos. Mine is said to have 8 practically parallel veins of 18 to 20' width, between a schist footwall and quartzite hanging wall, carrying cuprite, malachite and chrysocola, succeeded at depth by chalcocite and gray copper, ore all argentiferous and auriferous, with chalcopyrite beginning to show in lower workings, all with quartz gangue.

Development: includes shallow shafts and surface cuts on several claims, a 190' shaft on the Champion, a 180' shaft sunk on a 4' vein in the Oxide mine, and a 500' tunnel, which has stoping ore and cuts a 45° blank vein. Company plans sinking Champion shaft to 500' and opening drifts at 100' intervals. During 1917, 170' of development work was done and 10 tons of rock was hoisted, and 25 tons milled.

Equipment: includes a Leyner air compressor, Schramm gasoline engine and compressor for 4 drills, in the mill, with a power house adjacent. A 1,000' ground tram leads from the mouth of the Champion tunnel to 6 bins. Improvements include a 15,300' gravity pipe line, of 7" spiral steel riveted pipe. Was not regarded favorably by the late Horace J. Stevens.

EDISON MINING & MILLING CO.

PPER CO.

NEW YORK

Broad St., New York. Works office: Laurel Hill, Queens nplies about 1,500 men.

W. Nichols, pres.; J. B. F. Herreshoff, v. p.; W. C. Web- R. Nichols, treas.; M. E. Harris, auditor.

1905, in New York. Cap., \$10,000,000; reduced 1912 to \$7,000,- preferred stock issued 1914; shares \$100 par; bonds \$3,000,- ccessor of Nichols Chemical Co.

to Oct., 1914, at rate of 6% per annum, paid quarterly on then a break of 2 years, with a disbursement of 4% in Dec.,

The Laurel Hill Works include a smelter and electrolytic refining with steam and electric power.

The smelter has 20 reverberatory furnaces, taking 40 to 250-ton charge each furnace heating a tubular boiler with waste gases. There is 1 Herreshoff water-jacket blast furnace of 600 tons rated daily capacity. Matte and slag flow, in an uninterrupted stream, to a large settler, whence slag skims into pots and matte is tapped into an iron bed. Waste gases pass into a 1,000' main flue, of iron and brick, leading to a 300' chimney.

The electrolytic plant is operated on the series system, and has 5 tanks. Anodes are cast. The final product is cast mainly into wire bars. This company enjoys a deservedly high reputation for the purity of its product and the efficiency of its metallurgical practice. Is the largest electrolytic refining plant in the world; capacity about 45,000,000 lbs. of copper per month.

The works do a very extensive custom refining business, treating mainly ores and matte from outside producers in the smelter, and waste blister copper in the electrolytic plant. The works handle all the bessemer copper from the Phelps-Dodge properties, and from the Old Dominion, Calumet & Arizona, East Butte, Granby and Ducktown companies, and others. The mining properties at Capelton, Quebec, are operated by the Asbest Copper Co., a subsidiary of the Nichols Copper Co.

Reported 1917, that company had an option on a pyrite deposit near Mokoman, 31 miles from Port Arthur, Ontario.

A labor strike will affect the 1917 output.

NORTHERN ORE CO.

NEW YORK

Edwards, St. Lawrence Co., N. Y.

Officers: T. I. Crane, pres.; W. S. Pilling, treas.

Inc. in New York and operated as a close corporation.

Property: 650 acres, extending over 12 miles in a N. E. direction from Fowler to Edwards, lies within a talc-zinc belt, showing highly metamorphosed pre-Cambrian crystalline rocks. Mine has limestone and serpentine formation with veins, 6" to 14' wide, of sphalerite and pyrite, striking N. E. and dipping 40-50° N. W.

Development: to depth of 500' by 2 vertical shafts and diamond drill holes.

Equipment: includes steam and electric power, machine shop, power house and office building. The 150-ton concentrating mill started operations 1915. Ore is delivered from the mine over a trestle to the ore bins, where it is fed automatically to the rock crusher below. From the crusher the ore passes to rolls and jigs, and finally to James concentrating tables. Wet magnetic separators effect the separation of the zinc and iron sulfides.

Production: shipments of pyrite concentrate are at the rate of 45 tons daily.

ST. LAWRENCE PYRITES CO.

NEW YORK

Offices: 41 Broad St., New York and DeKalb Junction, St. Lawrence Co., N. Y.

NORTH CAROLINA

Companies are arranged in alphabetical order.

ASHBORO COPPER MINING CO. NORTH CAROLINA

Dead. Formerly operated the Scarlett, or Ashboro mine, N. of Ashboro, Randolph Co., N. C., which see. Company failed to meet payments and lands reverted to owner, F. R. Thorns, 112 Duane St., New York City, in 1916. Described Vol. XII.

BLUE WING MINING CO. NORTH CAROLINA

D. M. Hill, sec., 60 Federal St., Boston, Mass.

Company has voted to sell all its assets and go out of business, 1917. Fully described in Vol. XII.

CAROLINA COPPER CO. NORTH CAROLINA

Office: 15 Atwater St., West Detroit, Mich. Mine near Cullowhee, Jackson Co., N. C. Lewis C. Waldo, pres. and treas.; S. H. Knight, v. p.; Geo. E. Berriman, sec.; preceding officers, S. H. Knight, Geo. W. Clark and F. W. Olds, directors.

Inc. Oct. 12, 1901, in Michigan. Cap., \$2,500,000; shares \$25 par; issued, \$1,585,000.

Lands: 1,450 acres, freehold, including the Wayehutte mine, show 4 veins, of 27' estimated average width, carrying mainly chalcopryite, with estimated average values of 3% copper, 4 oz. silver and \$1 gold per ton, opened by a 55' shaft and a 200' tunnel. Lands also include an undeveloped water power. Regarded as promising if worked under proper direction. Never operated.

COPPER KNOB MINE NORTH CAROLINA

Owned by Monaton Mining Co., which see.

CULLOWHEE MINING & REDUCTION CO. NORTH CAROLINA

Idle. Cullowhee, Jackson Co., N. C.

Officers: S. B. Ezell, pres.; D. D. Davies, v. p.; Thos. A. Cox, sec. and managing director; Chas. Davies, smelter supt. at last accounts.

Inc. 1905, as successor of Cullowhee Copper Co.

Property: 1,300 acres, 12 miles from Sylvia, nearest rail point, shows a considerable body of sulphide ore, claimed to average about 5% copper and \$4 gold per ton, probably correct for small lots of ore, but cannot be realized from a large tonnage.

Equipment: includes hoists and a Sullivan air compressor, with steam and water power, latter with a plant 3 miles from works. The 30-ton smelter, near Sylvia, blown in Jan., 1909, with semi-pyritic smelting, suspended operations late 1910, and probably will remain idle until rail connections are secured.

GARDNER-HILL MINING CO. NORTH CAROLINA

Company's gold-copper property, 9 miles from Greensboro, N. C., is being reopened after an idleness of over 50 years.

GOLD HILL CONSOLIDATED CO. NORTH CAROLINA

Office: Room 309, No. 42 Broadway, New York. Mine at Gold Hill, Rowan Co., N. C. Walter Geo. Newman, pres.

Inc. 1910 as successor of Gold Hill Copper Co., a notorious promotion that caught many Wall Street operators. New company, under same management, became bankrupt and property sold at auction, Jan. 27, 1912, for \$45,000. Company does not own the adjacent Union Copper mine.

consisted of 1,050 acres in Rowan and Stanley Counties, the one where gold was discovered, A. D. 1799. Gold quartz veins were discovered in 1831, and in 1845 this mine was the largest gold producer in the States.

Developed by 2 shafts of 615' and 830', and 2 lesser shafts. The mine was operated in 1913 and part of 1914. Shipments to the Perth Amboy returned 1.5% copper and about \$3 gold per ton, with small quantities of silver values. Copper occurs in minute particles of chalcopyrite in the matrix and recovery by wet concentration is not commercially

profitable: includes ten 100 h. p. boilers and a 10-stamp mill. The mine was operated by the company and its companion, the Union Copper Mining Co., in several un- successfully checked careers. Operations conducted on a considerable scale from 1891-1903, were unsatisfactory and failed to show up the much needed rich bodies. A receivership ensued which was ended early 1906, and the mine was again appointed, Aug., 1906, for the old company, on the recommendation of Walter Geo. Newman, on claims aggregating \$352,000. In 1907 the Federal Court again appointed a receiver for the property, which was shut down and apparently abandoned by the company. Newman evidently used this property solely for stock-jobbing and the mine is considered worked out and low grade, but worthy of further investigation in depth. At best the company could never have paid dividends on its capitalization, and under its present president is not considered as worthy of any confidence whatever.

MINING CO.

NORTH CAROLINA

F. Oliver, Charlotte, N. C., and A. S. Proskey, Rawhide, Nev. 100,000; shares \$1 par. Listed on New York Curb. U. S. Trust Co., N. Y., transfer office.

Has a 10-year lease on the Mint Hill mines, a gold property in Mecklenburg county, 18 miles from Charlotte, N. C. Also controls the main mine at Rawhide, Nev., by ownership of the Proskey Mining Co.

Developed by 38 shallow shafts, one 100' deep, said to show six ounces of gold per ton. Mint Hill, carrying \$35 ore. Plant with 120-ton ball-mill erected for grinding ore. The lease calls for 15% royalty.

The main mine is said to have produced 3,000 tons of \$20 to \$200 worth of gold, but which must be taken with caution, since the whole Rawhide property is a failure, from an operator's standpoint.

The North Carolina property appears to have been shut down in 1917. The stock of the company were skyrocketed on the Curb in 1917, by means of manipulation. The men named as directors in the prospectus do not admit any connection with the company.

MINING CO.

NORTH CAROLINA

Ashe Co., N. C. J. B. Shale, pres., 301 W. 108th St., New York City. W. Lloyd, mgr., Garren, N. C.

Old Copper Knob mine, 160 acres, freehold, also 90 acres of land, said to show a 30" fissure vein in hornblende slate, containing iron, manganese and sulphide ores, mainly bornite. Carload shipments from the mine of N. J. said to average \$15 per ton in gold, silver and copper. The wall rock also carries metal. Property was opened 1880. Equipment includes hoist, 2-drill air compressor, and a 5-stamp mill.

COPPER CO.

NORTH CAROLINA

near Gold Hill, Rowan Co., N. C. T. B. Brown, pres.; J. H. Brown, sec.-treas.

Inc. 1904, in Arizona. **Cap.**, \$100,000; shares \$100 par.

Property: 50 acres, freehold, showing altered schists, carrying a fissure vein with N.-E. strike, and estimated at 4' width. Developed by a 100' shaft, showing chalcopryite reported to average 5% copper and \$5 gold per ton. Ore can be treated by flotation and property probably worthy of careful prospecting.

Letters returned from above address.

SCARLETT COPPER MINE

NORTH CAROLINA

Address: Frederick R. Thorns, owner, 112 Duane St., New York City. R. I. Dickens, supt., Ashboro, N. C.

Property: at Ashboro, Randolph Co., N. C., formerly operated by the Ashboro Copper Mining Co.

Ore: is a sulphide, carrying principally copper and zinc, with iron alumina, a trace of silver and gold, and occurs in contact and fissure veins, running N. 40° E., with dip of 35°. Pay shoot reported to be from 25' wide.

Development: by 120' vertical shaft and several tunnels, longest 220'

Equipment: includes 25 h. p. hoist, compressor, pump and steam power. Prospecting and development work only being done, 1917.

TWIN-EDWARDS COPPER MINE CO.

NORTH CAROLINA

Greensboro, Guilford Co., N. C. Inc. Sept., 1902. **Cap.**, \$100,000; shares \$100 par.

Owns sundry old properties, including the Twin mine, with an 18' vein, which was worked previous to the American Civil War. Property shut down many years, but company understood to be only dormant, not dead.

UNION COPPER MINE

NORTH CAROLINA

Office: care Sig. H. Rosenblatt, 18 Broadway, New York. **Mine address:** Gold Hill, Rowan Co., N. C.

Lands: 550 acres, freehold, about 15 miles from Salisbury, in Rowan and Cabarrus counties, well watered and timbered. The property has schists, carrying 5 veins with average strike of N. 20° E. and practically vertical dip, of 2 to 20' width, 3 of which carry copper ores, the other 2 reported to carry silver and gold ores respectively, being but slightly developed. The copper veins are mineralized zones carrying lenticular shoots of ore, longest about 100' in length.

In 1916, No. 7 and 12 shafts were unwatered to 140' and work started on a shoot of 3% copper ore, which is 5' wide and exposed for 250'. From December, 1916, to April, 1917, ore was shipped from shaft and dumps. Three drill holes near the Big Cut and No. 5 shafts cut 4% sulphide ore.

Development: is on the Big Cut copper vein, trenched at intervals for a distance of about 1 mile, and having 10 shafts, deepest 650'; these shafts show a vein of 20' wide. The Big Cut vein shows oxidized ores and a little native copper in the upper workings, succeeded by chalcopryite, with quartz gangue. A careful sampling by Dr. A. R. Ledoux gave averages of 4.4% copper, 4 oz. silver and 40c to \$1.20 gold per ton. No. 7 shaft, of 200' depth, shows a vein 4" wide at surface and 3 to 4' wide on the bottom level, where the ore is claimed to average 4.5% copper. There are 14 shafts all told, and about 5,000' of workings. The property has been claimed, in the press, to have produced about \$1,000,000 worth of gold in early days.

One vein is said to carry zinc ore of low value, but is little developed.

Equipment: machinery plant is extensive.

Buildings include a machine shop, smithy, engine house, boiler house, office building, 50-room hotel, dwellings and stable.

OKLAHOMA

For map of the Miami Zinc Field, see page 948.)

(Companies are arranged alphabetically.)

The Miami Zinc-Lead field is the newest great mining region of the West, and presents the superficial aspect of a Western mining district, but unfortunately it lacks, thus far at least, the wildcat stock companies which so often disgrace the earlier stages of development of our far western districts.

The importance of the Miami field can be judged from the fact that in less than two years old, it contains 200 operating concentrating mills with one or more working shafts, and that nearly 1,000 churn drills are prospecting the field. The Kansas companies are separately designated by that State name.

The following excerpts from a report on the district by the R. W. H. Brown, give an excellent idea of its salient features.

The Miami Zinc-Lead Field lies in Ottawa County, the extreme north-west of the State of Oklahoma, and extends into Cherokee County, Kansas, now developed, it is 3 miles wide and 5 long. The Oklahoma portion of the field are Commerce, Quapaw, Century, Cardin, Tar Creek and Baxter, Kansas is at the north edge of the field. The Oklahoma portion of the field is in Township Twenty-nine (29) North, Range Twenty-eight (28) East, Ottawa County. The Kansas portion of the field is in Township Twenty-five (25) North, Ranges Twenty-three (23) and Twenty-four (24), Cherokee County.

The mineralization of the Miami Field appears in troughs of zinc and lead ores, found in the Grand Falls cherts of the Boone series at various depths below surface from 100 to 300 feet. Beneath a very compact limestone forms a floor which water does not penetrate.

The water carries zinc and lead in solution until it reaches the faults in the cherts. It rises through these fault cracks and penetrates through the bedded cherts, depositing lead and zinc in them. The actuating of the cherts, the greater the deposit of metal, both in quantity and value. The Miami or main fault of the district runs north-west through the District from Baxter, Kansas, to Comanche, and represents a throw of about 15 feet. Cross faults extend from this to East and West at varying angles. The ore bodies are formed along these cross fractures and in the north-west side of them for a few hundred feet.

The Miami fault was sufficiently open to permit constant circulation of water. The north side fractures retained water in a quiet state more favorable to the precipitation of metal from the solutions contained. The North side fractures have the best ore bodies so far discovered.

The eastern portion of the Miami Field proper is within a limited area of about 10 miles long by about three miles wide, in which small area 99 mills are built or are building, and more are planned to be built. This remarkable development has all occurred practically within the last eighteen months. Drilling in this area is continued principally in additional information regarding ore bodies already discovered. On the west side of this proven area drilling is extending to the West, and in the north. In all nearly 700 churn drill rigs are in use, and from 100 to 200 holes are finished weekly.

The ore bodies in the field generally show two principal sheets or beds of ore, the upper at a general depth of 150 to 200 feet, and the lower be-

tween 250 and 300 feet, each bed of ore being from 15 to 30 feet thick, and in some instances twice this thickness. It appears certain that the ore bodies will prove to be much more extensive, and especially much richer than drilling indicates, as actual operations in this District have demonstrated when the mines are opened up by shafts and drifts the ore is from 50 per cent to 100 per cent richer than shown by assays of drill hole samples.

At present many operating mills in Miami are producing better than 10 tons of concentrates from each 100 tons of mine ore. This is locally termed 10 per cent recovery. It is probable that the field as a whole will average 8 per cent recovery, though some mills are actually recovering better than 15 per cent in concentrates. This is proving to be one of the richest lead and zinc fields in the world, and, as its production increases, will force the closing of leaner mineralized districts.

Prospecting is done by means of Churn Drill Holes; Keystone type of drill rigs are used. A 300-foot hole costs from \$450 to \$500, and is drilled in from ten to fourteen days. Samples are taken every few feet of the entire cuttings from the mineralized area passed through, which are assayed for zinc and lead.

The ordinary amount of drilling on 40 acres is from 10 to 30 holes. Old operators in the district are satisfied if they find two or three holes near each other carrying good ore, and will not drill further under such conditions, but sink shafts and build mills at once.

Shafts are sunk to the bottom of the ore body; the ore is mined, using the room and pillar system; trammed to shaft; hoisted to mill bins, crushed by rock breakers and rolls, and concentrated in jigs and on tables, so that the crude mine ore is reduced to a concentrate containing about 60 per cent metallic zinc and 80 per cent metallic lead. This is bought by smelters in the bins at the mills, and there is no further expense.

The entire process of mining and milling is extremely simple and cheap and does not require expert labor.

Mining and milling machinery is standardized and largely made in Joplin. It is not high priced and can be quickly obtained. Wages are on a sliding scale, depending on prices of concentrates, ranging from \$3.00 per day at \$50.00 per ton, to \$4.50 per day at \$100.00 per ton.

Division of costs, so far as obtainable, indicate: Labor, 50 per cent; Supplies, 30 per cent; Power, 15 per cent; General Expense, 5 per cent.

Average of Miami, in 1917, costs are:

Crude Ore:

Mining, Milling, General for 100 tons Mine Ore.....\$160.00

Concentrates:

If 10 tons concentrates produced, cost per ton..... 16.00

If 8 tons concentrates produced, cost per ton..... 20.00

Indicative of what some of the operators are attempting in this field may be mentioned the campaigns being conducted by some of the large operators. **The Eagle-Picher Lead Company**, on first entering this field, is reported to have expended a prospecting fund of approximately \$100,000 merely in its exploratory work. The blocking out of its ore bodies and discovery involved as much if not more than the original expenditure. The investment of this concern prior to the beginning of its production period was near \$750,000. This concern now has the largest single production of any company in the district.

The Commerce Mining & Royalty Company, the pioneer prospecting and development company of that field, has never ceased drilling since

e of ore in 1905 in the old Commerce camp. Its drills are kept ntly, and its expenditure in exploratory work has reached ex: proportions.

rch & Mabon interests have conducted some of the largest undertakings in the field, and as a criterion of how thoroughly is been done, may be mentioned that upon one forty-acre tract l holes have been put down. This concern has developed a of forty-acre tracts, many of which have proved to be some roducers the district has yet known.

ently the **Miami Zinc Syndicate** has taken over leases aggre- cres, north of the Kansas and Oklahoma State line and west rings, Kansas, and has conducted upon it a drilling campaign, under way, with only a small part of the acreage tested out.

est undertaking, however, that has been started is that of the **ter Company**, which has to its credit approximately 16,000 and whose operations promise to be the most extensive district. From 20 to 30 drills are kept at work doing explora- development work. The field of its operations extends from the oma line north and northwestward to Asbury, Missouri. e behind the Chanute Spelter Co. is the **Waco Mining Co.**, es in leases and fees, and P. B. Butler, with 6,500 acres in : large holdings, principally in the Kansas field, are being sys- developed on a large scale. Others who have done a large ploratory and development work are Frank Danglade, T. J. Marcum, Vinegar Hill Zinc Co., N. B. Gatch, H. Bardollar ers.

Y ZINC CO.

OKLAHOMA

THE COPPER CO.

OREGON

Homestead, Baker Co., Ore.

F. F. Curtze, pres.; F. A. Brevelier, sec.; A. A. Claus, treas.; Supt.

Pennsylvania. Cap., \$500,000; shares \$1 par; \$380,000 issued. Co. holds title by trust deed and bond. Worked by Home-
yke Mines Co., Inc.

A copper deposit discovered 1897, about 2,000' from railroad line. Lower tunnel, 300' above town, is about 1,300' long, cut-
ody at 800' in and connected by raise with 3 tunnels above.

Several thousand feet of workings. The lower tunnel shows
pyrite and pyrite ore about 6' wide, said to extend upward
tunnel. Ore said to contain \$2 to \$3 gold, 3 oz. silver and 5%
copper.

1915, after years of idleness, and in 1917 is largest copper
mine in the State.

Production during 1916 averaged at least 2,500 tons of 6% copper ore
minerals. Ore also contains \$5 per ton in gold and silver values.
In 1917, a wide body of 5% ore, with high precious metal con-
tained at a depth of 850'.

Concentrating plant commenced work in Sept., 1916, using
the latest art of the process with a 90% recovery claimed.

Steady producer and apparently has promising possibilities.

MINE

OREGON

A. Koehler, Baker, Ore.

In the Virtue district, 4½ miles from Baker, was a producer
of antimony ore in 1915. Has a well-defined vein, up to 10'

Has 4 quartz claims and the McNamee placer about 6 miles from
the Sumpter Valley railroad, in Greenhorn mining district,
Oregon.

Development: by 120' shaft shows a silicified shear zone in gabbro,
up to as much as 50' wide, and shows small amounts of pyrite
along fractures. Dump material is said to carry low
grade and a fraction of an ounce of gold.

Under water below 10' from surface.

THE GOLD INVESTMENT CO.

OREGON

Homestead, Baker Co., Ore.

Pres. A. Howard, pres.; John Arthur, v. p.; Fred R. Mellis,

Cap., \$50,000. Is a small, close corporation organized as a developing and holding company, but whose chief business since 1909 has been the operation of the Baker City, Ore., ore-sampling plant, burned April, 1911, but rebuilt later in the year.

Property: includes the Poorman group, 8 claims, 160 acres, surveyed for patent, on Balm Creek, 25 miles N. E. of Baker. The group shows a copper-bearing vein for 2,000' that has a gossan cap 200' wide in places.

Development: by an 800' tunnel with several short crosscuts at depth of 100', showing 2.5 to 3.5% copper, present as chalcopyrite.

Has lease and bond on the Taber Fraction and has use of the Bourne Gold Mng. company's tunnels to operate mine.

PACIFIC MOLYBDENUM MINES, INC.

OREGON

J. B. Philips, mgr. Property at Greenhorn, Baker county, is reported to show an 8' vein of molybdenum, running from 20 to 25%.

The mill is to be equipped with a 1,000-ton oil flotation unit in 1917-18.

POWDER RIVER GOLD DREDGING CO.

OREGON

Office: Insurance Exchange, California St., San Francisco, Cal. **Operating office:** R. W. Derby, supt., Sumpter, Ore.

Officers: W. P. Hammon, pres.; R. K. Barrows, v. p.; A. E. Boynton, sec.-treas.; with A. L. Dahl and F. J. Mott, directors.

Inc. Oct. 18, 1911, in California. **Cap., \$500,000;** shares \$1 par, all issued.

Bonds: \$300,000 authorized, of which \$3,000 are outstanding. Annual meeting 4th Monday in October.

Gross earnings in 1916 were \$640,635, of which \$624,869 was from the gold recovered. Operating costs were \$182,374; sundry expenses, development, etc., \$176,426, leaving \$281,835 net profit.

Dividends: aggregate 85c per share, or \$425,000, to Oct., 1917.

Property: about 1,500 acres placer ground, near Sumpter, Ore., half of which is considered payable. The gravel channel is from 300 to 2,000' wide; it will average 1,000' wide, 18 to 20' deep, and the pay gravel rests on a soft, decomposed rock called "clay webfoot." Dredge digging may be termed tough, and as a result, the bucket-lips wear out in 5 months' use.

Equipment: 2 dredges, the only ones in Oregon electrically driven. One has 9 cu. ft. and the other 7½ cu. ft. buckets, and can dig a total of 10,000 yards daily. Power consumed is 750 h. p. for each boat.

Production: yielded \$624,869 in 1916. Out of Oregon's annual gold yield of about \$1,800,000, this company contributes a third.

QUEEN OF THE WEST MINES CO.

VIRTUE MINES DEVELOPMENT CO.**OREGON**

Baker, Ore.

Officers: J. K. Romig, pres.; M. Boswell, sec.-treas.**Cap.**, \$1,500,000; shares \$1 par; 1,384,075 issued.

Property: bonded in 1916 to G. W. Field & Co., of Boston, for \$500,000, consists of 16 claims and placer ground, a total of 400 acres in the Virtue district, Baker Co., Ore. From 1878 to 1898 the gold yield was about \$2,189,000, the largest production being \$259,000 in 1898. Mine was idle for nearly 15 years, but in 1917 it was reported working and electric power was installed.

Claims said to show quartz veins in serpentine striking N. W., dipping 45° to 80° S. W. and averaging 14" in width. Ore carries gold and a little pyrite and chalcopyrite.

Equipment: includes hoist, boilers, 20 stamps, vanners, cyanide plant and electric power.

WHITED MINING CO.**OREGON****Address:** Aldred Whited, Unity, Ore.**Inc. Nov.**, 1916, in Ore. **Cap.**, \$15,000; \$1 par.

Property: 8 claims situated 5½ miles south of Unity, Baker Co., Ore. Two veins under development show shoots of gold-bearing quartz, the largest one along the hanging wall of a porphyry dike.

Development: includes 2 crosscut tunnels with drifts on the veins.

Equipment: embraces a 10-stamp mill with amalgamating plates and Wilfley tables. Was developing late in 1916.

CLACKAMAS COUNTY**OGLE MOUNTAIN MINING CO.****OREGON****Office:** 1003 Main St., Oregon City, Ore.**Officers:** J. B. Fairclough, pres.; W. J. Wilson, sec.-treas.**Cap.**, \$1,000,000; \$1 par; all issued.

Property: 22 claims, 14 miles from Gates on the S. P. R'y and 35 miles E. of Silverton, in the Ogle Creek mining district, Clackamas Co., Ore.

Ore: the mine carries low-grade gold ore which occurs in a well-defined fissure vein that averages about 5" in width. The average value is \$5 per ton.

Development: by a 1,460' tunnel driven 560' below the two old tunnels, in order to cut the downward extension of vein. Several small veins have been cut, but contain only very low-grade ore.

Company lost much money building a mill which proved a failure, and it is now doing very little work at property.

CROOK COUNTY

Includes Bear Creek, Butte and Ochoco districts.

AMERICAN ALMADEN QUICKSILVER & GOLD MINING CO.**OREGON****Office:** 100½ Fourth St., Portland, Ore.

Officers: W. B. McKinney, pres.; E. N. Wheeler, sec.-treas.; G. W. Tillotson, Howard, Ore., mgr.

Cap., \$1,500,000; shares \$1 par; all issued.

Property: 3 claims in Sec. 20, T. 14 S., R. 20 E., 11 miles from Bowers in the Ochoco district, Crook county, developed by tunnel. Contains cinnabar in altered andesite.

Embraces Riddle, Green Mountain and other districts.
ELDORADO COPPER MINING CO.

OREGON

Address: Andrew Laidlaw, Columbia Bldg., Spokane, Wash.

Incorporators: Andrew Laidlaw, S. W. Miller, C. P. Ritter, F. W. Beyer and Henry Banfield.

Inc. 1916, in Washington. Cap., \$2,000,000; \$1 par. Company organized to take over the Banfield mine, 32 miles east of Riddle, Ore., on the S. P. railway. The price is said to be \$300,000, partly in stock.

Property: 9 claims, known as the Banfield mine, and formerly owned by the Douglas-Umpqua Mng. Co. Claims said to show nine veins, 3 of which have been developed. Ore estimated to average 4% copper with slight gold and silver values.

Development: by 6 tunnels, lowest 900' below surface, with about one mile of workings, estimated by management to block out 300,000 tons of ore.

This is an old mine which has been under development for 16 years.

GRANT COUNTY

Embraces Granite, Greenhorn, New Eldorado, Quartzburg and Sossaville districts.

BEN HARRISON MINE

OREGON

Sold April, 1917, to E. H. Dewey, of Nampa, Idaho. Former owners are said to have spent \$200,000 on the property.

Property: 10 claims, 7,000' above sea level, in Grant Co., Ore., in N. W. corner of Sec. 36, T. 9 S., R. 34 E., 23 miles by road west of Whitney, and 28 miles by road from Sumpter, the nearest railroad stations.

Ore: occurs in the Ben Harrison vein, strike N. 3° E., dip 67° E. which varies in width from 18" to 21', with an average stoping width where opened, of 77". The vein is a brecciated replacement in granodiorite. Ore minerals are pyrite, stibnite, chalcopyrite, sphalerite, pyrrhotite and stephanite, with gold of about equal value to the silver in the ore.

Development: by adits, the lowest at the 600' level. Several hundred feet of drifting has been done on the various levels and at the beginning of 1915 there was said to be above the 500' level, 87,000 tons of ore blocked out on 3 sides, with an average value of \$10 per ton. The 600' level has had several hundred feet of drifting done; here the ore is said to be 20% higher in value than the ore in the upper levels.

Equipment: includes 20-stamp mill, tube mill, classifiers and vanner. A 75% extraction was obtained in the mill. This low recovery and high cost of transportation of concentrates caused the former owner to plan building a roasting and cyanide plant.

See Mineral Res. of Ore, Vol. 1, No. 8, p. 176.

BLUE MOUNTAIN MINING CO.

OREGON

Office: 9 E. Fifth St., Covington, Ky. Mine office: Sumpter, Idaho Co., Ore. Works office: Cable Cove, Grant Co., Ore. G. H. Vonderhe, sec.-treas.

Officers: C. L. Arano, pres., gen. mgr.; B. J. Stagg, v. p.; A. F. Bessel, asst. sec.-treas.; Clemens Backhus, Jr., E. Williams, Jas. Green, H. Vonderhe, Bernard Moeller, Alvin Davidson, directors. A. Nord, supt.

Inc. in Arizona. Cap., \$2,000,000; shares 41 par. fully paid; authorized; 1,373,999 issued. Authorized \$50,000 6% bonds; \$17,500. Annual meeting 10th Friday in April.

27 claims, about 500 acres, 200 patented, is said to be covered with the exception of 35 acres, in Cable Cove district, 11 of Sumpter in Baker and Grant counties, Ore., at head of John Day river. Claims include the Baby McKee group, Chance and others, said to carry the Eagle, Rawson, Cloud veins with gold-silver ore.

Runs in fissure veins in granodiorite, running slightly E.-N. and in opposite directions. One vein has an average width of 4', a depth of 2,200' and proven depth of 700'. The Eagle vein is said to be discovered and developed for 6,800' in length.

Development includes a 1,900' main working tunnel with a 262' crosscut showing a 6' vein opened up for 25' with concentrating ore. The Baby McKee tunnel, now caved, yielded specimen rock years ago. The company owns the Alpine mill, besides a 10-ton experimental mill at Imperial mill.

The company took a lease on the Imperial Gold Mng. Co. patented claims, of which the Blue Mountain holdings are an exception. Property carries 5 veins with ore shoots 100'-200' long, carrying 38.70% galena, 8.20% zinc blende, 12.10% pyrite, 3.4% arsenic, 1.4% lime, 2.7% insol. 30%. This assays 1.5 oz. gold per ton, 7% lead, 8% zinc, 18% iron, 30% insol., 17.8% arsenic and

ores: at the Imperial tunnel are reported to be 1,000 tons average per ton and 13,000 tons \$10 ore. Company appears to have capital to develop its property.

IMPERIAL MINING CO.

OREGON

East Webb St., Pendleton, Ore. Geo. Darveau, pres.; John Darveau, sec.

100; shares \$1 par; all outstanding.

3 claims in the Greenhorn range, Grant county, at an elevation of 10,000', is reported to carry a quartz vein in granodiorite, containing lead and silver values. Mine but slightly developed and still at start stage.

MONITOR MINE

OREGON

Under lease by Wm. Narkaus, 1916-17. Mine, about 5 miles west of Sumpter in Grant county, reported to have 3 veins, carrying pyrite, tetrahedrite, galena and stibnite; the main or Monitor vein 10' wide. Production to date amounts to \$75,000. The lessee has a compressor and air drills.

IMPERIAL & GOLD MINING CO.

OREGON

Rev. W. J. Hughes, pres. and gen. mgr., 2441 Center St., Sumpter, Ore. Mine P. O.: Prairie City, Grant Co., Ore.

Wm. M. Saxton, v. p.; Mrs. Kate Palmer, sec.; G. J. Bowman, gen. mgr. with Hon. T. E. Johns and Rev. R. W. Hughes, directors. Located in Oregon. Cap., \$150,000; shares 10c par, non-assessable. Total value of \$3,000.

16 claims, unpatented, 320 acres, with a 5-acre mill site, in Cable Cove district, 7 miles north of Prairie City. Reported to show 2' under development by tunnels, traceable one-half mile, and the ore estimated by company to average 2 to 3% copper, 2% silver and 118 gold per ton.

The mill has 5 stamps, a Blake crusher, New Standard tables and blenders. Presumably idle.

IMPERIAL MINING CO.

OREGON

100; S Main St., Marion, Ohio.

Officers: M. F. Douce, pres.; J. F. Lust, treas., both of Marion, Ohio; G. L. Bender, sec., Greenhorn, Ore.

Cap., 1,500,000 shares, \$1 par.

Property: 2 miles N. of Greenhorn, Grant Co., Ore., said to show a quartz vein in greenstone, pinching and widening to 48 inches.

Development: 2 tunnels on vein; upper 800' long, lower with other workings, 2,400'. Best ore found near mouth of lower tunnel. Two shoots said to be 225' and 60' long with maximum width of 20"; a third is 200' long and up to 42" wide. Ten stamps crushed ore in 1915, but operations were unprofitable, and in 1917 it was reported that mine was closed down and equipment sold.

HEPPNER MINING CO.

OREGON

Office: Heppner, Ore. **Officers:** D. B. Stalter, pres.; J. O. Hager, sec.; S. A. Wright, treas.

Cap., \$1,000,000; shares 10c par; \$97,458 cap. stock issued.

Property: 13 claims, about 18 miles from Austin, the nearest shipping point. Claims show over a dozen quartz veins from 1-20' wide, that carry free gold and some pyrite near the surface. Management claims to have secured a \$16 assay from a 20' sample across the lowest vein. Company has done 256' of tunnel work.

HIDDEN TREASURE GOLD MINING CO.

OREGON

Known locally as I. X. L. mine.

Office: Baker, Ore.

Officers: F. T. Kelly, pres.; N. M. Kelly, sec.

Cap., \$1,250,000; shares \$1 par; 1,090,600 issued.

Property: 11 claims, near Greenhorn, Grant Co., Ore., reported to show 3 veins carrying gold ore. Developed by 2 shafts. Some work done, 1915.

NEW ELDERADO MINING & REDUCTION CO.

OREGON

Office: Austin, Ore.

Officers: E. B. Reed, pres.; E. H. Saxe, sec.-treas.

Cap., \$100,000; shares \$1 par; 1,750 issued.

Property: known as the Pioneer, on the south slope of Greenhorn range, New Eldorado district, Grant Co., Ore., is said to show granodiorite cut by coarse-grained dikes of granodiorite porphyry. Dikes remain hard after the granodiorite alongside has become soft in the altered zones. The altered zone carries veins of bluish quartz from a few inches to 5' wide. Besides gold the ore contains a little antimony, blende, and low silver-gold values.

NORTH FORK MINE

OREGON

Address: Glen and Henderson, Granite, Grant county, Oregon.

Property: a gold-bearing gravel deposit known as the North Fork or Klopp mine, situated on S. bank of north fork of the John Day river, Granite district. Hydraulicking was done on a large scale in early years, and on smaller scale recently. Total gold yield about 5c per yard from 6,800,000 cu. yds. Gravel is a compact mass of sandy clay, carrying round to angular cobbles and boulders, sometimes as large as 10' across. These boulders are mainly granitic rocks, but there are some schists and lavas and a little unmetamorphosed argillite. Investigation shows that the deposit is the terminal portion of an old drift sheet laid down by the North Fork glacier.

OLIVE CREEK MINING CO.

ALMEDA CONSOLIDATED MINES CO.

OREGON

Succeeded by Almeda Mines Co., which see. Fully described in Vol. XII.

ALMEDA MINES CO.

OREGON

Offices: 1014 Board of Trade, Portland, Ore. and Opera House Block, Grants Pass, Ore.

Officers: S. C. Spencer, pres.; L. E. Crouch, 1st v. p.; Nat P. Ellis, 2nd v. p.; H. E. Thurman, sec.; C. M. Huddle, treas.

Inc. July 28, 1916, in Oregon. **Cap.**, \$3,500,000; shares \$1 par; 3,000,000 shares common, 500,000 shares preferred. Successor to Almeda Consolidated Mines Co. Annual meeting, 2nd Tuesday in April.

Property: 17 lode claims, 340 acres, also 500 acres placer ground, in Josephine county, about 26 miles from Grants Pass, and 17 miles from Merlin. nearest railway station on the Southern Pacific, with daily stage line to Almeda. Lands include a 200-acre town site.

The quartz claims are in three groups known as the Almeda, on the north side of the river and the Rocky Gulch and Rand groups on the south side of the river.

The Almeda group consists of 3 claims developed by tunnels and a 585' shaft, with about 2 miles of underground workings. Orebody estimated by the management to show approximately 2,000,000 tons blocked out for production.

Considerable development work has been done on the Rocky Gulch and Rand groups by tunnels and crosscuts. The main vein is said to be 10' to 20' wide on the slate hanging wall, ore being strongly auriferous and slightly argentiferous chalcopyrite. Paralleling the main vein is a body of low-grade ore 20 to 30' wide, highly silicious, mainly chalcopyrite with occasional bornite giving promise of greater values at increased depth.

Equipment: consists of a 100-ton blast furnace for matting, distiller engines to develop 225 h. p., compressors, motors, boilers, complete laboratory and all necessary buildings.

The 17 mile mountain road from Merlin to the mine is in good condition and motor trucks operate over it the entire year.

The mines are not being operated at present pending the installation of a 200-ton concentrator and electric power.

AMERICAN EXPLORATION CO.

OREGON

Address: Grants Pass, Ore. Reported to have bought the Waldo copper mine, Sept., 1917, for \$135,000.

Mine, 2 miles from Waldo, Josephine Co., Ore., is credited with production of \$300,000 worth of copper ore in recent years. **Ore:** massive chalcopyrite associated with pyrrhotite and pyrite.

BILL NYE MINE

OREGON

J. H. Beeman, mgr., Grant's Pass, Oregon. **Property:** near Grants Pass, Josephine Co., Ore., shows sulphide ore in veins, said to average 24 gold.

Development: by tunnels. **Equipment:** 10-stamp mill and cyanide plant. Operated jointly with Lucky Bart mine in 1915. Letters returned, 1917.

CHETKO COPPER CO.

OREGON

Idle. **Office:** Ashland, Ore. Mine near Kerby, Josephine Co., Ore.

Officers: C. W. Reams, pres. and gen. mgr.; C. C. White, v. p. and sec.; A. E. Shepard, sec. treas.; J. W. Keith, intell. supt., all at Ashland.

Inc. Aug. 10, 1905, in Ariz. **Cap.** \$1,000,000. Shares \$1 par, issued 1,000,000.

Property: 36 claims, 100 acres, near Kerby, Ore., and 1000 acres near

nty, Oregon, about 70 miles from Grant's Pass, the nearest

Said to show 8 orebodies, with 2 under development, 1 reported as of 240' average width, traceable 1¼ miles, carrying native iron, also covellite, bornite and chalcopyrite, claimed by company to average copper tenor, with \$4.75 gold per ton.

Development: by shafts of 45', 34' and 80', and by 6 tunnels, of 30 to 230' length, with 69' of workings, estimated by company to show 600,000 tons of ore, 100,000 tons blocked out for stoping, all of which figures are excessive.

GOLD MINES CO.

OREGON

122 Oregon Terrace, Medford, Ore.; and J. F. Reddy, Grant's

J. F. Reddy, pres.; Lincoln McCormack, sec.; Mary F. Reddy,

in Oregon. **Cap.**, \$50,000; shares \$1 par; non-assessable; all

200 acres, 120 patented, on Coyote creek, Josephine county, \$20,000 has been spent on development to Sep. 17, 1917.

Show a contact deposit between serpentinite and diorite; the contact zone is 2 to 12' wide dipping 20°, with N.-S. course. Ore shoot 200' long and 5' wide, and ore to average \$5 per ton.

Development: by 400' crosscut tunnel and 300' drift on vein, workings 1,000' to depth of 170'. Reserves given by company as 8,000

tons in 1917, a 5-stamp mill and concentrator were ready to treat the ore containing 30% chromic oxide in serpentinite. A 65% concentrate of low-grade chrome ores is increasing, as less chrome has a narrow market.

MINE.

OREGON

O. R. Moore, Salem, Ore.

2 chrome claims, 6 miles N. E. of Takilma, Josephine Co., Ore. Ore contains 40% chromic oxide in 1916. As usual for chromite deposits, they are irregular in shape and variable in quantity, and conditions are considered good.

TINUM MINES CO.

OREGON

Grant's Pass, Ore. I. F. Peck, pres.

10,000 shares, \$1 par.

1,280 acres of placer claims on Cave creek, Josephine Co., Ore., and flume, sluice-boxes, etc., have been constructed.

GOLD MINING & MILLING CO.

OREGON

Placer, Josephine Co., Ore. Mr. Childers, mgr. Owned by J. B. Parish, N. Y.; and leased to W. L. Holmes of Buffalo, and J. B. Childers of Geneva, N. Y.

1½ miles N. of Placer, which is 8 miles from Leland (nearest Greenback district, Ore. Claims said to show a vein of quartz, hematite in greenstone, cut off by serpentinite to the east. Ore average 10% gold, assaying \$8 per ton in upper levels.

Development: since 1897 opened by 12 levels to 500' vertical depth. Most of the ore has been stoped. A winze opened the ore

to largest plant in southern Oregon, consisting of 40 stamps and 3 Risdon crushers, 12 concentrators, cyanide annex, 7,000' of compressor.

Under way at present, employing 30 men. Mine has produced

GREYBACK COPPER MINES.**OREGON**

Address: Selma, Ore. John Hampshire, mgr.

Property: 20 claims, 13 miles E. of Selma, in the Waldo district, Josephine Co., Ore.

Purchased in June, 1917, by Twohy Bros. Co., railroad contractors of California and Oregon.

Development: 700' of tunneling has, it is said, proved a large copper deposit to exist.

JIM BLAINE MINE.**OREGON**

Owned by George Epperly, of Placer, Ore., a former lessee.

Property: 1 patented claim, 20 acres in Placer district, Josephine county, shows gold-silver ore in quartz veins in porphyry formation. The orebody runs N. W.-S. E. and dips 65°. Developed by 200' tunnel to depth of 150'.

Equipment: includes compressor and concentrating mill. Concentrates reported to average 1 oz. gold and 50 oz. silver. Mine produced 1,000 tons of ore in 1915, yielding a gross return of \$9,842. Ore is to be sent to Tacoma and the mill abandoned.

OAK MINE.**OREGON**

Address: G. A. Baker and Geo. Buell, owners, Grants Pass, Josephine Co., Ore.

Mine is 6 miles E. of Hugo, on Jump-off Joe creek, N. W. of Walker Mtn. Ore: main vein is gold bearing, but there are also several small copper veins. Minerals in the ore include chalcopryrite, pyrite, sphalerite, galena, quartz, rare malachite and pyrolusite.

Development: by tunnel with total of 800' of workings. Equipped with 20-h. p. gas engine and compressor.

OLD GLORY GOLD MINING CO.**OREGON**

William Stock, sec.-treas., Grants Pass, Ore.

Cap., \$1,000,000; shares \$1 par; 604,200 issued.

Property: the Old Glory mine on Silver creek in western Josephine county, 4 lode and 2 placer claims, said to show a large lode of low-grade copper ore carrying gold and silver values. Property was to be equipped with machinery in 1916, but the president and general manager died and development will therefore be delayed.

OREGON GOLD MINES CO.**OREGON**

Office: 1208 W. Monroe St., Chicago, Ill.

Officers: E. E. Dick, pres.; J. M. O'Grady, sec.; H. F. Comstock, treas.; H. D. Norton, atty.

Inc. in Arizona. Cap., \$2,000,000; shares \$1 par; 1,657,436 issued. In re-organization of the American Gold Fields Co.

Property: the Granite Hill mine, 9 miles N. E. of Grant's Pass, Josephine Co., Ore., which was active from 1902 to 1907 and is credited with a production of \$75,000.

Ore: quartz carrying chalcopryrite, galena and pyrite with gold values occurs in veins in tonalite and greenstone. Main vein said to average 3' width and ore treated in 1907 averaged \$5 per ton.

Development: by 450' vertical shaft with total of 12,000' of workings now under water.

Equipment: includes 20-stamp mill, compressor, steam hoist, 2 rock drills and 150-h. p. electric motor.

OSCAR CREEK CONS. MINING CO.**OREGON**

Office: 1st St., Grants Pass, Ore. Officers: Oscar C. Walker, pres.;

Cap., \$500,000

Property: 3 patented, 3 unpatented.

patented claims and 92 acres of dump ground, 2 miles E. of 10 miles S. of Grants Pass. Credited with production of \$40,000

It includes 3 miles of ditches and 300' flume line.

BRONZE MINE**OREGON**

Hamphshire, mgr.; Reed C. Crowell, supt.; R. H. Clark, cons. at Josephine Co., Oregon. Mine purchased for \$150,000 by owner and associates, March, 1916.

It is in the Illinois Valley and near the Waldo Sm. & Ref. Co. 10 miles from Waters Creek on the railway. The new California Great Ry. will connect it with Grants Pass and Crescent City,

It has been a producer for 10 years, shipping ore with 9% copper and 1 ton, but with much ore of lower grade in the mine. Geology (see) in Resources of Oregon, Vol. 2, No. 4, p. 184.

It fits are hauling ore to railway, 1,600 tons of copper ore shipped

MELTING CO.**OREGON**

101 Mining Exchange Bldg., Colorado Springs, Colo. Works at Josephine Co., Ore. Chas. L. Tutt, pres.; Wm. T. Tutt, sec.; as follows:

Colorado. Cap., \$250,000; shares \$10 par. Owns a controlling interest in Waldo Smelting & Mining Co.

It works in 1914-15, were \$55,000, with operating expenses of \$7,500.

It has mining claims and smelter site in Waldo district. The Queen of the Mountains (which see) was sold early in 1916 to Twohy Bros. and operated as a lead and zinc mine.

It has at Takilma, has a 125-ton water-jacket blast furnace, making pig iron blast averaging 45% copper, 2.5 oz. silver and \$4.50 gold per ton shipped to the Tacoma smelter for conversion. Owing to heavy snow and winter, causing impassable roads, the smelter can be worked only a few days in winter. The nearest rail point is Grants Pass, 42 miles distant. It includes a sawmill.

It has produced 7,543 tons of ore smelted yielding 1,563 tons of matte of average copper tenor, indicating an average return of 8% copper from the mine with production of about 1,350,000 lbs. fine copper in 1905, and 1,000,000 lbs. copper in 1907; the works have been idle since Jan., 1908.

3S MINING CO.**OREGON**

at Medford, Ore.

It has E. E. Wickstrum, pres.; N. L. Townsend, sec.; George Lindley,

10,000; shares 35c par; all issued.

It has 9 claims, and 9 others bonded, 2 miles W. of Galice, Josephine Co., Ore. It is said to have been exploited in recent years for tin, tungsten, and molybdenum. In 1916 mine was supposed to be a molybdenum producer.

PPER GOLD MINES CO.**OREGON**

at Murphy Blk., Salem, Ore. Mine at Selma, Josephine Co., Ore. W. S. Low, pres. and gen. mgr.; E. O. Moll, v. p.; Daniel C. E. Lebold, treas.; preceding with W. C. Buckner, James Neugebauer, directors.

It has 100; shares \$1 par; issued 219,654. Annual meeting, first Monday

It has a mine on Pickett creek, near Merlin, has been sold and company claims, in Illinois district, Ore., about 12 miles N. W. of Selma.

Geology ore occurs in serpentine near porphyry and diorite contact. A dark gossan sometimes stained with copper is underlain at 15' depth by ore carrying 18% copper and 5 to 10 oz. silver and upwards of \$1 gold according to management.

Development: amounts to 1,000', with a 500' tunnel and 200' crosscut, exposing 1,000 tons of ore. Property is 34 miles from S. P. R. R. Is regarded as a prospect which might be worked on a large scale were railroad transportation nearer.

VANGUARD GOLD-COPPER CO.

OREGON

Mine near Kerby, Josephine Co., Ore. C. E. Phillips, mgr.

Inc. 1910. Cap., \$1,000,000; shares \$1 par.

Property: 7 miles W. of Kerby, said to carry gold-copper ore. Idle.

WALDO CORPORATION.

OREGON

Office: 1621 L. C. Smith Bldg., Seattle, Wash.

Officers: D. E. Skinner, pres.; Louis Levensaler, v. p.; L. B. Siedzma, sec.-treas.; G. M. Esterly, mgr.

Cap., \$100,000; shares \$100 par.

Property: placer ground in the Waldo district, Josephine Co., Ore., carrying auriferous gravel 10' to 25' deep that lies on a bed rock of conglomerate and sandstone with some serpentine. Gravel worked thus far is reported to have yielded 12½c per cu. yd.

Equipment: consists of 3 ditches, 2 giants and hydraulic elevator for lifting the gravel.

WALDO MINE

OREGON

Address: W. B. Whipple, mgr., Takilma, Ore. Owners: De Witt Van Ostrand, of Phillips, Wis.; J. F. Reddy and A. H. Gunnell, Grants Pass, Ore.

Property: 20 patented claims, 400 acres, with mill site, in Waldo district, Josephine county, formerly owned by the Waldo Sm. & Ref. Co. of Colorado which see.

Geology: claims show unrelated masses of chalcopyrite, pyrrhotite and pyrite in abraded, or crushed rock zone, a large part of which is serpentine. Masses sometimes consist of mixed sulphides and serpentine.

A 50-ton mill has been erected to concentrate mine and dump ore. Some ore was shipped to Tacoma last year.

WALDO SMELTING & REFINING CO.

OREGON

Office: 301 Mining Exchange Bldg., Colorado Springs, Colo. Mine office: Takilma, Josephine Co., Ore.

Officers: Spencer Penrose, pres.; C. L. Tutt, v. p.; J. A. Hull, treas. preceding officers, J. A. Hayes, Wm. T. Tutt, directors. E. C. Tucker, mgr.

Inc. Dec. 3, 1901, in Colorado. Cap., \$3,000,000; shares \$100 par. Closely affiliated with the Takilma Smelting Co.

Property now owned by De Witt Van Ostrand and others, see Waldo mine.

PORTO RICO TERRITORY

... Rico, opened in 1860. Produced
... paystreak of 8 to 16", carrying
... in a vein of cuprif-

in schist cut by phonolite dikes. Orebody, 210' long, assays from \$1 to \$200 per ton. Developed by 200' vertical shaft, and several tunnels, with total workings of 2,270'.

Equipment: includes a 25-h. p. electric hoist, air compressor and sink-pump. Management claims company is well financed, and is yet in the prospective stage.

It is said that in Jan., 1917, a body of sylvanite ore was cut in the 'rift on the 200' level.

GOLD DOLLAR MINE

SOUTH DAKOTA

In Crown Hill district, Black Hills, S. D. Leased to Coleman, Madill, and others.

Property is a regular gold producer, whose ore is treated in the Mogul mill near Deadwood.

GOLDEN REWARD CONSOLIDATED GOLD M. & M. CO. S. D.

Office: 475 Fifth Ave., New York.

Mine office: Deadwood, Lawrence Co., S. D.

Officers: C. T. Tegethoff, pres.; Harris Franklin, v. p., with R. W. Golet, Henry de Forest, W. B. Devereux, Walter Luttgen, Ed. de Witt and W. A. Harriman, all of New York, directors. W. J. Johnson, sec.; N. E. Franklin, Deadwood, asst. sec.; Henry Schnitzel, gen. mgr.; F. R. Baldwin, gen. supt.

Inc. June 25, 1896, in South Dakota. **Cap.**, 1,000,000 shares; \$10 par. 841,793 shares issued to June, 1916. Stock transferred at company's office. Annual meeting 1st Tuesday in August at Deadwood, S. D. Gross earnings for 1915 were \$804,068; operating expenses amounted to \$703,837. Balance-sheet shows assets, \$10,710,511, and liabilities, accounts payable, \$70,647.

Property: 442 patented claims, 3,391 acres at Terry, in Whitewood and Bear Butte mining districts, near Deadwood, includes, the Union and Astor mines.

Ore: occurs as contact deposit in shale, carrying gold-silver values and 75% silica. Pay ore occurs in shoots from 5-100' long, said to give average assays of \$5 per ton.

Development: by several tunnels and vertical shafts from 100-350' deep with about 15 miles of workings.

Equipment: includes electric power, electric double-drum hoist, compressor, 150-ton cyanide plant and 75-ton Wedge roaster. The furnace was damaged in July, 1916, for further investigation of the blue ore, which does not give recovery. Average gold extraction is 75.55%.

Ore reserves: estimated by management June, 1916, at 2,000,000 lbs. Production for 1915 amounted to 57,770 tons, yielding 16,122 oz. gold and 20,196 oz. silver; and in 1916, \$311,242 from 33,294 tons.

HIDDEN TREASURE MINING CO.

SOUTH DAKOTA

Trojan, Lawrence Co., S. D.

Officers: S. T. Cochran, pres.; J. N. [unclear], v. p.; [unclear], gen. mgr.; above with [unclear] directors at last accounts.

Property: near Deadwood.

Ore: carries copper-gold-silver. Property is being developed, having crosscut E. and W. 100'.

Produced some ore, 1916.

HILL CITY MINING & DEVELOPMENT CO.

Hill City, Pennington Co., S. D.

Officers: John Wise, pres.; [unclear], v. p.; [unclear], gen. mgr.; Booth, directors; E. A. Schillman, gen. supt.

Inc. 1911, in S. D. **Cap.**, \$500,000.

Annual meeting, March 9.

11 claims, 6 patented, 220 acres in Burnt Fork gulch, 3 miles City.

1, in fissure vein, in schist; strike N .S., dip 80°. Said to have th of 16'.

ent: by shafts, deepest 200'.

t: includes double-drum hoist, Leyner compressor and a 10-company plans to sink to 400' depth and later to build a cyanide

TUNGSTEN PRODUCERS CO. SOUTH DAKOTA
ill City, S. D.

y, 1916. Bought the old Harney Peak tin mill, installed new l started treating tungsten and tin ores.

mine was formerly owned and developed by the Harney Peak said to average 30" in width and the tin ore is low grade, being 1.6% metallic tin. Ore is cassiterite in quartz with coarse and occurs mainly in narrow seams of mica in the quartz.

ent: by 300' shaft with some drifting. Treats 150 tons daily. 80 men.

MINING & MILLING CO. SOUTH DAKOTA
Pennington Co., So. Dak. L. A. Richards, gen. mgr.; L. L.

shows several quartz veins, 1' to 2' wide, containing gold, y, lead and zinc ore. Two veins have been opened up; adit connecting with a shaft, sunk on the vein, at the 100' ize shows the ore to be continuous to that depth. In these varies from 12" to 18" and is 150' in length; values are mainly timony. The second vein parallels the first, is ¼ mile E., wide and to contain more zinc than No. 1. Two shafts, 370' 103' deep, respectively, have been sunk on the vein.

No. 2, there is reported to be a 4 to 6' quartz vein carrying es. Developed by 300' shaft with 500' of drifting.

: includes three 100 h. p. boilers and an amalgamating mill, Dodge crusher, slow-speed Lane mill, tables and classifiers. ipped reported to carry 2-4 oz. gold, and 6-10 oz. silver; arsenopyrite. Cyanide plant to be added in 1917. Company n.

(a) Including salaries, legal, general, etc.; bills payable; taxes; property purchased; interest.

Taxes are high; in 1914, amounting to 16c per ton of ore milled, in 1915, 15c; and in 1916, 16c.

Dividends: have been paid monthly almost continuously since Jan. 1879; were suspended in May, 1907, as result of a fire in the mines, and resumed Jan. 25, 1908; continued to Dec., 1909, inclusive, when they were suspended owing to labor troubles at the mines; resumed in March, 1910. Present rate is 65c per share per month. Dividends paid to Jan. 1, 1918, total \$40,000,000.

The first claims acquired by the company were the Grant and Old Abe located by J. B. Pearson, Dec. 11, 1875. In the Fall of 1876, representatives of Haggin and Hearst bought these claims, and the Homestake Mining Co. was incorporated. In July, 1878, the first and only assessment was levied, \$1 per share; it furnished the \$200,000 required to build the 80-stamp Homestake mill. In 1899, company acquired the Highland Mining Co., an adjoining property of about 73 acres; also the Black Hills Canal & Water Co. owning 40 miles of ditches, flumes and pipe lines, with reservoirs, improvements and water rights covering the water supply of Deadwood and Lead districts.

Property: 468 claims, about 3,723 acres in the White Wood mining district, Lawrence Co. The towns of Lead and Deadwood and the settlements of Blacktail, Terraville and Central City have grown up around the mines and mills.

Ore: gold bearing, lies in a mineralized zone of nearly vertical Algonkian slates and crystalline schists, having a general strike, N. 35° W., and dipping slightly toward the east, into which enormous masses of rhyolite have been intruded. The ore bearing zone is approximately ½ mile wide and several miles long. Only the northern end of the zone has been extensively developed; such work lying mostly between the gulches, Gold Run, Deadwood and Blacktail. The deposits are not fissure veins, but impregnations that appear to have taken place along two converging lines of crushing; they follow roughly the direction of schistosity and show a general pitch southward; where several unite, the aggregate thickness is over 500' and many stopes are carried across that width of ore. The larger lenses are on the west side of the zone and are flanked on the east by a series of smaller parallel lenses, some of which join the larger at depth. Near the surface the orebodies follow the rhyolite porphyries, but at depth diverge from them and become in part associated with phonolite. The ore varies considerably in composition in different portions of the deposit, but that of the deeper levels, the unoxidized ore, usually contains either chlorite

s hornblende (cummingtonite), with quartz, carbonates of iron, arsenopyrite, pyrite and pyrrhotite. Ferrous minerals and this has been an important factor in determining the treatment. In the upper oxidized parts of the deposits the ore is black, but deeper, in the sulphide zone, is greenish blue to blue black. Gold varies in amount from 3 to 5%, and even as high as 10% or more. In the sulphide zone the distribution of gold is uniform, \$1 to \$4.50 per ton. Over 60% of the ore is free milling. The enrichment has not resulted in the formation of any particular minerals.

Shafts: 6 shafts; 4 in the footwall, one in the hanging, and one in the dip. Depths Jan. 1, 1916:

B. & M.	Golden Prospect	Golden Star	Old Brig	Gloden Gate
1,700'	1,100'	1,400'	800'	800'

The 2,000' levels of the Ellison shaft will eventually be connected to the B. & M. shaft, through which outlet the bulk of the ore will be raised to surface. The B. & M. shaft will be equipped with skips, and the product will be crushed in No. 8 Gates crushers, and their product carried by a conveyor system to smaller gyratories. Total cost of sinking at the mine is said to have averaged \$60.64 per ft. There are in all about 20 workings. Underground work in 1916 amounted to 21,982' of drift and 399' of raising. The measured ore reserves are large and will supply the reduction plants for many years.

Mineralogical equipment at the Homestake is one of the most efficient in the country.

South Side—3 stamp mills (660 stamps) with 36,356 sq. ft. of plates; 1 regrinding plant, with independent cone system, and 1 of amalgam plates; 4 batteries of cones for classification; 3 cone houses; 1 sand plant. The mills are the Amicus, Golden Gate and Pocahontas. In 1915 the Pocahontas mill was completed. The Amicus mill is being rebuilt.

North Side—2 stamp mills (360 stamps), the Monroe mill and 1 mill; 2 tank houses; 2 cone houses; 1 sand plant. Ore supplied to the mills is usually drawn from the upper levels of the mine, and is usually oxidized.

A crushing and concentrating mill was built, 1916, for treating the ore. Equipped with 1 Wilfley and 2 Deister tables. Net yield, \$29,916.

Flotation—1 slime plant, treating the combined slime from south side. The stamps weigh 900 lbs., drop 10", making 88 drops per second. The mill capacity is to be secured by a combination of primary and secondary crushing; the new stamps will weigh 1,000 lbs. and is estimated to give 10% additional stamp duty, while the new crushing will allow another 8% increase in capacity. The number of stamps is 1-3-5-2-4 or 1-4-2-5-3. A 25 h. p. back-gearred motor drives each 10 stamps. Ratio of water to ore is large, at the Lead mine about 12 tons of water to one of ore. A minimum of about 100 tons of water per day is used; most of which comes from Spearfish and its tributaries, being conveyed over 20 miles in ditches and canals.

Flotation is practiced, quicksilver being fed to the mortar. The stamps are cleaned in rotation, at intervals of about 2 weeks; outside of those of the fourth row, are cleaned and dressed daily.

Fourth row plates are dressed at 2-day intervals. Amalgam is restored three times each month. Oil-fired retorts are used, the resulting bullion being melted in coke-fired furnaces. Loss of quicksilver in retorting is almost nil.

Cost of stamp milling per ton of ore: stamping, 29.2c; amalgamating, normal charges, 2.6c. Supplies and labor rose considerably in 1916.

Regrinding is done in tube mills. In cyaniding the usual methods are closely conformed to. Slime plant costs in 1916 were 8.1c per ton of slime ore. Consumption per ton of slime treated in 1914; sodium cyanide, 0.16 lb.; zinc dust, 0.12 lb.; lime, 3.84 lbs.; hydrochloric acid, 0.39 lb.; costing 0.93c per ton treated; power, 1.15 kw.-hr. A recovery is made of about 94% of the values in the ore: 72% by amalgamation and 22% by cyanidation.

Power and equipment: company has hydro-electric plants at Spearfish and Englewood. New power equipment in 1915 includes a steam-driven electric generating station at Lead, maximum capacity, 4,000 k.v.a.; this in conjunction with the hydro-electric plants, will furnish sufficient power for all purposes except the hoists, which will continue to be operated by steam. A completely equipped central boiler plant of six 600 h. p. boilers was completed in 1915. The B. & M. shaft was equipped in 1915 with a compound condensing hoist, designed to handle two 6-ton skips from a maximum depth of 4,000'. The company operates its own machine shops, carpenter shops and foundry.

The Homestake Mining Co. has long been known for the fine way in which it has looked after the welfare of its 2,350 employees. In 1914, it completed a recreation building, containing a theatre with seating capacity of 1,000, library, swimming pool, gymnasium, bowling alleys, billiard and amusement rooms.

Production: to Jan. 1, 1917, \$147,141,385. Recent production has been

	Tons Milled	Recovered per Ton	Total Cost per Ton
1916.....	1,600,220	\$4.0813	\$3.11
1915.....	1,573,822	4.0848	2.6561
1914.....	1,587,774	3.8797	2.9155
1913.....	1,540,961	4.0148	2.7258

In 1916 Homestake produced tungsten ore from the Golden Summit claim, which netted \$229,916.

IMPERIAL COPPER CO.

SOUTH DAKOTA

Idle. Durbin Groupe, pres.; John O'Brien, supt., at last accounts. Property in Custer Peak district, developed by 175' shaft, reaching permanent water level. Crosscutting will be done to open up the 30" ledge.

Equipment: steam hoist, pump and mill of several hundred tons capacity. Mine reported to show good values in copper in upper workings.

MALONEY-BLUE LEAD COPPER MG. & SM. CO. SOUTH DAKOTA

Sheridan, Pennington Co., So. Dakota. Company out of funds, and property idle. Claims show copper ore in limited amount, but property is without merit as a copper producer, despite extensive workings. See Vol. XI, Copper Handbook. Letters neither answered nor returned.

MOGUL MINING CO.

SOUTH DAKOTA

Address: Terry, So. Dakota. Company treats ore from its own mine, from lessees and other companies. Treated 38,671 tons in 1916.

MONTEZUMA & THE WHIZZERS MINE SOUTH DAKOTA

Address: J. T. Milliken, Deadwood, So. Dakota.

Property: 150 acres, on the divide between Deadwood and Whitesand Cañon, and on Deadwood Creek and West Gold Run, near Lead, Co. So. Dakota. Property shows Algonkian schists, slates and quartzite.

ng gossan, of 45' estimated average width, traceable 3,000'.
ns are the Spiegel No. 1, formerly known as the Whizzers,
No. 5, carrying 2 parallel quartzite reefs, about 300' apart.
ed has chalcopyrite in a gangue of hornblende schist, surface
0.5 to 1.5% copper, up to 1 oz. silver and \$1-\$2 gold per ton.
No. 5 claim has 2 tunnels, one 650' long, and has produced
ons of low-grade fluxing ore, sent to smelters at Deadwood
y, until the latter was closed down. A 22' winze, below the
ve picked samples, assaying \$16.80 gold per ton.
ezuma claim, near West Gold Run, has 2 short tunnels, show-
ng up to 1 oz. silver and \$53.70 gold per ton. Though low
ade, the property is considered promising, because of the
nage assured, but needs big capital to develop. Examined
avorably on by Geo. Huston, of Mullan, Idaho, and Nicholas
alt Lake City.

acquired in 1917 by J. T. Milliken of St. Louis, Mo., who is
e Oro Hondo nearby. Mine was unwatered and diamond
way in July, 1917.

1911.....	10%	28 4 5	1916.....	30%	120 17 3

Total dividends including 1916, paid in all classes of shares, £880,000. Of this, £363,547, amounting to 375 5/0% on shares outstanding at the time of payment, was paid to the ordinary shares, and £101,500, amounting to 97,253% was paid to the founders' shares. The latter constitutes the world's record for profitable copper mining. The total amount paid to the ordinary shares, from 1895 to 1907, inclusive, was £1,000,000.

: nearly 7,000 acres, bought for £68,057, includes the Mary, see and Isabella mines, which are active, and the Calloway mines which are idle. Country rocks consist largely of very metamorphosed, silicified mica schists, of ancient origin. The usively sulphide, averaging about 2½% copper and containing ities of gold and silver, sufficient however to be appreciable

7 mine, which is the principal producer, has heretofore yielded gh the 3-compartment 350' Baxter shaft, and from the 2-com-No. 2 shaft. The new Gordon, 3-compartment 1,180' shaft is principal producer. The richest ore in the mine is on the Ore actually blocked out in the Spring of 1917 is in excess ons, averaging over 2% copper and 17% sulphur.

Tennessee mine, idle since early days, did not commence til 1910. The Thomas, or operating shaft, is 700' deep, has nts and yields about 30 tons per diem of ore containing pper and 15% sulphur. Reserves of some 15,000 tons of ore out 2½% copper and 8% sulphur, had been proven in the 7.

Isabella mine has thus far yielded but a few thousand tons of ore ore, averaging about 0.8% copper and 29% sulphur, has as yet little else than experimental purposes. 5,600' of systematic ing, however, has already revealed over 2,500,000 tons of ith excellent prospects beyond, so that doubtless the property ly, be worked on a considerable scale for acid and iron

t: the power plant at the smelter was enlarged in 1910 and direct to 440-volt, 60-cycle, 3-phase, alternating current, two tinghouse-Parsons turbine generator units being installed, inmpressor for acid plant, etc., totaling about 1,500 h. p. The is located at Isabella on the company's private, standard-, about 2½ miles from the Mary mine, consists primarily of sectional water-jacket blast furnaces. These furnaces are induction motor Connorsville blowers of 300 cu. ft. per revolu-e capacity, charged with Freeland patent electrical charges th electrical traveling crane for the mattes and belt bucket the granulated slag. Since 1902, when heap-roasting was mi-pyritic smelting, introduced into this country from Tas-company, has been employed. The first fusion gives a matte m 12-15% copper and disposes of the bulk of the non-valua-of the ore in a slag containing from 0.2 to 0.3% copper, matte is then raised to 45% copper content by a second fusion urnace, usually undertaken once a week. A small percentage old blast of from 20 to 30 oz. pressure is used in both fusions. te is sold to the American Metal Co., of New York, and m at the Laurel Hill, L. I., or the Carteret, N. J., smelters. vestigations were undertaken to determine the possibility of ric acid from the smelter fumes. In 1906, an experimental was erected but proved unsuccessful, and in 1908, work on amber acid plant was commenced. This plant, which cost was put into operation in less than a year from the time of round for its erection and has since been producing at the 0 to 50 thousand tons per annum of 60° Beume sulphuric he first acid plant to successfully convert sulphuric gases concentrated acid. In 1915 a 300-ton acid concen-

Initial balance sheet, Jan. 3, 1917, shows cash, \$2,779,891; Tenn. C. Co. share a/c (189,215 shares of not less value than \$1,000), \$1,000; State organization tax, \$20,109; paid bankers for underwriting sale of stock, \$400,000. Liabilities include stated capital, \$2,000,000; capital surplus (balance from issue of 200,000 shares at \$16, and 189,215 shares of Tennessee Copper Co. of not less value than \$1,000), \$1,201,000.

Net surplus, Dec. 31, 1916, was \$1,717,883.

Property: 12,640 acres of mineral and timber lands, in the Ducktown district. Ore was discovered and mining first begun in 1850, and the mines were operated regularly by a New York company previous to the Civil War, and during the earlier part of the war, under compulsion by the Confederate Government to supply copper for munitions of war. Company owns the Burra Burra, London, and the Eureka mines. Company also holds under lease 270 acres, including the Polk County mine. The Eureka was formerly operated under lease for iron ore by the Virginia Iron, Coal & Coke Co.

Geology: property shows pre-Cambrian metamorphosed mica-schist, carrying several lines of mineralization with lenticular orebodies. Feas deposits, under development, show extensive gossans, originally having a little rich sooty glance ore under the gossan, which was mined out many years ago. The lenses range 30 to 150' in width, 500 to 2,000' in length, and are of unknown depth. The ore consists of a massive mixture of pyrite and pyrrhotite, with a little chalcopyrite, in a gangue of various metamorphic minerals and quartz, ore ranging from 1.2 to 3% copper, 40% iron, 27% sulphur and 15% silica, with minute quantities of gold and silver. The ore is excellently adapted to smelting, giving very clean slags.

Development: the mines are extensively developed; new work in 1916 totaled 4,090' of diamond-drill holes, and 2,990' of exploration work.

Ore reserves: Jan. 1, 1917, estimated at 3,372,305 tons of copper ore and 2,500,000 tons sulphur ore, not including ore indicated by diamond drilling.

The Burra Burra mine, which is the principal property, is operated through a 1,000' main central shaft, sunk at 75° in the footwall, having its first level 170' below the collar, with succeeding levels at 100' intervals. The mine ending 1916 with 8 producing levels, the 9th and 10th levels were

The entire output in 1916 came from back stopes in the mine 1,000 tons of broken ore was in the stopes Jan. 1, 1917.

orebody of the Burra Burra is 1,200' long and averages 60' 3rd level. There also is the north, or McPherson orebody, a drift from the 3rd level of the main shaft, connecting with on shaft, now down to the 8th level. This shaft is 2,200' N. E. shaft and facilitates working the McPherson orebody, which is long with an average width of 25'. The Hiwassee shaft, 900' main Burra Burra shaft, is sunk to the 8th level, showing a small orebody, of about 200' length and 12' average width. a total of 1,820' of underground development work was done. produced 271,770 tons of ore in 1916.

London mine has a 750' shaft, sunk at an incline of 75°, with 6 levels. developing an orebody of 25 to 75' width and about 600' long 2 to 4% in copper tenor. A total of 392' of underground development in 1916, consisting mainly of raises and drifts. The London mine produced 52 tons of ore in 1916.

Polk County mine has a 485' vertical shaft, with 5 levels opened, an orebody of very irregular shape, up to 120' maximum width, average copper tenor. The Polk mine is held under lease. About 17, about 778' of drifting had been done. Production of the mine was 55,438 tons of ore in 1916.

London mine, idle since 1912, has a shaft 165' deep, at which point will be opened. Diamond-drill borings have shown an orebody 165' width, about 1,000' length, and it is estimated that this orebody contains 1,000 tons of ore developed that average 44% iron, 30% sulphur and 10% copper. This ore is to be treated for its iron and sulphur, and tests indicate that it will make a good non-phosphorous iron ore. A plant to try out the process is planned.

Underground work during 1916 cost \$1.26 per ton.

Equipment at McPherson shaft includes a Nordberg electric hoist, 3 electrically driven 2,500-cu. ft. compressors, a combination bin and crusher building. Crushing plant includes 18x36" Blake crushers and a 36"x33' Robins belt conveyor, used as a picking belt, discharging into storage bins of about 2,500 tons capacity; as far as possible barren rock is removed from the crushed ore by hand picking, and the plant has a daily crushing and assorting capacity of 1,500 tons, ore being of all sizes. There are similar shaft rock houses at the London and Polk County mines.

A power and compressor plant at the McPherson shaft has been built for the Burra and London mines. During 1917 a new steel bin and crusher house was erected at the Burra shaft and the London shaft has been shut down, electricity being substituted.

A private railway connects the mines with the works and is operated at Copperhill with the Louisville & Nashville railway. The standard gauge, with 7½ miles of main line and 8 miles of branch lines. Equipment includes four 105,000-lb Schenectady locomotives, five 65-ton steel tank cars, 74 standard gauge gondolas and 57 hopper bottom ore cars. The company has a repair shop and a machine shop, equipped for making all repairs and capable of rebuilding when necessary.

A large storage shed is located at Copperhill, 1 to 5 miles from the mines of the company, designed and built by J. Parke Channing. On the upper level are storage bins having storage capacity for 10,000 tons of ore, 800 tons of fluxes and furnace products requiring retreatment.

are lacking in the case of the Tennessee. This company has shown both courage and ability in changing the old method of semi-pyritic smelting, and has shown equal ability and greater courage in the installation of its acid plant, by virtue of which a very serious handicap has been turned into a permanent source of large revenue.

This progressiveness received a setback in March, 1916, when the trinitrotoluol plant, built with \$1,500,000 advanced by the Russian Government, was burned down and suit for recovery of the money begun by lender. The quarterly dividend was omitted on this account.

Events in 1916 were briefly as follows: There was a cave at the principal mine, strikes started, and there were other labor difficulties. These reduced copper and acid production. Then serious defects developed at No. 1 acid plant, which had to be practically rebuilt. The T. N. T. plant destroyed by fire has not been reconstructed. The claim of the Russian Government is disputed by Tennessee Copper Co. and the action is pending. Most of the other claims and suits against the company have been satisfactorily settled, that with the International Agricultural Corporation (which see) reported as settled for between \$400,000 and \$500,000 cash. By 1918 Tennessee Copper should be through with all its troubles, and making much larger profits.

TEXAS

During 1917, increased mining activity has prevailed in the State. In West Texas, in the sulphur fields of the Pecos valley, two companies, the West Texas Sulphur and the Michigan Sulphur & Oil Co., have entered the field. The total output of the latter company now is about 35 tons of sulphur per day. The West Texas Sulphur Company is the owner of three sulphur properties and is occupied in perfecting plants to extract the sulphur.

There is considerable mining activity in the eastern part of El Paso county. The Hazel mine, 10 miles north of Allamore, is shipping considerable quantities of high-grade copper-silver ore. Two miles north of this mine are several prospects which are showing up good, regular shipments of copper ore being made to the El Paso smelter. The Little Lightning mine, located in the Quitman mountain district, a few miles west of Sierra Blanca, Texas, is doing well, sending high-grade copper sulphide to the smelter at El Paso.

Several quicksilver companies in the Big Bend region of Brewster county are producing large quantities of quicksilver. Many old openings have been renewed, resulting in increased output. The Colquitt-Tiger Quicksilver Company is one of the heaviest producers. In the Terlingue district of Texas the most successful and heaviest producing companies are the Texas-Almaden Mining Company; Study-Butte Mining Company; the Chisos Mining Company, and the Mariposa Mining Company.

The mining companies of the State are arranged alphabetically.

AMERICAN SULPHUR CO.

TEXAS

Controls Freeport Sulphur Co. mines at Freeport, Brazoria Co., Tex. at mouth of Brazos river on Gulf of Mexico. Deposit covers 500 acres.

Sulphur occurs in pockets and veins, in porous gypsum deposit beneath limestone cap and many hundred feet below surface of ground. Recovery is by superheated water, compressed air raising the melted sulphur to surface. This is the well-known Frasch process.

Equipment: includes 4 plants aggregating 23,800 h. p., one 3,000 h. p. plant built in 1912, and a 4,000 h. p. plant in 1914.

made. Leaching and flotation plants nearby will consume most of the acid.

GARFIELD SMELTING CO.**UTAH**

Office: 165 Broadway, New York. **Operating office:** 714 McCornick Blk., Salt Lake City, Utah. **Works office:** Garfield, Salt Lake Co., Utah. Is the Utah Copper Co. smelter, owned by American Smelters Securities Co., and itself owns the Garfield Water Co. and the Garfield Improvement Co. The smelter has cost, complete, about \$6,000,000. Fully described Vol. X.

Capacity has been almost trebled by additions and metallurgical improvements since 1911.

HANAUER SMELTING WORKS**UTAH**

At Salt Lake City, Utah. Controlled through stock ownership by American Smelting & Refining Co.

KING COPPER MINING CO.**UTAH**

Office: Salt Lake City, Utah. Located on the divide between Emigration and Red Butte canyon, 12 miles E. of Salt Lake City, Utah. Controlled by the Baileys of Salt Lake.

Property: shows 6' ledge of copper carbonates on contact between quartzite and blue limestone. Is developed by 300' tunnel, principally in sandstone. Ore said to carry \$14 in gold, copper and silver.

ROB ROY MINING CO.**UTAH**

Address: P. T. Farnsworth, 164 E. S. Temple St., Salt Lake City.

Mine near Beaver City, Utah, at mouth of Indian Creek Canyon. T. P. Farnsworth, Salt Lake City, owner. Developed to depth of 300'. Reported about to resume operations, 1916. Mine has produced very rich gold ore, but was closed down several years ago when the vein was cut off by faulting. Tunnel was to be driven south in hopes of finding ore-body.

ST. PATRICK MINING & MILLING CO.**UTAH**

Idle. **Office:** 855 Sherman Ave., Salt Lake City, Utah. **Mine office:** Hughes Canyon, Salt Lake Co., Utah.

Officers: D. A. Buck, pres.; H. H. Paterson, v. p.; B. A. M. Froiseth, sec.-treas.

Inc. March 17, 1906, in Utah. **Cap.**, \$50,000; shares 20c par; non-assessable; issued, 180,000 shares.

Property: 6 claims, unpatented, 7 miles from railroad, opened by shaft and tunnel, with about 650' of workings, showing gold and silver-copper ore. Annual assessment work only being done.

UTAH ORE SAMPLING CO.**UTAH**

Office: Salt Lake City, Utah.

Officers: Jesse Knight, pres.; E. P. Ellison, v. p.; W. L. Mangum, sec. with J. W. Knight and R. E. Allen, directors. F. M. Manson, gen. mgr. E. G. Jensen, asst. gen. mgr.; Frank Burgner, gen. supt. at Murray; Geo. Green, supt. at Silver City.

Cap., \$300,000.

Company owns and operates ore-sampling mills at Murray and Silver City, with combined capacity of 500,000 tons of ore annually.

ROCKY MOUNTAIN MINING CO.**UTAH**

1 miles S. W. of Salt Lake City, Utah. Mine near Peterson,

Equipment includes machine drills, water power and a 30-ton mill, with jigs, putting about 4 into 1, giving concentrates with small and variable assays in copper, 35 to 40% lead, 40 to 45 oz. silver and 0.15 oz. gold per ton.

The Albion Group, being developed under lease by R. S. Witcher, covers about 2,000' of the Cardiff lode, intersected by the Greeley, Kate Hayes, Garfield fissures; on the first two a high-grade shoot of black sulphides 4' wide has been opened up on a porphyry and limestone contact; this ore is said to assay 1.7% copper, 22% lead, \$1 gold and 26 ozs. silver

PROPERTIES IN ALTA-COTTONWOOD DISTRICT, UTAH

per ton. Shipments begun in October, 1915, reported to average \$50 per ton and netting about \$30 to the leasers.

No recent returns.

ALTA CONSOLIDATED MINING CO.

Office: 201 Judge Bldg., Salt Lake City, Utah. Mine office: Alta Lake Co., Utah. R. S. Lewis, pres.; R. P. Morris, v. p.; W. E. Wagoner, sec.-treas., with John Dorius, directors. R. A. Brown, cons. mgr.; J. Lewis, mgr.

UTAH

1911. Cap., \$300,000; shares \$1 par, the promoters taking and 200,000 shares being placed in the treasury, of which 100,000 shares were sold at 20c per share; capitalization was in-
 1913, to \$500,000, to provide stock for treasury purposes, issued Jan., 1916. Stock listed on Salt Lake Exchange,
 17 claims in the heart of Alta's mineralized zone between
 the Michigan Utah properties, include several old mines.
 and copper sulphides, highly argentiferous. Ores occur as
 replacement deposits adjacent to crosscutting fissures and
 the bedding and fissure intersections. The Braine fissure,
 an important ore-bearing channel of the camp, known for 2 miles
 on Alta Consolidated ground for 800'. The existence of cross-
 cutting and a porphyry dike are favorable geologic features.
 Length: 5,000' of tunnels exposing a deposit of copper ore 20'
 2% copper, 80c in gold and silver and excess iron, and worth
 the Garfield smelter, 24 miles away. With cheaper freight
 and freight is (\$3.65) it could be worked. Ore occurs at
 on a flat dipping quartzite and limestone. The main working,
 tunnel is 300' below the Brooklyn tunnel and an equal dis-
 tance new Alfred tunnel. All recent development is from the
 west which follows in a general way the Braine fissure. Drifts east
 of this tunnel have raised to reach the ore. Shipments were
 95 from Hoboken lease and from small orebodies encoun-
 tered in company workings. In Nov., 1917, it was reported that a
 copper Prince tunnel had cut good gold-silver ore.
 Representations of mine management have been misleading and
 deceptive. While the property has merit the company has no stock
 and was reported out of debt, Nov., 1916, with \$10,000 in the
 development purposes.

IRONWOOD MINING CO.

UTAH

Salt Lake City, Utah. A. O. Jacobson, pres.; Franklin Webb,
 Secy., sec.-treas.; preceding officers, J. C. Wood and R. S.
 Smith.

Cap., \$250,000; shares 25c par.

28 claims, 18 patented, known as the Argenta group, located
 in the Ironwood district, 7 miles southwest of Park City. Claims
 include field mine on the south and the Cardiff on the north. In
 1917 was planning to start work on a long drainage and ex-
 posed that had already been driven 1,300'.

IRON GOLD MINING CO.

UTAH

F. Ellgren, pres.; L. H. Hardy, treas.; A. Y. Hardy, sec.;
 J. J. Jansen, and E. M. Tyson, directors.

22, 1916, in Utah. Cap., \$100,000; shares 10c par; 600,000
 shares.

34 unpatented claims, in Big and Little Cottonwood dis-
 trict, Salt Lake Co., Utah, shows gold values in a vein up to
 half quartzite contact.

Development: commenced in Spring of 1916.

IRONIA MINES CO.

UTAH

So. Main St., Salt Lake City, Utah. Mine office: Alta,

Cap., \$100,000; shares 10c; assessable; 78,714 outstand-
 ing. Assessment of 1c per share levied October, 1917. Stock listed

Inc. Aug., 1912. Cap., \$100,000; shares 10c par. An assessment of 1 mill called March, 1914. Property is in Tooele county, but as officers do not reply to letters, no details of the company's holdings are available. **UTAH**

Office: 27 Latimer Blk., Salt Lake City, Utah. **Mine office:** Brighton Salt Lake Co., Utah.

Officers: I. A. Benton, pres.; A. L. Headberg, 1st v. p. and gen. mgr.; Wm. Crome, sec.-treas.

Inc. 1896, in Utah. Cap., \$50,000; shares 5c par; assessable; all issued 26 assessments levied to end of 1910. Annual meeting 3rd Monday in May.

Property: 10 patented claims, on Scott Hill, in Big Cottonwood district, 5 miles from a railroad. Ore occurs as sulphides in lime. **Orebody** is from 2" to 2' wide and average assays run from 5-18% copper, 10 oz silver and \$3.50 gold.

Development: About 2,000' of shafts and tunnels.

Property: reported under lease and bond, June, 1917, for \$200,000.

AMERICAN STAR MINING CO.

UTAH

Office: 403 Dooly Bldg., Salt Lake City, Utah. **Mine office:** Eureka Juab Co., Utah.

Officers: Imer Pett, pres. and gen. mgr.; Jas. P. Graves, v. p.; Fred R. Sands, sec.-treas.; preceding officers, Geo. E. Davis and Thos. P. Billings, directors.

Inc. 1909, in Utah. Cap., \$1,000,000; shares \$1 par; issued 599,500 shares.

Property: 2 claims, 15 acres, between the Victoria and Chief Consolidated mines, and touching the Plutus on the east and Eagle & Blue Bell on the west. Mine has about 1,000' of workings, made from the 900' level and 1,000' from the 1,350' level of the Eagle & Blue Bell mine, and is developing through the Eagle & Blue Bell, in 1917. Workings show an ore channel of about 60' width. Property considered promising.

ANTELOPE & PRINCE OF WALES MINING CO.

UTAH

Not incorporated. Controlled by Walker Bros., of Salt Lake City. **Cap., \$1,250,000; shares \$1 par; 400,000 shares held in treasury.**

Property: 9 claims, patented, in the Alta-Cottonwood district, cover a mile of the Prince of Wales fissure, worked years ago to a depth of 900' said to have produced \$1,000,000 from one shoot alone, and was the "bone of contention" in a celebrated lawsuit in the seventies.

Development: 930' incline shaft and 600' "Annie" tunnel. In 1880 lessees continued the tunnel several hundred feet, cutting the vein 100' below bottom of shaft. Vein where cut is said to have shown good ore containing silver chloride and galena. Company plans to continue the work of the lessees.

BANKERS MINES CO.

UTAH

Office: J. A. Maxfield, Maxfield Apts., Salt Lake City, Utah.

Officers: Noble Warrum, pres.; J. A. Maxfield, v. p.-sec.; A. D. Williams, treas.; preceding with M. B. Connell, B. Y. Golding and Agnes Nebeker, directors.

Inc. November, 1916. Cap., 1,000,000 shares; 10c par; 500,000 shares in treasury.

Property: 39 claims, about 780 acres, adjoins the Laeger Mine in Cottonwood Canyon, and is near the old Maxfield mine.

Development: by a tunnel which is expected to cut the Laeger vein at 900' in. At 60' in, (Jan. 1917) tunnel was reported to show small quantities of galena.

BIG COTTONWOOD CONSOLIDATED MINING CO.

UTAH

Office: Boston Bldg., Salt Lake City, Utah. **Mine office:** Brighton

J. F. Dunn, pres.; J. E. Johnson, v. p. and gen. mgr.; J. P. [unclear]; preceding officers, Judge Chas. C. Dey, F. J. Fabian, [unclear], directors.

, 1909, in Utah. Cap., \$250,000; shares 25c par; assessable; issued; listed Salt Lake Exchange. Annual meeting, 1st October.

for year ended Oct. 1, 1917, shows total expenditures of [unclear], including \$13,806 for the Victor tunnel in 1916-17. Cash on hand to \$5,058.

11 claims in South Fork, Big Cottonwood district, Salt Lake ferrous and argentiferous lead and copper ore on which work

Driving the Victor crosscut tunnel, now in 1,400', to cut in lime and quartzite. No ore reserves developed as yet. prospect.

COTTONWOOD COPPER & GOLD MINING CO. UTAH
Brighton, Salt Lake Co., Utah.

Col. Nicholas Treweek, pres. and gen. mgr.; W. Mont Ferry, and Burch, sec.-treas.; preceding officers, J. E. Galligher and [unclear], directors, at last accounts.

Utah. Cap., \$1,500,000, increased 1906, to \$3,750,000; shares \$5 assessable. Is operated as a close corporation.

140 acres, adjoining the Mountain Lake Consolidated Mining northeast, and carrying same ore zone, near the head of Big Canyon, and also in the Snake Creek district.

Development: by a shaft, showing ore assaying up to 8% copper, with 1 silver values, and a long tunnel with about 2,000' of work. Apparently, has considerable bodies of sulphide ore, averaging 10% copper and \$2 per ton in combined gold and silver values.

COTTONWOOD COPPER & GOLD MINING CO. UTAH
Newhouse Bldg., Salt Lake City, Utah.

W. A. Parry, pres.; H. B. Cole, v. p.; H. H. Harris, sec.-treas., [unclear] and G. R. Halstead, directors.

1916, in Utah. Cap., 600,000 shares; 25c par; 240,000 shares August, 1917. Stock listed on Salt Lake Exchange, but trading February, 1917, by the listing committee.

24 claims, 480 acres, in Big Cottonwood Canyon, reported to contain defined fissure veins, carrying copper, silver and iron manganese prospect.

COTTONWOOD COPPER & GOLD MINING CO. UTAH
Boston Bldg., Salt Lake City, Utah.

W. H. Vahrenkamp, pres. and gen. mgr.; Thos. Austin, v. p.; [unclear], treas.; preceding officers, S. S. Stillman and B. F. Fitzmaurice; R. B. Garff, sec.; A. Boulais, supt.

1909; shares \$1 par; assessable; 3 assessments levied; last one in 1917.

the old Maxfield mine on the north side of Cottonwood in Big Cottonwood district, 3 miles north of the Cardiff mine, by auto from Salt Lake City, was taken over on a \$250,000 lease in 1914. The Maxfield mine, discovered in 1872, is one of our own early day mines; it is credited with a production of over 100,000 tons of ore in gold, silver, copper and lead. The present management have spent \$70,000 in 1915, in unwatering and equipping

where the water level is silver-lead, carbonate; below, it is galena, silver and copper. Orebodies vary in width from 6" to 24'.

Development: mainly by tunnels. The mine is about worked out above the main tunnel which was driven north and west, a total of 4,000'. New management plans systematic development work including the sinking of the 1,900' incline shaft.

In Jan., 1917, a new strike was made at 1,900'. The ore was followed for 20' and 700 tons were shipped, averaging \$65 per ton. In Sept., 1917, a narrow vein of rich lead-silver ore was cut at a distance of 1,100' in the tunnel. The ore will average \$165 per ton, it is said.

Equipment: includes 2 air compressors, pumps and electric power.

Production: shipped steadily in 1916. Ore from 1,800' level averaged \$50 a ton.

BRANBORG MINING CO.

OD ATLANTIS MINING CO.

Vermont Bldg., Salt Lake City.

: Alta, Utah.

Officers: Samuel Neff, pres.; R. O. Dobbs, v. p.-gen. mgr.; J. H. Moss, sec.-treas.; with Sol Snider and R. C. Middlewood, directors.

Transfer office: 521 Vermont Bldg., Salt Lake City. Annual meeting in May.

Inc. July, 1915, in Utah. Cap., 1,000,000 shares; 10c par value; 750,000 issued, non-assessable.

Property: 12 claims, 115 acres, of which 6 are patented in the Little Cottonwood district. Ore which carries lead, silver, gold and copper occurs in shoots at the intersection of two orebearing fissures with a thrust fault contact having a limestone foot wall and a quartzite hanging wall. This contact courses South 15° East and dips 25°.

Development: by tunnels that are 175' to 450' in length, having 1,500' of underground workings with a depth of 400'. During 1916, 191' of crosscutting was done.

It is the plan of the company to crosscut to the thrust contact as has been done at the Cardiff mine two miles north.

COTTONWOOD KING MINING CO.

UTAH

Office: 519 Newhouse Bldg., Salt Lake City, Utah.

Mine: Big Cottonwood Canyon.

Officers: S. A. Parry, pres.; A. Anderson, v. p.; H. H. Harris, sec.-treas.; preceding, with H. P. Hucy, G. H. Webb, C. R. Halstead and J. W. McLaughlin, directors. A. B. Gattrell, mgr.

Inc. July 2, 1915. Cap., \$150,000; shares 10c par; 150,000 shares in treasury. Late in 1916 company levied an assessment of 1/2c per share which should net \$4,419. Listed on Salt Lake Exchange.

Property: 28 claims, 560 acres, and a bond and lease on the Giles property of 31 claims, located between Big Cottonwood and Park City, Utah. Bond calls for \$600,000, with no payments due for 2 years.

All the property of the Big King Mining Co., bought, 1917, by exchange of stock share for share, property 52 claims, 1,040 acres, adjacent to Cottonwood King ground; also a bond and lease on Giles property, 31 claims.

Development: 2,100' of tunnels and 187' shaft with 500' of workings. Management states that on account of faults, 600' of development done in 1916-17 proved disappointing. In October, 1917, company was sinking a winze. Property is still in a prospective state. It adjoins the Daly Judge and Silver King Coalition of Park City.

COTTONWOOD METAL MINING CO.

UTAH

Office: 503 Utah Savings and Trust Co. Bldg., Salt Lake City.

Mine office: Alta, Cottonwood Mining District.

Officers: W. M. Ferry, pres.; S. J. Truman, sec.-treas., preceding with E. E. Watrous, E. P. Watrous, and H. R. Watrous, directors.

Inc. in Utah. Cap., \$1,000,000; shares 10c par. Outstanding 440,000 shares paid for property and organization expenses. The balance is to provide funds for development work.

Property: 38 full claims, 760 acres, known as the Watrous group, in the Big Cottonwood district. Property is said to be crossed by six large fissures which cut the series of sandstone, shale, quartzite and limestone. These fissures run N. 35°-40° E., dip 60° to the N. W., and are cut by E. and W. fissures. Orebodies are found at these intersections especially in the white lime. The deposits of the district are bedded deposits by replacement.

Development: by 380' tunnel that has cut first fissure. It is the plan of the company to continue the tunnel to cut all the fissures.

Equipment: 4 drill compressor, blacksmith shop, and hoists.

Management frankly states that property is a prospect and that they will spend the money in honest development. Prof. J. H. Woodhead of Salt Lake says that there is much first-class territory to prospect.

includes 11 claims in Little Cottonwood district and the adjoin-
l Joab Lawrence groups, bought 1915 in exchange for 352,000

The company has a lease on the Emma mine owned by the
res Co., which see.

the Old Emma mine was a famous early-day producer, having
6,000,000 worth of lead-silver ore in the 60's and 70's, from
evel. It was sold to the Emma Silver Mng. Co., for \$5,000,000
wards the orebodies appeared worked out, or cut off by a fault.

tempts to find the orebodies below the fault, the mine lay idle

rzig made a geological study of the property with the deduction
l a faulted portion of the Old Emma bonanza orebody, where-
drilling was started. Under direction of J. J. Beeson, geologist,
was located, 1916, at about 250' below where it had been cut
and the displaced segment of the orebody opened up.

ent: by 1,700' tunnel, 400' shaft and drifts on several levels.

t is diamond drilling in 1917 in the hopes of locating the
nsions of 4 other orebodies, all presumably cut off by the
t. In November a mineralized zone 30' wide was passed through,
ances of silver.

t: from Jan. to Nov. 1917, 2,400 tons were shipped with average
0 a ton. Shipping charges \$2.50 per ton to Midvale smelter,

Inc. July, 1915. Cap., 1,00,000 shares; 1c each. Stock listed on Salt Lake Exchange.

Property: the Logger mine in Big Cottonwood canyon, adjoining the Maxfield mine, shows a 1' fissure vein, developed by a 350' adit and a vein now being sunk on the vein from the 200' point. Assays said to return \$14.6 gold, 13.4 oz. silver and 11% copper.

A lower tunnel was started 100' below upper tunnel, 1916, and is reported to have cut the vein seen above with several other small veins of ore, assayed from \$50-\$240 per ton in copper, gold, and silver.

Developing energetically, 1917, and expecting to start production.

MAXFIELD MINE

UTAH

Operated by Boston Development Co.

MICHIGAN-UTAH CONSOLIDATED MINES CO.

UTAH

Office: 411 Felt Bldg., Salt Lake City, Utah. **Mine office:** Alta Salt Lake Co.

Officers: Norman W. Haire, pres. and gen. mgr.; H. R. MacMillan, v. p.; N. A. Robertson, sec.; L. H. Farnsworth, treas.; with Frank B. Cook, C. A. Gillette, and R. J. Evans, directors. R. A. Brown, cons. eng.; Ed. Cook, foreman.

Inc. April 26, 1915, in Utah, as a reorganization of the bankrupt Michigan Utah Mining Co. Cap., 1,500,000 shares; 25c par; assessable; 1,354,608 shares issued. Listed on Salt Lake Exchange. Columbia Trust Co., registrar. Annual meeting, 2nd Monday in February.

Gross earnings in 1916 were \$125,985, all from ore sales.

Property: 72 claims, 42 patented, 1,200 acres, including a millsite, in the Big and Little Cottonwood mining districts. Claims show Paleozoic sediment cut by granite, the ore occurring in fissure veins in limestone, and as contact metamorphic deposits between limestone and granite, having a general strike of N. 65° E., and a dip of 32°. There are 5 distinct and parallel veins showing average widths of 2½' and traceable 5,000', reported to carry copper, lead, zinc, silver and gold values, averaging \$25 per ton. Ores are carbonated at and near surface, succeeded below by sulphides.

Development: principally by tunnels, all workings being in the ore and carbonate zones, but sulphides are proven to occur in depth by workings of the Columbus Consolidated Mining Co., near by. Total underground workings aggregate over 50,000', about one-half being represented by tunnels, drifts and crosscuts that are all in ore, raises and winzes aggregating 10,500' additional. Ore is transported by aerial tramway to Tanners flat, 5 miles from the mine thence by narrow-gauge railway to Wasatch, where connection is made with the Salt Lake & Alta standard gauge road which runs to the Midvale area. The tram has a maximum capacity of 200 tons daily.

The Copper Prince tunnel has been driven under property about 1½ miles, exposing several large orebodies that are soon to be mined, the Lavinia vein showing well in Oct., 1917.

Equipment: includes two 90-h. p. hoists, and everything necessary for mining 150 tons daily. Air is supplied by the Wasatch Power Co. from Big Cottonwood creek.

Buildings include machine shop, carpenter shop, several dwellings, a smithy, located underground as a measure of protection from snowdrifts, and are of frequent occurrence in this region.

Production: in 1916: 154 oz. gold, 20,816 oz. silver, 1,112 lbs. copper, 916,851 lbs. lead, worth \$235,732 gross. Shipping 150 tons daily.

As much ore was shipped in first half of 1917 as in second half, and is being moved in October.

Part of the property is owned by the Michigan Utah Mining Co., a close corporation, which see.

Officers: Wm. Chipman, pres.; Hugo B. Anderson, v. p.; J. Trac Wootton, sec.-treas.; J. H. Wootton, mgr., with John Hower, directors.

Inc. Feb., 1917, in Utah. **Cap.**, \$50,000; shares 5 cts. par; assessable; 515,000 shares outstanding. Annual meeting, 2nd Tuesday in January.

Property: 7 claims, 140 acres, in American Fork canyon, Utah, claim to carry a fissure vein of lead sulphide and iron carbonate, with a 4" vein of lead ore, assaying about \$25. Developed by tunnel, 90' long, to be extended 200' during 1917. Company has no equipment.

BAY STATE MNG. & DEV. CO.

UTAH

Address: American Fork, Utah Co., Utah.

Officers: Geo. B. Tyler, pres. and mgr.; J. H. Wootton, v. p.; J. Storrs, sec.-treas., with A. Chipman and E. J. Bennett, directors.

Cap., \$1,000,000; shares 5 cts. par; assessable; last assessment, No. 5, of \$1,000,000 called June 14, 1917. Stock listed on Salt Lake Exchange. Financial statement to April 20, 1917, shows receipts from stock sales of \$7,990 and loans \$1,000, with disbursements for preceding year of \$9,160 and current bills of \$1,333.

Property: at American Fork canyon, 22 claims, unpatented, 18 miles from the railroad. Company claims to have 1,000 tons of ore on the dump averaging 5 to 8% lead and 8 to 10 oz. silver, and 210 tons of ore averaging \$75 per ton.

Development: is by a tunnel over 320' long with about 1,065' of workings.

Address: A. T. Sanford, Boston Bldg., Salt Lake City, Utah. John C. horn, mgr.

Cap., \$100,000; shares 10 cts. par; 960,000 shares issued.

Property: 250 acres adjoining the Live Yankee group on the north in American Fork canyon, Utah. The Live Yankee and other veins are said to cross the claims.

Ore: occurs in fissures in quartzite and in contact between lime and quartzite, carrying gold, copper, silver, and lead.

Shipped 1 carload in September, 1914, running 1.38 oz. gold, 10 oz. silver, 5.8% lead, and 3.45% copper.

Development: work in progress, and in Oct., 1917, management contemplated erecting a mill next spring.

BOG MINING CO.

y 1903, in Maine, practically as successor of Majestic Copper ject Copper Mining & Smelting Co. Cap., \$5,000,000; shares 10c par, 808,795 shares.

Officers: Matthew Cullen, pres.; J. L. Rawlins, v. p.; Athol Rawlins, sec.-treas.; G. S. Wilkins, supt.

Inc. May, 1907, in Utah. **Cap.**, \$1,000,000; shares \$1 par; assessable; issued, \$900,000. Listed on Salt Lake Exchange.

Dividends: \$108,000 to Sept., 1917, at rate of 2½c per share. Company does not reply to requests for information.

Property: 7 claims, including the Moscow mine in the Star district, 7 miles from a railroad, covers about one-half mile of the strike of an ore zone 50' to 60' wide. Ore mainly silver-lead, with some copper and zinc. The Moscow mine is one of the oldest in the district, having been worked over 30 years ago.

Development: tunnels and shaft to the 1,400' level. A winze is being sunk below this level to develop a new ore shoot, assaying 50 oz. silver and 50% lead; and a raise on the same is in good ore.

Shipments: have been fairly consistent during the past year. In June, 1917, output was 1,000 tons, averaging about \$30 per ton.

Company employs 60 men. Electric power is used.

O. K. EXTENSION MINING & REDUCTION CO. UTAH

Office: 222 D. F. Walker Bldg., Salt Lake City, Utah. **Mine office:** Milford, Beaver Co., Utah.

Officers: A. J. McMullen, pres. and gen. mgr.; T. M. Farrell, v. p.; Chas. A. Weaver, sec.-treas.; preceding with R. H. Greenhalgh, directors.

Inc. Nov., 1899, in Utah. **Cap.**, 300,000 shares; 3c par; assessable; issued, 125,000; total assessments to date, \$15,363. Annual meeting 2nd Tuesday in October.

Lands: 6 claims, 3 patented, 120 acres, near the Majestic mine, in the Beaver Lake district, show monzonite and quartz-porphry, carrying 2 fissure veins, of 5 to 24' estimated average width, traceable 150'. Opened by 7 pits and shafts of 15 to 510' depth, and a 150' tunnel, with 1,045' of workings, showing chalcopryite estimated to average 2% copper. Inactive except for annual assessment work.

ORPHAN BOY MINING CO. UTAH

Idle. Milford, Utah.

Officers: James R. Craig, pres.; W. D. Williams, v. p. and mgr.; Chas. A. Doe, sec.-treas.; with M. R. Williams and P. J. Evans, directors.

Property: in Star district, 20 miles S. W. of Milford, Beaver Co., Utah, shows limestone, cut by quartz monzonite, with ore in veins and replacements. There are 11 claims, adjoining the Red Warrior and Mowitz mines, developed by 500' shaft with 1,200' of tunnels and workings from which considerable high-grade ore has been shipped. Vein, though narrow, has bodies of lead-carbonate ore carrying a little copper. Presumably doing annual assessment work.

PALOMA EXTENSION MINING CO. UTAH

Office: 218 Judge Bldg., Salt Lake City, Utah. **Thos. Marionaux,** pres.; Lorin Hall, sec.

Inc. in Utah. **Cap.**, \$50,000; shares 5c par; assessable; 645,000 shares outstanding. Listed in Salt Lake City.

Property: 300 acres in Star mining district, Beaver county, shows N. E. fissures carrying silver-lead-copper ore. These fissures cross contacts between limestone beds running N. and dipping E., quartzite that runs E. and dips N., and a granite or quartz monzonite. Ore occurs where the contacts are crossed by the fissures.

Property a prospect.

PALOMA GOLD AND SILVER MINING CO. UTAH

Office: Judge Bldg., Salt Lake City, Utah. **Mines and works:** Moscow, Beaver Co., Utah.

M. P. Braffet, pres.; Chas. W. Olson, v. p., with W. Scowcroft, and B. F. Caffey, directors; J. H. Braffet, sec.-treas.; C. J. Graff,

Utah. **Cap.**, \$100,000; shares 10c par; assessable; last assessed Aug., 1917. Stock is listed on the Salt Lake Exchange.

14 claims in Star district, near Moscow, said to cover 3,000' stone-monzonite contact intersected by 2 fissure veins, carrying ad and copper ore.

Development: by 500' of trenching and 900' incline shaft, which was started in June, 1917, and will be used as a main working shaft.

IVE MINING CO. **UTAH**
229 South West Temple St., Salt Lake City, Utah. Mine near
Ver Co., Utah.

L. B. Bohn, pres.; I. Lessing, v. p. and mgr.; C. T. Mixer, and cons. engr., Box 56, Salt Lake City; preceding, with F. J. C. Crismon and Jas. Barrett, directors.

Filed Aug. 20, 1906, in Utah. **Cap.**, \$250,000; shares 50c par; assessable; Total assessments to date, \$10,000.

6 claims, 80 acres, patented, in the Star district, 8 miles from rrying argentiferous copper and lead ores. The mine has a shaft, with about 1,000' of workings, developing a 3' vein, said assaying up to 8% copper, 35 oz. silver and \$1 gold per ton. shipments have been made.

Lease in 1916, but idle in 1917.

IOR MINING CO. **UTAH**
Providence Bldg., Duluth, Minn. **Main office:** Milford, Beaver

Leonidas Merritt, pres.; Alfred Merritt, v. p.; W. H. Borgen, ibenack, treas.; preceding with Jas. T. Hale, John E. Merritt, nan and W. F. Acker, directors; Wilbur J. Merritt, supt.

Filed Jan. 25, 1908, in Minnesota. **Cap.**, \$250,000; increased Jan., 1911, , and again increased, Jan., 1917, to \$600,000; shares \$1 par; e; issued, 210,000. Shares are listed on the Duluth Stock Ex- few York curb. Annual meeting, 2nd Tuesday in January.

1 claim, a silver-lead mine comprising 8 claims, 1 patented, 95 acres, istrict, eight miles from the Salt Lake Route. The claims es occurring along the bedding planes of limestone, the one ment said to have an average thickness of 6', width of 50' epth of 600', and carries ore estimated by the management to lead, 1% zinc, 18 oz. silver and 25c gold per ton. In the the mine has shown ore assaying 12% copper, 1% lead and 8 ton.

Development: by an 812' vertical shaft with levels at 500' and 675' and unk on the vein from the 500' level. There are also numerous hafts and tunnels, the mine having about 3,000' of old and workings. These workings were estimated to show 20,000 with about 10,000 tons blocked out for stoping by the former

The mine was operated from 1870 until 1889 and was re- y this company. The shaft is to be deepened to 1,000'. New n concentrated on the 500' level, 1917.

Property of the Mowitza Mining Co., adjoining the Red Warrior, early in 1917.

It is noted that the mine has the same N.-S. ore channels mined in nine, whose workings of equal depth are about 1,500' distant. The hoist is good for 1,500' and a 3-drill compressor.

July 7, 1917, and had 125' to go to cut intersection of E. W. and N. S. fissures at a depth of 200'. Work is to be resumed at the 470' shaft, where some high-grade copper was reported in 1915.

VICKSBURG GOLD AND COPPER CO.

UTAH

Mine near Milford, Beaver Co., Utah, leased June, 1916, to United States Mines Operating Co.

Property: 5 claims in Star district, covering 4,000' of limestone belt cut by ore-bearing fissures.

Development: shallow, but ore shipped May, 1916. Property will be equipped with machinery.

VOLUNTEER MINING CO.

UTAH

Letters returned in May, 1917, from last address. Milford, Beaver Co. Utah.

Officers: W. C. Albertson, pres. and gen. mgr.; W. H. Hayenor, v. p.; S. G. Cole, sec.; H. E. Havenor, treas., asst. sec. and engr.; preceding with Geo. Havecamp, directors.

Inc. in Utah. Cap., \$50,000; shares 10c par; non-assessable; issued \$25,550. Annual meeting, 2nd Monday in May.

Property: 6 claims, unpatented, 600 acres, in the North Star district, seven miles from the Salt Lake Route. Claims show contact deposits between limestone and intrusive porphyry. The mine has only two 12' pits and a 70' tunnel. Company reported March, 1916, to be operating a lease on the north end of the Lakeview Mining Co.'s property.

FRISCO OR NEWHOUSE DISTRICT

CALDO MINING CO.

UTAH

Company has a lease on the dump of the Horn Silver Mine at Frisco, Beaver county, Utah, said to contain 200,000 tons of silver, lead, zinc tailings. Operates a 200-ton flotation mill.

CEDAR TALISMAN CONS. MINES CO.

UTAH

Offices: 515 Newhouse Bldg., Salt Lake City and Milford, Beaver Co. Utah.

Officers: S. S. Pond, pres. and mgr.; F. B. Sherwood, v. p.; Geo. Baglin, sec.-treas.; with H. M. Chamberlain, Geo. Lynch and G. L. Bernis, directors.

Inc. March, 1909, in Utah, as a merger of the Cedar Mining Co. and the Talisman Mining Co.; latter company described in The Copper Handbook, Vol. XI. **Cap.,** \$500,000; shares 50c par; assessable. The 19th statement was levied on March 15, 1917, of 1c a share. All outstanding stock transferred at company office. Listed in Salt Lake City.

Financial statement, Jan. 1 to April 30, 1916, shows profit of \$22,000. At this time management changed and in report, May 1 to Sept. 30, 1916, operating loss was given of \$8,193 on this period, or net loss of \$5,193. Management has been changed again and reports are not available.

Property: 13 claims, 8 patented, 250 acres, in the Star mining district, Beaver Co., Utah. **Ore:** carbonate of lead, copper and zinc, with some gold-silver values.

Development: several thousand feet of shafts and underground workings, the lowest on the 1,000' level of the shaft. Recent work has been done on the 1,000' level. The drift is out 267' and will be consolidated the two main shafts. Estimated cost of consolidation of \$130,000, but for the importance. Company also

ll average 8% lead, 14% zinc, 7 oz. silver. In July, 1917, the s leased for 2 years to H. S. Joseph, who started shipping d 10 oz. silver ore in August.

e necessary for the company to find a method for treating this re before it can be realized upon and a 10-ton electrolytic zinc een proposed for the purpose. Some high-grade zinc ore is larly.

power was substituted in 1915 for steam power whereby a ing of \$190 is claimed.

WEALTH MINES CO.

UTAH

420 Herald Bldg., Salt Lake City. Mine office: Newhouse, Utah.

Wm. M. Bradley, v. p.; W. T. Aiken, sec.-treas.; Newton A. i. mgr.; preceding with C. H. Strevell and Jas. H. Paterson,

v., 1906, in Wyoming. Cap., \$600,000; shares \$1 par:

: the Commonwealth mine, 7 claims, in the Star district, ad / Bryan and Progressive mines. Claims show Topache lime-trusive sheets of altered green porphyry, cut by fissures, with mineralization along fissures and outward along certain lime-

Considerable lead ore was produced from surface workings and the Nellie claim has copper sulphides in its bottom work-beaver claim has ores giving average assays of 13.2% copper silver per ton, with more or less lead.

ment: by a 1,400' tunnel, with back of about 300'. Said to have assaying up to 4% copper, 20% lead and 60 oz. silver per ton.

ment: includes gasoline power and an air compressor. Develop-but little ore, mostly low-grade, and claims are not especially cording to geological reports.

MOUNTAIN MINE

UTAH

by Samuel Newhouse, Newhouse Bldg., Salt Lake City, Utah. J. McMullen, Milford, Utah.

g expenses for year were \$1,500 and gross earnings, \$795.

: 7 patented claims, 125 acres, in Beaver Lake mining district, Utah.

Ores containing gold, silver, iron and copper occur as con-in shoots coursing E.-W. with a dip of 70° to the north with foot wall and a limestone hanging wall. Ore is copper oxides d iron, containing 4% copper by general average of carload

ment: by a shaft 100' vertical, then 150' incline and 620' of is worked by overhead stoping.

ment: 15 h. p. gas hoist.

ment: 60 to 70 tons in 1917. Ore reserves are estimated at Lessee expect to increase production in 1917.

MINES CO.

UTAH

Delivery Place. Mine office: 306 Templeton Marris, mgr.

shares \$1 par; owned by the

of the fault and cut by another fault continues on the N. S. south of the vein.

Favorable reports made 1906 by Chas. Calcolk Jones and by D. P. Rohlfing, former manager of Hornsilver Mine at Frisco.

Development: active in 1904-05, was resumed 1913, but stopped 1914. It comprises the 500' Buckbee and 600' Southside tunnels, 125' Cliff shaft with 200' drift work, 130' Tasor shaft and various lesser openings. The Revenue tunnel is to crosscut all these veins in depth and supply the mill.

Equipment: includes 300 cu. ft. compressor, Corliss steam engine, etc., but no mill machinery. Property promising.

SOUTH UTAH MINES & SMELTERS

UTAH

Office: 165 Broadway, New York. **Mine office:** Newhouse, Beaver Co., Utah.

Officers: Hugo Hoffstaedter, pres.; H. G. Robinson, sec.-treas.; with J. F. A. Clark, E. P. Earle and Samuel Newhouse, directors; W. L. Heidenreich, gen. mgr.; R. J. Tullock, mill supt.

Inc. Feb. 28, 1910, in Maine, as successor of Newhouse Mines & Smelters. **Cap.,** \$4,300,000; shares \$5 par; issued 645,800 shares. **Debentures:** \$1,071,000 of 6% 20-year income bonds, convertible into stock at par, remaining from a \$1,500,000 bond issue put out by the Newhouse Mines & Smelters. Interest on bonds is said to be payable annually, but only $\frac{1}{2}$ and when earned, and then out of net profits of the year's operations. The old company defaulted in interest on its bonds, and the property was bought for \$500,000 under foreclosure, old shareholders being given stock share for share, plus a payment of \$1 per share for new stock. The reorganization brought about \$600,000 into the treasury, of which all but about \$200,000 was required to liquidate the floating debt of the old company. The annual report for year ended June 30, 1912, showed an operating loss of \$31,113, increasing a former deficit to \$118,353, and gave current assets as \$179,500 and current liabilities as \$33,723. No report has since been issued. Listed on New York Curb. Equitable Trust Co. New York, transfer agent; Windsor Trust Co., registrar. Annual meeting, third Monday in October. A dividend of 50c per share, amounting to \$300,000, paid Aug. 31, 1907, by the Newhouse Mines & Smelters.

Property: 13 claims, patented, 201 acres, with miscellaneous holdings, including the Midvale placer, 168 acres, water rights at Wah Wah springs, mill, town sites and grazing lands, total holdings of 7,882 acres.

The mineral property carries about 1 mile of the strike of the Cactus vein. The Cactus mine shows monzonite-porphry country rock, near a limestone contact, and ore is essentially an irregular mass of brecciated monzonite, carrying copper impregnations, including some oxidized ore in the upper workings, but at depth mainly chalcopryrite, associated with pyrite, averaging about 1.15% copper and 25c per ton in combined gold and silver values. Although the average grade of ore is very low, there is some high-grade sulphide ore, mainly chalcopryrite, assaying up to 15 and even 20% copper, but the quantity of such ore is very small.

The mine has practically no ore reserves, though there is an outcrop between the 700' and 800' levels containing about 100,000 tons of 1.8% ore, with an additional 100,000 tons of probable ore. A new outcrop exposed on the 600' level for a short distance was said to show ore averaging about 1.8% copper.

Development: by two working shafts of 100' diameter, sunk at 100' intervals, and connected on the 600' level.

ing a grade of 5%, laid with 30-lb. steel rails. Trammings is electric locomotives, hauling trains of 21 cars. The tunnel is lined throughout, and cuts several cupriferous veins before reaching an orebody. The mine has upwards of 4 miles of workings. Developments are between the 300' and 700' levels, and the 600' level the principal showing of ore, was said to have an orebody of length and about 125' length, carrying ore of a little better than 1%

plant: includes 200 h. p. steam plant, with a 150 h. p. hoist good for a 40-drill Ingersoll-Sergeant air compressor, both operated electric. There also is an auxiliary electric hoist on the second level.

The mill and mill are connected with the Salt Lake Route.

The 1,000-ton mill is 100x400' in size, in two 500-ton duplicate units designed on the unit plan, to allow for future expansion. The mill, which is the concentrator proper, contains a 15-ton Whitney crane, and the power plant. Equipment includes three 10x24" rolls, 4 sets of rolls, 1 Huntington mill, 22 Hartz jigs, 48 Wilfley jigs, 8 Wilfley slimers, 16 Callow tanks and Sherman classifiers. Ore is received in 1,000-ton steel bins, drawn by belt conveyors, equipped with plunger feed, and 10 elevators, of which there are 2 for each section, 1 for dry ore. Concentration is about 12.5 into 1. A flotation unit installed in 1914.

The power plant includes five 350 h. p. Babcock & Wilcox boilers, a condenser and a 165' steel smokestack of 8' diameter. The boiler is held in reserve, machinery being actuated by electric energy, drawn over the lines of the Telluride Power Co. There are two Westinghouse-Parsons turbines, making 3,600 r.p.m. Water is drawn from 6 large springs, at Wah Wah, having a flow of 100 gals. per minute.

Production: for fiscal years ending June 30 was 5,670,993 lbs. fine copper, 2,272 oz. silver and 2,272 oz. gold in 1906; 7,244,179 lbs. copper, 48,595 oz. silver and 1,721 oz. gold in 1908; from Sept. 1, 1910, to June 30, 1912, produced 3,294,113 lbs. copper, 43,691 oz. silver and 2,450 oz. gold, secured from 34,062 tons of ore, of which 701 tons were smelting ore and 34,062 tons of ore, giving an actual net extraction of about 13 lbs. fine copper, 1.11c gold per ton. During 3 months ended Sept. 30, 1912, produced 674,987 lbs. copper. The mine was closed down owing to lack of capital from Sept., 1912, to April, 1913. From April, 1913, to June, 1914, production was 3,294,113 lbs. of copper. Mine was again closed down,

because costs have been estimated at 90c and milling costs at 50c per ton. It is obvious that the Cactus is an exceedingly low-grade mine and requires careful handling to earn substantial profits.

BEAVER COUNTY

scattered districts of Newton, Beaver, Jarloose, or Lincoln, (See others under Milford and Frisco districts.)

THE COPPER CO.

UTAH

mine: Beaver, Beaver Co., Utah. Sherman McGarry, supt. in Utah. Cap. \$50,000; shares 10c par; assessable. Property abandoned in 1914, owing to lack of capital, but development of work resumed in 1914, and property reported under lease to Senator Joseph C. Eastman, Eastern capitalists, 1916.

BINGHAM DISTRICT

ALPINE GALENA MINING CO.

UTAH

Owned and operated by Alpine and Provo men.

Property: in Alpine Canyon, near Bingham, Salt Lake Co., Utah, contains ferruginous lead ore, in bunches in black limestone.

Development: by 312' tunnel and incline shaft. Plans to drive tunnel to reach blowout 350' below surface. Assessment called in 1914 in order to provide funds for further development.

BINGHAM AMALGAMATED COPPER CO.

UTAH

Office: 61 Commercial Block, Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah.

Officers: B. F. Grant, pres.; L. A. Marks, v. p.; F. R. Snow, sec.-treas.; W. P. Davis, gen. mgr.; preceding officers, R. E. Miller and Dr. A. McCurtain, directors. E. W. Jones, supt.

Inc. Jan. 7, 1907, in Utah. **Cap.,** \$5,000,000; shares \$5 par; non-assessable; issued, \$3,500,000. Shares are listed on the Salt Lake City Stock Exchange.

Property: 24 claims, 300 acres, patented, known as the Illinois and Copper Glimmer groups, carrying 7 mineralized veins. The principal orebodies exposed in the Bingham Amalgamated are on the same vein as the Congor orebodies and of about the same character of ore. Vein is 15 to 40' thick, developed for several hundred feet in depth, but the water and high cost of wagon haul stopped further development. In a tunnel on the west side of the property a 20' vein shows streaks of good ore all through it. The Montana Bingham tunnel cuts this vein about 100' deeper, 3,945' from the portal, and opened it for 100'. Samples taken from this vein said to run from 3.2-6.5% copper, 7 oz. silver, \$1.20 gold and 25% iron. Development work resumed the latter part of 1915 after an idleness of several years.

The Illinois has a 640' shaft, with a 6 to 9' vein carrying a 2' pay-streak of about 5% copper ore, with occasional assays up to 40%, the average of 50 assays being 2.8% copper, 2 oz. silver and \$2 gold per ton. The Copper Glimmer group has a 1,400' tunnel, in McGuire gulch. Mine has a total of 2,450' of workings.

In summer of 1917, company mined ore from a raise at the East end of the 300' level. A trial shipment of 90 tons in June, yielded \$25 per ton, the ore carrying 4.73% copper, 2 oz. silver, \$1 gold, 26.4% iron and 35.6% insoluble. The shaft, flooded in July, was reopened later. Shipments in October were about 4 carloads.

BINGHAM ANACONDA COPPER CO.

UTAH

Office: 11 Main St., Salt Lake City, Utah. Mine in Markham Gulch, Bingham, Utah.

Officers: E. McCarrick, pres.; B. B. Gray, v. p.; P. L. Meyers, sec.-

Cap., \$1,000,000; shares 10c par. Owns a group of claims under development, 1917.

BINGHAM CENTRAL MINING CO.

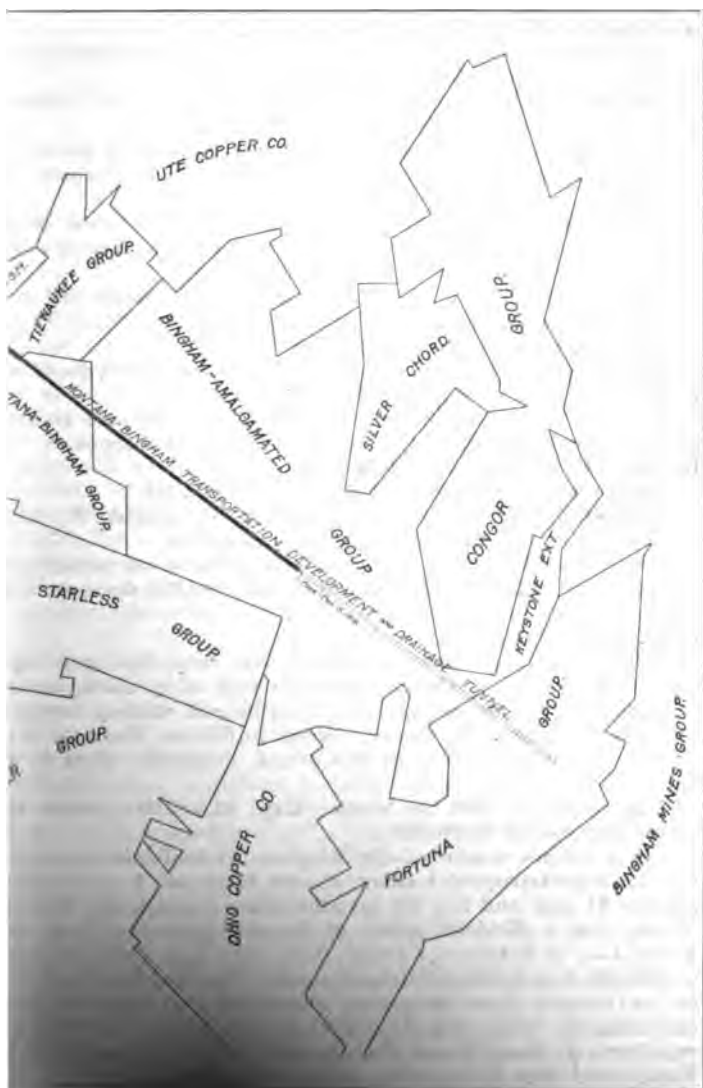

UTAH

At Bingham Canyon, Salt Lake Co., Utah. Idle. This company and the Bingham Standard Copper Co. were controlled by the Bingham Central Standard Copper Co., which sold this stock, 1906. **Officers:** above; A. Gustavson and R. E. L. Coe, directors. Bingham Co. for many years later company and is now controlled by Metal & Tunneling Co. (see. Described Vol. X.

BINGHAM CENTRAL STANDARD COPPER CO.

Was organized in 1906. Inc. comp.

ly entire stock issues, the Bingham Central Mining Co. and Standard Copper Co., and sold these subsidiary stocks, 1909, to Metal Mining Co. for 300,000 shares of latter, which was escrowed

WESTERN, UTAH

... additional shares until permit building by Utah ... western end of the ... of escrow,

1917 amounted to 728,305 oz. silver, 470,965 lbs. copper, 8,354,563 lbs. lead and 5,249 oz. gold, netting \$590,869.

The present management has made splendid progress in handling difficult financial and mining problems.

Eagle & Blue Bell Mining Co.

Subsidiary of Bingham Mines Co.

Office: 60 Congress St., Boston, Mass. **Operating office:** 404 Dooly Block, Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: Jas. P. Graves, pres.; Henry N. Sweet, v. p.; Imer Pett, asst. treas.-gen. mgr.; Geo. E. Davis, sec.; preceding with Fred H. Williams, Duncan MacVichie and Fred R. Sands, directors; Sydney S. Millett, treas.; Wm. Owens, mine supt.

Inc. Sept., 1898, in Utah. **Cap.**, \$250,000, increased, March, 1910, to \$1,000,000; shares \$1 par; issued 893,146 shares. **Dividends:** 4 of 5c each in 1913; 3 of 5c each in 1914; 1 of 10c and 1 of 5c in 1915; 2 of 5c in 1916, amounting to \$535,888 for the four years. Two dividends of 10c a share paid May 1 and June 1, 1917, the total now being \$800,000.

In March, 1910, issued 644,347 shares of new stock at 50c to take up a floating debt of \$269,925 and put \$50,000 in the treasury, for working capital. Is controlled, through stock ownership, by Bingham Mines Co. First National Bank, Boston, registrar; Federal Trust Co., Boston, transfer agent. Stock is listed on the Boston curb. Annual meeting, first Saturday after first day of October.

Annual report for year ending Dec. 31, 1916, shows total receipts, \$323,995; expenditures include operating expenses, \$120,528, and mine development, \$39,841. Net operating gain was \$154,776, as against \$143,345 in 1915.

Assets amounting to \$1,077,699, include mining properties and real estate, \$877,635; mine construction and equipment, \$132,483; cash and receivables, \$35,448.

Liabilities include: outstanding stock, \$893,146; surplus, \$184,553.

Profits for first 8 months in 1917 are \$452,614, against \$154,776 in this period of 1916.

Property: 17 patented claims, 73 acres, includes a 9-acre mill site carrying the water right to a spring having a flow of about 30 gals. per minute. Lands lie between the Centennial-Eureka, Victoria and Chief Consolidated mines, on the Victoria-Grand Central ore zone, in the Mammoth Limestone.

Geology: ore occurs as chamber deposits in limestone, carrying gold, silver, lead and some copper. The lime is cut by numerous fissures, at all angles, with mainly vertical dip, carrying pipes, shoots and erratic deposits of ore at the intersections of fissures and bedding planes, in massive blue limestone. The mine has considerable bodies of silicious copper ore, lead sulphides and carbonates. Pay shoots vary from 6-100' in width. Average assays of dry ore: 230 oz. gold; 12.99 oz. silver; .31% copper; lead ore assayed: 13 oz. gold, 16.81 oz. silver and 17.05% lead.

The workings indicate separate ore channels striking north-south and some east-west, brought together by immense ore deposits made up of the faultings. The ore occurs in the zone a width of over 60'

the D. & B. Mines Co. (before ore developed) several feet and

developed by 1,200' tunnel, that eventually found downward
 oreshoot cut by shaft. Profitably worked till panic of '93;
 and all ore in sight taken out and mine was idle until sold
 Mines crowd, who sank deep winze from tunnel; extracted
 ght and ran in debt for \$300,000; Hornblower & Weeks as-
 taking company notes, and installed Imer Pett as mgr. and
 as supt. New management followed for 800' a thin, iron-
 on the 1,000' level and found immense body of pay ore, mak-
 the big mines of Tintic.

paid off, fine plant installed, and over \$700,000 paid in divi-
 ore reserves ensuring profits for years to come.

ment: has been extensive in the last few years; the 3-compart-
 now 2,018' deep, with levels at 700, 1,000, 1,350, 1,550, 1,700 and
 ind levels at 1,100, 1,200, 1,300, 1,425 and 1,538'.

ment in 1916 amounted to 3,086'. The main operating shaft
 m 1,700' to water level, 2,018', and a station was cut at 1,875'.
 favorable developments on upper levels, no station has as yet
 t 2,000', but this will be done in near future.

er ore was encountered at a point 132' below the 1,700' level
 ore or less continuous for 90'. In the North Extension
 ; body of lead ore was found at 1,000'.

losures demonstrate the extension of the big ore zone the
 of the property and practically from surface to water level,
 agle & Blue Bell a very large stoping area.

nt: includes a 180 h. p. Hendrie & Bolthoff double-drum hoist,
 00' depth, a 100 h. p. tubular boiler and a 4x6' electric triplex
 mine was electrically equipped throughout and a 250 h. p.
 nd air compressor and 225 h. p. electric hoist installed in 1916.
 er is supplied by the Utah Power & Light Co.

on:

Tons	Oz. Gold	Oz. Silver	Lbs. Lead	Lbs. Copper

HOMESTAKE T. & C. CO.**UTAH**

Idle. Is a subsidiary of the Great Divide Mines Co. and controlled by John B. Taylor, v. p., 678 E. So. Temple St., Salt Lake City; Walter A. Cook, sec.-treas.

Inc. 1906, in Utah. Cap., \$100,000; shares \$5 par; assessable; fully issued. Is a close corporation, with only 5 stockholders.

Property: 30 claims, in Pine Canyon, West Mountain section, Tooele county, with water rights, tunnel rights and franchise for a deep tunnel from Pine Canyon into the Bingham district; also several hundred acres of bench lands, and an 800-acre smelter site, 4 miles from the International smelter. Claims show veins with lead and copper ores.

KEYSTONE EXTENSION MINING CO.**UTAH**

Mine near Bingham, in West mining district, Salt Lake Co., Utah. Company inactive for some time owing to heavy flow of water in mine workings. Property covers about 3,000' of the Keystone vein outcrop and shows ore said to average \$14 per ton in gold, silver, lead and copper values, from surface down to bottom of 165' shaft.

Development: by inclined shaft with drifts on vein opening up stopes from which shipments have been made. The Montana Bingham Consolidated Mining Co. is to open the ground by its deep tunnel, thus eliminating pumping costs and heavy wagon-haul charges on ore shipped, but no recent information can be obtained.

MINERAL LANDS CO.**UTAH**

Idle. **Office:** 36 Exchange St., Portland, Me. **Mine address:** Bingham Canyon, Utah. J. A. Waterman, treas.

Inc. 1913, in Maine. Cap., \$500,000; shares \$5 par. Company owns entire capital stock of the Markham Gulch Mining & Milling Co.

Property: the Red Wing and Butler-Liberal mines, with about 300 acres in Markham gulch, formerly owned by the North Utah Co., at Bingham, Utah. The claims carry the Florence and Erie fissures, latter having been a good producer in the upper levels.

Development: mainly by tunnels, with about 5 miles of workings, showing ores carrying lead, silver, copper and gold values, in about the order named.

Equipment: includes 200 h. p. electric hoist and 12-drill compressor. No recent returns received.

MONTANA-BINGHAM CONSOLIDATED MINING CO.**UTAH**

Office: 66 West Broadway, Salt Lake City, Utah. **Mine office:** Bingham Canyon, Salt Lake Co., Utah.

Officers: C. G. Ballentyne, pres. and mg. dir.; L. R. Eccles, v. p.; E. A. Vail, sec.; John Pingree, treas., with W. E. Hubbard, and J. Jorgensen, directors; J. B. Leggatt, gen. mgr.; Harry Bowman, supt.

Inc. July, 1910. Cap., \$3,000,000; shares \$1 par; issued, 1,783,000 shares. Owns 156,000 shares of Bingham Amalgamated C. Co. stock. Debentures: \$200,000, at 6%, due June 1, 1918; \$183,000 outstanding; total assessments to date, \$18,164.

Property: Original holdings consisted of the Puritan and Eddie groups, carrying the Quinn fissure, the main ore fissure of the Utah Copper ground.

During 1916 the company purchased the Tiewaukee mine, which has produced over \$1,500,000 of high-grade shipping ore; also the Valentine patent, which carries the mineral right under the town of Bingham; the Thrush claim; and in May, 1917, acquired a controlling interest in a bond and lease held by Jas. E. Higgins, of Butte, Mont., on the Fortuna mine, giving the company control of approximately 640 acres immediately adjoining the Ohio Copper and surrounding the Starless mine on three sides.

. 7, 1917, purchase of the Fortuna was completed. The deal was made by sale of the balance of treasury stock to Honolulu, Salt Lake and Los Angeles interests. About 1,000,000 shares were taken up by the syndicate, and \$240,000 was set aside to redeem outstanding shares, and complete payment for the Tiewaukee and Valentine

The most important holding of the company is the Fortuna mine, which is an intruded sheet of monzonite-porphry in tilted series of limestone beds, traversed by four nearly parallel veins of quartzite on a strike and dip of the monzonite sheet or of the quartzite veins, occasionally cutting across, and accompanied by some fracturing. Veins 2' to 25' thick, carry streaks and shoots of pyrite, and are rich with good copper value, as chalcopryrite and chalcocite. The workings have shoots of silver-lead ore and much copper ore. The main end of workings, 20'-50' thick with 2% copper.

Development: by an incline shaft 1,100' deep, and an inner blind shaft tunnel. The main development is along the 4,200' Keystone tunnel, one lower and 2 above it. Total workings are 16,000'. Mine was started in 1875 and closed in 1908. Is equipped with 1,500' hoists and machinery.

The Montana-Bingham tunnel is a deep transportation and drainage tunnel which develops the Congor, Fortuna and other holdings at great depth. The Fortuna group alone covering over 1,000 acres of patented ground. On Aug. 25, 1917, the tunnel was in 5,470', has cut six miles and penetrated the quartzite beneath the Keystone porphyry of the Fortuna.

The various properties owned and controlled by the Montana-Bingham Company are said to be a large tonnage of milling ore and the company has over 100 million tons partly developed and indicated.

The grinding mill is now in operation on the Fortuna section of the property which will treat 250 tons daily.

Fortuna mine: main tunnel, over 1,000' long, cut several bedded stopes of old workings north of it, that contain much milling ore. The left in stopes show 18.9% lead, 6% copper, 27 oz. silver per ton. A silver-bearing fissure was cut at 310' from the portal. Tiewaukee tunnel is vertical, connecting with a drift from the main tunnel, while the Tiewaukee is used as an incline on the bedded vein. In 1917 the shaft was cut vertically 110' below the tunnel level, the rock changing from limestone to quartzite.

The Valentine mine, also in Bingham Canyon, has been an irregular orebody, assaying 4% copper. It has a 500' tunnel and is producing a vein of silver-copper ore.

The company has contracts with Bingham Amalgamated C. Co. and will receive 10% of net proceeds on all ore shipped through the tunnel; from the Extension Mng. Co., 25c per ton of ore and 12½c per ton for waste; from the Bingham-Congor C. Co., 15c p. t. of ore or waste; from the Bingham-Congor C. Co., 25c p. t. of ore and 15c per ton for waste; also an agreement with E. A. Wall to handle Starless ores when drift from tunnel is cut. Drift is now being extended on one of Montana-Bingham veins into Starless ground; about 100 tons water per day is flowing from tunnel, which is valuable for irrigation. When completed tunnel will cut 10 veins at 1,000'-2,200' depth, on a steep dip and will drain them, allowing cheap mining. Tunnel is now being extended at the D. & R. G. railway sidings.

The property is well financed and placed under one competent manager the company should become a dividend payer in a short time.

NEW ENGLAND GOLD & COPPER MINING CO.**UTAH****Office:** 67 Milk St., Boston, Mass.**Mine office:** Bingham Canyon, Salt Lake Co., Utah.**Officers:** Jas. S. Williams, pres.; E. E. Abercrombie, v. p. and managing director; Geo. F. Bradstreet, sec.-treas.; preceding, with Woodford Yerris Francis H. Dowse and Geo. Bancroft, directors.**Inc.** June, 1899, in Colorado. **Cap.**, \$2,000,000; shares \$10 par; issued, \$1,294,467.**Bonds:** \$500,000 authorized, at 6%; issued, \$390,000. Paid a 10% stock dividend, Oct., 1908. Federal Trust Co., Boston, registrar; Geo. F. Bradstreet & Co., transfer agents. Annual meeting, first Monday in June.**Property:** the Bingham group of 9 fractional claims, 18 acres, in the Bingham, or West Mountain district, Utah, lying south of the Boston Consolidated, next to the Last Chance group and near the Utah Metals property. The company also owns a group of 4 claims at Goldfield, Nev.

The old Nast mine of the Bingham group shows porphyritic country rock carrying 3 fissure veins, of 30" average width, opened by the 1,600' Nast tunnel and the 1,670' Benton tunnel, both in ore, and 2 shafts, 1 of 158' with a total of about 6,000' of workings. Veins are said to widen at depth and ores are said to give average assays of 30% lead, 10% zinc, 15 oz. silver and \$4.50 gold per ton, with small and variable percentages of copper, some of the monzonite country rock carrying copper values that may prove workable at some later date.

Equipment: includes a steam plant with 2 hoists, 1 of 30-h. p., good for 800' depth. The concentrator has a 4x12" Sturtevant crusher, 2 rolls, 2 Hartz jigs and 1 Wilfley table, operated by commercial electric current.**Production:** was 2,108 tons of lead concentrates and 165 tons of copper ore, 1907, but property was closed down, late 1907, and mine was worked on only a small scale, 1908 to 1910, securing 936 tons of ore, giving net smelter returns of \$36,986. In 1910, the Utah Metal Mining Co. sued this corporation for \$700,000 damages, alleging trespass and illegal ore-extraction. A survey proved that company was not guilty of trespassing and suit was cancelled.

In 1911 the mine produced milling silver-lead ore, yielding 150 tons high-grade concentrates per month, netting the company \$25,874. In 1913 output was reduced to 8,360 and the mine was shut down by reason of western creditors forcing their claims. The Trust Co. holding mortgage securing the bonds, foreclosed same, Dec., 1915, at request of the bondholders and a reorganization of the company was contemplated. Interest, amounting to \$46,800 on bonds has not been paid since Feb. 1, 1914.

NEW UTAH BINGHAM MINING CO.**UTAH****Office:** 62 Broadway, New York. **Mine office:** Bingham Canyon, Utah.**Officers:** J. C. Blanc, pres.; N. O. Connor, sec.; H. A. Bellows, treat preceding, with H. F. Hoevel, J. W. MacRae, F. Harold Brown and F. T. Bellows, directors; P. M. McCree, supt.**Inc.** April, 1912, in Maine. **Cap.**, \$1,375,000; shares \$2.50 par; \$2.50 paid; 230,287 shares outstanding.**Bonds:** authorized, \$100,000, 5-year, 7%, issued Sept. 23, 1911, and payable Sept. 23, 1916; \$14,000 outstanding, \$23,000 cancelled. Bonds now being re-funded. Security Transfer & Registrar Co., New York, transfer agent. Stock is listed on New York Curb and London Stock Exchange. Annual meeting

Wednesday in June. Company acquired property and assets of the Utah Bingham Mining Co. for \$1,182,550, giving the shareholders one new share for each \$5 share held.

Property: 20 claims, 19 patented, 130 acres adjoining the Telegraph mine

ed States Mining Co., in Bingham Canyon, Utah. Claims cover along the footwall portion of the Jordan limestone ore-bearing Bingham. The large orebodies of this district are found in fissures in limestone, or along limestone contacts, and the Jordan belt is the active of the 3 belts known in the camp; 16 fissure veins have been developed by the company acquired the property a number of promising veins in the porphyry, but too narrow to be valuable, had been developed. These veins pass into the limestone and are expected to have large ore in the contact. Ore is mainly silver-lead.

Development: consists of about 15,000' of work, mainly by 3 tunnels. In the main tunnel, over 1,300' long, 8 veins from 1 to 4' thick have been developed. Two of them are working. These two veins run north, and the other two contain high-grade ore in the Spanish mine and along the rest of the company's ground. The Harrison tunnel, 600' long, is in the main and will crosscut the Rough and Ready veins, which are opened by drifts at higher up the mountain, all showing ore. Work on these veins is continued and all work concentrated on the Giant Chief.

The Giant Chief vein is a fault fissure, developed by a 200' shaft from the main tunnel. Further exploration is being conducted on the 150' level; 600' of drifts has been driven in 1915 from this point have at 800' depth in the sulphide zone. Fissures encountered in the higher workings. These veins carry iron pyrites, surrounded by a soft lime, and show porphyry mineralization. A small vein of carbonate ore, running nearly 50% lead, was developed; the Bonanza tunnel was driven 977' along the Giant Chief vein across it to reach the ore, 150' deeper than where first opened.

Equipment: includes compressor, 180-h. p. electric plant, taking current from Utah Power & Light Co., hoist and all necessary buildings.

Production: recent shipments said to have assayed 17.33 oz. silver, 1.49% lead, 22.8% iron, 10.7% silica.

The mine is well adapted for tunnel work, has large blocks of virgin ground developed and promising. Company is an intermittent producer.

MINING CO.

PPER MINING CO. OF UTAH

UTAH

43 Exchange Place, New York.

Controlled by: H. E. Rogers, pres.; Chas. A. Kittle, v. p.; E. S. Hooley, v. p.;

S. K. Kellock, sec.-treas.; Alfred Frank, gen. mgr.; above with J. H. Flagler, M. N. Buckner, A. R. Rogers, A. R. Peacock, Hugh Aiken and S. B. Sherman, directors.

Inc. Nov., 1916, in Maine, as a reorganization of the Ohio Copper Mining Co., formerly the Ohio Copper Co. **Cap.**, \$2,500,000; shares \$1 par; 2,200,000 issued.

Net profit for first 3 months, 1917, was \$180,122.

History: the Ohio Copper Mining Co. was inc. July 8, 1912, as a reorganization of the Ohio Copper Co., with capital of \$8,000,000, acquiring the mining claims of the latter company. The Ohio Copper Mining Co. assumed \$1,242,000 Ohio Copper Co. 6% convertible gold bonds; dated September 1, 1907, due September 1, 1917; bonds were secured by first mortgage on all mining property, plants and real estate then owned, or which might be acquired thereafter.

On September 1, 1914, the company defaulted payment of interest on bonds, whereupon a bondholders' protective committee was formed, which requested deposits of the bonds with the Mutual Alliance Trust Co. of New York as depository. On September 14, in the United States District Court of New York, Judge Mayer appointed Morris J. Hirsch and George C. Austin as receivers of the company in bankruptcy proceedings brought by creditors. On October 27, Clark Grove, E. McCormick and Charles T. Lark were appointed trustees to represent the creditors. On September 19, 1914, the company filed a voluntary petition in bankruptcy, scheduling assets of \$1,343,257, and liabilities of \$1,668,538. On July 16, 1916, the Empire Trust Co. of New York, as trustee under the bonds filed suit to foreclose the mortgage. The property was sold under foreclosure on August 30, 1916, to a representative of the bondholders' committee for \$750,000. Meanwhile, the mine and mill were being operated by the General Exploration Co. under lease from the receivers.

After the foreclosure sale, three plans of reorganization were devised, one by the bondholders' protective committee and one each by two stockholders' committees. That of the "Rogers" (so-called from the name of the chairman, Hubert E. Rogers) stockholders' committee was acceptable to the Court; the former sale was set aside and the property sold to this committee for \$1,350,000.

Under the plan of the Rogers' Committee, there was to be paid into Court whatever amount should be found due upon the bonds less whatever sums had been realized on the property: (a) By the trustees in bankruptcy; (b) By the receivers appointed in the foreclosure proceedings; (c) By the purchaser since the foreclosure sale; after deducting, in all cases, whatever amount the Court should determine should be deducted for expenses in connection with these various matters.

Stock of the new company was to be issued to the committee to be disposed of as follows: 1,500,000 shares to be sold to an underwriting syndicate at par less 15% commission; 150,000 shares to be retained by the committee for reorganization purposes; 850,000 shares to be placed in the company's treasury for future needs. Of the shares to be sold by the underwriting syndicate, the stockholders of the 1,350,000 shares of the Ohio Copper Mining Co. were given first opportunity to acquire new stock in exchange for their holdings on a share-for-share basis and payment of \$1 per share. The amount raised by this sale of stock was sufficient to pay off outstanding bonds, clear the property of all indebtedness and provide a working capital of approximately \$200,000.

Property: 14 claims, patented, 120 acres, bounded on the N. and W. by holdings of the Utah Copper Co., on the E. by the Fortuna Mining & Milling Co., on the S. by United States Mining Co., and on the S. W. by the Boston Consolidated. The Mascotte tunnel, controlled by the Heinze Estate, through the Bingham Central railway, exacts a toll of 15 cts. per ton on all ore extracted through that avenue, yielding a very considerable revenue to the owners.

d Sept., 1917, that company has secured stock control of the central R. R., which owns the Mascotte tunnel.

: property carries some ore in veins along a mineralized zone strike and dip of 45° N., consisting of a belt of quartzite of 500' long 2 parallel veins, known as the What Cheer and All's Well. are more than 500' apart, and separated by mineralized quartzites. The main orebody of the property, the ore averaging 1.015% quartzite, which adjoins the laccolithic mass of monzonite-porphry boring Utah Copper and Boston Consolidated properties, is much broken, with ore disseminations and impregnations along shatter planes, in the brecciated material, ore being chiefly chalcocite and associated with pyrite, readily amenable to concentration, and lying east of the Mascotte tunnel.

Reserves of ore developed vary greatly, the former management claim had been developed under about 5 acres, the porphyritic orebody estimated as 400' wide, 1,000' long and 600' deep. One estimate gave reserves of ore developed with 9,738,690 tons of probable ore and the mill probably about that of the ore milled, or 1.01% copper.

A 100' single track Mascotte tunnel, connecting with the shaft at depths of 100' for the large volume of water coming from the workings. Ore is milled in 100' squares, with extensive development on the 3rd, 5th and 7th. The caving system is used in extraction. Ore is sent from the bins, through chutes, to a 4,000-ton ore-bin, 20' wide and 200' long, on both tracks; loaded in about 4 minutes from the bins into trains of 10-ton double-bottom steel cars, and hauled by electric locomotives, operated at Lark.

The shaft, at Lark, 3,200' from the mouth of the Mascotte tunnel, is 317' deep, in 5 units, built in 6 terraces. Capacity is 3,000 tons daily, and in 1917, about 2,300 tons was being treated, the flotation units not yet installed.

Equipment includes 2 coarse and 4 fine Blake crushers, elevators, conveyors, 4 roughing and 8 finishing rolls, of Allis-Chalmers make, 10 Chilean mills, 144 jigs, 288 Wilfley and James tables, and Callow banks. The installation includes 51 motors, ranging from 15 to 100 hp.

Efficiency was low, about 47%, and in 1917, an experimental 500-ton Minerals plant and 150-ton Janney machine were installed. Results were exact 80% of the copper contents being saved. Flotation system is used throughout mill, 1917.

Production: for first 3 months, 1917, was 1,424,247 lbs., netting \$147,279. 3,000 tons of ore were being handled daily. Company had 1,919,758 shares in the hands of the A. S. & R. Co., Aug., 1917.

Property should prove profitable from now on with higher extraction and under a thoroughly competent management.

MINING CO.

1 Apex Mining Co.

UTAH

BYRON & BINGHAM TUNNEL CO.

121 N. W. Temple St., Salt Lake City, Utah.

UTAH

Pres.: J. B. Moreton, pres.; Richard Savage, v. p.; Homer Benton, 2nd vice-pres.; J. W. Levine, sec.-treas.

Organized 28th, 1916, in Utah. Cap., \$1,500,000; \$1 par; 800,000 issued and 700,000 in hands.

Reserves: 42 claims, 150 acres patented, covering apex of mountain, W. of Salt Lake City, and contains two N. E.-S. W. fissures, a bedded contact deposit and the Mascotte quartzite, carrying limestone beds and cut by Bingham monzonite.

Company owns 2,000' tunnel running from Pine Canyon toward Bingham. Portal of the tunnel will be $1\frac{1}{2}$ miles from the International smelter at 5,600' elevation. The Great Western tunnel at an elevation of 7,300' is between the Great Divide group and the Star group, half way up the mountain side between the Nancy Hanks and the portal of the new Pine Canyon tunnel.

SAMSON MINING CO.

UTAH

Subsidiary of the Bingham Mines Co.

SILVER SHIELD MINING & MILLING CO.

UTAH

Office: McCornick Bldg., Salt Lake City. Mine office: Bingham Canyon, Salt Lake Co., Utah.

Officers: Henry Cohn, pres.; H. S. Joseph, v. p.-gen. mgr.; H. W. Cram, sec. with J. M. Hayes, Lou Moore, R. E. Mills and J. M. Soloman, directors.

Inc. in Utah. Cap., \$300,000; shares \$1 par; assessable; 285,000 shares issued. Paid \$4,500 in dividends prior to 1903. Listed in Salt Lake City. Requests for information ignored.

Property: about 320 acres, at Bingham Canyon.

Ore: carries mainly silver-lead, with some gold.

Development: by a tunnel over 8,000' long, connected with tunnel of the U. S. Mng. Co. Reported in 1916, that a 4' vein of \$40 ore had been found by a lessee, 3,500' from the tunnel portal. Several carloads of ore reported to have been shipped and mine now worked on company account. Also reported Sundays have been designated as days upon which visitors will be welcome.

Shaft from surface to tunnel is to be sunk 500'. Was down 100' in Sept. 1917. Lessees are working on lead ore near the surface and underground. Company states that it is earning expenses.

Equipment: hoist, 5-drill compressor, 50 h. p. motor, etc.

STARLESS MINE

UTAH

Office: care Col. Enos A. Wall, owner, Salt Lake City, Utah. Mine office: Bingham Canyon, Utah.

Property: 8 claims patented, 160 acres, lying N. E. of the holdings of the Utah Copper Co., is developed by an incline shaft and numerous tunnels, longest 2,000', with crosscuts and upraises, aggregating 10,000'.

Development: said to block out 800,000 tons of 1 to 2% copper ore.

Equipment: includes a hoist.

The 125-ton mill, enlarged and remodeled 1910, at a cost of \$50,000, is equipped throughout with machinery of Col. Wall's own design, comprising Wall corrugated rolls, Wall steel rolls for middlings, 3 sets of jigs, 2 tables for concentrates, 2 Wilfley tables, and washers, of trough form, with valves and sprayers, concentrates being discharged through the bottom and sands from the top.

STIBNITE MINING CO.

UTAH

Address: H. C. Baker, 2421 Washington Ave., Ogden, Utah.

Officers: H. C. Baker, pres.; A. M. Miller, v. p.; G. M. Flowers, sec.-treas. with Leroy Buchmiller and H. J. Craven, directors.

Inc. April, 1917, in Utah. Cap., \$100,000; shares 10c par; 800,000 issued: non-assessable.

Property: 686 acres, patented, 4 miles N. of Bingham, in Wasatch Range. Box Elder Co., Utah.

Development: by 2,452' adit, total openings 4,315' to depth of 800', showing various types of deposits in limestone, quartzite and shale, the ore containing lead and antimony. Reserves are estimated at 126,000 tons. Antimony ore in 1916 was 67 tons, assaying 66% metal.

Equipment: compressor, 6,200' tram, 125-ton concentrating plant. Flotation to be added in 1918.

STAR GROUP

UTAH

Office: 159 South State St., Salt Lake City, Utah. Mine office: Bingham

Lake Co., Utah. A. M. Surbaugh and Thos. Moore Surbaugh,

7: 39 claims, 22 patented, 715 acres, with direct rail connection, part of the Bingham camp.

ment: by 16 shallow shafts and short tunnels, principal work being line tunnel, with another tunnel driving at lower depth. The mine and silver-bearing lead and copper ores, with small quantities of r, in quartz. Owners do not care to have output or other details and returned letters unopened in May, 1917.

EX MINING CO.

UTAH

10 Post Office Square, Boston, Mass. Mine office: Bingham Can-

: R. F. Haffenreffer, Jr., pres.; J. J. Murphy, v. p. and treas.; with lly, sec., W. F. Coffin and G. F. McGahey, directors; A. A. asst. sec.; V. S. Rood, supt.

y, 1902, in Maine, as a merger of the Copperfield Mining Co. and g Co. Cap., \$3,000,000; increased 1906, from \$2,500,000; shares \$5 28,200 shares.

\$500,000, authorized at 6%, convertible, were retired July 1, many absorbed the Highland Boy, Petro, Minnie and Phoenix panies. State Street Trust Co., Boston, transfer agent. Annual cond Thursday in November.

sheet for year ended Aug. 31, 1917, shows assets totaling including \$2,480,789 for cost of properties; \$486,702 cash; \$321- elopment and equipment.

al year ending Sept. 1, 1917, gross ore sales, royalties, etc., 571. Mining, development and milling cost, \$688,172; general axes, depreciation (\$94,066), etc., \$251,350, leaving a net profit

Dividends absorbed \$132,050.

ds: initial quarterly dividend, 12½c, paid Oct. 1, 1915, 75c in 1916, 017, to Oct. 15. Total is \$726,275.

7: 34 claims, 244 acres, including the York, Copper Field, Petro, y Consolidated and Phoenix groups, adjoins the Utah Consolidated l W., on York hill, Carr Fork canyon.

: claims show limestone and quartzite, carrying the Parnell, Petro, andy bedded veins. These veins are cut by several fissures which ore or less developed. The Dana, the principal orebody, is appar- ct deposit between quartzite and limestone, showing an ore-shoot ically, without disseminations in the contact, up to 15' in width and on the 4th level. The mine primarily is a producer of high-grade has considerable copper, and some zinc; all ores carry silver and with an excess of iron, giving low smelting charges. First-class ores 2% copper, and \$6 to \$8 combined gold and silver values per ton, lass copper ores carrying about \$3 per ton in combined gold and . First-class lead ores carry 35 to 50% lead, with silver and gold second-class lead ores range 7 to 14% in lead tenor, with small lver values.

ment: by 3 shafts and 6 tunnels, with several miles of openings. orking shaft is down to the 1,500' level. The tunnels, known as the nie, Smilax, Andy, Andy No. 2 and Parvenu, are spaced at 200' verti- and are connected by incline blind shafts, with electric hoists, on the which is estimated by the company to be 5' in width and to be min- about 1,000' in length and to 2,000' in depth. The Andy tunnel de- shoots, on the Parnell vein. The Parvenu tunnel, which is the prin- g, is about 1 mile in length, cutting the Parnell vein with a back of

Since the decline in the copper market 1907, attention had been

devoted mainly to silver-lead ore. A silver-lead orebody opened in the Parvenu tunnel, having a maximum thickness of 100', with a width of better than 100' and length undetermined, shows direct smelting ore of 15 to 20% lead, with 3 to 5 oz. silver per ton, and excess of iron, estimated to carry net values of \$8 to \$10 per ton. The Parvenu shaft was completed to the surface, and a new hoist started in April, 1917.

A 3,000' Bleichert aerial tram, not in present use, runs from the portal of the Andy tunnel to a loading station. Ore is shipped over a spur track of the railway line of the Utah Copper Co.

Mine was examined 1916, by Pope Yeatman, who discussed the lead-silver, lead-silver-zinc and copper ore occurrences, of which lead has been the most important. There is little chance for development of ore between 200 and 1,000' but above 200' there are possibilities. The York beds show promise of ore at depth. The principal orebody is the Parvenu, which on Nov. 1, 1917, contained 50,000 tons of 14% lead and 14% zinc ore. Its lower extension seems to be close to the 1,500' level. The future lies in extensive development, all other departments being in good order.

From March to late in May, 1917, the mine was closed on account of a fire in the lower levels, necessitating flooding the workings. This cost \$43,000 cash.

Ore reserves are estimated at 73,000 tons, assaying 0.03 oz. gold, 3.5 oz. silver, 11% lead, and 8% zinc. Present indications show that new ore will be opened faster than that mined.

Equipment: includes two 15-drill air compressors and 2 electric hoists, 1 of which is a double-drum Davis hoist installed at the 7th level station in the Parvenu tunnel. In April, 1917, a new Nordberg hoist was installed on the surface. The old Phoenix mill at the mouth of the Parvenu tunnel was dismantled and a new 200-ton mill built 1909, on the same site. The new mill is said to effect a concentration of 4 into 1, with a saving of about 77% of assay values. In 1914, company increased the capacity of the concentrator to about 350 tons daily, and in 1915 a flotation equipment was added.

The lead mill treated 53,518 tons in the year ended Aug. 31, 1916, from which 16,947 tons of concentrates were recovered. The copper mill treated 2,010 tons. Average cost of milling was 72.2c per ton in 1915, as compared with 79.8c in 1914. In 1917 the mill treated 17,637 tons of ore, assaying 0.034 oz. gold, 3.76 oz. silver, and 11.37% lead.

Company has contracts with U. S. Mng. & Sm. Co. and American Sm. & Ref. Co. for daily shipments of 300-400 tons lead zinc ore and lead ore and concentrates respectively. Employs 400 men.

Production: years ended August 31:

Year	Gold, Oz.	Silver, Oz.	Lead, Lbs.	Copper, Lbs.
1917.....	3,551	396,989	24,414,451
1916.....	4,924	620,022	37,304,675	2,355,475
1915.....	4,000	560,000	32,000,000	2,400,000

High prices for lead and silver resulted in larger profits, but with the recent decline in these metals the outlook is not so promising, specially also considering the conclusions of Pope Yeatman given above.

UTAH CONSOLIDATED MINING CO.

UTAH

Office: 42 Broadway, New York. Operating office: 608 Dooly Block, Salt Lake City, Utah. Mine office: Bingham Canyon, Utah

Officers: R. H. Channing, Jr., pres.; Adolph Lewisohn, v. p.; with Sidney Chase, J. S. Dunstan, H. H. Anthony, J. W. Allen, Maxwell Woodhull, directors; A. H. Melin, sec.-treas.; Frederick Cowans, gen. mgr.; A. S. Winther, supt.; T. S. Van Wagoner, purch. agt.

Inc. 1903, in New Jersey. Cap., \$1,500,000; shares \$5 par. Is a reconstruc-

h Consolidated Gold Mines, Ltd., a British corporation that in turn the Sevier Gold Mines, Ltd., Oct., 1896. Property of the Utah Consoling Co. is 2,490 shares of the 2,500 shares of the capital stock of the Highland Boy Gold & Copper Mining Co., of New Jersey, the latter corporation having direct title to the Utah properties. The company also owns 8,250 shares of the Anaconda Copper Mng. Co., stock derived from sale of the property of the R. Co. Shares are listed on the Boston and Salt Lake stock exchange. Annual meeting, first Tuesday in April.

The company's total income for 1916 was \$4,773,962, with surplus of \$1,038,637 over liabilities of \$2,549,995. Net earnings were \$1,038,637 in 1916; \$1,348 in 1904; \$1,887,385 in 1905; \$2,835,008 in 1906; \$1,179,412 in 1907; \$1,212 in 1908; \$154,263 in 1909; \$65,348 in 1910; \$438,430 in 1911; \$603,000 in 1912; \$636,470 in 1913; \$565,665 in 1914; \$1,128,122 in 1915; \$1,924,177 in 1916.

Dividends:

..... \$3.20	1908.....	\$2.00	1913.....	\$1.50
..... 3.00	1909.....	2.00	1914.....	2.00
..... 3.50	1910.....	.50	1915.....	2.00
..... 5.00	1911.....	.50	1916.....	1.50
..... 7.00	1912.....	1.50	1917.....	3.75

Dividends to Sept. 28, 1917, \$45.89 per share, or \$13,767,000.

Property: 43 claims, patented, 404 acres, known as the Highland Boy group, located in the Highland Boy canyon, 2½ miles from Bingham canyon. The Highland Boy is a considerable producer of silver-lead ore, 1870-90.

The Bingham Copper Boy group adjoining the Utah Cons. on the north was purchased for \$18,747. Property promising but undeveloped.

The property has 6 ore deposits which are replacements of limestone 300' thick, with quartzite above and below. These beds dip from north to south and the rocks are cut by a series of porphyry dikes that are nearly vertical and run N. E. The ore deposits form well-defined shoots with E.-W. strike and N.-E. pitch. They are large, varying up to 100' in width and 100 to 200' in length, and are separated by barren limestone; the largest orebody so far discovered is said to be 320' in extreme horizontal width and 340' in length. An interesting galena was found in the lower workings in an extension of the limestone. The predominant ore of the mine carries chalcocite, bornite and chalcocite, associated with pyrite in a limestone gangue. Development: the Highland Boy mine is opened by an old 900' shaft, and a new shaft, 1,000 to 2,600' length. No. 7 tunnel, 700' below the crest of the hill, 2,600' in length and is the main avenue of extraction, all tunnels are driven, and ore milled, through chutes, to the bottom tunnel. There are 10 shafts, deepest 500', starting from the 700' level, with large electric hoists to bring ore to that point for extraction by the electric haulage plant in the mill. The ore breaks easily and is extracted by the top-slice caving system. The mine is broken mainly on contract.

Production: earnings were 20,510' in 1913; 19,778' in 1914; 19,890' in 1915, and 20,510' in 1916.

At the 13 level there was 5,328' of work done in 1916. East of the main shaft the principal copper orebodies were found smaller and more silicious. Two shafts were developed and one of 14,000 tons assay 17% lead, 5.52 oz. silver, 0.7 oz. gold and 0.7% copper. The other, opened for 70', contained 3.7 oz. silver, 0.06 oz. gold, and 0.65% copper. In the upper limestone section, at bottom of incline shaft, 70' of ore assayed 2.6% silver, 0.7 oz. gold, and 0.8 oz. silver, across 18" and 30' assayed 3% copper, 1.5 oz. silver, and 0.8 oz. silver, across 24". West of the Occidental fault 5' of ore assayed 4.04 oz. silver, 0.05 oz. gold and 0.3% copper ore was opened.

Ore reserves: estimated at end of 1915: 266,700 tons of 1.9% copper \$1.00 gold and 0.69 oz. silver ore and 43,500 tons of 16.20% lead ore with 8% gold, 4.96 oz. silver and 0.7% copper; at end of 1916: 180,000 tons of 1.77% copper, 0.048 oz. gold and 0.69 oz. silver ore and 23,400 tons of 16.03% lead, 562 oz. silver, 0.038 oz. gold and 0.81% copper ore.

A 12,700' aerial tram leads from the portal of No. 7 tunnel to ore bins on the Rio Grande Western railway. There is a subsidiary aerial tram, crossing Carr Fork canyon, used for handling lumber and mining supplies.

While the great orebodies of the mine are worked out the property is far from exhausted, and development work is encouraging. In 1916, reserves were equal to half of the ore mined in that year.

Company mined 360,034 tons of 1.734% copper ore, and 74,542 tons 14.168% lead ore in 1916, the latter containing 4.249% silver per ton and 0.737% copper.

Production:

	Lbs. Copper	Lbs. Lead	Oz. Silver	Oz. Gold
1916.....	12,211,118	18,175,709	558,845	21,727
1915.....	8,836,091	17,777,604	370,985	19,387
1914.....	7,584,391	14,588,276	284,196	15,528
1913.....	7,710,968	19,208,063	378,960	14,172
1912.....	6,506,814	8,734,398	230,004	14,042
1911.....	9,162,023	3,311,939	160,366	16,730
1910.....	7,489,471	154,321	14,802
1909.....	10,043,900
1908.....	10,648,243
1907.....	13,987,557	390,296	34,554
1906.....	18,533,974	457,812	42,001
1905.....	17,264,474	374,685	28,290
1904.....	13,553,483

In 1916 the quantity of copper ore mined increased 73% and the lead ore 14%.

The company controls the Nevada Consolidated Copper Co., owning slightly more than 50% of the outstanding stock, having exchanged its own stock on the basis of 1 share of Utah for 2¼ shares of Nevada. The company controls, through stock ownership, the Bingham & Garfield Railway Co., described later. During 1910 the Utah Co. absorbed the Boston Consolidated Mining Co. and the Shawmut Consolidated Copper Co.

History: In 1862 General P. E. Connor was stationed at Fort Douglas Salt Lake City, in command of the Third California Infantry, a regiment of volunteers largely recruited from experienced California prospectors and miners. General Connor believed that the prosperity of Utah would be enhanced by immigration from the outside. He therefore encouraged exploration for minerals in the State and freely gave furloughs to his miner soldiers, in order that they might do the necessary prospecting. As a result mineral was discovered in Bingham canyon early in the fall of 1863, and it is probable that it was not long after this date until the first prospecting was done in what is now called the "Bingham copper porphyry." This prospecting consisted of a tunnel, afterwards called "Soldier Tunnel," driven into the copper bearing porphyry for a distance of 200' on the westerly side of main Bingham canyon, and on property now owned by the Utah Copper Co.

The mining property now embraced in the holdings of the Utah Copper Co. had been known to be copper-bearing for many years, but was supposed to be too low-grade to pay and was not taken up for active development until the organization of the original Utah Copper Co. in 1903. Previous to that time, any work done was in hunting for the rich copper ore that is found here and there in the seams of the rock and in the fissures and fault planes. In the spring of 1903, the Utah Copper Co. acquired a controlling interest in the property, and began the construction at Copperton of a 300-ton experimental concentrating mill. The work at the mine was commenced in November, 1903, and the mill began its operations in April, 1904.

The early development of the mine was designed along the lines of properly opening up the ground for the application of what is known as the caving system of mining, and until June, 1907, all the ores extracted were derived from development work and by the application of that system. The underground mining operations at the Utah mine were discontinued permanently September 18, 1912, and those at the old Boston Consolidated on March 31, 1914, so that now all the mining is being carried on by steam shovel operations.

Property: the Utah Copper Co., excepting the Chile Copper Co.'s mine at Chuquicamata, has the largest developed orebody in the world, its proven tonnage exceeding that of the Rio Tinto, its nearest copper competitor, and even exceeding the proven tonnage of the greatest of the enormous iron mines of the Mesaba range, or the developed tonnage of gold ore of all the combined mines of the Witwatersrand. Not only has the Utah Copper Co. the second largest body of developed ore of any mine, but it also is the greatest ore producer, measured by tonnage, of any mine of any metal.

Mills: company had three mills, one at Bingham canyon, now dismantled, and two at Garfield, 20 miles from the mine. The 900-ton Copperton mill at Bingham canyon, the first concentrator put up by the company, is fully described in Volume VIII, Copper Handbook. It was closed permanently August 1, 1910, and all machinery that was suitable was sent to the Arthur mill for use there.

The finely disseminated copper glance necessitates fine crushing with the formation of slime and a tailing loss of about 0.5% copper. Concentration is about 23 into 1.

The **Magna** mill, the first plant built at Garfield, stands on a 3,000-acre site, four miles E. of the Garfield smelter and 1 mile E. of the Arthur mill. It is connected with mine and smelters by the Bingham and Garfield, Denver and Rio Grande, and Salt Lake Route railways. The building is 505'x600' and contains two 3,000 ton units, each of 6 sections, each unit being 300'x505' in size, occupying a site of about 20 acres. The plant is so designed that 2 additional units of the same size can be added when desired. Milling was begun June, 1907, with two sections, and the 12th and final section of the mill was started in November, 1908. The ore bins of the Magna mill are of 25,000 tons aggregate capacity, with bins of 12,000 tons in the coarse crushing department and 13,000 tons in the fine crushing department.

The Magna mill treated 16,785 tons daily in 1916, and is divided, longitudinally, into three departments, for coarse crushing, fine crushing, and concentrating. Additions to this plant have increased its capacity to 24,000 tons daily.

To treat about 40,000,000 tons of oxide and partly oxide capping overlying the sulphide ore, a leaching plant including 12 tanks capable of treating 3,000 to 4,000 tons a day is about complete. This ore carries 13 lbs. copper per ton, of which 10 lbs. are soluble in sulphuric acid, at a treatment cost of 9c. per lb.

The coarse crushing department consists of 2 sections having a capacity of 8,000 tons each in 24 hours. Each coarse crushing section is equipped with 2 No. 7½ gyratory crushers, 4 sets of 54"x20" Garfield roughing rolls, 4 elevators, 12 conveyors, 60 steel apron ore feeders, 7 motors and one 25-ton, 3-way, motor crane. In this department the ore is crushed dry to approximately ¾" in size.

The fine crushing department contains 36-6' Garfield Chilean mills, 24 sets of 37"x15" Garfield rolls, 24 steel apron ore feeders, 24 elevators, 72-3'x4' impact screens, 12 motors, and one 15-ton, 3-way motor crane. In this department the ore is crushed dry to about 10 mesh of rolls, and wet to about 40 mesh by Chilean mills.

The concentrating department for the entire plant is built on 3 floors and contains 22 roughing and 44 finishing No. 5 Wilfley tables, 122 Garfield roughing tables, 1,104-6' vanners of suspended type, 83 Richards-Jannes classifiers, 240-9' and 148-7' 60° conical settling tanks.

Miscellaneous buildings at the Magna plant consist of machine shop thoroughly equipped for all repairs, boiler and blacksmith shop, warehouse, transformer house, pumping stations, ice house, carpenter shop, rigger shed, main office and dormitory.

The reserve pumping plant No. 1, used in whole or in part when the main pumping plant No. 2 is out of primary water, is situated 1500' N. F. of the Magna mill, and includes a Nordberg triple-expansion condensing pump with capacity of 10,000 gal. of water per min.; 3 two-stage Jeanesville centrifugal pumps and 3 two-stage D'Olier centrifugal pumps driven by 450 h. p., 350 h. p., and 250 h. p. G. E. induction motors, and having

of 4,500, 3,500 and 2,500 gals. per min. respectively. These pumps combined capacity of 31,000 gal. per min., pump through two 24" ave pipe lines, each 1800' in length, against a 230' head into a concrete lined reservoir above the Magna mill. In addition there are three 3-stage Byron Jackson centrifugal pumps driven by 150 h. p. Westinghouse induction motors, and having a capacity of 3,000, 1,500 and 1,500 gal. per min. respectively, which pump through a line of pipe, 1,700' of which is 20", and 5,870' of 30" wooden pipe direct to a 2,000,000 gal. concrete lined reservoir above the Magna mill, elevating the water 330'. The total combined capacity of this plant is 31,000 gal. per min.

Sources of supply for this station are springs at the plant developing 10,000 gal. per min. and through a canal which returns the water from a tailings pond, where both tailings and drainage water are impounded over an area of 1,000 acres. In time of low water, when the pond elevation is not sufficient so that the water will flow to the pumping station, it is pumped a maximum of 10' from the pond into the return canal by a 24" centrifugal pump per min. Byron Jackson centrifugal pump, driven by a 60 h. p. induction motor.

The main pumping plant, called plant No. 2, is situated immediately west of the Magna mill, and at the end of the Utah & Salt Lake Canal, which carries the water from Utah lake about 40 miles from the plant, and through which, at certain seasons of the year when the farms in Salt Lake County do not require water for irrigation purposes, all of the priority water for both the Magna and Arthur plants is received. The equipment of this plant consists of 2 single stage 10,000 gal. per min. Worthington centrifugal pumps, each driven by a 150 h.p. G. E. induction motor, and 3 single stage 5,000 gal. p.m. Worthington centrifugal pump, driven by a Westinghouse induction motor, all 3 of which pump direct into a 5,500,000 gal. reservoir through 700' of 30" wooden stave pipe against a 24' head; and 3 single-stage 5,000 gal. p.m. Worthington pumps, each driven by 200 h.p. G. E. induction motor, 1 single-stage 5,000 gal. p.m. Bryon Jackson centrifugal pump, driven by a 150 h.p. Westinghouse induction motor, all pumping direct to the Arthur mill 2,000,000 gal. reservoir through 6,300' of 30" wooden stave pipe line, against a head of 120'. The total capacity of this plant to the Magna mill is 18,000 gal. p.m., and to the Arthur mill, 18,000 gal. p.m., which is 70% of the capacity required by either mill.

The Arthur mill, about one mile west of the Magna mill, was built by the Utah Consolidated Mining Co., at a cost of upwards of \$1,500,000. It is modeled to a capacity of 13,253 tons of ore daily in 1916 by replacing the stamps with rolls and Chilean mills to correspond to the equipment of the Magna mill. It has 13 operating sections. The ore bins have a capacity of 21,500 tons, 9,000 in the coarse crushing department and 12,500 tons capacity in the fine crushing department. Additionally, the mill have increased its capacity to 16,000 tons daily.

The coarse crushing department is in a separate building adjoining the ore bins and is equipped with 3 No. 8 gyratory crushers, 4 sets of Garfield roughing rolls, 4 elevators, 14 conveyors, 102 steel feeders, 10 motors and one 25-ton, 3-way motor crane. This department has a capacity of 15,000 tons in 24 hours and the ore is crushed to approximately $\frac{3}{4}$ " in size.

The new crushing plant costing \$250,000 is being erected at the Arthur mill, and will be the largest in the United States.

The coarse crushing department contains 26 six ft. Garfield Chilean mills.

26 sets of 37- $\frac{1}{2}$ "x15" rolls, 78-3'x4' impact screens, 26 steel apron ore feeders, 26 elevators, 26 motors and two 15-ton, 3-way motor cranes. In this department the ore is crushed dry to approximately 10 mesh by rolls and wet to approximately 40 mesh by Chilean mills.

In the concentrating department there are fifty-two 4-compartment, fifty-four 5-compartment and thirty-nine 3-compartment Richards-Janney classifiers, 156 Garfield roughing tables, 26 roughing and 34 finishing No. 5 Wilfley tables, 840-6' vanners, 14 elevators, 312-9' and 52-7', 60° conical settling tanks and 14 motors.

Miscellaneous buildings at the Arthur plant consist of sub-station, machine shop, boiler shop, oil house, compressor building, warehouse, carpenter shop, foundry, pattern storage building, general office, telephone building and emergency hospital, dormitory, mess house, lumber shed, heating plant, assay office, time office, and scale house.

Electric power used at both the Arthur and Magna plants is taken from the Utah Power & Light Co.

The 13,000 h.p. steam-electric plant, 1,500' N. E. of the Magna mill was erected by the Minneapolis Steel & Machinery Co. The boiler plant has 20 Heine 419 h.p. water tube boilers, working under 175 lbs. steam pressure, equipped with American automatic stokers, having separate mechanical drives of special design. There are two 26x50x48" Allis-Chalmers cross-compound Corliss condensing engines direct connected to 1,500 k w A. C. generators, and three 32x70x48" Nordberg cross-compound Corliss condensing engines direct connected to three 2,250 k.w. A. C. generators. There are 2 concrete smokestacks, 180' high, 12' inside diam. at the top. This plant has not been in operation since Feb., 1914.

The Utah Copper Co. employs 1,640 men at the mines, and 1,650 at the mills and shops at Garfield.

Bingham & Garfield Railway

Inc. July, 1908, in Utah. Cap. of \$6,515,000; shares \$100 par. Controlled by the Utah Copper Co., through ownership of the entire share capital.

The main line from Garfield to the mines, including tracks to the smelter, Sand Spur, and the Carr Fork Extension to the Apex Yard, is 25.83 miles. Yard and side tracks along the main line aggregate 21.70 miles. This together with tracks in and around the mine, and tracks not owned but operated over, makes 111.73 miles of track. The average grade for the entire line is about 2%; the maximum grade is 2.5%, with curves compensated .04 of a foot per degree of curvature. There are 4 tunnels with an aggregate length of 4,821', all driven 18' wide and 22' high; the longest being 2,085.11. There are 3 steel viaducts with an aggregate length of 2,010', containing about 3,000 tons of steel; the longest, across Carr fork, being 699' long and 190' high. Equipment of the line includes 4 Mallet articulated compound locomotives, each weighing 228.5 tons on drivers; 1 consolidation type locomotive, weighing 87 tons on drivers; 14 switching locomotives; 500 hopper-bottom steel ore cars; 50 drop-bottom side-dump steel general service gondola cars; 124 steel concentrate cars, making a total of 674 cars, each of 60-tons nominal capacity, with 10% excess allowance for overload; 6 steel flat cars of 50-tons capacity; 4 steel frame powder cars of 50-tons capacity; 10 wooden flat cars of 25-tons capacity; 3 steel tank cars of 7,000-gals. capacity each; 7 caboose cars; 1 Jordan spreader; 1 scale-testing car; 1 business car; 2 passenger coaches; 2 tool and kitchen box cars; 13 outfit cars and one 120-ton wrecking crane.

The cost of the complete line was upwards of \$5,000,000. The first

of ore, about 2,600 tons, was taken down the main line on Sep- h, 1911, and regular passenger and freight service was started ng morning. In 1916 the line handled 28,585 tons of freight and gers daily.

e of ore reserves for 1916 was 23,530,258 tons in excess of ned. Much additional-ore can and will be developed.

amount of capping removed was 5,911,455 cu. yards. The total hich stripping operations has been conducted was 226.6 acres ual area stripped was 111.58 acres.

ally all ore produced was mined by steam shovel at average : of 28.12c per ton, of which 7.5c represents charges for stripping arges for development, leaving actual working cost, including orportion of all fixed and general charges, 20.24c per ton as com- 16.61c per ton in 1915.

rectors have authorized construction of a leaching plant to xidized material, estimated at 40,000,000 tons. It is the inten- d this plant with an initial capacity of from 2,000 to 3,000 tons or the purpose of furnishing acid for this plant, the company l equally with the Garfield Smelting Co. in financing construc- peration of an acid works near the smelter, now in operation. ements under way promise not only a continuation of production ut further reductions in costs.

opper is still the brightest star in the Hayden-Stone-Jackling

galaxy, and its aggressive and brilliantly competent management promises to keep the company in its present enviable position.

Profits for 1917 are likely to be reduced about \$13,000,000 by payment of the Federal excess profit tax.

UTAH & EASTERN COPPER CO.

UTAH.

Office: 127 Church St., New Haven, Conn. **Operating Office:** 508 McCormick Bldg., Salt Lake City, Utah. **Mine office:** Dixie, Washington Co., Utah. **Works Office:** Shem, Washington Co., Utah.

Officers: Louis E. Stoddard, pres.; T. W. Farnam, sec.-treas.

Inc. 1901, in West Virginia. **Cap.**, \$1,500,000, increased later to \$3,500,000; shares \$5 par, in \$2,000,000 preferred and \$1,500,000 common stock.

Property: 11 claims, patented, 220 acres, and a 40-acre smelter site, including the old Dixie mine, in the Tutsagubet or Cave Springs district, near Green river.

Geology: 5 replacement deposits in limestone, 1 of 40' estimated average width, carrying cuprite, azurite, and massive malachite ores, said to give average assays of 15% copper.

Development: by a 775' blind shaft, sunk from the breast of a 225' tunnel. This tunnel caved, 1905, and it was necessary to run a new tunnel of 800', to reopen the mine. Old workings said to show about 100,000 tons of ore.

Equipment: includes a small gasoline plant.

The company has 2 smelters, 1 worthless; the new smelter has a 100-ton water-jacket blast furnace, with water power, secured from the Santa Clara river, 2 miles distant, and a small auxiliary steam plant. The smelter is at Shem, about 50 miles from Acoma; on the Rio Grande Western railroad, the nearest shipping point, and transportation for 14 miles of the distance is by traction engine.

Production: 1,448,597 lbs. copper in 1904; 400,166 in 1905, and 391,779 lbs. in 1907. Property considered promising but is handicapped by lack of rail transportation. Worked by lessees, 1915, who shipped several cars of 30% ore.

Letters returned unanswered in May, 1917.

UTAH LEAD & COPPER CO.

UTAH

Office: Kearns Bldg., Salt Lake City, Utah. **Mine Office:** Bingham Canyon, Utah.

Officers: Carl Brandt, pres.; Harry M. Stonemetz, v. p.; J. P. McDough, sec., all of Boston. W. D. Bohm, manager.

Inc. Dec 24, 1912, in Maine, as the successor of the Bingham Copper Co. **Cap.**, \$500,000; shares \$1 par. Debentures \$100,000, at 6% convertible bonds; outstanding, \$31,750. Federal Trust Co., Boston, transfer agent; Paul Revere Trust Co., registrar.

Property: 11 claims, patented, about 102 acres, on the eastern slope of Carr Fork Canyon. Company also owns a one-half interest in the Diamond Extension, and one-half in the Diamond claims adjoining.

The property shows 3 fissure veins, several bedded deposits of silver-lead ore and a fissure vein of copper ore of less promise. A big outcrop near the W. end line is said to have yielded considerable high-grade gold and silver ore with lead carbonates, to former owner.

Development: by 2 tunnels, longest 1,200', and 2 shafts on the Venn claim. There are about 3,000' of workings, showing ore below commercial tenor generally, but with occasional streaks of ore assaying 20 to 70% lead and 15 to 30 oz. silver.

Equipment: includes a small air compressor.

ty has been idle for some time, but was planning to reopen, counts.

shares, Bingham-New Haven C. & G. Mng. Co., by exchange
r share. Latter company has been paying dividends since 1906,
d paid in 1915, and a total of \$960,493. Listed on Boston Stock

traded in on New York Curb. Stock sold at \$1 to \$10.50 in
al meeting, first Monday in May.

ty is a reorganization of the Utah Metal Mining Co., itself a
n of the Bingham Central, Bingham Standard, and Bingham
ng Co.

nt for 1916 covers the combined companies, as nearly all the
ew Haven shares had been acquired and the whole of the
s since been purchased. Gross earnings were \$1,499,268 from

and \$35,947 from water, etc. Costs were \$933,384. The profit
ing taxes, interest, depletion charge, and adding interest earned,
7. Current assets were \$774,117, and liabilities, \$66,662.

end of 50c. per share, or \$342,473, was paid in August, 1916.
was paid on Feb. 15, and 30c on Dec. 10. Total to end of 1917

Property: is extensive, covering 3,539 acres, including 139 acres timber land in Bingham district, adjoining holdings of Utah Cons. and Utah Copper Co. (Boston Con.), and extending across the range to Middle Canyon, on the Tooele side. The company's active asset is a transportation and drainage tunnel, cut 11,500' through and 2,300' below the crest of the range, from near Tooele to Bingham Canyon (Carr Fork). This gives direct short transportation to Tooele and Garfield and develops a large flow—600,000 gals. per day—of water sold to the Garfield mill of the Utah Copper Co.

The Bingham or Carr Fork holdings include the Bingham Central & Bingham Standard groups, an area in which the various mineral bearing limestone beds of the camp are cut by the Saginaw-Burning Moscow and Nast veins and crossed by the Old Jordan fault. The claims on the Tooele side show similar limestones, cut by fissures, but the development work there has not thus far shown commercial orebodies, as it has on the Bingham side.

In Nov., 1914, the company started crosscut exploration from the big drainage tunnel at 8,200' from the Tooele portal. In March, 1915, 1,300' from the Bingham portal, the latter work encountered mineralized ground, and on upraising 70', an orebody 25' thick was cut. Drifting disclosed a second orebody E. of and above the first, and later a third orebody, already opened and mined by the Bingham New Haven Co., was cut. At present there are five productive orebodies on the combined properties. One copper ore shoot 300' below the B. N. H. tunnel has been proven for over 200'.

The transportation tunnel is 8'x9' in the clear, double-tracked, with $\frac{1}{2}\%$ grade. It develops the mineral bearing limestone and veins at depths of 375 to 900' below any other workings.

By purchasing control of the Bingham-New Haven company, the two properties can be developed together, each mining its own ground from tunnel on the other's claims. It also gives the Utah Metal much needed tramway facilities saving 60c. per ton on ore shipments, and the use of the B.-N. H. mill. The Bingham-New Haven property is described later on.

Development: on the Utah Metal includes besides the 11,490' transportation and drainage tunnel, and the workings therefrom, extensive tunnel development on the Bingham Central and Standard group, embracing the 700' Saginaw, 2,000' Whiteley, 2,000' Jeff. Davis, 400' Deem, 950 Mtn. Maid, the Amelia and lesser tunnels, all showing ore at various points. On the Tooele side, the Middle Canyon group has one 5,000' tunnel, another 1,700' and a third 500' long.

New work in 1916 amounted to 13,413' at a cost of \$11.08 per foot. The ground already opened, and the orebodies found, indicate the existence of similar other deposits. A large amount of mill ore has been developed. In Utah Metal ground, the new deep shaft, No. 104, should encounter sapling ore opened on the upper levels. Three years' ore supply is estimated as available.

Equipment: includes a 400-ton mill using the Callow system of flotation, enlarged 50% Oct., 1917. In July, it was stated that a new mill could be erected at the other end of the tunnel, near the International smelter.

Production:

	Ore, Tons	Lead, Lbs.	Copper, Lbs.	Gold, Oz.	Silver, Oz.	Iron, Tons
1916.....	71,402	6,301,670	1,761,520	17,934	388,767	87,000
1915.....		9,860,680	2,873,815	16,914	475,891	1,280,000

ining was \$2.51, and of milling, \$1.11 per ton.

917, a five years' contract was arranged with the Interna-
g Co. for Utah Metal ore, the price to be the average for
eding receipt of the ore.

the Bingham-New Haven property includes 26 claims, 500
g the Utah Consolidated on the S. E., includes the Zelnora
head of Carr Fork. Claims show 3 fault fissures in porphyry
deposit 3' to 8' in width, between quartz-porphyry and
e copper ore averages 3.5% copper, \$6 in gold and silver and
ess iron. The lead ore averages 20% lead, \$7 in gold and
copper, ores being chalcopyrite, galena and sphalerite. The
ly is from 3 beds of limestone, which strike E. W. and dip
now mining 2 deposits of copper, 2 of lead and one of com-

nt: by tunnels with a blind shaft starting 900' from the
lowest tunnel, there being a vertical distance of 1,200'
ighest and lowest workings. The 1,030' lower tunnel cuts
vein, giving assays of about 3% copper, 2.3 oz. silver, and
ton. Terminal at the upper tunnel was moved to the lower
ne is operated through the latter. The shaft is now down
e 500', or Highland Boy level, and crosscuts have been
d 320' below the tunnel level to cut a recently found ore-
verages 6' in width where cut. Estimated 2-3 years' ore re-

D. & M. MINING CO.

UTAH

Controlled by Silver King Cons., which see.

JUDGE MINING & SMELTING CO.

UTAH

Office: 1022 Kearns Bldg., Salt Lake City, Utah. Mine P. O.: Park City, Summit Co., Utah.

Officers: H. Otto Hanke, pres.; M. C. Fox, v. p.; G. M. Lambourne, sec.-treas. and mgr.; W. M. Bradley and A. C. Wall, directors; O. N. Friendly, gen. supt.; Geo. D. Blood, cons. engr.

Inc. 1901, in New Jersey, as the Daly Judge Mining Co. Reorganized, 1916, under present name. **Cap.**, \$300,000; shares \$1 par, increased March, 1916, to \$500,000; 480,000 shares issued. Stock listed on Salt Lake Exchange.

Dividends: paid in 1916, amounted to \$435,000; total dividends to date, \$1,590,000. Present rate is 25c per share, quarterly. Balance of \$555,290 in treasury, Jan. 1, 1917. Total receipts from ore sales in 1916, \$839,455.

Property: company has valuable holdings, about 1,100 acres patented ground, covering 11,000' of a fissure vein system, in Park City district, adjacent to the Daly West mine. Is a large producer of silver-lead ores with much zinc and a small amount of copper.

Development: mainly by tunnel and drifts, amounted to 12,677' in 1916, of which 49.65% is on the Daly vein, 48.21% on the Bock vein, and 2.14% on the Middle vein. The depth ranged from 300 to 1,900'. On the Daly the most important results were at the hanging-wall fissure, which has been consistently productive. A valuable shoot was developed on the 1,200' level of the Bock vein. It is 300' long and 256' high, of high grade. Generally, exploration was satisfactory.

The Snake Creek tunnel driven 14,500' to the property line was completed early in 1916; it will unwater the mines at greater depth and provide transportation. It is to be extended later for further exploration of the property.

Equipment: includes 400 h. p. electric hoist, compressor and 500-ton wet concentrating plant with flotation unit for treatment of slimes, making a zinc and lead product. During 1916, a 15-ton electrolytic zinc plant was erected.

Property is a regular dividend payer and the unexplored portion of the mine is promising. The technical direction is good.

Production: in 1916, 65,951 tons. The mill treated 61,787 tons of ore yielding 10,019 tons of lead and 6,129 tons of zinc concentrate. Ratio of concentration was 4.7 to 1 for all products. Metal output was 477,852 oz. silver, 535 oz. gold, 8,114,627 lbs. lead, 5,153,049 lbs. zinc, and 341,198 lbs. copper. This includes the metal in 4,164 tons of ore shipped to smelters. To date the metal output is 6,100,272 oz. silver, 12,335 oz. gold, 124,716,068 lbs. lead, 92,090,199 lbs. zinc, and 3,326,073 lbs. copper, sold for \$7,322,285.

The company's progress in zinc production is of interest. As ore contracts expired in April, 1916, zinc concentrate was stored. By Feb. 1, 1917, a 15-ton electrolytic plant of good design, was erected and started. In 1916 the mill made 6,129 tons of concentrate, assaying 44.58% zinc, 4.88% lead, 6.54% iron, and 21.47 oz. silver. Of this, 2,929 tons were sold, the balance of 3,200 tons being held for the refinery. The process is roasting, leaching with 8% sulphuric acid, purifying solutions, filtering, and electrolytic deposition of pure zinc on aluminum discs. The filtered concentrate pulp is sold to lead smelters. The spelter was 99.9% pure in October, 1917.

KEARNS-KEITH MINING CO.

Lake City, Utah.

W. Mont. Ferry, pres.; Herbert Cohen, sec.-treas.

Dec. 2, 1902. Cap., \$600,000; shares \$2 par; assessable; 287,450
shares listed on the Salt Lake Exchange.

13 claims in Park City mining district, Summit Co., Utah,
lead-gold-copper ore, developed to depth of 600' by shaft and
Fisher was lessee at last accounts and had opened up ore
winze 100 tons shipped in October, 1916.

ATLAS MINING CO.**UTAH**

101 Atlas Blk., Salt Lake City. Mine office: Park City, Sum-

mit Co., Utah. W. S. McCornick, pres.; W. R. Hutchinson, v. p.; A. L.
Smith, with F. J. Hagenbarth, H. G. McMillan, M. B. Johnson and
Herbert Cohen, directors. Peter Harrington, supt.

1916. Is a reorganization of the Thompson Quincy Mining
Co., 1900; shares 10 cts. par; assessable; with assessments not to
be made during the first year. Exchange of stock made on a share-
calling for distribution of 1,055,958 shares. Stock is listed

on Salt Lake Exchange. The New Quincy Co. assumed the obligations of the Thompson Quincy.

Annual report for 1916 shows receipts totaling \$23,046, of which \$7,303 was from ore sales, \$10,426 from assessment, \$3,040 from sale of shares, and \$2,261 balance from 1915. Disbursements amounted to \$21,726, \$16,983 being spent at the mine. Cash remaining was \$1,320. Indebtedness at end of 1916 was \$42,326, plus \$3,199 interest.

Property: 140 patented acres in Park City district, with rights of way and easements from the Daly West, Daly and Ontario companies. The claims supposedly carry the extension of the Quincy orebody of the Daly West mine. Developed by a 625' two-compartment vertical shaft, a cross-cut tunnel through the Little Bell mine, cutting a contact vein, said to carry ore assaying up to 20% lead, 160 oz. silver and \$2 gold per ton, and through the Ontario drain tunnel No. 2, which was extended to the Quincy mine by the Ontario company. Work in 1913 under the former management was mainly from the 900' level of the Daly and Ontario companies and a shaft raised from the 900' Daly West level to the contact was completed.

In 1915, a 293' crosscut was run N. 31° W. across the Plumed Knight ground. This crosscut is 84' above the 900' level, Daly West, and starts from the Talbot raise; a raise was also driven on fissure No. 4 on a 43' incline a distance of 250', giving a vertical height of 160'. The crosscut intersected 9 fissures, all of which showed some slight signs of mineralization.

In 1916, milling ore from 1 to 10' wide was found at various points. and 870 tons shipped returned \$7,303 net. In the Bonanza Flat area there is still 2,000' of unexplored ground. Total development work in 1916 was 743'.

Workings from a raise above the 260' level, which is above the 900' of the Daly West, opened 3' of rich ore in July, 1917. Shipments are being made from this point.

The company's engineer advised as necessary for the proving of the property further drifting west on the so-called Thompson-Quincy workings, which is now being done, crosscutting south from the Talbot fissure another 400' until the Thompson-Quincy fissure is intersected at a point about 700' west of the old workings, thus opening up new territory; also crosscutting south on the intermediate level to intersect other fissures known to exist.

NEW YORK BONANZA MINING CO.

 ont and Uintah Treasure Hill Coalition.

ver, lead, copper and a minor amount of gold, occurs in lime-
 artzite. For geology see U. S. G. S. Prof. Paper No. 77.

ment: shafts and tunnels, with many miles of workings. One
 workings is the 3-compartment Silver Hill winze sunk from the
 nel level, at a point 8,500' from the portal; the collar of the
 0' from surface. In 1917 extensive development was done N. W.
 towards Thayne canyon and large orebodies found in the Park
 ne.

rves not reported. The management gives out but little infor-
 h may be due to the fact that the company has had consider-
 on over apex rights.

ic is electrically equipped, and company owns a 600-ton mill;
ng treated daily at last accounts. A flotation section which

started operating Dec. 5, 1915, is said to give an increased saving of from 10% to 15% silver and 10% lead. Company employs 400 men.

Production: 29,285 tons of ore and concentrate in 1916; in 1917 shipments ran about 600 tons ore, or 1,000,000 lbs. lead per week. Output is at rate of 27,000,000 lbs. lead, 1,200,000 lbs. copper, 1,700,000 oz. silver and 1,200 oz. gold per annum.

A judgment was rendered against the company in November, 1916, for ore extracted from the Conklin Mining Co.'s ground; the amount claimed is \$500,000. The Silver King claimed the Judge, Keystone and Conkling companies will drain its Alliance tunnel and take its water supply and therefore seeks an injunction.

SILVER KING CONSOLIDATED MINING CO.

UTAH

Offices: Newhouse Bldg., Salt Lake City and Park City, Utah.

Officers: Solon Spiro, pres.; R. P. Morris, v. p.; D. L. Wertheimer, treas., with H. A. Lee, Sherman Fargo, W. C. Lewis and Herman Harms, directors. G. W. Browning, sec.

Inc. 1902 in Wyoming as the Silver King Cons. Mng. Co.; re-incorporated Feb. 24, 1908, in Utah. **Cap.**, \$700,000, increased Sept. 12, 1912, from \$500,000; shares \$1 par; issued Jan. 31, 1916, 688,581. Empire Trust Co., New York, transfer office. Metropolitan Trust Co., New York, and Columbia Trust Co., Salt Lake City, registrars. Stock listed on New York Curb and Salt Lake Exchange.

Annual report for year ended Feb. 1, 1917, shows: balance Feb. 1, 1916, \$232,645; receipts for year, \$676,804, of which \$500,499 was from ore sales; balance Feb. 1, 1917, \$235,457.

Dividends: year ended Jan. 31, 1914, \$308,791, derived from judgment paid by co-tenant; 1915, \$251,033; 1916, \$255,032; 1917, \$294,562; to Oct., 1917, \$105,000, making \$1,422,705 to date.

Property: 1,076 acres near Park City, adjoins Silver King Coalition on the west. **Ore:** carries lead, silver, gold and copper in replacement deposits in limestone and quartzite. For geology of the district see U. S. G. S. Prof. Paper No. 77.

Development: by shafts, lowest level is at 1,800' depth. Ore mined during 1916 came mostly from stopes between the 1,500 and 1,625' levels. The flat ore-shoots adjacent to the main fissure are said to be over 32' thick and 4' to 30' wide. Branches from this main orebody, 1' to 5' thick, extend out into the adjoining country on both sides of the vein, making a mass of ore in places 100' wide. Development in 1917 totaled 7,058'. Average grade of ore produced in 1916, 43.52 oz. silver, 0.042 oz. gold, 26.13% lead and 1.13% copper, realizing \$49.57 per ton. Company employs 200 men.

Production (years ending Jan. 31):

	Ore, Tons	Lead, Lbs.	Silver, Oz.	Gold, Oz.	Copper, Lbs.	Net Value
1917*	3,123,328	282,085
1917	10,082	5,273,216	439,007	423	228,819	\$500,000
1916	13,719	7,843,139	652,076	605	411,086	519,678
1915	9,987	5,593,786	503,784	514	257,912	346,980
1914	609	316,434	22,319	40	6,343	19,867
1913	612	461,830	27,813	55	9,656	27,143

* February 1 to September 1.

New work includes a 14,000' working tunnel which is on compact ground and will serve for drainage, transportation, and development. Estimated cost of tunnel, \$400,000. By September, 1917, this tunnel was in

f over 4,000'. Its purpose is to explore the Thaynes Canyon area, where rich ore was opened recently. A 10,200' tramway was built in 1915 to convey ore to the mill and railroad. A mill, initial capacity 70 tons, was built by Traylor Eng. & Mfg. Co., employing flotation. The property has become a steady producer during the past two years. The company, apparently, is on a sound footing; its earnings are mainly dependent on the lead-silver content of the ore and vary with the market price of silver.

ON-QUINCY CONSOLIDATED MINING CO. UTAH

Incorporated, 1915, as New Quincy Mining Company, which see.

KINGS SILVER MINING CO. UTAH

616 Newhouse Bldg., Salt Lake City, Utah. **Mine office:** Jas. H. Nelson, Park City, Utah.

Officers: W. R. Elliott, pres.; W. Anderson, v. p.; P. J. McIntosh, sec.

Incorporated, 1914, in Utah. **Cap.**, \$100,000; shares 10c par; \$75,000 issued. **Organization:** June 8.

Property: the Nelson, Mineola groups, 156 acres at Park City, showing favorable geologic conditions of that camp, with fissures carrying silver.

Development: 550' shaft. In 1917 a winze was sunk 200' below the main shaft, cutting the limestone quartzite contact and exposing some silver-bearing lagers, besides iron and manganese ore.

Management: is confident of finding commercial ore.

PIUTE COUNTY

MADEIRA MARYSVALE DISTRICT AND OTHERS

MADEIRA MINES CO. UTAH

Officers: H. D. Chase, pres., 76 G St., Salt Lake City, Utah; Chas. A.

G. Alma Gardner, sec-treas.; A. J. Hogan, managing director,

superintendent, H. Mann, R. M. Usher, Chas. Anderson and W. J. Allen,

J. H. Nelson, supt.

Capital: 1,000,000; shares 10c par; assessable; 261,953 shares in treasury. **Location:** on Salt Lake Exchange.

Property: the General Connor mine, 9 claims, 1 patented, near Marysville, Piute County, said to show a 15' fissure vein of free milling ore, with a silver content averaging \$18-\$20 in gold and silver.

Development: by 95' shaft, 225' tunnel, winzes and crosscuts. Ore reported to be contained at \$275,000. Five men employed. Management plans sinking lower level and erecting a mill.

MADEIRA MINES CO. UTAH

222-23 Continental Bank Bldg., Salt Lake City, Utah. **Mine office:** Marysville, Piute Co., Utah.

Officers: A. H. Cutright, pres. and mgr.; Geo. R. Raymond, v. p.; W. E. Maxwell, sec.; A. Maxwell, sec., and Alex. Beckstead, directors.

Organization: 17, 1910, in Utah. **Cap.**, 1,000,000 shares, 1c each; issued 850,000 shares. **Annual meeting:** second Saturday in January.

Property: 11 claims, 220 acres, in the Ohio district, 5 miles from D. & C. Claims carry copper-bearing gold-silver ores in fissure veins in porphyry, giving average assays of from \$1 to \$60 per ton. There has been developed by crosscut tunnels, 725' and 72' long, to reach the ore. **Mine has only a prospecting outfit.** Management plans drifting and following up on several veins.

COPPER BUTTE MINING CO.

UTAH

Idle. Office: Richfield, Sevier Co., Utah. Wm. Johnston, pres.; George H. Ogden, sec.-treas.

Property: is a copper prospect on Gold mountain, in the Kimberly district, Piute Co., Utah.

Development: by a short tunnel, showing a 6' vein of low-grade silver-bearing copper ore. Company claims to have discovered a large deposit of alunite, a potash ore, in 1916.

MINERALS PRODUCTS CORPORATION.

UTAH

Address: Marysvale, Utah. Controlled by Chicago capital.

Property: alunite bearing claims, 9 miles S. W. of Marysvale.

Equipment: includes aerial tram 6,200' long, 600 h. p. steam plant and 50-ton mill to extract potash from the alunite, which is a hydrous sulphate of aluminum and potassium. On Oct. 25, 1917, mill was destroyed by fire, loss given as \$200,000 net.

WEDGE GOLD MINING & MILLING CO., THE.

UTAH

Office: 1102 W. 7th South St., Salt Lake City, Utah. Mine near Marysvale.

Officers: E. P. Mowers, pres.-gen. mgr.; N. W. Sonnedecker, v. p.; M. L. Grovenor, sec.-treas.; the foregoing, E. J. Schenck and K. D. Schenck, directors.

Cap., \$300,000; shares \$1 par; all outstanding.

Property: near head of Bullion canyon, 10 miles S. W. of Marysvale. Piute Co.

Mine contains a gold-bearing quartz fissure vein in latite; dip 15° S. E. strike N. E.-S. W. Orebody varies from ½" to 20" in width. Mine has been developed and worked chiefly under lease. Workings include a shaft, 400' adit and 200' of drifts. Shipments are of high-grade ore only.

*TINTIC AND SANTAQUIN DISTRICTS***AMERICAN MINES SYNDICATE.**

UTAH

Office: Houghton, Mich. Mine office: Eureka, Juab Co., Utah.

Officers: Walter Fitch, pres.; J. H. Rice, v. p.; Wm. P. Seager, treas.; preceding officers, Cecil Fitch and Exilda Fitch, directors.

Inc. 1907, in Arizona. Cap., \$100,000, shares \$100 par; paid in, \$80 share; issued, \$86,350. Is a holding company, controlling the Chief Consolidated Mining Co. through ownership of 361,000 shares.

APEX STANDARD MINING CO.

UTAH

Inc. 1917, in Utah.

Officers: Lewis Merriman, pres.-mgr., Eureka, Utah; Frank Kimball, v. p.; S. S. Pond, sec.-treas., with F. W. Brock and Hugh Hefferman, directors.

Property: 20 claims, 400 acres, E. of the Tintic Standard, East Tintic district, Juab county. Developed by 165' shaft.

Management plans sinking to 1,000' in 1917 before crosscutting.

BECK TUNNEL CONSOLIDATED MINING CO.

UTAH

Merged April, 1916, with the Colorado Mng. Co. and now called the Colorado Cons. Mines Co., which see.

BLACK JACK CONSOLIDATED MINING CO.

Merged 1917 with Empire Mines Co., which see.

BOSTON & TINTIC MINING CO.

UTAH

Office: Provo, Utah. Mine office: Mammoth, Juab Co., Utah. Wm. Knight, pres.; Wm. H. Tibbals, v. p.; W. Lester Mangum, sec.-treas.

Utah. Cap., \$1,000,000; shares \$1 par; assessable; issued,

PROPERTIES IN TINTIC DISTRICT, UTAH

voted March 20, 1916, in favor of the merger of the com-
 pany with the Tintic Mines Co., which see. Shares exchanged on the basis
 for 100 Boston & Tintic stock.

BULLION BECK & CHAMPION MINING CO.

UTAH

Care U. S. Smelting, Refining & Mining Co., 55 Congress St., Boston, Mass., and Newhouse Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: Geo. W. Heintz, pres.; Jos. F. Smith, v. p.; Ambrose Nord, sec.-treas.; C. E. Allen, mgr.; preceding officers, J. H. Horlick and M. C. Morris, directors. L. C. Doty, supt.

Cap., \$1,000,000; shares \$10 par; 63,787 issued; last assessment of 20c called in April, 1914. **Dividends:** to end of 1909, were \$2,738,400, last dividend being 10c, July 11, 1908. Company is a veteran of the Tintic district and a close corporation whose stock is mostly held by the U. S. S. R. & M. Co. through its ownership of the Centennial Eureka Co., which holds a majority interest in the Bullion Beck & Champion Mining Co. Balance sheet December, 1915, shows gross earnings of \$3,453; current assets \$7,459 and current liabilities \$1,363.

Property: 3 claims, adjoining the Centennial-Eureka, which is under the same control, and with which sideline agreements stopping litigation were secured, 1908. Mine was discovered, 1876, and has been a producer since 1880.

Development: 1,300' shaft, with 200' winze below the bottom level, and by the Beck tunnel. Ore is mainly carbonate and chloride in limestone formation, carrying copper, gold, silver, lead and zinc values.

Equipment: includes a 200-ton mill, with steam and electric power.

Production: in 1915 was 2,700 tons, averaging \$11 per ton and yielding 41 oz. gold, 29,306 oz. silver, 775,728 lbs. lead, 27,042 lbs. copper and 315,673 lbs. zinc.

About 60 men working leases on property.

CARISA GOLD & COPPER MINING CO. OF MAINE.

UTAH

Inc. 1907, in Maine. **Cap.,** \$500,000, increased Jan., 1909, to \$600,000; shares \$1 par; issued, \$545,000. Was a reorganization of the Carisa Gold & Copper Mining Co., which levied assessments of \$30,000 and paid dividends of \$60,000.

Stock purchased in April, 1917, by the Knight interests for \$115,000, which amount was to be divided pro rata among the Carisa stockholders. Property is now part of the holdings of the Empire Mines Co. and described thereunder.

CENTENNIAL-EUREKA MINING CO.

UTAH

Subsidiary of U. S. S. R. & M. Co.

Office: 55 Congress St., Boston, Mass. **Operating office:** Newhouse Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: Wm. G. Sharp, pres.; C. G. Rice, v. p.; F. W. Batchelder, sec.-treas.; preceding officers, B. Preston Clark, J. J. Storrow, Sidney W. Winslow and Niel W. Rice, directors; Geo. W. Heintz, gen. mgr.; Clarence E. Allen, mgr.; A. P. Mayberry, supt.

Inc. 1876, in Utah, and reorganized, 1899, in Maine. **Cap.,** \$5,000,000; shares \$25 par; issued, \$2,500,000. Is controlled by United States Sm. R. & Mining Co., through ownership of 99,980 shares of the 100,000 shares of issued stock.

Dividends: \$7 per share in 1906; \$2.50 in 1907; \$11.50 in 1908; nothing in 1909; \$6 in 1910 and 1911; \$3 in 1912 and 1913, making a total of \$4,050,000 to end of 1914. Last dividend of \$1 per share declared April 1, 1916. Annual meeting, third Wednesday in April.

Property: in the Tintic district, includes the Centennial, Eureka, Ten-Dove, Swan and Pelican group. Ores carry fair values in gold, silver, copper and lead. Majority interest of Bullion Beck and Champion mining companies held by company.

ment: by a 3,260' shaft, and the 2,160' Holden tunnel, connecting with the shaft just below the 500' level. This tunnel ore to be delivered directly to railroad cars, eliminated the rope and handles the water from the mine. Ores are shipped to the Mid-west of the U. S. Smelting Co., at West Jordan, Utah. The mine is with square sets, and formerly was dry, but the lower levels are being handled by a 500-gal. Sulzer-Winterthur electric pump. men are employed. Surface equipment includes 40-stamp mill, electric power with necessary engine houses and shops.

Production: in 1909 was 109,538 tons; 1910, 90,375; 1911, 109,079; 1912, 13, 101,101; 1914, 58,365; 1915, 47,996; 1916, 51,381.

CONSOLIDATED MINING CO.

UTAH

Houghton, Mich. Wm. P. Seager, sec.-treas. Mine office: ab Co., Utah.

Officers: Walter Fitch, pres. and gen. mgr.; F. W. Denton, v. p.; Cecil ...; above with J. H. Rice, W. A. Hodgson and D. L. Robinson.

Inc. Feb. 9, 1909, in Arizona. Cap., \$1,000,000; shares \$1 par, nonassessible, 884,020. Houghton National Bank, registrar; Boston Safe Deposit Co., transfer, agent. Has about 1,900 shareholders. Stock is on the Boston curb. Annual meeting, third Tuesday in February, at Phoenix, Tucson, Ariz.

Dividends: 1913, 20%; 1914, 10%; 1915, 10%; in 1916, 20%; 1917 to Nov., 1917 to date, \$665,121.

Report for the year ending Jan. 1, 1917, showed receipts of \$1,601,903, 1,315,441 from ore sales and \$210,034 balance from 1915. Disbursements include dividends Nos. 7, 8, 9 and 10, amounting to \$176,481; of properties, \$148,705; machinery and equipment, \$31,634 and taxes, \$684,611, which left a balance of \$477,295, on Jan. 1, 1916.

Receipts since organization to Dec. 31, 1916, were: \$228,160 from 185 shares of stock; \$3,086,680 from ore sales and \$20,474 from total of \$3,335,314. Disbursements: mining claims, \$428,539; and equipment, \$131,002; mining expense, \$1,752,770; dividends, report for first half 1917 showed balance on hand, \$614,017; ore for 6 months, \$872,598, and \$487,566 on Oct. 1.

Claims: patented claims, 1,315 acres and unpatented claims, 3,250 acres, in Nevada and North Tintic mining districts. Company owns the mine under the city of Eureka, the Little Edgard Mining Co. and the Mammoth group; controls the Homansville Mining Co., the Baltimore and Edgard Mining Co. These last four groups comprise about 600 acres. Company also controls the majority of the shares of the Plutus Mining Co. Mining claims. The company has continuous ownership for 3½ miles from its mine; covering 2/3 of the mineralized district. Original company was 100 acres.

The Eureka lands carry about 4,000' of the strike of the Victoria ore which has an extreme width of about 400', the Victoria ore channel is in the Mammoth-Grand Central ore zone, and parallel to the Centennial zone. The Victoria ore channel has a practically N.-S. strike, dipping in pipes and shoots in nearly vertical lime beds.

Development: by an 1,800' and a 600' vertical shaft with about 62,000' of principal development being on the 1,000', 1,200', 1,400', 1,600' and

The main shaft was enlarged to provide a double hoisting system and a ladderway. This was done without interfering with the increased production results.

The development work amounted to 25,844'; 2,619' was

done on the Pinyon Peak tract, including 593' of shaft sinking; and 246' on the Plutus. Total amount of development work by the company since its inception, 63,147'. For first half of 1917 company did 6,261' of work at its mine, 800' at the Plutus and 1,615' at the Pinyon Peak tract.

Company surrendered its lease on the Scotia mine.

Production:

	Ore, Tons	Copper, Lbs.	Lead, Lbs.	Zinc, Lbs.	Gold, Oz.	Silver, Oz.	Value Net
1916....	83,606	1,795	18,439,153	879,410	8,331	1,739,004	\$1,315,441
1915....	36,142	5,648	8,232,606	622,465	4,634	403,854	309,136
1914....	39,629	237,901	5,782,118	71,665	6,291	645,419	324,299
1913....	51,173	117,328	2,597,091	4,806	1,030,132	331,287
1912....	30,038	1,141,222	7,838	969,907	509,426
1911....	6,703	825,551	389	306,362	117,551
1910....	8,273	800,802	584	531,483	217,060

Gross average value ore in 1916, \$14.71 per ton, net \$7.94; in 1915, \$20.55 and \$9.96 respectively.

For 1916 the average gold content was 0.1015 oz., silver 21.18 oz., lead (on lead ore) 13.31%, copper 1.95%, zinc 30.52%. The zinc-lead ores averaged 19.58% zinc and 18.2% lead, with gross value of \$31.52 and an average net value of \$18.64 per ton. Average New York price received for metals was 66c for silver, 6c for lead, 26c for copper and 5.4c for zinc.

Production for first half of 1917 was 35,919 tons, mostly lead ores; the average net value was \$24.41 per ton and net profit after payment of all charges was \$355,678.

Equipment: the plant has three 150-h. p. boilers, with mechanical stokers, a hoist and 15-drill Nordberg air compressor. The double-cylinder hoist has 6' balanced drums, 1½" steel cable, and operates 2 triple-deck cages in balance, carrying 1-ton cars, to depth of one-half mile. Buildings include a power plant, housing the boilers, hoists and air compressors; a machine shop, carpenter shop, and a smithy, all of steel frame. Property considered valuable and management excellent.

COLORADO CONSOLIDATED MINES CO.

UTAH

Office: Provo, Utah.

Officers: Jesse Knight, pres.; J. William Knight, v. p.-mgr.; W. Lester Mangum, sec.-treas., with R. E. Allen, J. S. Smith, K. S. Jordan and A. E. Knight, directors. Controlled by Knight Investment Co.

Is a consolidation of the Beck Tunnel Cons. Mng. Co. and Colorado Mng. Co.

Inc. April, 1916. **Cap.**, 2,500,000 shares; 10c par; stock in old company exchanged share for share. Listed on Salt Lake Exchange.

Dividends of \$675,000 have been paid by the Beck Tunnel and \$1,000,000 by the Colorado Cons.

Property: 28 claims, near the Sioux Consolidated, in the Tintic district, Juab Co., Utah, contains large deposits of low-grade ore carrying silver, gold, lead and copper values.

Development: main shaft is 2,000' deep and will be sunk to water level. A drift on 2,000' level is being driven east to cut various fissures. Development 1917. Lessees are also doing development.

COLORADO MINING CO.

UTAH

Merged April, 1916, with the Beck Tunnel Cons. Mng. Co. and called the Colorado Cons. Mines Co., which see.

COPPER LEAF MINING CO.

UTAH

Mine in the Tintic district.

Officers: J. C. Diehl, of Provo, Utah, L. E. Mangum, of Salt Lake City.

or, mgr., of Eureka; T. F. Pierson and Alex. Hedquist, of Provo. 16, in Utah. **Cap.**, 600,000 shares; \$1 par.

y: several claims in the Tintic mining district. Company said to be installing a 40 h. p. hoist.

MNG. CO.**UTAH**

s: Major Catlin, Eureka, Utah.

y: the Connolly, Dunderberg and California claims in the district. The first named claim has a 400' shaft, at which depth \$50 ore was cut in October, 1917. The other two mines have proved past.

JOINT MINING CO.**UTAH**

Investment Co., Provo, Utah. John Roundy, pres. and gen. mgt., Juab Co., Utah.

7, in Utah. **Cap.**, \$100,000; shares 10c par; assessable. Listed in Salt Lake City.

lver-lead. Development by 800' shaft to be sunk to 1,100' with depth on 800' level.

for development work raised by assessments.

MINING CO.**UTAH**

y about 6 miles from Santaquin, reported operated under lease to Clean in 1917. Ore occurs in veins, 1-2' wide, carrying silver. Developed by tunnel, 500' long at vertical depth of 300'.

MOUNTAIN MINES CO.**UTAH**

409 Atlas Bldg., Salt Lake City.

: W. Mont Ferry, pres.; D. H. Livingston, v. p.; Wm. D. Livingston, S. J. Truman, treas., with J. W. Mellen, J. H. Turner and J. E. McPherson, directors. D. E. McPherson, supt.

000,000 shares; 500,000 reserved for treasury.

y: 12 claims, 250 acres in the West Tintic mining district, Juab Co., Utah. Claimed to show a contact vein, between limestone and porphyry, carrying copper ore that assays better than 3%.

ment: by 300' new incline shaft and an old shaft 218' deep, being raised. Plans continuing shaft to 500' level. About October, 1917, the 300' level crosscut had cut the vein. 10 men employed. Complete equipment being installed, July, 1917.

CONSOLIDATED MINING CO.**UTAH**

care Knight Investment Co., Provo, Utah. Mine near Tintic, Utah.

: Jesse Knight, pres.; J. Will Knight, v. p.; W. Lester Magness, R. E. Allen and L. E. Ritter, directors; E. R. Higginson,

1, in Utah. **Cap.**, \$2,000,000; shares \$1 par; issued 1,750,000; treasury. Stock listed in Salt Lake City. Annual report for Dec. 31, 1915, shows assets, \$2,006,266, which includes: mining property, \$636,931; cash and accounts receivable, \$40,000, and liabilities, \$1,329,335. Receipts totaled \$103,982 from ore sales, and operating expenses, \$1,225,396, leaving a net gain for the year's operations, \$25,697, and a total gain of \$68,887.

Dividend of 1c a share declared Feb. 20, 1917 and continued \$5,000 being paid to Nov., 1917. Is heaviest shipper in the district, and ore is low-grade pyrite used as a flux by smelters.

y: 22 claims, patented, 122 acres, comprising the Dragon and Governor groups in Tintic district. The Governor group has 2,000' or more of big iron blossom fissure in limestone, from which the great part of that and the Sioux mines has come. The Dragon group

shipped 100 tons per-day of iron ore to the U. S. smeltery, for a long time. The Governor ground has a rich orebody of copper-silver ore developed by drifts from the Iron Blossom on the 300', 600', 800' and 1,000' levels, showing a 20' vein with 0.5 to 10% copper and 20 to 50 oz. silver. Part of the property is worked through the Black Jack shaft.

In 1915 development work consisted of 1,143' of drifting, 983' of tunneling and about 400' of raises, winzes and opencuts. In the tunnel connecting the workings with the Iron Blossom property, large bodies of low-grade ore were encountered. Work is being prosecuted on the 900' level, in 1916.

Equipment: includes electric pump on 1,000' level which secures water supply of the Knight-Christensen mill, and a hoist installed in 1915.

Production: 1,743 tons in 1914, yielding 44,006 oz. silver, 135,814 lbs. copper, 57,552 lbs. lead and 432.37 oz. gold; 7,804 tons in 1915, yielding 102,143 oz. silver, 490,750 lbs. copper, 14,766 lbs. lead and 2,559 oz. gold.

Shipping 260 tons daily, 1917.

DULUTH & UTAH DEVELOPMENT CO.

UTAH

Idle. **Office:** 503 Utah Savings & Trust Bldg., Salt Lake City, Utah. E. J. Raddatz, pres.-treas.; Peter Porter, v. p.; Harvey J. Jones, sec.

Inc. in Utah. Cap., \$500,000; shares \$10 par, as successor of No-U-Dont Mining & Milling Co.

Property: 4 fractional claims, about 50 acres, near the Honerine tunnel and next north of the Honerine mine, which carries copper, at considerable depth. Mine has 2 shafts, deepest 500', with about 3,000' of workings, and under former ownership, produced silver-lead ore from above the 500' level, shipments said to have returned 35 to 60% lead and 20 to 30 oz. silver per ton, and to have aggregated \$250,000 in value. Copper ore is expected at depth.

Property was to be absorbed by Bullion Coalition Mining Co. upon completion of payment of the \$15,000 purchase price. Part payments in 1914 and February, 1915, have already been distributed as dividends among the stockholders.

EAGLE COPPER MINING CO.

UTAH

Mine office: Santaquin, Utah Co., Utah.

Officers: Armon Cravens, pres.; C. W. Higginson, v. p.; C. E. Snel, sec.-treas.; L. F. Peterson, supt.

Inc. May, 1907, in Utah. Cap., \$1,000,000; shares 10c par. Last assessment of 1/2c delinquent, April 11, 1914.

Mine, on Mount Nebo, east of Santaquin, has shipped a little high-grade lead and copper ore. Developing with a small force.

EAST TINTIC DEVELOPMENT CO.

UTAH

Property bought, 1916, by Eureka Lilly Mining Co., which see.

EMERALD MINING CO.

UTAH

Mine office: Mammoth, Juab Co., Utah. J. E. Oglesby, pres.; J. J. Yundt, gen. mgr.

Inc. 1896, in Utah. Cap., \$300,000; shares \$1 par; assessment delinquent; last assessment one-third cent delinquent, 1914.

Property: 4 claims, and additional workings, on the Opex mine, with about 4,000' of workings, carrying copper, silver and lead ores.

In May, 1913, it was reported that the Opex mine extended into this property a drift on the 1,100' level to be driven in the future. Formerly worked on the 2,000' Opex, the permission to use the workings.

copper and lead ores being remarkably complete. The lower workings in the sulphide zone show auriferous and argentiferous galena, chalcopyrite and pyrite, coming in at a depth of 1,800' to 2,000'. Recent development consists of a drift on the 700' to cut the orebody, followed by a raise from the 1,000' level.

Equipment: includes 2 electric hoists, 1 of 165 h. p., with double drum, good for a half-mile depth, and an electric air compressor. Buildings include a carpenter shop, smithy, assay office and superintendent's dwelling.

Production in 1916 was from the 1,500 and 1,700' levels. Company claims to have a 200,000-ton orebody, averaging 13% zinc, between the 1,500' and 1,800' levels.

EUREKA BULLION MINING CO.

UTAH

Address: J. M. Bestelmeyer, mgr., Provo, Utah.

Officers: D. R. Beebe, pres.; H. C. Hicks, sec.-treas.; N. C. Hicks and August Bostelmeyer, all of Provo, directors.

Inc. 1916, in Utah. **Cap.**, \$1,000,000; shares 5c par; assessable.

Property: 7 patented claims, formerly owned by the Grutli Mining Co., were bought at sheriff's sale, 1916, for \$8,960. Claims are in the East Tintic district, N. W. of the Tintic Standard property, and are said to show a 50' vein on surface with a limestone porphyry contact.

Development: by 525' shaft reported to show quartz in a cave 150' long, 50'-75' high and 75' wide at 500', with manganese.

Equipment: includes compressor, 60 h. p. steam boiler, hoist, etc.

EUREKA CROESUS MINING CO. OF NEW YORK

UTAH

Controls or owns the Eureka Utah Mining Co. of Salt Lake City.

Property: the Huebner mine, Eureka, Juab County, Utah, shipping high-grade lead-silver ore regularly.

EUREKA HILL MINING CO.

UTAH

Office: Deseret National Bank Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: Moylan C. Fox, pres.; Waldemar Van Cott, v. p.; Jas. E. Berkey, sec., with Ed. W. Packard, directors. Jackson C. McChrystal, managing engr.; Chas. Weisbaker, supt.

Inc. Nov. 12, 1875, in Utah. **Cap.**, \$1,000,000; shares \$100 par. Is a close corporation, credited with having paid \$2,000,000 in dividends. Paid \$1 dividend, 1916. Annual meeting, third Tuesday in February.

Property: 5 claims, 27 acres, patented, also a 25-acre mill site and 100 acres miscellaneous lands, in the Tintic district, adjoins the Bullion-Beck and Centennial Eureka. The Eureka Hill mine has a 1,500' main working shaft and about 30 miles of workings. Orebodies are lenticular deposits carrying cuprite, malachite and enargite, with average values of about 14% copper, 6% lead, 25 oz. silver and \$3 gold per ton. Mine worked for 40 years, but shut down, 1911, and only old workings mined by lessees since then. Produced many millions of silver-lead ore from above 1,000' level. Deep development in future will be from adjacent mines.

Knight-Dern interests, 1916, leased tailing dumps of Eureka Hill reported to contain 200,000 tons of ore, averaging \$4.50 per ton.

Lessees produced about 2,300 tons of ore in 1916.

EUREKA LILLY MINING CO.

UTAH

Office: Judge Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Utah.

Officers: Grant Snyder, pres.; Gideon Snyder, sec.-treas. A. N. Hayward, mgr.; Brig. Snyder, supt.

Inc. 1908, in Utah. **Cap.**, \$1,000,000; shares \$1 par. Company is a consolidation of the Lilly and Provo mining companies. In 1916, the East Tintic Dev. Co.'s property was bought

erty: 7 patented claims in the East Tintic mining district, adjoining Standard mine and including the Ralph mine of the East v. Co., bought in 1916, from which considerable high-grade silver was mined years ago.

Development: by 1,325' incline shaft, which passed into hanging wall and overshot it 20 or 30' on 1,250' level. Ore was cut in shaft and assays on 1,400' level (Sept., 1917) are reported in orebody. Bottom bed in limestone impregnated with sulphides.

Produced over \$150,000 worth of ore from above the 200' level.

A MINES CO.

UTAH

Address: John H. McChrystal, gen. mgr., Eureka, Utah.

Officers: Wm. R. Wallace, pres.; Jackson C. McChrystal, v. p.; J. E. sec. & treas.; above with H. S. Auerbach, directors.

1916, in Utah; Cap., \$1,000,000; shares 10c par.

Property: in the Tintic district is bounded by the Chief Consolidated, Centennial, Eureka and Eagle and Blue Bell mines.

silver-lead of milling grade, averaging about 6 oz. silver and 4% occasional zones of enrichment.

Development: mine has been opened up through the deep workings mainly on the 900' to 1,500' levels. Shipments being made in 1917 and to carry 90 oz. silver and 9% lead and to average \$70 to \$80

per ton. In August, 1917, a 16' winze on 900' level cut 30 oz. silver ore with 12% stoping was started. A connection was made between the 1,300' levels.

STANDARD MINING CO.

UTAH

Address: Knight Investment Co., Provo, Utah.

Property: acquired by the Knight interests in 1917, from the Uvada Co., for 550,000 shares of E. S. stock.

Officers: Jesse Knight, W. Lester Mangum, J. Will Knight, John and F. C. Richmond.

1917. Cap., \$1,000,000; shares 10c par.

Property: 14 claims, about 280 acres, in the East Tintic district, formerly as the Montana group. Shows several large outcrops.

Development: by 500' 3-compartment shaft which will be sunk to

JT MINING & MILLING CO.

UTAH

Address: c/o Ashby S. Thatcher, Boston Bldg., Salt Lake City.

Property: the Admiral Farragut group of claims in the North Tintic district at Eureka, developed by a 265' shaft, which is to be sunk to

level.

MINING CO.

UTAH

723-4 Kearns Bldg., Salt Lake City, Utah. Mine office: Eureka, Utah.

Address: E. W. Packard, pres.; Jackson H. McChrystal, v. p. and gen. manager; Berkley, sec.; E. O. Howard, treas., with W. Van Cott, director; H. McChrystal, supt.

1,000 shares, \$100 par.

Production: to March, 1917, totaled \$2,460,000. In 1916 there was distributed \$1,000,000, equal to \$16 per share.

Property: the Gemini is a silver-lead mine with accessory copper ore.

There are 3 fissure veins, in an ore-channel about 450' wide, intersected by a number of cross-fissures, making a rather complex orebody. The main fissure, of 15 to 20' width, having a S. E. strike, shoots raking to the north. Ore in the upper workings aver-

ages about 12% lead and 40 oz. silver, while the bottom level, at 1,600', shows a 20' vein carrying argentiferous 3% copper ore. The mine has a 1,700' shaft and a 300' winze, equipped with electric hoist. The adjoining Ridge & Valley mine is operated through the Gemini shaft. Company operating on 1,600 and 1,700' levels, opening the new ore system. Upper levels leased, over 100 men being employed, they contributing largely to the daily output of 70 tons. One set of lessees mined gold-silver-copper-lead ore that returned over \$13,000 per carload.

The Gemini has been a regular producer since 1886.

GODIVA MINING CO.

UTAH

Office: 735 Kearns Bldg., Salt Lake City, Utah. **Mine office:** Enreka, Juab Co., Utah.

Officers: E. W. Packard, pres.; J. C. McChrystal, v. p. and gen. mgr.; J. E. Berkley, sec.; E. O. Howard, treas.

Cap., 1,000,000 shares; \$1 par; 100,000 treasury stock sold in 1917, remaining 200,000 offered public.

Property: 64 acres of patented claims in Tintic district. Only leasing done for some years, company not operating on account of settlement of estates. From 1908 to April 1, 1917, production was 13,701 tons of crude ore and 2,861 tons of concentrate, worth \$805,687. In 1916 zinc and silver-lead ores yielded \$93,000, mostly from 700' level.

Development: by 1,200' shaft, with work under way at that level. Several sets of lessees are mining ore. At 700' 31% lead and 15 oz. silver ore has been opened.

Equipment: 250 h. p. hoist, compressor, 100-ton concentrator, ore bins, buildings, etc.

GOLD CHAIN MINING CO.

UTAH

Provo, Utah. **Mine office:** Mammoth, Juab Co., Utah.

Officers: C. E. Loose, pres. and gen. mgr.; J. T. Farrar, v. p.; P. G. Peterson, sec.-treas.; preceding officers, G. Simmons and John R. Turlock, directors. W. D. Loose, supt.

Inc. Dec., 1910, in Utah. Cap., \$250,000; shares 25c par.

Dividends: to date, \$130,000. Company absorbed the Ajax Mining Co. said to have paid upwards of \$1,000,000 in dividends.

Property: the Gold Chain group and Ajax mine in the Tintic district. Recent development on the 1,500' level has shown an orebody which averages 15 to 20 oz. silver, 40 to 50% lead and \$2 to \$3 gold per ton.

Development: from Lower Mammoth mine to west end of the property, 900' below the deepest previous work, disclosed another orebody said to carry 3% copper, 44 oz. silver and \$2.50 gold per ton.

Production: about 100 tons per day, from the 200 to 700', inclusive and 1,500' levels.

Ore: shipped is medium grade. Output in 1916 over 10,000 tons. Finances are favorable for resumption of dividends.

Equipment: hoist, 17-drill compressor, and electric motors.

GRAND CENTRAL MINING CO.

UTAH

Office: Provo, Utah. **Mine office:** Mammoth, Juab Co., Utah.

Officers: Jos. T. Farrar, pres.; H. L. Holbrook, v. p.; Preston G. Peterson, sec.-treas.; Col. Edwin C. Loose, gen. mgr.; W. D. Loose, supt.

Inc. Feb. 1902, in Colorado. Cap., \$200,000, increased 1909 from 200,000 shares \$1 par, nonassessable; issued 500,000 shares listed on Salt Lake Exchange. Last dividend 4c; total dividends to June, 1916, \$1,678,200.

Property: the Grand Central is the deepest mine of the Juab district. It adjoins the Centennial Enreka and is connected to the 2,000' level, carrying a vein with an orebody 200' to 300' in thickness and of 100' thickness.

is the largest orebody in the Tintic camp. A second ore shoot, of the old one, and with parallel strike, was opened on the 2,000' levels. This ore shoot averages 15 to 20% copper on the 2,380' level and opened up on the 1,600' level for a distance of 1,200', showing a 100' to 100'. At this point the ore is bunched, requiring careful sorting. Working from the 400' to the 2,300' levels, inclusive.

Equipment: includes hoist, tramway and electric power. Mill to be built after the Knight Christensen plant has proved successful.

Production: for 1916 was 27,000 tons of ore. Monthly shipments in 1917 were 1,000 tons. Employs about 35 men. Property and management good.

MINING & MILLING CO.

UTAH

ROSSOM CONSOLIDATED MINING CO.

UTAH

Officers: W. Lester Mangum, sec.-treas., 11 Knight Blk., Provo, Utah. ... ht, pres.; J. Wm. Knight, v. p.-gen. mgr.; preceding, with R. E. A. M. Knight, directors. H. V. Birch, asst. mgr. Chas. Zabriskie

History: ... Nov. 7, 1899, in Utah. Cap., 1,000,000 shares; 10c par; assessable; ...

Production: ... 1913; \$330,000 in 1914; \$350,000 in 1916; \$250,000 in 1917. Paying 5c quarterly, 1917, with extras of 25c to Oct, a balance of \$31, 1916, showed receipts: \$819,722; \$594,766 from ore sales, with ... on hand of \$135,095, April 30, 1917.

Geology: 15 claims, patented, 147.75 acres in the Tintic mining district, Utah. The Iron Blossom mine is in limestone cut by a large fissure ... orebodies are aligned.

Equipment: property is opened to a depth of 1,900' and is mining a very large quantity of silver-lead ore. In Oct., 1915, high-grade copper ore, carrying ... opened in a winze on the 900' level and a large tonnage of this ore ... to run 10%. A crosscut 80' from the winze on the 1,000' level, ... matter, carried 20' of copper ore, assaying from 9-16%.

Future: present reports that 1916 was an excellent year, and the future is ... indications point to a shoot of copper ore developed from the 900' level. A raise 75' above 1,300' found it inclining N. E. Connection ... with the 1,700' level which will improve ventilation.

Diamond drilling for 1,300' on the 1,900' level failed to disclose anything of value.

Mine had 58,193' of underground workings at end of 1916, of which 5,751' was done in 1916.

Production: of smelter ore in 1916 was 33,530 tons (dry), yielding 4.601 oz. gold, 923,468 oz. silver, 3,099,300 lb. lead and 619,761 lb. copper. The gross value was \$26.84 per ton and cost \$9.89 per ton. Milling ore amounted to 13,547 tons, averaging 1.305% copper, 9.58 oz. silver and 0.077 oz. gold per ton; or in value, \$9.03 gross and \$4.516 per ton cost. This ore is treated by the Tintic Milling Co. Production for first half of 1917 was 35,000 tons of all classes of ore. Daily output is 90 tons of 4 to 6% copper ore.

Property good, but ore shoots erratic, although past experience indicates that the company will keep up its record for several years.

IRON KING MINING CO.

UTAH

Mine near Eureka, Juab Co., Utah.

Officers: Col. C. Edw. Loose, pres.; Reed Smoot, v. p.; P. G. Peterson, sec., all of Provo, Utah.

Cap. \$2,000,000; shares, \$1 par, increased from \$1,000,000 in July, 1917.

Property is in Tintic district and has not yet found a body of silver-lead ore. Assessments of 1 ct. a share have paid for development work. Mine has a 600' shaft and a 3,500' tunnel, planned to be driven 6,000' eventually. The mine is said to show 100,000 tons of iron ore blocked out and ready for stoping. Mine closed down March, 1912, owing to inability to market the iron ore at a profitable figure, but was re-opened in April, 1917. A new shaft is being sunk from the tunnel level and contracts arranged for sale of the iron ore.

Equipment: includes compressor, etc.

JOE BOWERS MINING CO.

UTAH

Office: 515 Dooly Blk., Salt Lake City, Utah. John Dern, pres.; A. Reeves, sec.

Inc. in Utah. **Cap.**, 450,000 shares; 25c par; assessable; 460,216 shares outstanding. Listed in Salt Lake City.

Property: 40 acres in the Tintic district shows silver-lead ore. Is a prospect.

KING WILLIAM MINING CO.

UTAH

Office: 546 E. 1st South St., Salt Lake City, Utah. Mine address: Eureka, Juab Co., Utah.

Officers: Chas. H. Blanchard, pres. and gen. mgr.; F. G. Morse, v. p.; W. A. Wright, sec.; N. G. Hall, treas.

Inc. 1907, in Nevada. **Cap.**, \$1,250,000; shares \$1.25 par; non-assessable.

Property: 2 claims, patented, 16 acres, surrounded by the holdings of the Eagle & Blue Bell, Centennial-Eureka and Grand Central.

Development: is through the Eagle & Blue Bell workings, on the 700' and 1,000' levels, corresponding with the 1,400' and 1,900' levels of the King William. There are several shallow shafts.

In Oct., 1916, the mine was sold by the sheriff to a company that has 100,000 shares, on which an assessment of 1/4c each was levied. There is no information from the mine for 1917.

KNIGHT INVESTMENT CO.

UTAH

Offices: Knight Blk., Provo, and 617 Newhouse Bldg., Salt Lake City, Utah.

Officers: Jesse Knight, pres.; Amos M. Knight, v. p.; W. Wood, gen. mgr.; gum, sec.-treas.; preceding, with John Allen, I. West, Eureka, Juab Co.; Jordan and R. Knight, Eureka, Juab Co.

Controls 17 prospecting claims in the Tintic district, including the Black Jack Com.

y Cons., Opex Cons., Spring Canyon Coal, Tintic Milling, Utah Ore Colorado Mining, Knight Christensen Metallurgical companies, the npton Mining Co. at Rico, Colorado, and the Lucky Tiger and Black : mines near Neck City, Mo., acquired in 1915. The latter 2 properties eveloped, equipped with 250-ton mill and credited with production of ore.

ny also operates the Knight Woolen Mills and Eureka Hill R. R. ew 100-ton Knight Christensen custom milling plant at Silver City, y N. C. Christensen to treat the complex, low-grade Tintic ores, was t., 1913, and operated successfully on Iron Blosson ore, attaining xtraction at a cost of less than \$2 per ton, until completely by fire, April 4, 1915.

MINING CO.

UTAH

409 Hooper Bldg., Salt Lake City, Utah. Mine office: Mam-
City, Utah.

S. and gen. mgr.; Samuel McIntyre, Jr.

Reincorporated Dec.
Controls the Cleveland

Mining Co., through ownership of 70% of capital stock. Annual meeting, first Tuesday in February.

Dividends: 5c per share in 1913, nothing in 1914, 5c in 1915, 25c in 1916, and \$1 in 1917; total to Nov., 1917, \$2,820,000.

As a result of 9 years' litigation, a judgment in favor of the Grand Central Mining Co. was rendered, 1910, against the Mammoth Mining Co., and necessitated the levying of a 10c assessment, 1910, the first in the history of the company.

Property: 19 claims, in Tintic district. Mine opened about 1870, is developed extensively and has a 2,300' main shaft, the deepest in the Tintic camp. Irregular shoots and chimneys of lead and copper ores occur, values being mainly in silver and lead.

Production: 36,000 tons in 1914; 26,000 tons in 1915; 36,600 tons in 1916, 24,000 tons to July, 1917. Dumps containing over 250,000 have been leased, yielding company 50c to \$1 per ton net.

Prospects are brighter than at any time in company's life of 25 years.

Equipment: includes complete plant, installed in 1910. About 130 men are employed.

MAMMOTH NO. 2 MINING & MILLING CO.

UTAH

Idle. Office: 409 Hooper Bldg., Salt Lake City, Utah. Mine at Mammoth, Juab Co., Utah.

Officers: Wm. H. McIntyre, pres.; Samuel McIntyre, v. p. and treas.; Isaac Jennings, sec.

Inc. 1900, in Utah. **Cap.**, \$300,000; shares \$1 par; assessable; fully issued.

Property: 2 claims, patented, adjoining the Mammoth Mining Co., shows lead and copper ores.

MAY DAY MINING & MILLING CO.

UTAH

Address: Box 1418, Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: John Dern, pres.; M. P. Braffet, v. p.; A. Reeves, sec.; W. S. McCornick, treas.; with J. C. Dick, directors. C. C. Griggs, supt.

Inc. 1896 in Utah. **Cap.**, \$200,000; shares 25c par; assessable; all outstanding. Stock transferred at company's office. Annual meeting, first Monday in April. Listed on Salt Lake City Exchange.

Balance-sheet for year ended March 31, 1917, shows \$61,071 received from ore sales, \$31,799 from sundries and 1915 balance, a total of \$92,770. Expenses totaled \$64,761. Cash on hand, \$12,009.

Dividends: to April, 1917, total \$268,000; including \$16,000 paid in 1916-17.

Property: 6 claims, 5 patented, 60 acres, in the Tintic mining district.

Ore: zinc silver and lead in limestone.

Development: by 1,100' vertical shaft and 1,500' tunnel. The mine has been practically out of ore several times; at one time the supply was so low the stock dropped to 1c per share; the larger part of its dividends has been paid since then.

Equipment: includes 50-h. p. electric hoist and compressor, capacity 500 cu. ft.

Production: for year ending March 31, 1917, 1,260 tons lead ore, valued at \$40,980; 569 tons zinc ore, valued at \$18,378. Regular shipments are being made, but production is not large.

Development: work is being carried on with the hope of finding new orebodies, though it is said the present rate of production can be maintained for some time even if none are found. Part of the property is leased to company itself leases part of the Chief Consolidated ground.

Prospecting, started 2 years ago in the S part of the property, and is disappointing and has been suspended. Work between the 600' and 700' levels has opened a little ore.

SCRANTON MINING CO.

Part of Empire Mines Co., which see.

EMPIRE MINING CO.

UTAH

Address: Provo, Utah.

Address: Samuel Cox, supt., Eureka, Juab Co., Utah.

Officers: Wm. Hatfield, pres. and mgr.; J. H. Hatfield, v. p.; J. W. Hatfield, treas.

Organized 1908, in Utah. Cap., \$250,000; shares 25 cts. par; assessable. Shares listed on the Salt Lake Stock Exchange.

Property: Three 1-ct. and two 2-ct. declarations in 1911-12 and one of 1913. Total of 30, 1913, a total of \$80,907 to 1916. Stock is listed on the Salt Lake Exchange.

Property: 3 claims, patented, in the vicinity of the Black Jack and Ajax

Development: by shafts and tunnels, with about 2,000' of workings, to 700', with principal workings on the 500' and 700' levels. The mine is operated jointly with the Gold Chain, with which it is connected on the 300' level. Hoisting is through the Black Jack shaft. The 450' level shows an assay, said to give assays up to 10% copper and \$60 gold per ton. The mine shows this same ore shoot. Present development is mainly in the vicinity of Gold Chain mine, now being driven to cut the main vein. The mine shows the fissure in the east drift, but no ore, as the ore shoot has been exhausted. Lessees are at work in the upper levels and are getting ore on the 300-750' levels. The ore contains 7-10 oz. silver and 10% copper per ton.

Equipment: heavy equipment, owned jointly with the Gold Chain, includes an air

Development: has been intermittent since it began in 1909. Lessees operating on 300' to 700' levels, shipped about 850 tons of copper ore, 1916. Operating about 150 tons monthly, 1917.

which was first

Property: in the North Tintic district, is an old producer of silver, lead and zinc ores and the stopes were pretty thoroughly worked out. The company operated the mine until 1915. Lessees are now working it; reported in May, 1916, that 1,200 tons of lead and zinc ores, yielding \$23,000 had been shipped during the past two months. About 50 men employed at present.

See Scranton Leasing Co.

SELMA MINES CO.

UTAH

Office: Kearns Bldg., Salt Lake City, Utah.

Mine office: Knightsville, Juab Co.

Officers: C. E. Beers, pres.; S. J. Hawkins v. p.; O. W. Carlson, sec-treas.; with L. C. Peterson, mgr., and G. A. Seequist, directors.

Inc. Dec., 1909, in Utah, as successor of Selma Consolidated Mining Co. **Cap.,** \$50,000; shares 5c par; assessable, except 50,000; 740,000 outstanding. **Statement made in June, 1917,** shows current assets of \$13,655, and current liabilities, \$5,616. Miners have taken half of their wages in shares.

Property: 34 claims, unpatented, near the Lehigh Tintic mine, supposed to carry the northern extension of the mineral zone of the Colorado mine, 2 miles from a railway. The property has a lime-porphry contact, with 3 principal fracture zones carrying silver-lead and copper ores, and has secured small quantities of exceedingly high-grade ore.

Development: by a 3-compartment shaft, and tunnels showing leached ground with occasional bunches of good ore. The old company expended about \$75,000 on development. Workings total 2,650', including a 200' shaft, and tunnels 80, 900, and 1,400' long, opening ground to depth of 1,000'. The shaft is to be deepened to 600'.

Equipment: includes electric power and electric hoist.

Developing: in 1916-'17. Reported in Oct., 1915, "Selma has no high-grade orebodies in sight at present, but all indications point to them at any time"; apparently conditions of "low visibility" prevent the ore from being sighted.

SIOUX CONSOLIDATED MINING CO.

UTAH

Succeeded Nov. 30, 1917 by Sioux Mines Co., receiving 493,470 shares in entire assets.

Provo, Utah.

Officers: Reed Smoot, pres.; R. L. Anderberg, sec.

Inc. about 1890, in Utah. **Cap.,** \$1,000,000; outstanding, \$745,387; shares \$1 par. Listed in Salt Lake City. Has paid total dividends of \$872,105; last one of 4 cts. per share July 25, 1911. No report was issued for 5 years and stock was practically dead on the Exchange, quoted around 3c. In Feb., 1916, it jumped to 24c, attributable to the reported strike of high-grade copper ore at depth in the adjoining Iron Blossom.

Statement of accounts from Jan. 1, 1916 to Sept. 22, 1917, shows balance Jan. 1, 1916, \$6,257; receipts from ore sales (lessees), \$16,428; stock sales, \$18,157; misc., \$4,015; loans, \$18,000. Expenses totaled \$62,858; profit, \$164.

Property: 6 patented claims at Eureka in Tintic mining district, said to show silver-lead ore. Many years were spent in developing the prospect and then it was allowed to lie idle for a number of years. About 1907 work was resumed and ore found in 1908; this put the mine on a dividend basis for a time. Known ore reserves were exhausted in 1911 and mine closed down in May, 1912, to be worked since in a desultory way by lessees.

Development: by shaft to the 1,000' level. In April, 1916, the company resumed work; sank the shaft from 600' to 1,000' level. Drifts for about 200 E. on the 800' and 1,000' levels in search of the continuation of the vein recently found in the Iron Blossom, failed to find commercial ore. Considerable quartz has been found that management believes that ore will be found in

lepth. As company has no unissued stock and is in debt, it must reorganize. On Nov. 8, 1917, a meeting was held and sale approved of any's entire assets to the Sioux Mines Co. (to be organized) with shares capital; 500,000 shares to be issued in payment, balance to be working capital and for clearing indebtedness.

Address: Property: 1908. Cap., \$2,700,000; shares \$3 par; increased, 1906, to \$4,000,000, with an increase of 1,300,000 shares of \$5 par, which was first

reduced 1909, to \$2,100,000, by cutting the par value from \$5 to \$3 and was immediately thereafter increased to present amount of \$2,700,000.

Bonds: \$500,000 authorized, at 6%, convertible into stock, of which \$422,900 is outstanding, this bond issue having been made to liquidate a floating debt. The company is a securities-holding corporation only, and is the parent company of the Tintic Mining & Development Co., Yampa Smelting Co. and West Mountain Tramway Co., properties of which are described under the titles of the two first-named companies.

TINTIC CENTRAL MINING & MILLING CO.

UTAH

Office: Provo, Utah.

Mine address: T. T. Holdaway, Knightsville, Juab Co., Utah. J. T. Farrer, pres.; R. L. Anderberg, sec.-treas.

Inc. June, 1907, in Utah. Cap., \$50,000; shares 5 cts. par; assessable; all issued. Three assessments yearly of one-half cent a share. Stock listed on Salt Lake Exchange.

Property: 20 claims, covering ground adjacent to the Iron Blossom in the Tintic district and supposedly carrying the extension of the ore-bearing fissures of that mine. These fissures are in limestone and are cut by porphyry, carrying irregular but very profitable orebodies.

Development: includes a 1,038' shaft with extensive workings on the 870', 920' and 1,020' levels. In 1914 about 542' of development was done on the 870' level, opening up a fissure of low-grade quartz and a streak of lead-silver ore, running parallel with the fissure. During 1915, work was confined to the 800' level.

Equipped with electric power.

In April, 1917, arrangements were made with the Iron Blossom company to develop the Tintic Central from the former's 1,700' level, by continuing it several hundred feet. In September some lead-silver ore had been opened on the 900' level.

TINTIC COMBINATION MINING CO.

UTAH

Consolidated with Tintic Empire and Bullock companies to form United Tintic mines, now dead, the property passing to the Tintic Tunnel Co.

TINTIC DELAWARE MINING CO.

UTAH

Address: J. F. Rawson, West Tintic, Utah.

Officers: W. D. Rawson, pres.; J. T. Hammond, Jr., v. p.; J. F. Rawson, sec.-treas.; with J. H. Ekker, Albert Ekker and A. Madsen, directors.

Inc. in Utah. Cap., \$100,000; shares 10c par.

Property: 8 claims, in West Tintic, 12 miles from Dunbar, Juab County, Utah, said to carry ore containing 82% lead and 8 oz. silver per ton, opened in Sept., 1917. Shipments to be made.

TINTIC DELMAR MINING CO.

UTAH

Office: Snow Bldg., Provo, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: Lewis Merriman, pres.; Andrew Madsen, v. p.; Harvey Cliff, sec.-treas.; with C. W. Reed and T. Boardman, directors.

Inc. March 27, 1909, in Utah. Cap., \$100,000; shares 10 cts. par.

Property: 20 claims, partly patented, in the North Tintic district, in which limestones occur with geologic conditions like those of Centennial Eureka mine.

Development: by 350' tunnel, to be extended to crosscut formation, which shows stringers of quartz carrying ore said to give good assay values in silver, lead and copper where 2 large cross breaks intersect. A 114' winze encountered fissures opened by a drift, 100' below the tunnel, reported to show ore carrying 300 oz. silver, some gold, lead and a little copper in a shoot encased in low-grade ore. Sinking was under way in May, 1917, and a hoist and compressed air installed in August.

erty reported on favorably by C. A. Porter of the Utah Copper by Prof. J. E. Tallmadge. Is a promising mining gamble.

DRAIN TUNNEL CO.

UTAH

ess: Provo, Juab County, Utah.

rs: Jesse Knight, pres.; W. L. Mangum, sec.-treas.; with J. S. Smith, th, Henry Barney, and C. W. Reese, directors.

nized in Sept., 1917, to drive a 5½ mile adit from Goshen valley to ear Silver City, for drainage of adjacent mines and sale of water for

Company owns 300 claims along the right-of-way.

MILLING CO.

UTAH

, Utah.

rs: Jesse Knight, pres.; G. Dern, v. p.-mgr.; W. L. Mangum, sec.-P. Holt, gen. supt.

n Utah. **Cap.**, 1,000,000 shares, 3 cts. par; assessable. The purpose npany is to provide a process and a mill for treating low-grade ores ality, hitherto found valueless. The mill employs the Holt-Dern and ristensen roasting furnaces and leaching. Operations began Mar., mill treating 200 tons daily in Oct., 1917, mostly from the Iron Blossom on Consolidated mines. Bullion assays 90% copper and carries from 0 oz. silver per ton.

y the process is: crusher, 4 sets of rolls, 11 roasting furnaces; four aching tanks, and scrap iron precipitating boxes. The charge for s a mixture of oxide and sulphide ores, coal dust, and salt. This amenable to the low-grade silver-copper-gold ores of the district.

MINING & DEVELOPMENT CO.

UTAH

: 734 Fifth Ave., New York. **Mine office:** Bingham Canyon, Salt Utah.

rs: Grant B. Schley, pres.; E. B. Schley, v. p.; W. J. Walworth, C. G. Raynor, asst. sec.-treas.; preceding, with W. L. Thomas, E. J. nd Kenneth B. Schley, directors.

Aug., 1896, in West Virginia. **Cap.**, \$3,000,000; shares \$5 par; re-Jan., 1906, in Maine. **Cap.**, \$600,000; shares \$1 par. Is a subsidiary ic Co., and operated as a close corporation, making no public reports. was mortgaged 1910, for \$150,000, jointly with the Yampa Smelting Vest Mountain Tramway Co., to secure a \$675,000 issue of 8% gold

am Property: the Yampa mine and a group of 30 claims, 180 acres, ork, Bingham canyon, near the Ohio mine, and adjoining the Utah ed on the N. and Boston Consolidated on the W. The claims carry or bedded vein, of 10' minimum, 37' average and 200' maximum width, quartzite foot and limestone hanging, this being among the largest in the Bingham district, outside of the properties having disseminated ores. The deposit carries disseminated chalcocite, covellite and chala-aid to average 1 to 3% copper, 2 oz. silver and \$1.50 gold per ton, ter returns for 1909 were only about 1.7% copper, and probably under in combined gold and silver values. The ore has a considerable iron, rendering it valuable for smelting the highly silicious ores o the Bingham district.

atic, Utah, company owns claims near the Mammoth, Grand Central nial-Eureka mines in the Tintic district, having a 300' shaft, with a t and air compressor. Heavy expenditures on this property gave results, and it has been idle several years.

operations is confined to the Yampa mine, a claim of less than 6 re. **is** surrounded by the Utah Consolidated, and developed by 2 d. **The** Craig haulage tunnel, on the 1,200' level, is 3,248'

long, intersecting the main vein at about 2,200' from the portal and connecting with the shaft at 2,448'. The upper or Yampa tunnel intersects the shaft at 475' and runs about 1,000' on the vein. The 1,700' shaft has 3 compartments, and is operated in 2 sections, 1 from the 400' level to surface, and 1 from that level to 1,200' level, with balanced hoists. There are 12 levels opened, approximately 128' apart. Ore from the upper workings is sent down the shaft to the Craig tunnel, which has an electric haulage system, with 2 electric locomotives, taking trains of six 3-ton cars.

Equipment: includes an electric hoist, and a power plant near the portal of the Craig tunnel, with steam and electric motors. Power is furnished by the Telluride Power Co. There is a 35-drill Ingersoll-Rand 2-stage air compressor, direct-connected to a 200 h. p. motor. Ore is transported by the West Mountain Tramway Co., controlled by the Tintic Co., which has a 12.37' Leschen aerial tram, the longest in the district, of 700 tons daily rated capacity, having 600-ton ore bins at the upper terminal, connecting with the Yampa smelter at the lower end. The tram line saves about 25c per ton on cost of transporting ore.

Production: 4,069,886 lbs. fine copper in 1905; 4,699,765 lbs. in 1906; 5,001,255 lbs. in 1907; 5,412,850 lbs. in 1908; 6,500,000 lbs. in 1909; 6,172,243 lbs. in 1910; 6,157,175 lbs. in 1911; 1,666,000 lbs. copper, 45,680 oz. silver, and 2,699 oz. gold in 1915; 3,271,249 lbs. copper, 86,875 oz. silver and 4,244 oz. gold in 1916.

The Yampa mine, though small, is considered valuable and the management good.

TINTIC STANDARD MINING CO.

UTAH

Office: 422 Judge Bldg., Salt Lake City, Utah.

Mine office: Eureka, Juab Co., Utah.

Officers: E. J. Raddatz, pres.-treas.-gen. mgr.; W. I. Snyder, v. p.; Geo. F. Busch, sec.; with L. H. Stohr and Ira I. Travis, directors; E. J. Raddatz, gen. mgr.; John Westerdahl, supt.

Inc. Oct. 2, 1907, in Utah. **Cap.**, \$1,300,000; shares 10c par; assessable: issued, 1,175,000. Has levied 19 assessments of $\frac{1}{4}$ c each up to 1916. Stock listed on Salt Lake Exchange. Annual meeting, Sept. 15.

Initial dividend, amounting to \$24,000, paid, June 23, 1917. No. 2 of like amount paid on Oct. 25.

Property: 95 claims, 1,760 acres, of which 15 claims, 300 acres, are patented. 2½ miles from rail in the East Tintic district.

Geology: mine shows limestone, quartzite, and porphyry, carrying fissure veins with N.-S. strike and dip of 55° E. in limestone.

Ore: carries lead and copper, and is reported to assay from a trace to 50% lead, 1 to 105 oz. silver, and \$1 to \$15 gold per ton. The management reports the main orebody as 200' wide.

Development: one 1,000' ventilating shaft, one 1,300' 3-compartment shaft, and about 8,000' of drifts, etc. Both shafts show shipping ore. present output being 800 to 1,200 tons monthly.

Equipment: includes a 100-h. p. steam plant, with an 80-h. p. double-cylinder hoist, good for 1,500' depth, and a 3-drill air compressor. There are 15 buildings. Also double-drum hoist with 75-h. p. motor and an 800 cu. ft. Chicago Pneumatic compressor with 150-h. p. motor.

TINTIC TUNNEL CO.

UTAH

Letters returned unanswered July, 1917, from Newhouse Bldg., Salt Lake City.

Inc. 1916, in Utah. **Cap.**, \$2,000,000.

UTAH

company plans to drain the E. and S. ends of the Tintic district by a 5-mile tunnel. It has absorbed the holdings of the United Tintic which was a consolidation of the Tintic Combination, the Tintic Empire and other companies.

Property: 28 claims, about 600 acres, in the Tintic district, near Eureka, show 4 parallel veins in an ore zone, or channel, that lies east of the Grand Central and the Centennial-Eureka ore zones. The claims are said to give approximately 2 miles on this vein system.

carries copper, lead, silver and gold values. The veins vary greatly but are generally of small size, the Bullock vein, in which work has been done, showing a maximum width of about 4'. The ore in this vein is rich in iron and carries about \$20 per ton in copper, lead and silver.

Development: principally on the old Bullock property, includes shafts of about 102' and several old tunnels.

Equipment: includes a small steam plant and hoist.

drifting S. from shaft No. 2 in hopes of finding orebody at intermediate depths. Excess of water and high cost of mining below water level has caused a decrease of production.

ZINC CO.

UTAH

Address: H. E. Clark, 11 Maple Hill, Saranac Lake, N. Y.

Officers: G. P. Smith, pres.; S. A. Breed, v. p.; H. E. Clark, sec.-treas.; J. Suchen and W. A. Black, directors. G. H. Ryan, supt.

Utah. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; 700,000 issued. **Production:** 1916, \$1,680; expenses, \$1,548; cash on hand at beginning of

Property: 12 claims, 240 acres; in North Tintic district, Utah.

Development: by 700 and 60' tunnels; workings to 300' depth total 1,000'. **Production:** for zinc-lead-silver ore.

SAM CONSOLIDATED MINING CO.

UTAH

516 Dooly Block, Salt Lake City, Utah. **Mine office:** Eureka, Utah.

Officers: Hon. John Dern, pres.; M. P. Braffet, v. p.; Frank D. Kimball, J. C. Dern, sec.; J. C. Dick, gen. mgr.; C. C. Griggs, supt.

Production: June 29, 1900, in Utah. **Cap.**, \$750,000; shares \$1 par; assessable; Aug. 21, 1912, from \$500,000; issued, \$550,000, with 1 assessment on the company formerly owned a 50% stock interest, 400,000 shares,

Day Mining & Milling Co., which stock was distributed 1910, to the company, as a stock dividend. The Richmond & Anaconda Mining Co., was absorbed 1912, by the Uncle Sam.

Shares are listed on the Salt Lake Exchange. Annual meeting, first Monday

of each month. Dividend rate was 2 cts. per share monthly, changed June, 1910, to quarterly, with an extra dividend of 3 cts., Dec., 1910, dividends for 1911 have been 19 cts. per share; total dividends to April, 1913, were \$470,000;

No. 2 assessment of 1c a share was levied on Nov. 2, 1917.

Production: Annual statement for year ended May 31, 1917, shows: ore sales realized \$1,554 cash balance from 1915 was \$8,712, making \$13,155. Expenses totaled \$11,598, leaving \$1,554 cash balance, May 31, 1917.

Property: 4 claims, patented, in Tintic district, including the Humbug mine. This is the principal property, producing mainly auriferous silver-lead ore. **Development:** smelting and milling grades. A good orebody was developed, 1911, on the northern part of the property.

Equipment: Mine worked by 5 lessees in 1916.

Production: In 1916, 25 tons zinc ore and 265 tons lead ore.

TOOELE COUNTY

Includes Clifton, or Deep Creek, Dugway, Ophir and other districts, with various scattered mines.

DEEP CREEK DISTRICT

BREWER GOLD & COPPER MINING CO.

UTAH

Office: 212 Utah Savings & Trust Co. Bldg., Salt Lake City, Utah.

Mine office: Ibapah, Tooele Co., Utah.

Officers: J. P. Gardner, pres.; S. W. Morrison, v. p. and treas.; H. B. Windsor, sec.; John Mortimer, asst. sec.

Inc. Feb. 16, 1907, in Utah. Cap., \$50,000; shares 10c par; assessable; 4 assessments have been levied.

Lands: 11 claims, 6 patented, on Dutch mountain, in the Clifton district, less than 5 miles to loading station on the Deep Creek railroad. In operation, May, 1917.

COPPEROPOLIS MINING CO.

UTAH

Address: N. A. Dunyon, mgr., Tooele Co., Utah.

Property: 65 claims in Deep Creek district. Shipments of selected ore in Oct., 1917, reported to have returned 60% copper, 65 oz. silver and \$12 gold per ton.

Development: by tunnels.

DEEP CREEK COPPER KING CO.

UTAH

Address: R. C. Naylor, Gold Hill, Tooele Co., Utah.

Property: 10 claims in Deep Creek district, extending south from the Western Utah Copper claims.

Development: by 100' shaft said to be sunk on copper-silver-lead ore.

DEEP CREEK COPPER M. & M. CO.

UTAH

Office: 202 Atlas Block, Salt Lake City, Utah.

Officers: R. C. Naylor, pres.; J. Pingree, treas.; A. L. Thomas, Jr., sec.; above with A. Winzell, L. Housekeeper, I. A. Powell and W. I. Smith, directors.

Property: 10 claims, in the Deep Creek district, Tooele Co., Utah, said to show lead-silver-copper ore.

Development: by shallow shaft on the Moonlight claim which is to be sunk 100' on a 2½' vein.

Company raising funds for development work by stock sales, late in 1917.

DUGWAY COPPER MINING & SMELTING CO.

UTAH

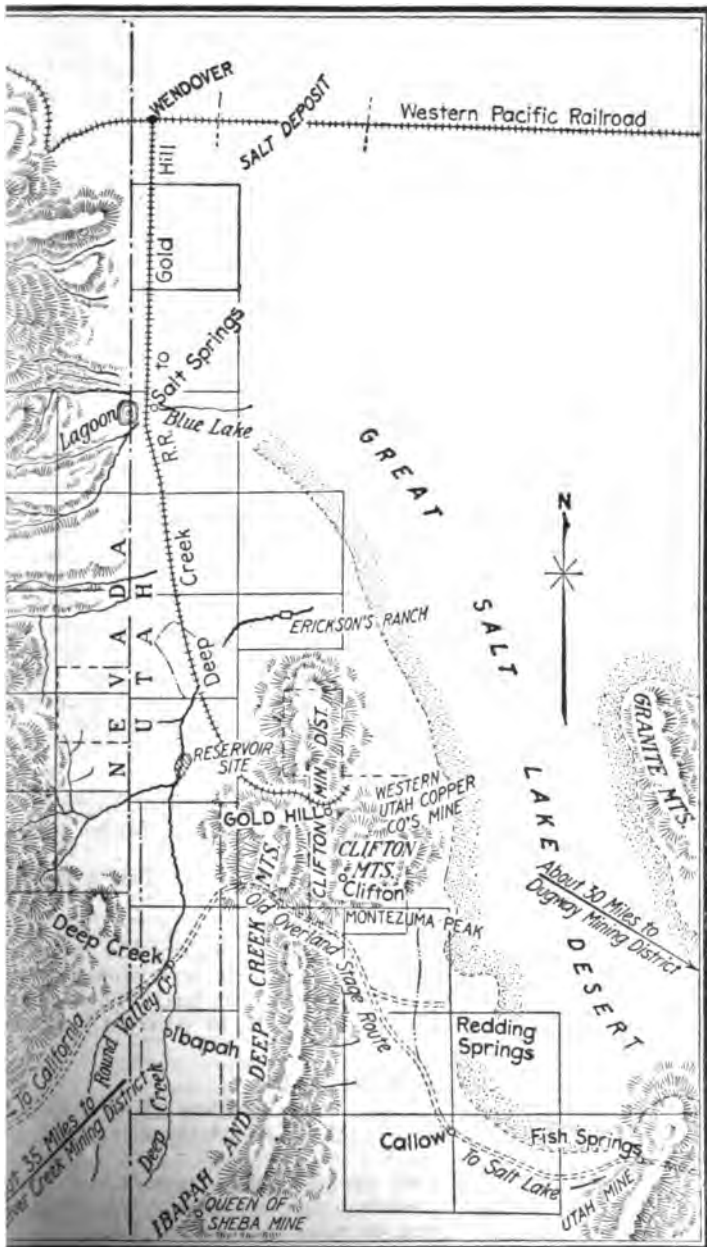

Office: 54 East 4th South St., Salt Lake City, Utah. Mine office: Clover, Tooele Co., Utah.

Officers: O. F. Peterson, pres.-gen. mgr.; P. C. Kittle, v. p.; A. F. Peterson, sec.; O. F. Peterson, treas.; preceding with A. E. H. Peterson and H. B. Windsor, directors.

Inc. June 13, 1902, in Utah. Cap., \$30,000; shares 10c par; assessable issued, \$22,506. Annual meeting, third Tuesday in July.

Property: 6 claims, patented, 118 acres, in the Dugway district, 3 miles from a railroad. Shows an ore zone, reported by company, to be 300' long on the 200' level, containing a number of orebodies that contain chalcopryrite, bornite and argentiferous galena, giving assays of 1 to 12% copper, up to 30% lead, up to 7% zinc, up to 66 oz. silver, and \$1.68 gold per ton.

Development: by a 333' incline shaft, with about 1,000' of workings. Shows considerable ore of good average assay tenor. Mine has no production. Has been idle for several years.

MAP OF CLIFTON (DEEP CREEK) DISTRICT, UTAH

FERBER COPPER CO.

UTAH

Office: Chas. A. Herzig, mgr. and cons. engr., 515 Dooly Bldg., Salt Lake City, Utah. **Mine office:** Ferber, via Wendover, Utah.

Officers: J. C. Dick, pres.; John Dern, v. p.; A. Reeves, sec., with W. W. Armstrong, A. A. Ellis, Jr., Duncan MacVichie and W. H. Clark, directors. John M. Price, supt.

Cap., \$1,000,000; shares \$1 par; 550,000 shares in treasury; 100,000 shares treasury stock offered at 25c per share, April, 1917.

Property: 8 claims and 4 held under bond, in the Deep Creek mining district, about 14 miles W. of Gold Hill. Claims show limestone near a monzonite intrusion, and are said to show a vein, 4-6' wide, carrying ore that assays 5½-7% copper, 3-12 oz. silver and 40c gold per ton.

Development: by two shafts, one 70' deep showing 3' of high-grade copper ore. Recent work is said to have shown 18% copper ore with 11 oz. silver, and at 100' depth in No. 1 shaft there was 25' of oxide ore.

Mr. Herzig is a good judge of a mine, and his management ensures proper development.

GARRISON-MONSTER MINING CO.

UTAH

Office: Utah Sav. & Trust Co., Salt Lake City, Utah. **Mine near Gold Hill, Tooele Co., Utah.**

Officers: J. P. Gardner, pres.; J. S. Garrison, v. p.; H. B. Windsor, sec.; S. W. Morrison, treas.

Inc. June, 1906, in Nevada. **Cap.,** \$1,000,000; shares \$1 par. Is a merger of the Garrison G. & C. Mng. Co. and the Monster Mng. Co.

Property: 26 claims, patented, on Dutch mountain, in the Deep Creek district, 40 miles from Wendover, on Western Pacific Railroad. A branch line to the district was completed in 1917, reducing transportation costs materially. The Garrison Monster company built a loading station at Garrison station on its spur from the Deep Creek line. Mine has 35% of workings and is said to show considerable bodies of silver-lead ore. Work was resumed during June, 1917; 20 men employed.

GETHIN LEROY UNITED MINES CO.

UTAH

Office: 517 Atlas Bldg., Salt Lake City, Utah.

Officers: A. S. Fowler, pres. and treas.; E. P. Haggood, 72 R St., Salt Lake City, v. p.; Jas. Moffat, sec., with Given Fowler and Loris Pratt, directors.

Cap., \$1,000,000; shares \$1 par; 750,000 issued. Paid a dividend of 1c per share, Nov., 1913.

Property: in Silver Island district, Tooele Co., 15 miles north of Wendover, said to contain silver ore. Company has made several shipments during the past few years. Property was worked by lessees, who are said to have shipped 500 sacks of ore in Jan., 1916.

Property was to be sold in Aug., 1917, to satisfy a judgment for \$1,000 in favor of E. Hanson.

LUCKY STAR COPPER MINING CO.

UTAH

Address: N. J. Nielson, sec.-treas., Dugway, Tooele Co., Utah.

Officers: G. N. Strike, pres.; J. T. Aydelotte, v. p., with Israel Larson and Peter Sacos, directors.

Cap., \$500,000; shares 10c par; 275,000 in treasury.

Property: Lucky Star mine in Dugway district, adjoining Cannon mine and held on lease and bond, 45 miles from rail at Faust.

Development: by 260' incline shaft with drifts on ore 5' thick. Length of drift, said to assay 8% copper and 15 oz. silver per ton. Eight ton shipment said to be ready late in October.

TAR COPPER CO.

UTAH

Office: Vandergrift Bldg., Pittsburgh, Pa., and Newhouse Bldg., Salt Lake City, Utah.

Officers: P. S. Chambers, pres.; D. A. Rees, v. p.; A. E. Custer, 2nd v. p.; A. Duerr, treas.

Organization: Nov., 1916, in Delaware. Cap., \$1,500,000; shares \$1 par. State-registered Mar. 20, 1917, showed cash on hand and accts. receivable,

Property: 15 claims, 5 patented, about 230 acres, in the Clifton or Deep Creek mining district, Tooele Co., Utah, 167 miles S. W. of Salt Lake City. Main office address, about 2 miles south.

Geology: country rock is monzonite with porphyry intrusions. East-west veins traverse the claims and are in turn cut by N.-S. dikes, the veins occurring at these contacts. Veins are said to be 4-12' wide and average 5-7% copper, 49 oz. silver, \$4.65 gold, with about 12½% lead.

Development: by 9 shafts, 5 tunnels, several drifts and open cuts. Main shaft is 300' deep and reported to be all in ore. Tunnel No. 1, 50' long, is yielding shipping ore.

Equipment: includes 2 gasoline hoists, compressor, etc.

Management: sure sent out from Pittsburg is suspiciously lurid, though mine management and officers be reputable.

OF SHEBA MINE

UTAH

Owned and operated by J. W. Lawton, Chicago, Ill.

Property: in the Deep Creek district, about 29 miles S. W. of Gold Hill. Produces free milling gold ore in a quartz vein said to be from 14-25'

Development: by 1,080' tunnel and a 276' raise, driven in 1914.

Equipment: includes 10-stamp mill and 1,700' aerial tramway. The mine is operated with past production of \$150,000. Operated by lessees in

LE COPPER CO.

UTAH

Office: F. L. Wilson, Brooks Arcade Bldg., Salt Lake City, Utah.

Property: adjoining that of Western Utah Copper Co., near Gold Hill, in Deep Creek district, Tooele Co., Utah. Ore deposits are numerous in character, but attention in 1917 is being given to tungsten, depth of 135'. Some molybdenite is also being developed. In 1917 a 50-ton mill was nearly complete. Shipments were made by prospect. Prospects said to be bright for a small but profitable property.

ILVER MINING CO.

UTAH

Officers: J. C. Soffe, pres.; W. R. Soffe, v. p.; J. W. McKinnig, sec.-y.; W. J. Soffe, mgr.; A. J. Shulson.

Organization: May 7, 1916, in Utah. Cap., \$10,000; shares 1c par.

Property: 12 claims, unpatented, in Erickson mining district, Tooele Co., west of Faust Station on Salt Lake route. Claims show high-grade gold ore. Letters returned in May, 1917. Probably idle.

GOLD HILL M. & M. CO.

UTAH

Office: Peter Clegg, Tooele, Utah.

Officers: Peter Clegg, pres.; C. W. Bailey, v. p.; T. S. Marks, sec.-y.; W. Carder and J. Donovan, directors.

Organization: April 7, 1917, in Utah. Cap., \$50,000; shares 10c par; 222,500

Property: 6 claims, patented, 110 acres, in Clifton district (Deep Creek mining district), Tooele Co., said to have a contact deposit in granite and limestone which carries gold, silver, copper and lead. Discovered in August, 1917.

UTAH-RELIANCE MINING CO.**UTAH**

Office: 408 South State St., Salt Lake City, Utah. **Mine office:** Ibapah Tooele Co., Utah.

Officers: J. G. Bywater, pres.; D. B. Tripp, v. p.; Richard B. Shepard, sec.-treas. and gen. mgr.; preceding with W. A. Langford and Samuel Divett, directors.

Inc. 1908, in Utah. **Cap.**, \$5,000; shares 1c par; assessable; issued, \$3,000, fully paid.

Property: 8 claims, unpatented, 160 acres, about 45 miles from a railway, showing porphyry and limestone.

Development: by a 175' tunnel and a 100' shaft, latter showing ore assaying up to 16% copper, 4 oz. silver and 40c gold per ton.

Letters returned unanswered, 1917.

WESTERN PACIFIC COPPER CO.**UTAH**

Office: care Wilson Bros., Brooks Arcade, Salt Lake City, Utah. **Mine office:** Callao, Juab Co., Utah.

Officers: E. J. Yard, pres.; Jackson H. McChrystal, v. p. and gen. mgr.; Elroy M. Clark, sec.-treas.

Property: 320 acres, adjoin the Western Utah Copper Co., in the Willow Springs division of Deep Creek district, Tooele county, just over the Juab county line.

Development: by a shaft and 2 tunnels, 400' and 1,200' long, developing ore averaging about 13% copper, 23% lead and 22% iron, with small silver and gold content. In 1914 a rich strike was reported in a south drift run from the bottom of the 250' shaft. The vein is said to be 15' wide and a 100-ton sample ran 24.4% copper. Occasional small shipments of ore have been made.

Equipment: includes steam plant and air compressor.

WESTERN UTAH COPPER CO.**UTAH**

Office: 1604 Walker Bank Bldg., Salt Lake City, Utah. **Mine office:** Gold Hill, Tooele county, Utah.

Officers: Harold R. Smoot, pres.; Duncan MacVichie, v. p.-gen. mgr.; Edwin T. Jones, sec.-treas.; with Imer Pett, Frank Fisher, H. H. Green and Senator Reed Smoot, directors. R. E. Phelan, mgr.

Inc. 1906, in Nevada. **Cap.**, \$2,500,000; shares \$5 par; fully paid and non-assessable; 499,500 issued.

Property: 5 groups of claims and 360 acres ranch land, a total of 760 acres, comprising the Gold Hill, Yellow Hammer, Calaveras, Tuslunna and Ochre Springs groups; also the Redding Springs ranch, valuable for water for reduction purposes.

The properties are situated in the Clifton district, Tooele county, reached by the Western Pacific and Deep Creek railroads, about 167 miles S. W. of Salt Lake City. Examined in 1917 by F. W. Weeks.

Geology: predominant rocks are granite and limestone. The deposits are replacements in limestone.

The Gold Hill group has about 200,000 tons of ore that averages 4.3% copper, 3.58 oz. silver, and 0.023 oz. gold per ton. In addition to this there is said to be a large tonnage of silver-lead ore under development and partly blocked out, averaging 9% lead and 12 oz. silver per ton.

The Deep Creek railroad from Wendover, Utah, to Gold Hill, Utah, was completed March, 1917, and ore shipments began on March 1 from the Gold Hill mine, averaging 200 tons of copper ore per day.

The Calaveras and Yellow Hammer groups commenced shipping about July 1. The product from these groups is gold and silver.

WESTERN UTAH EXTENSION COPPER CO.

UTAH

Address: A. E. Custer, mgr., Newhouse Bldg., Salt Lake City, Utah, or Gold Hill, Utah. P. S. Chambers; pres.

Inc. in Delaware. **Cap.**, \$2,500,000.

Property: 15 claims, adjoining the Western Utah Copper mine, in the Clifton district, Tooele Co., Utah. Examined in 1917 by F. W. Weeks.

Property is said to contain a well defined fissure in limestone and granite, over 5,000' long. In September a shaft was being sunk. Ore opened in a tunnel is said to assay \$3.20 gold, 19.4 oz. silver, and 17.4 copper, evidently picked ore.

Company banks on developing an extension of its neighbor's orebody.

WILSON CONSOLIDATED MINING CO.

UTAH

Offices: 208 Brooks Arcade Bldg., Salt Lake City, Utah, and Wendover, Tooele Co., Utah. Clyde H. Wilson, pres.; Frank L. Wilson, sec.-treas.

Property: located in the Clifton district, Deep Creek district, Tooele Co., 45 miles from Wendover, was the only mine in the U. S. which shipped bismuth ore in 1914. Reported to have shipped one 25-ton lot of 8% bismuth ore carrying gold and silver. Ore was hand jigged to bring shipment up to 20%.

Reported in July, 1917, that tungsten was found on the property and that 200,000 tons of ore had been blocked out; of which class or value was not specified.

WOODMAN MINING CO.

UTAH

Address: Gold Hill, Tooele Co., Utah.

E. F. Woodman, pres.; Geo. E. Woodman, v. p.-sec.-treas.

Property: the Frankie group, 2¼ miles S. of Gold Hill, said to show low-grade copper ore opened up for 72' in a 200' tunnel, Nov., 1917.

Ore: occurs in a granite-limestone contact, and the ore will, it is said, average 2% copper, \$1.20 gold, 2 oz. silver, but a 3' streak on the wall carries 15-20% copper.

Shipments reported to be 100 tons weekly.

Company also owns the Cane Springs mine S. W. of Gold Hill, and the Alverado group E. of the town. In both groups a gold-bearing calcite vein occurs in the granite-limestone contact. The two mines have, it is said, produced \$270,000. Seven men are employed at the Cane Springs mine.

*OPHIR DISTRICT***CARBONATE KING MINING CO.**

UTAH

Officers: M. J. Dooley, pres.; J. F. Free, v. p.; F. E. Harding, sec.-treas. of Salt Lake City.

Cap., 1,000,000 shares; 10c par; 400,000 in treasury.

Property: in Ophir camp, near Hidden Treasure mine. Company has acquired the Hetty Green, Schindler, Ethelwin and Pinky claims.

Development: 200' inclined shaft on Hetty Green vein. Some drifting has been done. Property is still in prospective state.

CLIFF MINING CO.

UTAH

First Nat'l Bank Bldg., Milwaukee, Wis. **Operating office:** 414 Jones Bldg., Salt Lake City, Utah. **Mine office:** Ophir, Tooele Co., Utah.

Officers: A. G. Kern, pres.; Grant Snyder, v. p.-mgr.; J. A. Swann, sec.-treas., with A. D. Thompson, Frank Adams, Geo. Swift and E. M. Vicker, directors. A. H. Williams, supt.

Inc. May 31, 1906, in Maine. **Cap.**, \$3,000,000; shares \$10 par, all standing. **Dividends:** in 1916, 100,000.

erty: in the Ophir district, contains silver-lead-zinc ore as replacements in limestone.

Development: by tunnels, with several miles of underground work-

ing: includes electric power and one-mile aerial tram.

DRY CANYON CONSOLIDATED MINING CO.

UTAH

Location: Tooele Co., Utah.

Officers: C. J. Garber, pres.-treas.; L. L. Travis, v. p.; J. E. Darmer, V. C. Anderson and Violet S. Scribner, directors.

Capital: 100,000 shares, in Utah. Cap., \$100,000; shares 5c par; assessable; 1,800,000 shares outstanding. Annual meeting Jan. 15.

Property: 29 claims, 12 patented, 400 acres, in Dry Canyon, Ophir mining district, Tooele Co., Utah, said to show gold, silver, copper, lead and zinc not in commercial quantity at present. Miners said to have discovered little ore before present company acquired it.

Development: by tunnels with a total of 8,000' underground workings.

Production: shipped two cars of ore, 1916, netting about \$2,000. Com- panning some ore while doing development work, 1917.

OPHIR MINE

UTAH

Location: Ophir camp, via Stockton, in Rush Valley district, Tooele Co., Utah, on the S. P. L. A. & S. L. R. R.

Property: shows veins with replacement orebodies in Paleozoic lime- stone near dike contact and was shipping 50 tons a month from 375' levels, averaging 8% copper, 15 oz. silver, 10% lead, in

1914, but reported operated under bond and lease by Development Co., in 1915, and shipping \$26.92 ore from the 200' level, is sinking main shaft to 400' level. No recent returns.

BLUE JAY MINING & MILLING CO.

UTAH

Location: Iron Co., Utah. I. C. Clark, mgr. Company owns the mine and a mill in Rice canyon. Reported to have taken a work- ing on the Blue Jay group in Washington mining district, Beaver Creek, 1916. Is a private corporation.

WINDY HOLE MINING & MILLING CO.

UTAH

Location: 27 Latimer Block, Salt Lake City, Utah.

Officers: A. A. Crome, pres.; Walter Crome, v. p.; Wm. Crome, sec.- y. W. C. Howe and C. F. Stanley, directors.

Capital: 38,000 shares, in Utah. Cap., \$25,000; shares 5c par; assessable; 200,000 shares outstanding.

Property: 2 unpatented claims, 4 miles from a railroad, Tooele Co., Utah, shows a contact fissure vein, traceable on surface and carrying copper, gold, silver in limestone formation. Assays average 10% copper, 15 oz. silver, 10% lead.

Development: Is merely a prospect reported to have good showings. De- veloped a shallow shaft and 120' tunnel, with about 300' of workings.

Production: driven to cut orebody. Four men employed.

WINDY HOLE CONSOLIDATED MINES CO.

UTAH

Location: 10 Congress St., Boston, Mass. Mine office: Ophir, Utah.

Officers: E. W. Clark, pres.; Ed. A. Fordyce, sec.-treas.

Capital: 100,000 shares, in Maine. Cap., \$1,000,000; shares \$1 par; fully paid; 100,000 shares outstanding.

Property: 640 acres in the Ophir camp, Tintic mining district, Tooele Co., Utah, said to show high-grade silver-lead ore in fissure veins in lime- stone.

Development: by 5,000' of shafts, tunnel and drifts. Operated by les- see, silver-lead ore mined, 1915-16.

MONO DEVELOPMENT CO.

UTAH

Address: J. H. Cook, pres., or Matt Gisborn, Salt Lake City, Utah. Mine at Dry Canyon, near Ophir, Salt Lake Co., Utah. Stock assessed $\frac{1}{4}$ c a share.

Property: a group of claims, 300 acres, noted in 1872-3 for its high-grade silver ore. Claims are near the following producing mines: Mono Brooklyn, Thad Stevens, Kearsage and Eureka Ophir. A new wagon road built Oct., 1917, from Dry Canyon to the railway gives a new impetus to work, as heretofore ore was hauled 9 miles to Stockton.

Developed: by 2,500' tunnel.

NEW STOCKTON MINING CO.

UTAH

Office: Mankato, S. D. Mine at Stockton, Utah.

Officers: F. M. Currier, pres.; R. A. Dunham, v. p.; W. Z. Harrison, sec.-treas., Hess Bldg., Salt Lake City. W. A. Wilson, cons. engr., #6 Dooly Block, Salt Lake City; C. B. Kennedy, W. D. Kimball and M. M. Ferguson, directors.

Property: the old Ben Harrison mine at Stockton showing a vein with one to two feet of ore, which averages 10% to 45% lead, 5 to 40 oz. silver and 60c to \$7 gold per ton.

Development: by shaft with main work on 200' and 500' levels.

Production: \$70,000 in 1913-1914. As shipped the ore has averaged \$12 to \$15 per ton with silver-gold-lead values.

In 1917 lessees were shipping ore averaging 45% lead and 35 oz. silver per ton.

OPHIR HILL CONSOLIDATED MINING CO.

UTAH

Office: Miner Bldg., Butte, Mont. **Mine office:** Ophir, Tooele Co., Utah.

Officers: Wm. A. Clark, pres.; W. C. Siderfin, sec.; E. W. Clark, treas. and gen. mgr.; preceded with Chas W. Clark, directors. A. G. Swanson, mine supt.; R. H. Dunstan, mill supt.; E. Bowman, engr. Company is managed as a close corporation.

Property: one-half mile north of Ophir, carries the 5' Top-vein, the 20' Big vein, the Middle vein 10', the Copper vein 8', and the Blue vein 8' thick, and from 10'-100' wide.

Ore: contains argentiferous galena, with pyrite, averaging 8% lead and 10 oz. silver per ton; also some copper and zinc ores. Ores occur as replacements in argillaceous limestone and shale, in 3 clearly defined shoots, known as the Wild Delirium, Miner's Delight and Western Stope.

Development: an 1,800 incline shaft, with the usual levels and stopes, also a transportation tunnel nearly 1 mile long, through which all ore is taken. This tunnel intersected the vein on the 1,300' level; it also drains the mine at depth.

Equipment: includes a steam plant, not operating, and a hoist; there is a gravity tramway from the mine to the 200-ton mill.

Production: averages about 100 tons daily of lead-silver ore, with a little gold and 2½% copper. Concentrates run about 10-12 oz. silver and 10-12% lead per ton. The property is an excellent one. A branch line of the Salt Lake Route was built to the property in 1912.

OPHIR KING GOLD MINING CO.

UTAH

Mine near Ophir, Tooele Co., Utah.

Inc. Nov., 1907, in Utah. Cap., \$10,000; shares 3c par, assessable.

Lands: 30 acres, patented, 9 miles from railroad, adjoining the Ophir Hill and Cliff Mining Co.'s properties and carry auriferous and argentiferous copper and lead ores. Mine has 400' tunnel, with some crosscuts and several shallow shafts. Property worked under lease in 1913. For

equipment were sold at sheriff's sale in Nov., 1914, to John B. for \$1,750, to satisfy a judgment obtained by Holmes.

QUEEN MINING CO.**UTAH**

Lowford, Cedar River, Mich., controls property.

UTAH MINING CO.**UTAH**

Office: Salt Lake City, Utah. Mine near Ophir, Tooele Co., G. Schliep, pres.; C. L. Olson, sec.-treas.

Feb. 13, 1909, in Utah. **Cap.**, \$250,000; shares 25c par; non-assess-

ment: 7 claims, 9 miles from railroad, show copper and lead ores. Several buildings and a hoist.

WYOMING STANDARD MINING CO.**UTAH**

Office: W. N. Grundy, 523 Atlas Blk., Salt Lake City.

Pres.: A. P. Davidson, pres.; D. J. Lemmon, v. p.; W. N. Gundry, with H. Roy Allen, Hon. A. C. Smoot, E. V. Anderson and J. W. Huether, directors.

Office: Utah. **Cap.**, \$10,000; shares 1c par.

Property: 10 claims, 5 patented, 170 acres, said to show a vein of silver in a 70' shaft.

Development: by 200' shaft, with 450' drift in which a N.-S. fissure has been showing ore for 60'. Drifting N. on fissure for E.-W. contact in 1917.

AMERICAN MERCUR MINING CO.**UTAH**

Office: 11 Broadway, New York. J. Macnamara, sec. **Mine office:** J. W. Huether, supt., Ophir, Utah.

Company is operating a mine on the western dip of the Camp Floyd and has been developing only, in 1917.

Equipment: includes a 150-ton mill.

OTHER DISTRICTS IN TOOELE COUNTY**KEY-DOUGLAS MINING CO.****UTAH**

Office: care Roger Traweck, sec., 62 W. 3d St. N., Salt Lake City.

Pres.: E. S. Holt, pres.-treas.; Thos. E. Brooks, v. p., with T. S. Huether, directors.

Property: 116, in Utah. **Cap.**, \$1,000,000; shares \$1 par; 600,000 paid for 900,000 in treasury.

Property: 10 claims, in Silver mining district, western Tooele Co., to show silver-lead ore in veins and deposits in limestone, at porphyry contacts.

Development: 150' crosscut tunnel, expected to cut vein at 250'. Is

BERNARD M. & M. CO.**UTAH**

Office: Keith, gen. mgr., Kearns Bldg., Salt Lake City, Utah. Thos. G. Lamb, sec.-treas.

Property: 99, in Utah. **Cap.**, \$100,000; shares 10c par, assessable; assessment of 3c per share levied May, 1917.

Property: 33 claims in Erickson mining district, Indian Springs (near Tooele Co., Utah).

Development: by a 280' incline shaft, reported all in ore running better than silver and \$4.70 gold per ton.

Production: in 1916, 5 cars of ore shipped netted \$30,000.

Work: mostly development work, 1917.

VERMONT

ORANGE COUNTY COPPER MINE

VERMONT

Strafford, Orange Co., Vt. J. B. Reynolds, mgr. and principal owner, 54 No. Main St., Rutland, Vt. Lovat Fraser, engr.

Lands: 900 acres, held under deed of mining rights, are near the Elizabeth mine, 13 miles from the Boston & Maine railway. Property carries a lenticular orebody, conforming to dip of the country rocks, which include gneiss, under garnetiferous mica-schist and above hornblende-schist, with strike of west of north, and average dip of about 45°. The lens, of 40' extreme width, but not mineralized for the full width, is traceable 4,000' on the property. Ore carries chalcopyrite, disseminated in massive pyrrhotite, averaging 2% copper.

Development: by 110' incline shaft, with about 70' of laterals on the 100' level.

Equipment: includes steam boilers, a 3-drill air compressor and several mine buildings. Geology is described, Bull. 455, U. S. Geol. Survey. Owner writes that "mine is in transition state—new development anticipated."

PIKE HILL MINES

VERMONT

Address: Corinth, Orange Co., Vt.

Officers: John H. Allen, pres.; John J. Coakley, sec.-treas.; preceding with C. A. Andrews, George Marshall and D. S. Conant, directors; H. G. Hunter, mgr.

Inc. Jan. 9, 1906, in Vermont. **Cap.**, \$200,000; shares \$100 par; outstanding, \$160,300.

Property: 101 acres, freehold, in the Corinth district, 14 miles from the Boston & Maine railway, shows mica-schist carrying lenses of chalcopyrite disseminated in pyrrhotite, of 2% estimated average copper tenor. The mine was worked in a small way at intervals during the nineteenth century.

Equipment: hydro-electric power and 100-ton flotation plant being installed, 1917.

Production: 131,911 lbs.; fine copper in 1905; 304,377 lbs. copper and 1,698 oz. silver in 1906; 425,367 lbs. copper and 2,292 oz. silver in 1907. Inactive from Nov., 1907, until Oct., 1915, when experiments with the flotation process were started. Shipments from Oct., 1915, to Jan., 1916, about 25 tons, claimed to run 10% copper and 1 oz. silver per ton.

VERMONT COPPER CO.

VERMONT

Office: 576 Fifth Ave., New York. **Mine office:** South Strafford, Orange Co., Vt. G. E. Parks, sec.; G. M. Heckscher, mgr.

Inc. 1906, in Arizona, as successor of Elizabeth Copper Co. **Cap.** \$1,000,000, and since has taken over the Strafford Mining Co. and the Sharon Power Co.

Property: 12 miles from Pompanoosuc, the nearest rail station, includes the old Elizabeth mine, opened 1793, for magnetic pyrites, and operated early in the nineteenth century by the Vermont Copper Co. which is said to have made, at one time, about 6,000,000 lbs. of copper yearly, beginning a small incidental production of copper about 1830, when it was found that the mine carried an average of about 3 per cent copper in the form of chalcopyrite disseminated in pyrrhotite.

Geology: the orebody is a thin lens of pyritic ore in foliated mica-schist, wedging out at the bottom. The lens has been mined for 700' in length and is reported, by the management to have been opened up to more than 2,000' in length, ranging from 50 to 100' in width, of which 300'

Management estimates upwards of 1,000,000 tons of pyritic ore consisting of pyrrhotite and pyrite with small amounts of chalcocite. Diamond-drill borings, made 1909, have shown ore to continue for 100 feet below the present workings.

Development: by a 1,340' tunnel with back of 225', and a 200' incline to the dumps. The dumps carry about 50,000 tons of discarded ore, of which iron is estimated by the management to average 1.75 per cent.

Hydro-electric power station on the White river, equipped for 500 horsepower, transmits current 9 miles to the mine and works. There is a small steam plant and an air compressor at the mine.

Reduction plant at the mine included a mill and smelter, the former using the Rowland magnetic separation process. The smelter has a blast furnace in which semi-pyritic smelting was tried, but abandoned, for heap roasting.

Due to an idleness of several years, operations reported to have been discontinued in June, 1916, under management of Professor George Guess of the University of Toronto.

In September, 1917, it was reported that a Boston syndicate had purchased about 300,000 tons, more or less, of dump ores and erected a 250-ton plant to treat the material. Rich ore is also said to have been discovered recently.

VIRGINIA

ANY ORE & IRON CO.

VIRGINIA

Address: Care H. B. Spackman, pres., Buena Vista, Va.

Industry: iron ore mines at Oriskany, Va., having an annual output of 100,000 tons.

AN RUTILE CO.

VIRGINIA

Address: Pacific Bldg., Washington, D. C. W. M. Slater, pres.; Albert C. -treas.; H. Wanke, supt.

Virginia. Cap., \$100,000; shares \$100 par; issued, \$97,500.

Industry: 5 claims at Roseland, Nelson Co. Rutile, containing 96% titanium oxide, is mined from open-cut workings. Equipment includes a pump, a 2,500' aerial train, and a 10-stamp mill. The mill, with a capacity of three tons, is equipped with Wilfley tables, and a magnetic separator. Gross earnings for 1914-1915 were \$70,000, netting expenses of \$25,000. Production amounted to 250 tons of ilmenite as a by-product.

Financial figures obtainable.

S CHEMICAL CO., INC.

VIRGINIA

Address: 44 Pine St., New York. Cap., \$10,000. J. Frederic Kernochan, president; Govern, mgr., Mineral, Louisa Co., Va.

Industry: shows a large lens of pyrite in ancient schistose rocks, also iron pyrite. Mine worked by shafts. Equipped with steam hoist and persulfate compressors, and output is concentrated in a 350-ton mill.

RANCH MINING CO.

VIRGINIA

Address and mine: Dumfries, Prince William Co., Va. Is controlled by the American-Carolina Chemical Co.

Industry: has a large lenticular body of iron pyrites carrying up to 1% of copper recovered as a by-product after roasting.

Development: by shaft, equipment, including a steam hoist and air compressor.

Mine employed 50 men at last accounts.

MANGANESE CORPORATION

VIRGINIA

Address: 30 E. 42nd St., New York, and Crimora, Augusta Co., Va.

Directors: Presidency vacant in Sept., 1917; John D. Brooks, v. p.; John H. Hulbutt, sec.-treas. Wm. L. Hogg, mgr., Crimora.

Inc. Sept. 29, 1914, in Va. **Cap.**, \$1,000,000; shares \$100 par; all outstanding. **Transfer office:** Security Transfer & Registrar Co., New York. **Annual meeting,** last Monday in Sept.

Bonds: authorized and issued \$500,000 1st mtge. 6% sinking fund gold bonds, due 1929.

Property: 946 acres, including the Crimora mine, 2 miles east of Crimora station, on the Norfolk & Western R. R. The mine was first opened in 1867 and acquired by present company in 1914. Deposit consists of manganese-ore masses of various sizes scattered through a clay basin, $\frac{1}{2}$ mile long, several hundred yards wide and 200' deep. The ore is hard and consists of psilomelane and pyrolusite. Percentage of ore to clay varies considerably, from 2 to 20% of ore to the clay, by volume. Ore assays 42 to 48% manganese. See U. S. G. S. Bull., No. 427, pp. 58-61, pp. 101, 270.

Development: by open pits using a drag line excavator; formerly done by underground workings. Management claims 1,000,000 tons ore proven with probable reserves of 3,000,000 tons.

Equipment: electric power, and a 200-ton mill, which started operating in June, 1916. Management anticipates a yearly production of 15,000 to 25,000 tons ore.

DURGY MINE

VIRGINIA

Being operated by T. G. Pool and associates of Virgilina, Va.

Property: 1,500 acres in Person county, North Carolina, shows copper ore occurring as chalcocite and bornite in a fissure in greenstone schist.

Development: by 515' shaft is reported to have blocked out 100,000 tons of 2% copper ore.

Equipment: includes hoist, compressor and pump with steam, air and electric power. Company planned to install a 100-ton flotation mill in 1917.

GOONEY MANOR COPPER CO., INC.

VIRGINIA

Front Royal, Warren Co., Va.

Officers: Hugh E. Naylor, pres., gen. mgr. and purch. agt.; Lewis F. Cooper, v. p.; S. M. Chiles, sec.; Geo. H. Bowman, treas.; preceding officers, H. C. Sheetz, N. S. Waller, S. M. Chiles, S. R. Millar, J. S. West, A. J. Sager, H. R. Kern, directors.

Inc. July 12, 1909, in Virginia. **Cap.**, \$500,000; shares \$100 par; issued 3,763. **Annual meeting** third Thursday in July.

Property: 84 acres, 5 miles south of Front Royal, reported to carry a fissure vein in porphyry and contact deposits between limestone and porphyry, with generally N. E.-S. W. strike and dip of about 55°. Main orebody is reported to average 7' width, and to be traceable 800', carrying a little malachite near surface, with chalcocopyrite at depth, averaging 5% copper, 1 to 6 oz. silver and \$2.50 gold per ton. Orebodies apparently are lenticular.

Development: by a 40' open cut, a 65' tunnel and by shafts of 250 and 228' without laterals, estimated by the company to show 35,000 tons of ore.

Equipment: includes a 150 h. p. steam plant, with a 50 h. p. hoist gear for 800' depth, and a 1-drill Rand air compressor. Buildings include a smithy, engine house, tool house and dwelling.

A 120-ton mill for crushing alumina was erected in 1917, running regularly since then. Equipped with Buchanan and Sturtevant crushers and 100 h. p. steam hoist installed, $\frac{1}{2}$ mile standard gauge railroad, and pumps and gutters for water supply. Engine house and pumps equipped.

OP MINING CORPORATION**VIRGINIA**

r Hall, supt., Elkton, Rockingham Co., Va.

909, in Arizona. Cap., \$10,000,000; shares \$10 par. Is a recon-
of the High Top Copper Mining Co.

erty: about 1,000 acres in Greene Co., Virginia, 10 miles from
the Norfolk & Western railway, said to show ore zone 600'
ing sulphide ores, claimed to give average assays of 6% copper,
er and \$15 gold per ton, which figures are entirely too high.

opment: by shaft 130' deep, with a 30' crosscut said to show 8' of
ted with bornite and chalcocite, giving sample assays of 10%
here also is a 55' shaft and several shallow pits and open cuts,
outcrop of the entire length of the property. A report formerly
by the company states that there are 70,000,000 tons of commer-
iscovered, which is a statement worthy of Baron Munchausen.
oes show occasional spots and bunches of copper ore and a few
ected ore have been shipped, but the mineralized rock as a whole
er too lean to work at a profit. Company is believed to have
to succeed, its officers to be self-deceived and stock is considered

The property has been visited by various geologists and de-
official government reports and the guarded warning given
ould be heeded.

request of the financial house backing the company, this office
Herbert Morgan, E. M., to look over the property and see if
ements were incorrect. His examination confirms what has been
hrows serious doubt on the judgment, to say the least, of the
ny officer, who is acting as the company's advisor and engineer.

RAY MINE.**VIRGINIA**

Owned by Wm. M. Pannebaker estate. Virgilina, Va.

erty: the old Holloway or Eustis mine, 3½ miles S. of Virginia,
., Va., on a spur of the Southern railway. Has a 460' shaft, and
ore from 75', 150', 200' and 300' levels. The vein is strong, per-
3 to 33' wide, owing to lenticular expansions. The ore is chal-
quartz, with epidote. Is described in detail by Weed in Bull. 455,
Survey, p. 79. Produced 6,000 tons of 12% ore about 1902.

THE SMELTING CO.**VIRGINIA**

is: Mountainair, New Mexico.

s: Z. L. Kay, pres. and gen. mgr.; J. R. Wilbourne, v. p.; H. P.
.; H. J. Watkins, treas., and Jas. S. Sebree, directors.

ug. 8, 1905, in South Dakota. Cap., \$1,000,000; shares \$1 par;
res paid Z. L. Kay for property; 200,000 issued.

ty: 261 acres, comprising the Kay farm at the N. end of the
istrict, 9 miles from South Boston, in Halifax county, Virginia.
shows lenticular quartz veins enclosed in schistose rocks formed
volcanic tuffs and andesite of the type characteristic of the Vir-
ict. Veins consist of white quartz and carry primary copper
ow the water level with carbonates, oxides and some native cop-
oxidized zone. One vein varies from 3 to 6' in width and is said
eable 1 mile. A recent report tells of 2 veins 10' wide. The
he entire district, including this property, depends upon the use
eap method of concentration, which flotation apparently supplies.
ny recently acquired some copper claims near Scholle, N. M.
7, 9 tons sent to Pueblo, Colo., carried 8% copper.

THE SMELTING CO.**VIRGINIA**

York corporation; operates under lease on a royalty basis, the
partment of Virginia Smelting Co.'s works, which see.

SEABOARD COPPER CO.

VIRGINIA

Office: 77 South Market St., Boston, Mass. Mine office: Virginia, Halifax Co., Va.

Officers: Geo. R. Leghorn, pres.; Edward L. Pond, sec.

Inc. July, 1902, in New Jersey. Cap., \$300,000; shares \$1 par.

Property: the Dorothy and Bailey mines, 135 acres, in the Virgilina district, 3 miles from the Southern railroad, shows an 8' fissure vein in schist carrying bornite ore, estimated to average 3 to 4% copper, with combined gold and silver values of \$1 to \$1.20 per ton.

Development: by shafts of 30', 265' and 115', and by 2 tunnels, of 165' each, with a total of 840' of underground workings. The ore occurs in well-defined shoots: the proportion of shipping ore is small but mine might be profitably worked if flotation is used.

Equipment: includes a 275-h. p. steam plant, with a 25-h. p. Lidgerwood hoist, good for 500' depth, and a 5-drill compressor. There is a 100-ton mill, and buildings include an engine house, bunkhouse and office. Company inactive since 1904, but still alive.

SULPHUR MINING & RAILROAD CO.

VIRGINIA

Office: 11 S. 12th St., Richmond, Va.

Officers: S. D. Crenshaw, pres.; A. R. Ellerson, v. p.; Thos. Armstrong, sec.-treas.; P. H. Haskell, supt.; Mineral, Louisa Co., Va.

Property: a pyrite mine whose ore carries low copper content. Has 600' shaft with steam power, compressor, etc. Ore treated in 500-ton concentration mill. Company makes cement copper from its mine and seepage waters, but is primarily a producer of pyrite for sulphuric acid plants. Is controlled by Virginia-Carolina Chemical Co.

UNITED STATES MANGANESE CO.

VIRGINIA

Office: 74 Broadway, New York. Mine address: Elkton, Va. Fred Berger, supt.

Property: a tract of several hundred acres S. E. of Elkton, shows 5' manganese ore mostly psilomelane and pyrolusite, occurring disseminated and massive in yellow clay overlying quartzite. Recent development indicates a large deposit of commercial ore. Mine has washer and concentrating tables.

VIRGINIA-CAROLINA CHEMICAL CO.

VIRGINIA

General office: Richmond, Va. Corporate office: Jersey City, N. J.

Officers: S. T. Morgan, pres.; E. B. Addison, 1st v. p.; S. D. Crenshaw, v. p.-sec., with C. G. Wilson, N. S. Meldrum, Henry Walters, Harry Bronner, B. Cutler, A. J. Hemphill, Alvin W. Krech, C. I. Stralem, S. H. Miller, and Geo. W. Wetts, directors. S. W. Travers, treas.; E. T. Organ, aud.

Inc. Sept. 12, 1895, in New Jersey. Cap., authorized, \$38,000,000 com. and \$30,000,000 8% cumulative pfd.; increased May 12, 1914, from \$20,000,000 shares \$100 par; outstanding \$27,984,400 com. and \$20,012,255 pfd. The \$9,988,200 unissued pfd. stock is reserved to provide for conversion of the 10-year 6% debentures. Annual meeting, first Wednesday in Sept. New York Trust Co., New York, transfer agent. Guaranty Trust Co., New York, registrar. Listed on New York and Richmond Stock Exchanges.

Bonded debt: \$12,600,000; first gold 5's dated Nov. 2, 1908; due Dec. 1, 1923; \$4,734,505 10-year 6% convertible gold debentures dated May 15, 1910 due May 15, 1924.

Balance sheet: year ending May 31, 1917, showed assets: \$94,673,000 which included current assets of \$40,135,303, compared with \$51,712,000 the previous year. Current liabilities were \$13,192,152, compared with \$7,600,000 the previous year.

ne account for fiscal year ending May 31, 1917, showed net earnings, \$5,905,250, compared with \$5,427,467 the previous year. Dividends \$2,020,710. The surplus May 31, 1917, was \$15,608,135, against \$13,111,000 May 31, 1916.

Company was formed to consolidate a number of manufacturers of pyrites, acids, chemicals, and kindred products. It owns and operates its mines, producing a large portion of the pyrite used by it in manufacturing sulphuric acid; in addition it has foreign potash, sulphur, and other properties. Controls the Sulphur Mining & Railroad Co. (which also owns pyrite mines in United States, and sulphur deposits in

the Charleston, S. C., Mining & Manufacturing Co., which owns phosphate rock in Florida, Tennessee, South Carolina, and

VA. CONSOLIDATED CHEMICAL CORPORATION **VA.**
 Office: 100 Broadway, New York. **Works offices:** Brinton, Bristol and
 Va. J. T. Williams, pres.

Controls the properties formerly owned by the Virginia Zinc & Chemical Corporation, which has retired from business. While primarily a manufacturer of chemicals used in the paint, paper and rubber business the company also mines considerable raw material from its properties in the Southern States.

VA COPPER MINE. **VIRGINIA**
 Office: care Richard Lamb, 90 West St., New York. **Mine address:**
 1, Halifax Co., Va.

Property: the High Hill mine, 617 acres, in the Virgilina district, developed 8 shafts of 140 to 340' depth, with about ½ mile of workings. Discovers 2 veins giving assays up to 5.9% copper, 2' oz. silver and 80c gold per ton. Ores are highly silicious, the gangue containing about 87% silica which precludes smelting and wet process concentrating. Property originally operated by the Virginia Copper Co., Ltd.

Plant: includes a 350-h. p. steam plant. Idle several years, but resumed operating operations in 1917.

VA LEAD & ZINC CORPORATION. **VIRGINIA**
Office: J. H. Batcheller, mgr., Mineral, Va.
Pres: Berkeley Williams, pres.; W. M. Cary, v. p.; Norwood Bentleys.

Nov. 30, 1915, in Virginia. **Cap.,** \$600,000, including \$200,000 10% preferred \$5 shares, and \$400,000 com. \$5 shares. Debentures \$200,000 convertible gold notes.

Property: 1,200 acres; the Valznico mine in Spotsylvania Co. and the mine in Louisa Co., Va., under development during 1916.

Valznico mine has a fissure vein in schist, dipping 75° S. E. and N. 40° E. The ore is a complex sulphide, containing 4% lead, silver, copper, gold and iron.

Development: by 250' vertical-shaft and 2,400' of workings.

Plant: Lidgerwood hoist, Sullivan compressor, Cameron pump, and 50-ton concentrating mill.

Production: in 1916 was 2,300 tons of ore, averaging 4% lead and 12%

VA MINING CO. **VIRGINIA**
 Controlled through stock ownership by General Chemical Co. Operates a pyrite mine at Monarat, Carroll Co., Va.

an air compressor. Buildings include a machine shop, engine house, sawmill, warehouse and 3 cabins. The mill has 2 crushers, rolls and a Schull concentrator. Has an aerial tram.

Company makes claims of large annual profits to be earned from the operation of its mines, sawmill, water power plant and in water and rail transportation, but the railroad is yet to be built, the mines are only slightly developed and the tonnages which would make annual earnings of \$2,800,000 possible, are neither blocked out nor reasonably assured. The total expenditure on the property to Jan. 1, 1913, is \$86,552, a small sum compared with the amount of stock issued. The company's circulars considered misleading and not liked. Company fails to answer letters, possibly because of the comments given above.

CHELAN CONSOLIDATED COPPER CO. WASHINGTON

Michael J. Cocoran, asst. sec.-treas, 180 Broadway, New York.

Operating office: 811 Lowman Bldg., Seattle, Wash. Mine office: Leavenworth, Chelan Co., Wash.

Officers: F. D. Wilsey, v. p.; Thos. J. Higgins, sec.-treas.; preceding officers, Henry D. Bristol, Edw. W. Kuhn, A. T. La Vallette, J. L. Jurey and Louis Arndt Stein, trustees.

Inc. May, 1906, in Wash. Cap., \$12,000,000, shares \$10 par, nonassessable; issued, \$5,779,140. Guaranty Trust Co., New York, registrar. Annual meeting first Tuesday in June. Company absorbed the Red Mountain Gold & Reduction Co., the North Star Mng. Co. and a large number of individual mining properties.

Property: 14 claims at Index, Snohomish Co., and 130 claims at Red Mountain, Chelan Co., Wash., 50 miles north of Leavenworth.

Property: the Index mine, between the Ethel and Bunker Hill Sullivan mines, has a 4' vein, opened by tunnels of 600' and 700', with about 2,000' of workings, showing a 6" paystreak of high-grade bornite and chalcocopyrite ore.

The Red Mountain lands, unpatented, 4 miles west of Phelps creek include 67 claims owned outright, and 58 additional claims held through the North Star Mining Co., which is controlled through stock ownership.

Development: by 2,000' main tunnel, supplemented by 600' of diamond-drill borings, showing a 5' vein carrying values in copper and gold, and 3 smaller veins.

Equipment: includes gasoline power and an Ingersoll air compressor and there are 6 or 7 buildings.

Company is inactive, as ore is too low-grade and in too small quantities to operate profitably.

CHEROKEE MINING CO. WASHINGTON

Incorporators: Wm. Rakestraw, M. E. Bennett, Lloyd Harris, C. G. Edwards, all of Wilbur, Wash., and I. Toner, of Spokane.

Inc. 1917 in Washington. Cap., \$1,500,000. Will develop the Cherokee group of claims.

HOLDEN GOLD & COPPER MINING CO. WASHINGTON

Mine near Lucerne, Chelan Co., Wash.

Officers: J. H. Holden, pres.-mgr., Chelan, Wash.; A. W. Lachapelle, v. p.; O. A. Hoag, sec.-treas.; above with Chas. N. Boon, directors.

Cap., \$250,000. Company has no debts and no earnings to date.

Property: 3 claims, 60 acres, on Railroad creek near Lake Chelan, 5 miles N. of Wenatchee on the G. N. R. R., shows gneiss and schist on to granite with a vein of 40' average and 185' claimed maximum width.

Development: by 6 tunnels. No. 1 and 2 being connected by a No. 3 shaft with about 2,000' of workings. There also are numerous

s. Mine shows ore said to assay from 7 to 10% copper, 2 oz. silver, \$10 gold per ton. Idle, except for annual assessment work.

OLOMON MINE. WASHINGTON

Gray, owner, Lakeside, Wash.

erty: near Lucerne, Chelan Co., Wash., consists of 3 patented developed by 1,500' of tunnels said to show fissure veins in gneiss, carrying gold-silver-copper values.

CLARKE COUNTY

ides the southwesternmost districts of the state, near Portland,

WASHOUGAL GOLD & COPPER MINING CO. WASHINGTON

ess: Washougal, Clarke Co., Wash.

rs: F. A. Mabee, pres.; John Scharboarer, v.-p.; J. B. Jordan and man, secretaries; Dr. Otta Sutter, treas., at last accounts.

1902 in South Dakota. Cap., \$1,000,000, shares \$1 par.

erty: 560 acres, held on a 30-year lease, from the State, near Mt. St. on the Bald Mountain district, on the upper Washougal river. Several fissure veins are in granite, one of which, averaging 6' thick, is developed by a 1,800' tunnel exposing ore, estimated to average 5% copper, and zinc, 2 to 70 oz. silver and \$1 to \$15 gold per ton.

ment: includes gasoline hoists and a 3-drill Sullivan air compressor. Had a 25-ton concentrating mill working in 1916, but no information available.

ited in Mining and Scientific Press, 1916, by F. Brinsmade.

FERRY COUNTY

ies Belcher, Columbia river placers, Danville, Lone Star, Meteor, Republic and San Poil districts.

ALLIANCE MINING CO. WASHINGTON

ss: 622 Old National Bank Bldg., Spokane.

rs: M. O. Hunter, pres.; F. H. Hunter, v. p.; W. W. Gifford, succeeding officers, J. M. Lloyd and C. M. Hansen, directors.

sept. 9, 1913, in Wash. Cap., \$1,500,000, shares \$1 par, outstanding assessable, not exceeding 5 assessments of 5 mills each year. Authorized \$100,000, outstanding \$32,400. In 1914 the company took 171,000 the property of the Anaconda Gold Mng. & Reduction Co., 20,000 in Alliance stock, and assuming an indebtedness of \$51,000 remainder.

erty: 7 claims, 5 patented, 100 acres, in the Eureka mining district, Wash., adjoining the property of the Republic mine, cover 3,500' strike of the Republic vein, 12' to 30' wide, and the Princess vein, wide.

development of the properties was done when only high grade shipped, and the Alliance Co. acquired the holdings of 4 different properties for the purpose of mining and milling the low grade ore. The properties developed to a depth of 600' by means of a 385' tunnel and a 400' shaft. Total workings of 5,000'. No development work has been done since 1914, but operations are to be resumed in the near future.

ment: includes gasoline hoist and a 3-drill compressor.

ANACONDA POWER & REDUCTION CO. WASHINGTON

ss: Republic, Ferry Co., Wash.

1916 by F. R. Clark, of Spokane; P. N. Clark and G. W. Sommer. Property of the North Wash. Power & Reduction Co., which had

been held by a receiver for 2 years, was purchased together with adjoining holdings.

Equipment: includes concentrator, mill, and power plant. No returns available.

BEECHER GOLD MINING CO.

WASHINGTON

Address: Orient, Wash. Alex A. Anderson, mgr.

Property: near Orient, Ferry Co., Wash., has the Beecher mine on it in which gold-quartz ore occurs in stringers.

Idle, 1917.

BELCHER MINING CO.

WASHINGTON

Mine office: Republic, Ferry Co., Wash. Jos. A. Anderson, pres. and mgr.

Property: the Belcher claim shows irregular replacement deposits of pyrite associated with garnet, epidote, tremolite and magnetite in marble and interbedded shale, etc., intruded and metamorphosed by monzonite porphyry dikes and sheets.

Development: by 3 tunnels showing sulphide orebody 5'-20' thick, on dip plane (see Bull. 550 U. S. G. S. 1914, pp. 167, 175, 179).

A 1,000' aerial tram connects the tunnels with ore bins on the railroad. Water, brought 2,000' from Lambert creek, through a steel pipe, generates electric power, supplemented by a gasoline auxiliary plant.

Equipment: includes an air compressor and power drills.

Property was reopened May, 1911, and shipped low-grade gold-bearing pyritic copper ore to Granby smelter. Mine reported, 1914, to have opened up lenses of low-grade ore on the lower level. No recent returns.

BEN HUR LEASING CO.

WASHINGTON

Mine office: formerly at Republic, Ferry Co., Wash.

Dissolved: company was a co-partnership formed to operate the Ben Hur mine at Republic, Ferry Co., Wash., under lease.

Property: the Little King and Queen claims on Gold Hill, developed by 800' shaft, showing gold, silver and copper ore. Equipped with steam power, compressor, etc. New plant installed 1913. Property was intermittently worked, 1911-12, and drifting done on the 200' and 400' levels. Mine was operated under lease by Cons. Mining & Smelting Co. of Canada Ltd., during 1914-15, but given up early in 1916. See Vol. X. of the Copper Handbook.

COPPER BUTTE MINING CO.

WASHINGTON

Orient, Ferry Co., Wash. J. D. Gumpper, pres.; H. J. Miller, sec. Willis Townsend, gen. mgr.

Inc. Dec., 1905, in Washington. Cap., \$1,000,000; shares \$1 par.

Property: 4 claims, patented, in the Pierre Lake district, south of Orient, shows 2 veins in open cuts, 14' and 15' wide, respectively.

Development: by 300' shaft with drifts on the 100' level shows copper gold ores, but not in commercial quantity. During 1916-'17, a 1,000' tunnel was driven. It has a vertical depth of 430', and is expected to cut the ledge within a few feet.

FIRST THOUGHT MINING CO.

WASHINGTON

Idle. Orient, Wash. Patrick Burns and Blake Wilson, of Calgary, owners. Alexander Sharp, mgr., Vancouver, B. C. Property produced \$750,000 prior to 1909, idle since. Company won a suit against Shoshone County assessor, June, 1910, and court ordered valuation reduced 10%.

GWINN MINING CO.

WASHINGTON

Idle. **Address:** Meteor, Ferry Co., Wash. Peter Proff, mgr. of accounts.

pany owns a group of claims in the Meteor, or Covada district, fissure veins in sedimentary rocks cut by diorite and carrying com- said to average about \$16 per ton in gold, silver, copper and lead. **Development:** by shafts and tunnels, said to have blocked out consid- w-grade ore which is being treated in a 50-ton concentrator. Com- also erecting a dam on Hall creek for its hydro-electric plant.

IS COPPER & SILVER MINING CO. WASHINGTON

Letters to Pittsfield, Ill., neither answered nor returned. Mine , Ferry Co., Wash. J. C. Davis, pres. and gen. mgr.; J. D. Nigh- ; A. Hamilton, supt.; W. S. Clapp, sec.; J. D. Hess, treas., at last

in Washington. **Cap.**, \$2,000,000; shares \$1 par, nonassessable, in preferred and \$1,000,000 common stock.

9 claims, in the San Poil district. The Columbia group of 4 ½ miles from Keller, shows auriferous and argentiferous copper e Oregon group has 300' of workings, developing a vein claimed to le, showing low-grade ore, carrying some zinc.

avorably regarded.

LAURIER MINING CO.**WASHINGTON****Office:** 410 Columbia Blk., Spokane, Wash. **Mine office:** Laurier, Ferry Co., Wash.**Officers:** Dayton H. Stewart, pres.-mgr.; Grant A. Stewart, v. p.-supt.; E. K. Erwin, sec.-treas.; with J. S. Talkington and Guy P. Linville, directors. G. A. Stewart, supt.**Inc.** Oct. 22, 1908, in Wash. **Cap.**, \$1,000,000, increased later to \$1,500,000; shares \$1 par; all issued.**Property:** 7 claims unpatented, about 120 acres, in the Curlew district, 9 miles from Grand Forks, B. C., and 127 miles N. W. of Spokane. Developed by 140' shaft and several tunnels, showing a vein of pyrrhotite ore said to show copper, silver and gold values.**Equipment:** includes a 2,900' aerial tramway connecting the mine with a railroad siding, constructed in 1915, one drill, gasoline compressor.**Shipments:** commenced in 1915, were sent to the Granby smelter; about 500 tons of copper-silver ore from development work averaged 4.16-7.66% copper and 2 oz. silver, netting \$30 per ton.

In 1916, 1,200 tons shipped reported to have averaged 4% copper and 1 oz. silver per ton, netting \$30 per ton.

LONE PINE-SURPRISE CONS. MNG. CO.**WASHINGTON****C. P. Robbins**, pres.-mgr., Wolverton Block, Spokane, Wash.; **G. C. Taylor**, supt.**Property:** Last Chance mine, formerly owned by the Republic Cons. Mines Corp., at Republic, Ferry Co., Wash., and said to show a 5' vein carrying \$13 ore. Developed by a 500' two-compartment shaft and tunnel. Equipped with a 514 cu. ft. compressor, hoist and boiler.**MANILA MINING & MILLING CO.****WASHINGTON**

Idle and probably defunct. Keller, Ferry Co., Wash.

Property: the Manila mine, 4 claims, with 20-acre reservoir and mill site, well timbered, in the San Poil district, 7 miles from the Columbia river and 4 miles W. of Ferry, the nearest rail station. The Manila mine is on the summit of a mountain and shows a large deposit of disseminated chalcocopyrite ore, traceable 1,000'.**Development:** by tunnels, the oldest 100' below the apex, another 50' lower. Said to be diamond drilling, 1916. Mine was under option for \$60,000 to the Keller Indiana Co., now bankrupt, which put up a smelter in 1900, but failed to develop mine and property supposedly reverted to Farr Bros. Has 20,000' sawmill.

No recent information.

NATIONAL LEAD-SILVER CO.**WASHINGTON****Office:** Hutton Bldg., Spokane, Wash.**Officers:** C. D. Muxen, pres.; E. D. Weller, v. p.; E. H. Pattison, sec.-treas. and mgr. trustee; J. E. Orr, asst. sec., and G. F. Ingraham, director.**Inc.** 1915, in Wash., as successor to the Phoenix G. & C. M. & M. Co. **Cap.**, 2,000,000 shares; 5c par; assessable. Annual meeting, third Tuesday in Nov.**Property:** 9 claims, known as the Panama group, and mineral rights on 159 acres, about 2 miles N. of Curlew, Ferry Co., said to show 4 veins carrying gold-silver-lead-copper-iron. Ore occurs as replacement deposits in veins carrying quartz, barite and iron carbonate. The country rock is fine grained granite with layers of porphyry with strata of lime lying parallel to the veins. Dip of 80° W. Ore was encountered in a tunnel. The first vein, about 148'

s intersected 600' from the portal of the tunnel. A second vein cut red to be 5' wide.

Development: consists of 1,200' main lower tunnel, 225' Panama, and shorter tunnels, numerous open cuts and prospect shafts. Property reported on by G. Cleveland Taylor in 1914.

WEST MINES DEVELOPMENT CO. WASHINGTON
Address: 204 Paulsen Bldg., Spokane, Wash. **Mine office:** Keller, Wash.
Officers: Wm. E. Johnson, pres.-supt.; H. J. Lefevre, v. p.; Harry J. McCreas., Wm. E. Malm, mgr. Keller; preceding, with Henry Oster-J. Earnest, directors.

Dec. 15, 1915, in Wash. **Cap.**, \$200,000; shares \$100 par; 500 outstanding. Authorized bond issue, \$300,000; none issued. Annual meeting, day in January.

Property: 17 claims, 330 acres, surveyed for patent, 12 claims in Okanogan and 5 in Ferry county, said to show zinc, gold, silver and lead assure veins and disseminations in granite.

Development: by 2,000' of tunnels and diamond drilling, 140' vertical and 480' of underground workings, of which 435' are claimed to be in carrying 1.83% copper, and 32' in copper-zinc ore, assaying 14% zinc

Development: includes electric power and 150-ton smelter at Keller. Progress development done to date. Secretary reports, 1916, "Ore unknown, but immense."

ORIENT GOLD MINES, LTD. WASHINGTON
 Company had financial troubles in 1914 and was sold in Nov., 1915, to free of liens. Reorganized as Orient Gold Rock Mng. Co.

ORIENT GOLDEN ROCK MINING CO. WASHINGTON
Address: 205 Hyde Block, Spokane, Wash. Mine at Orient, Ferry Co.,

Officers: C. E. Gray, pres. and gen. mgr.; Thos. R. L. Harris, v. p.; E. E. Ficks, sec.

1917. **Cap.**, \$1,500,000; shares \$1 par.

Property: the White Elephant mine with 6 claims, located 3 miles south of Canadian border, and an equal distance from Rock Cut. The mine is a producer, but contains gray copper ore. The mineral zone, 75' wide, between diorite and andesite.

Development: by a 225' incline shaft sunk on the vein with a dip of 45°. Workings on the 100' level show disseminated pyrite ore carrying to \$6 per ton, with occasional shoots of copper ore.

Development: includes steam plant, compressor, sawmill, etc.

Property reported taken over by a Spokane syndicate, March, 1916, and plant to be erected.

ORIENT GOLD & COPPER MNG. & MILLING CO. WASHINGTON
 Ferry Co., Wash.

Controlled by National Lead-Silver Co., which see.

ORIENT GOLD MINING CO. WASHINGTON
 Tate, sec.-treas.-gen.-mgr., Hyde Bldg., Spokane, Wash.

Cap., \$1,500,000; shares \$1 par; 67,500 shares outstanding.

Property: the Quilp mine at Republic, Ferry county, located in 1896 and worked intermittently by several companies, has paid five dividends, \$67,500; last payment in 1912. Mine was reopened in 1914 under new management, after lengthy litigation with the defunct Republic Mining Corporation.

Development: by 1½ mile of workings to depth of 500'.

REPUBLIC CONS. MINES CORPORATION

WASHINGTON

Republic, Ferry Co., Wash.

Officers: A. B. Willard, pres.; A. J. Langan, sec.; J. P. Burson, treas.; Geo. S. Bailey, gen. mgr. Is a reconstruction of Republic Mines Corporation

Inc. in 1914 to take over the Lone Pine, Surprise and Pearl claims in the Eureka mining district in Ferry county; these claims were worked in 1910-13 by the Republic Mines Corp., which is said to have produced over \$2,000,000 in gold and silver during the last 2 years it operated and before it went into bankruptcy in 1913. The Republic Cons. optioned the property in 1914 to a new company, the Western Union Mines Co., which operated for a short time and passed tranquilly away in 1915; this company was soon succeeded by another new company, the West Virginia Mining Co., which purchased some new machinery, operated a few months, and, like its predecessor, suffered a painless death, in Oct., 1915. The property reverted to the Republic Cons. Mines Co.

In July, 1916, the property was reported as shipping 200 tons daily to Trail, B. C., and planning to sink a 2-compartment shaft to a depth of 1,000'. The property is said to have merit and could be operated profitably under competent management. For geology, see U. S. G. S. Bull. 550, pp. 150-162. Employs 40 men.

In July, 1916, Geo. S. Bailey, trustee in bankruptcy of the Republic Mines Corp., gave a deed to the 3 claims named above, receiving \$82,000 in final payment. At the same time, the Republic Cons. Corp. gave a mortgage on the claims to Jerome J. Day of Wallace, Idaho, to secure a loan of \$93,000, payable July 17, 1917. This mortgage gives the Day Bros. control of mining operations.

SILVER CREEK MINING & MILLING CO.

WASHINGTON

Company dead and property sold for taxes. Now owned by Gold Creek Mining & Milling Co., Keller, Wash.

WALLA WALLA COPPER MINING CO.

WASHINGTON

Office: Walla Walla, Wash. **Mine office:** Keller, Ferry Co., Wash. Jasper King, supt. *

Property: 1 mile N. E. of Keller, in the southern half of the old Colville Indian reservation, shows a vein of 30' estimated width, partially mineralized with gold-copper ore of fair assay value. Developed by an open-cut shaft and tunnel. Reported in 1916, that company had struck a large body of high-grade copper ore.

WEST HILL MINING CO.

WASHINGTON

Out of business, having forfeited the bond on the San Poil mine in the Republic district. Former organization embraced J. W. Turner, owner, Spokane, Wash.; Thos. Neill, v. p.; Ralston McCaig, sec.-treas., Spokane; Jerome Drumheller and C. M. Hansen, directors.

Property: taken on a \$150,000 bond and lease from the receiver of the defunct San Poil Mng. & Milling Co., a well known gold producer. The ores carry \$7 to \$15 per ton.

Mine has 400' shaft and extensive levels, said to block out 30,000 tons of ore above the 300' level.

There is a 75-ton cyanide mill on the ground.

Including the M

CASCADIA M

rs: E. A. Sessions, pres., 106 W. 6th St., Vancouver, Wash.; W. v. p.; W. D. Scott, sec.-treas.; J. F. Hartley, asst. sec.; preceding A. Poppleton, J. P. Finley, Geo. S. Reid, W. H. Bennett, directors. March 12, 1887, in Washington. Cap., \$6,000,000; shares \$1 par; in treasury.

erty: 108 claims, 2,170 acres; 330 patented in St. Helens mining and the divide at the head of the Toutle river in Cowlitz, Lewis and counties, includes the Polar Star and Minnie Lee groups. Property contains fissure veins in grano-diorite, running N. E.-S. W. and dipping to the copper ore which carries gold and silver values, occurs in 12' thick and 20'-100' long. This ore is said to average 17.9% iron, 10.75% silica, 4% aluminum, 1.2% lime, 34.5% sulphur, 0.85% iron, 0.8% zinc and 0.05% nickel.

Development: 5,000' of work including 300' to 700' tunnels with about 100,000 tons of shipping ore has been mined and put on dump. Production has been deferred waiting for cheaper transportation.

The mines are 16 miles from a railroad over a heavy grade, but a 48 miles long to Castle Rock, Wash., is planned. Property has been developed in a small way for 19 years past. Property has been mined and reported on by Prof. F. L. Barker, State Metallurgist, Oregon; Robt. E. Hanley and G. B. Wilson.

veins in Algonkian rocks. Ore (sulphide) carries copper, silver and gold values.

Development: includes 3 tunnels, longest 600' with openings of 1,200' to depth of 500'. Has available water power and timber. Idle, except for annual assessment work, on account of lack of transportation.

MULTNOMAH MINING, MILLING & DEV. CO. WASHINGTON

Idle. **Office:** 405 Kuhn Bldg., Spokane, Wash.

Officers: M. J. Hills, v. p. and sec.; Dr. F. O. Hudnutt, asst. sec. and gen. mgr.

Inc. 1901, in Washington. **Cap.**, \$2,000,000; shares \$1 par.

Property: about 600 acres, in 4 groups, including the River group of 260 acres, patented, carrying placer gold; the Mineral Hill group of 100 acres, 3 miles west of Nespelem, Okanogan Co.; the Ramsey group of 60 acres, adjoining the Nespelem Central Mining Co., 5 miles west of Nespelem, and the Multnomah group of 180 acres, 4 miles west of Nespelem, with a tunnel of about 1,100', said to cut a 15' vein, showing argentiferous lead ore. There are 5 buildings, and a dam built across the Nespelem river.

PYRARGYRITE MINING CO.

WASHINGTON

Successor to Ruby Mining Co.

Mine and home office: Nighthawk, Okanogan Co., Wash. **Eastern office:** Mansfield, Ohio.

Officers: Monroe Harman, pres. and gen. mgr.; Jas. A. Hower, v. p.; Chas. B. Bushnell, sec.-treas.; preceding with Dr. S. P. Ecki and M. L. Branyan, directors.

Inc. Nov. 5, 1902, in Washington. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; issued, \$1,175,000. **Bonds:** \$100,000 authorized, at 7% maturing 1915; issued, \$35,100. Annual meeting, second Tuesday in June.

Property: 5 claims, patented, 80 acres, with 46 acres miscellaneous freehold lands, on Mt. Chopaca, near the Similkameen river, 3 miles south of the international boundary and within 600' of the Great Northern railroad.

Geology: claims show syenite, cut by veins containing lenticular ore-bodies running N. W.-S. E. and dipping at 47°. The vein under development is about 4' thick, traceable for 1,000', and carries cupriferous ore stated by management to assay 0.5 to 10% copper, 1.5% lead, 2.5% zinc, 5 to 2,800 oz. silver, and from a trace to \$4 gold per ton.

Development: by 3 crosscut tunnels with drifts on the vein. The main working tunnel, 300' below the old workings and about 350' below the outcrop, is 1,110' long, and has 550' of drifting on the vein and an equal amount of drifting run from a 100' upraise. An inclined shaft sunk on the vein from the lower tunnel has short levels at 100' and 200' depth.

Ore reserves: estimated at 135,000 tons of ore blocked out, carrying 20 oz. silver besides copper and gold values and which it is believed can be profitably mined and milled.

Equipment: includes a 15 h. p. electric hoist and 5 buildings. Company's report shows a total expenditure at the mine from beginning of work to April 28, 1913, of \$118,000, of which ore sales furnished \$17,000, bonds \$35,100 and stockholders (175,000 shares) \$65,838.

In 1917 company expected to erect a mill including flotation, which process is expected to save at least 90% of the metal contents.

Property promises to make a good small mine.

WASHINGTON

Mine at Loomis, Okanogan Co., Wash.

Is the successor of the Palmer Mountain Tunnel Co., inc. Aug., 1912, in Washington.

Cap., \$300,000; shares \$1 par; 50,000 preferred, 250,000 ordinary; issued 30,000. Debentures, \$19,000, 6%, none issued.

Property: 15 claims, 250 acres, in the Loomis (Palmer Mt. or Wannacut Lake) district, 12 miles from the Great Northern railroad. The Summit claim shows a N. W.-S. E. fissure vein in diorite, averaging 8' wide and proven to depth of 115'.

Development: 3 tunnels, all on the vein, said to show ore of commercial grade in small amounts. Vein averages 5' between walls and gives indications of opening up an orebody of profitable size. Ore reported to average \$40 gold and 10 oz. silver with traces of copper. Company has 750 h. p. water power and 450 k. w. electric plant, transmission line and machinery, as well as 100-stamp mill and sawmill.

Company's original plan of tunneling Palmer Mountain appears to have been abandoned. This crosscut is reported to be 5,993' long. Presumably idle.

TRINIDAD MINING & SMELTING CO.

WASHINGTON

Office: Tonasket, Wash.

Officers: Jos. Coleman, pres.-mgr.; T. W. Brown, v. p.-sec.; E. H. Twilight, treas.; T. W. Brown, supt.

Inc. Dec. 1, 1911, in Washington. Cap., \$1,000,000; shares \$1 par; 703,700 issued.

Property: the Central group, 16 unpatented claims, 320 acres in the Galena mining district, Okanogan Co., shows gold and silver-bearing lead-copper ores, occurring as a dissemination in andesite.

Development: to depth of 150', consists of shaft, tunnel, trenchings and open cuts, with a total of 700' of underground workings. Average assays said to run from \$12 to \$30 for shipping ores and from \$2 to \$8 for low-grade ore. Property is owned and operated by the officers of the company, who consider it has a large low-grade deposit. One of the recent troubles has been due to the Land Office allowing homestead filings on parts of the property.

PEND OREILLE COUNTY

(Includes the Metaline district; also see Stevens County)

BEAD LAKE GOLD-COPPER MINING CO.

WASHINGTON

Officers: G. C. Geisler, pres., E. 1111 Augusta Ave., Spokane, Wash.; G. W. Whittaker, v. p.; W. E. Allen, sec.-treas.

Property: 20 claims, about 400 acres, in Newport mining district, Pend Oreille Co., Wash. Ore contains silver, lead and copper values.

Development: by about 5,000' of tunnel work and 600' of shaft work which, it is claimed, has opened up sufficient ore to justify installation of a concentrator, preparations for which were being made, 1917.

LEAD & ZINC CO.

WASHINGTON

Controlled by L. P. Larsen and Jens Jensen, of Metaline Falls, Wash.

Property: the Josephine mine, at Metaline Falls, Pend Oreille district, one of the biggest zinc producers in the State.

Equipped: with 250-ton ball concentrating mill, 1,000' compressor, 250 p. electric hoist and aerial tram. Flotation is being installed, 1917.

Production: shipping regularly. To Aug., 1917, 80 carloads of zinc concentrates were shipped.

gement plans the construction of a mill because th oes not offer as favorable a treatment charge as fo

The mine was examined by I. H. White, of Butte, Mont., who is quoted as having reported that there is more than enough ore blocked out to warrant the construction of a 200-ton mill.

Company's former literature considered grossly misleading and has created an unfavorable impression which can only be removed by frank statements of operations and economical development.

BUNKER HILL MINING & SMELTING CO. WASHINGTON

Office: 1123 Broadway, New York. Mine office and works: Reiter, Snohomish Co., Washington.

Officers: Chas. G. Reiter, pres.; John D. Campbell, sec.; LeRoy B. Sherman, treas.; preceding officers, J. E. Bowman, A. W. Avery, Wilbur Morris, Eric T. Christensen and Manfred Rockefeller, directors.

Inc. Oct. 24, 1902, in Maine. Cap., \$3,000,000; shares \$1 par; reduced, March 23, 1908, to \$1,500,000, and afterward increased to \$2,000,000; shares \$1 par, in \$1,500,000 common stock and \$500,000 cumulative 8% preferred stock, latter to provide for payment of bonds, second mortgage notes and script notes; outstanding Jan., 1917, 1,497,000 common shares and 420,000 preferred shares. Annual meeting, last Tuesday in October. Was the successor of Bunker Hill-Sullivan Copper Mining Co.

Mining property and other assets were purchased by the Western Copper Mining Co. in June, 1917, and the mine is described under that title.

DUTCH MILLER MINING & SMELTING CO. WASHINGTON

Inactive. H. P. Fogh, pres. and agent for majority stockholders, 1403 Howell St., Seattle, Wash. Geo. H. Law, sec.-treas.

Cap., \$2,000,000; shares \$1 par; all issued; 1,000,000 shares in escrow for 5 years. Majority of stock is held by an ore contract association, which made a 5-year contract for output, the Dutch Miller to get 40% of earnings as royalty, one-half to apply to payment on 500,500 shares optioned to the ore contract association.

Property: 2 patented claims, on summit of range, 12 miles south of Skykomish, Wash., formerly worked by the Seattle-Boston Copper Co. Claims show an ore body in a vein in granodiorite. Ore is chalcopyrite with tourmaline and quartz and is high-grade. Mine lacks transportable facilities and rope tramway must be installed to get ore to the wagon road.

ECLIPSE CONS. MG. & INVESTMENT CO. WASHINGTON

Address: John E. Newell, supt., Silverton, Snohomish Co., Wash. O. Robert Dahl, pres., Seattle, Wash.; S. Hilmar Dahl, v. p.; H. M. Dahl, sec.; preceding officers, Andrew Chilberg and John E. Newell, directors.

Inc. 1906, in Washington. Cap., \$3,000,000; shares \$1 par; not assessable; giving \$2,000,000 in stock for the property.

Lands: 10 claims, unpatented, and a mill site, in 2 groups, including the mill and claims on the Stillaguamish river, formerly held by Copper Independent Consolidated Mining Co.

Mine has 5 tunnels, longest 1,100', on a fissure vein in slate, carrying a little copper, but mainly gold and silver values. Water power from the Stillaguamish river develops 830 h. p. by turbine. The concentrator, rated at 300 tons daily capacity, has tank room for cyanide treatment. A compressor of 1,000 cu. ft. capacity to be installed. No 1917 returns.

FLORENCE-RAE COPPER CO. WASHINGTON

Index, Snohomish Co., Wash. N. Rudebeck, mgr.; Fred Booth, sec.

Property: on Copper mountain, about 4 miles E. of Index, has a tunnel showing a 10' paystreak of chalcopyrite in the Margurite vein and a

400 lbs. taken across 6' of the vein averages 12 oz. silver, 18.5% 29.6% iron, 7.2% silica and 35.8% sulphur.

Development: hindered 1913-14 by litigation among opposing factions holders. Presumably idle since.

YORK-SEATTLE COPPER MINING CO. WASHINGTON
Probably dead. Mine near Index, Wash. Described in Copper Handbook,

SOUND REDUCTION CO. WASHINGTON
Bett, Snohomish Co., Wash. Is controlled, through stock ownership, by the American Smelters Securities Co. The works have three 30x180" blast furnaces, 1 running on copper ores, making a 50% matte, which is blown up with oxygen and copper in a reverberatory furnace and shipped east for electrolytic treatment. Also includes an arsenic plant.

LE-BOSTON COPPER CO. WASHINGTON
Company owns water rights of 40,000 est. h. p. and a charter for to open large timber tracts and reach the Dutch Miller mine, described in the report of Dutch Miller M. & S. Co. The former mine holdings of the Le-Boston C. Co. are described in Vol. VIII, Copper Handbook.

LEBOSTON-IOWA COPPER MINING CO. WASHINGTON
Property: on the eastern fork of Silver creek, 2 miles above Mineral Point, N. W. of Index, adjoin the Edison Mining & Development Co., properties are worked under one management. Claims are said to include 100,000 tons, carrying complex ore, consisting of chalcopyrite, galena, sphalerite and pyrite, with quartz gangue.

Development: by the 1,200' Bonanza crosscut tunnel.

LEBOSTON COPPER MINING CO. WASHINGTON
Address: 1123 Broadway, New York. **Mine office:** Reiter, Wash.
Officers: C. G. Reiter, pres.; Leroy B. Sherman, v. p.; J. J. O'Brien, sec.; J. H. Bell, treas., with W. D. Schwarzwaelder, E. J. Wright, E. T. Christensen, J. H. Rockfeller and T. A. Meed, directors. C. Hendricks, mgr.; V. V. Reiter, asst. engr.

April 25, 1917, in Maine. **Cap.**, \$2,000,000; shares \$1 par; non-assessable stock \$5,000 issued. Annual meeting, first Tuesday in April.

June 6, 1917, company purchased assets of the Bunker Hill Mining & Co. for a stock consideration and assumed B. H. debts of \$84,973, including bonds and notes.

Property: 20 claims, 15 patented and 1 millsite, patented, 371 acres at LeBoston, Snohomish Co., Wash. Examined by Cory Wright, T. E. Brown, J. H. Bell, and V. V. Clark. Claims said to show fissures in granite, and diorite, dipping 45°, with N. 46° E course.

Ore is mainly chalcopyrite, associated with magnetite. On account of this character, the consulting engineer considered that prospecting with a dipping shaft would find additional copper deposits. The Bell shoot has been followed up to 100' and the Jumbo to 100'.

Development: by incline shafts, 86 and 500' deep and tunnels, the longest shaft to a depth of 1,200' workings total 6,100'. Diamond drilling cut a parallel shaft to the Bell at 497 to 526', assaying 6.99% copper. This hole is to be developed by a shaft. Exploration cost \$112,927 to the end of 1916.

Investment: to Dec., 1916, cost \$72,195, covering 300-h. p. hydro-electric power plant, 50-ton concentrator, 50-ton smelter, compressor, tramway, diamond drill, hoist, etc.

Property is well equipped for production if ore is developed and has a large reserve of 50,000,000' of standing timber.

STEVENS COUNTY

Includes Bossburg, Chewelah, Colville, Deep Creek, Deer Park, Deer Trail, Metaline, Meyers Falls, Northport, Old Dominion, Orient and Silver Queen districts.

ADMIRAL MINING CO.**WASHINGTON**

Mine: in Colville district, near Valley, Stevens Co., Wash.

Officers: T. H. Greenway, pres.; T. R. Tate, v. p.; Mrs. T. R. Tate, treas., Chas. Warsth, sec.

Inc. 1914, in Washington. **Cap.**, \$1,500,000; shares \$1 par.

Property: 65 acres, patented, developed by 3 tunnels. Reported to have opened up a silver-copper vein 18"-8' wide, assaying from \$30-\$100 per ton. In April, 1916, the property was optioned to J. R. Brown and W. Everett of Spokane for \$30,000 and development work started. Shipments scheduled for the summer of 1917.

AICHAN BEE SILVER-LEAD MINING CO.**WASHINGTON**

Office: 401 Jamieson Bldg., Spokane, Wash.

Officers: H. M. Howard, pres.-mgr.; Emma S. Stephan, v. p.; Dr. B. F. Blosser, sec.-treas., with H. G. Twomey and A. P. Witherspoon, directors. J. Currie, supt., Fruitland, Wash.

Inc. August 1, 1916 in Wash. **Cap.**, \$10,000; shares 1 cent par; 600,000 shares outstanding.

Property: 8 patented claims, 160 acres, in Deertrail district, Stevens county.

Ore: occurs as a contact deposit in granite. Three veins under development said to give average assays of \$52 in silver-lead and \$3.72 in gold.

Development: by tunnels to depth of 150'. Management plans erecting 5-stamp mill and extending tunnels in 1917 with returns from stock-sales.

AMERICAN MINERALS PRODUCTION CO.**WASHINGTON**

Address: Thos. W. Cole, mgr., Valley, Wash.

Property: 3 claims, 2,000 acres, in Stevens county, Wash., said to carry a large deposit of magnesite. Shipping in 1917.

A 16-mile standard gauge road being built Oct., 1917, from Valley to the property.

AMERICAN TUNGSTEN CONS. CORP'N**WASHINGTON**

Address: Hutton Bldg., Spokane. Wm. Sheck, gen. mgr.; Henry Becker, supt., at last account.

Company a reorganization, 1912, of the Germania Mng Co. **Cap.**, \$1,000,000, shares \$1 par.

The Germania Co., composed principally of German investors, was organized 12 years ago to develop the Roselle mine, 25 miles west of Springdale, Stevens Co. It is said that \$500,000 was spent in driving tunnels, in the concentrator and buildings. In 1911 the company became involved in litigation, later going into bankruptcy.

In Jan., 1916, eastern interests, represented by F. T. Hamshaw, of Seattle, obtained a lease and bond on the properties held by the Corporation and started operations. Holdings include the Germania and Roselle mines. Development, consisting of a 200' shaft and 3 tunnels with 3,000' of work, is said to have exposed a considerable tonnage of ore.

ARK GROUP MINING & MILLING CO., LTD.**WASHINGTON**

Office: Kettle Falls, Wash. J. J. Budd pres. and gen. mgr.; D. E. Grob, v. p.; O. L. Budd, sec.-treas.; preceding officers are the directors.

Cap., \$250,000; shares 25c par, 20c paid, 5c assessable; issued 437,600 assessments to date \$3,000. Annual meeting Oct. 1.

Property: 12 claims, partly patented, in the Kootenai district, British Columbia, and the Silver Queen group, 3 miles S. of Kettle Falls, Stevens Co.

Ore occurs in contact between granite and lime with S. W. strike and 5°. Vein reported to be from 30 to 60' wide, traceable for three-fourths and proven to depth of 150' and carries 10 to 20% copper with good lues.

Developed by 3 shafts and 3 tunnels, longest being 800'. Equipped with power, 1 air compressor and 2 air drills. The Washington property has further development for several years.

LA COPPER MINING CO.

WASHINGTON

Probably dead. See Vol. XII.

LA COPPER MINE.

WASHINGTON

Property: 200 acres, located 3 miles from Bossburg, Stevens Co., Wash. Mine, an old-time producer, said to have had an output of \$1,000,000, and in 15 years, was reopened in 1915 by lessees who started shipping silver to the Trail smelter.

Developed: by incline shaft with 6 levels, and a total of 3,000' underground. See U. S. G. S. Bull. 550, p. 63.

LA COPPER CHEWELAH COPPER CO.

WASHINGTON

Developed: Gillice, pres., Paulsen Bldg., Spokane, Wash.; F. M. Bell, v. p.; Berhardt, sec.-treas.; preceding officers, G. B. Harrington and R. J. Directors: R. J. Davis, gen. mgr.

March, 1913., in Washington. Cap., \$1,000,000; shares \$1 par; fully paid non-assessable; 500,000 issued.

Property: 4 claims, 75 acres, in the Valley mining district, Washington. Vein in sedimentaries close to a diabase intrusion; average strike N. 25° dip 60°. Ore occurs as mixed sulphides, mainly chalcopyrite and gray copper, with a gangue of quartz, calcite and spathic iron. At 100' in depth the vein is 6' wide and the ore to average 2 to 5% copper 1 to 5 oz. in silver values to \$1 in gold per ton.

Property is developed by 100' winze, reported all in ore, a 300' shaft tunnel. Equipment includes a hoist and an air compressor, installed in 1913.

LA COPPER CHEWELAH COPPER KING MINING CO.

WASHINGTON

Address: 115 Wall St., Spokane, Wash. Mine office: Chewelah, Stevens Co., Wash.

Officers: S. P. Domer, pres. and gen. mgr.; H. H. Hebert, v. p.; J. Grier, sec.-treas.; preceding, with E. W. Shively and F. M. Jarvis, directors.

1898 in Washington. Cap., \$100,000, shares 10 cts. par, changed 1909 to \$1 par, and increased March, 1912, to \$1,250,000; issued 100,000 shares. Bonds \$30,000 authorized at 8%; issued \$10,360. Annual dividend third Thursday in May.

Property: 4 claims, 1 fractional, 47 acres, patented, and a 3-acre mill site, and 20 acres miscellaneous lands, 6 miles east of Chewelah, shows 4 orebodies, with widths of 8 to 56', carrying mainly chalcopyrite and gray copper, with values of 3 to 5% copper, 2 to 6 oz. silver and \$1 to \$2 gold per ton.

Development: 300' shaft, and tunnels of 1,200' and 1,350', estimated by manometers to show 300,000 tons of ore.

Development: includes 100-ton smelter. Operations were suspended for lack of funds and receivership asked by creditors December, 1915.

LA COPPER CHEWELAH GREY COPPER MINING CO.

WASHINGTON

Property: many reported out of existence, July, 1917. Formerly at Chewelah, Stevens Co., Wash. See Vol XII.

LA COPPER CHEWELAH COPPER CO.

WASHINGTON

Property: Chewelah, Wash. Officers: C. M. Carroll, pres., Spokane, Wash.; Alex. v. p.-mgr.; Oscar Olson, sec.-treas. T. J. Vaughan Rhys, cons. engr.

Property: a 10 year lease and bond, for \$100,000 on the High-grade Mining

Co. property in Deertrail Mining district, formerly owned by Carson Bros. of Reardon, Wash. Claims said to show 9' of ore from which shipments have been made.

CONSOLIDATED COPPER CO.**WASHINGTON**

Office: 906 Paulsen Bldg., Spokane and Turk, Stevens Co., Wash. Mine at Springdale, Stevens Co., Wash.

Officers: W. H. Stowell, pres.; Geo. C. Gates, v. p.; V. W. Brasch, sec-gen. mgr.; preceding and Chas. A. Libby and E. R. Traeger, directors.

Inc. 1913 in Washington. **Cap.**, \$1,500,000; shares \$1 par, assessable; total assessments to Dec., 1915, 16 mills. Annual meeting, Jan. Company is a re-organization of the Togo Mining & Smelting Co.

Property: about 240 acres, 160 patented, in Cedar Canyon district. Ore occurs principally as copper pyrites in slate, serpentines and quartzite with a N.-S. strike and 40 to 60° dip. One orebody, developed by tunnels, with about 2,000' of workings, is reported by management to average 3 to 5' in width, in upper levels, and to carry 8% copper, 3½ to 5 oz. silver and a trace of .02 oz. gold per ton. Upper levels said to show bornite, copper glance and a little native copper. A 1,000' crosscut tunnel is said to cut several veins, undeveloped at last reports.

Equipment: includes gasoline engine and hoist. The mine has been closed down for several years, but management expects to begin operations in 1917.

COPPER CLIFF COPPER MINING CO.**WASHINGTON**

Inactive. **Office:** 724 Peyton Blk., Spokane, Wash. **Mine office:** Chewelah Stevens Co., Wash.

Officers: T. F. Wilson, pres., treas. and gen. mgr.; J. O. Blair, v. p.; L. C. Dougherty, sec.; L. K. Armstrong, mng. engr.

Inc. Feb. 24, 1912, in Washington. **Cap.**, \$1,000,000; shares \$1 par: issued \$62,000.

Property: 60 acres and 40 acres timber lands, held under bond and lease, in the Chewelah district, shows contact deposits between altered granite and limestone. Ores are mainly copper, with small silver values.

Development: by shafts of 332' and 730', and by tunnels, longest 600', giving depth of 1,000'.

COPPER HOARD MINING CO.**WASHINGTON**

Property: the Lookout claim has been bonded to the Chewelah Grey Copper Mng. Co.

COPPER QUEEN MINING CO.**WASHINGTON**

Property taken over by Copper King Mining Co. and a new company organized under title of King Mining Co., which see.

ELECTRIC POINT MINING CO.**WASHINGTON**

Address: Roy A. Young, pres.-gen. mgr., Northport, Wash. Dan Dodds, supt., Cummins, Wash. **Directors:** J. E. Yoder, v.-p.; F. A. Turner, sec.; W. B. McGregor, treas., with L. C. Jesseph, R. A. Young and F. T. McCollough, directors.

Cap., \$1,000,000; \$1 par 793,500 issued. No bonds. One quarter interest owned by Walter J. Nicholls. Paid 1c dividend on Jan. 31, 1916, 2c in March 1917 and 3c in June, 1917, a total of \$47,810. Profits for 1916 were \$93,750. Balance Jan. 1, 1917 was \$68,184.

Property: 13 claims, 245 acres, unpatented, 20 miles E. of Northport and 11 miles from Boundary, the shipping point. Mine is on top of a mountain 4,000 to 5,000' high with surface showing three ore "chimneys"; No. 1 ore chimney was opened by a glory hole, exposed a body of ore 25' wide containing carbonates in which boulders of galena were imbedded.

A 250' shaft with drifts and cross-cuts has proved chimney No 1 to main-

same size and grade at this depth. This one chimney is estimated to over 11,000 tons of ore. The second and third chimneys have been cut. No. 2 chimney is 33' wide at 225'; No. 3 chimney from which much ore has been mined, is now practically exhausted. There are several bodies reported to exist on the property.

Galena which appears to be a replacement in dolomitic limestone. Tests run from 25% to 75% lead.

Development: by 250' shaft and 900' tunnel.

Production: to Jan. 30, 1917 was 11,000 tons of ore.

Operating costs reported at \$6 a ton which does not include development charge.

A FARM MINING CO.

WASHINGTON

located in Spokane to develop silver-lead claims near Colville, Stevens Co., similarity of name with a property in British Columbia has led to confusions.

NIA MINE

WASHINGTON

Property near Springdale, Stevens Co., Wash. W. von Scheck, mgr. Owned by Germania Mng. Company. Litigation over title kept mine idle for years. Regarded as a promising tungsten producer. Development of 200-ton mill (dismantled in 1916) cost \$500,000.

LONE MOUNTAIN MINING CO.

WASHINGTON

Address: J. M. Hall, sec., 201 Sherwood Bldg., Spokane, Wash. W. J. Hall, mgr.

Officers: F. T. McCollough, pres.; T. S. Lane, v.-p.; W. J. Nicholls, treas.; J. A. Welch, R. W. Nuzum, directors; E. H. Brang, supt. at Colville; A. G. Larson and A. Lakes, Jr., cons. engrs.

Started Aug., 1916, in Wash. Cap., 1,500,000 shares, 10c par; non-assessable; 100,000 shares treasury stock offered the public, November, 1916, 5c per share.

Reserves in 1916, \$601. Operating expenses to July 1st, 1917, \$26,400. Cash \$2,000, also ore worth \$10,000 in bins.

Property: 16 claims, 11 surveyed for patent, 289.9 acres, situated 20 miles E. of Colville, Wash. and but 900' from Electric Point mine, the claims almost entirely overlapping that property.

Geology: vertical chamber or so-called "chimney" deposits in limestone. Tests show lead as carbonate, 1 oz. silver, trace of gold.

Development: by Setting Sun shaft 275' with drifts at 50, 100, 200 and 260', underground openings 450'. Shaft and drifts show pay-shoot 120' long with considerable width, of carbonate lead ore. Also has 120' Lone Star shaft with

reserves: 1,000 tons, assaying 20% lead. Grade shipped in 1916 20%. Total output to 1917 was 440 tons. Proposed work is extending drifts from shaft, driving tunnel and surface exploration. In July, 1917, drift on 260' level cut a chimney of 6 to 8% ore, with rich pockets. Development: Fairbanks-Morse 15 h. p. gasoline hoist.

Output in 1917 shipped 15 cars of 13% to 16% lead ore netting \$9,327. Employs 18 men and four 4-horse teams. The monthly expenses are about \$3,500. Shipments average 20 tons per day.

Plans are to be sunk to 600' and output increased to 50 tons per day, early in 1918.

REEK MINING & MILLING CO.

WASHINGTON

located in Stevens Co., Wash. Herman Camerer, supt.

Property: the Gwin mine and group of claims, shows a fissure vein carrying silver and lead ore, developed by 400' shaft.

Equipment: includes steam plant and water power, hoist and 4-drill Fairbanks compressor. Has a 75-ton concentration mill, driven by electric power. No recent returns.

HECLA COPPER-SILVER MNG. & MLG. CO. WASHINGTON
Chewelah, Wash.

Officers: J. C. Argall, pres.; Howard McPhee, v. p.; Robt. A. Wilson, sec-treas.; Fred F. Foster, supt.; preceding, with C. W. Linscott and Chas. Kliner, directors.

Property: 11 claims $3\frac{1}{2}$ miles N. E. of Chewelah and S. of the United Copper Co. holdings. Claims show 4 ledges, the main vein varying from 6 to 14' wide, traceable by cuts and pits for nearly a mile and averaging 5.4% copper, \$1 in gold and \$1.80 in silver.

Developed: by a 75' tunnel and a 150' vertical shaft. **Equipment:** includes a 50-h. p hoist and a 4-drill compressor. Company plans sinking the shaft to 500'.

HIGH GRADE SILVER & COPPER MINING CO. WASHINGTON

Office: Chewelah, Wash. **Officers:** T. F. Hertzell, pres.-gen. mgr.; L. E. Hertzell, v. p.; W. W. Dickson, sec.-treas.

Inc. July, 1909. Cap., 1,500,000 shares, assessments of 9 mills levied to date.

Property: 3 claims, about 3 miles N. E. of Chewelah, Stevens Co., Wash. shows a granite intrusion in lime with development along contact. **Ore:** high-grade copper with silver-lead values.

Development: by 125' shaft and a new 60' shaft being sunk on a body of oxidized iron ore. **Equipment:** includes hoist, boiler, pump, etc.

Has produced only a few tons of ore since 1909 and if development proceeds as rapidly in the next eight years as in the past, the mine may be a profitable one in our lifetime.

Property taken over July, 1916, by Columbia Copper Co, which see.

JUNE COPPER CO. WASHINGTON

H. S. Spedden, supt., Chewelah, Stevens Co., Wash.

Inc. June, 1913, in Washington, by R. C. Toole, L. B. Cottingham and W. L. Hansom.

Presumably owns the June-Echo mine near Chewelah, where a 40-h. p gasoline hoist has been installed and a 200' shaft sunk. Vein shows copper-silver ore. Reported under lease to J. W. Douglas, 60 Wall St., New York, in May, 1915.

No 1916 returns.

KING MINING CO. WASHINGTON

Officers: V. D. Williamson, pres., Empire St. Bldg., Spokane, Wash.; J. W. Douglas, v. p.-gen. mgr.

Inc. in 1916, to take over the Copper King and Copper Queen mines at Chewelah, Stevens Co., Wash.

The Copper King shows 4 veins carrying grey copper and chalcocopyrite ore and is developed by 1,200' tunnel. A 4' ledge of high-grade ore was cut on the 500' level. Equipped with 100-ton oil-burning smelter, which was completed by former management. The mine was bid in at receiver's sale for \$125,000 July, 1915.

The Copper Queen property, 6 claims, is developed by 200' tunnel and crosscuts. An 8' vein showing silver and copper ore was intercepted 50' from the portal of the tunnel, at a depth of 70'.

No recent information available.

LIBERTY COPPER MINING CO. WASHINGTON

Office: Spokane, Wash. **Mine office:** Bluecreek, Wash.

Officers: J. H. Reser, pres.; C. Oldfather, v. p.; A. Haak, sec.; S. G. Smith, treas. and gen. mgr.; R. E. McVicar, trustee.

Inc. in Wash. Cap., \$1,000,000; shares \$1 par.

Property: 6 claims, well watered and timbered, on Blue creek about

es from Blue creek station, and 6 miles N. W. of Chewelah. The in, developed by 4,000' of tunnels, is about 18" wide, carrying auriferous and argentiferous copper and lead ores.

ipment: includes a Fairbanks-Morse steam hoist, 100-h. p boiler and compressor. The mine has been under steady development since 1906, and first carload shipment March, 1909, to the Northport smelter. Management said to plan a concentrator.

STAR COPPER MINING CO.

WASHINGTON

ers: Oscar De Camp, pres.; Wm. S. Thyng, sec. and engr., and R. C. n, directors.

April, 1910, in Washington, practically as a reconstruction of the Cop- & Milling Co. Cap., \$1,500,000; shares \$1 par. Owns sundry claims, in- the Copper Hill mine near Newport, Stevens Co., Wash., developed by hollow shafts and tunnels. Mine has an 18' vein, carrying chalcopyrite, ated in phyrrotite. There is no machinery. Idle several years, except al assessment work.

LAKE COPPER CO.

WASHINGTON

ce: 408 Columbia Bldg., Spokane, Wash. Officers: Judge Geo. Turner, W. Kemp, v. p.; Frank Crane, sec.-treas.; Evan Morgan, managing with A. De Voto and E. K. Erwin, directors.

1915. Cap., \$375,000; shares 25c par. Surplus, July, 1917, was \$50,000, 000 worth of ore in bins. Dividends: 1c a share monthly declared 7.

erty: the Kemp-Komar and O. K. mines, 310 acres on Grouse miles N. of Loon Lake, Stevens Co., on the Great Northern R. R., carry, a well-defined fissure vein, 20' wide, running E.-W. which urns of from 24-30% copper when formerly worked.

lopment: by 500' incline shaft. A level at 200' goes E. on the vein cutting 2 orebodies, one of chalcocite ore from which nearly \$100,- h of ore was shipped, 1916. The second vein carries milling ore. ns have been cut on the 300' level, and management is now sink- t under them at depth.

ipment: includes hoist and pump.

erty resumed shipments, 1916, after 15 years' idleness and is shipping 1917.

JRRENCY MINING CO.

WASHINGTON

nized to take over the property of the Jay Gould Mining Co., at , Stevens Co., Wash., said to show copper-lead-silver ore.

N MINES CO.

WASHINGTON

es: 1300 Old National Bank Bldg., Spokane, Wash.; and Northport,

ers: J. A. Welch, pres.; H. R. Welch, v. p.; Sidney Norman, gen. mgr., , with O. C. Moore and J. W. McBride, directors.

1914. Cap., \$100,000; shares 10c par; assessable after treasury stock 00,000 shares issued. Company reported a cash surplus of \$6,000, 6.

st., 1916, all ore had been extracted and work was stopped. Zinc car- erty \$25,000 was shipped in 1916. For description see Vol. XII.

erty: 5 claims, about 100 acres, 7 miles S. E. of Northport, Stevens Co., claims show a shear zone of lead-zinc carbonate ore in altered limestone, erage 30% zinc, 13% lead, 4.6% lime, 1.1% sulphur, 5.5% iron, 2% in-

opment: mainly on the Great Western orebody; with strike N. E. and W., reported to measure 200'x150'x5' in width. The Empire vein,

25' at surface, has not yet been found in the lower workings. The Great Western group is developed by 325' tunnel and winze sunk to 200'.

Equipment: consists of a 2,000' aerial tramway at the Last Chance and a 600' surface railroad. Twenty men employed.

NORTHPORT SMELTING & REFINING CO. WASHINGTON

Northport, Stevens Co., Washington. **Officers:** J. J. Day, pres.; E. R. Day, sec.; with Edw. Boyce, E. H. Knight and F. M. Rothrock, directors; R. W. Marston, mgr.

Cap., \$1,000,000; shares \$1 par. Company owns the Northport smelter, built on the site of the old Le Roi Mining Co.'s plant. The new \$500,000 plant was blown in March 7, 1916.

Equipment: 3 lead furnaces, 42" wide and 16' long, of 300 tons daily capacity, are now in operation. Company is treating ores from the Hercules and Tamarack & Custer. In Aug., 1917, a Cottrell electric fume-precipitator, costing \$100,000, was erected.

O-LO-LIM COPPER CO. WASHINGTON

Office: 414 Kuhn Block, Spokane, Wash.

Officers: Jas. Keeth, pres.-mgr.; F. T. McCormick, v. p.; D. R. Riegel, sec. **Inc.** May 11, 1917, in Wash. **Cap.,** \$100,000; shares 10c par; assessable: 500,000 outstanding. Annual meeting, 1st. Tuesday in Dec.

Property: 160 acres in the Spokane Indian Reservation, Stevens Co. Wash., leased for 25 years from the Government; 10% of net smelter returns to be paid the Government. Lands were opened to leasers in May, 1916, and work started on company's ground in Jan., 1917.

Ore: copper occurs in contact in shale and granite. Ore is high-grade but its extent is still to be determined.

Development: by 60' shaft and tunnel from which 40 tons of ore have been shipped averaging 8-9% copper.

Tunnel and shaft work in progress, 1917.

REDWOOD COPPER MINING CO. WASHINGTON

Dead. Mine at Chewelah, Stevens Co., Wash. Developed by 400' tunnel with several hundred feet of raises and winzes expected to expose copper at greater depth. Operations ceased in April, 1912, and property was lost under foreclosure of mortgage. Present owners are Chas. Stevens and others of Robinson Straus & Co., St. Paul, Minn.

ROYAL COPPER MINING & MILLING CO. WASHINGTON

L. J. Winslow, pres. **Mine address:** Chewelah, Stevens Co., Wash.

Property: 7 claims said to show 3 parallel ledges having slate and granite contacts.

Development: by 400' tunnel said to show values in copper, lead, silver and gold. Property is a silver-lead mine with small amounts of copper. Company probably dormant as letters were returned in May, 1917.

SECURITY COPPER CO. WASHINGTON

Address: 720 Peyton Bldg., Spokane, Wash. **Mine office:** Chewelah, Stevens county, Wash.

Officers: J. F. McGinnis, pres.; M. C. Hunter, v. p.; A. H. Spencer, sec. & treas.; with L. K. Armstrong, gen. mgr.; G. F. ...

Inc. 1913, in Washington. **Cap.** \$1,000,000; shares \$1 par; assessable: 1,500,000 shares of which 1,000,000 are outstanding.

Operating expenses in 1916 were \$100,000, of which \$50,000 was paid that year.

Property: 9 claims, 200 acres, in Stevens Co., Wash., in several groups, adjoining the Standard-Chewelah group. Ore is high-grade, with fissure veins in shales and schists. Ore is high-grade.

lopment: by about 1150' of underground work on a series of six veins—
aft, levels, and tunnel.

ment includes a gasoline hoist and a 3-drill air compressor.

Inc. 1900, in Washington. **Cap.**, \$1,000,000; shares \$1 par, non-assessable. Annual meeting, second Monday in March.

Property: 14 claims, unpatented, 200 acres, adjoining the Blue Bell mine on the north, about 65 miles N. W. of North Yakima, in the Summit district. Shows a number of orebodies in granite, carrying gold-silver-lead-copper ores, with 1,600' of workings.

Ore reserves: estimated by management, 150,000 tons of ore, with 100,000 tons blocked out for stopping, averaging \$40 per ton, which figures are excessive.

Equipment: includes steam and water power, and a small sawmill, with material for a 10-stamp mill on the ground. Idle.

WISCONSIN

Wisconsin produces over 40,000 tons of zinc per annum, from the treatment of over 2,000,000 tons of 2.7% ore. The dressed concentrate is mostly reduced to metal at Illinois smelters. The principal centers of production are Benton, Hazel Green, Linden, Livingston, Mifflin and Platteville. During 1916 there were 68 producers with full equipment.

The various copper and iron mines of the state are arranged alphabetically.

BARABA MINING CO. (COPPER) WISCONSIN

Idle. Office and mine: Mellen, Ashland Co., Wis. Nelson Baraba, Secy.; Nelson Baraba, Jr., sec.

Inc. 1906. **Cap.**, \$1,000,000, shares \$1 par. Has a shallow shaft showing ore assaying 2.8% copper, with traces of gold and silver.

MINERAL POINT ZINC CO.**WISCONSIN**

Address: B. A. Hoskins, mgr., Galena, Ill.

Subsidiary of the New Jersey Zinc Co., operating the following mines in the Wisconsin zinc region: Black Jack mine at Galena, Ill.; Coker at Livingston, Wis., Fox at Strawbridge, Kennedy at Highland, Kennedy at Hazel Green and the Penna-Benton at New Diggings, Wis.

At Mineral Point company has a concentrating plant, including a hearth roaster of 150 to 200 tons daily capacity and magnetic separators to remove pyrite from jig concentrates, whose zinc content is raised from 55 to 59%. Recovery is 90% at cost of \$2 per ton.

NATIONAL ZINC SEPARATING CO.**WISCONSIN**

Address: W. N. Smith, gen. mgr., Platteville, Wis.

Company operates a roasting and magnetic-separating plant, capacity 500 tons of ore in 24 hours, at Cuba City, Grant Co., Wis., producing a 50% zinc concentrate.

NORTHWESTERN IRON CO.**WISCONSIN**

Address: J. H. Means, mgr., Milwaukee, Wis. E. P. O'Connell, supt.

Property: the Mayville mine in Dodge Co., Wis., developed by two shafts.

Ore: is a soft, red non-bessemer hematite containing 56.5% iron, 0.05% phosphorus, 1.09% phosphorus, 4.11% sulfur and 14.0% manganese. Output in 1915 was 10,000 tons to 43.19% iron.

Output in 1916 was 122,000 tons.

O. P. DAVID MINING CO.

Address: T. R. Webber, supt.,

Company is operating zinc

MINING CO.

1127 State Life Bldg., Indianapolis, Ind.

erty: at Linden, Iowa Co., Wis., is the main producer of lead-zinc ores in the Linden district. Operates a 100-ton mill and produces ores averaging from 30-40% zinc.

oment: includes electric power, drills and pump.

MINING CO.

ess: Henry Ovitz, supt., Mifflin, Wis.

any is operating zinc mines in the Mifflin district.

MINING CO.

ess: H. C. Holtz, supt., Mifflin, Wis.

any is mining zinc ores in the Mifflin district.

V. HUNT CO.

ess: L. V. Rice, mgr., New Diggings, Wis.

erty: the Crawhill zinc mine at Scales Mound, Ill., near New Diggings.

MINING CO.

ess: Chas. Ross, supt., Mineral Point, Wis.

any is developing and mining a zinc deposit in the Linden district.

PH LAND CO. (COPPER)

Mine near Gordon, Douglas Co., Wis.

905, as successor of Minong Range Copper Co.

erty: 12 miles from Gordon, is in Secs. 11, 12, 13 and 14, T. 43 N., on the southern fold of the Keweenawan syncline.

lopment: by two shafts, deepest 350', sunk at an angle of 36°, on a syngdaloidal trap bed carrying small quantities of native copper.

oment: includes a 6-stamp mill. Property fully described under title of Minong Range Copper Co., Vol. III., Copper Handbook.

OIX CONSOLIDATED COPPER CO.

of business. For description see Vol. XII.

OCK MINING CO.

aloney, mgr., Mifflin, Wisconsin.

ers: H. F. Cochenus, pres., 1536 First Nat'l Bank Bldg., Milwaukee.

C. Kolinski, gen. mgr.

erty: 37 acres in Mifflin, said to show a 32' vein, running N. W.,

rying a 10" to 12" streak of lead-zinc sulphides, averaging 35% zinc.

L. Mine is the old Shamrock & Pemi mine on the so-called old 80

ed 100 years ago for lead, recently quarried for glass rock and now

" to 12" of coal black "Jack" ore.

lopment: by 340' tunnel, and opened to 28' depth, by quarry, stripping

class rocks." About 800 tons shipped in 1915, that averaged 30% zinc

ts of lead concentrate.

is treated in 50-ton mill and concentrate goes to DePue smelter.

worked by double shift 1916. Company took over the Sunset mine.

Y MINING CO.

ess: 923 Postal Telegraph Bldg., Chicago, Ill.

1916 Cap., \$200,000

erty: 160 acres, including the Tiffany mine, formerly owned

Tiffany. No work has been drilled and orebody

WISCONSIN

WISCONSIN

WISCONSIN

VINEGAR HILL ZINC CO.

WISCONSIN

(Owned by Mark Manufacturing Co.)

Office: Platteville, Wis. W. N. Smith, mgr.; J. A. MacCulloch, gen. supt.

Operates Blackstone, North Unity, Hodge, Graham, Martin, Kittoe, Yendall, Meloy, and Jefferson mines in Platteville district. Ships galena and blende concentrates.

WEST END MINING CO.

WISCONSIN

Inc. June, 1916, by D. F. Gardner, C. May, L. Hable, Chas. Roselip, Jr. and W. F. Weigle, to lease and operate a zinc mine near Platteville, Wis.

WEST HILL MINING CO.

WISCONSIN

W. Brown, supt., Platteville, Wis.

Cap., \$20,000. In last eight months of 1915, reported to have made 150% profit on capital stock.

Operates zinc lands in Platteville, Grant Co., extending its holdings by amalgamation with adjoining lands. An important shipper of zinc concentrates. Paid a 10% dividend in March and another in June, 1916.

WISCONSIN ZINC CO.

WISCONSIN

Subsidiary of the American Zinc, Lead & Smelting Co., which see.

Address: A. W. Plumb, gen. mgr., Platteville, Wis.

Dividends: 2% quarterly; No. 5 paid May 21, 1917.

Property: the Winskell, Champion, Longhorn and Thompson mines in the New Diggings, Wis., district. Also has a roasting plant at New Diggings containing 7 Skinner hearth furnaces, 20' diam., preparing ore for magnetic separation of marcasite from zinc blende. Crude ore averages 2.8% zinc.

In 1917 a 200-ton mill was erected on the Copeland lease, near Shullsburg.

WYOMING

Mines are arranged alphabetically, as State has no great mining center.

ACME CONS. GOLD & COPPER MINING CO.

WYOMING

Inactive. See Copper Handbook, Vol. XI.

AETNA MINING CO.

WYOMING

Idle. Office: Merrill, Wis. Mine near Riverside, Carbon Co., Wyo. See Copper Handbook, Vol. XI.

AMERICAN FIREPROOFING & MINING CO.

WYOMING

Address: Investment Clearing House, Fin. Ag'ts, 513 Denham Bldg., Denver, Colo. A. E. Minimum, pres.; S. E. Coyle, mgr.

Inc. 1913. Cap., \$10,000,000, shares 10 cents par. Stock was offered at \$25 with a guarantee of refund attached should the company's statement not be verified.

Property: 8 and a fraction claims, 200 acres, in the South Pass mining district, 35 miles from Lander, Fremont Co., Wyo., the nearest railroad, comprising the Jerry Dain and Hidden Hand Fraction group, a lead and zinc lease on the Bobtail, Denver and Bluebird claims, near Lewistown, and control of 120 acres of partially developed mineralized land.

Ore: quartz, with gold in fissure veins, 15-24" wide; said to average more than \$100 per ton in gold.

Development: includes shafts 40-70' deep, including 100' of underground workings on the Bobtail claim.

Equipment: shaft house, black smokestack, winding engine, hoisting engine, electric plant and other machinery.

COPPER MINING

WYOMING

ce: Room 3, Algoma Bldg., Oshkosh, Wis. **Mine office:** Copper-
rbon Co., Wyo. H. O. Granberg, sec.-treas.

April, 1901, in Wyo. **Cap.**, \$1,000,000, shares \$1 par.

lands: 4 claims, 80 acres, patented, in the Battle Lake district, developed
of shaft and tunnels of 45' and 60', showing an orebody estimated at
h. giving average assays of 17% copper, and from a trace to \$5 gold

Has a 40-h. p. steam plant, with hoist good for 500', 3 power drills and
ential mine buildings of logs.

C MINING CO.

WYOMING

Office: Jelms, Albany Co., Wyo. L. A. Hancock, sec.

1903, in Wyoming. **Cap.**, \$250,000, shares \$1 par.

lands: 100 acres, near Jelm, said to show two 4' contact veins between
and schist, opened by a 140' shaft and a 138' tunnel, showing copper
tes and bornite, assaying up to 20% copper and \$10 gold per ton. Idle
07, except for representation work performed each year.

TE MINING CO.

WYOMING

Office: Room 3, Algoma Bldg., Oshkosh, Wis. Arthur Bishop,
O. Granberg, sec.-treas. and gen. mgr.

Dec. 17, 1904, in Wyoming. **Cap.**, \$1,000,000, shares \$1 par; issued,

lands: 5 claims, 63 acres, in the Battle Lake district, near Dillon, in
Co., Wyo., showing 3 fissure veins, in gabbro, of 15 to 20' estimated
pened by 305' of work, including a 65' shaft and 70' tunnel, showing
ing assays of 18% copper. Company paying taxes yearly.

VE COPPER CO.

WYOMING

Office: Rock River, Wyo. **Mine office:** Arlington, Wyo.

Officers: John F. Pierce, pres.; W. A. McIntyre, v. p.-mgr.; R. W. S.
sec.-treas., with Ralph Booth, and S. Morris, directors.

1908, in Wyoming. **Cap.**, \$1,000,000; shares \$1 par; non-assessable;
hares outstanding. Annual meeting, July 17.

Property: 2 claims, 40 acres near Arlington, Carbon Co., Wyo., shows
in of copper ore carrying gold and silver values. Only assessment work
t management planned sinking to 220' and crosscutting at 175' level at
unts.

N & WYOMING COPPER MINING CO.

WYOMING

Office: care Jas. A. Shinn, Leadville, Colo. **Mine office:** Ester-
Albany Co., Wyo.

Jan., 1903. **Cap.**, \$500,000.

Property: the oldest in the district, includes 120 acres mineral lands and
miscellaneous lands, taken over from Esterbrook Mining Co. The
ok mine has a 4' fissure vein, traversing diorite, schist and granite,
cuprite, chalcopyrite, cerussite and galena, estimated by former owner
ge 2 to 4% copper, 25 to 30% lead, 2 to 4 oz. silver and \$1 to \$2 gold
developed by 2 short tunnels and 5 shafts, deepest 335'.

ERCIAL GOLD MINING CO.

WYOMING

Office: Centennial, Wyo.

Officers: P. A. Peterson, pres., Canon Falls, Minn.; P. L. Holtum, sec.;
and mgr., Centennial, Wyo.

Mine office: Centennial. Annual meeting, second Tuesday in August.
1909, in Wyoming. **Cap.**, \$1,000,000; shares \$1 par; 350,000 outstanding.

Property: 2 patented claims of 96 acres in Centennial mining district,
of the district, granite, schist, porphyry, quartzite,

Wyoming. Developed for 15 years past. Mine has 2 orebodies.

Same management as the Hecla Cons. Mines Co., which see.

HOME RUN COPPER MINING CO.

WYOMING

Office: Rooms 17-18, Postoffice Bldg., Colorado Springs, Colo. Mine near Rudefeha, Carbon Co., Wyo.

Officers: A. L. Bohrer, pres.; J. F. Humphrey, v. p.; Adolph Fehrmger, treas.; Wm. C. Robinson, sec., at last accounts.

Cap., \$1,500,000; shares \$1 par.

Property: 180 acres, partly patented, known as the Copper Bell group near the Ferris-Haggarty mine, having a 350' tunnel showing a vein of 30" to 9' width assaying up to 12% copper, with gold and silver values. Idle.

IMPERIAL COPPER & GOLD MINING CO.

WYOMING

Inactive. Office: 423 Caswell Block, Milwaukee, Wis. Jacob Best, sec-treas.

Property: 6 claims, 113 acres, patented, near the Penn Wyoming mine, on Upper Cow creek, 12 miles west of Encampment, said to show 2 veins, 1 of 26 to 32' estimated ore width, being a schist dike. Mine has about 500' of tunnels, developing ore giving assays of 6 to 14% copper, with small gold and silver values. Secretary reports all taxes paid, 1915. Idle in 1915-17.

INDEPENDENCE MINING CO.

WYOMING

Idle. Office: Algoma Bldg., Oshkosh, Wis.

Officers: E. E. Meelus, pres.; Henry L. Larsen, v. p.; H. O. Granberg, sec.-treas. and gen. mgr.

Inc. June 28, 1904, in Wyo. Cap., \$1,000,000, shares \$1 par, as successor of Leighton-Gentry Mining Co.

Property: 6 claims, patented, 120 acres, 2 miles north of Dillon in the Battle Lake district, shows eruptive metamorphic country rocks, carrying an 11' contact vein between quartzite and diorite.

Development: by 200' incline shaft and 250' tunnel, showing occasional stringers of 3 to 12' width, carrying a little chalcopyrite assaying 12% copper, with small quantities of nickel and cobalt and traces of silver and gold. Has steam power, a hoist and several small mine buildings.

ITMAY COPPER MINING CO.

WYOMING

Idle. Office: Rawlins, Wyo. Mine near Rambler, Carbon Co., Wyo. I. C. Miller, mgr.; Albert Bryle, supt., at last accounts.

Property: 4 miles S. of Rambler, is said to have a 20' vein, carrying a paystreak of high-grade ore, apparently undeveloped, and another vein 8' in width carrying sulphide ore averaging about 8% copper.

Development: by a 300' shaft. Mine has been a complete failure to date.

JACK POT MINING & MILLING CO.

WYOMING

Idle. Office: Room 3, Algoma Bldg., Oshkosh, Wis.

Officers: H. Thorsgaard, v. p.; H. O. Granberg, sec.-treas.

Inc. Dec. 23, 1903, in Wyoming. Cap., \$1,000,000; shares \$1 par.

Property: 9 patented claims, 180 acres, in the Battle Lake district, showing fissure veins in diorite and chloritic schist, and 2 contact veins, between diorite and porphyry, carrying carbonate and sulphide ores. Two veins, slightly developed, are said to average 14" to 60' width. The smaller vein has averaged 8% copper and \$3 to \$12 gold per ton, the larger vein showing very low gold copper ore.

Development: 75' tunnel, 100' shaft and 8 pits of 50 to 25' depth, 411' of workings. Though inactive for many years, company still in existence and reports that all taxes have been paid to date.

KIMBALL MINING CO.

WYOMING

Idle. Address: Kimball, Neb. H. A. ... and ... Carbon Co., Wyoming. G. W. ...

Property: 19 unpatented claims, near Centennial. Has driven 800' to develop a quartz vein with gold and silver-bearing copper ores. Recent reports that development work has been done in 1915, opening up ore that will average about 3% copper and \$3 gold per ton. Nothing done for 1916.

IRON-WYOMING MINING CO.**WYOMING**

Office: 417 Seventh St., Milwaukee, Wis.

Officers: M. H. Yewdale, pres.; Herman Pereles, v. p.; H. E. Dankoler, Spencer C. Yewdale, treas.; with A. G. Weissert, S. P. Bjorklund and Hendricks, directors.

Inc.: 1906. **Cap.,** \$1,000,000; shares \$1 par; issued, \$810,000.

Property: 2 patented claims, about 1 mile north of the Ferris-Haggarty the Battle Lake district.

Development: by a 186' tunnel and a 65' shaft.

Equipment: includes a saw mill and a small machinery plant, bought 1909, the Haskins mine.

CABIN MINING CO.**WYOMING**

Office: B. Elnick, pres., Lysite, Fremont Co., Wyo. A. O. Heyer, sec.; D. E. Haskins, treas.

Inc., \$150,000.

Property: the Lost Cabin group, in the Boyeson section, is said to carry a magnetite vein. Gold, silver and copper ore occurs in quartz veins. Since development work only has been done.

THE MURPHY COPPER CO.**WYOMING**

Office: care Chas. S. Ashley, pres., New Bedford, Mass. Mine near Converse Co., Wyo.

Inc.: Aug., 1904, in Wyoming. **Cap.,** \$1,000,000; shares \$1 par.

Property: 12 claims, 180 acres, and a 60-acre mill site in Horseshoe in the Laramie Peak district. Claims show granite, with gneiss and carrying 7 veins between gneiss and mica-schist; one of which ranges in width and shows covellite, bornite and chalcopryrite, with pyrrhotite carrying 1 to 6% copper, 2 to 9 oz. silver and 40 cts. to \$4.50 gold per ton.

Development: includes 114' shaft and various shallow workings. Company kept up necessary annual assessment work, but has done no develop-

THE LARAMIE PEAK COPPER MINING CO.**WYOMING**

Office: care L. V. Saul, sec., Esterbrook, Wyo.

Home office: Douglas, Converse Co., Wyo. H. C. Saul, pres.; W. A. Eas,

Inc.: 1908, in Wyoming. **Cap.,** \$2,000,000; shares \$1 par; fully paid and assessable; 500,000 shares in treasury.

Property: 29 claims, 440 acres, patented, in the North Laramie Peak

Claims show pre-Cambrian schists bordering granite contacts, on 1,000' of diamond-drill work has proven existence of a flat body of oxidized chalcopryrite ore 40' wide. A shaft has been sunk 100' on a body of chalcopryrite ore said to assay 27% copper, 6 oz. silver and \$2 per a total width of 5'. A second shaft, also in ore, will be deepened

Equipment: includes 80 h. p. boiler with hoist, Cameron pump, steam engine and a 3-drill compressor. Expected to start shipments in 1916. Is a corporation, entirely owned and financed by Messrs. Saul.

THE OSH-WYOMING MINING CO.**WYOMING**

Office: 8 Algoma Bldg., Oshkosh, Wis. Mine near Dillon, Carbon Co.,

Officers: O. A. Koshi, pres.; E. E. Meelus, v. p.; H. O. Granberg, sec.-

Production: one carload shipped, 1916, netted \$2,552.

Value: carried 11% copper, with platinum and palladium values.

Output: all ore shipped to May, 1917, 5,341 tons, yielding 1,905,925 lbs. copper and small values in gold and silver. Mining 7-10 tons of ore daily, 1917.

Equipment: includes a steam hoist.

WYOMING GOLD & COPPER MINING CO.

WYOMING

Office: 3 Algoma Bldg., Oshkosh, Wis. Mine near Dillon, Carbon Co. H. Thorsgaard, v. p.; H. O. Granberg, sec.-treas.

Dec. 15, 1902, in Wyoming. Cap., \$1,000,000; shares \$1 par.

Property: 11 claims, patented, 220 acres, and a 40-acre mill site, in the Lake district, near the Ferris-Haggerty mine, said to show both fissure quartzite and contact deposits between diorite and quartzite, ranging to 30' in width, and carrying copper ore, with average assays of 1% a trace of silver and \$3 gold per ton.

Development: by numerous pits of 10 to 20' depth, 5 shafts of 55 to 100' depth, and a tunnel of 1,004' with about 2,000' of underground workings.

Equipment: includes a 40-h. p. steam plant and 3-drill air compressor. In operation since 1908.

WYOMING LAND CONSOLIDATED COPPER CO.

WYOMING

Office: 20 Broad St., New York.

Officers: Phil. S. Delany, pres.; Myer Newberger, v. p.; Thos. C. Delany, v. p.; above with Herbert Frankenberger and Wm. H. D'Esterre, directors. **Dec. 1916, in Wyoming. Cap., \$2,000,000; shares \$1 par; 1,136,912 shares outstanding; fully paid and non-assessable.** Metropolitan Trust Co., New York, N. Y.; Company office, transfer office. Stock listed on New York Curb.

Property: formerly owned by the West Virginia-Wyoming Copper Mining Co. and the Portland Copper Mining Co., comprises 203½ acres, 153¼ acres at Encampment, Carbon Co., Wyo., said to cover over a mile along a mineralized zone of diorite and limestone. The Portland group is reported to have been developed for 1,800' by a system of veins, which runs westerly into and through the West Virginia-Wyoming for another 1,800', veins said to vary from 2" to 40' in width, and to average 3% copper and some gold.

Minerals: are chiefly pyrite, chalcocite, bornite and malachite.

Development: 2,600' of underground workings, of which 1,650' are on the Portland, consisting of an 1,150' tunnel, drifts and 250' main shaft. Management estimates ore reserves at 300,000 tons of probable mill ore, containing 10% copper and 40c gold and 50,000 tons of probable smelting ore, containing 10% copper and \$1-\$6 gold per ton. Further development necessary to prove value of the property.

WYOMING PLATINUM COPPER & PLATINUM CO.

WYOMING

Office: 29 So. La Salle St., Chicago.

Home address: Holmes, Albany Co., Wyo. Julius Thielman, pres.; Edw. Thielman, v. p.; F. C. Sheldon, treas.; Dorchester Mapes, sec.

Jan. 21, 1903, in Wyoming, as a merger of the Rambler Mining & Milling Co. and New Lincoln Copper Co. Cap., \$2,500,000; shares \$1 par;

Has indebtedness of \$100,000, 90% of which is in the form of promissory notes (bonds) held by stockholders.

Operating for 15 years, in 1912, to the Platinum Mining & Milling Co.

WYOMING PLATINUM COPPER & PLATINUM CO.

WYOMING

Address: Shawnee, Okla. Owners: J. M. Bovee

W. B. Bovee, v. p.; J. M. Bovee, sec. Medicine Bow Mts., French Creek mine, shows granite and gold ore.

Development: by 160' and 210' shafts. A new 1,500' tunnel has been considered. Examinations have been made by H. C. Beeler, J. J. Hintze and other engineers. Ample assessment work is done each year.

SNAKE RIVER CONSOLIDATED MINING CO.

WYOMING

Mine P. O.: Columbine, Routt Co., Colo.

Officers: L. A. Pease, pres., treas. and gen. mgr.; A. L. Arnold, sec.

Inc. July, 1906, in Wyoming. **Cap.**, \$5,000,000; shares \$1 par; non-assessable; fully issued, with \$2,500,000 stock assigned to a trustee, for the benefit of the treasury. Annual meeting, second Wednesday in July.

Property: 9 lode claims, 2 patented, 180 acres, and 520 acres of placer claims, unpatented, in Three Forks district, 26 miles S. W. of Encampment, the nearest rail point. Claims show granite and diorite, reported by management to have veins carrying auriferous galena, with strike of N. 25° W. and cross veins carrying copper striking at nearly right angles. The management reports the galena vein system to have an extreme width of 120', with length of 4,500', the paystreak varying from 10" to 54" in width. The galena ore is said to average 10 to 20% lead, free from zinc, with silver and gold values. The copper veins are undeveloped, but show a variety of oxidized ores, at surface.

Development: by pits and shafts, and numerous short tunnels, from 20 to 500' in length, nearly all openings showing ore. The management estimated 5,000 tons of ore blocked out for stoping. Planned raising necessary funds for proper equipment and small concentrating plant at last report.

UNITED SMELTERS, RAILWAY & COPPER CO.

WYOMING

Dead. The property claimed by this company is described under the title of the Penn-Wyoming Copper Co., which apparently was the legal owner, and full particulars regarding the entire chain of rotten promotions, including this company, are given in Vol. X, Copper Handbook, under Penn-Wyoming Copper Co.

Judgment for \$2,500,000 secured by Continental & Commercial Trust & Savings Bank, Chicago, Dec., 1913. Bank had loaned money to company taking a mortgage on the property. Several years of litigation were thus ended and the properties of the United Sm., R'y. & C. Co. and its subsidiaries were sold at forced sale, being bought in by the bank.

UTOPIA MINING & MILLING CO.

WYOMING

Address: Centennial, Albany Co., Wyo.

Officers: Lee Van Voorhis, pres.; Jas. McCune, v. p.; P. L. Holm, sec.; Bernard Holtum, gen. mgr.

Inc. 1898, in Wyoming. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; issued, \$875,000. Annual meeting, third Tuesday in August.

Property: 2 claims, 30 acres, unpatented, in the Centennial district, to show 2 contact veins between diorite and schist, of which 1 vein, 12' in width, is reported to have given assays of 2% copper, 4 to 20% silver to 63 oz. silver and \$44 gold per ton.

Ore: minerals are mainly chalcopyrite, sphalerite, and pyrite. \$15 per ton.

Development: by tunnels of 850', 600', 175', 200', and 1,000' and 2,600' of workings, all in ore.

Equipment: 1000 ft. of 12" diameter pipe, 1000 ft. of 12" diameter pipe, and 6 buildings.

company stated that the property was owned by the Utopia Mining & Leasing Co (which is now defunct) and that the property is being erected.

WESTERN POTAS

Office: E. B. W.

cers: J. W. Boileau, pres.; F. H. Woodbridge, v. p.-gen. mgr.; with Woodbridge, W. S. Phillips and J. S. Pennington, directors.

Cap., 1,000,000 shares of no value; non-assessable; 530,000 issued

erty: 720 acres in Austin Co., Wyo., said to contain a deposit of clay, 30' deep, containing 5 to 25% potash and 10 to 12% alumina. Drills and steam shovel are to be used. A 10 to 100-ton plant has been

The salts are said to be soluble in hot water.

AMS LUMAN MINING CO.

WYOMING

ress: care W. J. Thom, cashier First Nat'l Bank, Buffalo, Wyo.

office: Depass, Fremont Co., Wyo. L. R. Vanhouten, pres.

May 2, 1908, in Wyoming. Cap., \$2,500,000; shares \$1 par; issued 100,000 shares.

erty: 9 claims, patented, 130 acres, 16 miles from a railway, in Upper Mountain district, shows 8 fissure veins in granite, diorite and schists. The main vein, a zone 50 to 60' wide, traceable 3,400', in altered, crushed and fissured diorite, has a 2' paystreak carrying free pyrite ore, and native copper in thin sheets and nuggets, ore minerals include pyrite, melaconite, malachite and chalcocite.

It is reported to assay 10% copper, 5 to 10 oz. silver and \$2 to \$8 per ton.

Development: by an 820' shaft, showing sulphides on the 800' level, with good workings. There also are tunnels of 513' and 300'.

Equipment: includes an 80-h. p. gasoline plant, with a 15-h. p. hoist and compressor. The company is operated as a close corporation, money for development having been furnished by about 10 shareholders only. The property is favorably regarded, but needs railroad transportation.

In 1916, a 3-year's option was given to Denver people, who have some ore, but no returns are available.

VA GOLD-COPPER MINING & MILLING CO. WYOMING

office: 111 Market Ave., S., Canton, Ohio. Mine office: Painter, Big Horn Co., Wyo.

cers: L. Cavanah, pres. and gen. mgr.; Geo. House, v. p.; Dr. J. H. House, v. p.; Wm. H. McAloney, sec.-treas., at last accounts.

1903, in Wyoming. Cap., \$5,000,000; shares \$1 par; fully paid. Management was changed and company practically reorganized Dec. 12, 1905.

erty: 25 claims, unpatented, 440 acres, in the Sunlight basin, on the west side of the range, in Bear Tooth and Sulphur mountains, in the N. W. corner of Big Horn County, about 12 miles E. of the Yellowstone National Park. The property shows granite, porphyry and andesitic breccia, carrying 6 fissure veins of low-grade copper ore. The ores carry chalcopyrite and chalcocite. They are reported to average 7 to 8% copper with about \$3 gold per ton. The principal veins in andesite are known as the Bluff, Malachite and the Blue vein. The Bluff vein is said to be 25' wide with a 12' paystreak of ore. The Malachite vein, 10 to 25' wide, has a paystreak of high-grade ore at surface, increasing to 5' at depth.

Development: by adits, the lower or main working tunnel, 804' long, with workings 2,000'.

Equipment: includes two power plants and 10 buildings.

Properties: include original Granby group at Phoenix in the Boston district, B. C.; the Hidden Creek mine on Granby bay, Ontario.

opper Key and Belcher groups at Belcher mountain, Wash., taken over, der a working bond and lease; the Oversight group; the Bonanza ek; 30 quartz claims on Granby Peninsula; Mamie and Dean mines on an Peninsula; the Midas mine at Valdez, and an option on It mine g the Dean on Prince of Wales Island. Also owns a large interest oal mine and coking plant at Crow Nest Pass, and a 100,000-h. p. ver plant at Kettle Falls, both together valued at \$2,000,000; a smelter d Forks, operated since 1901, and one at Anyox, blown in 1914. ds are being acquired to ensure a regular supply of coke.

The Phoenix Mines.

I. Campbell, supt., Phoenix, B. C.

Granby or Knob Hill properties at Phoenix, B. C., 43 claims and 1,050 acres, 15 claims being in the mineralized area, include the Old Knob Hill Victoria, Gray Eagle, Banner, Tip Top, Triangle, Gold urlew, Monarch, Tamarack, Monte, No. 13 and others. Claims form ct tract of about 8,000x9,000' size, carrying 8,000' of the strike of the ed zone. The Phoenix property has 2 distinct sets of orebodies. est and longest worked are those of the Knob Hill-Ironside mines; one, one-half mile east, is the Gold Drop. The first named has 3 th separate crews and equipment.

ogy: of the district is not simple. Paleozoic rocks, limestones, argillites overlie beds of fragmental volcanic rocks with small amounts one. These rocks are intensely altered by contact metamorphism, due to intrusions, and orebodies formed in basin-shaped troughs in the zone alization. They are replacements of limestone by garnet, epidote, alcite, with magnetite and finely-divided copper pyrite. The foot- either jasperoid or limestone; the hanging wall is determined by

Old Ironside-Knob Hill claims carry the main orebody, the Gold e deposit being irregular in shape, and of limited size. The main has an approximately N. S. strike, with an eastward dip of 60° at nd 30° at depth. Ore now being mined at Phoenix yields slightly less lb. copper and about 84c in gold and silver per ton. The mine is y an immense pit, or glory-hole, 400x1,000' in size, which, however, l out and present extraction is mainly through tunnels. On the Gold y 80,000 tons of ore remain to be extracted, and the Snowshoe, Cur- monarch claims are almost worked out. Practically all reserve tonnage Ironsides.

lopment: 5 shafts, the more important being the 300' Aetna shaft, 2 shaft, and the 485' Victoria shaft. Principal extraction is by tunnels, the 250' Knob Hill tunnel; 250' No. 1 Gold Drop tunnel; 1,000' No. 3 p tunnel; 2,500' No. 2 tunnel; 3,000' No. 3 tunnel, and 1,500' No. 4 The ore stoped is milled through chutes to lower levels, the mine hav- ic haulage on the 200', 300' and 400' levels, with double-tracked tunnels with 75-h. p. locomotives drawing 10-ton ore cars. Development ncluded 14,608' of underground work and 11,392' of diamond-drill- about 1,000' per month. Total shipments up to June 30, 1917, have ove No. 3 tunnel, 6,150,939 tons; Victoria shaft, 5,039,633 tons, and p mine, 1,635,754 tons, a total of 12,825,426 tons. ge cost per ton crushed on cars including all development was ncrease of 23.4c. Ore is smelted direct. The mechanical equip- the mine is fully described, Volume X.

3 main haulage tunnels are each equipped with 150-ton crushers, of 2,000 and 3,000 tons capacity. The main crusher house at the No. 3 tunnel, has a 30x42" Farrell-Bacon crusher driven by a

150-h. p. Westinghouse motor, the crusher being capable of breaking masses of nearly a cubic yard in size to chunks not larger than 7 to 8". This crusher was shipped to Anyox, when the properties closed down in August, 1914, following the declaration of war in Europe. A 42" rubber belt conveyor, with capacity of 250 tons hourly, handles the ore. An electric shovel installed in 1915 proved very satisfactory. Operating costs were about \$1.10 per ton crushed in cars at No. 2 tunnel, including development and handling waste.

The mine is connected with the smelter at Grand Forks, 24 miles distant, by 2 railways, the Canadian Pacific and the Great Northern. By means of extensive ore bins at the Victoria shaft and the 3 main tunnels a train of 35 thirty-ton cars can be loaded in 25 minutes or less.

Hidden Creek or Anyox Mines.

E. E. Campbell supt., Anyox, B. C.

The Hidden Creek mine is located on Granby (formerly Goose) bay, Observatory inlet, south of and parallel to Portland canal. It is probably the largest copper mine of British Columbia. The 9 claims cover the top and sides of a hill 920' high, enclosed by 2 branches of Hidden creek and 2 miles from Anyox, the smelter site and seaport town of the company.

The ore occurs as a mass of solid sulphides, pyrite and chalcopyrite, or mixed with country rock in shear zones, in crushed and schistose argillite. The rocks are folded and mashed but are part of the cover of the great granite mass forming the Coast range. There are 2 deposits, one of 25 to 40' wide, traced 1,400' said to average 6%, the other estimated to be 100' wide and of unknown length. Development by diamond drill holes shows the ore to extend 300' below sea-level, a vertical distance of 1,250' below outcrop.

Development: by tunnels with principal workings on the 750' crosscut main tunnel, which is about 450' from the surface.

New work in 1916 totaled 2,333', making a total of 27,439'. Diamond drilling amounted to 5,873', or 49,464' to date. New electric hoists were installed, also crushing plant, new drills, residences, etc.

Cost of ore delivered on cars was \$1.235 per ton, an increase of 23% per ton. Cold weather and high price of mining supplies increased the cost during 1916.

Reserves at June 30, 1917, were estimated at 18,139,163 tons, averaging 1.61% copper. So far, this mine has yielded 2,041,338 tons, of which 769,700 tons was mined in 1916-17.

Company also owns the Bonanza group, adjacent to the Hidden Creek mine. No development work was done on this property in 1916, but erection of compressor, crusher, aerial tram, etc., was commenced.

This mine contains 904,355 tons of 1.6% ore. No work was done in 1917.

Alaskan Mines

Operations during the year ended June 30, 1917, may be summarized as under:

	MAMIE Hadley, S. E. Alaska	IT Kasaan Bay, S. E. Alaska	Mrs. Vedie, S. W. Alaska
Situation			
Period, months	8	12	9
Tons ore shipped to Anyox	20,115	14,881	23,000
Copper content, %	1.40	4.09	4.12
Gold and silver per ton	\$0.30	\$1.68	\$1.50
Total workings, feet	3,815	3,114	2,715
Diamond-drilling to date, feet	10,575	3,164	
Reserves, tons	22,283	1,000	41,000
Cost per ton	\$1.235	\$1.643	\$1.75

e Mamie ore, containing an excess of iron, is considered a flux. The s closed indefinitely, until such ore is needed at Anyox. Under conditions it cannot be profitably worked. The ore is valuable as as it is high in lime. So far, the property shows a profit of \$133,827. ily equipped. Indications point to the Midas (P. J. Cook, supt.) g well at depth. Low-grade concentrating ore is being developed mill is being considered.

: reserves: estimated as follows (June 30, 1917):

	High Grade			Low Grade		
	Tons	Copper, %	Precious Metals	Tons	Copper, %	Precious Metals
.....	3,275,996	1.00	\$0.75	300,000	0.65	\$0.60
Creek	9,882,183	2.31	0.30	8,257,500	0.64	0.15
.....	414,775	2.66	0.30	489,580	0.70	0.15
.....	93,080	1.39	0.35	429,480	0.81	0.20
.....	7,500	3.30	1.30
.....	44,487	4.00	1.53
	13,717,021	9,476,560

total is 23,193,581 tons, against 23,156,000 in the previous year. ooper contents are 674,191,016 lbs.

nd Forks Smelter: company's reduction plant at Grand Forks has up-smelting, converting and power plants, with 2,000 acres of land and 68 s. Smelter has 4,400 tons daily capacity, being the largest in Canada, ng the largest in the world. Steel storage bins hold 8,000 tons of coke 00 tons of ore. Ore is handled by 4 electric locomotives, each drawing n cars, constituting a single charge; the ore being practically self-flux-harged without concentration, or assortment, just as it comes from the ith the addition of limestone and fuel.

8 blast furnaces are 4x22' in cross-section at the tuyeres. A steel dust , set 22' above the charging floor, is 13' wide, 15' high and 313' long, oor of 28 hoppers, having a conveyor underneath for flue dust. Slags nulated are dewatered, carried on conveying belts to a height of 120' harged.

first-fusion 40% matte is taken in ladles by a 40-ton electric traveling the converter house, which has 3 stands, electrically operated by 25-h. p. with ten 84x126" shells of barrel type. There are 3 mould carriers ch stand and the product is blister copper of 98.5% tenor, containing ge of 18 oz. silver and 4 oz. gold per ton, sent to the Laurel Hill works ichols Copper Co., for electrolytic refining.

smelter power plant is driven by electricity. Equipment includes 9 owers and 2 Connersville Jumbo blowers, with capacity of 100,000 cu. ft. air per minute, driven by two 300-h. p. motors. Converter blast is by an Allis-Chalmers double-cylinder air compressor, with capacity : 10,000 cu. ft. of free air per minute to a pressure of 15 lbs. per square ven by a 500-h. p. direct-connected electric motor.

as and smelter in B. C. well described in *Min. & Sci. Press* of Feb. 24,

ox Smelter: in March, 1914, this plant on Observatory inlet was s. The plant has 4 furnaces, 52' wide and 30' long, and is the ynnic smelter in the world. Daily capacity is from 2,000-2,500 ompany has laid out a town, installed water works, electric plant, streets, built stores, hospitals, etc.

Mine was idle in 1916, but worked by lessees (W. S. Hawley Co.) during 1917. In July a flotation plant was started. Table concentrates contained 65% lead, 45% zinc, and 150 oz. silver per ton. The new plant was expected to add 5% on the lead and zinc, and make a total recovery of 85 to 90%.

UTICA MINES, LTD.**BRITISH COLUMBIA**

Office: Kaslo, B. C.

Officers: V. D. Williamson, pres. and managing director; C. F. Caldwell v. p.; with W. C. Sivyver, R. H. Voorhees and W. Tolman, directors. C. B. White, mgr.

Inc. in British Columbia. Cap., \$2,000,000; shares \$1 par; non-assessable; 1,600,000 issued.

Operating profits in 1916 were \$72,875. In first quarter of 1917 profits were \$34,119. An initial dividend of 2c. was paid in June, followed by 2c. in September.

Property: silver, lead, zinc holdings in Ainsworth district, B. C.

Development: by tunnels to 1,200' below vein outcrop. Workings cover over 6,000'. In July, 1917, 8' of high-grade ore was opened 1,020' below No. 2 level.

Production: in 1916 was 983 tons of ore, averaging 22% lead and 170 oz. silver; also 75 tons assaying 43% zinc and 145 oz. silver per ton. The total value was \$170,000. Regular shipments are being made to the Trail smelter.

Company is now in a fairly strong position to continue dividends. Costs are high, being \$31.16 per ton in 1916.

WOLVERINE MINING & DEVELOPMENT CO.**B. C.**

Succeeds Kootenay Dev. Co. Ainsworth, B. C. Jere Madden, pres., Rapid River, Mich. J. Cleveland Haas, managing director, and J. F. Carey of Spokane, Wash., director.

Property: the Nicollet group of 14 claims on Kootenay lake, north of Ainsworth and adjoining the Highland and Florence mines (Florence Mag. Co.). Veins in metamorphic rocks are said to carry rich silver-lead ores. A new tunnel was to have been driven in 1916-17.

ASHCROFT DISTRICT**HIGHLAND VALLEY MINING & DEVELOPMENT CO. . . . B. C.**

Office: 610 Hutton Block, Spokane, Wash. Mine address: Howland & King, supt., Ashcroft, B. C.

Officers: Frederic Keffer, pres. and gen. mgr.; Sigmund Dilsheimer v. p.; Chas. G. Hall, sec.-treas.; above, with J. C. Haas, directors.

Inc. 1915, in Wash. Cap., \$1,500,000; shares \$1 par, non-assessable; 984,000 outstanding.

Report for year ending Dec. 31, 1916, shows, receipts from ore shipments \$16,815; operating expenses, \$2,802; net income, \$14,013.

Company has unpaid balance of \$48,115 to pay on the Chataway and Sanson groups.

Property: the Chataway, Tamarack and Sanson groups, 15 claims, about 600 acres, 28 miles S. W. from Ashcroft, a station on the C. P. R. R. Eas claims held under bond for \$50,000.

Ore: copper with small silver-gold values, occurs as contact vein below granite and quartz-feldspar porphyry. Vein is from 9-17' in width, and has been drifted on for about 600'. Ore carries chalcocite in a massive gangue. Average assays are 5% copper, with 50c gold and silver.

Development: by 400' tunnel to depth of 120'. Total work, 90' of shaft and tunnels, 300' raises and stopes.

1,000' tramway and 50-ton mill using electric

duction: 26 carloads of concentrate shipped from August, 1916, to
 ber, 1917, netting \$68,351. Reserves about 15,000 tons of 5% ore.
 clean cut and creditable mining promotion.

MINES OF THE COAST DISTRICT

ing Vancouver district and Vancouver Island, which are grouped
 together)

LUMMON COPPER MNG. CO., LTD. BRITISH COLUMBIA
 dress: S. J. Maloney, Vancouver, B. C.

ctors: J. Pearse, W. Patterson, J. Robertson, Geo. Kent, J. Bratch
 Matheson, all of Vancouver.

erty: a group of claims, a mile from tidewater, at Miskatlah bay,
 channel, halfway between Kitimat and Hartley bay.

: copper glance in quartz gangue, with 1.42 to 74% copper and 0.8 to
 lver per ton; occurs in a shear zone 75' wide in granite.

elopment: by 360' crosscut tunnel, with depth of 150'.

CARIBOO DISTRICT

NING CREEK GOLD GRAVELS & DRAINAGE CO., LTD. BRITISH COLUMBIA

ce: C. H. Unverzagt, owner and treas.; 405 Lexington Ave., New York.
 dress: P. M. Hamlin, supt., Cottonwood, B. C.

1896 in B. C. Cap., \$3,000,000; shares \$5 par; 450,000 issued. Bonds:
 authorized; \$150,000 outstanding.

erty: 40 claims, 2,036 acres, or about 20 miles of Gravel beds on
 g Creek, at Wingdam, B. C., credited with a production of many
 in the 70's and 80's. Shaft, 165' deep, is sunk in gravel to bedrock.

pany is equipping property and expected to start work June, 1917.

GREENWOOD DISTRICT

H COLUMBIA PHOENIX CO., LTD. BRITISH COLUMBIA
 etary and office: H. W. Batty, 146 Bishopsgate, London, E. C.,
 Geo. S. Waterlow, chairman, and L. C. F. Robson, directors.

pany is a reorganization, July, 1914, of the British Columbia Phoenix
 L. Cap., £5,000 in 20,000 shares of 5s each; 6,205 shares issued and
 L. Shareholders in the B. C. Phoenix Synd., Ltd., received 1 share of
 aid in the new company for 10 shares, 1s each, of the old company.

erties and interests taken over from the liquidator of the B. C.
 Syn., Ltd., include an interest in the New Velvet-Portland Mine, Ltd.,
 g of a mortgage debenture, loans to the receiver and accrued interest,
 ared debt and also the equity of redemption. The mine was leased
 ear from July, 1915. Other properties and interests include mining
 British Columbia, real estate in Rossland and sundry shareholdings
 interests.

 2,500,000; £11,202 issued.

Mont. Company leased and operated main holdings of Rocher de Bo Copper Co., built tramway, equipped property and turned it over to latter company in January, 1916. See Rocher de Boule.

ROCHER DE BOULE COPPER CO. BRITISH COLUMBIA

Office: 419 D. F. Walker Bldg., Salt Lake City, Utah. Mine at Hazelton, B. C.

Officers: M. S. Browning, pres.; A. Fred Wey, v.p., and S. A. Douglas directors. D. J. Williams, mgr.; J. A. Cowan, supt.

Inc. Oct. 15, 1911, in Arizona. Cap., \$1,000,000; shares \$1 par; no assessable; fully issued, fully paid. Listed on Butte Exchange. Annual meeting, Oct. 20.

Property: 6½ claims, crown grant, 825 acres with 50 acres mill site and 100 acres other lands, in Hazelton district, 9 miles from the Grand Trunk Pacific railroad.

Ore occurs in fissure veins in granite, veins having an E.-W. strike with dip of 60°. Five ore-shoots being developed have average width 5½', are 3,000' long and proven to depth of 150', according to management.

Development: by shaft and 800' tunnel estimated to have blocked 25,000 tons of ore averaging 15% copper, 5 oz. silver and \$1.50 gold per ton. Copper occurs principally as chalcopyrite and bornite.

In July, 1917, 5' of 10% ore was opened on 1,000' level of No. 1 shaft which had yielded \$1,500,000 up to Jan. 1. This shoot is being explored at 1,200' depth by a 3,000' tunnel, eventually to be driven through the mountain, a distance of 7,000'.

Mine was under lease to Montana Continental Dev. Co. from 1911 to Feb., 1916. Lessees shipped about 17,000 tons of ore, 1915, averaging 15% copper and \$2.50 gold-silver, according to reports.

Output in 1916 was 1,250,000 lbs. copper from 10,000 tons of ore.

Equipped: with 240-h.p. hydro-electric plant, aerial and surface tramways, compressor and saw-mill by lessees who worked mine on royalty basis. Is a good mine with rich ore.

SILVER STANDARD MINING CO. BRITISH COLUMBIA

Office: 506 Winch Bldg., Vancouver, B. C. Mine office: W. C. Newell, New Hazelton, B. C.

Owners: J. W. Stewart, Angus Stewart, D. McLeod, and the estate of late A. L. McHugh.

Gross earnings in 1916 were \$49,000.

Property: the Silver Standard mill, 14 crown grant claims, 180 acres, 7 miles N. of New Hazelton, in Omineca district, said to show 400' of veins in calcareous sandstone, dipping 62° and pitching N. 50° E. Veins are from 12 to 72" wide and 3 of them carry profitable ore. Shoots are 100 to 200' long. Ore is a sulphide, mill ore averaging 0.16% copper, 0.10 oz. silver, 3% lead and 11% zinc.

Development: by 3,000' tunnel and total of 4,000' of workings to depth. Mining is by percentage stamping. Reserves are 15,000 tons.

Equipment: incline, 100-ton hoist, 350 cu. ft. compressors, 25 to 50 ton concrete crushers, 200-h.p. mill, 100-h.p. mill, 100-h.p. mill.

Production: 1,250,000 lbs. copper, 1,250,000 lbs. silver, 1,250,000 lbs. lead, 660,448 lbs. lead, 269,620 lbs. zinc in 1916. The mine is well equipped for cheap mining; water is abundant. The mine is within a short distance of the Grand Trunk Pacific railroad.

SILVERED-COPPER MINE

Office: 1621 Madison St., Vancouver, B. C. Mine office: W. C. Newell, Hazelton district, B. C.

Officers: F. Thoman, pres.; J. W. Stewart, v.p.; C. E. Thoman, gen. supt.

March 23, 1908, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; none issued, 568,754 shares. Debentures, \$50,000 authorized and un-

erty: 6 claims, 300 acres, in the Hunter Basin, Omineca district, 1/2 miles from the railway at Telkwa, shows a bedded agglomerate igneous rocks, chiefly diorite, beds standing almost perpendicular and N. 35° E. Orebodies occur as true fissure veins in diorite. Ores bornite and chalcocite. Three cars ore shipped to smelter in 1914 and have averaged a little over 100 oz. silver and 5% copper per ton.

Development: by a short tunnel, numerous pits and open cuts, with a total of about 200' of workings.

The mine has no power equipment. A concentrator is planned, but one should first be developed. The company is pinched for funds, but it still has a valuable property, which, if handled right, may develop a big mining mine. Idle in 1915, and no information since.

LE ROCHER DE BOULE MINING CO.

BRITISH COLUMBIA

Officers: P. J. Jennings, pres.; 1314 Addison St., Spokane, Wash. P. A. Jennings, sec.-treas.

April, 1916. **Cap.**, \$100,000; shares 10c. par; 600,000 shares subscribed, balance in treasury.

erty: 7 claims, including Spokane & Washington and has bond on the latter group near New Hazelton, B. C. Ore so far developed said to contain 7% copper, \$2 gold and 15 oz. silver per ton.

Development: planned is 1,000' drift tunnel on vein giving 1,000' back and cutting beneath four ore-shoots. \$30,000 to be spent in installing a power plant, power station on Mission Creek, an aerial tram and road, an ambitious program for this amount of money.

KAMLOOPS DISTRICT

IRON MASK MINE

BRITISH COLUMBIA

Owned by Kamloops Copper Co., at Kamloops, Yale district, B. C.

Shaft is down 780' and diamond-drilling under way. Has 600-ton mill, and a concentrating unit.

IRON MASK COPPER CO.

BRITISH COLUMBIA

General office: 609 First National Bank Bldg., Duluth, Minn. Mine office, Kamloops, Yale district, B. C.

Officers: E. G. Wallinder, pres.-mgr.; W. H. Eaton, v.p., with G. Carlsson, J. M. Hudson, F. M. Needham, J. J. Eklund, Reiner Hoch, Theodore Otto Johnson, directors; W. W. Blackshaw, sec., 1412 Tower Ave., Kamloops; Otto Johnson, treas.; John Jenswold, atty.; Arthur Wallinder, Kamloops.

Sept. 7, 1908, in Arizona. **Cap.**, \$3,000,000; shares \$10 par, part paid; none preferred. First-mortgage bonds on Iron Mask mine for \$1,000,000; and convertible 6% notes, \$128,500.

For period of 2 years show revenue of \$337,454 of which ore revenue was \$200,000. Balance at end of September, 1916, was \$77,572. Total liabilities was \$33,840.

222 acres mineral land, including 100 acres at Kamloops. The Iron Mask shaft is 70' in width, with segregations of 10' width, carrying 100 tons of ore containing 10% copper. The Iron Mask

Yankee Girl, has been drifted on 300' in No. 4 tunnel; it is said to be 5' to 7' wide and to average \$7.24 gold and 0.77 oz. silver per ton. Another vein the Yukon, is of secondary importance to the Yankee Girl.

Development: 4 tunnels; No. 1, 1,600' long; No. 2, 2,100' long and 400' below the surface; No. 3, 400' long and 175' below No. 2; No. 4, 2,100' long and 600' below No. 2, is driven in the footwall and for the first 1,100' nearly parallels the vein. At No. 4 tunnel level the Yukon vein is estimated to lie 100' N. E. of the tunnel. Company claims to have 400,000 tons ore blocked out. Total underground workings, 6,000'.

Equipment: includes 2 air compressors and a 6,000' tramway. Total output to date, 24,900 tons.

Company plans completing the development of No. 4 tunnel to add a compressor, build a 300-h.p. hydro-electric plant and a 200-ton concentrator.

HUDSON BAY ZINC CO., LTD.

BRITISH COLUMBIA

Office: Salmo, B. C.

Inc. April, 1916, in B. C. Cap., \$5,000,000; shares \$5 par; listed on N. Y. Curb, May 1, 1917. Incorporators were M. W. Bacon, Old National Bank Bldg., Spokane, Wash.; W. E. Cullen, Jr., and associates, who are reported to have secured a 3-yr. lease and bond dating from Sept. 1, 1915, on the property described below. An 18 months' option on the property, acquired by the Butte & Superior Mng. Co. (Hayden, Stone & Co.), for approximately \$1,200,000, in May, 1916, was not exercised.

The Canadian Cons. at one time held a lease and bond on this property for \$500,000, and shipped 3,200 tons of lead carbonate ore containing a small amount of zinc from near the surface. The option was relinquished, due to increase of zinc with depth.

Property: 14 claims, 600 acres, 8 miles S. E. of Salmo, and 2½ miles S. of Nelson on the Great Northern Ry. **Ore:** zinc, contains lead values in varying amounts, but no silver. Orebodies occur as replacement deposits along bedding planes in shattered limestone. Orebody cut, but not displaced by diabase dike. Vein is on N. E. slope of mountain, 1,500' above Sheep creek; runs N. 28° W. and dips 85° S. W. It is stripped and stoped for 1,000'.

Development: in Oct., 1917, consisted of a 600' crosscut tunnel No. 1 tunnel, 200' below the outcrop, said to cut a mineralized zone 300' wide with many veins carrying low-grade zinc carbonates, and one of them of shipping grade. Veins strike N. 28° W., dip 85° S. W. The main vein is 33' in width and averages 10% in zinc, with 4' of 30% zinc at top. For 840' of stope, the vein averaged 9% zinc, 3.93% lead, 18% iron, 2.7% lime. During 1916 it had been drifted on 1,000' north and south with no decrease in size or value. A 100' winze from this tunnel level shows 80% of vein matter and a 10' orebody, 4' which was shipping grade. Lower tunnel, now in several hundred feet, is being driven 1,500' to 2,000' below the outcrop.

Ore reserves: estimated at 225,000 tons in sight, 10% of shipping grade.

Equipment: includes a small water-power plant working under a 100' head to operate the compressor plant. An aerial tram was built from the mine to the foot of the hill, where a mill was to be erected. The railroad was to be continued from Salmo to the mine.

work during the year 1917. The property is owned by the Hudson Bay Zinc Co., Ltd.

Recent developments show sulphide ore and indicate that the y will become one of the large and profitable producers of the e.

ENAY BONANZA MINES, LTD. BRITISH COLUMBIA

ce: 901 Vancouver Block, Vancouver, B. C.

in Maine. Cap., \$1,250,000; shares \$1 par. A dividend of 11% was in Dec., 1915.

erty: at Sheep Creek, West Kootenay district, B. C., shows gold n orebody said to have a maximum width of 35' on 6th level.

ipment: includes 10-stamp mill and cyanide plant, connected with e by a 3,600' aerial tram.

11 ore mined and milled amounted to 20,000 tons; bullion recov- orted as \$190,000. Owing to lack of power the mine has been e only about 9 months of the year.

roduction in 1916. Mine is closed.

MINES, INC.

BRITISH COLUMBIA

ress: E. V. Buckley, mgr., Salmo, B. C.

erty: the Queen, Yellowstone and Alexandria mines and a mill-site e Creek near Salmo, said to show several veins containing gold e concentrated on the Queen group, developed

Equipment: includes 20-stamp mill, handling 50 tons daily and reported making an extraction of 60% of the gold values.

Property was under option to Tonopah Belmont M. Co., in 1916.

Mine credited with total production since 1908 of \$700,000 in gold.

QUEEN VICTORIA MINE

BRITISH COLUMBIA

Owned by the British Columbia Copper Co. Described Vol. VIII, Copper Handbook. Work suspended March, 1915. Costs were \$3 per ton and ore averaged only 1.2% copper; 0.36 oz. silver; trace gold; 36.8% silica; 14% iron, so that no profit could be made. Shipments totaled 7,920 tons.

RECORD MINING CO.

BRITISH COLUMBIA

Address: Exchange Nat'l Bank Bldg., Spokane, Wash.

Officers: John R. Cassin, pres.; W. H. Turner, v.p.; W. R. Orndorff, sec.-treas.

Cap. \$100,000; shares 10c. par; 600,000 issued.

Property: the California mine, about 3 miles from Nelson, said to show a 4-8' vein with 6" shoot of gold-silver-zinc ore, developed to 300' vertical depth. Shipments by former owners reported to total \$50,000. Management plans erecting a 50-ton mill.

RELIEF MINE

BRITISH COLUMBIA

Address: Erie, B. C., and Bayfield, Wisc.

Officers: Frank Stark, pres.; H. J. Wachsmuth, v. p. and treas. with C. R. Liehy, R. J. Nelson and A. D. Westby, directors; F. V. Holston, sec.

Inc. March, 1914, in Arizona. **Cap.**, \$300,000; shares \$1 par; 250,000 shares issued. First Nat'l Bank, Bayfield, Wisc., registrar. Annual meeting 1st Tuesday in May.

Property: 6 claims, patented, 186 acres, on Salmon river, in West Kootenay Nelson mining division, 14 miles N. from Erie, B. C., said to show sulphide ore in a quartz fissure vein in diorite. Vein strikes N.-E. with dip of 85°. Pay ore occurs in shoots, from 50-170' wide, and is said to average \$18 per ton in gold.

Development: to 416' depth by 4 tunnels, each 1,200' long.

Equipment: includes 14-drill compressor, pump, steam power and 75-ton cyanide mill.

Mine is credited with production of \$500,000 and management estimates ore reserves, August, 1917, at 56,000 tons, with 6,500 tons blocked out.

SILVER KING MINES, LTD.

BRITISH COLUMBIA

Office: Trail, B. C. **Mine address:** Nelson, Kootenay Lake, B. C.

Officers: R. H. Stewart, pres.; S. G. Blaylock, v. p.; T. W. Binray, sec. W. M. Archibald and R. S. Lennie, directors. Company is owned jointly by the Kootenay Bonanza Co., and the Consolidated Mining & Smelting Co., of Canada, Ltd., in the proportion of $\frac{1}{4}$ and $\frac{3}{4}$, respectively.

Property: 5 claims, on Toad mountain, include the old Silver King mine formerly owned and operated by the Hall Mining & Smelting Co. Ltd. Mine is opened by a shaft to the 10th level, showing a well-defined vein in diabase schist. The ore occurs in those portions of the veins which are intersected by 2 dikes, and in the altered surface zone is principally bornite, with tetrahedrite, iron pyrites and silver occurring in the near zone below. Gold is present in small amounts. Considerable ore was extracted in the past from above the 5th level in the Main vein. The South vein and the K vein are unworked at present. The Main vein is lower in silver, but carries a considerable amount of gold. The K vein is higher in silver.

are conservatively estimated at 100,000 tons. Ore in the Main been proven to a depth of 1,130' by diamond drill borings.

Equipment: includes electrical motors of 50-h.p., a 100-h.p. electric in 1,850' tramway, and all necessary mine buildings. Shut down No information for 1917.

WILCOX DEVELOPMENT CO., LTD. BRITISH COLUMBIA

Office: J. C. Breese, 1580 Sherman Ave., Evanston, Ill.

Officers: W. S. Mason, pres. and treas. J. C. Breese, sec.; with C. H. Busen, E. R. Johnston and B. J. Jayne, directors.

June 29, 1911 in British Columbia. **Cap.**, \$500,000; shares \$1 par; **Issued:** 400,000.

Property: 6 patented claims, 188 acres, near Nelson, B. C. Examined by W. S. Mason, Jr. Ore carries gold and some silver. Under development since 1917.

NICOLA DISTRICT

YALE MINES, LTD.

BRITISH COLUMBIA

Office: F. M. Hawkes, or James McKieran, Quilchena, Nicola district.

Property: Tubal Cain, King William and Joshua mines containing lead, zinc, silver and gold ores. Development has followed veins to a depth of 1,130'.

Equipment: includes a 30-ton mill, with a "balanced rod" mill and 1 concentrators.

OSOYOOS DISTRICT

YALE COPPER MINING & SMELTING CO.

BRITISH COLUMBIA

Office: 305 Colt Bldg., Paterson, N. J. **Mine office:** Olalla, Yale district.

Officers: Robt. Gaede, pres.; Jos. Bamford, Jr., v. p.; John E. Tylee, sec.; preceding with Frank A. Blauvelt, Warren N. Conant, Robt. H. Chas. Royce and Frank E. Morrison, directors.

Oct. 19, 1901, in Maine. **Cap.**, \$8,000,000; shares \$25 par. Annual dividend, first Monday in August.

Property: 32 claims, crown-granted, 1,183 acres, and a 92-acre mill, and town site in Olalla, in the lower Similkameen and Keremeos Osoyoos district, 4 miles from a railway. Lands said to show contacts between diorite and felsite, with orebodies in both, but mainly felsite. Twelve claims adjoin the town site of Olalla, and the Division of 7 claims is 17 miles distant. Vein under development is being managed to carry bunchy replacement deposits of chalcocite with garnetite and magnetite gangue, in limestone, near intrusive rock. Assaying 1.5 to 5% copper, a little silver and \$1 to \$7 gold per ton.

Development: by a 70' shaft, and tunnels of 642', 600', 150' and 112', with 100' workings. There is no power equipment. Property now idle, but for 25 years to the Yale Development & Construction Co., organizing the stockholders of this company.

YALE DEVELOPMENT & CONSTRUCTION CO.

BRITISH COLUMBIA

Office: 305 Colt Bldg., Paterson, N. J. **Mine office:** Olalla, Yale district.

QUEEN CHARLOTTE ISLAND

HERCULES MINING CO.**BRITISH COLUMBIA**

Idle. Nearest P. O.: Jedway, Queen Charlotte island, B. C. Claims are near the Ikeda mine, on Moresby island. Apparently has little or no development.

IKEDA MINES, LTD.**BRITISH COLUMBIA**

Ikeda Bay, Queen Charlotte Island, B. C. S. J. Castleman, gen. mgr.: Andrew G. Larson, cons. engr. and supt.

Inc. Sept., 1910, in British Columbia. Cap., \$850,000; shares \$1 par.

Property: the former holdings of the Aways-Ikeda Co., Ltd., taken over for \$200,000, include 42 claims, 2,100 acres in several groups on Ikeda bay, at the southern end of Moresby island, 3 miles from Jedway, and connected therewith by government rail and telephone. Steamer connection is had with Vancouver, 450 miles distant.

The Lily group, 8 claims, 400 acres, crown patented in 1912, on the southwestern side of Ikeda bay, discovered May, 1898, by Arichika Ikeda, and developed by him until taken over by the present company, Sept. 1910. The group shows limestone and slate cut by dikes of greenstone and diorite, having well defined flat fissures at right angles to and between the main fissures, which are practically vertical, the others being approximately horizontal and of great number. Ore occurs in a series of veins of 2 to 8' width, the largest orebodies lying along the horizontal main fissure. The vein principally developed is of 5 to 30' width, proven for 1,600' in length and about 300' in depth. The ore shoot, up to 20' in width, carries lenses of chalcopyrite, averaging, as mined, about 2.5% copper, with a gangue of silicious country rock and occasional stringers of quartzite and limestone. The ore mined by the former owners averaged about 4% copper, 2.2 oz. silver and \$2.25 gold per ton.

The Lily mine has 4 tunnels connected by winzes. No. 3 tunnel, 90' long, has about 5' of chalcopyrite of good average tenor and ends in a 40x50' chamber from which considerable ore has been stoped, the ore in the chamber apparently being not the same as that followed in the tunnel lying about 45' to the N. and found by crosscutting.

Stoping in No. 3 tunnel in 1916 covered an area 100' long by 75' wide from which 1,060 tons was sent to the Granby smelter and 1,600 tons left for local treatment.

Production: to end of 1910 was about 12,000 tons of ore. Property idle in 1912, save for assessment work on unpatented claims, but was reported as shipping 50 tons of ore monthly to the Granby smelter at Anso in 1915.

Smelter returns in 1916 totaled 1,060 tons assaying from 4.8% to 17.48% copper, 0.10 to 0.34 oz. gold, and 1.0 to 3.8 oz. silver per ton.

A mill was to be built during 1917.

TASSOO MINING & SMELTING CO., LTD. **BRITISH COLUMBIA**

Out of business. Property now owned by F. C. Elliott of Vancouver, B. C., and J. E. Cortell of Seattle, Wash.

Mine at Jedway, Queen Charlotte Island, B. C., consists of 13 or 15,000 acres, including a town site on the S. W. side of Tassoo harbor, side of Moresby Island. The mine is accessible by steamer direct or a 5-mile trail from Sewell. Property shows granite cutting limestone, diabase and trap dikes in both rocks. The ore deposits, in limestone, consist of magnetite containing 62% iron, 2% copper, 11 gold-silver, 1% and 3% silica. The orebody is 100' wide, with 50' of 23% ore, 100'

and 23' more of 1%. A 280' adit tunnel, at 1,130' elevation, cuts the
y.
ipments to Tacoma smelter total 1,150 tons. A 2,300' aerial tram-
nnects mine with harbor.

e 1917 increase of capitalization of 1,000,000 shares was to provide
shares for conversion of the new bonds at \$3 per share, the bal-
66,667 shares, being held for corporate purposes.

March 20, 1917, company purchased the properties and assets of
tish Columbia Copper Co., Ltd., the operating company, by ex-
of one of its shares for two of the latter. In May, 1917, there was
n 3% of the capital stock of the B. C. company outstanding.

ount of old debentures outstanding May 8, 1917, \$63,800 was called
emption, August, 1917.

e new bond issue is underwritten by Hayden, Stone & Co. and
Meyer, Jr., and is secured by a first mortgage on all the com-
property. It provides funds for a new mill, etc., at the Copper
in property.

ance sheet showed capital assets of \$4,828,966, including organization
; deferred charges, etc., \$140,220; investments, \$4,059,665; purchase
erties, \$10,272; expenditure on properties, \$47,889; cash on hand and
s, \$15,814; supplies, \$396; mortgage notes of B. C. C. Co., \$540,000;
accrued on notes receivable, \$14,710; liabilities included accrued
on and bills payable, \$111,255; accounts payable, \$7,046.

cluding notes payable and interest accrued thereon due, for ad-
made to the British Columbia company, under the terms of the
te of July 1, 1914, which were cancelled as one of the considerations
transfer of the properties, the current assets and liabilities of the
company, on Dec. 31, 1916, were: current assets, including cash,
smelter products, supplies, accounts receivable, prepayments, etc.,
current liabilities including open accounts payable and amounts
d by banks, \$293,968.

Copper Mountain Properties

erty; the new and most important properties consist of 3,006 acres
ral and other land located in the vicinity of Copper Mountain,
Columbia, at an elevation of 4,200 feet. Copper Mountain is 9.5
e south of Princeton, British Columbia, 307 miles by rail north-
Spokane, Washington; Vancouver lies 182 miles by rail to the

west of Princeton. A 13-mile branch railroad between Princeton and Copper Mountain will give railway transportation, and a subsidiary of the Canadian Pacific Railroad has agreed to build it at its own expense.

The company also owns and operates its old properties in the vicinity of Greenwood, British Columbia, where the smelter is at present in operation.

Geology: the geological formation at Copper Mountain consists principally of monzonite-porphry and granodiorite, which rocks carry the ore. This formation has been intruded by a system of light-colored porphyry dikes.

The ore consists of chalcopyrite, bornite and pyrite finely disseminated in the porphyry and granodiorite, carrying recoverable values in gold and silver. The orebodies for the most part evidence themselves at or close to the surface, but occurrence of oxide minerals is rare.

Development: property has been developed in a systematic manner by a large amount of diamond drilling and underground work. There has been executed 118,323' of diamond drilling, 31,738' of surface trenching, 11,836' of drifting, 2,299' of raising, and 859' of sinking.

All ore thus far developed is primary, lying well above the level of the Similkameen River, which passes along the base of Copper Mountain at an elevation of approximately 2,500'. There are only slight evidences of secondary enrichment.

Ore reserves: estimated at 10,000,000 tons of developed ore and 200,000 tons of probable ore having an assay value of 1.74% copper, and approximately 35c per ton in gold and silver. Careful geological study suggests the possibility of eventually doubling the present tonnage of assured ore. Company in addition owns several other promising prospects in the locality.

The average grade of ore is derived from bulk samples drawn from the underground workings, and such areas have been thoroughly checked both by drill and groove sampling.

Treatment of ore: a 40-ton flotation test mill was erected at the property and has been in operation during four months in 1917, giving very satisfactory results. Since there is a marked absence of oxidized material in the ores, a recovery of 90% of the copper will be secured in regular operations; actual savings very close to this figure on extended experimental runs have already been obtained. Concentrates assaying 35% copper have been maintained with a concentration ratio of approximately 25 into 1.

For the purpose of estimating earnings, a recovery of 27.4 lbs. of copper per ton of ore is assumed after allowing for a certain amount of flotation by waste rock. As the wall rock is generally light colored dike material, the ore admits of close sorting.

The cost of producing copper is estimated at 9½c per lb. when operating on a basis of 3,000 tons per day. It is possible that this cost figure may be lowered. Approximately one-half of the present ore reserves will be extracted by open-cast mining methods, and all of the ore will be drawn from the mines by means of tunnels.

Equipment: for extraction purposes is well advanced. The greater part of the equipment is of a permanent nature so that the development work at the mine can be readily completed in time for the mill, the design for which is now in hand. The Canadian Pacific Railroad will proceed at once with the construction of the branch railroad, between the present railroad terminus at Princeton and the mill site.

The company also owns some claims on Kennedy Mountain, adjoining
 Copper Mountain on the west and across the Similkameen river; 1,777'
 nondrilling and 956' of tunneling having been done, costing \$44,600.
 Ore was found, but no continuous orebodies were outlined.
 The old property of the company is extensive, about 1,900 acres, of
 80 are smelter and mill sites and the balance mineral lands. Claims
 under Crown Grant or U. S. patents. The Boundary Creek prop-
 erty of the company are the Mother Lode mine, at Greenwood, B. C.,
 mine and the Copper Mountain, the Queen Victoria mine and Lone
 Eureka group near Nelson, the L. H. group and the Butte claim
 near the Wellington camp, held under option in 1914, were abandoned, as ex-
 pired work was unsatisfactory. A three-fourths interest in the Emma
 Mother Lode group of mining claims near Greenwood, in the
 area district, comprises 339 acres. The copper ore occurs in a con-
 position between limestone and eruptive rocks, largely as altered lime-
 stone that has been replaced by massive garnet, magnetite, silica and
 calcite. All these minerals are present in such proportions as to
 the ore practically self-fluxing. Copper occurs exclusively as chal-
 crite, the ore carrying from 1 to 1.75% copper with from 75c to \$2
 in gold and silver. The main orebody measures about 160x1,200',
 70° easterly. Diamond drill work is reported to have failed to find
 extension of the orebody.
 Ore is mined by both quarrying and underground stoping, though
 the method is now almost abandoned owing to the depth of the quar-
 ried honeycombed and stoping was impossible. A large blast was set
 Sept., 1913, which was a record for underground work. Number of
 4,830; 40% dynamite, 49,550 lbs.; wire, 18.5 miles; estimated amount
 1,400,000 tons. The shaft has four compartments, 2 for the 5-ton
 ore for a man cage, and 1 for ladders and pipe lines. On the 2 lower
 ore is hauled by electric motors, and on the upper levels by horses.
 Dumped into capacious pockets at the shaft and hoisted to a bin at
 end of the shaft, where it is crushed by one of a pair of Farrel
 rolls, with jaw openings 24x36" and 36x42", respectively. From the
 end of the conveyor the ore passes an automatic sampler, which
 takes the daily sample.
 The Mother Lode mine, now nearly abandoned, has
 tons, averaging 0.945% copper, .034 oz. gold
 only possible to operate the smelter
 of copper. High costs were due to
 in the mine and also to high cost
 the Lone Star group of 3 claims, 27
 and is connected with the Canadian
 by a 28,560' aerial tram, having 72 towers
 tension and 2' anchor stations. The ore
 orebodies in a highly altered
 schist. Approximately 300,000 tons have been
 other work, the major portion of the area being
 The mine is equipped with a 7-drill compressor driven
 motor, the hoist being run with compressed air. The average

value of the Lone Star ore is higher than that of other Boundary district ores, but it is silicious, and as it carries alumina as well, it is much more refractory.

Ore reserves: April, 1916, estimated to be 170,000 tons of 1.60% copper. The ore is amenable to wet concentration with subsequent flotation treatment.

The Napoleon mine, about 60 acres, is in the Pierre Lake district at Napoleon, Wash., 7 miles from Marcus. The ore is needed for its sulphur content. Output for 1914 until shut down in May was 5,332 tons, averaging gold 10.94c and silver 0.08 oz. per ton, with copper 0.204%, silica 20.3%, iron 35.3%, lime 5.3% and sulphur 17.7%.

Ore reserves: Jan. 1, 1915, 3,300 tons as floors of stopes. Costs per ton laid down at the Greenwood smelter were \$2.8575.

Equipment: includes 2 compressors of 10-drill capacity, Farrel crusher and a 4,100' aerial tramway to the Great Northern railway. The sulphide ores are capped by 75 to 150' of oxidized ore. To treat this ore a 10-stamp mill has been erected, with a 100-ton cyanide plant. All power is steam, electric lines not having been extended into the district.

The Victoria mine, purchased 1912, comprises 5 claims, about 75 acres, near Nelson, B. C., about 110 miles easterly from Greenwood. Ore is an altered limestone, similar in genesis, nature and mineral contents to the Boundary ores, carrying about 1.26% copper with some silver and gold. Mine is equipped with a 5-drill electrically-driven compressor and the ore is taken to the Canadian Pacific railway, on the bank of the Kootenay river, over a 3,000' aerial tramway. Operations were suspended March, 1914, due to low copper content of the ore, averaging about 0.77 oz. silver, 0.0037 oz. gold, 2.28% copper per ton.

Equipment: the 2,500-ton smelter at Greenwood, 5 miles by rail from the Mother Lode mine, receives its ores over the Canadian Pacific railway, and does a general custom business also. The plant is electrically operated, requiring about 1,600 h. p. A 600-ton sampling mill has a custom ore bin connected with the sampler by a belt conveyor. All ores are coarse crushed at the bins, then pass the samplers, and then go to the receiving bins over a belt conveyor. The cupola building has 3 blast furnaces. The ore bins have a capacity for 12,000 tons ore and 4,000 tons coke. There are 6 Baldwin-Westinghouse electric motors for the charging and slag lines. The slag cars have 25-ton side-dumping ladles operated electrically from the locomotives.

The converter building adjoins the blast-furnace building and has 2 stands, with 84x126" shells, taking matte with from 25 to 55% copper and producing blister copper of 99 to 99.5% copper, carrying 20 to 50 oz. silver and 5 to 10 oz. gold. Stands are tilted by hydraulic accumulators, shells, matte, etc., handled by a 40-ton, 4-motor traveling crane. There is a 72" silica mill for linings. In the power house are three 300' Crossville blowers, a Norberg compressor for the converters, and four 300 h. p. motors. There are 3 motor generators furnishing direct current to the railway locomotives and an air compressor for operating furnace gas steam hammer, etc., and an electrically-operated hydraulic accumulator.

A power house, 100' x 100' x 100' miles long was constructed at Princeton, B. C. The plant was secured. A power plant with a 100' x 100' x 100' under a head of 1,700' was installed. Since January, 1914, the power plant has been in operation.

The works have 3 h.

e, costing under \$6 per ton, consumption being about 90,000 tons

the Greenwood smelter suffered a scarcity of coke in 1912, and for 2½
s but 2 furnaces were running; 740,589 tons was smelted in 13 months

Dec. 31, 1913, as compared with 608,945 tons for the year ending
0, 1911; 443,022 tons came from the company's mines; the balance
stom ore. The smelter was idle until July, 1915, when one furnace
t in operation, treating 7,374 tons custom ores and 115,140 tons com-

re. Output was 1,850 tons of matte, containing 48%

In April, 1916, a second blast furnace was blown in and 306,450
f dry ore was smelted, of which 23,243 tons were custom ore. 350
mployed in Greenwood mine and smelter.

roduction:

Gold, Oz.	Silver, Oz.	Fine Copper, Lbs.	Year	Gold, Oz.	Silver, Oz.	Fine Copper, Lbs.

n. 1 to Aug. 23.

e following estimates of future operations and earnings is made by
npany's president: with the treatment of 1,000,000 tons of ore annu-
e production, is estimated at 27,400,000 lbs. of copper per annum.
rnings per share, assuming 1,778,787 shares outstanding (which al-
or the conversion of the \$2,500,000 of bonds), would be as follows
ious prices for copper:

Copper.....	15c	16c	17c	18c	20c
nd Annual Earn-					
.....	\$1,507,000	\$1,781,000	\$2,055,000	\$2,329,000	\$2,877,000
nd Annual Earn-					
per share, all					
converted)....	\$0.85	\$1.00	\$1.16	\$1.31	\$1.62

will be seen from the foregoing that the estimated net operating
f \$1.50 per ton of ore is based on 15c copper, which on the devel-
ed probable ore would represent a total net profit of \$18,000,000, not
g for amortization. The estimated life of the property based on
ore reserves is 12 years. With the development work now in
s it is expected that the present ore reserves will be substantially
d.

YALE GOLD MINING CO.

ces: 42 Broadway, New York, and Hedley, B. C. Officers: I. L.
pres.; W. B. Dickson, v. p.; J. D. Clarke, sec.-treas.; preceding,
D. Thurston, E. C. Congdon, G. E. Tener, Marcus Daly and W.
y. Directors: Gomer P. Jones, gen. supt., Hedley, B. C.

Aug., 1909, in Delaware. Is successor of the Yale Mining Co.
outstanding, \$1,200,000. American Trust
Trust Co., Boston, registrar. An-
at 42 Broadway, New York.

ipment: includes an air hoist, two compressors, each of 2,000 cu. ft. capacity and driven by 440 h. p. motors; also a 200-ton 40-stamp mill with 24 Frue vanners and 12 Deister tables.

Work was changed, 1916, and cyanidation now precedes concentration. Electric power supplied by company's hydro-electric plant on the Neenah river. The dam, located on the river just below its confluence with Twenty-Mile Creek, is of the stoplog type; from it water is conveyed through a flume, 7'x9' inside dimensions, a distance of 15,000' to the forebay which supplies 2,100 h. p. twin turbines through an 8' steel penstock. Work on the dam about Jan. 1, 1914, and the whole plant was finished in operation Jan. 2, 1915. Total cost of plant, \$192,009, charged to account.

ent production:

	Ore Tons	Ave. Assay	Gold Rec.	% Rec.
.....	73,491	\$10.65	\$711,997
.....	74,625	11.65	796,592
.....	78,494	10.80	797,340	94.09
.....	70,796	12.03	802,330	94.14
.....	70,455	11.19	748,133

Conditions in the lower levels of the mine have changed considerably the last two years. While the orebodies are larger and stronger than practically the same grade, the specific gravity has increased in increase in arsenopyrite, which adds to the cost per ton of ore. Concentrate tonnage rose from 3,831 tons in 1913 to 6,218 tons and to offset this increase in costs the company installed a cyanide plant as a good property and well managed.

GROUP

BRITISH COLUMBIA

Copper Mountain Mining & Development Co.

EDWARD MINES, LTD.

BRITISH COLUMBIA

Fairview, Boundary district, B. C.

1904, in British Columbia. Cap., \$500,000; shares \$1 par.

Property: 10 claims, 500 acres, in the Similkameen district. Opened workings to show a sulphide orebody 6 to 10' wide averaging 5%

MINING & BRITISH COLUMBIA MINING & DEV. CO., LTD.

BRITISH COLUMBIA

Office: 826 Northwestern Bk. Bldg., Portland, Ore. Mine at Copper Mountain, near Princeton, B. C.

Officers: at last accounts, W. J. Peddicord, pres.; Walter T. Woodeworth, Evert Baker, sec.-treas.-gen. mgr., with G. B. Tucker, directors.

Jan. 6, 1906, in Oregon. Cap., \$500,000; shares 10c par; none issued; 1,455,000 shares authorized.

Property: 8 claims, 1,000 acres, in the Boundary district, in the Boundary district, B. C. Carrying patches, veins and disseminated arsenopyrite, with pyrite. The mine is being opened to show

as \$4 per ton. The mine is being opened to show

development. The mine is being opened to show

carrying 10' wide averaging 5% copper.

8' vein of copper. The mine is being opened to show

set mine and the company expects to show

PACIFIC SYNDICATE, LTD.**BRITISH COLUMBIA**

Reported, March, 1917, to have taken over the Voigt property on Copper Mtn., described in Vol. XII. See Similkameen Cons. Copper Co.
SIMILKAMEEN CONSOLIDATED COPPER CO.

BRITISH COLUMBIA

Property now worked by Pacific Syndicate, Ltd., which see. Company, etc., described in Vol. XII.

SIMILKAMEEN MG. & SM. CO., LTD.**BRITISH COLUMBIA**

Idle. Office: Bank of British North America Bldg., Vancouver, B. C. Mine near Princeton, B. C.

Officers: Fred Buscombe, chairman; W. H. Armstrong, managing director; Chas. F. Law, sec.

Inc. Feb. 8, 1906, in British Columbia. Cap., \$2,000,000; shares \$10 par.

Property: the St. Lawrence and St. George groups, 5 claims, 3 crown granted, about 300 acres, 3 miles from Tulameen City, at the head of Bear creek, a few miles from the Great Northern railway.

Development: 4 shallow shafts of about 50' depth each, besides a short crosscut tunnel and numerous trenches. The work shows a strong orboddy between schist and granite with intrusive porphyry dikes. The St. Lawrence mine has an 8' vein of massive cupriferous iron sulphide, giving average assays of about \$10 per ton in copper, silver and gold. The St. George group shows a 4' vein, carrying ore with quartz gangue, giving average assays of 1.38% copper, 2.08 oz. silver and some gold per ton. Inactive some years.

SKEENA DISTRICT**BABINE BONANZA M. & M. CO.****BRITISH COLUMBIA**

Jas. Cronin, mgr. Owns a group of claims at the head of the Tuchi river in the Babine range, Skeena district, 22 miles by trail from Smithers on the Grand Trunk Pac. R. R. Orebodies occur on contact of granite porphyry and altered sediments, and in fissure veins, 1' to 3' wide, in the porphyry. Values are in the silver-lead-zinc contents. Average assays show 20 to 60 oz. silver, 11 to 56% lead, 10 to 34% zinc.

Development: several tunnels, longest 400', and shafts, deepest 300'. Property has had only a little development work done during the last few years. It is a promising prospect, but handicapped by its inaccessibility. See Ann. Report, Min. of Mines for B. C., pp. 174, 279.

BELMONT-CANADIAN MINES, LTD.**BRITISH COLUMBIA**

Office: 500 Bullitt Bldg., Phila., Pa.

Inc. 1915, by the Tonopah Belmont Development Co.

Officers: Clyde A. Heller, pres.; K. Kitto, sec-treas.; C. S. [unclear] resident director in Vancouver; F. W. Holler, supt.

Company exercised an option Jan. 1, 1916, on a gold mine owned by the Surf Inlet Gold Mining Co., Surf Inlet, Princess Royal Is. and a new company has been formed, the Belmont Surf Inlet with capital of \$2,500,000, of which the Tonopah Belmont Surf Inlet remaining 20% going to original owners of the Belmont Surf Inlet. Belmont Canadian mines will probably be developed.

Ore: gold-quartz with iron sulphides. Assays run \$12 per ton, in 1,000'. Average assays run \$12 per ton, in 1,000'.

Development: for year ending Mar. 1, 1917, 1,000' of tunnel and drifting by machine drills.

Ore reserves: estimated at 385,320 tons.

Equipment: power plant, boilers, compressors, etc. Plan driving tunnel 2,000' to copper.

Company spent \$150,000 during life of option and \$500,000 installing mill, hydro-electric power, and cyanide plant. When in full operation will employ 300 men.

Surf Inlet Gold Mining Co.

See Ann. Report of Minister of Mines of British Columbia for 1916, and 435.)

TONOPAH SURF INLET MINES, LTD. BRITISH COLUMBIA

Office: 500 Bullitt Bldg., Philadelphia, Pa.

Capital, \$2,500,000. Inc. by the Tonopah Belmont Development Co. of Canada to take over property of Belmont-Canadian Mines, Ltd. (which owned Surf Inlet Power Co., two British Columbian corporations owned by Tonopah Belmont, and which controlled the mine during construction period. Of the capital, 80% will be held by Tonopah Belmont, and 20% by original owners, the Surf Inlet Mines.

Property: gold-copper mine on Princess Royal Island, B. C.

Development: about 7,000' of tunnels. Reserves are given as 385,320 tons, averaging \$11.22 per ton. Ore is somewhat refractory.

Equipment: hydro-electric plant containing 2 turbo-driven 468 k. v. a. motors. 5.65 mile power line, railway, 2 compressors and 300-ton mill (Sept., 1917), containing gyratory crusher, ball mills, concentrating and Jones-Belmont flotation machines. Table concentration will recover 90% and flotation 50% of the recoverable gold content; while 94% total gold and 96% of the copper will be recovered in the combined processes.

The mine looks like a future profit maker, and has been well handled thus far.

BELL ISLAND COPPER CO. BRITISH COLUMBIA

Office: 203 First National Bank Bldg., Bellingham, Wash. Mine at Bell Island, Skeena River division, Cassiar district, B. C. Idle since 1914, owing to lack of funds. Fully described, Vol. XI, Copper Handbook.

PORTLAND CANAL TUNNELS, LTD. BRITISH COLUMBIA

Office: J. Hearn, sec., 214 Belmont House, Victoria, B. C.

Directors: R. I. Elliott, K. C., pres.; J. A. Mara, R. M. Stewart and J. G. Ghorn, directors.

Started: Aug. 23, 1912, in British Columbia. Cap., \$700,000; shares 25c par.

Property: 10 claims, Crown granted, near Stewart, Portland Canal, B. C. Company was organized to drive a crosscut tunnel to intersect the veins of Glacier Creek, previously worked in the Portland Canal and Stewart Mining Co.'s properties. The tunnel, over 3,000' long, has failed to disclose orebodies of permanent commercial values. Idle since 1914, owing to lack of funds. Being examined with a view to reopening property.

STEWART MINING CO. BRITISH COLUMBIA

Bankrupt. Mine at Stewart Skeena district, B. C. See description, Vol. XII.

SURF INLET GOLD MINES. BRITISH COLUMBIA

Office: 1001 Broadway, Montreal, P. C. F. W. Holler, supt. Controlled by Belmont-Canadian Mines, Ltd.

Equipment and equipment of this mine.

Started October, 1917.

Average output, 100 tons, averaging \$11.22 per ton.

SLOCAN DISTRICT

BLACK PRINCE MINE.**BRITISH COLUMBIA**

Operated under lease by J. A. Tipping, Slocan City, B. C., Canada.

Ore: silver, in 6" vein, in schist.**Development:** by tunnels only. Property is said to have made first shipment in Nov., 1915, and expected to have output of 1 car of ore every 2 weeks. Owing to inaccessibility of property, only the high-grade ore can be profitably mined. Twelve men employed at last accounts.**CORK-PROVINCE MINES, LTD.****BRITISH COLUMBIA****Office:** Kaslo, B. C. Mine at Zwicky, B. C.**Officers:** W. E. Zwicky, pres.-gen. mgr.; Henry Giegerich, v. p.; W. H. Burgess, sec.-treas.; preceding with W. O. Miller, G. O. Tierbey, H. Rindal and W. M. Archibald, directors. **Transfer office:** Kaslo, B. C. W. H. Burgess, registrar.**Inc. May, 1915, in British Columbia. Cap., \$1,000,000, shares 10c par, 6,158,005 issued, on bonds, non-personal liability.****Property:** 13 claims, 9 crown granted, containing about 580 acres on the S. Fork of Kaslo creek in the Slocan district. Company is the consolidation of the Cork and Province groups.

The orebodies are found in fissure veins in slate. They have an N. E.-S. W. course and 68° dip, the shoots are 6' to 30' wide, with ore containing silver, lead and zinc.

Development: has been by a 1,400' crosscut tunnel, which intersects the Black Fox and the Cork veins, with greatest vertical depth of 300 and 1,300 linear feet of underground work. The Black Fox vein was cut at 700' from the portal and shows a width of 4' to 6' of vein material but no commercial ore. Company will prospect this vein. The Cork vein was intersected at 920' and is said to be stronger and wider than is usual in the district. Four shoots, developed on this vein, are reported to show a width of 8' and a length of 50' to 150'. Ore reserves are said to be 10,000 tons.**Equipment:** 100-ton concentrator, hydro electric plant, sawmill, compressor and electric lighting system.**Production:** mine yielded 1,206 tons previous to consolidation, and about 850 tons in 1915, which are said to have given net smelter returns of \$30,000. Ore shipments said to average 30 oz. silver and 45% lead. No production reported for 1916.**FISHER MAIDEN MINING CO.****BRITISH COLUMBIA****Officers:** J. L. Prickett, pres.; Wm. Huntley, v. p.; H. S. Stoolfire, sec. treas., with John O'Connor, directors, all of Spokane, Wash.**Cap., 1,500,000 shares, 10c par; 1,000,000 issued.****Property:** the Fisher Maiden group, 7 miles from Silverton, Slocan district, B. C., reported sold to Barney Crilley and J. J. Malaga, on a 3-year bond and lease, 1917. Claims said to carry silver-lead-zinc values.**GALENA MINING & MILLING CO.****BRITISH COLUMBIA**

Company was formed to take over the Galena Farm silver-lead mine in the Silverton district, B. C. The estate of the late Patrick Clark of Spokane holds 75% of the stock, and the A. W. McCune interests of Lake City hold the remainder. P. W. Clark is manager, and A. King in charge of the mill.

Net earnings during the first 11 months of operations were approximately \$200,000. A bond for \$100,000 was paid off, and development mill construction of \$80,000 also paid.

Ore: averages about 12% lead and 15% silver. Development has been kept well up to date.

and Rev. P. F. Hylebos, directors; A. E. Cable, asst. sec.; J. A. McPhee, asst. treas.

Cap., \$1,750,000; shares \$1 par; all issued. Listed on Spokane Exchange. Balance sheet of April 30, 1917, showed total receipts of \$189,090, which included: balance forward, \$16,509; ore in transit and at smelter, \$72,513. Disbursements for year ending April 30 were \$167,808, including \$11,097 for development, \$44,375 for mining and \$16,324 for milling expenses. Net earnings for the fiscal year ended April 30, 1917, amounted to \$49,844. On April 30, 1917, the company reported cash on hand \$21,850 and \$10,000 ore at the smelter or in transit.

Dividends: 1915-16, \$52,500; 1916-17, \$87,500. The company is reported as having paid 22c per share in as many consecutive installments prior to suspension of dividends in 1903. Total dividends including Sept. 1, 1917, said to be \$542,500; exact records not available.

Property: 5 crown granted claims, at the head of McGuigan creek, near Three Forks, Slocan mining district, has been operated for many years as a silver-lead-zinc mine and has been extensively developed at depth. On the 14th level at 5,000' crosscut was run, but development there has been disappointing, the orebody evidently not extending that far. Reported in April, 1917, that new orebodies had recently been found on the 600, 800, 900, 1,200 and 1,300' levels south, but the extent of these deposits has not yet been determined.

The product is lead and zinc concentrates and crude lead ore. The crude ore runs from 148 to 165 oz. silver and 50 to 58% lead, while the lead concentrates average from 70 to 100 oz. silver and 32 to 40% lead, and the zinc concentrates run 35 to 37% zinc and about 25 oz. silver.

Development: work from May 1, 1916 to April 30, 1917, amounted to 910'. Ore reserves estimated as sufficient for 2 years' operations. Employ 40 to 50 men.

Concentrator during 1916 treated 18,000 tons of ore, producing 993,751 lbs. lead, 137,329 oz. silver and 388,657 lbs. zinc.

Management is reported as "honest, efficient and extremely conservative," but gives out but little information.

SILVERTON MINES, LTD.

BRITISH COLUMBIA

Offices: A. Martin, sec., 23 Throgmorton St., London, E. C.; G. Silvert mgr., Silverton, B. C.

Officers: G. Freeman, chairman; M. S. Davys, F. J. Ferguson, D. H. Gibb, and E. W. Monkhouse, directors.

Inc. Oct., 1909, in England. **Cap.**, £50,000, in 30,000 7% cumulative and 20,000 ordinary shares at £1 each; 28,050 paid. and all ord. shares issued. Profit of £2,522 in year ended Sept. 30, 1915.

Property: the Hewitt-Lorna Doone mine at Silverton, carrying silver-lead-zinc ores, which are concentrated in a mill having a flotation unit. In 1914, 18,000 tons of ore was mined. The silver-lead concentrate is sent to the Trail smelter.

In 1917 assets were transferred to the Silver Tip Mining & Power Co.

SLOCAN STAR MINES, LTD. (N. P. L.)

BRITISH COLUMBIA

Offices: 901 Vancouver Block, Vancouver and Simon, about 1917. B. C.

Officers: R. S. Leitch, sec.; E. C. Paedick, mgr.; J. D. Macdonald, mgr.; Elliot, Thomas McPhee, mgr.

T. B. Hooper, sec.-treas. Inc. in British Columbia.

Cap., \$2,500,000; issued \$2,500,000. Balance sheet year ended April 30, 1917, showed total receipts of \$189,090, which included: balance forward, \$16,509; ore in transit and at smelter, \$72,513. Disbursements for year ending April 30 were \$167,808, including \$11,097 for development, \$44,375 for mining and \$16,324 for milling expenses. Net earnings for the fiscal year ended April 30, 1917, amounted to \$49,844. On April 30, 1917, the company reported cash on hand \$21,850 and \$10,000 ore at the smelter or in transit.

property and plant, \$2,054,610; mine exploration as at Oct. 31, 1915, \$34,179, and deferred charges, \$128,124. Liabilities include \$32,924; debentures, \$91,696, and profit and loss, \$16,619.

Bonds: authorized, \$100,000 4-year 7% 1st mortgage; issued, \$90,000. Bonds paid in former years, \$542,000.

Property: at Sandon, Slocan district, consists of Slocan Star and Rabbit groups of 12 Crown Granted claims, which formed the subject of protracted and costly apex litigation between the Star Mining & Milling Co., and the Byron N. White Co., in the Supreme Court of B. C. for 10 years, finally determined by a judgment of the Supreme Court of B. C. Holdings also include a patented mill-site and extensive water

rights: carries silver, lead, zinc. The main vein, the "Slocan Star," is a fissure in slate, traceable over a mile. Vein strikes N. E.-S. W., 47°, width 6-8', widening out in places to as much as 50'.

Development: 10 main adit levels; No. 10, the lowest is 2,300' long; total gobs 13,000'; new work in 1916, 1,610'. Silver-lead ore has been almost exhausted down to 5th level; from 6th level to surface several zinc-orebodies have been left intact as unprofitable under former market conditions.

Reserves: recently estimated as 49,000 tons zinc concentrating ore with net value of \$190,000 and 100,000 tons partly blocked ore, valued \$100,000. Average assay value reported as 3 oz. silver, 1.2% lead, and 1% zinc, or total value of \$11.50 per ton. Costs estimated at \$7, spelter at 5c.

Production: in 1917 the Silversmith vein was opened for 100' on No. 10 level, it was 14' wide. Mine was examined by R. H. Stewart of Trail, in 1917.

Equipment: provided for by the recent bond issue includes, 15-drill compressor, 1,500-h. p. electrical plant, 4,000' aerial tram connecting mill tipping bins at Sandon and flotation units added to the 100-ton concentrator, increasing capacity to 250 tons. Mill is at level of No. 10 adit.

Production: in 1916, 1,070 tons of crude ore and concentrate averaging 50.5% silver, 59.5% lead, and 7.1% zinc, valued at \$100,539; and 2,008 tons of concentrate containing 34.5% zinc, worth \$30,395; a total of \$130,933. In the third quarter of 1917, shipped ore and concentrates worth \$39,725. Concentrates on hand are valued at \$10,000.

Future: the future of the mine looks favorable now that litigation is ended, production is being bettered, and mill capacity increased.

HARD SILVER LEAD MINING CO. BRITISH COLUMBIA

Offices: Empire State Bldg., Spokane, Wash., and Silverton, B. C.

Officers: W. J. C. Wakefield, pres.; J. F. Clark, v. p.; Chas. Hussey, sec.; Geo. H. Aylard, gen. mgr., Victoria, B. C., with Henry White, B. C.

Dec. 1910, in Washington. Operated under present management since 1911. Controlled by the Finch-Campbell-Clark estates of Spokane. 100,000 shares \$1 par; fully paid; non-assessable; all issued. Annual dividend first Tuesday in May. Security Transfer & Registrar Co., New York, N. Y., transfer agent. Listed in Spokane and on New York

1910 shows total income of \$905,713, of which \$495,636 was retained; dividends, \$600,000. Net profit in 1916, made available, leaving \$125,307 surplus at Dec. 31, 1917, after paying divi-

The Jumbo group, 4 claims, located on Copper Creek, at the end of Tofino Inlet, Clayoquot mining division, Vancouver Island, B. C., said to show 1' to 4' of chalcopryrite in a limestone formation, with dolomite hanging-wall. **Development:** 65' shaft with 80' drift and several short tunnels.

The Dewdney, or Indian Chief mine of the Tidewater Copper Company at Sydney Inlet, Vancouver Id., is reported to be fully equipped. Ore said to run 50% copper and \$20 in silver. A 300-ton concentration mill was under construction in 1917 to treat the 500,000 tons of 2% copper ore, said to be in sight. There is also said to be a cliff of high-grade ore 40' wide.

The Tofino property shows 4' vein of high-grade ore, which will be mined when a 600' tram line is completed. Company reports "in two tunnels alone there is an estimated profit of two and a half million dollars on the copper ore in sight now. Additional tonnage is being opened up every day." Shipped 600 tons of 4% ore to Tacoma, Dec. 1916. A 3-year contract with the Tacoma smelter calls for 1,500 tons per month. Two shipments made to May, 1917, netted \$17,000. Employs 30 to 40 men.

See Ann. Report Minister of Mines, B. C., 1916, pp. 337 and 361.

TRAIL or ROSSLAND DISTRICT

See Geology and see Deposits of Rossland, B. C., by Chas. W. Dryden. Mem. 77, Canadian Geol. Survey.

CONS. MG. & SM. CO. OF CANADA.

BRITISH COLUMBIA

Secretary and office: J. Kitto, Room 1202, C. P. R. Bldg., Toronto, Ont. **Works office:** Trail, Trail district, B. C.

Officers: W. D. Matthews, pres.; Geo. Sumner, v. p.; Jas. J. Warren, managing dir.; preceding, with E. B. Osler, Chas. R. Hosmer, H. S. Osler, W. L. Matthews, J. C. Hodgson and Wm. Farwell, directors; Robt. Holden Stewart, cons. eng.; Selwyn G. Blaylock, asst. mgr.; T. W. Bingay, smelter; James Buchanan, smelter supt.; J. F. Miller, refinery supt.; M. E. Purcell, supt. Centre Star mines; F. S. Peters, supt. Le Roi mines; J. K. Cran, supt. St. Eugene and Sullivan mines; Fred Chapman, supt. construction at smelter; W. M. Archibald, mines eng.; and E. H. Hamilton, metallurgical mgr.

Inc. 1905 as Canadian Consolidated Mines, Ltd. Cap., \$15,000,000; \$2 par; issued \$10,477,450; increased from \$5,500,000 in 1909 to \$7,500,000 and again in Dec., 1915, to present amount. Company's fiscal year ends Sept. 30. Annual meeting, third Tuesday in December.

Transfer agents: Toronto General Trusts Corporation and the Trust Co., Montreal.

For fiscal year 1916 net profits were \$96,490, and surplus showed a balance of \$2,278,459. **Dividends:** for fiscal years—1905, \$100,000; 1906; \$480,005 in 1907; \$60,940 in 1908; \$404,352 in 1909; \$463,375 in 1910; \$464,398 in 1911; \$776,328 in 1912 and 1913 making \$3,777,000 in all.

An 8% dividend was declared for 1914 and 1915 when 2% was changed Jan. 1, 1916.

Sales of refinery

Property: company

either by direct ownership or by lease. The company is a subsidiary of the Consolidated Mining Co., Ltd., which was formerly operated by the British Columbia Iron Mask, Idaho and Enterprise. The Phoenix Amalgamated Co.

Acc claims adjoining the Phoenix, located at Phoenix, B. C. In 1910 company acquired the La Plata, or Molly Gibson group, near Nelson, the No. 7 group in the Boundary district. In 1911, company purchased control of the Fort Steele Mining & Smelting Co., Ltd., owning Sullivan silver-lead mine, near Fort Steele; Le Roi Mining Co. at Rossland, the Virginia and Abe Lincoln Mines. In 1915, company purchased Monte Christo, Paul Boy, Eddie J. and the Iron Horse mines, all Rossland, and acquired a controlling interest in the Silver King Mines, at Nelson. Also the No. 1 and the Highland groups in Ainsworth. In 1913, the Deer Park, Grand Prize and Mabel in Rossland were taken and the Ottawa Mine near Slocan City purchased. Control was vested in the Quatsino Copper Co., operating on Vancouver Island. In 1917 the company acquired properties in the Camp McKinley airway districts, near Keremeos, B. C., and Molson, Wash. Properties contain silicious flux.

Le Roi-Centre Star group, on the southern slope of Red mountain, Rossland, is the principal property. Country rock is a series of igneous and fragmentary volcanics of the Paleozoic age, intruded by an unmetamorphosed mass of monzonite-porphry. This monzonitic mass, with its associated rocks, has been intruded by a large number of nearly vertical dikes, from a few feet to 250' wide, with generally N.-S. trend, the dikes being basaltic, and occasionally slickensided, larger dikes cutting off veins completely, with the more important orebodies occurring at the intersections, and having a series of faults, mainly parallel to the trend.

Ore occurs in shoots of 3 to 50' width, and 50 to 600' length, occurring at intersections of veins with dikes. Ore is strongly auriferous, chiefly argentiferous chalcopryrite, associated with pyrite, and pyrrhotite. The average range of silicious altered country rock, ore ranging 0.5 to 2% copper and \$8 to \$20, and occasionally up to \$100, gold per ton. Pay grade extends, in some cases, from wall to wall, and forms local enrichment zones in some cases being very indistinct, and ore shading into the

country rock. There are several veins, the more important being the Centre Star, Le Roi and War Eagle, on which the mines are opened, and which are being shear zones, carrying chalcopryrite disseminated mainly in the country rock, with some pyrite and occasional arsenopyrite.

The Centre Star-Rossland group, which now has a total acreage of about 775 acres, includes the Le Roi, Centre Star, War Eagle and Iron Mask mines, which are practically one, all connected by drifts and crosscuts, with about 1000' of workings. For fiscal year 1915-16, new openings were 10,290', and 171' of diamond drilling. Mines are worked by overhand stoping, and the shrinkage system and partly timbered with square sets, and round timber. There is an electric haulage throughout, with electric locomotives hauling 2-ton side dumping cars to the underground shafts of the Centre Star shaft. The ore pockets are on the hanging level of the shaft, and on the 1st level, 1 directly behind the other, the 2nd level is for waste, and the 150-ton back bin

The Le Roi and the other mines, the Centre Star, the pumping equipment, and a No. 7 Cameron induction motor, and a 6 p. motor on the 1st level, a 10 p. motor on the 6th, a 10 p. motor on the 8th level, while the 9th level

Power for mill is from a 350-k.w. generator, driven by a Pelton wheel under a head of 1,000'.

The **Ottawa** mine has a fissure vein in granite. Development by $\frac{1}{2}$ mile of tunnel and winze. Principal metal is silver, associated with copper, lead and zinc sulphides, some barite in gangue.

The **Silver King** mine on Toad mountain, back of Nelson, purchased in 1912, was unwatered in 1913, the surface plant repaired, machinery installed and made ready for production. The mine works well mineralized fissure veins in granite, yielding high-grade silver-copper ores. Development by $3\frac{1}{4}$ miles of tunnels and winzes. Equipment includes single rope aerial tram $4\frac{1}{2}$ miles long, connecting ore bins at mine with shipping bins on C. P. R. tracks at Nelson, 2 single stage straight line Ingersoll air compressors, driven by motors, a double drum-gear electric hoist, using current at 220 volts and a 7"x10" triplex plunger pump. Mine not operated in 1915-16; all development operations have been curtailed after outbreak of European war.

The **Trail Smelter**, located near the International boundary line, treats both copper and lead ores and does an extensive custom business in addition to treating the company's ores. Smelter was closed down in Nov. 1917, on account of labor troubles.

There are two sampling mills, equipped with crushers and Vezein samplers; No. 1 mill, for copper ores, has 200 tons hourly capacity; No. 2, for lead ores, has 100 tons hourly capacity.

The smelter has a calcining department, and blast-furnace departments for copper and lead. All the copper ores are bedded and hauled from the beds by electric locomotives to the charge bins, and from charge bins to the blast furnaces. The lead ores for roasting department are delivered to beds by a system of belt conveyors and drawn from these beds by a belt conveyor over an electric scale to the roasters.

The calcining department consists of three 22' 6" 7-deck Wedge roasters, and five 26' Godfrey roasting furnaces. The roasted ore is sintered in 34 Huntington-Heberlein sintering pots and 2 Dwight-Lloyd sintering machines, fumes being passed through the Cottrell electric precipitator.

The 1,800-ton copper smelter has 5 blast furnaces, largest 45'x180", all taking a 32-oz. cold blast. Ore was treated crude in the blast furnaces, making a first-fusion product of 10 to 15% copper tenor, which is cooled, crushed and smelted with silicious ore and 4% coke to a matte of 30% copper, and shipped to Tacoma for conversion. Two 12' Great Falls type converters were installed during 1916, and in future all matte will be converted here.

The 350-ton lead smelter has one 45'x180" and three 45'x180" blast furnaces, with mechanical feed, taking mainly calcined ores, crude lead ore being roasted in seven 26' Godfrey furnaces, which reduce the sulphur from the original tenor of 16% to only 8%, and these calcines are re-roasted in fifteen 9' Huntington-Heberlein sintering pots, yielding a product carrying only $4\frac{1}{2}\%$ sulphur. The fully sintered ore, carrying 50 to 50% lead, is smelted in the blast furnaces, each making 50 to 85 tons of lead bullion daily, with about 4% matte fall. This matte is roasted and again put through the blast furnaces, and slags are granulated. Blast furnace gases are passed through a Cottrell precipitator.

In connection with the smelters is an electrolytic lead refinery handling anodes cast from the silver-lead bullion. This plant, of 100-ton daily capacity, was the first electrolytic lead refinery ever built, and uses the Betts process. The lead is of exceptional purity, with average assay of about 99.997%, which means that a short ton of lead carries only about 1 oz. of impurities, which is marvelously successful work.

the silver refinery, taking silver sludge from the electrolytic lead tanks, water-jacketed reverberatory furnace for the production of doré and the necessary reverberatory furnaces for melting and casting silver and gold bullion. Products are silver 0.999 fine, and gold 0.995 fine.

The electrolytic zinc plant was erected in 1916, and is now producing 25 to 50 tons of spelter daily. The Sullivan and other mines supply the process is similar to that used at Anaconda, Mont., but is the result of the operation of an experimental plant treating ore from Sullivan mine and producing 1,000 lbs. of zinc per day.

For the reduction works is electric throughout, brought 30 miles at 22,000 volts, on the Kootenay river, received at the transformer power house was revenue producing load of 11,152 h.p. during 1916. Capacity was enlarged. A 20,000 h.p. distributing station was installed at Smelter, B. C.

It is supplied at 32 oz. for all furnaces, by one No. 9, and one No. 11 and one 400 cu. ft. Root blower, and one 200 cu. ft. Rootville blower.

The works have a central heating station and well-equipped machine. A variety of electrical shops. The assay office, which handles all equipped.

In the past three years the smelter has had many betterments, both lead and copper smelting departments. In 1915 these included additional lead furnace, charge bins equipped with conveyors and hoppers for the lead furnace department, wash houses for the mill, copper converters with necessary equipment, beds for copper ores, and additional tanks at the lead refinery.

In 1916 a briquetting plant was added to the lead smelter; lead sump was completed, and an ore bedding system. The sulphuric acid plant erected, with 15 tons daily capacity; also the hydrofluoric acid electrolytic copper refinery was completed.

Tons, Ore Smelted	Gold Oz.	Silver, Oz.	Lead, Lbs.
447,017	98,314	2,285,631	30,974,110
447,064	148,801	2,230,500	40,177,910
374,771	129,083	2,568,301	34,017,310
407,124	186,017	3,224,458	48,326,252
	129,789	1,765,992	26,072,074

	137,614	2,162,406	42,308,810
	114,920	2,443,475	43,675,077
	121,380	2,224,888	32,157,130
	69,186	1,100,271	20,380,083

Considering that the Centre Star and out when taken over, the company is enterprising and thorough. The company at present is the only one

ise 415 acres, in the Santa Eulalia mining district, 18 miles from ahua City, where the company's narrow gauge railroad connects he National Lines of Mexico. The Santo Domingo, the producing of the Chihuahua Mining Co. adjoins the 200 acre claim of the i Company. Other claims are within a two mile radius of the Domingo. A new cave of ore was discovered in Nov., 1916, which, another extensive deposit forms an orebody 100' wide at the north 00' at the south, 600' on its dip, and still strong in the floor. g allowance for the tonnage shipped during the year, 75,000 tons been added to the ore reserve. About 5,200' of development work lone in 1916.

ie production of the mines was shipped to the A. S. & R. Co.'s plant. nine workings and development for the past 2 years have been in : of Mexican foremen; the American organization of the company, to disturbed conditions, were drawn out of Mexico and held in so under pay. W. J. Quigley is manager in charge of operations.

ER MOUNTAIN MG. & DEV. CO. BRITISH COLUMBIA

Office: 5406 Union Ave., South Tacoma, Wash. Mine near Quatsino, Reported sold, 1917. Fully described Vol. XII.

SMITH SMELTING CORPORATION, LTD.

BRITISH COLUMBIA

Address: F. A. Sieberling, Goodrich Tire & Rubber Co., Akron, Ohio. Mining office: Col. W. L. Stevenson, mgr.; H. W. Aldrich, gen. supt., Smith, Vancouver Island, B. C.

Property: 1,247 acres, including 13 claims, crown granted, 342 acres, a smelter site and 800 acres timber lands. Owns the Ladysmith r, and mineral lands on Mt. Sicker, purchased from the Tyee Copper Dec., 1916, for \$275,000.

ie Tyee mine, on Mt. Sicker, in the Somenos district, 11 miles N. W. ncans, and about 80 miles from Victoria, yielded only 1,200 tons of 7, and has been idle since. The orebody was rich, but shallow, and gh it was explored thoroughly, nothing of value was found:

Smelter: known as the Ladysmith works, is well located, on a 45-acre i Oyster harbor, and treated custom ores from as far N. as Alaska far S. as Mexico. The smelter was remodeled and practically rebuilt 10. There is a 40x210' wharf, having an electric hoist, connected, by vated incline trestle, with the smelter bins, which are of 5,400 tons y. The works are terraced throughout, permitting handling of ma- y gravity, and have a capacity of 500 tons daily.

ie furnace building has 42x120" and 48x160" Allis-Chalmers blast fur- of 200 and 300 tons daily capacity, respectively.

Smelter production was 3,604,474 lbs. copper in 1903; 5,045,000 lbs. in 1903,398 lbs. copper, 103,474 oz. silver and 5,952 oz. gold in 1905; 1 lbs. copper in 1908; 2,148,058 lbs. copper in 1909; 45,758 tons of ore. g 3,392,901 lbs. copper, 41,128 oz. silver and 10,041 oz. gold in 1910. g 42,030 tons of custom ore were treated. Closed down, 1911.

ie 250-ton mill was remodeled and flotation installed, 1917.

QUETI ISLAND MINING CO., LTD. BRITISH COLUMBIA

ancouver, B. C.

Officers: R. A. Mather, pres.; A. D. Tennant, v. p.; John D. Mather, co. E. Winter, treas.; Percy Williams, mgr., at last accounts.

g 1910. Cap., \$500,000; shares 25c par.

Property: 3 claims, 150 acres, on Lasqueti Island,* on the S. W. end of Island, on the Gulf of Georgia, 25 miles from Vancouver.

Developments by a tunnel, on a 20' vein known as St. Joseph, having 4

paystreaks, of 6 to 24" width, said to carry ore averaging 10% copper and \$20 gold per ton.

Closed down.

LITTLE BILLY OPERATING CO. BRITISH COLUMBIA

Van Anda, Texada Island, B. C. J. C. Taylor, supt.

Property: the Little Billy mine is said to have an orebody of 8' estimated average width, developed by a 260' shaft, with a 35' headgear.

Equipment: includes an 80 h. p. boiler, single-drum hoist, and a 5-drill air compressor. There is a crude concentrating mill, with sorting tables, and a 500' trestle with double-track gravity tram to a shipping bunker on tidewater. The Granby Co. did some prospecting on the property in 1914. Idle since.

MARBLE BAY MINE BRITISH COLUMBIA

Owned by Tacoma Steel Co., which see.

MINNEAPOLIS & TEXADA COPPERITE CO., LTD. BRITISH COLUMBIA

Offices: 1311 Washington Ave., N., Minneapolis, Minn., and Vananda, Texada Island, B. C.

Officers: C. F. Stremel, pres.; E. E. Rorem, 1st v. p.; John Kraft, 2nd v. p.; A. E. Barker, sec.; Wm. Bofferding, treas.; above, with Eden Schmidt, Hilmer Olson, B. F. Laffin and W. H. Curtis, directors.

Inc. in Ariz. Cap., \$1,000,000; shares \$1 par; 400,000 issued.

Property: 5 claims, 240 acres, on Texada Island, 47 miles N. W. of Vancouver, said to show 2 main veins, the Swan and the Paxton, containing copper ore with gold and silver. Paxton vein is said to be traceable 1,500' on surface. Three of properties held under lease have been purchased and paid for. Claims show good ore in 25 test shafts.

Development: 200' shaft, with 300' of drifting; also a number of test pits. On Alladin claims, shaft is being sunk to reach contact of 2 veins at 500'. Considerable mill ore extracted in this work, reported to average 4% copper, 2% lead, and \$5 per ton in gold and silver.

MOUNT SICKER & B. C. DEV. CO., LTD. BRITISH COLUMBIA

Idle. Office: 30 George Square, Glasgow, Scotland. Fred I. Smith chairman; John D. Steel, sec.

Inc. Oct. 20, 1898, in Great Britain. Cap., £125,000; shares £1 par. Lands are on Mt. Sicker, Vancouver Island, B. C.

NORSEMEN EXPLORATION CO. BRITISH COLUMBIA

Office: 1048 McKnight Bldg., Minneapolis, Minn. **Mine office:** Alladin Camp, Vananda, Texada Island, B. C.

Officers: E. E. Rorem, pres.; W. H. Curtis, v. p.; C. A. McKennie, sec.; Allen T. Rorem, treas.; B. F. Laffin, A. E. Barker and Eden Schmidt, directors; Robt. Forbes, cons. engr.; Jas. Forbes Sr., supt.

Inc. in Arizona. Cap., \$500,000; shares \$1 par; issued, \$375,000.

Property: 23 claims, 1,200 acres, 730 patented, on Texada Island, B. C. is heavily timbered and shows contact deposits between limestone, granite and diorite. Copper occurs as chalcopyrite and bornite, with gold and silver values. The Capsheaf claim has an 80' vertical shaft, said to show 10' of ore, carrying 14% copper and \$11 in gold in samples reported as taken from surface down to 59'. Ore expected by manager to average 15% copper and \$6 gold and silver. Test shafts along the vein for several hundred feet show a continuity of the vein, and crosscutting is said to have proved it to be about 25' wide. The Cameron claim, adjoining the Texada iron mine, owned by the Puget Sound Iron Co.—on which extensive development is now in progress, has a capping of magnetic iron with large lenses of chalcopyrite. The vein is reported to be over 100' wide.

cut on the face of the Iron mine is 8 to 10' from the line of Cameron claim, which rises to a height of about 170'. The Cameron claim to average 4% copper. The Aladdin claim carried silver-lead. It has a 212' vertical shaft with about 250' of crosscutting. The De Ore, and Blizzard claims are leased to the Minneapolis & Copperite Co., Ltd., which is now developing. The company's Hazel Ruth claims lie close to and are on the same vein as the Iron mine.

Company's property runs about 4 miles along the various veins, connected to tide water transportation and about 20 miles from a smelter. In the past year considerable prospecting has been carried on proving new and promising veins. Management is conservative and the property considered promising.

MIGAN MINES, LTD.

BRITISH COLUMBIA

Address: care H. H. Johnson, Victoria, B. C.

Property: 8 claims at 5,300' elevation, 15 miles inland from the mouth of the Fraser River, on Bedwell Sound, Vancouver Island. Considerable development work was contemplated on this property, but all work was suspended shortly after the outbreak of the European war.

Claims are on Big Interior mountain and show gossan outcrops under chalcopyrite-magnetite ore.

SINO COPPER CO.

BRITISH COLUMBIA

Address: Succeeded 1916 by Coast Copper Co., which see.

MA STEEL CO.

BRITISH COLUMBIA & WASHINGTON

Address: Provident Bldg., Tacoma, Wash. Mine offices: Van Anda Island, and Darrington, Snohomish Co., Wash.

Officers: Joshua Pierce, pres.; E. M. Shelton, v. p.; A. Y. Eastman, second gen. mgr.; Alex Grant, supt.

Capital: with cap. \$5,000,000, reduced later to \$3,000,000. Paid a \$35,000 dividend April 2, 1907.

Property: a mine at Darrington carrying gold-copper ore, idle for several years, 4,000 acres of coal-bearing properties in Washington, 208 acres of other lands on Redonda Island, B. C., and the Marble Bay mine, all of which are crown-granted, near Marble Bay harbor, at the northern end of Vancouver Island.

The Marble Bay mine, about one-fourth mile from the Cornell and Queen mines, has ore of similar nature occurring as lenticular masses carrying argentiferous chalcopyrite, with bornite, in a garnetiferous matrix near a contact between diorite and limestone. The mine is developed by a 1,350' three-compartment shaft, showing, on the lower levels, a vein of 18' width, with copper values unchanged and gold values gaining with depth. Recent development work mainly between the 1,200' and 1,300'

Development: work in 1916 was mainly by diamond drill, boring between the 3rd and 15th levels at 1,160' and 1,360' vertical depth, respectively. Descriptions of mine workings and geology will be found in Annual Report of the Minister of Mines of British Columbia for year 1916, pp. 351-3.

Equipment: includes steam and electric power, with 5 Lidgerwood steam drills, 5 Ingersoll-Rand, small Canadian-Rand and 10-drill Allis-Chalmers air compressors. Buildings include a power house, machine shop and there is a wharf, on Marble Bay, having large ore bunkers, connected with the mine by a ground tram. In connection with the mine there is a limestone quarry and 4 kilns, with daily capacity of 300 bbls. of lime. Production: shipped mainly to the Tacoma smelter, was 6,237 tons of copper and 293,269 lbs. fine copper in 1907; 11,438 tons of ore, estimated to

have yielded 1,250,000 lbs. fine copper, in 1909; 22,500 tons averaging 3% copper in 1911; 17,870 tons in 1912; 12,600 tons in 1913, containing 2,216 oz. gold; 22,400 oz. silver; 1,031,009 lbs. copper.

Mine considered valuable and management good.

TYEE COPPER CO., LTD.

BRITISH COLUMBIA

Smelter and assets sold in Dec., 1916, to the Ladysmith Smelting Corporation, Ltd., which see.

Office: 80 Bishopsgate St., London, E. C.

Officers: T. H. Wilson (chairman, with J. A. D. Hancke, H. Von Berg, directors. W. Gardner, sec.

Inc. April 4, 1900, in Great Britain. Cap., £180,000, increased 1901 from £120,000; shares £1 par; fully issued and paid.

Accounts: for year ending April 30, 1916, show a debit balance of £124,098; cash, £523; debtors, £18,519; creditors, £1,985. Reserves for royalties owing, £17,333; mortgage on property, £20,000.

Dividends: 10%, or 2 shillings in 1904; 10% in 1905; 5% in 1906; 7½% in 1907; none since.

VAN ANDA COPPER & GOLD MINES CO., LTD.

B. C.

Inactive. H. W. Treat, gen. mgr., and L. Goodacre, trustees; Jas Raper, agt., Van Anda, B. C. Company is presumably still alive, but not operating.

Property: 20 claims, crown granted, 840 acres, including the Cooper Queen and formerly the Cornell mines has been bonded from time to time to various operators who have held it for short periods. Property was under option to the Granby Cons. M. & S. Co., Ltd., in 1914, but option not exercised.

The Cornell mine has lenses of rich ore, mainly hornite, with some chalcopyrite along a diorite limestone contact. The deposit has one main ore-shoot, 150' long and 30' wide and two lesser shoots. No commercial ore has been found below the 360' level, though extensive drifting was done on the 460' level. The Copper Queen ores are similar in character and occurrence. See Texada Id., B. C., by R. G. McConnell, Geol. Survey Canada Memoir 58, 1914, pp. 56-64.

The Copper Queen shaft is 600' deep with a winze 240' deep on the 360' level.

WESTERN MINING & DEVELOPMENT CO. BRITISH COLUMBIA

An organization of Fred J. Rowland's of Spokane, Wash.

Inc. July, 1915, to take over the Yreka group, Quatsino Sound, Vancouver Is., B. C., but succumbed to infantile paralysis.

YALE DISTRICT

ARGO MINING & TUNNEL CO., LTD.

BRITISH COLUMBIA

Office and mine: Greenwood, Yale district, B. C.

Officers: Ole Lofstad, pres. and gen. mgr.; A. S. Black, sec. and preceding officers, John Williamson, Jerome McConnell and Oscar Bowman, directors.

Inc. June 10, 1909, in British Columbia. Cap., \$125,000; shares \$5 par.

Lands: the Argo Mine, near the British Columbia smelter, developed by 1,150' tunnel, at a vertical depth of 500', with portal about 300' from track of the Canadian P. R. R. A vein of milling quartz, 18' wide, was discovered in face of tunnel, a 4' body of concentrating ore, on the footwall, is under development and expected to make shipment by early summer. Discussed at last accounts.

BRITISH COLUMBIA

MANITOBA.

the Flin-Flon Lake district attracted much attention during 1916 and because of the large size and richness of the copper deposits found.

It is situated 650 miles N. W. of Winnipeg and 90 miles N. W. of Pas, northern Manitoba, so that transportation is expensive. Several known American exploration companies are developing properties, but as yet known regarding the results of their work.

According to J. W. Callinan at the Pas, ore worth \$45,000,000 has been found in two properties by drilling. The rocks are greenstones, conglomerates, etc., intruded by quartz-porphry dikes and masses. The ores are magnetites and carry copper, gold and silver, with some zinc.

JMET-CORBIN MINES CO.**MANITOBA**

Main office: 35 Congress St., Boston, Mass. **Mine office:** Gold Lake, Manitoba, Can. Wm. Bracken, pres.; J. K. Heath, v. p.; Erik Huneker, gen. mgr.; preceding officers are the directors.

Reorganized Jan. 11, 1915, in Me., as a reorganization of the Calumet-Corbin Co. **Cap.**, \$2,500,000; shares \$1 par. Paul Revere Trust Co., Boston, Mass. Shares in the old Calumet-Corbin Co. are exchangeable on certain terms for those of the new company. Listed on Boston curb.

Company has a lease on the Gold Seal and Gold Pan claims, 102 acres in the Gold Lake mining district, Manitoba, Can. Free gold occurs in a vein of quartz, in porphyry and schist. Samples evidently not representative of the quartz as a whole, are reported to show from \$600 to \$4,880 per ton with no silver contents. Property is a prospect on which development work is said to have begun 1916.

It appears that the Gold Lake lease covers a swamp in which quartz is not abundant. Such quartz exposures are known at a great many places in northern Canada, but so far as known none of them are now commercially developed.

The New Era mine near Idaho Springs, Colo., taken under lease for \$10,000, was lost through default of semi-annual payments of \$7,500 in 1914, and local debts of \$10,000. The Montana holdings were previously abandoned.

It appears that the company has no real property and its stock represents nothing but paper whose only value is that it is saleable at about 5c per share to Curb speculators. The sponsors for the stock are apparently interested in stock dealing, not mining, and caveat emptor applies to all buyers.

UNION GOLD MINING CO.**MANITOBA**

(Successor to Calumet-Corbin Co.) **Office:** 802 Pioneer Bldg., St. Paul, Minn. **Officers:** Bernard Noon, pres.; J. P. Fetsch, v. p.-treas.; Jas. E. Liebe, gen. mgr.; N. L. Watson and George Warner, directors.

Reorganized Oct. 5, 1915, in Ariz. **Cap.**, \$2,500,000; outstanding Dec., 1915, 1,000,000 shares \$1 par. Registrar & Transfer Co., New York, registrar and transfer agent. Cash on hand, Nov. 8, 1915, \$5,500. Listed on New York Curb as a prospect. Outstanding shares, 1,500,000, used in the purchase of property. Of this amount 1,000,000 shares were set aside to be given to the stockholders of the Calumet-Corbin Mines Co., of Maine, in exchange for their shares in that company, received by them in exchange for stock of the Calumet-Corbin Mining Co., of Ariz., when the reorganization was completed in early 1915. Reason for the gift of this stock to the stockholders of the Calumet-Corbin Mines Co. is stated by those giving it to be because

of responsibility for the failure of the old company, and because their efforts to make good, and because their efforts to

up., \$1,000,000; shares \$1 par; non-assessable; 500,000 issued. "An extraordinary 'speculative investment' is offered to the public for a limited period of 6% preferred shares at par, to be redeemed later at 15% above the wording of a recent circular.

Property: 6 patented claims, 200 acres, on Star Lake, eastern Manitoba, show a quartz vein in a shear zone of Keewatin conglomerate near a contact between granite and schist. Vein minerals include quartz, gold-bearing pyrite and arsenopyrite. Samplers cut for 10 to 15' across the vein carry \$3.50 to \$5.80 per ton. The Penniac company is reported to have spent \$100,000 on development work, consisting solely of test pits and shafts, said to disclose two lodes. The main shear zone is said to be composed of, with two main and several lesser parallel quartz veins with strike 45° E. and dip N. W., all showing gold values in payable quantities. Property reported on by Prof. R. C. Wallace, University of Manitoba; W. H. Frey, W. J. Tretheway of Toronto, and J. Tait Milliken of Colorado.

Development: by 95' shaft and 150' tunnel. Reserves estimated at 400 tons.

Equipment: includes a 5-ton mill, office and several buildings. Management plans extensive development and banks on platinum content of the ore to make large profits.

NEW BRUNSWICK.

INTERNATIONAL CANADIAN COPPER CORPORATION, LTD.

Office: 14 St. John St., Montreal, Quebec, Canada.

Officers: Howard R. Richey, pres.; E. A. Baynes, v. p.; with Chas. E. A. M. Vici and E. A. Reilly, directors; A. H. Thomson, treas.; J. F. Dow, sec.

Organization: Dec. 28, 1915, in Ottawa. **Cap.,** \$990,000; shares \$10 par; 30,000 shares deposited in escrow with Security Trust & Registrar Co., New York, as agent and registrar, for the benefit of the company. Listed on New York Exchange.

Statement of March 1, 1916, shows assets of \$990,000 mining rights in International Co., inclusive of buildings and equipment. Free of debt.

Property: covers 1 sq. mile, including the Vernon copper mine on the shore of the Bay of Fundy, St. John Co., New Brunswick, reached by the Intercolonial and C. P. R. R. to Sussex and thence by driving 32 miles to Goose Creek. Can also be reached from St. John, N. B., by boat, 15 miles E. of St. John and 1¼ miles from Goose Creek Harbor. Ores on a steep mountain rising 550' above the bay are said to show copper. Country rock is diorite, schists and slates, crossed by diabase.

Development: 7 tunnels, from 50' to 170' long, said to show a quartz-vein, containing bornite and chalcopyrite, 45' long where exposed in tunnel, 6'-10' wide, and assaying 13.4% copper; tunnel No. 4, 45' E. of No. 1, is said to show several quartz veins, "ramifications of the vein in the above 3 tunnels." The other 3 tunnels are inaccessible at present.

Equipment: includes a shipping dock, blacksmith shop and quarters for men, but little mining equipment.

Company: was planning to renew development work in 1916 with the object of attaining "an average daily output of 100 tons of ore." a feat which has not yet been accomplished, we assume. No later information.

INTERNATIONAL COLONIAL COPPER CO.

NEW BRUNSWICK

Office: P. O. Box 294, Pawtucket, R. I. **Mine office:** Dorchester, West-
 10th Co., N. B.

Officers: Darius L. Goff, pres.; T. J. Edwards, sec.; F. J. Powers, treas. Inc. 1899 in Arizona. **Cap.**, decreased, 1906, to \$2,000,000, shares \$5 par, in preferred and common shares, latter with restricted voting privileges.

Property: 250 acres freehold and 1,100 acres held by leasehold from the Crown, show a blanket vein carrying carbonate and sulphide ores, claimed to average 3 to 4% copper. Has shafts of 40', 75' and 150', also a 1,500' drainage tunnel, with about 8,000' of underground workings.

Works include a 200-ton concentrator, leaching plant and electrolytic refinery. The electrolytic plant has 550 lead cathodes and 550 lead anodes, 22x33" each, giving a plating surface of 5,000 sq. ft., for the deposition of electrolytic copper. Plant also includes tanks for precipitation of metal on scrap iron. Reduction plant proved unsatisfactory after making about 50 tons fine copper.

In 1916 the property was leased to the National Chemical Co. (F. B. Homer, treas.), 248 Mt. Vernon St., West Newton, Mass. Lessee is erecting a flotation plant under direction of W. E. Greenawalt, of Denver. The mine is reported to be in better condition than for years and was producing 50 tons of 3% ore per day in July, 1917. Lessee supplied money needed and gives half the profits to the lessor.

NOVA SCOTIA.

BRADFORD MINES, LTD.

NOVA SCOTIA

Halifax, Nova Scotia.

Officers: E. F. Heffler, pres.; A. E. Abrams, v. p.; W. C. Milner, sec-treas.; with Paul Sigel, Jr., 37 Wall St., New York, and G. J. Partington, Halifax, directors.

Inc. Oct. 3, 1914, in Nova Scotia. **Cap.**, \$500,000; shares \$1 par; outstanding, 440,000 shares. Transfer office and registrar, Security Reg. & Transfer Co., New York. Listed on New York Curb.

Property: at Sheet Harbor and Tangier, Nova Scotia, contains ore with gold and silver values.

CAPE BRETON COPPER CO., LTD.

NOVA SCOTIA

Mine near Coxheath, Cape Breton Co., N. S.

Cap., \$2,000,000.

Property: the old Coxheath mine and adjoining lands, 10 miles from Sidney, Cape Breton, shows several cupriferous veins, of which the principal, averaging 10' width, traverses felsite and diorite, carrying argentiferous and auriferous chalcopryrite, in a silicious gangue, ore averaging about 4.5% copper. Deepest shaft, 420'. Idle many years.

CHETICAMP COPPER CO., LTD.

NOVA SCOTIA

Idle. Office: 37 Sackville St., Halifax, N. S. **Mine office:** Cheticamp, Inverness Co., N. S.

Officers: Edward Staris, pres.; John W. Regan, sec.-treas.; Milton V. Grandin, supt., at last accounts.

Inc. May, 1904, in Nova Scotia. **Cap.**, \$3,000,000; shares \$1 par, as a merger of the Eastern National Copper Co., Ltd., and 3 other corporations.

Property: 950 acres, freehold, also a 200-acre mill and smelter site, 100 acres timber lands, and 200 acres water frontage, with a government license for exploring and locating mines on 50 sq. miles.

Property shows a mineralized zone, in micaceous schist, of 350' width, traceable 1½ miles, carrying 4 orebodies, of which 3 are developed by a 200' shaft and by tunnels of 25', 35' and 115', claimed by company to show 250 tons of exclusively sulphide ore, averaging 2.5 to 3.5% copper, 18% lead, .02 oz. silver and \$2 to \$30 gold per ton. Nearest railroad is 38 miles, but

is 5 to 6 miles only from tidewater. Property considered promising, estimates of tonnage and values are excessive.

UNION MINING CO.**NOVA SCOTIA**

Tangier, Halifax Co.; N. S. W. J. Prinsk, mgr. Company owns a gold mine at Tangier. Production, 1914, amounted to 419 tons ore, yielding 57 lbs. gold.

DENVILLE CONSOLIDATED MINING CO., LTD.**NOVA SCOTIA**

Agency: 185 Summer St., Boston, Mass. Mine office: Goldenville, Cumberland Co., N. S., Can.

Officers: D. E. Makepeace, pres.; D. S. Howard, v. p.; E. B. Estes, sec.; Floyd, treas.; foregoing, with A. C. Post, J. A. Sherman, W. E. Brem-G. F. Rooke, G. A. Bridges and H. N. Wright, directors.

inc. June 16, 1916, in Nova Scotia, as a reorganization of the Golden-Mining Co., Ltd. Cap., \$2,400,000; shares \$1 par; 2,000,000 outstanding. Assets authorized, \$60,000; \$32,000 outstanding.

Property: 501 acres on St. Mary's river, Goldenville, N. S., said to show w quartz veins in quartzite, with E.-W. course. Pay ore occurs both in lumps and streaks. Gold is coarse.

Development: by vertical and incline shafts to 750' depth. Workings 5,200'.

Equipment: 50 h. p. electric hoist, 1,000 cu. ft. compressor, turbo-compressor, 40 stamps (20 dropping) using amalgamation. Seems a promising mine but results are withheld.

Production: 41,854 tons to 1917. No yield given, but recovery is 90%.

DENVILLE MINING CO., LTD.**NOVA SCOTIA**

Reorganized in 1916 as the Goldenville Consolidated Mining Co., Ltd., same as above.

AT BRAS D'OR MINING CO.**NOVA SCOTIA**

at Ladysmith, Victoria Co., N. S. Mine office: Middle River, Victoria Co., N. S.

D. J. Patriquin, mgr. Operates a gold mine. Last production reported was 775 tons ore, yielding 262 oz. gold.

AT COPPER MINING CO., LTD.**NOVA SCOTIA**

at Ladysmith. Office: care Dr. H. Mackay, New Glasgow, N. S. Mine office: Ladysmith, N. S. A. G. Baillie, gen. agt.

inc. Jan., 1908. Cap., \$2,500,000; shares \$1 par.

Property: 6,400 acres, on Polson lake, said to show a vein 5' thick, which extends a mile and carrying auriferous and argentiferous copper ore. Company has a 103' shaft with 554' of workings.

J BROOK MINING CO., LTD.**NOVA SCOTIA**

at Ladysmith. Office: 1 Leys Ave., Letchworth, Herts, Eng. Mine office: Montague, N. S.

E. Romilly Smith, mgr.

Operating a gold property and 10-stamp mill with cyanide unit in Ladysmith district, N. S.

Production: for year ending Sept. 30, 1914, was 118 tons of ore, which yielded 1,400 oz. gold.

Recent returns.

AT TOMMY BURNS GOLD MINES, LTD.**NOVA SCOTIA**

at Ladysmith and operated by Tommy Burns Gold Mining Co., which succeeded the former. Promotion of Pope and Cheppu, who failed, 1917.

Property: 134 acres, ½ mile from Brookfield, the nearest R. R. station, said to show a fissure vein, 2½-3½' wide, running E.-W., with dip 30°, and which is exposed at surface for 900'.

Development: by 108' shaft, sunk on the vein and drifts on the 50' and 100' levels.

Equipment: includes a 5-stamp mill, boiler, hoist and pump. A pleasing prospect.

According to T. A. Rickard, who made a report on the gold deposits of Nova Scotia for the provincial government, none of the Nova Scotia gold deposits can be relied upon to carry their values to any great depth.

WENTWORTH COPPER CO., LTD.

NOVA SCOTIA

Idle. **Address:** Wentworth, Cumberland Co., N. S.

Inc. 1907, to acquire lands, bought at foreclosure sale, of the Cumberland Copper Co. Company apparently holds property for speculation purposes as no work has been done since purchase.

WEST GORE ANTIMONY CO.

NOVA SCOTIA

Address: N. O. Carpenter, mgr., West Gore, N. S.

Property: the Rawdon mine, opened 1884, worked intermittently until Oct., 1914, and regularly since then. Company is closely allied with the St. Helen's Smelting Co., Manchester, England, which refines the product.

The main deposit is up to 4' wide and has been opened for 200' on one level. The ore consists of stibnite and native antimony, associated with pyrite, quartz and calcite. Country rock is a soft slate.

Development: by shafts, the main one, 502' deep, with a 332' winze below this level.

Production: about 1,200 tons of ore monthly, yielding 110 tons of concentrates containing 38 to 45% antimony.

ONTARIO

This section includes the Ontario mining companies of Algoma, Massey and other districts. Cobalt, Porcupine and Sudbury districts are grouped in separate sections immediately following this one.

ALEXO MINES, LTD.

ONTARIO

Address: Porquois Junction, Ontario.

Officers: Maj. E. F. Pullen, pres.; G. F. Hanning, v. p.; H. N. Roberts, sec.-treas., with Capt. Frank Pullen, Alex. Kelso, Maj. C. W. Allen, directors. Wm. Anderson, mgr.

Inc. Jan. 3, 1913, in Ontario. **Cap.**, \$40,000; shares \$1 par; 30,005 shares issued.

Property: the Alexo mine, in Dundonald twp., Timiskaming district, discovered in 1908 and active work starting in 1912. The ore, a nickeliferous pyrrhotite, averages 4% nickel and is shipped to the Mond Nickel Company's smelter.

Development: by 200' shaft, crosscuts and drifts.

Production begun in 1913, amounted to 8,288 tons in 1916, totaling to date, 34,650 tons. About 20 men employed.

ALGOMA CUSTOM SMELTING & REFINING CO., LTD. ONTARIO

Idle several years. **Works office:** Thessalon, Algoma, Ont. See Vol.

• XI. Copper Handbook.

ALGOMA STEEL CORPORATION

ONTARIO

Subsidiary of the Lake Superior Corporation.

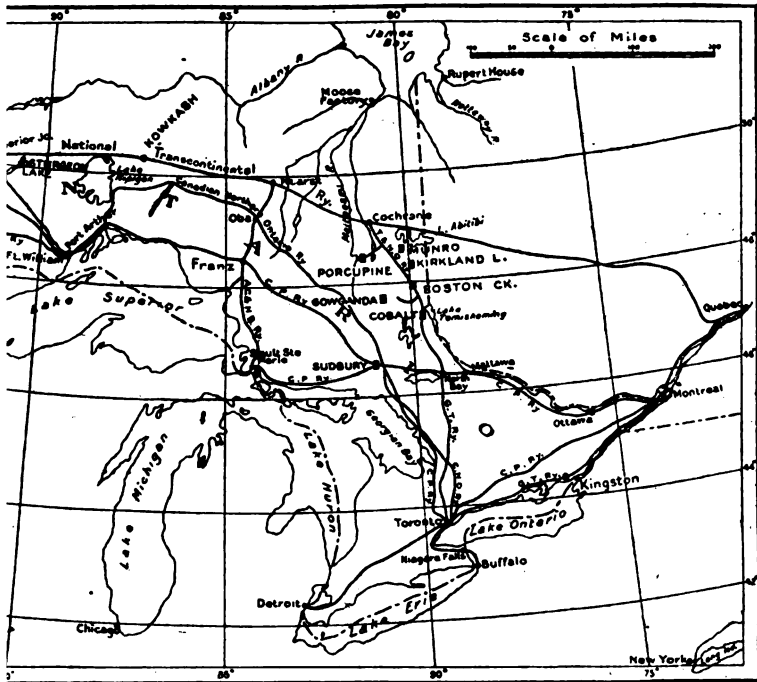

Gen. office: Sault Ste. Marie, Ont. **Secretary's office:** Traders' Bank Bldg., Toronto, Ont. **J. Frater Taylor**, pres. and gen. mgr.; **Chas. E. Duncan**, gen. supt.

Property: the Helen and Magnie iron mines, old producers, at Michipicoten, Ont., with blast furnaces at Sault Ste. Marie. The Helen, opened in 1899 and developed to vertical depth of 641', is a steady producer of iron ore which occurs as goethite with some hematite.

The Magnie, opened up in 1911, is developed by a 4-compartment shaft depth of 250', with main levels at 125' and 205'. The orebody, mainly

is said to be 50' wide over a distance of 1,500' and when roasted is a fair Bessemer ore.

Production: at the Magpie, 208,163 gross tons in 1916, with total production 1913 of 424,816 tons; at the Helen, 85,241 gross tons iron ore and gross tons pyrites in 1916, with total shipments since 1900 amounting 19,971 gross tons iron ore and 40,690 gross tons pyrites. The Helen grade sulphur ore is mixed with Magpie raw ore and roasted, product a very desirable Bessemer ore, which runs 52% iron and 0.044 phosphorus. - Employs about 250 men when working to capacity.

MAP SHOWING MINING DISTRICTS OF ONTARIO

ALLIE ISLAND COPPER MINE.

Location: 225 Water St., Kenora, Ont., Can. Owned by F. W. Moore et al.
Property: 4 claims, the S 777, K 312, K 314 and K 315, 156.64 acres in all, east end of Allie Island, about 15 miles from Kenora.

Geology: claims cover an outcrop of serpentine, or chlorite-schist, with small pellets or crystals of native copper. Country rock is dolomitic traps and greenstones. Ore body claimed to be 1/2 mile long with maximum width of 700'.

Development: is surficial only, 40' and 20' pit holes, showing ore in outcrop. Ore said to average 1 1/2% copper. Owners plan development work.

WILLCOX-PARRY SOUND COPPER CO.

Location: Parry Sound, Parry Sound district, Ont. Inc. June, 1908, in Ontario.
Capital: \$1,000,000; shares \$1 par.

Property: 200 acres, in the vicinity of the Willcox and McGowan

mines. Idle some years, but owners are well-to-do and expect to reopen property some day. Is a close corporation.

BRANT MINES, LTD.**ONTARIO**

Address: W. M. Macdonald, mgr., Gowganda, Ontario.

Officers: J. C. Cohoe, pres.; E. L. Goold, v. p.; O. Hall, sec.-treas. with F. L. Mapes, W. H. Whittaker, C. W. Leeming and C. H. Waterous, directors.

Inc. 1917, in Ontario. Cap., \$1,500,000; shares \$1 par; 1,000,000 issued.

Property: 87 acres, formerly owned by the Mapes-Johnston Silver Mines Co., in Meickle township, in Silver Lake district, and near the Miller Lake-O'Brien mine.

Development: by new 350' shaft and other workings. On 320' level ore assaying 2,000 oz. silver per ton was reported as being mined. A car-load of rich ore was to be shipped as soon as possible.

Equipment: includes hoist, compressor, machine-drills, and accessories. Shares quoted at 57c early in Nov., 1917.

BRUCE MINES, LTD.**ONTARIO**

Dead. Mines sold to Mond Nickel Co. in 1915.

CALUMET & ALGOMA MINING CO.**ONTARIO**

Secretary's address: Lucas Hermann, 109 Fifth St., Calumet, Mich. Mine near Massey, Algoma, Ont.

Officers: Christian Schenck, pres.; Jos. Vertin, v. p.; Lucas Hermann, treas.

Inc. 1905. Cap., \$1,000,000; shares \$5 par, assessable; issued, \$100,000, paid in, \$1.75. Was a reconstruction of the Copper Queen Mining Co. Ltd. At last accounts had no debts, with \$600 in the treasury.

Property: 957 acres, freehold, shows a 45' fissure vein, traceable about 3 miles, carrying medium-grade chalcoppyrite ore, more or less auriferous, with occasional bornite and malachite, giving assays of 5 to 25% copper. Has 2 shafts, No. 1 being 138' deep, and 2 tunnels, longest 195'. Lands are heavily timbered and well watered. Idle several years.

CANADIAN EXPLORATION CO.**ONTARIO**

Offices: 28 Victoria Sq., Montreal, and Naughton, Ont.

Officers: Geo. E. Drummond, managing director; R. W. Brigstocke, supt.

Property: Long Lake gold mine, near Naughton, Ont. Orebody consists of an elliptical mass of quartzite, carrying considerable mispickel and pyrite with gold values.

Development: 225' shaft with levels at 80 and 180', and development below the 180' by means of a winze.

Equipment: 20-stamp mill, daily capacity 120 tons, cyanide plant, and compressor and steam-power. Employs about 100 men.

Production: 5,800 oz. gold in 1913; has been operating since, but production figures not available. Present method of treatment said to have increased profits.

CANADIAN SMELTING & REFINING CO.**ONTARIO**

Office: Orillia, Ont.

Officers: J. B. Tudhope, pres.; Geo. Hayward, treas.; W. L. Vail, sec. M. B. Scott, metallurgist; C. Doolittle, supt.

Inc. Oct., 1914, in Canada, and took over the assets of the Canada Ref. & Sm. Co.

Works at Orillia have been partially rebuilt and an additional blast furnace added. Capacity of the cobalt refining department has been increased to 2 tons of oxide per day. Products shipped are refined silver and arsenic, and the oxides of cobalt and nickel. Company employs 25 men.

LAKE SILVER MINES, LTD.

ONTARIO

operated the Gould lease on Cart Lake during 1914 with a production 5,000 oz. silver. Production for 1915 not available. Ore came from extension of the Seneca-Superior vein.

Development: in 1914 amounted to 1,003'. No. 2 shaft is 195' deep with 2 workings on the 185' level, at last accounts.

KEY COPPER CO., LTD.

ONTARIO

Office: 5-7-9 Melinda St., Toronto, Ont.

Officers: D. M. Robertson, pres.; R. P. Gouch, v. p.; G. Taylor, sec.-gen.; preceding with J. S. King, G. P. McCallum, J. L. Coffee and G. Brown, directors, all of Toronto.

Loc. in Ontario. **Cap.,** \$2,000,000; shares \$1 par, fully paid and non-assessable. No bonds. Security Transfer & Registrar Co., 66 Broadway, New York City, registrar and transfer agent.

Property: 700 acres, of which 400 are held by Crown patent and the balance under Mines Act of Ontario, 28 miles from Thessalon, Ont., on railway and 40 miles east of Sault Ste. Marie.

Geology: Lands show a series of three parallel veins exposed by outcrops, trenches and open cut for 1½ miles, with width of 4' to 12'. Strike about 16° west with dip of 75° to south. Veins are mostly quartz with lenses or lenses of specular iron, iron pyrites and copper minerals.

Development: by a 105' shaft and crosscuts and surface pits.

Promotion: by a firm of New York brokers whose extravagant statements about the property are at variance with the facts given by their consulting engineer.

EMBIA COPPER MINING CO.

ONTARIO

File. **Office:** 510 Chamber of Commerce, Detroit, Mich. Mine near Parry Sound, Ont.

Officers: Dr. A. H. Côte, pres.; Dean S. Fleming, v. p.; S. S. Southerland, sec.; Dr. W. P. Dick, treas.; Alex. Dick, cons. engr.

Cap., \$3,000,000; shares \$1 par, non-assessable. Authorized, 1910, a \$1,000,000 bond issue.

Lands: 200 acres, adjoin the McGowan claim of the Parry South Cop. Co., 1 to 2 miles from Parry Sound.

SOLIDATED COPPER CO. OF PARRY SOUND.

ONTARIO

Office: 705 Palladio Bldg., Duluth, Minn. **Mine office:** Parry Sound, Ont. Sound district, Ont.

Officers: Robt. Forbes, pres.; Robt. Millard, v. p.; J. G. Harris, sec.-gen.; preceding, with A. C. Le Richeux, Frank Cox, E. E. Rorem, Dr. Budd and C. J. Jackes, directors.

Loc. Feb., 1902, in Ontario. **Cap.,** \$5,000,000; shares \$1 par; issued, \$3,100,000. No stock for sale.

Lands: 1,500 acres, patented, carry considerable standing timber, in McDougall, Hagerman and Cowper townships. Part of property formerly was held by Hattie Belle Gold, Copper & Nickel Co. and the former Mica Mining Co.

ores: occur as contact deposits between slate and quartzite, and as lenses, ore being mainly chalcopryrite, with occasional bornite and chalcocite. Ore is mainly low in grade, but with occasional seams of high-grade ore. There are 18 different orebodies, shown by test pits and stripping, of which some are somewhat developed. The fahlbands are said to show a width of more than 1,000', carrying 7 bands of fairly good ore, of 200' estimated average width, between which is low-grade ore, part of which may be amenable to concentration. Ores assay 1.5 to 12% copper, 3 oz. silver, and 1.5 to 2.5 gold per ton.

Development: by 180' vertical shaft, and about 25 pits of 10 to 100' depth. The Spider Lake mine has a shaft house, and steam hoist good for 500', with necessary mine buildings. A considerable orebody has been exposed by trenching.

The Lefex mine, about 220 acres, has shafts of 90' and 40', showing nothing of particular promise. The Lefex has an iron gossan, carrying up to 2% copper and \$2 to \$3 gold per ton. A 600-lb. test shipment, from the 65' level, returned 30% copper, and various samples have shown from 1.5 to 3% nickel, and from nothing to \$20 gold per ton. Property is now under option for development.

The land situated in the township of McDougall, Ont., has been sold to an operating company, the consolidated company retaining a large interest. Shipments of mica are expected to be made in 1917.

CORDOVA MINES, LTD.

ONTARIO

Office: Sun Life Bldg., Toronto, Ont., Canada. **Mine office:** Cordova Mines, Peterboro Co., Ont.

Officers: P. Kirkegaard, pres.; Wm. H. Price, v. p.-treas.; Edw. Willan, sec.; with C. M. Kirkegaard and M. Garvey, directors.

Inc. 1911, in Ontario. **Cap.**, \$500,000; shares \$5; \$50,000 in treasury. Company is operated as a close corporation.

Property: 678 acres, owned in fee simple, in Belmont Twp., Peterboro county. Ore occurs in diorite in veins, said to be from 4'-30' wide and from 50'-400' long, carrying quartz, calcite and iron sulphides.

Development: shafts of 160', 400' and 500' depth, with a total of 6,000' of underground workings.

Equipment: the rock and shaft houses and the mill were wiped out by fire, March, 1917. Buildings for a counter current decantation cyanide plant are being built. Ore is said to be well adapted to that process; two 1,500' compressors, hydro-electric power plant developing 900 h. p., pumps and 1,800' tramway. Power plant was enlarged in spring of 1916. Company has no appreciable ore reserve.

DELORO SMELTING & REFINING CO., LTD.

ONTARIO

Deloro, Ont., Can. Toronto office, C. P. R. Bldg.

Officers: M. J. O'Brien, pres.; Thos. Southworth, v. p.; S. B. Wright, gen. mgr.; S. F. Kirkpatrick, cons. metallurgist; F. A. Bapty, sec.-treas.

Company is the successor, 1917, of the Deloro Mng. & Reduction Co. with same officers and management.

Owens a smelting plant and refinery at Deloro. Output consists of bar silver, arsenic, nickel oxide and metal, cobalt oxide and metal. Also manufactures "stellite," a high-speed cutting metal.

Company aims to finish all products at the Deloro plant. Employs about 250 men.

DOMINION MOLYBDENITE CO.

ONTARIO

Address: Wilberforce, Ont.

Organized by J. J. Gray, W. J. L. MacKay, P. J. Dwyer and Dr. Lowrey.

Property: at Wilberforce, Ont. Reported in August, 1917, that development had exposed a large deposit of molybdenite, for which a mill is being erected.

Officers: Edw. J. Hall, pres.; Chas. Schenk, v. p.; Lucas Hermant.

B. Anderson, treas.; preceding, with Ole Olson, Frank Schroeder, Mitschler, J. S. Pickell and T. H. Pollack, directors.

June, 1903, in Ontario. Cap., \$2,500,000; shares \$12.50 par; \$8 paid & assessable. Total assessments to date, \$2.35 per share; 71,000 issued. Annual meeting, fourth Tuesday in June.

erty: 1,040 acres near Massey, Ont., on which shafts were sunk & developed. In 1910 company extracted small quantities of copper, been idle since then.

NIAN BELT CO., LTD.

ONTARIO

ce: 310 Dominion Express Bldg., Montreal, Canada.

cers: F. H. Hamilton, chairman; with E. Turk, E. T. McCarthy, Cooper, directors.

March, 1914, in Ontario. Cap., £200,000. Company acquired, in 1911, the interests of the Huronian Belt Syndicate, Ltd.; controls the Thompson Gold Mine, Ltd. Also has claims in Northern Ontario near Great Slave Lake.

er Siberian Syndicate, Ltd., of England, has a substantial holding in the company and in a report states that over 100,000 tons of ore has been developed to No. 5 level in its Porcupine property.

ERNATIONAL MOLYBDENITE CO., LTD.

ONTARIO

ress: J. L. Murray, Renfrew, Ont., pres.; G. P. Grant, mgr.

is a mine and 100-ton plant for concentrating molybdenum-bearing ore near Renfrew; also a refinery at Orillia for making molybdenum compounds. Electric furnaces are used.

roduction: in 1916, was 24 tons of molybdenite from 2,350 tons of ore, averaged 1.3% MoS₂.

S ROBERTSON, LTD.

ONTARIO

dress: Montreal, Can.

ine at Galetta, Ont.

owns the Galetta or Kingdon lead mine on Chats Island, in the Otteriver, 5 miles E. of Arnprior, Ont. Mine shows a 10' fissure vein fault in schistose rocks. The ore consists of galena, disseminated in schists and crystal aggregates in crystalline calcite and barite.

veloped: by two shafts, 1,000' apart.

roperty: has a concentrating mill and a small lead smelter blown in 1916, and turning out 15 tons of lead daily. (See W. E. Newland, *Lead Mining & Smelting at Galetta, Ont.*, Trans. A. I. M. E., Oct., 1916.)

ON COPPER MINES, LTD.

ONTARIO

dress: Massey, via Sudbury, Ont.

roperty: the Massey mine, discovered in 1900, was equipped with an open-pit flotation plant, which was unsuitable. Mine acquired from the Massey Station Mining Co. and reopened in 1917, and Callow flotation plant started in July. Daily capacity of mill, 200 tons.

ology: an area of quartzitic greenstone tuff schists, in contact with granite and granite. Ore contains chalcopyrite with pyrite, magnetite and hematite, in white, milky quartz, and occurs in a sheer zone parallel to the schists.

velopment: to 530' depth. At 3 places No. 1 shaft is 76° incline and 100' level, showing step-faulting of surface. Vein changes to one body at depth. Ore is 4' wide, averaging 3½% copper for all levels.

EDWARD MINE

ONTARIO

med by J. S. Dobie and Mary C. Dobie, Thessalon, Ont.

roperty: 1,000 acres, patented, in Rose Township, includes Sec. 14 and 15.

part of 11 and 24. Openings on areas are $\frac{1}{2}$ mile apart. The two properties, King Edward and Canada Verdi, adjoin, and are a mile long. The latter claim shows a 16' vein, said to be traceable 2 miles, in diabase; it has steep southerly dip, and carries ore streaks, one 3' thick showing 3% copper and 2 oz. gold. Examined 1915 by C. G. Bateman and C. Rollins.

Development: by shaft and numerous shallow pits. Was under option to King Edward Mining Co. Idle in 1916.

MAPES-JOHNSTON SILVER MINES CO. ONTARIO

Property acquired late in 1917 by Brant Mines, Ltd., which see.

MASSEY STATION MINING CO., LTD. ONTARIO

Office: 801 Dominion Bank Bldg., Toronto. Mine near Massey, Ont.

Officers: Wallace Nesbitt, pres.; S. H. P. Pell, v. p.; Britton Osler, sec.; preceding, with Robt. Means Thompson and Miss I. M. Innes, directors.

Inc. April 24, 1901, in Ontario. **Cap.,** \$300,000; shares \$100 par; non-assessable; fully issued. Company is said to have expended about \$300,000 on development and equipment.

Property: 840 acres, crown granted, including 480 acres timber land, in Salter township, Sudbury district, about 3 miles from a railway. Lands show schist and quartzite carrying lenticular orebodies in E.-W. zones with 75° dip. There are 3 parallel lenses, 2 developed averaging 10' in width in an ore zone traceable about a mile. Ore carries finely disseminated chalcocite and gray copper ores in quartzose gangue changing in depth to bornite, and that in turn to chalcopyrite, estimated by management to average 3 to 5% copper and \$1 to \$2 gold per ton, with about 50,000 tons in sight.

Geology: described by F. C. Lincoln in Eng. & Min. Jour. of Aug. 4, 1917.

Development: by a 600' shaft and 150' tunnel.

Equipment: includes a 200 h. p. steam and electric plant, with 2 Lidgerwood hoists, a 6-drill compressor and 15 buildings.

The ore not being adapted to wet concentration, owing to excessive sliming, a 50-ton experimental mill was built, using the Elmore vacuum oil flotation process, with Blake and centrifugal crushers and 3 Jenckes and Wilfley tables. Property closed down in 1909 owing to failure of mill to make expenses.

Property was acquired by the Kenyon Copper Mines, Ltd. (which see) at the beginning of 1917. An experimental Callow flotation unit is being tried out, and company contemplates installation of a larger plant, hydro-electric power.

METALS CHEMICAL, LTD. ONTARIO

Address: Welland, Ont. J. H. Charles, mgr.

Operates a plant for the treatment of cobalt ores, near Welland.

Equipment: includes two blast furnaces, two roasting furnaces, one reverberatory furnace, 22 leaching vats, 12 filter-presses, one crystallizing plant, 2 bag-houses. Electric power is used. Company employs 85 men. Output is silver, arsenic, oxides of cobalt and nickel, and various cobalt and nickel salts.

ansfer office: 354 Hudson St., Buffalo, N. Y. Annual meeting, 2nd
ay in January.

roperty: 107 acres at Northbrook, Lennox and Addington counties,
ore in six veins, from a

few feet to 40' wide, in diorite and schist. Developed by a 2-compartment shaft 53' deep. Work retarded owing to lack of working funds. A prospect.

PARRY SOUND COPPER MINING CO., LTD.

ONTARIO

Office: 500 Germania Life Bldg., St. Paul, Minn. Mine office: Parry Sound, Ont.

Officers: Frank Johnson, pres.; Otto Monson, sec.-treas.; preceding, with John Ogren, A. Linderholm and F. X. Benning, directors.

Inc. March 23, 1899, in Ontario. Cap., \$5,000,000; shares \$1 par; issued, \$4,500,000. Liabilities are given at \$45,000 floating indebtedness, and a \$3,000 mortgage at 6% on 200 acres of land. Annual meeting, second Tuesday in August.

Property: 10 claims, 1,000 acres, one-half freehold and one-fifth held subject to a \$3,000 mortgage, on the eastern shore of Georgian bay, property including the McGowan and Wilcox mines.

The Wilcox mine has outcroppings of 4 parallel veins in a width of about a quarter mile, with a 145' shaft on a 20' vein in granite-gneiss, traceable 1,000', carrying auriferous and argentiferous bornite, assaying 2.8 to 11% copper. There also is an opencut, 20x150', 18' deep, showing 3% chalcopryite.

The McGowan mine has shafts of 100', 100' and 250', and a 150' crosscut tunnel, showing bornite and occasional chalcopryite, with quartz gangue. A smelter shipment of 240 tons of selected ore returned 17% copper and \$5 per ton in combined gold and silver values.

Equipment: includes a 10-stamp mill, hoisting machinery and several buildings. Idle, but management plans further work.

Reported to have sold the Wilcox mine, Sept., 1917, for \$30,000.

SUPERIOR COPPER CO., LTD.

ONTARIO

Idle. Office: Sault Ste. Marie; Ont. Mine office: Superior Mine, via Algoma Central Railway, Algoma, Ont.

Officers: G. R. Nicholson, pres.; C. H. L. Jones, v. p.; Emory W. Clark, sec. and treas., with E. L. Fisher, Capt. John Mitchell, Geo. T. Arnold, J. W. Staley, Geo. Kemp and Capt. Benj. Boutell, directors.

Inc. Sept. 13, 1901, in Ontario. Cap., \$3,000,000; originally \$1,500,000, increased, 1903, to \$2,000,000, and again July 29, 1907; shares \$10 par; issued, \$2,402,160. The company was organized with non-assessable stock, but a special act of the provincial parliament of Ontario rendered the stock assessable. Total assessments to Dec. 31, 1910, were \$132,080.52. Security Trust Co., Detroit, registrar and transfer agent. Annual meeting, second Thursday in June.

Property: 11 claims, crown granted, 800 acres, in an unorganized mining district of Algoma, shows granite and chloritic schist carrying fissure veins of 10' and 70' estimated average widths, traceable 7,000'. The quartz veins carry chalcopryite with a little chalcocite, estimated by the management to average 4% copper, 1 oz. silver and 40c gold per ton.

Development: amounting to 1,233', includes a 400' shaft and 348' tunnel with 5 shallow shafts, a 189' tunnel and many surface cuts.

Mine is reported to show 4,000' tons of ore on the dump, with 100,000' blocked out, apparently a serious over-estimate.

Equipment: includes a 150 h. p. steam plant, 12-drill compressor engine, house, changing house, boarding house, machine shop, smithy, office and dwellings, and a 50-ton concentrator.

The mine has been idle since Dec.

THE P. MINE

ONTARIO

Thund...

roperty: 4 claims, freehold, 336 acres, locations K62, K63, K64 and 1/2 miles by rail S. W. of Kashaboiwe station, Canadian Northern rail-

The claims are near Round Lake, near Moss Twp., and show schist, stone and quartz porphyry of Keewatin age, with folded quartzite and quartz porphyry dikes. The ore occurs disseminated in dikes of colored felsite and quartz porphyry. There are several lenses of this pyrite and pyrite ore, stoped for 8 to 25' wide and 70' long, giving assays of 7% copper, 5 to 12 oz. silver and \$1 to \$2 gold per ton.

velopment: by a main incline shaft, dipping 70° N. of 208' depth, about 900' of workings, on 4 levels, about 190' of drifting on each

This work is estimated to show 45,000 tons of ore, of 4 to 6% copper a vein ranging up to 60' width.

quipment: includes a 150 h. p. steam plant, with 50 h. p. hoists, and a small Ingersoll-Sergeant air compressor. See Ontario Bureau of Mines Report, 1911, p. 209.

Shipping 50 tons of ore daily in May, 1917.

le. Office: Oil City, Pa. **Mine office:** Sowerby, Algoma, Ont.

fficers: Dr. E. L. Dickey, pres.; S. F. Amsler, v. p.; D. G. Bailey, sec.; J. Wilkins, treas.; F. W. Bailey, gen mgr.; preceding, with J. W. Russell, W. Coulter, G. W. Freeman and Edw. Schwabenbauer, directors.

nc. Oct. 12, 1906, in Ontario. Cap., \$500,000; shares \$1 par; non-

able; issued, \$270,000. Annual meeting, first Tuesday in November.

unds: 8 claims, 1 fractional, 300 acres, freehold, including the Robin and Tupper mines, 8 miles from Thessalon, and 4 from a railway. The property shows pre-Cambrian rocks, slate, conglomerate and greenstone, and a number of fissure veins, of which 3, under development, are of estimated average width, carrying sulphide ores of about 4.5% copper with small quantities of silver and gold.

velopment: by shafts of 50', 25' and 10'.

quipment: includes a 60 h. p. boiler and 35 h. p. hoist. There are 8 buildings. At last reports the management was planning further development as soon as the financial situation improved, but is apparently adhering to a "watchful waiting" policy.

PIKA GOLD MINES, LTD.

ONTARIO

dress: Isbell, Plant & Co., Standard Bank Bldg., Toronto, Ont.

p., \$1,000,000; shares \$1 par.

roperty: the Ribble claims, near Wasapika Lake, in the Sudbury division. Examined in March, 1917, by G. R. Rogers, who reported that the vein is a contact between andesite and rhyolite porphyry. Ore is quartz with a schistose filling impregnated with iron pyrite, with free gold. So far 1,800' of ore, averaging 49" wide, is reported to have been uncovered; 18 samples in one section gave \$10.40, and 58 in another gave \$8 per ton. Reserves were estimated at 3,077 tons of \$9 ore, or 173 tons if a shaft is sunk 80' and drifts driven.

Sept., 1917, 10 men were employed sinking a shaft.

ALADDIN COBALT, LTD.

ONTARIO

Address: Frank F. Fuller, sec., 638 Salisbury House, London Wall, London, E. C., Eng. **Mine address:** Cobalt, Ont.

Directors: D. H. Herbert, Chairman, Lt. Col. Chas. Gold, Capt. C. R. E. Jorgensen, and S. B. Peech.

Registered April 23, 1913. Acquired all the capital of the Aladdin Cobalt Co., Ltd., registered in Canada with a capitalization of \$500,000, shares \$5 par. Canadian shareholders received 5 fully-paid £1 shares for every two \$5 shares held.

In addition the Canadian company was allotted 58,000 fully-paid shares in order to enable it to acquire 1,160,000 shares, \$1 each, in the Chambers-Ferland Mng. Co., Ltd. Shares have since been issued for the acquisition of remaining outstanding shares of the Chambers-Ferland Co. at the rate of one fully-paid £1 share for every twenty Chambers-Ferland shares. For services rendered in organization of the company, 134,351 shares were allotted to H. B. Sedgwick and C. R. Jorgensen.

Cap., £500,000; shares £1 par; 499,993 shares issued. Stock is to be listed on Toronto Exchange. Balance sheet for fiscal year ending April 30, 1916, shows expenditures, £12,432 and a deficit of £28,758.

Aladdin Cobalt Co., Ltd.

J. A. McVichie, mgr. Balance sheet for fiscal year ending April 30, 1916, shows, **Assets:** £511,598, which includes property £453,608; plant and buildings, £14,419; ore on hand, £18,962; cash, £22,297. **Liabilities:** capital stock, £103,092; sundry creditors, £7,406; reserve, £398,027. Operating profit for the year amounted to £2,618.

Dividends: ½% paid Jan. 24, 1916; 2% paid Feb. 28, 1917.

Property: adjoins the Nipissing at Cobalt, Ont., and is supposed to have the extension of the Nipissing vein system. Faulting has made necessary a thorough system of crosscutting.

Ore: silver, in veins of calcite. Property supposed to have good chances of becoming a large producer, but the output has been comparatively small.

Development: work on the whole has been disappointing. Late in 1915 a 3" vein of high-grade silver ore was cut in a winze from the 350' level and stopping on this vein on the 426' level has yielded some shipping ore. Up to Sept., 1916, the vein has been drifted on for over 42'. The winze is 750' from the shaft and 37' from the Nipissing boundary line. A crosscut was started Oct., 1916, from the main shaft on the 425' level to connect up with No. 55 crosscut north at this level and is expected to cut the Nipissing No. 64 vein about 400' from the west line of the property. Total development from May 1915, to Sept., 1916, amounted to 3,046', of which 2,634' was drifting and crosscutting.

Equipment: new equipment installed includes double-drum hoist, 125-ton crusher, 125-h. p. boiler, ore bins and an ore house with engine.

Production: for fiscal year ending April 30, 1916, amounted to 72,363 oz. Estimated production from May 1, 1916, to Sept. 30, 1916, amounted to 300,000 oz.

tee Co., Ltd., Toronto, Can., transfer agt. and registrar. In 1914 com- being deeply in debt, including about \$90,000 owing to E. A. Benson, r president, a permanent liquidator was appointed. A Protective Com- was formed by Buffalo stockholders to guard their interests. It is said E. A. Benson, former president, and other promoters issued 4,250,000 of stock to themselves, retaining 750,000 in the treasury for financing operty. This promotion stock, it is claimed, was disposed of, and the ry stock remained unsold, with the foregone result of such practice. any now in hands of liquidators.

Reorganization Committee: Because of the financial condition of the ny and appointment of liquidators by Supreme Court of Ontario, the ing consented to act as a committee and prepare the plan for reorganiza- Albert G. Wheeler, Jr., chairman, Wm. E. Stevenson and H. S. Langdon, Valter Laier, sec., 22 William St., New York. Lawyers' Title Insurance st Co., New York, is depository.

Reorganization Plan: The plan issued by the above committee is dated 3, 1914, and provides for the formation under the laws of the Province tario of a new company with \$600,000 capital stock, of a par value of \$1 e. Holders of existing stock consenting to plan shall receive one share v stock for each ten shares of old. The remaining new stock shall red for subscription to stockholders at par, in proportion to their pres- dings. New company shall have the power to issue 6% First Mortgage covering its property to Edwin A. Benson, of Chicago, in payment of ent of \$90,789 held by said Benson against the company.

e proceedings brought by the Protective Committee of Buffalo against mer directors of the Bailey Company in Canada resulted in a default ent being obtained by the liquidators, all of these directors being Amer- nd none of them appearing in the proceedings. The Buffalo committee uested the liquidators to institute like proceedings in the United States, they have up to the present time refused to do.

e judgment obtained by E. A. Benson was purchased by the Profit g Construction Co. of New York, and the Reorganization Committee, by A. G. Wheeler, Jr., is negotiating with the Profit Sharing Con- on Co. as the owner of the judgment, for the purpose of bringing about rganization. The Buffalo Protective Committee has opposed this action is responsible for the delay. The Reorganization Committee is also ting for the purchase of a mill in the event of a reorganization being

Property: 38 acres, adjoining the Penn Canadian mine in Coleman Twp., ng district. Several veins have been opened up, from which shipments een made at different times. Developed by shaft. Lowest workings fifth, or 280' level. In 1913 underground work totaled 1,370'. roperty in charge of caretaker since 1914.

See description under Aladdin Cobalt, Ltd.

COBALT COMET MINES, LTD. **ONTARIO**

Office: 61 Broadway, New York, and Cobalt, Ont. Same officers as Caribou Cobalt Mines Co., which company owns the entire capital stock of Cobalt Comet Mines, Ltd.

Inc. April 16, 1913, in Ont. Cap., \$1,000,000; shares \$5 par; all outstanding. Annual meeting, 2nd Thursday of Feb.

Property: 2 part claims, patented, in Coleman Twp., Temiskaming mining district, formerly known as the Drummond mine.

Ore: silver in fissure veins, occurs in shoots of variable widths. Ore minerals are native silver and cobalt-nickel sulpharsenides.

Development: by two shafts, 100' and 200' deep.

Equipment: includes an air hoist, electric pump, compressed air and electric power. Employs 50 men.

Production: in 1916 amounted to 203,777 oz. silver. Practically all ore in sight has been removed and future earnings depend on further discoveries of ore. Low-grade ore is treated by the Dominion Reduction Co.; high-grade ores are shipped.

COBALT PROVINCIAL **ONTARIO**

Cobalt, Ont. Adjoins Nipissing. Reopened Sept., 1917, by John H.ington, who is sinking a shaft on a vein at S. W. end of tract. Reserves estimated at 148,000 oz. silver.

.....	727,195	501,718	440,000	61,718

) Deficit. During year ending Dec. 31, 1914, paid 33% in dividends
bonuses. Total dividends paid to Oct. 31, 1916, \$8,440,000.

Balance sheet as of Oct. 31, 1916, shows assets, \$5,583,027, which in-
clude mine, \$3,985,700; machinery, plant and buildings, \$228,913; Coniagas
Reduction Co., Ltd., stock, \$249,400; cash in bank and on hand, \$226,472;
transit, \$257,999; accounts receivable, \$22,307; silver account, \$525,362.
Liabilities include surplus, \$1,363,430.

Property: the Coniagas mine, 40 acres on the townsite of Cobalt, Cole-
brook Twp. In 1915 the company purchased 198 acres of Lot 15, Con. 1,
Twp., known as the Agaunico mine, in which considerable develop-
ment was done a few years ago on a promising vein of cobalt and
nickel. No work is now being done save on the Anchorite property
also in Colebrook Twp. The Coniagas mine contains a large number of small but
rich veins carrying silver with small amounts of nickel, cobalt and
copper. Bought Maidens McDonald property, adjoining the Ankerite, for
in September, 1917.

Development: totaled 29,712' of underground workings Oct. 31, 1916.
Included shafts 875', drifting 17,611' and 9,527' of crosscutting. Under-
ground work for year ending Oct. 31, 1916, amounted to 1,974', as compared
with 735' in preceding year. Development work was confined to follow-
up on small stringers and development on the 4th level. No important
ore bodies were developed during the year, though considerable ton-
nage of low-grade ore was disclosed.

Reserves: Oct. 31, 1916, estimated as 134,852 tons containing 5,943,-
silver and 117,000 tons of sand tailings and 40,000 tons of slime
which contain 859,500 oz. silver. A re-survey of the mine and re-
gion of ore reserves has given a much lower estimate. In 1915 it
was 1,995 tons, containing 12,894,380 oz. silver.

Plant: 60 stamps, daily capacity 160 tons and a small cyanide plant.
Cyanide plant was built to cyanide about 6 tons per day of low-grade
concentrates and decomposed gouge from the mine, whereby
estimated daily saving of \$100 per day will be made. For year ending
1916, mill treated 56,973 tons ore, an average of 3.04 tons per stamp
hour, compared with 55,437 tons, an average of 3.02 tons per 24

hours for the previous year. Mill heads averaged 25.76 oz. silver per ton, compared with 23 oz. for the previous year.

There were shipped during the year 1916, 492 tons dry weight of high-grade concentrates averaging about 2,276 oz. silver per ton and 152 tons of low-grade slime of about 330 oz. silver per ton. A recovery of 131 tons of slime concentrates was made by canvas table plant and contained 26,366 oz. silver. Cyanidation of these concentrates began February, 1916, and 87.3 tons of about 206 oz. silver per ton were cyanided; also 889 tons of mine slimes of about 82 oz. were treated. This contained 81,916 oz., from which 71,731 were recovered. Three and a half tons of precipitates averaged 20,494 oz. silver per ton; 193 tons of 2,716 oz. per ton were shipped from the mine.

Number of men employed in mine and mill averaged 120.

Production (for Year Ending Oct. 31)

Year	Tons	Tons	Cost per Oz. Silver		Ounces	Price, Oz.
	Mine Ore	Concts.	(a)	(b)	Silver	Silver
1916.....	193	648	15.24c	4.27c	1,773,286	63.11c
1915.....	267	607	13.62c	3.25c	2,002,053	49.25c
1914.....	485	688	12.44c	3.58c	2,497,394	56.73c
1913.....	735	1,034	8.76c	4.32c	3,252,566	60.55c

(a) Includes all expenses except shipping, smelting, refining and marketing charges which are under (b). Total production of mine to Oct. 31 amounted to 23,935,729 oz.

Ore and concentrates are treated by the Coniagas Reduction Co., Ltd. which see below.

Coniagas Reduction Co., Ltd.

Entire stock issue owned by the Coniagas Mines, Ltd., except 6 shares of stock issued to directors to qualify.

Inc. in Canada. Cap., \$250,000; shares \$100 par.

Owms a smelter and refinery at Thorold, Ont. R. L. Peek, supt.

During fiscal year ending Oct. 31, 1916, company shipped 3,362,673 oz. silver and treated 3,183 tons ore dry weight. Company produces silver, arsenic and the oxides of cobalt and nickel. An average of 122 men employed in 1916.

The cyanide mill erected in 1916 and 250-ton flotation plant installed in 1917, but to be enlarged, assures continued production and dividends in some time to come.

Coniagas is one of the big producers of Cobalt, having yielded 27,000,000 oz. silver and paid \$8,740,000 in dividends in 11 years. Ore reserves at Coniagas, Jan. 1, 1917, were 7,000,000 oz. of silver.

CROESUS GOLD MINES, LTD.

ONTARIO

Address: J. M. Cohen, mgr., Cobalt, Ont., Canada.

Officers: D. M. Steindler, pres.; E. L. Steindler, sec.-treas. also directors.

Inc. Sept. 21, 1912, in Ontario. Cap., \$2,000,000; shares \$1 par, 2,000,000 issued; non-assessable. Is a close corporation, finances not published. Stock owned by Dominion Reduction Co.

Property: the Walsh & Dobie claims in Munro township, Ont. Ont.

Geology: quartz vein in diabase. Gold occurs free and in solution. Spectacular gold ore exposed on Dobie outcrop was protected by a plate and locks.

Development: by 350' incline shaft. Rich ore opened recently.

500'. Shaft produced \$1,000 for each foot in sinking. Gold is all e and free.

Equipment: includes 50-ton mill, with Hardinge mill, picking belt and amalgamation plates.

Produced \$1,000,000 in first 6 months' operation.

WON RESERVE MINING CO., LTD.

ONTARIO

Offices: Dominion Express Bldg., Montreal, Que.; 59 Victoria St., Toronto, Ont., and Cobalt, Ont.

Officers: John W. Carson, pres.; W. J. Gear, 1st v. p.; J. G. Ross, 2nd v. p.; Jas. Cooper, sec.-treas.; preceding officers, C. A. Smart, J. W. Ross, W. Gardner, R. W. Reford, F. S. Meighen, Ziba Gallagher, directors; Cohen, gen. mgr.

Incorporated Jan. 16, 1907, in Canada. Cap., \$2,000,000; \$1 par; outstanding, Jan. 1, 1916, \$1,999,957, of which \$231,143 is held by trustees for the benefit of the company and bears no dividends. Crown Trust Co., Montreal and Toronto, transfer office and registrar. Annual meeting, fourth Wednesday in January. Listed on Montreal Stock Exchange. Dealt in on unlisted market of Toronto Stock Exchange and on New York and Boston curbs. Dividends: 20% in 1908; 71% in 1909; 60% in 1910-12; 48% in 1913; 24% in 1914; 8% in 1915; 5% in 1916; total dividends to Jan. 1, 1917, \$6,190,849. Balance sheet for 1916 shows assets of \$2,839,957, which includes minerals, plant and equipment, \$2,032,366; supplies, \$2,613; ore in transit on hand, \$34,500; cash, \$191,182; investments in other companies and securities, \$571,533; accounts receivable, \$37,184. Liabilities show: accounts payable, \$10,446; surplus, \$770,534. The property accounts, which total \$2,032,366, were slightly written down. It appears that, according to the last balance sheet, the company had net quick assets of something like \$37,010 applicable to the stock, or about 42c per share.

Income Account Essentials—Years Ended Dec. 31

	Ore Sales	Oper. Exp.	Net Earnings	Other Income	Total Income	Div.	Year's Surplus	Total Surplus

Includes \$144,000 (1913, \$308,877) profit on Porcupine Crown, Ltd., investment.

The Crown Reserve Co. owns 60% of the stock of the Porcupine Mines, Ltd., from which it received \$144,000 in dividends in 1915. It is jointly with Kerr Lake Mining Co., Ltd., the Drummond Fracture property from which it received a profit of \$9,844 in 1916. It also owns the Silver Leaf mine of the Silver Leaf Mining Co., Ltd.

The company has paid total royalty to the government of \$880,315; this at a 10% rate. Beginning Jan. 1, 1916, only the regular tax of 3% is paid.

Property: original holdings at Cobalt consist of 23 acres in Kerr Lake, owned by the Crown Reserve mine, which has been one of the heaviest producers in Cobalt, but the end of this property is in sight. The company operated with the Kerr Lake Mining Co. in the draining of Kerr Lake, but results were disappointing to Crown Reserve in that no new veins were found. The pumping out of the lake made it possible to mine ore containing over 2½ million oz. silver, which otherwise could not have been extracted, and the small veins discovered, not in themselves of great importance, are sufficient to pay for the whole cost of the opera-

tion. Total amount of mud and water removed to Jan. 1, 1916, was about 700 million gallons.

Development: in 1916 amounted to 3,200', making 32,786' to date.

Production—Years Ended Dec. 31

Year	Ore Prod. Tons	Silver Prod. Gross Oz.	Gross Value	Net Value	Results per Ounce

1908.....	650.78	1,798,954	910,350	854,788	50.64	7.50	43.13
Totals..	8,772.77	19,361,006	\$10,608,109	\$10,067,722	54.78	15.73	39.05

Development during 1916 showed that conditions on the lower levels under the diabase sill were disappointing; but an important discovery was made on the N. side of the property, a raise above 500' level, cutting conglomerate at 170' above the level. This is 60' deeper than previously for this formation, which produced the large orebodies in the Crown Reserve.

Possibilities are good for new shoots. The mine should continue to show a small profit for some time to come; this, in addition to the assets on hand at the time of dissolution, would seem to warrant somewhat better prices for its stock than those now prevailing of between 25c and 30c per share. The future of the Crown Reserve Mining Co. beyond the limits of the two mines it now controls, depends upon its ability to acquire other properties. It was in following this policy that in 1915 it exercised its option on the property of the Globe Cons. Mining Co. in Trinity Co., Cal. (see Globe Cons. Lease, Inc.), but as results were not satisfactory, work was stopped. An option on gold claims in the Boston Creek district of Ontario was given up, owing to poor developments. About 90% of the shares in the Reward mine, Inyo Co., Cal., was purchased. There is \$250,000 of refractory ore blocked out, and with a flotation plant the mill is being operated at a profit. A return of purchase price is assured and good profit on the investment. A joint option is held with the Dominion Reduction Co. on the Cochrane mine at Cobalt.

Crown Reserve is financing the Newray mine in the Parcupine district, Ontario.

DOMINION REDUCTION CO., LTD.

Offices: 42 Broadway, New York City, Cobalt, Ont.

Officers: D. M. Steindler, pres.; Martimer B. Davis, v. p.; E. P. Blodgett, sec.-treas., with A. A. Allen and H. Victor Brayley, directors.

Inc. 1912, in Ontario. Cap., \$2,000,000; shares \$1 par; \$1,000,000 standing. Nearly all stock is held by the directors.

Company took over the Nova Scotia mill at Cobalt. The mill has 10 stamps, rated 200 tons per day, and treats various grades of low-grade ore from the Lake and Crown Reserve mines. The mill is connected with the Lake and Crown Reserve mines, and reduced to bullion. The company also owns and operates the

interest in the St. Anthony,
 tes the Nova Scotia mine.

vie, v. p., with Thos. Mc-
 and C. L. Sherrill, direc-
 nas, mgr.

Inc. July 16, 1909, in Ontario, to acquire from the Temiskaming & Hudson Bay Mining Co., silver properties at Cobalt; it is the operating company of the latter. **Cap.**, \$3,500,000; shares \$1 par, outstanding Sept. 1, 1915, \$3,200,050. Controls Dome Lake Mining & Milling Co., Ltd., through ownership of 894,045 shares.

Balance sheet for year ending Aug. 31, 1917, shows assets, \$3,374,825, which includes: mining claims, at Cobalt, \$2,953,228; at Gowganda, \$44,900; claims in Teck & Lebel Twp., \$18,193; plant, concentrator and equipment, \$43,318; accts. receivable, \$80,465; ore on hand, \$43,147; 894,045 shares Dome Lake M. & M. Co. stock, 187,506; stock of Mines Water Supply Co., \$2,943.

Liabilities show: accts. payable, \$4,102; bills payable the Temiskaming & Hudson Bay Mng. Co. and Dome Lake M. & M. Co., \$67,936; wages due, \$2,503; capital stock, \$3,200,050.

Receipts, 1917, were \$190,993, ore sales giving \$189,696. Expenditures were \$96,043, leaving a profit of \$94,949, plus balance of \$5,284 from 1916, a total of \$100,233.

Dividends: total to 1916, \$778,909; last one of 2½% paid Aug. 31, 1913.

Property: 9 claims, 340 acres, at Cobalt. No. 1 mine was re-opened in June, 1916, and stoping operations started. Several promising veins were found carrying high silver values, and are being further developed, 1917.

Ore reserves: estimated at 8,299 tons milling ore with silver content of 107,614 oz.; against 13,000 tons and 260,000 oz in the previous year. During 1916-17, 1,652' of new work was done.

No. 2 mine was closed down in March, 1916, after \$10,000 had been spent in development work. If examination of property proves satisfactory, work will be resumed.

No work was done on the Gowganda property, and only assessment work on claims in Lebel & Teck Twp. and Kirkland Lake.

Company acquired additional interest in the Ferguson mine, now owning two-thirds. Property adjoins the Lake Shore mine on the east, and is one-half mile west of the Tough Oakes mine.

For work done at the Dome Lake M. & M. Co., Ltd., see under that title.

Production: the mill treated 18,247 tons of 17.3 oz. ore, extracting 92,803 oz. silver. The recovery was 83.2%, at a cost of 14.5c per oz.

KERR LAKE MINES, LTD.

ONTARIO

Succeeds Kerr Lake Mining Co., which see.

KERR LAKE MINING CO.

ONTARIO

Office: 61 Broadway, New York.

Officers: Adolph Lewisohn, pres.; Sam A. Lewisohn, v. p.; E. H. Westlake, sec.-treas., with J. J. Steindler, D. M. Steindler, S. S. Rosenbaum, J. Parke Channing, J. H. Susmann and Wm. B. Joyce, directors.

Inc. Sept. 14, 1905, in New York. **Cap.**, \$3,000,000; shares \$5 par, all outstanding. Federal Trust Co., Boston, Bankers Trust Co., New York, transfer agts.; Equitable Trust Co., New York, Old Colony Trust Co., Boston, registrars. Annual meeting, 4th Monday in September. Stock listed on Boston and Toronto Exchanges; traded in on New York and London Curbs.

Is holding company, owning stock of Kerr Lake Mining Co., Ltd., Ontario, the operating company. Company was dissolved Nov. 12, 1917. Shareholders are to get stock, share for share, in Kerr Lake Mining Co., a Canadian corporation, to own entire assets of present company. This arrangement doubtless unnecessary taxation.

Assets: \$3,012,211, which includes 133,000 shares of Kerr Lake Mining Co. stock, 857,100 shares of

Mines Co. stock, \$8,125; and cash, \$2,586. Current liabilities in reserve, \$1,250; Kerr Lake Mng. Co., Ltd., \$2,000; profit and loss, Total receipts for the year were \$726,175, of which \$666,000 was in dividends from the Kerr Lake Mng. Co., Ltd. Expenditures \$21,175.

Dividends: paid quarterly at the rate of 20% annually, last payment June, 1917. Payments have been as follows:

.....	\$1.15	1910.....	\$2.00
.....	1.00	1909.....	1.15
.....	1.00	1908.....	.75
.....	1.00	1907.....	.40
.....	1.00	1906.....	.22½
.....	1.65	1905.....	.02½

A special dividend of 15c per share was paid on Aug. 10, 1917, to be added to Red Cross work; included in above total. This makes 237%, 10,000.

The company is a holding company owning the entire stock issue of the Kerr Lake Mng. Co., Ltd., and controls the Cobalt Comet, Ltd., through its stock ownership in the Caribou Cobalt Mines Co., the holding company for the former. The operating companies are separately described.

LAKE MINING CO., LTD.

ONTARIO

Office: 61 Broadway, New York. H. A. Kee, gen. mgr., Cobalt, Ont. Controlled through ownership of entire stock issue by Kerr Lake Mng. Co., New York, which see.

Balance sheet of Aug. 31, 1917, shows assets: \$1,875,350, which includes real property, \$80,000; ore on hand, sold and in transit, \$335,141; cash, \$100,000; short term bonds, \$202,150; Kerr Lake Mng. Co. of New York, liabilities: 400 shares of capital stock at par, \$100, \$40,000; accounts receivable, \$20,530; accrued wages, \$6,340; reserve for outstanding liabilities, \$97,434, leaving a surplus balance of \$1,711,045 after payment of \$100,000 in dividends.

Dividends: to August, 1917, amounted to \$7,117,000. Payments are at the rate of \$1 per share annually. Total proceeds from ore sales were \$1,800,000; operating expenses were \$297,303 for production and development, \$170,766 for shipment and treatment, \$14,892 for general expenses; \$100,000 off on property acquired, \$83,078. Operating profit for the year 1917, \$343,474.

Property: one patented claim and two fractional claims, 57 acres in Township 2, Nipissing district, Cobalt, Ont., Can. For description of geological features see Nipissing Mines Co. The ore occurs in several vertical fissure veins in Huronian slate and conglomerate. The lead and zinc ore are characteristic of the Cobalt district. The ores shoot vary from a few feet to 400' in length and occur in an area of about 8 acres.

Development: comprises several vertical shafts, deepest 487', with a total of 51,450' of underground workings. New development for the fiscal year 1917, amounted to 3,105', compared with 4,057' in 1916.

In 1916, the winze on the Keewatin vein was sunk 150' below No. 6 level, the lowest, is 475' below the surface. The entire winze is in the Keewatin formation below the diabase contact, and work on No. 7, 8 levels shows the vein to be weaker and less mineralized as it leaves the contact, so possibilities below No. 6 are not good. Ore is probably contained in the diabase near or above the contact. Results of explorations at this shaft were fairly satisfactory. In stoping, the Fleming vein was

Dividends: 2% in 1907; 9% in 1908; 10% in 1909; 15% in 1910; 50% in 1911; 50% in 1912; 32% in 1913; 18% in 1914; 12% in 1915; 12% in 1916; 1% to July 1, 1917. Total 226%, or \$5,011,336.

Property: 1 claim, 40 acres, the McKinley-Darragh mine, located at southern end of Cobalt Lake; 1 claim, 40 acres, the Savage mine, on the east side of Cart Lake; 40 acres in Bucke Twp., the Bennet claim. The McKinley-Darragh, which adjoins the Nipissing and La Rose holdings, has been the most important producer; deepest workings are at 400', where the contact with the Keewatin formation is exposed.

Ore reserves: estimated at end of 1916 to contain 1,714,302 oz. of silver, compared with 1,871,280 oz. Jan. 1, 1916. Reduction in reserves is due to exhaustion of the Savage mine.

Costs at the McKinley-Darragh mine:

	Tons Milled	Costs			Total

ING CORPORATION OF CANADA, LTD.

ONTARIO

Office: Traders Bank Bldg., Toronto. **Mines and works:** Cobalt, Ont. April 1, 1914, the Mining Corp. of Canada acquired the mining proper- formerly operated by the Cobalt Townsite Mng. Co., Ltd., Cobalt Lake Co., Ltd., City of Cobalt Mng. Co., Ltd., and the Townsite Extension s, Ltd., total area, 183½ acres, at Cobalt. In 1915, the property of the Nipissing Mining Co., 40 acres, was acquired. On Jan. 1, 1917, busi- and assets of Canadian Mng. Corp'n. were acquired.

Officers: Sir H. M. Pellatt, pres.; J. P. Watson, 1st v. p.; W. P. P. r. 2nd v. p.; with G. M. Clark, R. E. G. van Cutsem, D'Arcy Weather- ed Grace Watson, directors. W. W. Perry, sec.; C. E. Watson, mgr., t; M. F. Fairlie, mill mgr.

nc. March 20, 1914. **Cap.**, \$2,075,000; shares \$1 par; all issued; 1,911,319 s were held by the Canadian Mining Corp., Ltd. in liquidation.

Capital increased to \$8,300,250, shares \$5 par, in 1917.

Balance sheet for 1916 shows production worth \$3,276,006; operation, 196; head office (including \$233,162 taxes, etc.), \$293,624; dividends, 25; leaving \$1,049,631 balance, plus \$1,167,376 balance from 1915 and 74 dividends and interest, making amount carried forward to 1917, 581.

The new company paid 12½c per share on March 15, 1917, with 25c making \$622,519.

was entire capitalization, \$250,000, of Cobalt Reduction Co., Ltd., ing a 300-ton mill and 140-ton cyanide plant.

Dividends: paid by this company to Mining Corporation were \$171,516

re: silver, occurs in narrow calcite veins in Huronian conglomerate formation. The high-grade ore assays 1,919 oz. silver per ton, and 30 oz. silver per ton.

mines, the City, Lake and Townsite are worked. 50', at cost of \$15.41 per foot. Total open- and-drilling was done last year. Under- in all departments in 1916 totaled

Recent Shipments

	Ore, Tons	Gross Oz. Silver	Gross Value Silver, Cobalt, Nickel & Arsenic Paid For	Net Value Received
1916.....	2,139	3,819,769	\$2,737,569	\$2,686,488
1915.....	191.9	4,623,958	2,422,791	2,381,463
1914.....	434.2	3,999,862	2,226,430	2,207,428
1913.....	1,328.6	4,844,169	2,945,335	2,920,714

In July, 1917, yield was 344,925 oz., valued at \$272,490.

Cost of producing an ounce of silver in 1916 was 24.135c equal to \$12.589 per ton of ore treated. The total cost was \$2.51 per ton higher than in 1915, due to advanced prices of supplies, taxes, and insurance.

Production: since 1904 totals 45,029,007 oz. silver, realizing \$26,168,029 gross and \$24,846,968 net.

Nipissing is the largest company and has the best holdings at Cobalt, and manages to maintain its reserves, the past year showing an increase. With silver at \$1.05 per oz., a profit of 75c can easily be made.

NORTHERN CUSTOMS CONCENTRATOR, LTD. ONTARIO

Office: 702 Excelsior Life Bldg., Toronto, Ont. A. J. Young, pres.; E. J. Booth, v. p.; F. J. Bourne, sec.-treas.-gen. mgr.; A. S. Holmes, supt.; F. J. Bourne, cons. engr.

Operates a 200-ton, 80-stamp concentrating mill north of the La Rose mine, at Cobalt, Ont.

O'BRIEN MINE, THE. ONTARIO

M. J. O'Brien, Cobalt, Ont., owner. J. G. Dickenson, mgr.; D. W. McLeod, supt.

Property: 15 claims, patented, 560 acres, privately owned, at Cobalt and Gowganda, Ont. The O'Brien mine has been a steady silver producer for many years and is reported to have 4 years' ore reserves in sight, 1917.

Ore: occurs in conglomerate and Keewatin diabase and contains silver, cobalt, arsenic, nickel and copper values.

Development: by 6 shafts to depth of 660', with 7 miles of crosscutting, raising, drifting and stoping.

Equipment: includes 200-ton cyanide mill and 200-ton concentrator.

The mill treated 51,892 tons of ore in 1914. **Shipments:** 1,237,345 oz. silver. Royalty paid to government was \$5,898 in 1914, with total payments to date of \$700,966.

Results of operations and production not made public.

PARAGON-HITCHCOCK MINES, LTD. ONTARIO

Address: Collingwood, Ont., Canada. **Mine office:** Wabun, Ont.

Officers: Donald McKay, pres.; W. R. Hitchcock, v. p.; David Meville, sec.; W. T. Herrington, treas.; E. H. Hitchcock, C. W. Pitt, W. A. Hamilton, R. Fregehen, J. P. Welsh and T. R. Gilpin, directors

Inc. Feb. 12, 1917, in Ontario. **Cap.** \$1,100,000; shares \$1 par; 200,000 issued, non-assessable.

Property: 2 claims in Willet and 4 claims in Tushope Twp., Ont. adjacent to the Cobalt district, with total area of 245 acres. Four claims are ½ mile from the T. & N. O. Ry., and 2 claims are 3 miles from the line, the two groups being 4 miles apart. Discovered in 1911 by A. M. Campbell, in 1913 by E. J. Bourne, and in 1917 by W. W. Jeffrey.

Geology: the Hillier Group, with diabase showing in places. Bearing veins can be seen in places.

red for some distance and is considered the strongest. Shaft on this is deep and a drift is said to show some native silver. At the W. end No. 1 & No. 4 vein. Sinking to 270' is recommended.

At the Paragon, shaft is 160' deep with 2' of good silver ore showing.

Equipment: boiler, steam hoist, and compressor, pump, and camp accessories.

Is a prospect in a district with a fair production. More money is necessary for development. Some of the circulars issued are peculiar in that they digress from their real object far too much.

\$2,500,000	\$75,591	\$671,000	\$19,978	\$3,589,097*
2,500,000	49,674	896,860	25,556	3,472,091
2,500,000	23,747	527,906	17,059	3,068,802

* includes \$322,828 contingent a/c re North Dome property and Cobalt hospital shares.

Property: 224 acres underlying Peterson Lake at Cobalt, surrounded by holdings of the Nipissing Co. The most important that of Seneca-Superior, now exhausted. Company is operating the Reliance and Peterson Lake mines, the last named in the Nova Scotia. All leases given by company have now expired.

Development: the Peterson Lake area has been prospected by shafts Nos. 2 and 3 and the Nova Scotia territory opened up; several have been found here, but to date commercial ore has not been paying quantities. During the year new work totaled 3,556'.

Production: in 1913, 1,230,732 oz. silver; in 1914, 1,608,550; in 1915, 295; in 1916, 11,204 oz.

The company's property has been well prospected in Nova Scotia, but the Little Nipissing & Susquehanna tracts are promising. A large part of the company's ground under Pearl Lake is still unprospected.

In April, 1917, work was started on the Susquehanna section on the N. E. end of lake and management hopes to cut the lower contact at depth where new orebodies may be found.

Mine was practically closed down from Feb. to April, 1917, when management changed. The managing director and Mr. Frank C. believe property can again be made profitable.

PITTSBURG AND LORRAIN SYNDICATE.

J. A. Rice, mgr. Property: the Currie Mine, adjoining the Wetton in South Lorrain, Ontario, Canada, said to show rich silver ore in situ.

Development: is by shaft, to 300' level. Diamond-drilling to 900' in 1917. Has leased the Wettlaufer 25-ton mill.

RIGHT OF WAY MINES, LTD.

Office: Central Chamber, 46 Elgin St., Ottawa, Ont.

Officers: E. Seybold, pres.; A. W. Fraser, v. p.; E. A. Larmour, treas.; with C. J. Booth, directors. D. H. Angus, mine mgr.

Inc. Sept. 11, 1909, in Ont. **Cap.,** \$2,000,000; shares \$1 par; outstanding, \$1,685,500. **Transfer office:** 46 Elgin St., Ottawa, Ont. Annual meeting February.

Annual report for 1916 shows gross receipts \$96,084; operating expenses \$55,372; leaving a net profit of \$40,712.

Adding the previous balance, etc., there was available \$45,926. Depreciation and general expenses reduced this to \$33,267; less \$25,282 for dividends, leaving \$7,985 carried forward to 1917.

Stock selling around 5c per share, 1916, sold in the boom days at as \$10.50. The company has paid 66½% on the old capital of 500,000 and the new capital of 2,000,000 shares.

Property: 3½ acres, adjoining La Rose mine in Cobalt and rights under 3½ miles of the right of way of the T. & N. O. Railway. Production of silver for a few years was important, but during the last few years little rich ore has been mined or discovered.

Development: mine is opened up to the 365' level. In 1916 a winch sunk 50' below the 365' level to prospect the Cobalt Lake fault. So far results are promising.

Production: in 1916 was 225 tons of high-grade ore, concentrated metallics, containing 145,064 oz. silver.

SENECA SUPERIOR SILVER MINES, LTD.

Office: 103 Bay St., Toronto, Can.

Officers: S. H. Worth, pres.; F. W. Zoller, v. p.; R. F. Segsworth, treas.; with W. E. Segsworth and A. H. Dewey, directors. R. H. Lipp, mine mgr.

Inc. Sept. 29, 1911, in Ontario. **Cap.,** \$500,000; \$1 par; 478,884 shares issued.

Comparative Operating Account:

	Receipts	Expenses	Profits	Cash Assets
1916.....	\$708,877	\$355,987	\$352,870	\$579,599
1915.....	732,283	282,471	469,731	462,487
1914.....	146,649	228,071	*81,422	85,621
1913.....	438,455	320,881	117,574	196,920

*Deficit.

Properties: in which the company is directly or indirectly interested: Daigle claim, 20 acres; Gans property; McDonald claims, 40 acres in North Cobalt; Peterson claim, 40 acres; Osland claim, 40 acres: also 40 acres each in McCool, Cook and Barnett townships; the Morrison claims, commonly called the Red Jacket and the North Dome property in the Porcupine mining division. The Red Jacket claim was leased 1916 to a syndicate which unwatered it.

AURUM MINES, LTD.

ONTARIO

Office: 420 Bank of Hamilton Bldg., Toronto, Ont., Canada.

Officers: Sir Henry M. Pellatt, pres.; Col. J. B. Miller, v. p.; with W. B. Reid, A. E. J. Blackman and A. H. Jeffrey, directors. C. H. Manaton, sec.; H. M. Asling, treas.

Inc. in Ontario. Cap., \$1,500,000; shares \$1 par; 800,000 shares outstanding.

Property: 2 patented claims, 80 acres, adjoining the Croesus mine, in Munro Township.

Ore: occurs in quartz and schist veins in basalt, dipping N. W.-S. E.; average value of the gold contents is as yet undetermined. Mine examined by W. J. Trethewey and A. G. Kirby, who recommend diamond drilling in attempt to pick up the Croesus vein.

BOSTON CREEK GOLD MINES, LTD.

ONTARIO

H. D. Symmes, mgr., Boston Creek, Ontario. F. M. Richardson, pres.-mgr., with Ex. Lieut. Gov. Spriggs of Montana and W. B. Albright, directors.

Inc. late in 1916 to take over the holdings of the R. A. P. Syndicate, financed by Sherwin-Williams Paint Co. interests, who spent \$250,000 on the property. Cap., \$2,000,000; shares \$1 par.

Property: 21 claims, 100 acres, in Boston Creek township, 45 miles N. W. of Cobalt and 382 miles N. of Toronto and crossed by the T. & N. R. R. **Ores:** simple gold-quartz, like those of Porcupine, occur in two parallel master veins, 250' apart. The Kenzie vein is of replacement type in a "pillow lava" or greenstone, a few inches to 5' wide, showing spectacular free gold in fine grained greenish quartz, with associated iron and copper pyrites, galena and molybdenite.

Development: by 300' shaft with drifts on vein at 100', 200' and 300' and a winze to 400' level. Brokers letters claim \$1,500,00 worth of ore blocked out and that the company is sacking high grade ore. Equipment includes gas-line and electric hoists and buildings, etc., for 40-50 men employed.

Property considered good and directors are as high grade as the ore, but stock offered at 50 cts., boosted to \$1.50 and declining to 60 cts., June, 1917, > extravagantly lauded by various brokerage houses as to beget and foster icion.

Property will, it is believed, eventually be a milling proposition, ranking with the various Porcupine companies.

DOME LAKE MINING & MILLING CO., LTD.

ONTARIO

New Liskeard, Ont., and South Porcupine, Ont. **Officers:** Geo. Taylor, pres.; A. A. McKelvie, v. p.; with Thos. McCamus, S. S. Ritchie, F. L. Bepko, S. J. Dark and Chas. L. Sherrill, directors; F. L. Hutchinson, sec.-treas.; Ralph Regnell, mgr.

Inc. Aug. 26, 1912. **Cap.**, \$2,500,000; shares \$1 par, reduced to 500,000 shares, Feb., 1913; increased to \$1,000,000 in Feb., 1914, and to \$2,000,000 in 1915. All issued. Hudson Bay Mines Ltd. took up its full allotment of 1,000,000 shares. Trusts & Guarantee Co., Ltd., Toronto, transfer office. Annual meeting 2nd Monday in Feb. Listed in Toronto and on New York curb.

Statement for year ending Jan. 1, 1917, shows receipts from ore shipments \$18,322; expenditures, \$111,451 which includes \$79,688 for development work.

Reported 1917, that company plans increasing its capitalization to \$3,000,000. **Property:** 3 claims, patented, 120 acres, in Tisdale Twp., Porcupine. Gold ore occurs in shoots as replacement deposits. Veins have strike of N. 10° E. and dip of 70°. Recent work is said to prove that the mineralized zone traverses the company's property instead of dipping into property on the north. Country rock is basalt.

In Feb., 1917, the vice-president reports that an over-estimate of values and tonnage in the mine was made by the former manager. The new manager is resampling the mine as the records are not considered accurate or reliable.

The principal work for 1916 was the development of the No. 1 vein on the 300' and 400' levels proving oreshoots of fair milling grade west of the main crosscut and showing that the vein is faulted, with movement along the line as well. The manager finds that in view of the encouraging results in a winze below the 400' level and the large acreage of unprospected ground, that a further expenditure for prospecting and development is warranted.

Development: by 460' shaft with over 14,000' of workings. In 1915, 5,750' of work was done. Reported stoping No. 3 vein on 400' level Sept. 1917. Reserves at end of Aug., 1917, were reported as 9,089 tons, assaying \$9.23 per ton.

Equipment: includes Vulcan hoist, compressor and 200-ton mill. A 300-ton cyanide plant has been installed.

Production: during 1916, 7,700 tons of ore, of which 6,540 tons were milled yielding a bullion return of \$18,267. The milling cost was \$14,343.

The property has not been as successful as hoped for, but the management believes that continued active development will prove the mine to be valuable.

(a) Includes undistributed development expenditures, \$98,506. (b) Includes pay-
\$37,670.

Operations for 1916-17 include \$2,171,785 from bullion sales with operating
enses of \$1,241,862. Total output to April 1, 1917, 1,302,832 tons, yielding
\$1,669.

fit and Loss Statement: years ending March 31:

Gross Earnings	Net Earnings	Int., Disc. and Exch.	Balance	Dev. Deprec. and Improv.	Surplus
..... \$2,194,311	\$929,922	\$22,526	\$952,449	\$221,369	\$731,079
..... 1,778,959	889,365	23,015	912,380	370,518	541,861
..... 1,055,497	481,820	6,878	488,498	309,920	178,578
..... 1,204,597	750,633	2,695	753,328	295,631	457,696

Property: 6 claims, 240 acres, in Tisdale Twp., Ont. The geology is fully
ribed in report of Ont. Bureau of Mines, 1915. Ore is white quartz carry-
free gold and auriferous pyrite, occurring in a stockwerk of veins and
gers netting schists of pre-Cambrian age. The orebody is large, being
100' across in places and has been proven by diamond drill work for 500'
ore. The original outcrop, a dome-shaped hillock about 30' high, showed
uch free gold at one place that it was called the Golden Stairway.

Company has an option on 5 adjoining claims belonging to the Dome Ex-
on Mining Co., effective until October, 1917. Basis of exchange is 50
es of Dome Extension for one of Dome Mines. About \$16,000 was spent
development work on these claims in 1916. Diamond drilling in progress,

Ore occurs in large irregular masses, entirely without walls and extremely
en in values. It is found on or near the contact of an igneous rock
phyry) and sedimentaries and is capped by slate. Development has
en the existence of quite as good ore at 700' and in diamond drill holes
150' vertically below the surface, as that mined on the surface and in
upper levels.

Development: there are 2 working shafts, one 850' deep, with 8 levels.
erground work has been distributed over a zone 1,500' long and 400' wide.
year ending March 31, 1917, new development work totaled 7,051' and
ond drilling footage totaled 11,423'.

Ore reserves: estimated April 1, 1917, as 2,250,000 tons, average grade \$5.32 in gold per ton, or a total value of \$11,979,000 compared with the estimate of the previous year of 2,600,000 tons of \$6.20 ore.

Equipment: includes a crusher on the 5th level, automatic loading hoppers, 5-ton cars and 4-ton skips. Shrinkage stoping system is used.

Company owns a very complete mill and cyanide plant of 1,500 tons daily capacity, enlarged to present size in 1916. Over \$400,000 was spent in new equipment and improvements, 1916, stamps being replaced by ball mills.

Water is obtained from Porcupine Lake by means of 2 electrically-driven 4-stage turbine pumps. Electric power is obtained from Wawaitin Falls, 13 miles from the property. Three-phase current is supplied over the Company's transmission line at a pressure of 12,000 volts, stepped down to 550 volts by three 600-k. w. Westinghouse transformers.

Production and costs since milling started, March 23, 1912, for fiscal year ending March 31st:

Year	Tons		Rec. %	Costs per Ton			Total
	Milled	Per Ton		Mining	Reduct.	Gen.	
1917.....	459,530	\$4.73	92.98	\$1.44	\$1.05	\$0.30	\$2.70
1916.....	347,640	5.50	92.88	1.22	1.01	.32	2.56(b)
1915.....	243,550	4.68	90.6	1.38	1.12	.46	2.97(b)
1914.....	145,305	8.77	94.51	1.86	1.60	.64	4.19
1913.....	101,812	10.72	95.63	1.31(a)	2.35	1.29	4.95

(a) Does not include development. (b) Reduction due to larger units of operation, improved methods, and greater efficiency.

Cost of producing an ounce of gold has risen from \$10.30 in 1915-16 to \$11.82 in 1916-17 and to \$14.18 in March and April, 1917. The bullion produced in 1917 was \$2,171,784.

Operations for 1916-17 were curtailed by labor shortage in mine development work, but an orebody 119½' wide, averaging \$17.15 per ton, was cut by a diamond drill hole and a crosscut extended out to it on the 700' level. This will, it is hoped, increase the grade of ore mined which averaged below \$5 a ton compared with \$8 at the Hollinger, \$6 at the Schumacher, \$10 at the Porcupine Crown and Porcupine V. N. T. properties.

In April, 1917, operations were further curtailed, the mill treating but 28,900 tons yielding \$132,000, compared with 36,500 normally, or \$175,000 and 39,600 tons in Jan., producing \$181,000. The 1,500-ton mill treated only 963 tons daily in April, owing to lack of labor, but was run full capacity in Sept.

The Dome is a long lived mine with liberal orebodies which will be profitably mined for many years to come. It can continue its current dividend of \$1 a year for a decade unless forced to shut down temporarily for lack of labor in 1917.

Owing to increased cost of supplies and labor shortage, the company, early in Dec., 1917, decided to suspend milling during the winter. The new shaft, 800' deep, will be sunk deeper, and diamond-drilling continued.

HARGRAVE SILVER MINES, LTD.

Inc. 1916, in Ontario. Cap., \$25,000,000; shares \$5 par; 4,920,000 issued. Jan. 1, 1917.

Toronto Genl. Trusts Corp. and Montreal Trust Co., transfer agents. Canadian Trust Co. and Montreal Safe Deposit Co., registrars.

Dividends: initial dividend of 1% paid July, 1916; 1% quarterly paid to July, 1917, when rate was decreased to 1% every 8 weeks; June, 1917, dividends suspended. Company is a consolidation of the Hollinger Gold Mines, Acme Gold Mines, Ltd., Millerton Gold Mines, Ltd., and Claim 13,147 of Canadian Mng. & Finance Co., Ltd.

Stock was issued as follows: 200,000 shares in treasury; 2,400,000 to original shareholders; 2,100,000 to Acme shareholders; 100,000 to Canadian M. Co. shareholders.

Shareholders in Acme, Millerton and Canadian M. & F. companies were to receive full dividends from Jan. 1, 1916, on Hollinger Consolidated stock issued in 1915; amounting to \$720,000 in June, 1916. Owing to increased labor costs and scarcity of labor, operations resulted in a deficit and company sold 120,000 shares to shareholders at \$6.50, proceeds being used to pay the \$720,000 indebtedness.

Income and expense account for 1916: gold-silver production, \$5,073,401; operating expenses, \$2,124,461; total, \$5,285,862.

Operating expenses, \$2,134,539; dividends, \$3,126,000; taxes, \$144,063; depletion, \$150,000; total, \$5,554,601. Deficit for year, \$269,591.

Property: 11 claims, 440 acres, patented in Tisdale Twp., Porcupine. The rock of the entire area consists of basalt in the S. E. portion and the conglomerate of the Keewatin series in the N. W., while between these two areas, approximately 2,000' apart, lies an area of basalt schist and an area of greenstone, which have been intruded by a quartz-feldspar porphyry. The porphyry, except near its marginal contacts with the older rocks, proved of value as a source of gold, yet it is believed that its occurrence has had some definite influence upon the mineralization and concentration of gold values in the older rocks.

It is within the area between the basalt and the greenstone that the richest gold veins are found; 54 veins had been found on the Hollinger property up to 1915, and 12 had been reached by underground workings. Orebodies consist of quartz veins and country rock containing gold and pyrite. Veins are not always with well defined walls; the fissuring has been very irregular; a vein trending largely of quartz in one place may consist of quartz veinlets and an enclosing schist a short distance away. In No. 1 shaft the veins are practically vertical.

Reserve reserves estimated Dec. 31:

	Tons	Value	Estimated Gross Value
.....	3,938,540	\$8.68	\$34,185,535
.....	1,846,000	9.65	17,824,800
.....	1,600,800	10.02	16,031,600
.....	1,162,960	11.49	13,358,420
.....	845,300	13.71	11,604,800
.....	664,540	17.48	11,271,400
.....	462,000	22.14	10,230,000

For consolidated properties.

Reserves refigured for consolidation purposes.

Development: by shafts to depth of 1,250' on the old Hollinger claim; No. 10 on the Millerton was deepened and a 4' vein encountered carrying \$15 per ton. The Acme being developed by shafts Nos. 9 and 11. Claim 13,147 leased, 1916.

Development during 1917 has been very extensive. Approximately one mile of **underground work** is being done per month, and development work is being pushed forward at one hundred different faces. Every level from the

surface to 1,250' is being opened up and about 40 machines are engaged on the work, with the result that it is expected the ore reserves at the end of the current year will show a considerable increase. Heretofore reports on ore reserves at this mine did not include anything below the 900' level, and the decision to resume developments at the 1,250' depth is of interest.

Total work done, 1916, was 20,280'. Average number of men employed in 1916 was 1,056, against 735 in 1915 and 546 in 1914.

Mill: 100-stamps and cyanide plant, with daily capacity of 3,000 tons. The ore is easily treated; practice is to crush by stamp and to regrind in tube mills, preparatory to cyanide treatment.

Power: obtained from the central power plant built by the C. M. & F. Co.

Recent production and costs (costs are per ton of ore milled):

	Tons Milled	Average Value	Milling Costs	Mining Costs	Assay Tailing	Value Recovered
1916.....	601,854	\$8.84	\$2.188	\$0.969	\$0.40	\$5,073,401
1915(a).....	334,750	10.11	2.18	9.99	.40	3,160,815
1914.....	208,936	13.676	2.70	1.220	.56	2,719,354

(a) In addition there was milled 106,486 tons Acme ore at a cost of \$1.00 per ton.

Operating costs are greatly affected by the war; the price of explosives in Feb., 1916, was sufficient to add 15c per ton to the mining costs; milling costs per ton were increased 7c, due to advanced price of zinc dust. It is expected that greater economies in operations will partly offset the increased cost.

Company has been working against great odds owing to lack of skilled labor and increased cost of supplies. A comparison of costs shows but a slight increase, but this is due to the economies made possible by the consolidation of the different properties. Under normal conditions management expects to be able to reduce working costs from 40c to 50c per ton.

JUPITER MINES, LTD.

ONTARIO

Succeeded, 1915, by the McIntyre-Jupiter Mines, Ltd., which see.

KENEBEC SILVER MINES, LTD.

ONTARIO

Address: W. H. Jeffrey, mgr., Temiskaming district, via Cobalt, Ont.

Development: on the Veteran claim, 2 veins have yielded some high-grade silver ore. Ore occurs in Keewatin formation.

Equipment: includes boilers, hoist, and 5-drill compressor.

KIRKLAND LAKE EXPLORATION, LTD.

ONTARIO

Office: Pinners Hall, Austin Friars, London, Eng.

Officers: C. H. Villiers, pres.; H. J. Hollingsworth, and R. D. La Brec, directors. E. C. Wheeler, sec.

Inc. Jan., 1914, in England to acquire mining properties in Ontario, Canada. **Cap.**, £150,000; shares £1 par; 26,000 issued. On June 30, 1915, assets included stocks and bonds at cost, £10,320; interest in the Kirkland Lake district, £1,650. Organization expenses, £5,498; exploration, £12,001; cash, £116.

Property: in Swastika district, near Porcupine, Ontario, Can., and an interest in claims adjacent to the Tough Oakes mine. Is a holding company inactive during the war.

KIRKLAND LAKE GOLD MINING CO., LTD.

ONTARIO

Address: Kirkland Lake, Ont., or c/o Beaver Consolidated, Cobalt, Ont.

Cap., \$2,000,000; shares \$1 par; 1,830,526 issued.

Property: under option to the Beaver Consolidated Mines, Ltd., Cobalt, since Oct., 1915. In Dec., 1917, the Temiskaming Mining Co., Cobalt acquired 871,525 shares of Kirkland Lake at 40c from the Beaver Consolidated.

Development: shaft sunk 700', with levels every 100'. On No. 1 level the vein was opened for 166'; on No. 2 it was faulted; on No. three, 5', 10' and 12' of ore was cut, assaying from \$7 to \$12.80 per ton; on No 4 there is 220' of ore; on No. 5 some rich ore was opened; while No. 6 was satisfactory. In 2 years, work totaled 4,608'.

Ore reserves: estimated at \$1,000,000, including 8,000 tons of \$10 ore on dumps. A new shaft will be sunk at a better location and a 150-ton mill is to be constructed. All money is provided by the Beaver Consolidated and Temiskaming Mining companies.

Equipment: includes steam plant, electric motors, double-drum hoist 4, 10 and 12-drill compressors, shops, residences, assay office, and 150-ton mill to be ready by June, 1918.

This property appears to have a future, and is in good hands.

KIRKLAND LAKE PROPRIETARY, LTD.

ONTARIO

Secretary and office: J. J. Sneddon, Finsbury Pavement House, London, E. C., Eng.

Directors: H. G. Latilla, A. Burt, C. A. Foster, J. D. G. Simpson and G. F. Wyatt.

Inc. Nov. 27, 1913. **Cap.**, £200,000; shares £1 par; 75,000 issued and fully paid. First annual meeting was held Aug. 3, 1915.

Company's assets consist of shares in the following companies: Tough-Oakes Mines, Ltd., Burnside Gold Mines, Ltd., Sylvanite Gold Mines, Ltd. Teck-Hughes Gold Mines, Ltd. and Sudbury Syndicate, Ltd.

Balance sheet Feb. 28, 1916, shows general expenses, £13,882; cash, £63; debtors, £19,824; loans and interest, £59,448; shares and interests in properties at cost, £82,101; creditors, £11,221; loans and interests, £80,500.

KITCHIGAMI GOLD DEV. CO.

ONTARIO

Officers: John Daniell, pres., Calumet, Mich.; John MacRae, v. p.; Chas. Chynoweth, sec.; Jas. T. Fisher, treas.

Inc. 1915, in Ariz. **Cap.**, \$300,000; shares \$2 par; 100,000 shares subscribed at 25c.

Property: 160 acres, Gordon McGuire claims, on Goldfish lake, Moresette township, Ont., Kirkland district, adjoining the Goldfish Lake Gold Mine Co. Ground acquired on advice of Chas. W. Botsford, E. M.

Some diamond-drilling was done in 1916, without important results.

LA BELLE KIRKLAND MINES, LTD.

ONTARIO

Property: the Gibson group of claims at Goldfish Lake, Kirkland Lake district, Cobalt, Ont., shows molybdenite and gold ore in Keewatin formation. Developed to depth of 350' by shafts and crosscuts, showing several 2' stringers of high-grade ore. Encountered fault on this level, April, 1917. Diamond drilling totaling 5,000' was done 1916 and is said to indicate ore to 700' depth. On the 100' level a promising vein is under development.

Equipment: includes compressor and hoist good for depth of 1,000'.

Suspended operations, July, 1917, pending financing.

LAKE SHORE MINES, LTD.

ONTARIO

Haileybury, Ont. Harry Oakes, pres.; J. W. Morrison, sec.-mgr.

Inc. Feb. 25, 1914, in Ontario. **Cap.**, \$2,000,000.

Property: the Lake Shore gold mine, on Kirkland Lake, adjoining Teck-Hughes on the east.

Development: by 300' shaft with crosscut at 200' level. One vein has been developed to bottom level and 2 others, under the lake, have been developed by drift. In July, 1917, a strike of ore was reported at a point 100' below drift. Values are gold.

Equipment: includes 7-drill compressor. About 30 men employed.

MINE D'OR HURONIA, LTD.

ONTARIO

Three Rivers, Quebec.

Officers: Chas. Lafond, pres.; P. V. Ayotte, v. p.; A. Lebrun, sec.-treas.; I. York, gen. mgr.

Property: 4 claims, 177 acres, in McVittie Twp. and in Gauthier Twp.atika district, Ont., Can., 18 miles from Dane.

Development: by 3 shafts, 102', 75' and 45' deep, a 300' tunnel and 125'ifting on the 50' level.

Equipment: includes mill and hydro-electric plant. Power is transmitted e mine from the Goldfields mine at Larder Lake. Total gold production te amounts to \$7,064. About 40 men employed:

(a) 15 months, ending March 31. (b) 15 months ended June 30, 1917. (c) Includes depreciation, \$114,764.

Property: located on the south, west and north sides of Pearl Lake. Tisdale Twp., comprises 347 acres, of which 113 acres are under Pearl Lake and Gillies Lake. The area added by acquiring the Extension and Jupiter mines was 127 and 79 acres, respectively. The immediate object of amalgamation was to secure the right of operating through the Extension main shaft for deeper exploration of the McIntyre property on N. side of Pearl Lake. Recent work revealed large orebodies at 1,000' depth in both mines.

An option is held on the Plenaurum property of 120 acres, adjoining the Jupiter section.

Geology: the north and south sections of the property show areas of altered volcanic schist, basalt and associated lavas; between them there is a broad band of schistose quartz porphyry. Veins are classified in the following systems: veins in the basalt and gray schist and veins in the contact between the quartz porphyry and gray schist on the south side of Pearl Lake; No. 5 vein and veins in the contact zone paralleling the north contact between the quartz porphyry and the basalt on the north side of Pearl Lake; veins in the quartz porphyry.

Exploration has shown that the best deposits of gold occur in the altered volcanic schist, at or near the contact with the quartz porphyry; development in the quartz porphyry away from the contact has not shown much gold. Orebodies are lenticular in form and very irregular; the ore shoots consist of quartz more or less interbanded with mineralized schist. The location of orebodies has been rendered difficult by the presence of compressive faults which have displaced portions of the ore as much as 130'.

Eighty per cent. of ore milled is heavily mineralized schist.

Development: by shafts to 1,000' depth, amounting to 44,651' to end of June, 1917; also 19,920' of diamond drilling. A report issued in Sept. 1917, states that exploration continues to be most satisfactory. On 1,000' level the main vein has been opened for 1,150', of which 900' is high-grade milling ore. At depth of 1,387' the drill has cut this vein, where it is 19' wide, assaying \$25.30 per ton. Veins in the McIntyre-Jupiter property are from 24 to 50' wide, with rich stringers running out into the walls along the joint planes.

Ore reserves: due to form and occurrence of orebodies, it is impracticable to attempt to block out ore in the usual manner.

Date	Tons	Average Value	Total Value
June 30, 1917.....	443,617	\$11.14	\$4,943,004
Mar. 31, 1916.....	201,920	11.12	2,247,128
1915.....	109,693	7.79	854,588

Reserves were considerably enlarged by acquiring the Extension and Jupimines, and subsequent development.

Equipment: property is well equipped with hoisting and milling facilities, latter including a 525-ton cyanide plant. The ores yield 95% of their gold ent to the simple treatment of grinding in cyanide solution and giving a short period of agitation. Treatment was described by A. Dorfman in 1917, Bulletin of Canadian Mining Institute.

Production:

	Tons	Value	Rec.	Costs per Ton			Profit
	Milled	per Ton	%	Mine	Mill	Tot. Optg.	per Ton
(c).....	195,307	\$10.00	95.4	\$2.99	\$0.89	\$4.78	\$5.22
a).....	105,758	7.71	95.6	2.51	.96	4.28	3.09
b).....	85,654	8.87	94.4	3.72	1.18	6.02	2.5
.....	31,979	7.85	89.8
.....	14,500	7.00	75.0

(a) Year ending March 3. (b) 15 months, ending March 31. (c) 15 months ended June 30, 1917.

Mine development during the past 3 years has shown steady improvement. The lower levels so far as opened up have proven to be as productive as the upper levels, while lateral development on the upper levels has cut out orebodies. The results of the underground work, together with the acquisition of adjoining properties, assures a productive life to the company, and the making of another large producer for Porcupine.

REAR INDEPENDENCE MINES, LTD.

ONTARIO

Address: Boston Creek, Northern Ontario.

inc. Nov. 17, 1915, in Ont. Cap., \$500,000.

Property: in the Boston Creek district.

Dre: consists of white quartz, with some pyrite, galena and telluride, in a grained pillow lava and hornblende. On the hanging wall of the vein is a diarsenoporphry dike. Gold occurs with the minerals. A Nissen stamp and oil flotation plant were erected in 1916.

FRAY MINES, LTD.

ONTARIO

Office: 55 Yonge St., Toronto, Ont., Canada.

Officers: C. Millar, pres.; H. W. Drayton, v. p.; C. P. Charlebois, mgr.

inc. in Ont. Cap., \$1,500,000; shares \$1 par; 1,200,000 issued. Imperial Co., Toronto, transfer agent.

is a reorganization of the Rea Consolidated Gold Mines, Ltd.; shares exchangeable at the rate of 1½ shares in the new company for every share of Consolidated stock.

Statement for 1916 shows cash in banks \$13,312, less current liabilities.

Receipts in 1916 totaled \$31,757, of which \$31,050 was from sale of "retired" stock. Expenses were \$20,530, of which \$6,588 was spent in drilling, prospecting, and \$3,091 on plant.

Property: North ½ of lots 6 and 7, Concession III, about 320 acres, includes the Rea mine, at Porcupine, Ont., 1½ miles from Schumacher, nearest railroad station. Mine was operated in 1914 under lease by the Rea-Aurum Mng. Co. The veins are well-defined quartz fissures, strike and dip N. W.; ore-shoots occur as lenses in and along shear zones.

Development: 2-compartment vertical shaft, sunk 420' on vein, with levels at 200, 300 and 400'. On the 200' level 390' of drifting was done. A freshet is cut and displaced by a fault at depth of 240'; below the level the vein is not of the same character nor does it show ore. The orebody is cut by the fault was stopped out for about 300' in length, 4½' wide, and 200' in

depth and is said to have produced 19,500 tons of ore, averaging \$11 per ton.

In Nov., 1916, the diamond drill was down 900', and is said to have cut 12' of quartz showing free gold at 630' vertical. A crosscut on the 400' level, 985' from the shaft, opened 5' of ore in Aug., 1917.

Equipment: includes 10-stamp mill, which is to be considerably enlarged, Sullivan hoist, 6-drill compressor, pumps and boiler.

Production: mill treated 11,607 tons of ore yielding \$125,000 in bullion in 1915. It resumed treatment in May, 1917, but recent returns are not available.

Property reported on by C. H. Poirier, June, 1916.

An immense quantity of literature has been published about this mine, mostly in the interest of speculators. Evidently, the management is trying hard to make it a large producer.

In Nov. 1917, property was taken under control by the Crown Reserve company of Cobalt.

James Cooper, sec.-treas.; John Reid, asst. sec.-treas.; Samuel W. Cohen, Cobalt, Ont., gen. mgr.; M. W. Summerhayes, mgr.

Inc. in Oct., 1913. Cap., \$2,000,000; shares \$1 par. Crown Trust Co. Montreal, registrar and transfer agent. Traded on New York Curb.

Balance sheet of Dec. 31, 1916, showed net profit for the year \$270,490, making total with balance brought forward of \$542,445; dividends, 12%, absorbed \$240,000, other accounts \$25,360, leaving surplus of \$277,085.

Statement for half year ending June, 1917, shows income from bullion sales, \$245,031; expenses, \$120,852, leaving profit of \$124,180.

Dividends: 3% quarterly has been paid since 1914. Total to Aug., 1917, \$840,000. In August directors decided to suspend dividends on account of shortage of labor due to the war which prevented keeping development ahead of production.

Property: one patented claim, 40 acres, at Porcupine, Ont., shows quartz ore with free gold and sulphides in veins in schist. Orebody is 5' wide and 1,100' long. Vein strikes N. and has dip of 70° S.

Development: by 900' vertical shaft. New work in 1916 totaled 1,755' with 4,156' of diamond drilling. Ore mined by shrinkage stoping.

Ore reserves: management reports 97,000 tons of ore blocked out, valued at \$1,050,000.

run N. E.-S. W. and are vertical. Pay ore occurs in a shoot 900' long. Formation is an amygdaloidal basalt.

Development: by 600' shaft.

Ore reserves: in the Vipond, April 1, 1916, estimated at 68,145 tons in place, valued at \$8 per ton, and 22,850 tons already broken, but not pulled, averaging \$6.25 per ton, a total of 91,000 tons, valued at \$688,600.

Equipment: includes hoist, 2 compressors, hydro-electric and steam power, and 140-ton mill, which employs the continuous decantation process and is equipped with Buchanan crusher, 6' Hardinge ball mill, classifiers, Dorr agitators and Dorr thickeners. New 400-ton mill to be erected.

Production: treating 100 tons daily, Aug., 1917.

PRESTON EAST DOME MINES, LTD.

Inc. 1911, in Ont. Cap., \$3,000,000; shares \$1 par; 2,500,000 shares outstanding. Stock listed on New York Curb. Toronto General Trusts Corp'n. Toronto, transfer agents.

Property: 3 claims, patented, in Tisdale Twp., Porcupine, Ont., adjoining the Dome Mines, Ltd.

Ore: which occurs in narrow veins in quartz-porphry, carries coarse gold, associated with pyrite and zinc-blende. Company is idle, pending outcome of further development on the Dome Mines property. Secretary reports a small cash balance on hand.

R. A. P. SYNDICATE

ONTARIO

Succeeded, 1916, by the Boston Creek Gold Mines, Ltd., which see.

RAPP MINING DEVELOPMENT & PROSPECTING CO. ONTARIO

Address: Boston Creek, via Krugersdorf on the Ont. Northern Ry.

Property: the original "find" at Boston Creek shows a gold-bearing quartz vein on which shaft has been sunk.

Equipment: includes hoist, compressor, etc.

REEVES-DOBIE MINES, LTD.

Reported incorporated June, 1917, to develop the Reeves-Dobie group at Gowganda. **Cap., \$2,000,000.**

SCHUMACHER GOLD MINES, LTD.

ONTARIO

Head office: 85 Bay St., Toronto, Ont. **Mine office:** Schumacher, Porcupine district, Ont.

Officers: F. W. Schumacher, pres.; F. L. Culver, v. p.; with J. Y. Murdoch, H. E. Tremain and O. G. Manby, directors; F. A. Hammond, sec.; E. S. Davis, treas.; S. A. Wookey, mgr.

Inc. July 16, 1914, in Ontario. Cap., \$2,000,000; shares \$1 par; 1,700,000 issued, plus 100,000 sold July, 1917.

Balance sheet for year ended June 30, 1916, shows assets totaling \$1,557,532, including property \$1,393,970; plant and equipment, \$127,526; development \$121,237; current assets, \$49,799; and discount on shares \$165,000. Liabilities included current \$37,300; and surplus \$69,935.

Revenue from bullion, etc., was \$163,992, of which \$31,933 was profit.

Property: the Schumacher mine, adjoining the McIntyre on the W. for $\frac{1}{2}$ mile and the Acme of the Hollinger Consolidated for $\frac{3}{4}$ mile, Porcupine, Ont.

Development: surface showings are numerous and extensive. No. 1 vein is 1,150' long and from 50 to 60' wide. It is considered that the ore zone is 1,000' wide, running E. and W. Openings to date total 8,880' to 600' depth. Two orebodies cut on the 600' level by diamond-drill have not been mined yet.

Reserves: were estimated at 64,900 tons, worth \$6.11 per ton. The main

it was to be sunk to 1,000' in Sept., 1917, and No. 4 shaft, 1,400' E. of main shaft, to 400'.

Equipment: hoist, 25-drill compressor, boilers, shops, 150-ton plant containing Hardinge and tube mills, and 300-ton continuous decantation cyanide plant.

Production: Oct. 1, 1915, to June 30, 1916, 30,120 tons of ore yielding 949.

Early in July, 1917, property was closed for a period of 51 days to over-mine and plant. In September work was in full swing again.

Property apparently has a good future, judging by nearby mines.

VANITE GOLD MINES, LTD.

ONTARIO

Subsidiary of Kirkland Lake Proprietary. Chas. A. O'Connell, mgr., Kirkland Lake, Ont.

Inc. June, 1913, in Ont. **Cap.**, \$2,000,000.

Owns the Wright and Robbins claims adjoining the Tough-Oakes gold mine, Kirkland Lake. Work to date has been chiefly surface exploration.

Letters returned in 1917.

WALK-HUGHES GOLD MINES, LTD.

ONTARIO

Office: Bankers Trust Bldg., 14 Wall St., New York. **Mine office:** Kirkland Lake, Ont.

Officers: C. L. Denison, pres.; R. W. Pomeroy, v. p.; A. D. Crooks, H. C. Clarke, treas.; also directors. L. W. Ledyard, supt.

Inc. in Ontario. **Cap.**, \$2,000,000. **Bonds:** \$250,000.

Statement for year ended Aug. 31, 1916, showed an expenditure of \$52,455, \$156,485 total to that date. Current assets were \$96,987, and current liabilities \$4,484.

Property: 4 miles from Swastika, in Kirkland Lake district, Ont.

Development: by 600' shaft. At 400' the vein is said to be up to 30'

Exploration is reported as being entirely satisfactory.

Equipment: hoist, 10-drill compressor, and plant, including ball and tube mills, cyanidation by counter current decantation, and Oliver filter. Electricity is supplied by the Northern Ontario Light & Power Co. of Cobalt, and transmission line is 65 miles long.

Production: commenced March, 1917, and up to July the total was 5,121 tons of ore, yielding \$37,853. The ore varied from \$4.84 to \$9.66 per ton, and mill is treating 40 tons daily.

is one of the promising mines of the Kirkland Lake district.

ISCAMING & HUDSON BAY MINING CO., LTD.

ONTARIO

Address: New Liskeard, Ont., Can.

Officers: Geo. Taylor, pres.; A. A. McKelvie, v. p.; with T. McCamus, Dunkin, F. L. Bapst, W. H. Kinch, Chas. L. Sherrill, directors; F. L. Denison, sec.-treas.; D. A. Mutch, mgr.

Inc. July 29, 1903, in Ontario. **Cap.**, \$25,000; shares \$1 par; outstanding 25,000. Annual meeting, last Tuesday in October. Company is a holding corporation, whose operating company is the Hudson Bay Mines, Ltd., which in turn controls Dome Lake Mining & Milling Co., Ltd.

Balance sheet for year ending Aug. 31, 1916, shows: assets \$2,956,599, including, stock of Hudson Bay Mines, Ltd., 580,000 shares, \$2,900,000; \$2,113; Hudson Bay Mines, Ltd., account receivable, \$49,673; Gowanda, \$4,500; furniture, \$313. Liabilities include: outstanding capital stock, \$2,948,838; balance, loss and gain account, \$2,948,838.

For year ended Aug. 31, 1917, assets totaled \$2,853,180, including 556,000 shares of Hudson Bay Mines, \$2,780,000; accounts receivable, \$66,096; cash,

Liabilities include capital \$7,761, and balance at credit of loss and account \$2,945,419.

Dividends: during 1915-'16 one 300% dividend was paid, bringing total dividends paid since incorporation in 1903 to 25,000%, or \$1,940,250. Operations are described under titles of the subsidiary companies.

Inc. in Del. Cap., \$3,600,000; shares \$1 par; Registrar & Transfer Co., 32 Nassau St., New York, registrar and transfer office.

Owns all but 5 shares of stock of the Tommy Burns Gold Mines, Ltd. Balance sheet of Jan. 31, 1916, shows no other assets besides this stock and \$5,000 cash. Balance sheet of the same date for the Tommy Burns Gold Mines, Ltd., gives this stock a value of \$99,995 and shows \$4,000 cash and total development expense of \$5,645.

See Tommy Burns Gold Mines, Ltd.

Canadian Mining Manual considers this a too much advertised company. Its promoters deserve credit for gall and nerve, but nothing more.

TOUGH-OAKES GOLD MINES LTD. **ONTARIO**
 (Subsidiary of Kirkland Lake Proprietary, Ltd.) Office: 119 Finsbury Pavement, London, E. C., Eng. Mine office: Kirkland Lake, Ont.

Officers: G. R. Bonnard, chairman; R. Simpson, E. H. R. Trenow, directors. C. O. Connell, mine mgr.; H. J. Almond, sec.

Inc. in England, Jan., 1914. Cap., £500,000; shares £1; 230,007 outstanding. Organized to acquire 426,388 fully paid shares of company of same name registered in Canada, with a capital of \$3,000,000 (£600,000), in \$5 shares, together with an option to January 31, 1915, on a further 85,555 shares at 15s each and 85,555 at 20s. To September 30, 1915, £44,997 cash and £30,000 in fully paid shares had been paid on account of shares of which 66,781 had been delivered, and in the annual report, December 31, 1915, it was stated that legal proceedings were still in progress regarding delivery of further shares in the Canadian company. According to latest reports, litigation has not been terminated, but 280,555 more shares are in Court in England.

Cash on hand, Sept. 30, 1916, was \$5,860.

During 1915, two dividends of 2½% each were paid by the Canadian company and during 1916 four dividends of 2½% each.

For details of property see Tough-Oakes Mining Co., Ltd.

TOUGH-OAKES MINING CO., LTD. **ONTARIO**
 Office: Kirkland Lake, Ont.

Officers: C. A. Foster, pres.; Chas. O'Connell, mgr.

Inc. 1913, in Ontario. Cap., \$3,000,000.

Earnings in 1916 were \$707,114, of which \$260,068 was profit. Dividends absorbed \$260,750, and with other deductions, there was a loss of \$104,667.

Dividends: to July, 1917, total \$391,125.

Property: 185 acres in the Kirkland Lake district, Ont., being the principal gold producer in that region.

Development: by shafts to 500' depth. Reserves are estimated as worth \$1,000,000.

Ore: is 85% hard feldspar-porphry, the remainder quartz with some conglomerate and graywacke.

Equipment: complete, with 120-ton mill using ball and tube mills.

enter current decantation cyanidation. Cost of treatment is \$2.43 per ton. Compressor machines are employed underground.

Production: in 1916 was 33,171 oz. gold and 13,051 oz. silver, from 39,863 tons of ore and tailing. In June, 1917, output was \$2,000 daily.

Company employs 200 men, is the only dividend payer in the district, and has a good future under present management.

UNITED KIRKLAND GOLD MINES, LTD.

ONTARIO

Address: Kirkland, Ont.

Officers: R. T. Shillington, pres.; W. G. Ellis, v. p.; H. A. Day, sec.-y., with Levi Dodge and Ed. Kert, directors.

Inc. in Ontario. Cap., \$2,000,000; shares \$1 par; 1,000,000 issued.

Property: 135 acres near the Teck-Hughes mine, Kirkland Lake district. Geologic conditions are said to be similar to adjacent producers.

Development: by surface prospecting; No. 1 shaft being sunk in September, 1917.

Company may have fair prospects, but has received considerable advertising from prospectors.

ST DOME CONSOLIDATED MINES

ONTARIO

Office: Traders Bank Bldg., Toronto.

Officers: Sir Henry M. Pellatt, pres.; Hugh Blair, v. p.; C. H. Manaton, treas., with J. A. Murry, A. M. Hay, and G. A. Stimson, directors.

Inc. 1915, in Ontario to take over property and assets of the West Dome Gold Mining Co. Cap., 3,000,000 shares; \$1 par; 2,000,000 shares offered in exchange for 3,000,000 shares in the old company, leaving 1,000,000 in the treasury to provide funds for development. Annual meeting in April. Listed on New York Curb and in Toronto.

Property: 176 acres adjoining the Dome mine on the W. in Tisdale Twp., Porcupine, Ont. Idle from 1912 to 1915 after fire destroyed surface equipment worth \$75,000.

Development: by 70° incline shaft, 365' deep, sunk on a quartz vein that averages 5' in width and in some places 8'. Eight veins have been found by open drilling, which cost \$30,000, to a depth of 1,800'. Work is being concentrated at 300' depth. Reserves in Sept., 1917, were estimated as worth \$10,000, the ore valued at \$6.17 to \$8 per ton.

Equipment: includes 12-drill compressor, electric motors and transformers, pumps, drills, etc. A mill is now contemplated.

The Dome has a large probable tonnage and is expected to make a big

NIGHT-HARGRAVES MINING CO.

ONTARIO

Address: Kirkland Lake, Ont.

Development: by 2 main shafts, 300' deep. At 100' depth there is said to be 12' of \$30 gold ore. In October, 1917, the vein, where cut, at 300' depth, showed indications of making ore.

Ore: high-grade silver, containing arsenic and smaltite. Assays on samples average from 500 to 6,000 oz. silver per ton. Deposits occur at the foot of the Keewatin formation with a diabase sill. Pay ore is found in places.

Development: by vertical shaft. Greatest depth is 1,600' and total length of workings over 4 miles. Reserves total 15,734 tons. In the first half of 1917, new development aggregated 2,750' including 117' of shaft sinking. Drilling at the North Dome amounted to 1,700', finding ore at 1,000'. Work is suspended at this mine for a while owing to scarcity of

Diamond Drilling has proved that another contact occurs below the main shaft at a depth of about 2,000'. In April, 1917, the main shaft

reached 1,600' depth, and was connected with the Beaver adjoining, where over 1,000 oz. ore had been opened at the lower contact. In July, prospecting for ore under the diabase sill was still underway.

Equipment: includes a compressor for 20 drills, a Nordberg hoist with 6' drums and a capacity of 2,500', and 150-ton, 40-stamp mill, equipped with concentrating machinery. Concentrates averaged 953 oz. silver per ton in 1916. Plant treated 32,897 tons.

Total cost of production, 1916, was 26.4c per oz. silver.

Mill tailings amounting to 150,000 tons, averaging 4 oz. silver per ton, are held in reserve, and will probably be treated by flotation.

The Temiskaming was in poor physical and financial condition early in 1914. Since then a profit of \$943,044 has been made by present management.

About July, 1917, H. B. Wills, a broker and M. Morgenstern, a shareholder, are alleged to have accused the management of distorting reports to shareholders. As a result the mine was examined by Balmer Neilly of the Penn-Canadian mines. He estimated 11,572 tons of positive ore broken, about 4,000 tons less than official reserves. Shareholders were not satisfied and Douglas Mutch of the Hudson Bay mine was employed to examine the mine. He estimated 10,816 tons of all classes of ore, containing 393,800 oz. silver. Little new ore is being developed. Exploration at 1,600', or lower contact, does not warrant further expenditure. This report generally vindicates the management.

This controversy is unfortunate, for while the Temiskaming is not a large mine, it seems to be carefully handled, is highly profitable, and though it has no great future, it may pay dividends for some time to come.

THUNDER MINING CO., LTD.

ONTARIO

Address: Dominion Reduction Co., 42 Broadway, New York. Julius Cohen, mgr.; H. H. Lavery, supt.

Inc. Oct. 7, 1916, in Ontario. **Cap.**, \$2,000,000; shares \$1 par; 1,610,000 issued.

Property: the St. Anthony Gold Mining Co.'s ground at Sturgeon Lake, Ont., held jointly by the Dominion Reduction Co. (66%), Kerr Lake Mining Co. (22%) and Wettlaufer-Lorrain (12%).

Considerable development has been done by the above owners.

TRETHEWEY SILVER-COBALT MINE, LTD.

ONTARIO

Office: 1601 Royal Bank Bldg., Toronto. **Mine office:** Cobalt, Ont.

Officers: S. R. Wickett, pres.; J. B. Tudhope, v. p., with Gordon Taylor, J. B. Bickell, W. J. Sheppard and T. E. Leather, directors; L. J. Pashler, sec.-treas.

Inc. 1906, in Ontario. **Cap.**, \$2,000,000; shares \$1 par; non-assessable; outstanding, \$1,000,000. No bond issues. Annual meeting, February. Toronto General Trust Corporation, transfer office. C. E. Robin, registrar. Listed on New York Curb.

No financial statement for 1915 is available, operations having been suspended for most of the year, owing to the low price of silver. For the seven months ended Dec. 31, 1916, gross earnings were \$156,746 and operating expenses were \$92,083.

Dividends: total, 113% of outstanding capital stock. Last dividend of 5%, paid Dec., 1916.

Condensed balance sheet: Dec. 31, 1916 shows assets, \$1,117,358, with liabilities as follows: cap. stock, \$1,000,000; accounts payable, \$13,220; credit of rev., \$104,135.

Revenue in 1916 was \$156,747, of which \$155,771 was from silver; profit was \$64,664.

Property: one patented claim, 40 acres, Coleman township, Cobalt district; also owns control in Rochester Mines, Ltd., of Cobalt. Ore deposits of silver and cobalt and occur between conglomerate and diabase. Pay occurs in shoots. Average of all ore milled in 1916 gave 16.3 oz. silver.

Development: by vertical shaft, greatest depth about 230' and total area extent of workings, 24,970'. Mining costs, \$3.34 per ton.

Equipment: compressors, hoists and other necessary mining machinery includes a 30-stamp concentrating mill with a capacity of 100 tons daily. Total output to date, about 6,000,000 oz. silver.

Company spent \$35,956 during 1916, in prospecting other properties. Operates under lease the Rochester Mine at Cobalt, the Rochester to get 10% of the net profits.

A 100-ton flotation plant being erected in Sept., 1917, to treat slime dumps which contain 65,000 tons of 4.7 oz. material.

Production: in 1916, the mill treated 18,541 tons of 16.3 oz. ore at a cost of 1.59 per ton.

The Northern Custom Concentrators, Ltd., offered to buy the Trethewey property in 1916; the latter's directors recommended the sale, but the shareholders voted it down. As the Beaver, adjoining the Rochester, has ore at 1,600', the latter has additional speculative value. Trethewey would be very profitable while present high silver prices continue.

ROCHESTER MINES, LTD.

ONTARIO

Is a subsidiary of the La Rose Consolidated Mines Co., which see.

WETTLAUER-LORRAIN SILVER MINES, LTD.

ONTARIO

Office: 61 Broadway, N. Y. **Mine office:** South Lorrain, Ont.

Officers: H. Lockhart, Jr., pres.; D. M. Steindler, v. p.; E. H. Westlake, treas.; the foregoing, and T. L. Herrmann, J. H. Susmann, W. J. Avern, W. H. Clipsham, J. L. Mitchell and Herman Cook, directors. A. Kee, mgr.

Incorporated Nov., 1908, in Ontario. **Cap.:** \$1,500,000; \$1 par; non-assessable; outstanding, 1,416,590 shares. Annual meeting, fourth Monday in January. Transfer agents: Trust Co., New York, and Trust & Guarantee Co., Ltd., Toronto, Ontario; transfer offices; Security Transfer & Registrar Co., New York, registrar. Registered on New York Curb.

Operations ceased in 1913, owing to exhaustion of ore, and efforts to locate other bodies in the property practically abandoned. Treasury cash and investments \$129,153, which will be used for prospecting and purchase of other properties. Examination of other properties planned for 1917.

During 1916 the company's properties were operated under a lease with the Comfort Mining & Leasing Co., Ltd., and royalties amounting to approximately \$8,250 were earned. The lessee assumed all expenses, and effected some development, but no important discoveries were made. Lease expired on Feb. 17, 1917, the lessee not having availed itself of the privilege to renew. In September, the Pittsburg Lorrain company overtook the mine, and is to treat the low-grade dumps.

With respect to the option which was held by this company jointly with the Kerr Lake Mining Co., Ltd., on the properties of the St. Anthony Mining Co., Ltd., at Sturgeon Lake, Ontario, considerable exploration has gone on in conjunction with the Kerr Lake company, this company bearing one-third of the expense. The Wettlaufer decided to participate in the venture only to the extent of a one-ninth interest, and a new corporation was formed under the name of the Thunder Mining Co., Ltd., in which the Wettlaufer's share of the title to the property is now vested. Shares in this new corporation representing its interest have been received by the Wettlaufer.

MINING COMPANIES OF THE SUDBURY DISTRICT

BRITISH-AMERICAN NICKEL CORP., LTD.

ONTARIO

Office: 507 Royal Bank Bldg., Toronto, Ont. **Mine office:** Nickelton, via Sudbury, Ont.

Officers: J. H. Dunn, pres.; W. A. Carlyle, v. p.; W. H. Coade, sec-treas.; E. P. Mathewson, gen. mgr.; F. J. Brulè, chief engr.; E. Hibbert, supt. of mines; F. B. Prescott, supt. of const.; T. N. Hay, purch. agt.

Inc. Aug., 1913, Canada. Cap., \$20,000,000 common stock, all issued; \$6,000,000 first mortgage bonds, 6%, all issued; \$10,000,000, 6% debenture stock authorized, of which \$3,500,000 has been issued; \$14,000,000 stock and \$3,000,000 bonds held by British Government, out of \$29,500,000 issued.

Property: In the Sudbury nickel district, Ontario, the Corporation owns 17,590 acres, of which 12,590 acres are within a mineral bearing zone, the balance being non-mineral and required for smelter townsites, etc. Included in the above are the following mines: Murray, Whistle, Wild Cat, Jackson, Nickel Lake group, W. D. 16, Elsie, Gertrude, Victor, Lady Violet and Falconbridge. Lands contain 21 known orebodies, 7 of which have been developed. The company has spent \$850,000 on diamond drilling from 1907 to 1913.

The Whistle mine has been developed and is ready for production, but the Murray mine, having shown a much larger orebody has been selected as the property on which the first work is to be concentrated. In all, the company has developed by diamond drilling over 13,000,000 tons of ore, 9,000,000 of which is in the Murray mine, which is about 4 miles N. W. of the town of Sudbury.

The surface works contemplated at the Murray mine and now in course of construction will consist of electric hoist, rock crushing and sorting house with a capacity of 3,500 tons of ore per day, and electrically driven air compressors and the usual shops and change house. The corporation is now diamond drilling at the Murray mine to determine the extent of the orebody, with a view to larger operations than at first contemplated and the sinking of another shaft. At the Murray mine a 2,000' three-compartment shaft was sunk 700', but the mine was closed down in August, 1914. Work was resumed on this property under new management, August, 1916, and is now being pushed.

The plans made for the smelter in 1913 have been considerably improved and enlarged. The present design provides for the construction of 4 blast furnaces with hearths 50x300", 7 Pierce-Smith converters, 13x30', to be erected in a modern plant with full equipment of cranes, flues, stacks, bins, shops, power house and tramming system, all machinery to be operated by electricity. An electrolytic refinery, using the Hybinette process for the separation of copper and nickel and the precious metals from the matte, will be constructed adjacent to the smelter and will have a capacity of about 10,000 tons nickel per annum. The site chosen for the smelter and refinery is about one mile west of the Murray mine shaft. Preliminary work at the site is now underway.

It is the intention of the management to have all employees reside in the town of Sudbury, and cars or suburban trains will be provided for their transportation. The mines are connected with the Canadian Pacific, the Canadian Northern Ontario and the Algoma Eastern railroads.

ANADIAN COPPER CO.

ONTARIO

Subsidiary of International Nickel Co.

General office: 43 Exchange Place, New York. Mines and smelter site: Copper Cliff, Ontario. Mines in the Sudbury district.

Officers: A. D. Miles, pres.; F. S. Jordan, 1st v. p.; Andrew Squire, d v. p.; J. L. Ashley, sec.-treas.; A. D. Miles, W. A. Bostwick, F. S. Jordan, Andrew Squire and F. S. Whitcomb, directors; G. E. Sylvester, st. to the pres.; J. L. Agnew, gen. supt.; J. C. Nicholls, mine supt.; m. Kent, smelter supt.; T. W. Rawlins, metallurgist; Frank Ludlam, n. pur. agt.; E. Horton Jones, chief engr.

Inc. Jan. 6, 1886, in Ohio. Cap., \$2,500,000; shares \$100 par. Licensed Canada, by special act of Parliament. Controlled through entire stock ownership by International Nickel Co. The Canadian Copper Co. is the world's largest producer of copper nickel ores and copper nickel matte. Ore was discovered 1884, mining commenced 1886, and smelters were started in 1888.

Property: about 18,000 acres, mostly on the south range of the Sudbury nickel belt. The ore consists of a mixture of chalcopyrite, pyrrhotite and pentlandite in a norite gangue. The ore may be massive sulphides, as the Creighton mine, or disseminated sulphides scattered through the gangue, as in Crean Hill mine. For geology, see Eng. & Min. Jour., Vol. 19, No. 19.

Total ore production is now being obtained from Creighton and Crean Hill mines, distant from Copper Cliff by rail, respectively 8 and 19 miles.

The Creighton mine is developed by 3 incline shafts, the maximum vertical depth of hoisting at present being 1,000'. Open pit mining was the principal system until 1912, since which time underground stoping has been almost exclusively carried out, the mine being fully developed to the 12th and partly developed to the 16th level.

The new No. 3 shaft, which was put into commission in July, 1917, has 5 compartments, incline 55°. All ore is now hoisted through this shaft. No. 2 shaft is used for handling men and supplies only. No. 1 shaft being dismantled. Trimming is done by electric locomotives, with men on cars, on the main levels.

Primary crushing of ore is carried out underground at one main-level station. The crusher is the jaw type, 42"x30" and is set at 6". Shafts are equipped with electrically-driven hoists operating in balance, mechanical hoists being in use for quick loading of skips. The handling of men from the mine is provided for by separate hoists.

The opening of the new No. 3 shaft also marked the completion of elaborate new surface equipment, including combined headframe and rock-house, hoist house, change house, and office building, warehouse, truck shops, oil-storage, etc. All these buildings are of concrete, steel and brick, fireproof construction.

Secondary crushing is carried out, with screening and hand sorting on picking belts, in successive stages. Concrete bins of 3,000 tons capacity are situated under the picking belts. There is an extensive system of 17 tracks and sidings, with a hump for gravity switching of cars.

The main ore hoist is electric, and is operated on the Ilgner system, with a capacity for hoisting 9-ton skips at 2,500' per minute; present skips hold 7 tons. The mine is served with 4 compressors, 3 of 5,000 cu. ft. capacity, and one of 2,500 cu. ft., giving total capacity for about 175 drills. Production of ore from this mine is 3,500 tons per day, with 1,200 to 1,400 employees.

Crean Hill mine, about 2 miles east of Victoria mine, is opened by a 4-compartment shaft, 780' deep, the first 300' at an angle of 57° and the remainder at an angle of 71°. The daily production is about 450 tons of sorted ore with stoping in progress as present down to the 5th level.

Surface equipment consists of rock house for crushing and sorting ore, power house containing 3 compressors, suitable for operating 65 drills, workshops, warehouses and necessary housing facilities for employees.

No. 2 mine, situated at Copper Cliff, is developed to the 11th level, at a depth of 860', and produces about 200 tons of sorted ore per day. Surface equipment at No. 2 mine is similar to that at Crean Hill.

A quartz quarry about 15 miles south of Copper Cliff produces the necessary silica used for fluxing. This quarry is operated during the summer months, when the output is so arranged as to provide the necessary storage of crushed quartz for the winter's requirements.

All the mines are operated by electric power, which is transformed to 2,200 and 550 voltage. A subsidiary corporation of The International Nickel Co., known as the Huronian Co., has a hydro-electric installation at High Falls on the Spanish River, about 30 miles from Copper Cliff, utilizing an effective head of 85', which yields about 10,000 k.v.a. The current is transmitted at 35,000 volts.

Ore from the Crean Hill mine is sent to the smelter; ore from the Creighton mine goes mostly to the roast yard about 13 miles from Copper Cliff, and in part to the smelter. The yard is about 7,500' long and is served by four tracks. It contains space for 122 roast beds. Fuel is wood. The ore is re-loaded from the beds by steam shovel and taken to the smelter in 50-ton drop-bottom steel cars, from which it is dumped into bins 30'x600'x23' deep.

The blast furnace building contains 7 furnaces, 5 of which are 4' 2" x 17', one 4' 2" x 21' 3", and one 4' 2" x 25' 6". Four of the furnaces are now 1' deep, a 3' 6" jacket having been inserted between the upper and lower tiers to lower the settlers sufficiently to receive molten converter slag. No. 5 furnace is under construction.

The jackets, except the top row, are of cast iron with a grid of cooling pipes cast in. The lower jackets are 8' 6" in height and carry 2 tuyeres 6" in diam.; there are 8 jackets on each side, thus making 16 tuyeres at 12¾ centers on each side of a 17' furnace. The center line of tuyeres is 3' 10" above the sole plate. The upper jackets of steel plate are 6' in height. The furnace building is served by two 50-ton and one 25-ton cranes.

The charge is a mixture of raw and roasted ores, which as a rule, is self-fluxing, but which can be adjusted as required, by the admixture of quartz or limestone. About 11.5% coke is used on the charge. The slag carries about 32.5% silica and is sent to the dump in standard gauge slag pots of 225 cu. ft. capacity. Matte from the blast furnace is taken to the converter building, which is parallel to the blast furnace building, and 60' away. This matte averages 24% CuNi.

The reverberatory department contains a fine grinding plant, 4 Wedge roasters and 2 reverberatories, one working. This department is served by a high level track 70' above the main yard, and has steel storage bins of 126,000 cu. ft. capacity for ore and fuel. The ore is ground in ball mills and roasted in Wedge furnaces. These are 22' 6" diameter, have 7 roasting hearths and 1 drying hearth, producing calcines containing 8% sulphur. The reverberatory charge consists of a mixture of calcines, green ore fines

l flue dust. Ore is fed along the side and end walls of the reverberatory m a continuous trough shaped bin, served by a charge car, and drops to the furnace through feed pipes in such a manner that the side walls continually protected by a blanket of fresh charge. The furnace smelts out 500 tons charge in 24 hours. It burns pulverized coal, which is shed so that about 75% will pass 200 mesh and is blown in by fan st; about 100 tons a day is consumed, and has proved entirely satisfactory. The slag is skimmed from the front of the furnace into 225 cu. ft. n pots. Matte is tapped from the front near the slag skimming door. averages 23% CuNi.

The matte from both departments goes to the converter building, ick is served by two 50-ton cranes of 55' 8" span with 20-ton auxiliary st. Matte is charged into 5 basic converters of the horizontal type :10' diam., using about 8,500 cu. ft. free air per min. A mixture of quartz mine rock which carries a little ore is used for flux.

The operation is conducted exactly as in the conversion of copper te, but is stopped as soon as the iron is eliminated. Final product con- is 24% copper, 55% nickel, and 0.5% iron. Slag contains 28% silica, . 4% copper-nickel, most of which is recovered by passage through st furnace settlers. Matte is cast into iron molds, broken up, and sent the refinery of The International Nickel Co., at Bayonne, N. J. On mpletion of The International company's Canadian refinery, now under struction at Port Colborne, Ontario, on Lake Erie, matte will be sent re for treatment.

Production: of the Canadian Copper Co., in 1916 was approximately 00 tons of finished matte. Company employs directly about 3,500 men.

NADIAN MINING CORPORATION, LTD. ONTARIO

Liquidator: V. Layman, Balfour House, Finsbury Pavement, London, C. England.

* Equal to \$2.68 per share on \$41,834,600 common stock (par value \$25), against \$3.64 for six months to Sept. 30, 1916.

The net quick assets, or excess of current assets over current liabilities, amounted to \$12,063,584 on Dec. 31, 1917, as compared with \$8,531,147 on Mar. 31, 1916.

Dividend Earnings: regular dividends of 6% have been paid upon preferred stock since 1906, and varying rates have been paid on common since 1909. Stockholders received 10½% in 1913, 10% in 1914, 10% stock and 17½% cash in 1915; in 1916, 8%, in 1917, 24% paid June 1. Present rate is 24% per annum, payable quarterly, M. J. S. and D. I. Since the expansion in 1912, the International Nickel Co.'s earnings have averaged about 12% yearly for its common shares. Actual percentages are 11.79% for year ending Mar. 31, 1913; 11.2% in 1914; 13.32% in 1915; 32.2% in 1916 and 37.1% in 1917. The large increase in earnings does not seem to be entirely due to war conditions.

The copper-nickel properties consist of mines with an estimated developed reserve of 20,000,000 tons, smelting plants at Copper Cliff, Canada, andling 3,500 tons daily, separating and refining plants at Constable Hook and Camden, N. J. Company also absorbed the Orford Co., Anglo-American Iron Co., Vermillion Mining Co., American Nickel Works, Nickel Corporation of Great Britain, and the Société Minière Calédonienne.

Production: company is said to control the world's production of nickel, which is 60,000,000 to 70,000,000 lbs. per year, selling at present 50c. to 55c. per lb. It also produces about 35,000,000 lbs. copper annually, and 1916-17 profits from this source are larger than normal, though its price has remained practically stationary.

With reference to this, it may be said that shareholders began to chafe under the price-level (35c. per lb.) of its nickel, and asked directors to raise the selling price, they having adopted the policy of not increasing the price to customers. In March, 1917, the directors acquiesced, and made the price 40c.

War requirements for nickel have been less of a factor than generally supposed, the big expansion having taken place in developing new uses for the metal. Company has adopted policy of increasing earnings through development of new uses for the product. When the war is over International Nickel ought to retain most, if not all of its present large earning power. The number of shareholders increased from 7,145 in 1915-16 to 252 in 1916-17.

Company's mines are described under Canadian Copper Co.

At Port Colborne, Ontario, near the Lake Erie entrance of the Welland Canal, the International Nickel Co. is erecting a refinery which will cost \$5,000,000. To Mar. 31, 1917, the sum of \$1,046,740 had been spent on it. Completion is set for the end of 1917. The initial capacity is to be 1,000,000 lbs. of nickel.

One of the reasons for building a new plant in Canada, instead of enlarging the existing refinery at Bayonne, N. J., was on account of the agitation started in Canada soon after the war commenced. It was stated that nickel, produced from Canadian mines refined in the United States, was finding its way to Germany, also that enemy shareholders were interested in International Nickel. These accusations were apparently groundless, but a great deal of politics was made of the debate

in Canada. (A Nickel Commission was appointed by the Canadian Government, the report being handed in early in 1917. It discussed the fining of nickel in Canada, ore reserves of the Sudbury area—70,000,000 tons of proved ore—New Caledonian deposits, and those of Norway, etc. The cost of producing nickel from New Caledonian ore was 19c. per lb., before the war.) Eventually, after considering the whole question, International Nickel acquired the new site in August, 1916, and rushed completion of the new refinery. International has a strong rival in the nickel field, namely, the British-America Nickel Corporation, Ltd., (which see) so erecting a refinery in Ontario.

Company is subject to war taxes in both countries, but is expected to earn dividend requirements despite this.

INTERNATIONAL NICKEL CO., LTD.

ONTARIO

Secretary's address and sales office: D. O. Evans, 39 Victoria St., London, S. W., England. **Mine office:** Conniston, Ontario. **Works office:** Clych, Glamorganshire, Wales.

Directors: R. L. Mond, chairman; Bernhard Mohr, gen. mgr.; E. J.iffitt, London. W. A. Noble, Sir Robert Hadfield, Emile S. Mond, Dr. urf, London. Robt. Mathias and Sir Edmund Walker. C. V. Corless,

Canadian mgr.; Oliver Hall, mines supt.; A. Sharp, supt. Garson mine.

Inc. Sept. 20, 1900, in Great Britain. **Cap.**, £600,000, increased July, 1908, to £850,000; in £500,000 cumulative 7% preferred shares, £5 par; £300,000 ordinary shares, £1 par, and £50,000 deferred shares, £1 par; total issued capital, £750,000. Reorganized July 22, 1914, with authorized capital of £2,400,000, in shares of £1; 500,000 being in 7% cumulative preferred shares; 1,000,000 in 7% non-cumulative preferred shares, and 900,000 ordinary shares. All except £520,000 of the non-cumulative shares has been subscribed and called up; £375,000 5% first mortgage debenture stock and £500,000 6% redeemable debenture stock has been issued. For fiscal year, 1916, profits were £322,589.

Dividends: 7% has been paid regularly on preferred shares; dividends on ordinary shares: 6% in 1905; 10% in 1906; 12½% in 1907; 15% in 1908, 1909 and 1910; 16¼% in 1911 and 1912; 21¼% in 1913; 35% in 1914; 20% in 1915 and 1916, on new capital. Dividends on deferred shares were 18% in 1906; 33% in 1907; 48% in 1908, 1909 and 1910; 55% in 1911 and 1912; 85% in 1913. Reserve fund, £150,000. Cash balance, April, 1916, £22,321. Net profits, £111,320 in 1909; £114,107 in 1910; £140,803 in 1911; £146,650 in 1912; £191,047 in 1913; £248,088 in 1914; £285,282 in 1915, and £306,460 in 1916.

Property: about 14,000 acres in the Sudbury district and mining rights on about 12,000 acres near to and including Bruce Mines. Mines in the Sudbury district include Levack, Garson, Victoria, Worthington, Froot Extension, Kirkwood and North Star. Only the first four named worked at present. Mines in the Bruce Mines area consist of several openings grouped under the general name of Bruce Mines. The former group produces copper-nickel ore and the latter quartz-copper ore, used as flux in the converters. For geology of the Sudbury nickel-copper deposits see Eng. & Min. Jour., Vol. 101, No. 19, and Vol. 102, No. 2.

The Levack mine, purchased in 1913, is being opened up by a 5-compartment shaft 400' deep.

Garson mine has a 3-compartment 800' shaft. Present deepest level is at 600'. Extraction to date has been almost exclusively from the upper 400', where a large tonnage still remains to be extracted.

Victoria mine is one of the deepest mines in Canada. The bottom level is over 2,300' vertically from the shaft collar, and the 3-compartment shaft, the sinking of which is nearly continuous, is now over 2,400' deep.

Worthington mine, now about 500' deep, produces a mixture of very high-grade ore and rock, which is subjected to close sorting. The orebody is a brecciated basic dike and not typical of the Sudbury deposits. For geology see Economic Geology, Vol. X, No. 6. The Worthington is developed by a 3-compartment shaft.

The purchasing and opening of the Levack mine, 1913, caused the closing down of several properties, including Froot Extension mine, which had been opened up to a depth of 1,000' by a 4-compartment shaft.

The copper-nickel ratio of the ore from these mines differs quite widely, but the production from the various mines is usually so arranged as to give close to an evenly balanced copper-nickel matte.

The old smelter, near the mines, has been abandoned, and a new 1,200-ton smelter, erected 1912, at Conniston, Ont., was blown in May 15, 1913.

Equipment: includes 2 Allis-Chalmers water-jacketed copper blast furnaces, 50"x240", and 2 Pierce-Smith basic converters, with stells 10' to 12" and 25' 10" long. Ores are smelted and bessemerized in a copper-nickel matte averaging about 82% copper and nickel, which is shipped to the company's refinery at Clydach, in Swansea Valley, South Wales.

metals are separated and the nickel is refined by the Mond Process. The copper-nickel matte from the smelter is dead-roasted and treated with dilute sulphuric acid, which permits the extraction of about 65% of the copper and 2% of the nickel. The residue, after drying, assays 45% nickel, and is treated in charges of 500 kgs. with water-gas, in a reaction tower, at a temperature of about 300° C. This tower has shelves and the ore is moved from shelf to shelf by automatic rakes, the lower shelves being cooled. After treatment in the reduction tower the charge is transferred to a volatilizing tower and treated with carbon monoxide at a temperature of about 100° C. The residue therefrom is returned to the reaction tower and the charge goes forward and back between the 2 towers every 10 to 15 days, and when 60% of the nickel has been volatilized, as nickel carbonyl, the residue of the charge is returned to the roasting furnace. The nickel carbonyl is treated in a decomposing apparatus, wherein the metal is recovered in granules, assaying 99.4 to 99.8% nickel, the copper is turned out as bluestone.

All the Canadian plants are up-to-date and operated electrically by power from 3 hydro-electric plants, 2 of which are the property of the Canadian Power Co., a subsidiary of the Mond Nickel Co. The growth of the company's operations within the past 5 years has been phenomenal.

The mine output for 1911 was 163,352 tons, 117,658 tons in 1912 and 138 tons in 1915.

Production is not reported by the company, but unofficial estimates two years ago placed the annual output at about 4,000,000 lbs. fine copper and 1,000 lbs. nickel, with a possible maximum production of 10,000,000 lbs. copper and 15,000,000 lbs. nickel.

QUEBEC

ALBERT COPPER CO.

Office: 25 Broad St., New York. Mine office: Capelton, Sherbrooke, Que. Was organized to take over the mining interests of the Nichols Copper Co. in Quebec and is controlled by that company.

The Albert mine, 640 acres at Capelton, carries lenses of chalcopyrite pyrite, assaying up to 5% copper and 38% sulphur. Development is in 3 shafts, 4 under 500' depth each, with one of 800' and one of 2,000', mine having upwards of 5 miles of workings.

The works at the Albert mine include a 150-ton concentrator, a washer and an acid plant. The chemical works, completed, 1907, at a cost of about \$1,000,000, with capacity of 150 tons of commercial sulphuric acid, are among the most complete in existence manufacturing sulphuric, hydrochloric and hydrofluoric acids and glauber salts. The cinder remaining from the burning of cupriferous pyrite for sulphuric acid is smelted in a blast furnace producing 1 to 2 tons daily of matte assaying up to 20% copper, with small silver contents, shipped to the Laurel Hill works for refining, and copper production is estimated at 350,000 lbs. yearly.

ALBERT MOUNTAIN COPPER CO.

A close corporation owning an old copper mine near the Eustis mine. Vol. XII. In Ascot township, Sherbrooke Co., Que.

ADRIAN WOOD MOLYBDENITE CO.

Address: Hafvey Fitzsimmons, mgr., 14 Metcalf St., Ottawa. H. E. Wood, Denver, Colo., part-owner.

Property: near Quyon, Pontiac Co., Que.

Development: open cuts opened molybdenite in reddish gneissoid schists. The ore is principally finely disseminated in flakes of 1/2" or less. Not hand sorted.

QUEBEC

QUEBEC

QUEBEC

Equipment: includes 60 and 150-ton mills, using crushers, dryers, ball mills and Wood flotation machines. Ore containing as low as 1% MoS₂ gives 75 to 80% recovery.

Production: from March, 1916 to March, 1917, over 5,500 tons of 2% ore had been mined. At present over 250 tons of 2½% ore is being treated weekly.

EAST CANADA SMELTING CO., LTD.

QUEBEC

See Weedon Mining Co., Ltd.

EUSTIS MINING CO.

QUEBEC

Office: Eustis, Sherbrooke Co., Quebec, Can.

Officers: W. E. C. Eustis, 131 State St., Boston, Mass., pres., sec.-treas.; F. M. Passow, supt.

Inc. 1878, in Quebec, and operated as a close corporation.

Property: near Sherbrooke, carries 4 parallel interbedded lenses of cupriferous pyrite, in talcose schist cossed by diorite dikes, the cupriferous belt being traceable for 2 miles. The orebody is worked through an inclined shaft to a depth of about 3,450' on the incline, with an average dip of 45°. Lenses are 3 to 60' in width, averaging about 2.5% copper, up to 60 cts. per ton in combined gold and silver values, and 40% sulphur, but with considerable variations, ore occasionally carrying up to 50% sulphur. Footwall vein, or lens 4 to 20' thick, 50 to 100' long. Main vein 20 to 60' thick, 100 to 120' long. Shaft vein, 3 to 15' thick, 50 to 100' long. No. 1 vein 2 to 25' thick, 20 to 120' long. Footwall and shaft lenses richest in copper, averaging 4 to 8% while others carry 2½% copper with 42 to 48% sulphur. Property is primarily a producer of pyrite, for the sulphuric acid trade.

Development: the mine, opened 1870, and producing for 30 years, has a 7x7' crosscut tunnel, 1,000' long and a 3,000' shaft, sunk at 20 to 45°, with double skip tracks. The mine is dry, most of the water coming from surface and the upper stopes, but the limited quantity of mine water is very acid, and contains copper in solution, which is precipitated as cement copper on scrap iron as it leaves the tunnel, through which it is conducted by a launder. Mine is served by the Boston & Maine railway. About 150 men are employed in the mine and mill.

There is a 400-k.w. hydro-electric power plant on the Coaticook river, 2 miles from the mine. The main plant has 2 alternators mounted on the same shaft and run in parallel, driven by turbine water wheels. There is one 375- k.w. generator direct-connected to the water wheels running at 450 r.p.m. The power is generated at 2,200 volts. The electric efficiency is 90 to 93% and efficiency of water wheels is 60 to 80%, according to load.

Equipment: includes a 150-h.p. Westinghouse electric hoist, good for 3,500' depth, and two 8-drill, 2-stage, Rand air compressors, 1 run by steam and 1 by electricity.

The 300-ton mill, three-fourths mile from the mine, is connected therewith by an electric tram, equipped with three 3-ton cars. The mill has a 150-h.p. electric equipment. Ore is dumped onto grizzlies, coarse ore falling to the sorting floors and conveyor belts, where hand-picked and cobbled. Ore sufficiently rich for shipping is reduced to 2½" size, and concentrated ore is reduced to ¾" size, by crushers and ball mills, going thence to an 8-compartment classifier with spigots discharging to 8 Wilfley tables. Middlings from coarsest tables are returned to ball mills and from finer tables, to the re-crushing department.

Both the power plant and mill were burned down in 1916, but have been rebuilt.

Selected ore and concentrates are shipped to various acid works, and

were burned for sulphur, the cupriferous cinder remaining then being shipped to the Norfolk smelter, where treated for copper. Production is about 30,000 tons of cupriferous pyrite yearly.

NORTON, A. O.

QUEBEC

Office: Coaticook, Quebec. A. O. Norton, owner and mgr.; W. Jenkin, in charge.

Property: 600 acres, freehold, except 150 acres, title covering only mining rights, includes the Suffield, King, Silver Star, and Marrington mines, in Ascot township, 7 miles from Sherbrooke, with railroads within miles on either side.

The mines show 3 lenses, of 8 to 20' width, 1 proven to depth of 300', estimated by owner to average 4 to 5% copper, from a trace to 10% zinc, 5 to 25 oz. silver, and \$1.50 gold per ton. The King mine has a 55' incline shaft with about 500' of workings. The Suffield mine has a 350' shaft with about 1,200' of workings, showing ore with an average of about 4% copper, and combined gold and silver values of \$2 to \$12 per ton, with about 10% sulphur. The Marrington mine, 100 acres, 1½ miles from Suffield, and about 1 mile from Capelton, is opened by a 260' shaft with about 300' of drifts, developing a lens about 75' wide at surface, said to carry depth 5 to 7' of good ore. Little development work has been done since 1914, and no shipments have been made from the property.

Equipment: includes a steam plant, 100-h.p. boiler, a 50-h.p. double cylinder steam hoist and a straight-line air compressor. Property considered promising.

DEEDON MINING CO., LTD.

QUEBEC

Office: 263 St. James St., Montreal. **Shipping office:** 11 Broadway, New York. L. D. Adams, gen. mgr.

In 1915 acquired the property of the East Canada Smelting Co., at Deedon from the Precious Metals Corporation of New York. Controls the Zinc Co., Ltd., which operates a lead and zinc mine at Notre Dame des Anges, Portneuf Co., Quebec; also the Canadian Zinc Products Co., Ltd., which operates a zinc oxide plant at Notre Dame des Anges.

Property: 375 acres in Wolff county, Province of Quebec. Has produced 260,000 tons of cupriferous pyrite ore, mined for sulphur as well as copper in the last 6 years. Average assay is 3.3% copper, 40.8% sulphur, 1.5% lead, 0.77% zinc, 0.5 oz. silver, and 20c. gold per ton. Market value is about \$9 per ton.

Geology: ore occurs in two lenses in schist. Main orebody is 570' long and from 15 to 45' wide, with dip of 45° N. E., and course N. 37° E.

Development: by two shafts 700 and 900' deep, and 9 levels driven to the limits of the ore.

Reserves: on January 1, 1917, were about 200,000 tons.

Equipment: 2 air hoists (60-h.p.), one 150-h.p. electric hoist, 2 compressors, (one electrically driven, 1,600 cu. ft. capacity), and all necessary buildings, shops, etc.

The zinc mine is developed by one 300' shaft. It is equipped with a flotation concentrating mill using tables, flotation unit, and magnetic separator. Produces zinc concentrates containing 42% zinc and lead concentrates averaging 60% lead, 65 oz. silver, and \$13 gold per ton.

Transportation: at copper mine 3½ miles of aerial tram to railroad, costing 7c. per ton.

At zinc mine there is 4 miles of teaming. Mining costs at copper mine in 1916, including development and all overhead charges were \$2 per ton. Competitive cost at zinc mine for concentrates, f.o.b. cars, was \$6 per ton of dry ore.

Production of copper in 1916, 5,640,000 lbs.

SASKATCHEWAN

BEAVER LAKE GOLD MNG. CO.

SASKATCHEWAN

Prince Albert, Saskatchewan, Canada. Frank Kisbey, sec.

Property: in April, 1914, the company acquired 32 claims of the Prince Albert Expl'n Co., located on the north shore of Beaver Lake, 118 miles from Le Pas, the nearest R. R. point, is on the Can. Northern Ry., out of Winnipeg.

Development: has been done on the Prince Albert claim where, at the contact of the Huronian schist and Laurentine diorite, a 48' quartz outcrop can be traced for a considerable distance. A 70' incline shaft, sunk on the vein, is said to show a 4 to 5' vein averaging \$16 in gold and 2 oz. silver per ton. Company was planning development work at last accounts.

YUKON TERRITORY

ATLAS MINING CO.

YUKON

Presumably dead as in Feb., 1916, company holdings were taken over by the Yukon Copper Co., Ltd., a Canadian company, which see.

CANADIAN KLONDYKE MINING CO., LTD.

YUKON

Is a subsidiary of the Consolidated Goldfields of South Africa, Ltd.

Address: Dawson, Yukon Territory.

Officers: Jos. W. Boyle, pres.-mgr.; J. W. Boyle, Jr., v.p.- acting mgr. with J. J. Boyle, F. A. Tilton and Jas. McDougall, directors. John Kennelley, Jr., sec.; L. H. Titus, gen. supt.; Allan McIntosh, dredge supt.

Inc. March 5, 1913, in Canada. **Cap.**, \$3,000,000; shares \$5 par; \$6,000,000 issued. Bonds authorized, \$1,798,000; all outstanding. Annual meeting 1st Tuesday after 2nd Monday in May.

Property: 151 placer claims and Hydraulic Lease No. 18, about 26,000 acres, in the Klondyke Valley, with total production to date of \$11,000,000 and estimated reserves of 115,000,000 cu. yds.

Company operates 4 bucket dredges with aggregate capacity of 40,000 cu. yds. per day. During 1916, the dredges handled 18,302,610 cu. yds.

Equipment: includes 10,000-h.p. hydro-electric power plant and six steam shovels.

Management plans installing oxy-acetylene plant, electric furnace and additional shop equipment.

On Nov. 22, 1917, the Granville Mining Co. (which see), the bond-holding company, applied at Dawson for a receiver for the Canadian Klondyke Mining and Canadian Klondyke Power companies.

GRAFTER COPPER MINING CO.

YUKON

Geo. Armstrong, E. A. Dixon, J. P. Whitney, Robert Law, and W. C. Pedlaw, owners.

Property: 1 claim, crown-granted, 50 acres, elevation 3,822', 1 mile N. of the Arctic Chief, near White Horse, Yukon, Can., has a 7-mile wagon road to the terminus of the White Pass & Yukon R. R.

Mine lies in an area of alternating bands of limestone and diorite, with aplitic cross dikes. **Ore:** consists of magnetite containing bornite and chalcopyrite, with a garnet-augite gangue. Ore is estimated to carry 8% copper and \$3 gold per ton. Mine opened 1900, but idle until 1905. Has a shaft of about 90' depth, with 150' of workings, including some stopes nearly to the surface.

Equipment: includes steam power. Estimated 200 tons of high-grade copper ore on dumps. Operations resumed and mine unwatered in 1915. Has shipped over 15,000 tons of 6% copper ore to Tacoma smelter since then.

GRANVILLE MINING CO., LTD.**YUKON**

Head office: 8 Old Jewry, London, E. C., England. American office: Broadway, New York.

Officers: F. A. Govett (chairman), M. H. Orr-Ewing, A. C. Beatty, L. Sapte, W. Trask, Lord Brabourne, A. N. C. Treadgold, H. C. Dover, J. S. Wetzlow, directors; J. Bradshaw, sec.

Inc. Aug. 11, 1911, in England. Cap., £1,500,000; shares £1 par; 10,000 shares outstanding.

Acquired in 1911 from A. N. C. Treadgold, placer gold properties in Yukon, for £206,000 cash, £100,000 debentures, and 1,200,000 shares. Part of the properties were sold to the Canadian Klondyke Mining Co. (which see), which guarantees the Granville company a minimum income of \$240,000 per annum up to Feb. 28, 1928, on stock and shares held by the Granville.

Assets consist of \$1,646,000 6% convertible debentures and \$2,175,000 shares (out of \$8,000,000) in the Canadian Klondyke (bonds are convertible at par; if converted, Granville holds 49% of the Canadian Klondyke); \$1,200,000 6% debentures (out of \$1,500,000) in Canadian Klondyke Power Co., Ltd. (a large electric power producer in the Yukon); and 15,000 shares in the North-West Corporation, Ltd.

Apparently the Granville company was behind in meeting its obligations, as in April, 1917, a receiver was appointed by the British Court, on the motion of the Gold Fields American Development Co. (which see), a holding company that acquired the American interests of the Consolidated Gold Fields of South Africa, Ltd. Granville raised funds from the Gold Fields American for exploitation. The receivership was asked to protect secured creditors from possible actions by unsecured local creditors of the Canadian Klondyke Mining and Power companies, and to prevent forfeiture of the North West company's claims. Under the trust deed the trustees should have had deposited with them bonds and securities of the Canadian companies, but Granville had failed to do this and interest payment was in default. The general aspect is complex and some reorganization must be arranged.

On Nov. 22, 1917, the Granville Mining Co., the bondholders, applied to court at Dawson for a receiver for the Canadian Klondyke Mining and Canadian Klondyke Power Companies, alleging failure to issue bonds for a sum of \$1,350,000, or to pay interest thereon, etc. The Granville company will stop Canadian Klondyke's operations, but wants an adjustment and steady payments of obligations.

YUKON COPPER CO., LTD.**YUKON**

Address: White Horse, Y. T.

Officers: Dr. Alfred Thompson, pres.; W. D. Greenough, v. p., White Horse, Y. T.; Jas. Smilley, sec.-treas., Ottawa, Can.

Inc. Nov., 1915, in Canada. Cap., \$200,000; shares \$100 par; all issued. Company took over holdings of the Atlas Mining Co.

Property: 10 claims, 720 acres, in the valley of Porter creek, 4 to 7 miles east of White Horse, include the Pueblo group of 420 acres, and the Carlisle group of 300 acres.

The Pueblo concession, located 1899, was sold to the White Horse Copper Co. That company immediately bonded it to the British American Corp'n, who relinquished bond in 1901, and property reverted to locator, E. Porter. In 1906, the Yukon Pueblo Mines Co. of Spokane, bought the concession, transferring it in 1911 to the Atlas Mining Co., controlled by Greenough Bros. of Spokane.

Geology: the Pueblo orebody is an irregular shaped mass 400' long

and 200' wide, running N. W.-S. E. and raking north. It is enclosed in crystalline limestone, near a granite contact, and apparently the limestone replaced by the orebody was cut by granite dikes, traces of which remain. There also is a porphyry dike of 3 to 4' width, crossing the orebody, decomposed and showing copper stains. Ore is essentially cupriferous hematite, varying in texture from compact to coarse, with some alteration, and with irregular silicification. The copper sulphides in the hematite have been largely altered into carbonates, oxides and silicates, only a little chalcopyrite having been found to depth of 100'. Principal ore mineral is malachite, disseminated in hematite, with considerable chrysocolla, and some cuprite occurring in veinlets and small masses. Ore ranges from 1 to 10% in copper, and 700 tons of roughly sorted ore sent to the Crofton smelter, carried 5% copper, 1.25 to 2 oz. silver and some gold per ton.

Development: by a 400' shaft and 28 prospect diamond drill-holes, totaling 3,796'. Employed 100 men at last accounts.

The Carlisle mine, 2 miles from the Pueblo, has a vein 15' wide, with a high-grade paystreak up to 4' in width of bornite and chalcopyrite. Developed by shafts of 50' and 137'.

Equipment: includes steam power, a 10-drill air compressor and necessary mine buildings. Mine has a spur line to the White Pass & Yukon railway, built 1910.

Production: 1914, shipped to the Tacoma smelter, was 250 tons of ore per day from the Pueblo mine. Property considered promising. Nothing recent available.

YUKON GOLD CO.

See same title under United States section.

NEWFOUNDLAND

ANGLO-NEWFOUNDLAND DEV. CO.

NEWFOUNDLAND

Address: Grand Falls, Newfoundland. Mining properties transferred to Terra Nova Properties, Ltd., which see.

BUCHAN'S MINE

NEWFOUNDLAND

P. O.: Millerton, N. F. Wm. Scott, supt.

Property is owned by the Terra Nova Properties, Ltd., and described under that name. This company is a subsidiary of the Anglo-Newfoundland Development Co., which has a timber and mineral concession over about a million acres in the center of the island, near Grand Falls and has built largest pulp paper plant in the world, and mining is merely a side issue.

Idle.

GREAT NORTHERN COPPER CO.

NEWFOUNDLAND

Idle. **Office:** 11 Broadway, New York City. **Mine office:** Twillingate, Newfoundland.

Officers: H. R. Warnock, pres.; H. G. Terry, v. p.; A. E. Randall, sec.; Obadiah Hodder, treas. and gen. mgr.; preceding officers, W. L. George and W. J. Devison, directors.

Inc. 1905. **Cap.**, \$100,000; shares \$1 par. Company was combined with Notre Dame Copper Co. and Hodder Supply Co. of Pittsburg, in 1912. Reorganized Jan., 1917, and inc. in South Dakota with cap. of \$5,000,000; shares \$1 par; 3,010,135 issued.

Lands: 526 acres, freehold, on Twillingate, North Island, on the eastern coast of Newfoundland, in the vicinity of the Tilt Cove mine. Company claims a vein 163' wide, uncovered for one-half mile and tested to depth of 200', carrying chalcopyrite, averaging 2.9% copper. Management

estimates ore reserves of 9,000,000 tons with 500,000 tons blocked out.

Ores: of this district, as developed elsewhere, average about 4% copper, 40% sulphur and \$1.50 gold per ton, and are somewhat lumpy, with sphalerite frequently found in connection with the chalcopyrite. Mine is worked opencast.

Equipment: includes steam power and a hoist, with a tram line and 1,000-ton ore bins on the sea. Has 1,500-ton coarse crushing plant and is installing 150-ton concentrator, 1917.

HYDRO-ELECTRIC SMELTING CO. NEWFOUNDLAND

Developing an old copper property on Little Bay, Newfoundland, operated by a British company, 1878-1890. Driving adit, about 500' in length, 1917.

REID-NEWFOUNDLAND CO. NEWFOUNDLAND

St. Johns, N. F. Owns a copper property at New Bay, N. F., now idle. Property was under development in 1907, but has never been a producer. Company owns the railroad and steamship lines of Newfoundland.

TERRA NOVA PROPERTIES, LTD. NEWFOUNDLAND

Secretary and office: E. A. Sursham, Fleetway House, Farrington St., London, Eng. **Mine address:** Millertown, Newfoundland. Mayson M. Beeton, chairman; William Scott, supt., at Grand Falls, Newfoundland. Is a subsidiary of the Anglo-Newfoundland Development Co.

Company owns rights over about 2,500 sq. miles, held by 99-year lease, in the central part of Newfoundland, surrounding Long lake. The principal property is Buchan's River mine, about 5 miles W. of the lake on the N. shore. Ore occurs in sericitic schists formed of volcanic grits, the vein having strike of N. 51° E. and dipping about 30°.

Development: consists of a 370' shaft with several levels, having long drifts on the vein. The one orebody thus far found varies from 5 to 10' in thickness, is 350' long, horizontally, and 370' in downward extension. The ore is a complex sulphide carrying 2.36% copper, 8.14% lead, 20.38% zinc, .70 oz. silver and \$2.72 gold per ton.

Examined and reported on by W. H. Weed.

YORK HARBOUR MINE NEWFOUNDLAND

Idle. **Former address:** York Harbour, Birchy Cove, Bay of Islands, N. F. The mine, 4,000' from the bay, at elevation of 1,000', carries cupiferous pyrite. The ore is compact and close-grained with 2% to 4.5% copper and 38 to 41% sulphur, the sulphur being valuable for the manufacture of acid.

Development: by 360' main shaft sunk at an angle of 72° to the S. E., practically the same as the dip of the ore lenses. Levels are opened at 60' intervals, with drifts driven S. W., along the strike of the orebodies.

Equipment: included a 250 h. p. steam plant, with a 50 h. p. Flory hoist and an 8-drill Norwalk high-altitude air compressor. Company supposedly bankrupt and property has been closed down for years.

MEXICO

MEXICO

Owing to unsettled political condition of the country and the various crises of mining men in the revolutionary states of the nation, the mining industry has been greatly depressed for four years past, and many formerly prosperous companies have stopped work, while others have maintained merely nominal operations.

In 1916 the Carranza government peremptorily ordered all mining companies to resume work under penalty of confiscation of property. This action, combined with the doubling of taxes, the imposition of export duties and the prohibition of gold exports, even in base bullion, and denying the return of 25% of all silver exported, have so crippled the mining industry as to make one wonder whether it is worth while owning a proven mine across our southern border line. To add to these heavy and onerous impositions, the new Mexican constitution contains a provision making partners, or profit sharers, of each mine employee and a provision for 3 months' wages to be paid a discharged employee, while the merits of the case are being considered by an enquiry commission. This has made the mine manager's job a worrying one.

The active mining companies of this country are grouped by states. Owing to the great difficulty of getting letters to or from our correspondents in Mexico, the descriptions are in some cases old and many companies have no doubt been omitted.

MEXICAN SMELTING & REFINING CO.

See same title under United States mines.

EXPLORATION CO. OF ENGLAND & MEXICO, LTD. MEXICO

Liquidation, 1917.

EXPLORATION CO., LTD. MEXICO

25, F. Wreford, sec., 24 Lombard St., E. C., London; P. L. Foster, 61 Broadway, New York.

Directors: R. T. Bayliss, chairman and managing director; J. H. M. Wreford, managing director; J. R. Maguire, J. E. D. Ryder, G. D. Smith and Warburg.

Registered March 21, 1904, to acquire the assets and undertakings of a company of same name, registered June, 1896, except certain assets and liabilities which had been acquired by the Exploration Assets Co., Ltd. The company carries on a general financial business and holds interests in the African Real Estate Trust, Ltd., Tomboy, El Oro, Santa Rosa, Buena Vista, Greene-Cananea Copper, Chile Copper, Natomas Cons. and other companies, and has floated the Mexico Mines of El Oro, Ltd.

Capital, £750,000; shares £1 par; reduced Nov., 1916, to £375,000; shares 375,000. For every 5 old shares, holders received 3 fully paid shares and the Assets Company's debenture stock.

Dividends declared by former company: 1896, 2s; 1897, 2s 6d; 1898, 1899, 3s; 1902, 1s. Dividends paid by present company: 1905, 1s; 1906, 1s; 1907, nil; 1908, 1s; 1909, 1s 6d; 1910, 1s; 1911, 1s; 1912, 1s 6d; nil in 1913 and 1914; 1s in 1915.

For year ending Dec. 31, 1916, there was a net profit of £3,251, making balance forward, £97,457; cash, £16,498; sundry debtors, £7,366; interests, £617,863.

INTERNATIONAL COOPERATIVE HOLDING CO. MEXICO

Letters returned from Las Cruces, New Mexico. Branch office: 203-4 Mills Bldg., El Paso, Texas.

Officers: J. I. McCullough, pres.; L. M. Stiles, v. p.; F. W. Campbell, sec.-treas; above with J. C. White and Albert Runkel, directors.

Cap., \$250,000; shares, \$10 par.

Purpose of company is to acquire control of, or options on mining properties in Mexico, to be held until business is re-established in that country, then sell them or organize subsidiary companies to operate them.

Company's prospectus states that mines should be cheaply acquired, and it is only a matter of time until dividends are paid.

In view of recent happenings in Mexico this concern will find that properties cannot be held, but must be worked.

STATE OF AGUASCALIENTES**ASIENTOS MINING CO.****MEXICO**

Mine office: Asientos, Ocampo, Aguascalientes, Mex. Chas. Adler, v. p.; Abram Rapp, gen. mgr.

Inc. 1898, in Delaware. **Cap.,** \$1,000,000; shares \$10 par; non-assessable; fully issued.

Lands: 190 acres, including the Nopensada and Alta Palmira mines, which are antiguas, and the Veta Grande and Refugio mines. The Nopensada, said to have been a considerable producer in early days, carries mainly slightly argentiferous copper ore, of about \$40 per ton average value. The Alta Palmira mine, having a 450' shaft, produces auriferous and argentiferous copper ore. The Refugio mine shows ore carrying up to 10% copper and 1,100 grams silver per metric ton, with small gold values. Idle owing to revolutionary disturbances.

Equipment: includes a 150 h. p. steam plant and hoist.

FORTUNA, S. A.; COMPANIA MINERA LA.**MEXICO**

Aguascalientes, Mex. **Mine office:** Tepezalá, Ocampo, Aguascalientes, Mex.

Officers: Geo. B. Wardman, pres.-gen. mgr.; O. F. Westlund, v. p.; De Witt Crevelling, sec.-treas. Alberto Pez, supt.

Inc. 1902. **Cap.,** 200,000 pesos; shares 100 pesos par.

Property: 20 hectares, including La Fortuna and adjoining mines.

Development: by 2 tunnels and a 100-meter blind shaft, mines having a vertical depth of 200 meters and greatest horizontal length of 600 meters of workings, showing mainly oxidized argentiferous copper ores of good average tenor in both metals. Has animal power and employs 200 men normally. Idle owing to revolution.

STATE OF BAJA CALIFORNIA**BOLEO; COMPAGNIE DU****MEXICO**

U. S. office: 303 Market St., San Francisco, Cal.

Secretary and office: M. Georges Odier, 56 Rue de Province, Paris, France. Mine at Santa Rosalia, Sur, Baja California, Mex. Albert Mirabaud, pres.; Charles La Forge, managing director; William d'Eichtal, Maurice Ephrussi, Marquis de Montaigu, Henri Puerari, Ernest Tambour, Charles de Wendel and Alex. Tombelaine, directors. Ernest Michot, director-general; R. Plonin, mgr. M. Michel Berger and André d'Eichtal, auditors.

Inc. May 16, 1885, in France. **Cap.**, \$12,000,000; shares \$100 par. There also 46,000 founders' shares. Is controlled jointly by the French house Rothschild and the Banque Mirabaud, and owns a considerable share interest in the Compagnie d'Inguaran. Is exempt, until Dec. 17, 1925, from federal and local taxes, except stamp taxes; is exempt, until 1935, from export and import duties on fuel consumed; is exempt, until 1942, from export duties and local duties.

Balance sheet of Dec. 31, 1915, published May, 1916, shows: assets, \$9,557, which includes: works, \$1,000,000; ore and copper matte, \$6,198,000; supplies on hand and en route, \$5,792,483; live stock, \$488,267; cash on hand and in banks, \$7,233,532; notes receivable, \$5,799,642; acct's receivable, \$4,122. Liabilities include: stock outstanding, \$12,000,000; reserve fund, \$1,189; acct's payable, \$8,335,418. Operating profit for 1915 was \$7,941,000 compared with \$4,587,442 in 1914.

By a fixed rule 5% of the profit goes into the reserve fund, 8% to ordinary shares and 2% of the remainder to the directors. Of the profit then left, 77% goes to the ordinary shares and 23% is divided among 46,000 "founders" shares. The result is that ordinary stockholders receive 3½% of the profit, founder shareholders 19½% and directors 2%.

Dividends: \$62.5 in 1901; \$62.5 in 1902; \$104.16 in 1903; \$135.41 in 1904; \$190.5 in 1905; \$312.5 in 1906; \$200 in 1907; \$25 in 1911; \$36 in 1912, with \$34.1 for founders' shares; \$35 in 1913, with \$21 for founders' shares; \$22 in 1914, with \$10.90 for founders' shares; \$40 in 1915, with \$24 for founders' shares.

Property: 11 groups of copper claims, 20,000 hectares, granted by the Mexican government, also 598,600 hectares of grazing lands south of the mine.

Principal groups are the Soledad, Providencia and Purgatorio. They include 5 known copper deposits of importance, the copper-bearing formation covering 3,000 hectares, with possibilities of further extensions.

Geology: the ore occurs in a formation of Tertiary conglomerate, sandstones and tuffs, the cupriferous tuffs overlying conglomerates of erup-tive rock pebbles, and being surmounted by argillaceous tuffs, all traversed by veins. The ores comprise a remarkably varied series of oxidized minerals in which the metal occurs in combination with silver, lead, iron, manganese and other metals. The prevailing oxide is melanconite, or less mixed with manganese and iron oxides; and the prevailing sulfides below water level are covellite and copper glance. The following minerals are peculiar to this deposit: boleite, an oxychloride of lead, silver and copper; cumengeite, oxychloride of lead and copper; fosgeneite, a carbonate of lead; spherocobaltite, a carbonate of cobalt. Practically every known oxidized ore of copper occurs here, as well as those of iron, manganese and iron. Gypsum is abundant and native sulphur occurs.

Minerals occur in an unctuous, decomposed tuff, locally called soapstone. There are 3 cupriferous beds, the upper averaging about 8' in thickness, the middle 2 to 3', and the bottom 2 to 10'. The middle bed carries iron and carbonate ores in oolitic concretions, known locally as boleos; the name of the mine. The lowest bed, partly below the water line, carries sulphide ores, as well as oxides and carbonates. This bed, No. 3, is the chief source of ore supply of the property. It has averaged 8' in thickness, but varies from a few inches up to 16' in different parts of the property. The ore is disseminated through the tuffs in thin, irregular veins, with clay gouge, and has a marked concentration toward the bottom of each bed, where the ore forms compact layers of 6 to 12" thickness.

Development: the main workings are 15 to 200 meters above sea level, and are being opened by numerous tunnels, and by 7 shafts of the following depths: Sombrero, 98 meters; Carmen, 53 m.; Purgatorio, 55 m.; Cen-

tral, 156 m.; Amelia, 48 m.; Santa Rita, 86 m.; San Juan, 86 m. The mine is extensively developed.

Owing to the peculiar nature of the mine, all drilling is done by hand, the ore is hand-sorted, and about half is machine-briquetted at a cost of only about 0.8 per ton, the argillaceous gangue serving as a natural binder.

Equipment: the mine has complete steam and electric plants, generating upwards of 2,500-h. p. from steam engines, of which 2,000-h. p. is transformed by two 500-k. w. 3-phase current generators and two 250-k. w. 3-phase generators. The electric plant, at Santa Rosalia, furnishes power for hoisting, traction engines and a lighting system having 50 arc lights and a number of incandescent lamps. The company is courageous in installing new machinery. The climate is tropical, and the country extremely arid. Potable water is brought from a reservoir on the Yaqui plateau, through a 16,074-meter pipe line, having pumps at Santa Agueda and Santa Rita. The mines and works are connected by a 30-kilometer private railway, equipped with 9 locomotives and 250 cars.

The smelter, rebuilt 1901 and 1906, has 12 water-jacket blast furnaces, of 200 to 250 tons capacity each, 6 with 12 and 6 with 15 tuyeres each. There are 6 large Root blowers, driven by three 175-h. p. compound engines. Sea water for jackets is supplied by a duplex pump of 2,400 cubic meters hourly capacity, operated by a 250-h. p. engine. Electric locomotives on the slag line dump molten slags into moulds in rough holes in the ground, and, after cooling, the masses of slag are dumped over the end of the breakwater, serving a useful purpose in its extension. Fuel for smelting was German coke and English coal, and patented coal briquettes are used for general fuel. The first fusion product is a matte of 60 to 65% copper tenor, blown up to black copper of 93 to 94% average tenor, production being about two-thirds matte and one-third black copper. Matte and bars are shipped to England and France for refining, the management believing this preferable to adding a converter plant.

The works at Santa Rosalia include a 2-story power building, of steel, concrete and brick, and extensive machine shops, capable of handling all classes of mining work, the company occupying a singularly isolated position.

The harbor of Santa Rosalia has breakwaters of 650' and 2,500', with a 340-meter jetty and 2 new wharves, the dock having an area of 15 hectares, with breakwaters composed of large blocks of slag. The harbor works include a dredge and three 200-ton lighters used therewith. The port handled only 47,879 tons of freight in 1915, as compared with 148,536 tons in 1914. The company owns two steamers, plying between Santa Rosalia and the eastern coast of Mexico. These boats were seized by the Revolutionaries in 1914, but later were returned to the company. Copper is shipped to Europe on the steamers of the *Compagnie Chargeurs Reunis*.

The towns of Santa Rosalia has a population of 9,500, of whom 200 are Europeans, dependent solely upon the mines and works, and is controlled absolutely by the company. The town is well laid out, and has 4 general stores, warehouses, saw mill, church, 4 school houses, theater, amphitheater and market. The company gives free medical and surgical attendance, medicines and an excellent hospital service to employes.

The labor question has given considerable difficulty, owing to the population of Lower California, necessitating the importation of workmen. Wages average about 2 pesos daily for miners.

In 1915 the company employed 3,360 men. Almost all hand labor is Mexican with some Yaqui Indians. Europeans are only employed as foremen and for special work.

duction: 29,120,000 lbs. in 1910; 27,686,400 lbs. in 1911, and 28,336,000 lbs. in 1912. The production of ore mined for 1911 was 355,100 tons of ore; 364,850 tons of 3.51% ore in 1912; 371,300 tons in 1913; 324,000 tons in 1914; 316,800 tons in 1915. The smelter handled 356,700 tons of ore; 360,000 tons of ore, yielding 12,650 tons of copper in 1912; 374,350 tons of ore, yielding 13,000 tons copper in 1913; 324,000 tons, yielding 11,480 tons of copper in 1914; 317,000 tons, yielding 3.62%, or 11,500 tons of copper in 1915.

Railway transported 607,088 tons, in 1914, as against 675,743 tons in 1913. Reserves of ore amount to 6 years' supply.

The company's policy of secretiveness, concerning mine operations together with its refusal to permit inspection by visiting engineers and geologists, made it impossible to give detailed information concerning a unique ore deposit and its exploitation. The property is one of exceptional merit and has been ably managed for many years. Company has been able to continue operations despite revolutionary disturbances in Mexico.

Producing at rate of 1,600,000 lbs. of 3% copper ore monthly, 1917.

EMERALDA COPPER MINING & SMELTING CO. MEXICO

Location: Mine near Santa Catarina del Norte, Baja California, Mex., known as Esmeralda, is opened by shaft, with considerable development.

EMERALDA COPPER MINING CO. MEXICO

Location and office: E. W. Nicholson, 801 Land Title Bldg., Philadelphia, Pa. Operating office: P. O. Box CCC, San Diego, Cal. Mine near Ensenada, Baja California, Mex. Geo. P. Brown, gen. mgr.

Property: 83 hectares, and 40 acres miscellaneous lands, on Cedros Island on the Pacific coast, shows diorite, cut by veins having 3 lenticular pockets carrying carbonate and sulphide ores, estimated by company to be 40' width, 300' depth and 1,100' length, and to contain an average of 3% copper, 3% zinc, 2 oz. silver and \$3.50 gold per ton.

Development: about 8,500' of workings, showing 150,000 tons of low-grade ore, with about 100,000 tons blocked out for stoping. Has produced \$450,000 from shipments to the Denver, Pueblo, San Francisco and San Francisco smelters.

Due to 1915, unsettled conditions in Mexico necessitated closing down the property.

EMERALDA COPPER CO. MEXICO

Location and office: Phoenix, Ariz. Mine at Angeles Bay, Gulf of California,

Capital, \$1,000,000; shares \$1 par. J. H. Baker, pres. and gen. mgr.; G. E. Brown, mgr. engr.; J. H. Loudon, directors.

Property: 40 hectares, about 100 acres, at north end of Angeles bay, 140 miles N. W. from Guaymas and about 90 miles S. W. from Port Lobos. Show siliceous schists cut by porphyry dikes and a vein running N. 45° E. dipping at 45° and varying from 5 to 42' in width.

Composition: black oxide and sulphide of copper said to average 4.7% with trace of silver.

Development: by tunnels with 1,363' workings, including winze sunk on property. Has shipped 300 tons, 25% picked ore, and has several thousand tons of low-grade ore on dump. Property considered promising if properly developed and handled. Presumably idle.

EMERALDA COPPER CO. MEXICO

Location: Antonio, Baja Calif. Paul Knapp, gen. mgr.; J. C. Puttner, mine superintendent; David Lawrence, mill supt. Operates a mine yielding gold-bearing carbonate ore, 5 miles E. of Triunfo.

Equipment: reduction plant, bag dry rolls, Hardinge mills, roasting furnaces and tanks.

Production:

	Ore to Mill	Gms. Per Ton		Contents	
	Metric Tons	Silver	Gold	Silver-oz.	Gold-oz.
1915.....	128,612	530.2	1.19	2,192,444	4,932
1914.....	82,728	548.1	1.06
1913.....	118,383	570.1	0.79

In 1914 company lost 131 days of operating time; in 1915 operations covered 93.2% of the total time; loss was due mainly to shortage of fuel which had to be transported chiefly from El Paso on special trains operated by the company.

1916: due to political disorders in Mexico company's properties were operated only 42% of the year. Tonnage milled for the year, 53,119 metric tons, containing 886,559 oz. silver and 723 oz. gold.

The Villista forces occupied Parral on November 5th, 1916; seized the cyanide mill and mines, which they operated for 15 days, producing 45 bars of gold and silver bullion; 96 additional bars were stolen and the property robbed to the extent of \$300,000. Many of the office and operating records were destroyed, therefore the company was unable to make its annual statement.

Owing to the very large increase in ore reserves, the capacity of the cyanide mill will be increased from 400 to 600 tons per day and the necessary machinery purchased. Present ore reserves, 500,000 tons. Company will resume operations Oct., 1917.

ARADOS COPPER CO.**MEXICO**

Address: 25 Broad St., New York. Clarence W. Hoyt, pres., 79 Milk St., Lowell.

Property: about 2,000 acres were taken over 1910 from Chihuahua Copper Co., Quo Vadis Copper Co., and include a number of adjoining claims privately owned.

The Chihuahua group has several shallow shafts, and 9 tunnels with about 1,500' of workings, estimated by management to show several thousand tons of ore.

The Quo Vadis and other groups show numerous contact veins between limestone and porphyry, ranging from 2 to 40' in width, development work said to have yielded enough ore shipped to pay for machinery in use on these properties, ore averaging better than 5% copper.

Idle several years owing to political disturbances, but president writes that property will be vigorously and systematically developed as soon as conditions in Mexico warrant. Company is controlled by strong interests who are successful copper producers, and stock is privately held by a few people.

Equipment: includes a 25-h. p. hoist, good for 500', and small Gardner air compressor and necessary mine buildings.

AURORA Y ANEXAS; CIA. MINERA LA, S. A.**MEXICO**

The Cia. Minera Aurora y Anexas, owned by the late Ernesto Madariaga and brother, has worked for several years past, the Aurora mine, with 100 hectares in the Cuchillo district, near Coyame, Chihuahua and the Justicia copper mine, 4 miles east of Marquez station on the Kansas City, Mexico & Orient railroad. These properties were purchased from Don Francisco Diaz in 1908.

Owing to the revolution it is impossible to get recent information.

BATOPILAS MNG. CO.**MEXICO**

Address: 50 Broad St., New York City. Mine office: Batopilas, Chihuahua, Mex.

Officers: F. D. Merchant, pres.; Sam'l Elliott, N. F. Palmer, v. ps.,
 ding officers, Jas. Marwick, Geo. W. Field, Alton B. Parker, Gates W.
 irrah, Louis H. Scott, Walter M. Brodie, Geo. Rowland, E. L. Stevens,

ap., \$9,000,000; shares \$20 par; outstanding \$8,931,980; nonassessable.
s: authorized \$1,000,000, 1st mtge. 6's, dated Dec. 1, 1887, for 15 years,
 inding \$367,900. Bonds were extended to Dec. 1, 1917, with provision
 0% of amount outstanding at that time, \$45,900, should be retired each
 beginning in 1908. Shares are listed on the New York and Boston
 Exchanges. Annual meeting 3rd Tuesday in April. Union Trust Co.,
 York, and State St. Trust Co., Boston, transfer offices. Farmer's
 & Trust Co., New York and Old Colony Trust Co., Boston, regis-

concession from the Mexican government was granted April 12, 1886,
 R. Shepherd for 20 years, covering 61 sq. miles of the richest mineral
 t in and around Batopilas, together with water rights of the Batopilas

This concession was assigned to the Batopilas Mng. Co., which was
 ized Oct. 13, 1887, in New York, as a consolidation of 6 companies,
 Batopilas Silver Mng. Co., New Giral Silver Mng. Co., Descubridora
 Silver Mng. Co., Camuchin Cons. Silver Mng. Co., Valenzuela Cons.

Mng. Co., Animas Silver Mng. Co.; other mining properties were
 urchased. The concession expired in 1906, and was renewed for 10
 expiring May 31, 1916. It gave the company full mining rights over
 ea mentioned, the company being required to purchase outright at
 100 hectares, 240 acres, per year.

Balance sheet as of Dec. 31, 1914, shows assets, \$12,794,479, of which
 t \$12,485,435 represents mines, real estate, buildings, equipment, etc.,
 207,322 current assets; current liabilities \$37,258, accrued liabilities
 . Total surplus Dec. 31, 1914, \$3,365,771. Oct. 15, 1915, the company
 sh in New York banks, \$87,247.

roperty: located around the town of Batopilas, in the Andres del Rio
 district, in the extreme southwestern part of the State of Chihuahua,

b. When 1913 began the company had titles in the silver zone for
 ctares, and in the auriferous zone, 2^o miles up the river, for 64
 s. On account of the revolution it has been impossible, during the
 years, to comply with the provisions of the contract and time allow-
 have been granted. In addition the company owns 130,000 acres of
 und timber lands.

e: native silver occurring with calcite in veins, which are mainly in

Some of the veins have contained very rich ore. The San Miguel
 ty contains many veins, some of which have been worked for more
 30 years. The main veins are the San Antonio, Cancio, Cinco de
 Diablo, Carmen, and Veta Grande now worked out. During 6
 in 1913 the average assay for low grade ore from the San Miguel
 which produces $\frac{3}{4}$ of the silver output, was 9.27 oz. per ton, while
 from the Porfirio Diaz Tunnel group averaged 6.55 oz. per ton.
 grade ore produced during 8 mos. 609 tons, averaged 411 oz. per ton.

velopment: over 10 miles of adit levels and 77 miles of workings.
 incipal mines are the Porfirio Diaz Tunnel on the Todos Santos
 the San Miguel mine, El Escritorio, and El Camuchin. Work at El
 rio and El Camuchin was unsatisfactory in 1913 and they were closed

ipment: the Hacienda San Antonio contains 100-stamp mill with a

daily capacity of 40 tons, electric light plant and air compressor, all run by Pelton wheels capable of furnishing 550-h. p. The San Miguel Hacienda contains a 25-stamp mill for high-grade ores, cyanide plant, amalgamating pans, refining plant, a roasting and lixiviation plant for concentrates, with a daily capacity of 8 tons, machine shop, foundry, office buildings, dormitories, boarding house, etc.

Power obtained from the Batopilas River by means of a dam 764' long and an aqueduct 9,900' long. The water after being used in the San Antonio plant, is siphoned under the river and runs to the San Miguel Hacienda, where 32-h. p. is developed by turbines.

Production and profits have been as follows:

Year	Tons Ore Treated	Oz. Silver	Operating Profits
1915.....	156,862
1914.....	6,630	188,087	\$ 10,556
1913.....	20,887	374,174	60,068
1912.....	34,032	564,398	80,046
1911.....	33,073	516,688	17,409(a)
1910.....	43,612	730,697	106,258(a)

(a) Deficit.

During the last 3 years the Mexican revolution has interfered with the operation of the company, the mines were worked only about 8 mos. of each year with a consequent reduction of output. The future of the property depends upon new development and the acquisition of a new mine.

At a special meeting called in Aug., 1916, company's charter was amended, authorizing the management to conduct mining operations in the United States.

BUENA TIERRA MINING CO., LTD.

MEXICO

T. D. Pillans, sec., 11 Cornhill, London, E. C. Eng.

Directors: R. T. Bayliss, chairman; Lord Arthur Butler, W. McDermott, J. H. M. Shaw; R. M. Raymond, cons. engr.; A. C. Brinker, gen. mgr.

Cap., 330,000 shares, £1 par; all issued and fully paid. Reg. Feb. 10, 1912, in England, to acquire from the Exploration Co. of England and Mexico, Ltd., the Buena Tierra mine, 89 acres, in the Santa Eulalia district, Chihuahua, Mex., 15 miles S. E. of Chihuahua. Purchase price was £300,000, payable £178,201 cash, £121,799 in fully-paid shares. Property reported on by R. T. Bayliss and R. M. Raymond. Dividends paid, 2 shillings per share.

Ore: principally lead and zinc carbonates assaying 10 oz. silver, 10% lead and 25-50% zinc. There is also a low-grade mixed sulphide. Ore-bodies occur in limestone lying almost flat, but instead of following the fissures, spread out into flat beds near them, their average width is 30', average thickness, 40'. The Chorro orebody has a depth of over 1,900'. Developed orebodies are most numerous at 450' depth, but most of the mines have ore down to a depth of 1,300'. Ore reserves estimated early in 1915 at 300,000 tons.

Development: by shafts; Buena Tierra shaft is 1,400' deep. Raises are put up from the levels at intervals of 75-200' and the ore is mined in small bunches, little powder being required and practically no timber.

The Mexican revolution has interfered with production during the past few years and property has not been operated steadily. Lead ore is shipped to the A. S. & R. Co.'s smelter at Chihuahua or El Paso and the zinc ore to the United States.

Development costs are high, due to difficulty of finding orebodies. If daily tonnage of 300 tons can be maintained, conditions are good for low s.

In Sept., 1916, Pres. Carranza of Mexico issued a decree enforcing the king of all mining properties under penalty of confiscation, with exceptions. Exemption for the Buena Tierra Co. has been applied

ENA VISTA GOLD MINING CO.**MEXICO**

Offices: 734 Fifth Ave., New York City, and Chihuahua, Mex.

Officers: G. B. Schley, pres.; E. B. Schley, v. p.; W. J. Walworth, sec.-s.; C. G. Raynor, asst. sec.-treas.; W. J. Quigly, mgr., Chihuahua.

Inc. Jan. 8, 1890, in New York. Cap., \$600,000; shares \$1 par; outstanding, 587,806 shares, nearly all of which is owned by El Potosi Mining control of which company was obtained by Howe Sound Co. in Jan.,

Stock transferred at company's New York office. Annual meeting, nd Monday in January. Stock is closely held.

Property: in the Santa Eulalia district, Chihuahua, Mex.

Ore: lead, silver and zinc.

Development: by vertical shafts to a depth of 1,800'. Operations have hampered by the revolution, though shipments of zinc ore were made 15 and 1916.

I MINING CO.**MEXICO**

Office: 1025 Peoples Gas Bldg., Chicago, Ill. L. P. Ryan, supt., 711 Bldg., El Paso, Texas (temporary address).

Officers: Potter Palmer, Jr., pres.-treas.; Honore Palmer, v. p.; A. M. ohy, sec.; all of 721 Peoples Gas Bldg., Chicago. H. L. Hollis, mg. tor.

Property: the Promontorio mine and other claims, at Cusihiuriachic, uahua, Mexico, showing veins of silver-lead ore.

Equipment: includes a 250-ton mill, partly completed, June, 1917, and flotation unit installed to treat silver-lead ore.

CUBRIDORA MINING & DEVELOPMENT CO.**MEXICO**

Owned by El Rayo Mines Co. See Mines Co. of America.

ORES MINES CO.**MEXICO**

Subsidiary of the Mines Co. of America, which see.

POTOSI MINING CO.**MEXICO**

Control obtained in Jan., 1916, by Howe Sound Co., which purchased shares out of a total outstanding capitalization of 60,000 shares.

Property: in Santa Eulalia district, Chihuahua, adjoins property of uahua Mining Co., nearly all of whose stock is owned by El Potosi. e of the oldest producers of silver-lead ore in the district, said to have dividends for many years, and to have large ore reserves. Idle at nt due to disturbed conditions in Mexico.

RAYO MINES CO.**MEXICO**

Subsidiary of the Mines Co. of America, which see.

ACIO RODRIGUEZ RAMOS, S. A.; COMPANIA MINERA**MEXICO**

Property "confiscated" by Gen. Villa, 1915, and operated by Sr. F. R.

Quijano, Chihuahua City, Chih., Mexico. Shipments 1915 to Granby Mining & Smelting Co., St. Louis, held up by Villistas, and smelter agent unjustly jailed. No direct information received.

Property: 129 hectares, covering the mineral zone of the Sierra Almoleya. The geological conditions greatly resemble the Santa Eulalia camp. Ore occurs in limestone, in lenses, one having a width of 70' and length of 140', ore said to average 5% copper, 25% lead, 6% zinc, 15 oz. silver and \$3 gold per ton. Values are mainly in silver-lead ores, though chalcopyrite occurs as a by-product.

The mine is extensively developed to a depth of 300 meters, by an 800' shaft and 2 main tunnels, with much rich ore in sight.

Equipment: includes steam and electric power, with steam hoist and air compressor. A 3-stamp experimental mill is connected with the mine by a 4,000' incline tram.

INTERNATIONAL GOLD & COPPER MINING CO. MEXICO

Idle. **Mine office:** Guaynopa, Chihuahua, Mex. J. C. Peterson, pres. Company took over lands formerly held by International Cons. Smelting & Mining Co., known as the Utah mine, in Guaynopa canyon. Claimed by former owners to have a 90' vein, with an 8 to 12" pay streak carrying high-grade chalcopyrite, assaying 5 to 8% copper, with good silver values. Mine has several short tunnels. Idle on account of revolution, but regarded unfavorably for other reasons. No recent returns secured.

LAS VIGAS MINING CO. MEXICO

Dead. **Property** controlled by A. McKenzie, 66 Broadway, New York. Mine at San Sostenes, Coyame, Iturbide, Chihuahua, Mex., consists of 74 hectares, said to show upturned Cretaceous sandstones and shales with interbedded copper lodes, occurring as impregnations and replacements in sandstone. Four veins last under development are reported to average 1 to 12' width, and to give average returns of 7.5% copper and 3 oz. silver per ton, mainly from disseminated bornite and chalcopyrite, with occasional oxidized ores and native copper.

Development: by shafts of 614, 98', 125' and 212', with various levels; also 3 short tunnels. Workings estimated to develop 160,000 tons of ore.

Equipment: includes steam power, a hoist, an air compressor, and a 100-ton concentrator. Buildings include an office, store and 19 dwellings. Ore was hauled, 43 miles, to Las Trancas stations, by a Buffalo-Pitts traction engine. Reported under option to English parties, 1916.

LLUVIA DEL ORO MINING CO. MEXICO

Is a close corporation, owned and controlled by B. F. Yoakum, John Scullin of St. Louis, Mo., and the estate of Jas. Campbell. Fred G. Farish mgr.

Property: in the Andres del Rio Mtns., Chihuahua, Mex., consists of the Lluvia del Oro gold mine, a mill, cyanide plant and hydro-electric plant.

1916, amounted to \$4,958,600, including El Rayo Mines Co. No dividends were paid to revolutionary conditions in 1916. Dividends resumed in January, 1917. Dividends also paid in April and July, 1917.

General Balance Sheet, Dec. 31

Investments	Plant & Equip.	Claims Against Mex. Govt.	Current Assets	Total
\$8,577,309	\$1,051,632	\$393,544	\$641,302	\$10,744,466
7,911,712	1,050,660	392,859	732,089	10,087,322
7,951,718	1,041,639	382,920	960,848	10,337,126

Liabilities:

Cap. Stock Outstanding	Sub. Co.'s Stock Out.	Suspense Account	Cur. & Wk'g Accts. Pay.	Surplus & Res.	Total
\$8,648,013	\$622,864	\$273,414	\$225,020	\$ 975,154	\$10,744,466
8,376,583	23,604	302,202	56,358	1,328,573	10,087,322
8,376,583	23,624	291,314	90,743	1,554,861	10,337,126

Operating receipts for 1916 were \$100,892; operating expenditures, \$147,727, leaving an operating loss of \$46,835, compared with profit of \$147,727 in 1915. Adding general expense and taxes, the loss in 1916 was \$194,562.

Reserves: on Jan. 1, 1917, estimated total ore of the company's mines had a gross value of \$5,824,670, an increase of \$402,801, based on silver \$20 and silver 75c per oz.

Companies controlled by Mines Company of America:

Chihuahua-Esperanza Gold Mining Co., Mexico

Owned by Mines Company of America.

Property: adjoining that of the Dolores Mines Co., Chihuahua, on the south. Consists of 3 claims, 304 acres. Company also owns 10,000 acres of land and 5 miles north of Dolores.

Geology: formation is similar to that of the Dolores. Veins occur in white fissures in dikes; 3 vein-systems exist. Development amounts to 100 acres. Ore reserves said to total 2,500 tons worth \$15 per ton. La Esperanza mine has great possibilities.

Consuelo Mining, Milling & Power Co., Mexico

Controlled by Mines Company of America.

Property: adjoining that of the Dolores Mines Co., west of Madera, in Chihuahua, and east, and consists of 77 pertenencias, 190

niding plants, also compressor and hoisting plants, machine shops, etc. A steam-driven Reidler pump, $2\frac{1}{2}$ miles east of the mine on the Tutuaca river, supplies all necessary water. Electrical equipment to supplant steam power is in place. A 30-mile transmission line connects Dolores with Madera; line is designed to carry 3-phase, 60-cycle current of 33,000 volts. Power will be furnished by a generating plant built near Madera, to consist of three 320 k. w. generators, driven by 3 Diesel type oil engines of the "Snow" make. It is the intention to double the capacity of the milling plant, which now has 25 stamps and four 5' Bryan mills.

In the re-modeled mill a 15x24" Blake crusher will replace 3 small machines; belt conveyors will be installed and steel ball mills will replace stamps and Bryan mills. The complicated flow-sheet will be simplified.

The milling plant was not operated in 1916 on account of the revolution. When operating, extraction is about 87%, 18% by concentration and 69% by cyanidation. Bullion is marketed in Maurer, N. J. Concentrates are shipped to the El Paso smelter.

Company employs about 365 men under normal conditions, only 17 being Americans. The small amount of development work done in 1916 gave good results.

The orebody found in unprospected ground in 1915 opened well on the 400 and 500' levels. The shoot is now 265' long, with indications of greater length. Management expects to reduce power costs by over 300% when the plant is running by electricity and to double the milling capacity. The future of Dolores looks promising.

El Rayo Mines Co., Mexico

Controlled through ownership of 99½% of capital stock by Mines Co. of America. Same directorate. Mine office: Santa Barbara, Chihuahua, Mex.

Inc. Feb. 13, 1906, in Maine. Cap., \$1,000,000; outstanding \$714,940; shares \$2 par. No bonded debt. Annual meeting, second Tuesday in February. Listed on New York Curb. Company is the American holding company for the El Rayo Mining & Development Co., S. A., a Mexican corporation. Owns the Descubridora Mining & Development Co. and Bueno Vista Gold Mining Co., also 33E..D%OTAA....6 UG.nRy. cmfw77 Co.

Property: 21 claims, 766 acres, in the State of Chihuahua, S. W. of Santa Barbara, the terminal of a branch line of the Mexican Central Railway. Mines can be reached from Santa Barbara over an 8-mile trail. Company also has a 14-year lease on about 12 square miles of timberland, adjoining the mining property. El Rayo is at an elevation of 7,200' above sea level. The mining claims cover the N. S. strike of the producing veins for over 2 miles.

Ore: gold, silver in fissures in rhyolite. Veins dip from 50° to 90° and the filling varies from a friable and oxidized quartz at the north end to a harder sulphide-bearing quartz at the center and south end of the property. The north end contains about 4% sulphides, chiefly iron, with traces of lead and zinc. Copper sulphides are found occasionally. Values in the ore as produced during 1915 are, approximately, 74% gold and 26% silver. The orebodies consist of a number of irregularly shaped lenses, greatly varying in width and values. They occur principally at the intersection of side fracture with main fracture.

Development: total underground workings amount to 78,268'. In 1916 282' was done during the limited time of operations, divided as follows:

a mine, 276', El Rayo mine 6'. The Adela mine covers 4,700' of the system at the north end. The El Rayo mine covers 2,300' of the vein system and adjoins the Adela on the south. The Descubridora mine covers 5,000' of the vein system on the extreme south end of the property.

A 6' vein has been opened by winze 126' below 1,300' level of the Descubridora mine. The waste filling system of stoping is used.

Ore reserves: were estimated Jan. 1, 1917, as follows:

	Tons	Value per Ton	Gross Value
At place.....	65,210	\$11.58	\$755,283
In Ore.....	13,328	10.77	143,542
Total.....	78,538	\$11.44	\$898,825

Compared with 75,038 tons of \$10.48 ore with gross value of \$786,825 on Jan. 1, 1916. Values are based on \$20 per oz. for gold and 50c per oz. silver.

Equipment: includes a 1,950 cu. ft. steam operated compressor plant. A cable aerial tramway furnishes the necessary fuel, lumber and mining tools.

Mill: includes 160-ton crushing, concentrating and cyaniding plants. The storage bin at the portal of the 1,100' level of the Adela mine where ore is trammed 1,300' in 6-ton cars to the mill storage bin. Course of ore through plant is as follows: from bin through 9"x15" Blake crusher, to 1" discharge; undersize by conveyor belt to bin, by Challenge feeder conveyor belt to one set of 16"x36" Traylor rolls, discharge to 2 sets of 16"x30" Traylor rolls; to classifier; overflow to tables, oversize in closed circuit returned to 7'x14' tube mill; discharge to classifier, overflow to tables, oversize in closed circuit returned to tube mill. Pulp treated by cyanide solution. Resulting bullion and also the concentrates are marketed in the U. S.

Power: electrification of entire plant is under way. Electricity will be furnished, under contract, by the Cia. Agricola y de Fuerza Electrica del Conchos, S. A., from their plant at La Boquilladam, about 70 miles from El Rayo.

Extraction has been as follows:

	Conct. & Flotation	Cyanidation	Total
-No output.....	20.7%	63.3%	84%
.....	(a) 14.0%	66.0%	80%
.....	(a) 12.0%	77.0%	89%

a) By concentration alone.

Flotation by the Callow system was proven a success. During the month's operations recoveries were 42.7% by cyanidation and flotation 7.6% by cyanidation.

Due to revolutionary conditions the property was closed down Sept. 9, 1916, to be reopened when practicable. Work has been carried on under adverse conditions, but at a profit. When operating under normal conditions the company employs 15 Americans and about 385 Mexicans.

La Dura Mill & Mining Co.

Office: 111 Broadway, New York City. Mine office: La Dura, Sonora, Mex. Cap., outstanding, \$1,000,000. The Mines Co. of America, Do-

Mining Co., Dragoon Mining Co. and San Rafael Copper Mining Co. The principal properties are the Rio Tinto Mexicano, San Rafael, Promontorio, Verde and Colombia mines, all connected underground. The company also owns the Savanarola group, at Savanarola, about 50 miles south of Chihuahua and 35 miles west of Ortiz, carrying silver-copper and lead ores.

The Rio Tinto Mexicano mine was opened 1860, closed 1902, and reopened 1905, and has been owned and operated by a number of different mining companies until purchased by the present company from Messrs. Enrique and Juan A. Creel.

Geology: the mine shows contact deposits between limestone and altered andesite, there being 5 known orebodies in a metamorphic zone traced 1,500 metres, the orebody, with a minimum of 2', maximum of 100', and average of about 20' width, being erratic but of very large extent. Ore also occurs between the bedding planes of limestone, near a large quartz ledge, and the orebodies, while erratic in size and occurrence, are connected and practically continuous. The limestone has an average dip of 45° N.-W., and the property has also some silver-lead ore. Ore near surface is mainly oxidized, but sulphides occur below. The oxidized ores range 2 to 5% in copper tenor, with traces of lead and zinc, with an average of about 3% copper, 2 to 4 oz. silver and 30 to 75c gold per ton. The gangue is mainly limestone, somewhat garnetiferous. Extensive diamond-drill borings show good orebodies.

Development: by a number of shafts to a depth of 440'; has about 3 miles of workings. The ground is firm, breaking well and requiring no timbering, pillars having been removed to give chambers up to 100' square.

The San Rafael mine has 2 shafts, the deeper being a 440' two-compartment shaft, known as the Verde. The Promontorio mine has 2 new shafts, nearly 1,000' apart, the main Promontorio shaft being 350' deep, with a surface gravity tram to ore bins. The Promontorio also has 2 old shafts. The Colombia mine has a 275' shaft, with about one-half mile of workings. Miscellaneous shafts include the Bronce of 120', Pederal of 180', San Martin of 100' and Vinagre of 100'.

Equipment: includes steam and gas power. The San Rafael main shaft has two 100 h. p. boilers and a 100 h. p. hoist, with 4-drill and 14-drill air compressors. There are 5 gasoline hoists of 6 to 22 h. p. at various other shafts.

Ore is carried from mines to smelter by a mile long narrow-gauge railway, equipped with a 6-ton Porter locomotive and 5-ton iron ore cars.

Smelter: at Terrazas, 1 mile from the mine, connected by a one-half mile spur with the main line of the Mexican Central railroad, has two 300-ton 42x192" blast furnaces. The converter department has 1 stand and 3 shells, with a 40-ton electric traveling crane and a relining plant. The power plant has a 250 h. p. compound engine, direct-connected to a No. 8 Connorsville blower, and a 100 k. w. generator supplies current for the other machinery.

Production: 1906-1910 inclusive amounted to 9,150,000 lbs. copper; 27,000 metric tons smelted averaged 2.5% copper, mining cost being \$3.50 per ton, and smelting cost \$3.50 per ton, or a cost for finished copper of 12.5c per lb. The ore, though low grade, exists in large quantities, and the mine bids fair to become a producer, capable of making 1,000,000 lbs. fine copper monthly.

The mine and smelter operated more or less continuously throughout 1912 and 1913, despite the revolutions which stopped almost all mining operations in this part of Mexico, but the intolerable conditions since then have kept it closed.

N FRANCISCO MINES OF MEXICO, LTD.

MEXICO

Parral, Chihuahua, Mex. Harold A. Searle, sec., 65 London Wall, London, E. C., Eng. Rt. Hon. Earl of Denbigh, chrm. board of directors. Inc. March 27, 1913, in England. Cap., £650,000; outstanding £350,000; shares £1 par. Bonds: £200,000 convertible first mortgage debentures, in denomination of £100 and £20 each; int. payable April and October, was paid to Oct. 1, 1914; payment of the next six half-yearly instalments has been postponed for a period of 3 years so that in each of the half years ending Oct. 1, 1920, a year's interest will become due, and on postponed interest 6% interest will be allowed.

Accounts for period ended Sept. 30, 1916, showed mine expenditure, \$4,269; cash, £50,698; creditors, £2,608, and accrued debenture interest, \$5,080.

Property: a group of silver, gold, lead and zinc mines, 194 acres, 14 miles from Parral, formerly worked by the San Francisco del Oro Mining Co., Ltd. Examined by Knox and Allen, New York. Property covers roughly 1½ miles on the strike of the San Francisco vein, a fissure lode in limestone. The oreshoot worked has a length of 2,600' with minimum thickness of 5½'; 4th level is in primary ore; ore minerals are galena, blende, pyrite and chalcopyrite.

Development: by 3 shafts and 5 levels; deepest shaft, 484'.

Ore reserves: estimated at 390,000 tons; average grade, 21 oz. silver, dwt. gold per metric ton, 12.5% lead and 17.4% zinc. The ore is delivered to the mill by aerial tram. Many mistakes were made in the original design and construction of the mill, but present management has started to reconstruct it, adding flotation equipment, and when rebuilt it will have a daily capacity of 200 tons.

The property has been forced to suspend operations intermittently as a result of the Mexican revolution.

N TOY MINING CO.

MEXICO

Office: Oliver Bldg., Pittsburgh, Pa.

Officers: Joseph Dilworth, pres.; C. A. Blanchard, v. p., with Wm. L. Abbott, R. R. Brown, G. A. Deitch, D. L. Gillespie, Geo. E. McCague, Eugene Murray, J. C. Slack and D. B. Gillies, directors. Edward Hoopes, treasurer; W. V. Paterson, asst. sec.

Inc. 1901, in Maine. Cap., \$7,000,000; shares \$1 par; outstanding \$5,750,000.

Dividends: 6% in 1911; 1% in 1912; 2% in 1913; none since. Colonial Trust Co., Pittsburgh, transfer agent. Commonwealth Trust Co., Pittsburgh, registrar. Annual meeting, third Monday in February at Augusta, Me. Stock listed on Pittsburgh Stock Exchange and New York Curb. Shortly after flotation of the company stock sold up to \$1.25 per share; it has since sold down to 11c.

Comparative General Balance Sheet:

	Mines & Equip.	Supplies	Accts. Rec.	Cash	Total
3.	\$5,865,564	\$14,484	\$4,204	\$256,156	\$6,140,408
5.	5,865,564	12,156	4,114	290,412	6,172,245
1.	5,864,172	18,085	11,209	346,155	6,239,621

	Capital Stock	Undiv. Profits	Reserve	Accts. Pay.	Total
3.	\$5,750,000	\$322,639	\$67,231	\$538	\$6,140,408
5.	5,750,000	352,274	67,236	2,735	6,172,245
1.	5,748,000	420,849	68,772	6,239,621

the old mines on the property and had done about 13,000' of work when they were forced to cease operations in March, 1912, due to the revolution in Mexico. No work has been done since, but property will be reopened on short notice when conditions in Mexico permit. There are said to be six ore-shoots now developed that will produce 100,000 tons of ore, averaging \$12 per ton in gold and silver. The silver-bearing mineral of the ore is practically all argentite, with some associated gold, in a siliceous gangue; the ledge matter is an andesitic breccia cemented with quartz.

Equipment: includes the old El Salto 20-stamp mill. Machinery for the first unit of a 40-stamp mill is on the ground. Power is furnished by a 300 h. p. steam-electric power plant, at Durazno, 6 miles N. E. of Ocampo.

STATE OF COAHUILA

COAHUILA MINING & SMELTING CO., LTD.

MEXICO

Office: 614 Penobscot Bldg., Detroit, Mich. **Operating office:** Apartado 72, Monterey, N. L., Mex. **Mine office:** Jimulco, Viesca, Coahuila, Mex.

Officers: H. T. Ambrose, pres.; Frank J. Llewellyn, v. p.; Walter E. Parker, sec. and gen. mgr.; Archibald Cattell, treas.; preceding, with J. Kirby, Jr., Sidney B. Cohn and C. F. Jennings, directors; J. C. Treadwell, supt.; Alex. McCormick, mine supt.; Harry Reed, mill supt.

Inc. Jan., 1902, in Mexico. Cap., \$500,000 gold; shares \$1 par; non-assessable, fully issued.

Dividends: 10% in 1902; 6% in 1904; 29% in 1905; 30% in 1907; 10% in 1909 and 16% in 1910, a total of 101%, or \$505,000. Annual meeting, first Wednesday in February.

Lands: include holdings in the Mapimi, Viesca and San Juan de Guadalupe districts. Properties include the Santa Maria, Sultana and other mines at Jimulco, carrying auriferous and argentiferous copper and lead ores, opened by a 700' main shaft, and a 1,000' main tunnel, with steam and electric power. The Alberto mine, in the Mapimi district, was said to have made regular shipments of high-grade ore to the Mapimi smelter, 1910. A 250-ton smelter, with steam and electric power, connected with the mines by rail, was blown in, early 1903, but was idle, 1909-13. The revolution in Mexico has practically stopped all mining in Coahuila and the mines are closed down until peace and safety again prevail.

CONTINENTAL MINING CO.

MEXICO

Mine office: San Antonio, Texas.

Officers: Otto Wahrmund, pres.; C. T. Priest, San Antonio, v. p.; S. G. Newton, sec.

Inc. April, 1905, as a reconstruction of Continental Copper Co. Cap. \$1,000,000; shares \$10 par. Is closely allied in ownership and management with the Jimulco Mining Co.

Property: the Panuco mine with 65 hectares, opened in 1700 and worked at intervals since. Property was bought from the Panuco Copper Co., under whom it was badly mismanaged.

Ore: deposit is a chimney of breccia, cemented by metallic sulphides, mainly chalcopyrite, but with a little chalcocite, in a quartz gangue; the country rock being granitic. The ore is reported to average about 35% copper.

Company owns a 40-mile railway, from Monclova to Panuco. Old company invested about \$1,000,000 in the property and improvements. Largest production, under former ownership, was 1,455,059 lbs. fine copper in 1906, and a small production was secured, July-Nov., 1907, by present company, estimated at 1,250,000 lbs. copper. Mine considered promising, though less

ade, and management good. Closed down since 1913, on account of danger life and property by revolutionary bands.

INTERNATIONAL ORE CO.**MEXICO**

F. E. Salas, mgr., Saltillo, Coahuila, Mex.

Company operates a small zinc plant handling 40 to 45 tons of concentrates day in two 300 retort furnaces.

ZAPIL COPPER CO., LTD.**MEXICO**

Office: 47 Peter St., Manchester, England. Mine address: Saltillo, Coahuila, Mex.

Directors: Alfred Crewdson, chairman; R. R. Crewdson, W. A. R. aven, Jacob Higson, Chas. Hopkinson and Jas. Wm. Purcell; R. H. Frey, mgr.

Inc. Feb. 18, 1891, and reincorporated April 21, 1896, in Great Britain. p. increased 1903 to £300,000, shares £10 par, and again increased 1912 to 00,000; shares £1 par; issued, £422,490. Debentures: £120,000, at 6%. s paid several dividends: 20% in 1910; 20% and a 5% bonus in 1911; 30% h and 50% bonus in 1912.

Company does not care to give details concerning its mining operations. owns and operates the Coahuila and Zacatecas railway, running from Saltillo Concepción del Oro, 2 smelters and various mines, employing over 4,000 normally. Op rations were suspended June, 1913, by the Mexican revolution, but were resumed in a small way in March, 1917.

Property: about 850 hectares of mineral land in 4 principal groups. The anzú and Cabrestante mines, carrying copper ores, are the most important; San Elijo, Naranjera, Cajón, San Francisco and Protero mines, carrying er-lead ores, and the Promontorio group, producing mainly fluxing ores. per ores occur in irregular masses, in limestone, near granite-porphyr tacts.

The various mines of the company have 83 different shafts and tunnels, y of which are small and worthless, remaining from old operations, with ards of 25 miles of workings.

The smelters are at Concepción del Oro and Saltillo. The first named, about 800 tons daily capacity, has 4 copper furnaces. The Saltillo smelter, it 1906, has a lead plant of 300 tons daily capacity and does a general custom nes, as well as treating ores of the company. There are 3 blast furnaces 1 reverberatory furnace. Transportation is by 4 aerial trams.

The Ferrocarril Coahuila y Zacatecas has 166 kilometres of main line.

Production: 1912, was 13,556,208 lbs. copper, 15,024,485 lbs. lead, 8,463,536 zinc, 1,572,012 oz. silver and 15,560 oz. gold.

SALTILLO, S. A.; COMPANIA MINERA DEL.**MEXICO**

Office: Primera de Galeana No. 2, Saltillo, Coahuila, Mex. Mine near zapil, Zacatecas, Mex. Lic. Miguel Cárdenas, pres.

Inc. June 15, 1899, in Mexico. Cap., 100,000 pesos; shares 100 pesos par; y paid.

Dividends: were 10,000 pesos in 1907; 15,000 pesos in 1908. Annual ting, Jan. 31, each year.

Property: the Jesus Nazareno mine with 116 acres of mineral land and 9 hectares of miscellaneous lands, in the Nazareno mining district of Mal, 10 miles from a railway. The mine has an orebody carrying auriferous and copper sulphides sufficiently developed to produce 1,000 metric tons iver-lead ore monthly.

Equipment: includes 5-mile private tram line, and 135-h. p. gas and tric plant. Presumably closed down owing to Mexican revolution.

TORREON, S. A.; COMPANIA METALURGICA DE.**MEXICO**

Torreón, Viesca, Coahuila, Mex.

tunnel, 7x9', planned to be driven about 3 kilometers, management estimating that in this distance a large number of veins carrying lead and copper ores should be cut, the tunnel being estimated as likely to cost about \$250,000.

The Mexican Western railroad from Tepehuanes to Guanacevi should add materially to value of property.

The L. Diamond Co., of Boston, was never a representative of this corporation, but a number of brokers bought stock and combined to unload on the public at unduly high prices. Debts amounted to \$150,000 in 1912 and have since increased.

Idle.

LUCIA MINING CO.

MEXICO

Office: 15 William St., New York. **Mine office:** Pánuco de Coronado, San Juan del Rio, Durango, Mex. H. M. Hubbard, v. p.; Myra B. Martin, sec.-treas.

Inc. 1900, in West Virginia. **Cap.**, \$25,000; shares \$5 par. This company is controlled by the San Luis Mining Co. and its property is described under that title.

NATIONAL MINES & SMELTER CO.

MEXICO

Office: Magee Bldg., Pittsburgh, Pa. **Mine office:** Magistral, Durango, Mex.

Officers: S. H. McKee, pres.; Wm. L. Curry, v. p.; John S. Eberman, sec.-treas.; Renald Ailes, financial agt.; E. A. Kennedy, supt.

Inc. 1911. Cap., \$2,500,000; issued, 1,700,000 shares. Authorized \$400,000 collateral income bond issue; issued, \$375,000. Company owns all the stock of the Santa Maria del Oro Mines Co., which company purchased property of the Lustre Mining & Smelting Co. from old stockholders, paying for same in stock and bonds of the National Mines & Smelters Co.

Property: the Magistral and Cocinera mines, 32 claims, 441 hectares, 1,089 acres of mineral lands, 397 hectares of mill and smelter sites, besides miscellaneous lands and leasehold timber lands. The Magistral mine is developed by 3 tunnels and 9 shafts and has a large body of slightly cupriferous pyrite with quartz and limestone gangue, carrying 0.5 to 5% copper, probably averaging under 1% copper, 1 oz. silver and 15 to 20 grams gold per metric ton.

The Cocinera mine developed an ore shoot 1,000' long, 15' wide and said to average \$10 in gold and copper with a little silver. Depth over 600'.

Ore reserves: in this and the Azurite mines are estimated by the management at 190,000 tons, developed in new ground since 1911. The old company claimed reserves of 185,000 tons in other and entirely distinct orebodies, in 1910.

Equipment: is complete, including a central power plant having two 360-h. p. Koerting and two 350-h. p. Crossley gas engines, one 200-h. p. and three 400-h. p. gas producers, a 2,300-volt 3-phase generator, two 6-drill Ingersoll-Rand air compressors and 10 hoists of 100 to 300-h. p. The 40-stamp mill, 750-lb. heads, has Huntington mills, 1 Ball mill and 10 Frue vanners.

The smelter has 6 blast furnaces, including two 150-ton hot-blast furnaces and three 200-ton furnaces, air for blast being heated by waste gases in a specially-designed MacDonald hot-blast heater. Shipping matte sent to the A. S. & R. Co. at Aguascalientes amounted to 8,000 tons, averaging 15-15% copper, \$155 gold and \$4 silver per ton.

The old company apparently spent a million dollars or so for installation before the mines were sufficiently developed to provide the ores necessary to keep the various plants running and in 1907-08 became financially embarrassed. The mines are not yet on a profitable basis, but with the new concentration plant, built in 1915, as the result of tests made by Henry E. Wood & Co. of Denver it is expected that the property will yield a satisfactory return as soon as operations become normal in Mexico.

ENOLES MINING CO. (CIA. MINERA DE PENOLES). MEXICO

Office: 61 Broadway, New York. Smelting works and mines at Mapimi, Arango, Mex. H. S. Mulliken, mgr. Controlled by the Metallurgische Gesellschaft of Germany.

Cap., 4,000,000 pesos, increased 1910 from 250,000 pesos; shares 100 pesos r. Has paid \$6,500,000 in dividends.

Property: the Ojuela mine with silver-lead ores in limestone, the San an mine, Paloma mines and options on the Cabrillas and Mariposa mines. Company produces iron, lead and silver, with a little copper as a byproduct.

Development: by shafts and tunnels to depth of 3,000', showing porphyry, brite, lime and shale. The main veins strike N. W. with 45° dip. Twenty-0 veins are traceable at surface, showing only carbonates or oxides of iron little value down to 300'.

Equipment: includes steam and electric power, hoist, a 3-mile narrow-gauge railroad connecting the mine with Mapimi and a 1,500-ton smelter.

Company actively producing ore 1917, and enlarging its mineral holdings.

AN LUIS MINING CO.**MEXICO**

Office: 15 William St., New York. **Mine office:** Panuco de Coronado, Arango, Mex.

Officers: David F. Beggs, pres. and treas.; C. P. Jacobs, F. C. Hanford, B. Raymond, Wm. T. Read and Walter S. Logan, directors; Myra B. artin, sec.

Inc. 1900, in West Virginia, and cap. increased, 1905, to \$3,000,000; shares par. First dividend, 1%, was paid Jan., 1906, and a second dividend was id July, 1916, both unearned. Direct title to this property is held in the me of Lucia Mining Co. Annual meeting, last Tuesday in February.

Property: 225 pertenencias, 500 acres, and a 25-acre mill site, in the San cas and Pánuco de Coronado districts of Durango. The mineral property ows limestone and porphyry, carrying fissure veins and contact deposits, imated by the management to average 3% copper, 12% lead, 1% zinc, 35 oz. ver and \$4 gold per ton, mainly from sulphide ores. The mines were dis- vered 1650, and worked more or less irregularly until 1830, when closed on count of water and Indian troubles, remaining idle until reopened, 1901, by : present company.

The **Potosina** mine is said to show, at the western end, a considerable dy of ore of smelting grade and a large quantity of milling ore.

The **San Gonzalo** mine, 450' deep, has a vein showing mainly low-grade s carrying silver values above, with copper on the lower levels, and is o reported to have a 2' vein carrying 25 kgs. silver per ton, with some gold.

The **Sidney** has a 2' vein of galena, giving assays up to 45% lead, 4 oz. ver and 3 grams gold per metric ton, opened by a shallow shaft, but has n idle for some years on account of water.

The **San Lucas** mine, 19 hectares, about 35 miles N. W. of Gabriel, is an l property claimed to have nearly 2 miles of workings, carrying mainly lead l zinc ores, and is idle .

The **San Pablo** mine has parallel veins said to carry 6 to 36" paystreaks sulphide ore, giving assays up to 16% copper, 360 oz. silver and 14 grams ld per ton.

Development: is by an abandoned incline shaft and a 175' vertical shaft, er equipped with headgear and hoist.

Equipment: includes steam plants, claimed to aggregate 750 h. p. with 6 ets and 2 air compressors of 12 drills combined capacity. Buildings include machine shop, carpenter shop, smithy, offices, 4 general stores and a large mber of dwellings for workmen, with a total of 175 buildings. The mill 2 crushers, 1 jig and 4 Bartlett tables. Concentration seems to have proven re satisfactory than leaching.

The Trinidad leaching mill, of 120 tons claimed daily capacity, has 2 calcining furnaces and apparently treated only about 40 tons of ore daily, when in operation.

Idle on account of revolution.

SAN MATEO, S. A.; CIA MINERA.

MEXICO

Idle. Velardena, Durango, Mex. Carlos Michaud, pres.

Inc. 1911, as successor of the Hileta Gold & Silver Mining Co.

Property: 72 acres, including the Santo Tomas, Bolsa and other mines, and a 60-acre mill site. Claims are reported to show 5 fissure veins in limestone and porphyry, having a generally E.-W. strike.

Development: one vein of 12" to 3' width is developed by a 1,600' tunnel, with 6,000' of workings, carrying ore said to average 1% copper, 6% lead, 36 oz silver and \$10 to \$50 gold per ton.

Equipment: includes steam and gasoline hoists, good for 1,000' each, and a 3-drill air compressor. There are 9 buildings. Shut down several years on account of political conditions.

STATE OF GUANAJUATO

CUBO MNG. & MLG. CO.

Office: 1025 Peoples Gas Bldg., Chicago, Ill.

Officers: H. L. Hollis, pres.; W. C. Boyden, v. p.; Alfred Cowles, treas. A. Hunter, sec.

Property: located in the towns of Cubo and Villalpando, 6 miles from Guanajuato, Mex.

Equipped: with 250-ton cyanide mill.

GUANAJUATO CONS. MINING & MILLING CO.

MEXICO

Office: 15 Broad St., New York, and Guanajuato, Gto., Mex.

Officers: Fred G. Corning, pres.; Robt. Mulford, v. p.; C. Van Rensselaer Cogswell, sec.-treas.; preceding, with R. A. Walker, W. Lawrence Green, Chas. G. Molin, Sidney Green, all of New York, and Geo. A. McGlone, Charleston, W. Va., directors.

Inc. 1899, in West Virginia. Cap., \$3,000,000; outstanding, \$2,830,000 shares \$5 par; \$169,080 of the unissued stock has been set aside to retire the outstanding 7% bonds. State St. Trust Co., Boston, transfer agent. Colony Trust Co., Boston, registrar. Annual meeting in Jan., at Charleston, W. Va. Listed on Boston Stock Exchange and dealt in on New York Curb.

Bonds: authorized \$300,000; outstanding \$128,000 convertible debentures, 7's, dated Jan. 2, 1904, due Jan. 2, 1924. Interest Jan. 2 and July 2, at New York office of company. Coupon and registered bonds, \$100, \$500 and \$1,000 convertible at 120 into stock at par; 10% of net earnings is set aside for redemption of this bond issue. Coupon No. 22, due Jan. 2, 1915, on the debenture bonds, was payable on May 15, 1915, but No. 23, due July 2, 1915, was deferred until further notice. Trustee, Columbia Trust Co., New York.

Dividends: 1¼%, 6¼c per share, paid July 31, 1906; 1½%, 7½c per share, Oct. 31, 1906; none since.

Balance sheet Dec. 31, 1913, the last reported, showed assets of \$3,493,000 which included mines, plants, etc., \$3,136,890; supplies, \$78,896; cash, \$98,000. Liabilities included: 6% bonds, \$5,000; refunding notes, \$53,800; surplus \$1,000; sinking fund, \$28,409; undistributed profits, \$45,019; notes payable, \$100,000.

Income account for 1913, last reported, showed: Receipts—bullion and concentrates, \$670,142; expenditures, mining, etc., \$302,452; ore bought, \$176,000; treatment charges, \$39,186; bullion expense, \$23,413; taxes, etc., \$26,674; depreciation, \$568,312. Gross profit, \$101,830. Deduct: bond interest, \$13,412; deprecia-

33,427; bond redemption reserve, \$5,494; total, \$52,333. Net profit, \$49,498; undistributed profit forward, \$45,522; total, \$95,019. Forward to surplus accounts, \$50,000. Undistributed profit, Dec. 31, 1913, \$45,019.

The company owns a large interest in the Carmen-Guanajuato Gold Mining Co.

Property: owns a number of silver-gold mines in the Guanajuato district; of these the Sirena is the oldest, having been worked for 100 years. Under normal conditions it has a monthly output of 7,500 tons milling ores. **Ore:** silver-gold, with value mainly silver. Vein varies in width from 3' to a maximum of 200'. Ore reserves of the Sirena mine were estimated 1913 as 800,000 or 1,400,000 tons blocked out, pillars and fill; Penafill lease, 180,000 tons.

Development: by shafts to depth of about 1,000'.

Equipment: includes 80-stamp mill, cyanide and electrical plants.

The revolution has greatly interfered with operations during the past few years, the property having been run on half time for a large part of the time.

GUANAJUATO DEVELOPMENT CO. MEXICO

Office: 50 Broad St., New York. **Corporate office:** Jersey City, N. J. line office at Guanajuato, Gto., Mexico.

Officers: Willard P. Reid, pres.; C. A. Decker, v. p.; P. E. Sharpless, v. p.; J. H. Porter, sec.-treas.; preceding, with Jas. T. Potter, Wright Johnson, Wm. Field, F. B. Medbury, John A. Martin, directors; John Pritzl, asst. treas.

Inc. Feb. 24, 1906, in New Jersey. **Cap.,** \$300,000 com. and \$600,000 pfd., increased June 24, 1916, from \$1,000,000, 6% cum. pfd.; \$3,000,000 common; shares \$100 par. Preferred stock has preference as to assets and is subject to all at par and accrued dividends on any semi-annual dividend date. Stock transferred at company's office. Annual meeting, first Thursday after first Monday in April, at Jersey City, N. J.

Dividends: preferred, paid semi-annually Jan. and July 1, from 1906 to 1910, inclusive, none since.

Company controls the Pinguico Mines Co., Mexican Milling & Transportation Co. and Peregrina Mining & Milling Co. Properties are located at Guanajuato, Gto., and are held under Government titles by leases, options, etc.

Ores: gold-silver bearing quartz found in veins cutting bedded volcanic dikes and intrusive rocks.

Company refuses to supply information.

Peregrina Mining & Milling Co.

Controlled by Guanajuato Dev. Co. Same officers, with P. E. Sharpless, J. W. Blackman, H. J. Milligan, Delavan Smith, W. B. Field and J. A. Martin, directors.

Inc. Feb. 21, 1905, in New York. **Cap.,** authorized and issued, \$1,000,000, 6% cum. pfd., and \$2,000,000 common. **Shares:** preferred, \$100; common, \$10. Annual meeting in April in New York.

Dividends: preferred paid 3½% in 1905; 1906 to Sept. 1, 1910, inclusive, 6% per annum; none thereafter until April 15, 1915, when 3½% as paid. Common none. Preferred dividends payable March 1 and Sept. 1, at 27 William St., New York. Last one, of 5% paid April 15, 1916.

Balance sheet for year ending Dec. 31, 1915, shows assets \$3,347,712, which included: property account, \$2,978,677; cash \$96,547; accounts receivable, \$1,646; metal pending settlement, \$72,805; supplies, \$30,339; investments, \$43,464; deficit, \$94,365. Liabilities include: current liabilities, \$6,282; accrued preferred dividends, \$338,333.

Profit and loss account for 1914 showed: balance, surplus, Dec. 31, 1914, \$81,224; 1915 earnings, \$55,557; total, \$336,801. Of this accrued preferred divi-

dends absorbed \$338,333; accrued pfd. dividends paid, \$35,000; depreciation, \$57,833; total, \$431,166; deficit, at end of 1915, \$94,365.

Property: about 175 acres, which include a group of old producing silver mines near Guanajuato. Output under normal conditions, 13,000 tons per month. **Ore reserves:** estimated Jan. 1, 1916, at 65,000 tons.

Equipment: includes milling and cyanide plants. Ore milled in 1915, 46,403 metric tons, with an operating profit of \$62,868. Revolutionary conditions have greatly hampered mining operations during the past few years.

Pinguico Mines Co.

Controlled by the Guanajuato Dev. Co.; same directorate. **Inc.** Sept. 13, 1906, in New Jersey. **Cap.**, authorized and outstanding, \$1,000,000 6% cum. pfd. and \$500,000 common, reduced from \$2,000,000 and \$5,000,000 respectively June 24, 1916. Shares: preferred, \$100; common, \$10. Preferred stock has preference as to assets and is subject to call at par, and accrued dividends on any dividend date. Stock transferred at company's office. Annual meeting, first Tuesday after first Monday in April at 15 Exchange Place, Jersey City, N. J. Fiscal year ends Dec. 31.

Dividends: preferred, 1907, to Oct., 1913, inclusive, 6% per annum; none reported since. Common, none. Preferred payable April and Oct. 1 at 27 William St., New York.

Property: 5 claims, 300 acres, covering 3,200' on the main Pinguico vein, near Guanajuato, Gto. **Ore:** silver-gold. **Development:** Pinguico shaft, 800' deep, and the Fortuna, 670' deep, with several miles of underground workings. **Equipment:** includes a 40-stamp mill and a cyanide plant. Capacity, under normal conditions, about 8,000 tons per month.

Political disturbances have interfered with operations during the past few years.

The Mexican Milling & Transportation Co. built and operates the 2 miles of railroad connecting the mine and the mill. The Guanajuato Dev. Co. refuses to give out any information.

GUANAJUATO REDUCTION & MINES CO.

MEXICO

Columbus, Ohio. Mines and mills at Guanajuato, Gto., Mex.

Officers: C. L. Kurtz, pres., Columbus, Ohio; Wm. G. Moore, v. p.; Geo. D. Bounton, v. p., Philadelphia; C. J. Kurtz, sec.-treas.; preceding, with C. J. Schlaechter, Wm. D. Sherrerd, Robt. T. Moore, Geo. W. Chase and L. O. Bailey, directors. W. G. Wheaton, auditor; H. P. Smith, gen. mgr.; F. L. Hudson, resident mgr.

Inc. 1904, in Colorado, as a consolidation of several silver and gold mines in the Guanajuato district. **Cap.**, \$7,500,000; shares \$100 par. Stock transferred at company's office, Columbus. Empire Trust Co., New York, registrar. Annual meeting, first Tuesday in Feb. of each year. Office, Colo.

Bonds: authorized \$3,000,000; outstanding \$1,000,000. 6%; 20-year, \$100, \$500, and \$1,000 gold bonds, dated Jan. 1, 1924; interest Jan. 1 and July 1, at office of the company, New York.

Bond interest was deferred Jan. 1, 1915, and was suspended in Aug., 1916, due to the revolution and inability to secure cyanide and other supplies.

The company was unable to convert its property into cash because of the Mexican revolution and defaulted, July 1, 1915, on its mortgage 20-year 6% bonds; this interest was not paid in 1915, the interest due Jan. 1 and July 1, 1915.

Comparative Income Account, Year Ended Dec. 31

	Gross Earnings	Operating Expenses	Net Earnings	Bond Interest	Balance for Year
6.....	\$525,553	\$375,531	\$150,022	\$168,000	(b)\$17,978
5.....	489,724	366,417	123,307	168,000	41,693
4.....(a)	1,459,435	1,297,529	161,906	168,000	6,094
3.....	1,149,176	839,674	310,813	168,000	141,502
2.....	1,004,290	693,477	310,813	168,000	142,813
1.....	930,280	648,247	282,033	168,000	113,033
0.....	931,562	618,067	313,495	168,000	145,495

(a) Includes deduction of \$64,191 for conversion of accounts from 2 to 10 to U. S. currency. (b) Deficit.

Cash balance, Dec. 31, 1916, was \$243,825, including \$93,803 from 1915. During 1916 operations were more seriously affected by the revolution Mexico than in any previous year. The causes were political, financial, transportation, labor, supplies, and withdrawal of staff. Instead of a normal 225,000 tons being treated, the quantity was only 61,030 tons, not 30%.

Property includes the Valenciana mine, practically idle in 1916. **Tepeyac mine:** on which little development was done. Produced, in 6, 1,708 tons (metric) averaging 363.4 grams silver and 3 grams gold. Its cost was \$1.762, and profit \$3.031 per ton.

Maravillas—Cata mine: good ore opened in 1915 was further developed. Produced 4,764 tons containing 282.5 gm. silver and 2.84 gm. gold. Its cost, \$1.576; profit, \$1.803.

Cata shaft: in 1916 the mine yielded 779 tons of 369.8 gm. silver and 2.7 gm. gold ore, at \$1.917 cost and \$2.925 profit per ton.

Mellado mine: during 1916 the Santa Margarita vein supplied the company's best ore, the yield being 11,561 tons, assaying 261.5 gm. silver and 2 gm. gold. Cost, \$1.286; profit, \$1.612 per ton. Contractors mined 3,276 tons from the principal workings.

Kurtz shaft: the 1916 output was 10,304 tons of 238.6 gm. silver and 2.54 gm. gold ore. Cost, \$1.037; profit, \$1.681 per ton.

Rayas shaft: during 1916 exploration cut high-grade stringers, rich in silver. In the Bautista hanging-wall lode is 6,000 tons averaging 700 gm. silver and 6 gm. gold per ton. Precautions were rendered necessary by thieves.

Garrapota mine: 1916 work revealed nothing special of note. Output was 5,032 tons at cost of \$1.204 and profit of \$2.203 per ton.

The average cost of all underground work was \$1.444 per ton.

Ore reserves: estimated as 141,452 tons blocked out, 245,665 tons probable ore, 483,327 tons on dumps, total 870,444 tons carrying 206 oz. silver and 2.03 gr. gold per metric ton.

The mill treated 64,000 tons of ore, 76% of which came from the mines, remainder from dumps. Average grade was 245.7 gm. silver and 2.49 gm. gold. There was also treated 1,005 tons of concentrate. Recovery was 8% of the silver and 10% of the gold. Cost of treatment was \$1.75 per ton, including 10% (above normal). Silver cost, 15.637c per oz. mill.

Equipment: includes 1000 ft. of 10-in. diameter cyanide line to the plant. Crushed ore from the plant is carried by a 10-in. line to the cyanide plant.

Under normal conditions the mill would be able to treat 100,000 tons of ore per month.

MEXICAN MILLING & TRANSPORTATION CO.

See Guanajuato Development Corporation Report, 1916.

PEREGRINA MINING & MILLING CO.**MEXICO**

Controlled by Guanajuato Dev. Co., which see.

PINGUICO MINES CO.**MEXICO**

Controlled by Guanajuato Dev. Co., which see.

PROPRIETARY MINES COMPANY OF AMERICA**MEXICO**

Office: 15 Broad St., New York.

Officers: D. C. Catlin, pres.; E. J. Page, v. p.; Chas. E. Pope, 2nd v. p.; C. W. Pope, sec.-treas.; above with Horace E. Parker, Wm. A. Robinson, Jr., Robt. V. Norris and W. B. Cogswell, directors.

Inc. 1907, in Nevada. Cap., \$3,000,000; shares \$5 par; \$2,250,500 issued. Bonds: authorized, \$750,000, 6% convertible; outstanding, \$703,400. New York Trust Company, registrar. Stock transferred at company's office. Annual meeting, second Monday in June. Is a holding company, controlling through stock ownership the Mineral Development Co., and the Providencia M. & M. Co. of Guanajuato, Mexico.

Latest financial report available, year ending May 31, 1914, shows assets: property, \$2,249,000; stock, bonds and notes of subsidiary and other companies, \$560,542; accounts receivable, \$31,076; cash, \$5,427; furniture, \$313; accounts since organization of company, \$132,632; loss and gain, \$8,700. Liabilities, amounting to \$3,737,193, include outstanding stock, \$2,250,500; outstanding bonds, \$703,400; stock exchanged for Min. Dev. Co. shares, \$6,380; accounts payable, \$5,996; contingent, \$21,417.

The 1915 annual report contains a reference to necessary "additional financing" when the orebodies of the Nueva Luz mine have been more thoroughly developed and when political conditions in Mexico permit the reopening of the Tajo de Dolores mine.

Mineral Development Company

H. Vincent Wallace, gen. mgr., Guanajuato, Mex. Cap., \$1,000,000; shares \$1 par; \$800,000 issued.

Property: the Nueva Luz mine, the La Planta and Torre mines. La Nueva Luz mine, adjoining the Valenciana, is developed by a 2,025' shaft and a 1,130' crosscut, driven through the Veta Madre, below the Valenciana workings, which cut 3 veins reported to be from 5' to 32' wide, and to carry iron pyrite, zinc blende, lead sulphide, chalcopyrite, silver and gold. The 3rd vein intersected 1,069' from the shaft was 5' wide, and assayed 60 grams silver, 1/4 gram gold and 10% zinc, per ton. Management plans drifting on the lowest level and diamond drilling to ascertain dimensions of these orebodies. Although the general manager, an Englishman, remains at the property, it is doubtful if active development work can be continued at the present time.

Providencia Mining & Milling Co.

Cap., \$1,250,000, of which \$250,000 is 7% preferred, convertible at \$10 and \$1,000,000 common stock, 250,000 shares common in treasury.

Property: the Tajo de Dolores mine at Guanajuato, Mexico. The mine was closed down in April, 1914, and the outlook for an early resumption of operations is not bright. The 200-ton mill and cyanide plant has been leased for 3 years to the Cuba Mining & Milling Company for a yearly rental of \$20,000 U. S. currency and an option to purchase at \$1,000. Interest at the rate of 6% is charged until the option is exercised; rent paid is credited to purchase price. The Cuba Co. agrees to mill Tajo de Dolores ore for 3 years at a cost of 10¢ until exercise of option. The lease also provides for the lease of water, power, fuel, and supplies.

Company reported, March, 1917, that it was active. but no report of operations is ready.

N LUIS; CIA. BENEFICIADORA**MEXICO**

San Luis de la Paz, Gto., Mex. Owns the Ojo de Agua smelters. Idle.

STATE OF GUERRERO**PACIFIC COPPER CO., LTD.****MEXICO**

Address: F. C. Stephens, P. O. Box 1656, Mexico, D. F. Mine office: Atlan, Galena, Guerrero, Mex.

Officers: Dr. W. S. Cockrell, pres.; Thos. Milan, v. p.; J. P. Taylor, H. J. Morden, treas.; F. C. Stephens, gen. mgr.; preceding, with J. Milbraith and Carlos Eisenmann, directors.

Inc. May 16, 1906, in Mexico. Cap., 10,000,000 pesos; shares 100 pesos non-assessable; fully issued. Company holds direct title to its property through the Compañia de Cobre del Pacifico, and is in turn controlled through stock ownership by the Pacific Copper & Pyrites Co.

Property: 1,000 pertenencias, 2,471 acres, known as El Rey del Cobre, near the Rio Murga, in La Union district, 10 miles north of Petatlan about 28 miles N. E. of Zihuatanejo, the nearest port. The property has contact deposits in metamorphic schist, the main lode having a strike, traceable 3 miles. No. 3 orebody, reported to have a maximum width of 197', carrying lenses of cupriferous pyrite, is developed by 2 cut tunnels, drifts and raises to depth of 234' below the outcrop. No. 1 orebody, about 1 mile to the S. E., has only been slightly developed; the ore of the ore in both is said to be identical. Ore is estimated to average 1.5% copper and 40c in silver and gold per ton, with 48% sulphur and iron.

Development: by "A" shaft of 109', "B" shaft of 70', El Socavon drift level of 400', No. 3 crosscut tunnel of 404', No. 4 crosscut tunnel of 486', 5 tunnel of 243', and No. 1 tunnel of 407', with a total of 3,050' of workings.

Ore reserves: estimated at 3,000,000 tons of ore blocked out, Jan., 1916. Equipment: includes a hoist, not installed, good for 1,000' depth, and all air compressor. There are about 35 buildings. Property lies in a rugged country and is reached only by trails.

The property has been under development several years. Development work continued without interruption from the warring factions in present revolution until 1915. Company is planning to build a railway from Zihuatanejo and to add equipment at the mines. The mine, though of small size, apparently contains large orebodies and is considered promising.

PACIFIC COPPER & PYRITES CO.**MEXICO**

Office: 1429 Monadnock Bldg., Chicago. John Howard McElroy, pres.; Greenleaf, sec.; Eugene Atkins, treas.

Inc. 1913, in Maine. Cap., \$7,500,000; shares \$50 par. Is a securities-trading company, controlling the Pacific Copper Co., Ltd., through ownership of over two-thirds of that company's outstanding share capital.

GRANDE & DOLORES SILVER MINING CO., LTD. MEXICO

Office: 57 Old Jewry, London, E. C., Eng. Mine office: Mineral de Guadalupe, La Union, Guerrero, Mex. Lieut.-Col. A. B. Haig, C. M. G., London, Mordant directors; A. Kitching, sec.

Inc. 1907, in Mexico. Cap., £17,000; increased, Aug., 1917, to £10,000 ordinary shares and £7,000 preference shares. All paid. After the pay-

ment of a 10% dividend on preference shares, remaining profits are divided equally. Debentures, £10,000, at 10%.

Property: La Nava mine, at Guadalupe, carrying copper ore, with values mainly in silver, developed by shaft and tunnel.

Equipment: includes steam and water power, with a 20-ton mill and leaching plant. Property employs about 100 men, normally, but for several years active operation has been prevented by the Mexican revolution.

STATE OF HIDALGO

ANTIMONY CORPORATION

MEXICO

Address: Room 1209, 71 Broadway, New York City.

Officers: Chas. F. Rand, pres.; Jos. S. Fay and Olof Wenstrom, v. p.s.; Chas. F. Smith, sec.-treas.; preceding, with Freeman Hinckley, Robt. A. Manning and Geo. Tyson, directors. Olof Wenstrom, mine mgr.

Inc. Feb. 15, 1916, in Delaware. Cap., \$1,000,000; shares \$5 par; 100,000 preferred; issued 10,000 preferred, 100,000 common, no bonds. Company organized to take over a deposit of jamesonite, a lead antimony ore, on one of the properties of the Cortez Associated Mines Co., in Zimapan, Mexico.

Property: 48 hectares, 120 acres patented, Zimapan, State of Hidalgo, Mex., said to show ore carrying jamesonite, consisting of 50.8% lead and 29.5% antimony, and carrying silver. The occurrence is fully described by W. Lindgren, and W. L. Whitehead, Econ. Geol., July, 1914, p. 433, and R. W. Raymond, E. & M. Journal, Jan. 2, 1915, p. 9.

CORTEZ ASSOCIATED MINES

MEXICO

Office: 53 State St., Boston, Mass. **Mine Office:** Jacala, Hidalgo, Mex.

Officers: Joseph S. Fay, pres.; Olof Wenstrom, v. p.; Freeman Hinckley, sec.-treas.; preceding officers, Wm. R. Fay, Robt. A. Manning and Philip W. Wrenn, directors.

Inc. Jan. 3, 1910, in West Virginia. Cap., \$1,500,000; shares \$3 par, non-assessable; issued, \$825,000. Company began business with \$275,000 cash, and Dec. 31, 1915, had on hand \$675,000 cash loans and accounts receivable. Boston Safe Deposit & Trust Co., transfer agent. Stock is listed on the Boston curb. Annual meetings, first Tuesday in March.

The Cortez Associated Mines is primarily a development and holding company, formed to explore and develop mining properties until they are ready to produce, and then to promote an operating company. Lands 170 pertenencias, 2,666 acres, in 4 groups, in the districts of Jacala, Zimapan and Ixmiquilpan, about 20 miles distant. The lands include the entire old mining camp of Jacala.

Zimapan is 85 miles north of Mexico City and Jacala is 35 miles N. E. of Zimapan, this place being 43 miles from Sayula on the National railroad. The Pachuca-Zimapan R. R., under construction, has been completed to Ixmiquilpan.

The Jacala property shows thickly bedded blue granular monzonite with alteration along the contact with the metamorphosed limestone by copper and silver. The intrusive mass is $1\frac{1}{4}$ miles long and 700' wide. There are numerous orebodies showing chalcopyrite and magnetite, some of oxidation.

Careful exploration has shown that most of the ore is in copper and carry but 1 to 3 oz. in silver. At the Bolde and Abeja, there are a few thousand tons of copper ore is found in a narrow chimney of

nt is by the Cortez 1,770' tunnel, which has opened up about 35,000 tons pyritic ore containing magnetite and chalcopyrite, the average copper contents being 1.72%. Several hundred thousand tons may possibly be developed here, and as the ore contains 50% iron, it will be valuable for a flux.

The Humboldt, Cortez, Abeja and Santa Maria show promise of making producing mines. The Humboldt has a magnetite-garnet outcrop, explored the 1,304' Humboldt tunnel with drifts and a 130' incline winze, mostly ore. The Santa Maria 394' shaft has developed a body of soft, leached copper-bearing gossan of 6,000 sq. ft. area. This shaft will connect with the Humboldt tunnel.

The Abeja shaft, 50', sunk 1912 through altered limestone to porphyry tract, shows massive, porous magnetite with chalcocite and oxidized copper minerals. This work will connect with the Cortez tunnel. The Gallo mine, part of the Humboldt, has a 350' shaft, connecting with the Humboldt tunnel, 35' from the portal.

Small silver-lead replacements in limestone also occur at Jacala, but Carmen mine is the only one of promise. This is a well-known old producer, 1½ miles north of Jacala, that yielded 40 oz. silver-lead ore for many years. The mine workings are on the contact between limestone and porphyry and have developed a replacement chimney of silver-lead ore in limestone, worked by an incline shaft to a depth of 900'. The company's work has not yet cut the downward continuation of this ore shoot.

The San Nicolas group includes the Soledad and Ensino Largo mines. The Ensino Largo, 6 miles from Jacala, shows irregular replacements of silver-lead ore in crystalline limestone developed by a 900' tunnel. This tunnel will also develop the Soledad mine. Production from the Ensino Largo mine in 1912-13 was 72 tons, valued at \$99 per ton.

Zimapan lies in a broad, arid valley with the 4,000' deep Moctezuma canyon 9 miles west and the 3,000' deep Toliman canyon 6 miles west. The mines lie in the Toliman canyon and on the ridge between it and the Moctezuma river. The ore deposits appear around a large intrusion of monzonite porphyry either as contact deposits carrying copper, or silver-lead deposits in the surrounding limestone, especially along fissures and intrusive dikes. The latter form pipes, or chimneys, either vertical or inclined. The copper properties at this place are practically undeveloped, but a contact deposit wing disseminated copper pyrite, zinc blende and galena, promises to develop a large tonnage.

The Sirena lead-antimony mine lies 9 miles north of Zimapan. Ore occurs as a replacement deposit, in Cretaceous limestone, cut by a porphyry vein, and apparently follows the bedding of the limestone, dipping about 40°.

The ore is massive and consists of pyrrhotite, arsenopyrite, blende and arsenite, forming an orebody 700' long and 30' thick.

Ore reserves: estimated at 1,000,000 tons of lead-antimony ore averaging 8% lead and 4% antimony. Examination of this property has been made by Waldemar Lindgren and W. L. Whitehead. See Economic Geol., Vol. IX, No. 5.

On Jan. 20, 1916, the company agreed to sell the Sirena property to the Sirena Mining Corporation, organized in the State of New York. The Cortez company owns 90,000 shares of the Sirena Mining Corporation. The shares are to be listed as treasury stock. The Sirena Mining Corporation will be given as much as to subscribers to provide for the common stock bonus for every share of common stock subscribed for by the Sirena Mining Corporation.

Property has been closed since 1916. No further advances.

GRANADENA MINING CO.**MEXICO**

Closed down by revolution. Mine at Santa Barbara, Hidalgo, Chih., Mex., produces silver-lead ore with a small amount of copper. Fully described Vol. X.

HIDALGO COPPER MINING & SMELTING CO.**MEXICO**

Office: Avenida 16 de Septiembre No. 26, Mexico D. F. **Mine and works office:** Zimapan, Hidalgo, Mex.

Officers: Sydney Ludlow, pres.; Ricardo T. Sobey, v. p.; R. A. Mills, sec.; Hedley Ludlow, treas.; preceding, with George A. Camphuis and W. H. Armstrong, directors; Hedley Ludlow, gen. mgr.; Jas. H. Armstrong, supt.; Plenio Lopez, engr.; Halarion Diaz, chemist.

Inc. Aug. 14, 1907, in Arizona. **Cap.** \$2,000,000; shares, \$10 par, in \$1,000,000 preferred and \$1,000,000 common stock. Annual meeting, third Monday in August.

Property: 44 mines, 500 acres, with a 500-acre mill site, said to carry copper ores, with small amounts of lead ore. Lands show monzonite-porphry and limestone, with contact orebodies. Copper ores are estimated by the company to average 2.8% copper and 800 grams silver per ton. The mines have a great variety of ores, including copper oxides and carbonates, carbonate and sulphide ores of lead, argentite and chalcopyrite.

Development: by shafts and tunnels, with a total of 3,000 meters of workings, estimated to show 50,000 tons of ore, with 20,000 tons blocked out for stoping.

Equipment: includes a small steam plant and 16 buildings. Company employs about 800 men at the mines and works.

The 50-ton smelter, at Zimapan, 5 miles from the mine, receives ore by pack-train. Copper production is 20% matte, sent to the Aguascalientes smelter. Lead smelter running, 1913, after many years' idleness, on ore from Nevada group of mines, averaging 25% lead and 900 grams silver. Company plans further development of Purisima, Camino and Concordia groups, and was installing oil engines and electric light, etc., at smelter. Probably closed down, owing to disturbed conditions in Mexico. No recent returns secured.

REAL DEL MONTE Y PACHUCA; COMPANIA DE**MEXICO**

Subsidiary of the U. S. Smelting Ref. & Mining Co., 55 Congress St., Boston, Mass. Salvador M. Cancino, pres.; D. S. Calland, director. Mines at Pachuca and Real del Monte, Hidalgo, Mex.

Inc. 1867, in Mexico, with 2,554 capital shares; all but 20 owned by the U. S. Sm. Ref. & Mng. Co.

The first discovery of ore was made shortly after the Conquest of Mexico by the Spaniards, and several of the principal properties were in large production prior to 1780, and at the time of the visit of Baron Von Humboldt in 1790 constituted the most important silver producers in the Western Hemisphere.

Property: 180 mining claims, 1,736 hectares or 4,270 acres, and approximately 26,000 acres agricultural land, at Real del Monte, 7 miles from Pachuca.

Geology: of the district is extremely simple, as all veins are fissures in a uniform, deep-seated andesite base which constitutes the entire rock mass for an area of over 100 square miles. While there are superficial capping rocks of other nature, they have no relation to the veins. Vein filling is quartz with a little calcite. The usual mineral content of the veins

never more than four or five per cent. and aside from the silver and gold minerals is almost wholly composed of iron pyrite with insignificant inklings of lead and zinc sulphides.

Development: by over 150 shafts, and the tunnels, drifts, etc., now open and accessible, aggregate over 100 miles in length. Past workings have embraced over 50 operating mines on the company's property, but the principal operations at present are confined to eight, worked through shafts extending to surface and numerous interior shafts devoted to hauling of men and materials. The deepest workings extend to a depth of 25 meters (2,050') below the surface and the average depth from which ore is handled approximates 1,300'.

Ore reserves: owing to the heavy expense of pumping, the reserves of ore actually blocked have been held for several years past at about 1½ years of full production rate. During the past year entirely new developments have importantly added to this ratio. The eight operating mines merely served to embrace a relatively small proportion of the known mineral-bearing territory and operations are assured for many years to come.

Ores are transported from the shafts by electric surface haulage or aerial tramways to two cyanide plants, one of 800 tons daily capacity in

the Real dei Monte district, the other 1,200 tons daily capacity for the Chuca district. Approximately, 90% of the silver values and 96% of the gold are extracted by the cyanide process and by concentration. About 60% of the total recovered values are in the form of concentrates which are shipped to custom smelters; the balance in the form of doré bullion which is exported. A 50-ton Minerals Separation flotation plant was erected at the Huatlan cyanide plant in 1917.

Production: during 1915 amounted to 390,000 tons of ore averaging 13.5% of silver and \$1.48 gold per ton. The average cost for the first nine months of 1915 was \$4.16.

In spite of Revolutionary activities and the fact that during several periods the properties have been completely cut off by rail and telegraph from the outside world for months at a time, operations have never been stopped and the entire organization, Mexican and foreign, has been held together. There have been no labor troubles of importance at any time and the only causes for cessation or reduction of operations have been due to difficulties in getting supplies on account of transportation causes. The plants are at present operating at about one-third of rated capacity.

SANTA GERTRUDIS CO., LTD.

MEXICO

(Controlled by Camp Bird, Ltd.)

Office: 1 London Wall Bldgs., London, E. C., Eng. A. A. Kelsey, sec. gen.; directors: F. W. Baker, chairman; L. Clerc, F. A. Govett, F. H. Hamilton, J. LePass, O. deRivaud.

Technical committee: J. A. Agnew, L. Chevillon, Wm. J. Cox, cons. gen.; Hugh Rose, gen. mgr.

Departmental heads: general, C. A. Lantz; mining, T. C. Baker; accounting and purchasing, E. J. Craig; electrical, F. H. Walsh.

Inc. Dec. 31, 1909, in England. Cap., £1,500,000; increased Jan., 1911, to £1,275,000; shares £1 par; all issued and fully paid. (Camp Bird, Ltd., has 1,126,991 shares.)

Company organized to acquire from Camp Bird, Ltd. an option to purchase the controlling interest in the Compania Minera de Santa Gertrudis de Huadalupe, owning the Santa Gertrudis gold and silver mines, for \$9,000,000 Mexican currency, approximately £922,130. Consideration for the option is £222,800, payable £20,000 cash and £202,800 in fully paid shares; the holders also agreed to provide subscribers for 1,072,131 shares at par, and

to provide £150,000 working capital, and also the purchase price of £922,130, the preliminary expenses to be repaid to vendors out of the first profits.

The name of the operating company is **Compania de Santa Gertrudis**.

Inc. Jan., 1910, in Mexico. Cap., \$250,000. Hugh Rose, gen. mgr. The company formed to treat the ores is known as **Compania Beneficadora de Pachuca, inc.** in Mexico. Cap., \$500,000. Hugh Rose, gen. mgr. All shares in both these companies are owned by Santa Gertrudis Co., Ltd.

Balance Sheet: (year ending June 30).

Assets:

	Property & Equip.	Invest- ments	Cash	Miscel.	Total
1916.....	£1,019,343	£431,739(b)	£100,982	£17,253	£1,569,317
1915.....	1,019,601	503,507(a)	99,459	17,722	1,640,389

(a) Includes: Cost of shares in Cia. Ben. de Pachuca, and Cia. de Santa Gertrudis, S. A., £252,100; Cia. de Santa Gertrudis, S. A., £2,459; Cia. Ben. de Pachuca, S. A. current account, £136,434; shares in Amistad y Concordia Aviado and Recuperadora, £93,762; shares in the Messina Transvaal Dev. Co., Ltd., Messina, Zoutpanster, Transvaal, South Africa, £18,750.

Liabilities:

	Capital	P. & L. Acct.	Miscel.	Total
1916.....	£1,500,000	£22,030	£47,287	£1,569,317
1915.....	1,500,000	130,394	9,895	1,640,389

(b) Includes: Cost of shares as in (a), £252,100; Cia. Ben. de Pachuca, current account, £66,611; shares in Amistad as above, £99,277; and shares in Messina, £13,750.

Profit and Loss Account: for year ending June 30, 1916, shows receipt of £76,854, which includes £70,000 dividend declared by Cia. Ben. de Pachuca, S. A. Balance forward, £70,057, to which is added amount brought forward June 30, 1915, £55,393; total £125,450, of which dividend No. 5 of 1s. per share, paid June 30, 1916, absorbed £75,000; tax reserve, £23,000; special reserve, £5,000; directors' extra remuneration, £11,000; £22,030 carried forward.

Dividends: 15% in 1911-12; 15% in 1912-13; nil in 1913-14, owing to unsettled conditions in Mexico and Europe; 5% in 1914-15, paid Nov. 25, 1915 and 5% for 1915-16, paid June 30, 1916.

Property: 626 acres in the Pachuca mining district, State of Hidalgo, about 62 miles from Mexico City, examined by W. J. Cox, R. J. Frederick, F. J. Pope and E. E. Chase. The ore carries silver-gold values in large fissure veins or crush zones, 50' to 100' wide in andesite. The great shoot is 3,000' long, 18' thick and 600' high and prongs extend upward to the 800' or 900' level, but do not reach the surface.

Development: by shafts with extensive underground workings. Work in year ending June 30, 1916, totaled 14,865'.

A feature of work in 1916 was the discovery of highly mineralized rock on the hanging wall of the north vein on No. 14 and 16 level. On No. 14 it was 45' wide and on No. 16, 42'. On No. 11 level the shoot was 102' long, assaying \$1.79 gold and 16.6 oz. silver across 4½' and on No. 12 was 118' long, containing \$1.15 gold and 10 oz. silver across 7' of ore.

Ore reserves: estimated June 30, 1913, 1914, 1915 and 1916, respectively at 1,047,000, 1,194,000, 1,287,000, 1,214,000 tons, the last with an estimated recoverable content of 66,964 oz. gold and 13,392,981 oz. silver, recovery at 90%. At normal rate of production the present reserves would be sufficient for about 3½ years. Operating expenses under normal conditions about 18s. 6d. (\$4.44) per ton. For mining and milling practices see A. I. M. E., Aug., 1916, pp. 1,295-1,376.

Equipment: includes a 60-stamp mill and cyanide plant; wt. of stamps, 50 lbs. Mill also contains 10 tube mills; capacity, 25,000 tons per month. Ushing commenced June 14, 1911.

Production: (years ending June 30).

	Tons	Value	Gold, Oz.	Silver, Oz.
6.....	277,616(b)	£379,651	12,550	2,286,450
5.....	211,669(a)	249,728	10,727	2,000,856
4.....	293,836	498,754		
3.....	263,554	631,718		

(a) Operations were at 52.7% normal rate. (b) 56.6%. Ore averaged 34d. (\$8). The recovery was 92.85%.

During June, 1917, 27,550 tons of ore was treated for \$41,063 profit. In second quarter of this year, 85,705 tons yielded a mine profit of \$115,157. The mill operated at 86.5% capacity, but 100% capacity was expected during third term.

Flotation is being tried on a working scale to see how far cyanidation may be eliminated. K. & K. machines are used, followed by Callow cells cleaning concentrate.

Santa Gertrudis is a big mine, and if conditions allowed, it would make good profits, especially with silver at present prices.

STATE OF JALISCO

AGUILA CONSOLIDATED MINING CO.

MEXICO

Address: 185 Summer St., Boston, Mass.

Officers: D. E. Makepeace, pres., Attleboro, Mass.; E. B. Estes, sec.-as.

Inc. 1917 in Arizona. **Cap.**, \$1,200,000; shares \$1 par. Company is a re-organization of the Aguila Amalgamated Mining Co., described Volume 1, and which succeeded the Mazeppa Cons. Mining Co. Stockholders in old company were given the option of exchanging their holdings on a basis of 1 share of new for each 5 shares of old and payment of 4c per share new stock.

Property: near Cinco Minas, said to have one-half mile of workings and show ore assaying from \$100 to \$160 per ton, mainly in gold and silver. Development work resumed in 1917.

LAJAC MINES CO.

MEXICO

Address: Guadalajara, Mexico. W. L. Barclay, pres.; J. I. Higbee, v. p.;

J. Pentland, gen. mgr.; C. A. Sidler, sec.-treas.

Inc. Dec. 16, 1910, in Delaware. **Cap.**, \$2,500,000; shares \$1 par. Company was formed for purpose of purchasing the Refugio, Animas, and Tres Estrellas mines in the Hostotipaquillo district. Later an option was taken on the Trinidad and Mexicano mines.

Property: the Refugio mine, 125 acres, was worked for 25 years prior to acquisition by present owners, down to the 500' level. The main vein a width of 5' to 15' with well-defined walls. Ore is said to carry gold and silver with average assay value of \$15.00 per ton. The Animas property, 125 acres, lies west of the Refugio and is apparently on the same vein. Ore is said to contain 20 ounces silver and \$3 to \$5 gold per ton.

Development: at both mines is by means of tunnels, the Animas having 2,500' of workings. The Tres Estrellas property, 120 acres, is a mile from the mill and has not been developed at depth.

Equipment: includes a 15-stamp mill and a 50-ton cyanide plant in part of construction. Hydro-electric power is used. The revolution in

Mexico has interfered with operations and the mines have only been worked intermittently since 1914.

AMPARO MINING CO.**MEXICO**

Office: 541 Drexel Bldg., Philadelphia, Pa. Mine office: Etzatlan, Jalisco, Mexico.

Officers: A. F. Bracher, pres.; W. H. Kister and A. S. Miller, v. p.'s; Henry Freund, treas.; with J. H. Stopp, P. C. Evans, E. A. Noppel, J. H. Scott, L. H. Adler, Jr., and C. K. Smith, Jr., directors. J. S. Williams, sec.; J. H. Howard, gen. mgr.; W. Howard, asst. mgr.

Inc. 1902. Cap., \$2,000,000; shares \$1 par; reduced from \$3,000,000 in 1907.

Balance sheet for 1916 shows total assets of \$4,009,195, including \$2,478,897 for property and plant, \$1,377,538 current (\$798,925 cash) and \$152,760 miscellaneous. Current liabilities at end of 1916 were \$428,056.

The income was \$1,297,236 gross, mostly from bullion and concentrate. Net profit was \$456,970. Dividends absorbed \$400,000. Mexican taxes amounted to \$120,675, plus \$20,665 for revolution expenses. American taxes totaled \$7,524. In Aug., 1917, \$60,000 was paid in dividends.

Property: includes the Canada, La Union, San Juan, Amparo, San Domingo and Natividad mines, and Rancho Embocado of 4,390 pertenencias, 7 to 9 miles S. of Etzatlan, State of Jalisco.

Development: through general shaft to depth of 1,300'. New work in 1916 totaled 10,501'. Prospects at 1,100' are good, but at 1,300' ore is spotty. The ore contains gold and silver values with sulphides.

Ore reserves: of positive, probable, and prospective ore were 750,000 tons in 1908, 695,000 in 1909, 712,773 in 1910, 706,635 in 1911, 724,099 in 1912, 502,746 in 1913, 447,500 in 1914, 393,610 in 1915, and 472,350 in 1916; over 70% being positive in 1916. Shrinkage stoping is practised, resulting in reduction of costs.

Equipment: electrically driven throughout, including hoist, compressors, pumps, sorting plant, crushers, 50 stamps, 4 tube mills, concentrators, Dorr classifiers, Pachuca tanks and 3 Oliver filters; also a ranch for supplying meat, corn, vegetables, etc.

Production: 50,000 tons in 1908; 63,398 in 1909; 68,217 in 1910; 71,790 in 1911; 92,365 in 1912; 104,330 in 1913; 87,320 in 1914; 114,166 in 1915; and 90,000 tons in 1916.

In 1916 the ore assayed 9.95 grams (0.32 oz.) gold and 320 grams (12.5 oz.) silver per ton. The extraction was 75.6% and 78.9% of gold and silver by cyanidation, 18.4% and 9.2% by concentration, and 91.1% of the total contents. Flotation is to be tried in place of cyanide.

Costs were \$1.34 for mining, 14c for transport and crushing, \$1.86 for treatment, 48c for selling, 43c general, \$1.22 for taxes, 21c for revolution and 30c for miscellaneous, a total of \$5.98 per ton milled. Results are given with commendable detail.

Although the revolution hindered operations in 1916, results were almost normal and appear to be improving.

AYUTLA SMELTER**MEXICO**

Owned by Carrizo Copper Co., at Ayutla, Autlan, Jalisco, Mex.

EL FAVOR MINING CO.**MEXICO**

Offices: Makeever Bros., Journal Bldg., Boston, Mass., and 170 Broadway, New York. Mine at El Monte, Hostotinanguillo district, Jalisco, Mex.

Officers: Sanford Makeever, pres.; Dr. H. D. Meredith, v. p.; J. S. Makeever, treas.; M. M. Makeever, sec.; Walter Neal, gen. mgr.

Inc. July, 1906, in Ariz.; reorganized, 1906, in Mexico. Cap., \$1,000,000; shares \$1 par. Stock not listed. After 5 years of operation the mine paid total dividends of \$110,000 in 1915-1917. Estimated total investment of \$1,000,000.

Property: 476 acres mineral land and extensive surface areas at El Monte, 75 miles N. W. of Guadalajara, Jalisco, Mex. A branch line of the Southern Pacific R. R. runs to Quemada, near the mine, and the Chapala Hydro-Electric Co. furnishes power for \$50 per h. p. Mine shut down May 1914, owing to Mexican revolution.

Vein reported as 10' to 14' thick with shoots of bonanza silver-gold ore workable to 1,300' by tunnels. Mine said to have 3 miles of underground workings open to 800' level. Mining costs reported to be 24c per ton.

Equipment: includes 150-ton silver cyanide plant, equipped with 20 pumps, crusher, tube mills, Dorr classifiers and thickeners, Oliver filters, chuga tanks, Wilfley tables. Extraction was only 54% of \$18 gold-vein ore, owing to manganese, but recent improvements are claimed to insure nearly 90%. Total production to date reported as \$1,500,000.

KEYSTONE MINING CO.

MEXICO

Office: Shamokin, Penn. Is a reorganization of Keystone Copper Smelter Co., of Philadelphia, and is the holding company for the Mexicana Co., Tapalpa district, Jalisco, Mexico. W. H. Childs, gen. mgr.

Lands: about 100 hectares, in 5 groups, in Tapalpa, including the Mexicana, America and Palma groups; also timber rights to 50,000 acres of mining lands. Principal development is on La Mexicana group, 82 hectares, 15 miles west of Tapalpa, mine having a 200-metre crosscut tunnel, showing 4 veins, with about 1 mile of workings. Veins are fissures in porphyry, averaging 5' width, carrying auriferous and argentiferous chalcopyrite, sphalerite and pyrite.

Equipment: includes steam and electric power and 30-ton mill. The mill plant was enlarged and remodeled and resumed operations in Jan., 1917. Presumably idle, 1915-17, owing to unsettled conditions in Mexico. Questions unanswered.

REGINA MINING CO.

MEXICO

Office: 2120 W. Tioga St., Philadelphia, Pa. **Mine office:** San Martin del Alto, Jalisco, Mex.

Officers: Chester P. Ray, pres.; F. W. Schmidt, v. p.; A. W. Brackner, sec.-treas.; M. J. Slattery, gen. mgr.; John P. Delaney, supt.

Inc. Nov. 1, 1909. **Cap.,** \$1,000,000; shares \$1 par, as successor of Philadelphia Copper & Gold M., M. & Smelter Co. Debentures, \$200,000 authorized; issued, \$62,000.

Property: 73 hectares, including the San Vicente, La Perla, La Fe, La Ochoa, Ajax and other mines, shows veins of 3 to 25' width, carrying auriferous and slightly argentiferous chalcopyrite. The mine has 4 tunnels, 150' intervals, and a 465' shaft. The Ajax mine shows a 12' vein, estimated to average 4% copper, 2 oz. silver and \$1.33 gold per ton. La Ochoa del Norte mine has a 260' tunnel.

Development: property as a whole has 8 shafts, of 100' average depth, with a total of about 1,000' of workings, claimed to put in sight 125,000 tons of auriferous copper ore. Development in recent years has been confined to the gold-silver vein, said to show at depth of 115', ore averaging 2% silver and 15 grams gold per ton.

Equipment: includes a steam hoist and air compressor, at the San Vicente group. The mill has a 25-ton Elspass mill, 25-ton experimental side plant, Huntington mill and 3 Pachuca tanks. Idle on account of local disturbances in Mexico.

Material changes impending, 1917, and secretary deems it inadvisable to give particulars at present time.

DISTRAL-AMECA COPPER CO.

MEXICO

Office: 201 Hibernian Bldg., Los Angeles, Cal. **Mine office:** Ameca, Jalisco, Mex.

Officers: H. L. Percy, pres.; Fred M. Lyon, v. p.; Geo. C. B. Robinson, sec.-treas.; Jas. P. Harvey, gen. mgr., and H. N. Manington, directors; Percy A. Babb, cons. engr.

Inc. May 20, 1909, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; issued, 1,255,300 shares. Holds direct title to lands through Magistral-Ameca Copper Co., S. A., inc. in Mexico. Annual meeting, second Wednesday in November.

Property bought of Las Moras Copper Mining Co. for \$100,000 by Messrs. Patrick Clark, Jas. P. Harvey, H. L. Percy and Fred M. Lyon. Mr. Clark selling his quarter interest to his associates for \$55,000.

Property: 74 pertenencias, 185 acres, known as the Mina Magistral, on the Hacienda Hegira, 8 miles S. W. of Ameca, has veins in diorite that are cut by porphyry dikes. The veins occur on dike contacts and show outcrops of silicified rock with quartz stringers and hematite. The vein varies from 4 to 25' in thickness and carries lenticular orebodies connected by mere films of quartz or fissures with wall rock impregnated with chalcopyrite. The Magistral ore shoot occurs where 3 veins intersect. The ore carries copper sulphides and averages from 4 to 7% in copper with about \$2 in combined gold and silver values.

Development: by 321' shaft, planned to be deepened to 350', and by tunnels with about 1 mile of openings, March, 1913, developing copper ground for width of 5 to 50', said to assay 4 to 8% copper. The Magistral was worked many years ago for bluestone, used by neighboring mines in the process of treating silver-lead ores.

Equipment: includes two 80 h. p. high-pressure boilers and a 150 h. p. tandem compound engine, with hoist good for 500', at the Magistral. The mines are connected with Ameca by a good wagon road, 8 miles long, with a 1½% grade, built with the idea of using it for railway tracks in the future. About 100 men are employed.

The concentrator was rebuilt, 1914, but owing to disturbed conditions in Mexico, operations have been greatly interfered with. No recent returns securable.

MASCOTA COPPER CO.

MEXICO

Office: 513 Germania Life Bldg., St. Paul, Minn. **Mine office:** Ameca, Jalisco, Mex.

Officers: Chris D. O'Brien, Sr., pres.; J. M. Bowler, v. p.; Byron J. Mosier, sec.-treas.; Chris D. O'Brien, Jr., gen. mgr., at last accounts.

Inc. June, 1908, in Arizona, as successor of Independence Mining & Smelting Co. **Cap.**, \$1,500,000; shares \$1 par.

Lands: 46 hectares, said to include an antigua mine, in the Guachinango division of the Mascota district, 24 miles from the Mexican Central line. The claims show an 8' fissure vein in porphyry, said to be traceable about 2,000' and proven to depth of 486'. The ore is reported to average 5% copper, 7 oz. silver and 6 grams gold per ton.

Development: includes 300' shaft and 375' tunnel, with 4,825' of workings, estimated to show 40,000 tons of ore, with 28,000 tons blocked out for stoping.

Equipment: includes 50 h. p. steam plant, with 3-drill Sullivan air compressor, a 25-ton wooden stamp mill, with 10 Allis-Chalmers gravity stamps, and a small concentrator, equipped with 2 Overstrom tables, a vanner, 4 slime tables and a sizer. Operations suspended on account of revolution. Still idle. 1917.

MEXICANA MINING CO.

MEXICO

Is the operating subsidiary company of the Keystone Mng. Co. of Shamokin, Pa., which see.

LOLOLOA MINING CO., LTD.**MEXICO**

Hostotipaquillo, Jalisco, Mex.

Officers: W. G. Miller, pres.; F. G. Stevens, managing director; W. L. Mathews, treas. and gen. mgr.; Edw. Fenley, supt., at last accounts. Inc. 1908, in Canada. **Cap., \$250,000.**

Property: 130 hectares, include ahtiguas opened by the Spaniards in the 16th century, reopened in 1904. Said to have been abandoned by former owners because of vein faulting. Several fissure veins in andesite carrying old-silver ore were worked in 1914 and shipments made to the El Favor mill.

AN FELIPE MINING CO.**MEXICO**

Hostotipaquillo, Jalisco, Mex. Col. N. Z. Seitz, pres. and gen. mgr.

Inc. 1902, in Arizona. **Cap., \$1,000,000; shares \$1 par.**

Property: includes a 50-ton mill. The company is said to have paid dividends from stock sales and was considered by Horace J. Stevens as rank bit of stockjobbery. Idle and probably defunct.

OLCANCILLOS MINES**MEXICO**

Letters returned in July, 1917, from Avenida Borbon No. 6, Autlan, Jalisco, Mex.

Property: 28 pertenencias, 70 acres, and a 10-acre mill site, with 100 miles of timber lands, held under a government concession in the Toluca district, including the Volcancillos and adjoining mines. The Olcancillos group, 12 miles W. of Autlan, shows diorite-porphry dikes, with contact deposits 5 to 80' wide, the largest one containing chalcopyrite assaying 4 to 15% copper, 4 oz. silver and nearly \$5 gold per ton.

Development: includes a 300' two-compartment shaft with about 1,000' workings and several tunnels, 1 having a back of about 150' but still in the oxidized zone. The mine is estimated by the management to show out 100,000 tons of ore. The ore deposit, discovered 1860, was opened by Edward Blake, was operated under bond and lease for a while by the Coma Mining & Smelting Co., but reverted to Mr. Blake and still remains in his family.

Equipment: includes a steam plant with 40 h. p. hoist, good for 1,000' and a 10-ton mill and smelter, now abandoned. The ore from the Volcancillos is sold to the local Indians, who have been metal workers from time memorial. The natives buy the crude ore, paying 4c per lb. for the copper content. They crush and concentrate the ore, smelting the concentrate in little furnaces, making copper cakes which are skillfully fashioned into pots, kettles, and other articles.

Equipment: includes 120-stamp mill, tube mills and a cyanide plant.
Production:

Year	Tons Milled	Value per Ton	Costs per Ton	Profit per Ton	Rec. %
1915.....	22,684(c)
1914.....	166,212(b)
1913.....	207,281(a)
1912.....	229,076	\$7.31	\$6.01	\$1.30	80
1911.....	272,235	6.17	4.43	1.76	88

(a) Includes 121,438 tons of tailing. (b) Includes 45,237 tons of tailing. Mill was closed down from April 21 to Aug. 31, 1914, due to revolutionary conditions, and in Feb., 1915, the plant was again closed down. A little development work was done during the year. (c) Production for January and February, 1915, was 22,684 tons with a gross value of \$143,486. Working profit amounted to \$57,304.

Other properties are being investigated with a view to prolonging the life of the company. An interest has been secured in the Anglo-Colonial Co., Ltd.

Mine was closed down Feb. 25, 1915, owing to revolutionary disturbances and milling operations could not be resumed during the year.

ESPERANZA MINING CO.

MEXICO

Office: 25 Broad St., New York. Controlled by Esperanza, Ltd. which see.

MEXICO MINES OF EL ORO, LTD.

MEXICO

Offices: 2 St. Helen's Place, London, E. C., and 18 Rue Laffitte, Paris

Directors: E. M. Clarke, Don Guillermo de Landa y Escandon, F. J. Fournier, H. Higgins, and Sir R. J. Price, M. P. F. L. Allan, resident manager, El Oro, Mexico; J. Vincent, asst. mgr.; C. R. Pinder, cons. engt.

Reg. Oct. 14, 1904, in England. Cap., £210,000; shares £1 par; increased from £180,000 in July, 1914; 180,000 shares issued and fully paid; 30,000 to be issued for acquisition of the Nolan properties. Shares were being issued in Feb., 1917.

Financial statement for year ending June 30, 1916, issued Feb. 17, 1917, showed that owing to suspension of operations due to the revolution, there was a loss of £21,855. Balance forward on June 30, 1916, was £19,073, compared with £91,127 the previous year.

Dividends: including bonuses—

Year		Year	
1907-08.....	5s.	1911-12.....	18s.
1908-09.....	12s. 6d.	1912-13.....	18s.
1909-10.....	14s.	1913-14.....	18s.
1910-11.....	16s.		

Property: company was formed to acquire by agreement with Exploration Co., Ltd., 26.83 hectares, 65.79 acres, total with surface rights 75 acres, adjoining the Esperanza mine, near the town of El Oro, Mexico. The land, formerly held by the Mexico Venture Syndicate, Ltd. includes the Mexico gold and silver mine.

The properties of the Compania Minera de Oro Nolan were acquired in Jan., 1915, for 30,000 fully paid shares.

The ore is contained in veins consisting of fissure veins.

Development: by shafts. The North shaft is 1,547' deep, the South 1,687'.

Ore reserves: June 30, 1916, were estimated at 505,300 tons, containing 1.40 gold and 6.4 oz. silver per ton.

Equipment: includes a 40-stamp mill, 7 tube mills, and a cyanide plant.

Milling operations started in Oct., 1907, were suspended in April, 1914, owing to revolutionary conditions. In year ending June 30, 1915, the mill worked 5 months. At the end of 1915 the mine was producing a limited output, but supplies were rapidly becoming exhausted, with little prospect of obtaining transportation for more.

Ore treatment was resumed in Aug., 1916, and to end of December quantity handled was 81,000 tons. In Feb., 1917, 7,300 tons yielded \$7,000, of which \$106,500 was profit.

Production	Tons Milled	Yield	Value per Ton	Costs per Ton	Profit per Ton

This famous and very efficiently managed property appears to have reached the zenith of its career and to have become a liquidating proposition.

STATE OF MICHOACÁN

ARIO COPPER CO.

MEXICO

Idle owing to political disturbances in Mexico. Mine office: Ario de Sales, Ario, Michoacan, Mex.

Officers: Frederick Moser, pres.; Geo. H. Walsh, Jr., treas.; A. P. Amler, supt.

Cap., \$2,000,000; shares \$10 par. Holds lands through Ario Copper Co., A. Inc. April 13, 1907, in Mexico. **Cap.,** 500,000 pesos.

Property: 126 hectares, including the Flora, Roma, Bohemia, San Antonio and San Valentin mines, old properties showing silver and copper ores, about 5 miles from the Inguaran mines, on the projected line of the Ario y Tacambaro railway, partly constructed.

Development: principal work is on the Flora and Bohemia mines, with shafts aggregating 500' depth, and 12 tunnels aggregating 2,600' length. Roma has ore assaying up to 25% copper. Equipment includes steam and gasoline power.

Patzcuaro, 70 miles distant, is the nearest railway point.

INGUARAN; COMPAGNIE D'

MEXICO

Office: 56 Rue de Provence, Paris, France. Mine office: Inguarán, Ario, Michoacán, Mex. Ch. Laforgue, gen. mgr.; Maurice Armand de Lille, agt.; L. Philips, supt.

Inc. Jan. 15, 1898, in France. **Cap.,** 12,000,000 francs, shares 500 francs par. Controlled jointly by the French house of Rothschild and the Banque d'Alger; a considerable portion of the company's stock is owned by the

Companie du Boleo. Property is said to have cost 1,500,000 pesos, and company reported to have expended about \$8,000,000 thereon, which is undoubtedly overestimated.

Property: 185 hectares, and a mineral zone of 5,000 additional hectares, in the Tacambaro district 70 miles north of the Balsas river, Michoacán, lying on the plateau of the volcano Jorullo, 1,500' above the plains.

Geology: the Inguarán mountain is traversed by a dike 2,000 to 3,000 wide, of fine-grained pink granite, or granodiorite sprinkled with grains of copper glance and copper pyrite. This dike is traceable several miles across country. The granite rock is sprinkled with specks of chalcocite and chalcocopyrite forming a disseminated, or so-called porphyry deposit whose payable ores occur in belts or bands in the dike. Proven depth of the ore is about 300 meters, at which point it apparently cuts off.

Development: by a 2,500' tunnel and 2 main shafts, deepest 350', with levels opened at 80' intervals. Both ore and country rock are exceedingly firm, little timbering being required. Estimates of size and value of the orebodies vary greatly, but the best authorities estimate an average of 3.25% copper, with 2,000,000 to 3,000,000 metric tons of ore blocked out. The ore is not well adapted to wet concentration as the metallic sulphides are firmly interlocked with the granitic minerals, but it is admirably adapted to treatment by froth flotation of the Minerals Separation Co., and apparently could be put about 8 or 10 into 1.

The Inguarán was the particular bugaboo of the copper situation at the end of the nineteenth century, the exigencies of the buyer's demanding that there always be some mine, just about to begin production, that can make several hundred million pounds of copper yearly at a merely nominal cost. The Inguarán has a large body of low-grade ore, but it is not equal in quantity or quality to that of several of our other "porphyry" coppers.

The property has been idle some years and cannot become a serious producer until rail connections are secured; judging from the very leisurely progress of the past decade it will become a large producer about the time that Gabriel blows his horn.

MICHOACAN RAILWAY & MINING CO., LTD.

MEXICO

Address: G. A. Mitchell & Co., secretaries, 2 Suffolk Lane, Cannon St., London, E. C., England. **Mine office:** Angangueo, Michoacán, Mex. **Works office:** Ocampo, Zitacuaro, Michoacán, Mex. G. A. Mitchell, C. R. Potter, W. J. H. Moll, and T. B. R. Scott, directors.

Inc. Jan. 29, 1889, in Great Britain. **Cap.**, £105,364; shares £1 par. £21,015 "A" non-cumulative 7% preference shares, £12,190 "B" non-cumulative 7% preference shares, £70,745 ordinary shares, and £1,414 founder shares; issued £99,370. Debentures, £27,090 of 5% prior lien bonds and £103,000 of 4% mortgage bonds. Is £61,800 in arrears of interest on mortgage bonds. The railway rights originally held have been disposed of to the Michoacán & Pacific Railway Co., in which the company has £60,000 share interest in addition to £18,000 bonds held.

Report for 1914 shows income, £3,343 and loss of £5,188; for 1915 £1,554 income with loss of £6,825.

Property: 537 hectares known as the Angangueo silver mines, open by tunnels and variously reported to have 14 to 30 kilometers of tunnel was leased, 1909, for 10 years to the American Smelting & Refining Co. and this lease has been extended until July, 1920, at a minimum annual rent of 350,000 (Mexican) and 10% of the net profits.

Conditions in Mexico resulted in intermittent work by the A. S. & R. The Government operates the railway to a limited extent.

STATE OF NUEVO LEON

MONTEREY MINING, SMELTING & REFINING CO., S. A. MEXICO

(Compania Minera, Fundidora y Afinadora, S. A.) Monterey, Nuevo León, Mex. Juan M. Weber, general manager. Cap., \$8,000,000; shares \$10 par.

Property: includes the Ocampo and Santa Elena mines, at Mineral de Mula, carrying gold, copper and lead ores; La Cruz y Anexas mines, Pánuco de Coronado, carrying silver-lead and copper ores; the Cinco de Mayo group at Lampazos, Nuevo León, producing iron fluxing ores; and mine at Naica, Chihuahua, Mex.

Company operates a lead smelter and silver-lead refinery, in direct competition with the American Smelting & Refining Co., at Monterey. The smelter also handles small quantities of copper, which is disposed of in the form of matte.

Production: 1912: was 13,919,107 kgs. lead, 238,555 kgs. silver and 3,158 s. gold. Probably idle since revolution started in Mexico.

MONTEREY SMELTING & REFINING CO.

MEXICO

Monterey, Nuevo León, Mex. Controlled by American Smelting Refining Co., which see.

STATE OF OAXACA

LA FORTUNA MINING CO.

MEXICO

Idle. **Office:** 221 Colorado Bldg., Washington, D. C. **Mine office:** Bartado 21, Ocotlan, Oaxaca, Mex.

Officers: C. E. Miller, pres.; Wm. H. Brown, first v.p.; E. D. Stinson, second v.p.; Amos Tyree, sec.; W. H. Brown, treas., at last accounts.

Inc. 1906 in South Dakota. Cap., \$250,000; shares \$10 par; non-assessed; outstanding, \$230,000.

Property: 30 hectares, known as the Treadwell group, about 3 miles from Ocotlan and one-half mile from the Oaxaca-Taviche branch of the Mexican Southern railway, shows a well-defined nearly vertical fissure in bed of 2 to 12' width, cutting bedded andesite tuffs, greatly leached and oxidized to depth of 300'.

Development: by a 400' vertical shaft, with 700' of workings, two 100' prospect shafts and 4 tunnels of 700' aggregate length. Workings show alcoppyrite, with quartz gangue, estimated by company to average 4.5% copper and 200 grams silver per metric ton. Some ore was shipped returning 14% copper and 600 grams silver per metric ton.

Equipment: includes a 30 h. p. boiler, hoist and a small air compressor and hammer drills.

Is a copper mine, whose silver output is a by-product only. Idle since 1912 owing to conditions in Mexico.

SAN MARTÍN y ANEXAS, S. A.; COMPANIA MINERA.

MEXICO

Office: Aptdo 145, Oaxaca, Mex. **Mine office:** San Martín de los Ríos, Oaxaca, Mex.

Officers: Frank M. Leonard, pres. and gen. mgr., 312 E. 2nd St., Tucson, Ariz.; Lic. Jesús Acevedo, v. p.; Ranulfo Bravo, sec.-treas. and supt.; preceding with Frank J. Woods and Alfredo Castillo, directors, at last accounts.

Inc. Jan. 15, 1907, in Mexico. **Cap.**, 400,000 pesos; shares 10 pesos par. in 35,000 fully paid shares and 5,000 assessable shares, issued 37,995 shares.

Property: 53 pertenencias, including El Billete de Banco, King Dodo, La Liga, Las Virginias, La Maria and La Roseta mines, about 10 miles from Ocotlan. Property shows diorite cut by a 6' vein carrying silver ore assaying 5 kgs. silver and 50 grams gold per ton.

Development: a 160' shaft, on the Maria, an 80' shaft on the Billete de Banco and a 350' tunnel on La Liga claims.

The political conditions in Mexico have stopped operations, but company keeps up tax payments and keeps watchmen at the mine. Property considered promising.

TEZIUTLAN COPPER CO.

MEXICO

Inc. in New Jersey. **Cap.**, \$1,000,000; shares \$100 par. Is controlled through ownership of entire stock issue, by Teziutlán Copper Mining & Smelting Co., which see. Fully described Vol. V, Copper Handbook.

TEZIUTLAN COPPER MINING & SMELTING CO.

MEXICO

Offices: 82 Beaver St., New York. **Mine offices:** La Aurora, near Teziutlan, Puebla, Mexico; and Tjutla, Oaxaca, Mexico.

Officers: S. W. Reynolds, pres.; C. J. Peabody, v. p.; D. C. Brown, v. p. and gen. mgr.; R. E. Safford, sec.-treas.; with E. W. Gould, Jr., R. H. Cromwell, W. F. Gillesby and Isaac Jackson, directors.

Inc. April, 1905, in New Jersey. **Cap.**, \$10,000,000; shares \$100 par. Controls, through entire stock ownership, the Teziutlán Copper Co., and has a close working agreement with the Compañía Metalúrgica Mexicana. State Street Trust Co., Boston, transfer agent. Annual meeting, first Thursday in June.

Dividends: have been paid as follows: \$100,000 in 1903; \$350,000 in 1904; \$495,216 in 1905; \$800,000 in 1906; \$800,000 in 1907; \$300,000 in 1908; none in 1909-10; \$400,000 in 1911; \$400,000 in 1912 and \$300,000 in 1913; none since on account of revolution in Mexico, causing suspension of work.

Property: La Aurora and Ocote mines, the former with 4,500 acres, 12 miles from Teziutlán, and about 130 miles E. of the City of Mexico, with a 16-acre smelter site, and 2,500 acres of miscellaneous lands, including La Chignautla limestone quarry, about 3 miles from the smelter. The climate is equable, and the mines are surrounded by fine arable lands, with an adequate supply of good labor.

Los Ocotes group, 240 hectares, bought Oct., 1905, is 2½ miles N. of San Martin, Ejutla, Oaxaca, Mex., and includes the San Juan mine, which is one of the few copper properties that has paid for development from production, since inception, and in addition, has given a profit, the mine having been a steady producer since 1900. This property shows 4 fissure veins, a porphyry. The one worked in the San Juan mine varies from 2 to 30' in width and has lenticular shoots of quartzose-chalcopryrite ore containing antimony, arsenic or bismuth. The ore averages 4 to 5% copper and 1 oz. silver per metric ton, with a trace of gold, and the mine has considerable ore carrying up to 11% copper and 4 kgs. of silver per

Development: by 4 shafts, 1 for ventilation. The San Juan or main is deep, and is connected on the 7th level with the Dolores shaft, 200 feet to the N., of 164 meters depth having 9 levels. The San Francisco shaft, 475 meters S. of the San Juan, is not yet connected with the main workings. The mine is quite dry, making only about 25,000 gals. of water daily. Ore reserves were estimated March, 1912, at 1,000,000 tons.

Equipment: at the San Juan mine of Los Ocotes group includes steam, and electric power, with steam hoists good for 500 meters depth, at the San Juan and Dolores shafts, and a 6-drill Rand air compressor. There also is an old mill erected by the former owners near the San Juan shaft.

The company owns a private narrow-gauge railway, of 12 miles length, from La Aurora mine to Teziutlán, where connection is had with the Intercontinental Railway of Mexico. This line has 2 Shay mountain-climbing locomotives, with a Rogers switch engine at the works. A railway is projected from Teziutlán to the port of Nautla, on the Gulf of Mexico, a distance of 100 miles, which would give a direct outlet, and reduce transportation charges, which are very high at present.

The company has 2 aerial tram lines, the lower of 50 metric tons hourly capacity, carrying ore and limestone, and the upper, of 15 metric tons hourly capacity, with automatic loading and dumping devices, carrying limestone.

A new 500-ton concentrating mill at Aire Libre, Puebla, Mex., is now fully operated, and of the most modern and complete equipment. It was practically completed at end of 1913, when all work had to be done in the light of revolutionary conditions.

Smelter: 17 kilometers from Teziutlán, was remodeled in April, 1910. Buildings are of concrete and steel and the mill is run by gravity throughout. Ore is brought from the mine by a 100-foot incline, passing over a gravity tramway equipped with sections of 100-ton cars. There are rows of six 250-ton ore and flux bins, having pneumatic chutes leading to two 500-ton blast furnaces, doing semi-pyritic smelting. Each furnace is charged with 6 charges of coke, charged by cars taking current from a 200-volt system of motors mounted on the axles, ore being dumped into 65-ton hoppers leading to each furnace. Each hopper is divided into 6 vertical sections, each of height, each section having 2 gates, operated hydraulically. The gates are in front of the furnace, permitting charging to any point. The furnace is charged, as charging can be done at 10 different points. The water-jacket piping is visible. The furnace is surrounded by 10 settling tanks, of 4' 6" height, with 18" linings, provided with 1/2" screens. Under the furnace floor is a 4x7' concrete-lined slag tunnel, through which the sludge, slags being granulated and washed out by a 100-ton water-launder having a 45' fall. A 10' steel balloon leads from the launder to the 150' steel stack, of 14' diameter, set on a 30' concrete base. The converter department, occupying an extension of the mill, has a 30-ton electric crane, of 40' span. There are 10 converters, with fusible discs, tilted electrically. Blister copper is produced in tilting moulds carried on trucks, and containing 18.6% in copper. The copper is exported through Vera Cruz to New York by the Amboy & Jersey.

The power plant has 5 Cornwellsville individual motors, each of 42" No. 1000, driving 1000 horsepower blast.

electric power is figured at \$14 per h. p. year, exclusive of interest and insurance. The 1,000-h. p. hydro-electric installation at the smelter takes water from the Totoyic or Xolat river, through a 3,600' flume, under a head of 150', the company having a government concession for 2,500 liters of water per second from that stream. The second hydro-electric power plant, on the Atexcaco river, 9 kilometers from the smelter, has about 3,000 h. p. available, partially developed by a 1,500-k. w. hydro-electric plant of 4 units, driven by Pelton wheels under a head of 1,340', delivering current at 6,000 volts, which is carried by double transmission lines, each of capacity adequate for the entire load, and stepped down to 440 volts in a transformer station at the smelter.

Production: 6,788,404 lbs. fine copper in 1902; 6,786,488 lbs., in 1903; 7,512,252 lbs. copper, 286,012 oz. silver and 3,057 oz. gold in 1905. The plant has a capacity of about 12,000,000 lbs. fine copper yearly, and was producing early 1911, at the rate of nearly or quite 1,000,000 lbs. fine copper monthly. Employs 2,500 men when working at capacity. The Teziutlán is the most promising and successful copper mine in southern Mexico, and management is considered good. Closed down since 1913, owing to Mexican troubles.

In July, 1917, it was reported that coke and other supplies were being sent to works for resumption of smelting.

STATE OF PUEBLO

AJUICHITLAN MINING & MILLING CO.

MEXICO

Address: Monterey, Mexico. Mines located in district of Toliman. State of Queretero, Mexico, about 25 miles northeast of Bernal station on the National railway, are reached by coach over good roads from Tequisquiapam.

Ore: is gold-silver, occurring in veins in shale. Vein has well defined walls, an average width of 9 metres, and dips east 50°. Average assay of ore from upper level is \$8 per ton, with \$4 to \$6 ore on the level 50 metres below. Ore is blocked out for 50 metres above upper level, company claiming to have 250,000 tons of \$7 to \$12 ore blocked out in the workings. There is a 65-ton mill on the property, water being obtained from a shaft in the arroyo. Output not reported. Mail returned in 1917.

PUEBLA SMELTING & REFINING CO.

MEXICO

Office: 35 Nassau St., New York. **Mexican office:** Isabella Catalica No. 33, Mexico City, Mex. **Mine office:** Cuyuaco, Pueblo, Mex.

Officers: Harvey C. Garber, v.p.; H. H. Nieman, sec.; B. P. Thom. treas.; preceding, with P. W. Luper, Wm. B. Reed, Jr., and I. W. Lofland directors.

Inc. Oct., 1912, in Delaware. Cap., \$5,000,000; shares \$5 par; non-assessable. Debentures, \$1,000,000 at 6%. Guaranty Trust Co., New York, registrars. Owns a 72% stock interest in the Cia. Minera Explotadora El Magistral y Anexas, and also sundry lands acquired from the Bankers Mining & Development Co., for \$4,250,000 in stock and bonds of the Puebla Smelting & Refining Co.

Property: 28 claims, 1,600 acres mineral lands, 120 acres timber lands 800 acres coal lands, a 25-acre smelter site and 100 acres miscellaneous lands in the Magistral district.

Ore: property shows limestone porphyry and diorite, orebodies occurring as contact deposits between limestone and diorite, and as replacements in the limestone. Ores carry oxides and carbonates of copper with small quantities of silver bromides, sulphides and free gold in the oxidized

ie. The deeper workings show chalcopyrite associated with hematite carrying garnetiferous quartz gangue in the sulphide zone.

Development: by numerous tunnels of from 200 to 750' with about 100' of workings, showing ore said to average 3.5% copper, 70 grams per ton and 1.5 grams gold per ton.

Equipment: company claims to have a power plant consisting of two 300 h. p. Babcock & Wilcox water-tube boilers, a 300 h. p. Allis-Corliss engine, a 200-h.p. Hughes-Philips Corliss engine, and a 225-k.w. Westinghouse generator.

Due to the revolution the property has not been operating since 1913.

STATE OF SAN LUIS POTOSI

MEXICAN LEAD CO.

See Mexicana, Cia. Met.

MEXICANA; COMPANIA' METALURGICA.

MEXICO

Offices: 82 Beaver St., New York, and No. 26, Ave. 16th de Septiembre, Mexico City, D. F.

Officers: D. C. Brown, 1st v.-p.; C. J. Peabody, 2nd v.-p.; R. E. Safford, asst. treas., preceding with H. H. Dean, G. F. Peabody and R. H. Carter, directors.

Inc. 1890, in New Jersey. Cap., \$4,000,000; shares \$100 par; fully issued; \$1,000,000 cumulative 8% preferred stock, \$1,250,000 guaranteed 6% non-cumulative preferred stock, and \$1,750,000 common stock.

Bonded debt \$2,774,700 first gold 5s. dated July 1, 1901, due July 1, 1911; interest A. and O.1, at company's New York office. Coupon (principal to be registered) \$1,000, and registered in multiples of \$100. Guaranty Trust Co., New York, trustee. Authorized \$3,000,000, of which \$732,700 is now alive in sinking fund. Subject to call at 110 and interest. Sinking fund, 2% per annum of amount outstanding; bonds so purchased being kept in sinking fund and the interest thereon added to the fund. Interest paid without deduction for normal income-tax.

Guaranty Trust Co., New York, registrar. No dividends to date.

Property: interests are extensive, including control of numerous subsidiary mining, transportation and land companies, among the more important being the Sombrerete Mining Co., and the Mexican Lead Co., at Sombrerete, Zacatecas, Tex., the Montezuma Lead Co., Alvarez Lead & Silver Co., Mexican Mineral Railway Co., and Potosi & Rio Verde Railway Co.

The **Veta Rica** mine owned outright at Sierra Mojada, is an important silver-lead producer. Development is by a 600' shaft.

Other important producers are the silver-copper mines at **Concepcion Oro**, State of Zacatecas. The **San Pedro** and **San Pablo** mines at Sombrerete are also important producers of lead and the mines of the San Pedro district at San Luis Potosi are heavy producers of silver, gold and copper, constituting the main supply of ore for the company's custom smelter, at San Luis Potosi.

The **smelter**, treating about 1,000 tons daily, has a modern equipment, including 12 furnaces for the reduction of gold, silver and lead ores, and a special copper department of 100 tons daily capacity. The works have modern steam and electric power, and employ about 1,000 men. In addition, there has lately been completed the Carmen 250-ton cyanide plant for cyanidation of lower grade ores from the San Pedro mines.

The company is a large producer of lead and silver, with outputs of

copper and gold, secured mainly as by-products, and is active and enterprising in the rejuvenation of old properties and the development of new mines.

NATIONAL METALLURGICAL CO.

MEXICO

(A subsidiary of the American Smelting & Refining Co.)

Office: 120 Broadway, New York. Smelter at Matehuala, San Luis Potosi, Mex.

Inc. Aug., 1901, in Colorado. Cap., \$1,000,000; shares \$25 par. Bonds have been retired. Annual meeting, last Tuesday in July.

The principal mines of the Matehuala district, San Luis Potosi, Mexico, are connected with the smelter by a 7-mile narrow-gauge railway.

The smelter, connected by a spur, with the Mexican Central railway, receiving ore by rail and burros, has 3 blast furnaces with a 30-ton reverberatory furnace used for flue dust. Product is matte, averaging 45% copper, 50 to 200 oz. silver and 1 oz. gold per ton, shipped to the Aguascalientes smelter for conversion.

SAN LUIS POTOSI SMELTER.

SANTA MARIA DE LA PAZ; NEGOC. MIN.

MEXICO

Office: 10 Cinco de Mayo, San Luis Potosi, Mex. Mine office: Matehuala, Catorce, San Luis Potosi, Mex. Pedro Barrenechea, pres.; Edgardo Mead, sec.; W. B. A. Dingwall, gen. mgr. at last accounts.

Inc. in Mexico. Cap., 240,000 pesos; shares 25 pesos par. From 1885 to 1904 inclusive, the mines yielded 11,327,210 pesos worth of ore, and the company paid 5,778,270 pesos dividends therefrom.

The mines, which are extensively developed, carry gold and silver-bearing copper and lead ores, with values mainly in silver and lead, the gold and copper being by products. The ores are mined to depth of 1,500'.

Equipment: includes steam and electric power. The reduction plant includes a 300-ton concentrator with Blake crushers and Chilean mills, and a smelter with two 40-ton furnaces. Company employed about 1,500 men, but closed down 1913, on account of revolution.

TIRO GENERAL DE CHARCAS MINE

MEXICO

Mine address: Charcas, San Luis Potosi, Mex. Owned by Cia. Metalurgica Nacional de Matehuala, controlled by the American Smelting & Refining Co. Mine was formerly owned by the Cia. Minera del Tiro General, S. A.

Property: 72 pertenencias, 178 acres, with 46-acre mill site, and 50-acre farm, in the Venado district. The mine, an antigua, discovered 1883, was worked on a small scale for 3 centuries, and in a larger way since 1838. It shows 2 main ore zones, carrying fissure veins in porphyry, near a limestone contact, with a generally E-W, strike and dip of about 70°. The N. vein of 3 to 8 meters width, with known length of 500 meters, is opened to depth of 1,361', showing chalcopyrite and sphalerite estimated by the management to average 2% zinc, 430 grams silver and 8 grams gold per metric ton. There are 9 tunnels, 4 reported by the management to be of 656' each, and 5 of 1,312' each, the mine having 13,123' of workings. The mine and works, when operating normally, employ about 1,200 men.

Equipment: includes a 700-h. p. steam plant, with hoists of 100-h. p. and 175 h. p. and a 10-drill air compressor, and some use is made of malacates in the shallower shafts. Buildings include an engine house, combination engine and carpenter shop, machine shop, general store, office, laboratory, warehouse, a hospital, 5 dwellings for officials, and accommodation for 40 Mexican families. There is a 10-stamp mill and a 150-ton concentrator, having 5 Blake crushers and 5 sets of rolls, with trommels and other necessary equipment. The mill has 10 Sutton, Steele & Steele pneumatic dry concentrators, treating

phide ores and giving a preliminary lead concentrate, cut out from the final concentrate, the latter being a 45% zinc product, secured largely from in jack.

STATE OF SINALOA

COIX CONSOLIDATED MINING CO., LTD.

MEXICO

Office: 516 Grant Bldg., Los Angeles, Cal. Mine office: Choix, Sinaloa, Mex.

Officers: R. A. Thomas, pres.; A. E. Pomeroy, 1st v. p.; C. J. Heyler, v. p.; J. R. Thomas, sec.; A. M. McDermott, supt; preceding with E. R. rey, A. J. McDermott, W. W. Thomas and A. Gleason, directors.

Inc. May, 1902, in Arizona. Cap., \$5,000,000; shares \$1 par, nonassess-; issued, \$3,155,534. Is protocolized under laws of Mexico. Owns 45% the stock issue of Los Platanos Development Co. Annual meeting, first nday in October.

Property: 269 hectares, some distance from a railway, on both sides of Rio Fuerte, in El Fuerte district of Sinaloa and Urique district of huahua. Orebodies are claimed to be large, occurring as contact de-its between diorite and limestone and porphyry and limestone, with re veins in granite and quartzite carrying gold and silver. Property in-les several antiguas.

Shipments of 1,062 tons of ore, to the Aguascalientes smelter, gave rns of 19.5 to 28% copper, with gross values of \$127,915.44 and net values \$7,940.61.

A 100-ton smelting plant, purchased 1911, has been received, but not in-led, owing to revolutionary disturbances in Mexico. Company awaiting eful conditions before resuming operations.

MAGISTRAL COPPER CO.

MEXICO

Mine office: Choix Fuerte, Sinaloa, Mex.

Officers: H. L. McNair, pres.; Hon. C. F. Wright, v. p.; A. G. Nash, -treas.; preceding, with Hon. W. S. Lieb, Thos. H. Carvin, H. R. Wood- d, John J. Dowdle, John P. Fiebig, John G. Whitmore and Hon. G. E. en, directors at last accounts.

Inc. June 15, 1906, in Maine. Cap., \$1,000,000; shares \$10 par. Owns the re capital stock of San Lucas Copper Co. No returns secured. Prob- closed down owing to revolution.

S PLATANOS MINING CO.

MEXICO

Mine office: Choix, Fuerte, Sinaloa, Mex.

Officers: A. M. McDermott, pres. and gen. mgr.; C. F. Iredell, v. p.; J. Davidson, sec., with R. E. Small and W. W. Thomas, directors. E. B. ford, mine supt.

Inc. Dec., 1909, in Arizona. Cap., \$1,200,000; shares \$10 par, nonassess-; issued, \$280,000. Operates through Cia. Exploradora de Los Platanos, ., inc. in Mexico. Merchants' Trust Co., Los Angeles, transfer agt. ual meeting, first Monday in October.

Property: 96 acres, bought of Choix Cons. Mining Co., Ltd., 3 miles i Choix, and 40 miles from Fuerte, the nearest rail point. The eastern nsion of the Kansas City, Mexico & Orient railway is planned to pass in 10 miles of mine.

Property shows diorite, cut by dikes of andesite, crossed by shear zones, of 30 to 100' estimated width with length of 2,500'. These zones carry ore shoots connected with a system of cross-fractures. The upper portion of one vein shows flakes of native copper, near surface, succeeded by a leached zone. The other vein is entirely leached near surface, except for occasional copper stains, and small bunches of ore. Ore is estimated by management to average 7% copper, 1.5 to 2 oz. silver and 60c to \$1.50 gold per ton.

Development: includes 1,500' of workings, estimated by the management to show 12,000 tons of ore. Records of 1,093 tons of ore shipped show average returns of 21.8% copper and 5.5 oz. silver per metric ton. The discard from these shipments, about 7,500 tons, is estimated to average 4% copper and 1.5 oz. silver per ton.

Equipment: includes a hoist, and several buildings. Idle several years owing to unsettled conditions in Mexico.

MEXICO

Subsidiary of the Pacific Smelting & Mining Co.

TAJO; MINAS DEL.

MEXICO

Mine at Rosario, Sinaloa, Mex. Owned by the Bradbury Estate, Bradbury Bldg., Los Angeles, Cal. Is one of the great gold-silver mines of Mexico, showing a big fissure vein in andesite, developed to 1,000' in depth. Working \$8 ore from old fills and pillars, above 600' level, 1916. Has a very complete equipment with 1,000-k. w. gas producer-electric plant.

The mill was handling about 250 tons per day, 1916. In June, 1917, milling was restricted by shortage of cyanide.

WEST COAST MINING & SMELTING CO.

MEXICO

Idle. Office: 30 Church St., New York. Mocerito, Sinaloa, Mex. Howard L. Haines, pres.; Chas. M. Hicks, sec.

Inc. 1906, in Maine. Cap., \$2,500,000; shares \$1 par; nonassessable; in \$500,000 of 7% cumulative preferred stock and \$2,000,000 of common stock.

Property: 6 groups, 387 acres, 5 to 20 miles from Mocerito, and 12 to 43 miles from Carbo. Principal property is Los Tajos group, 357 acres, showing andesite, cut by narrow fissure veins of 4' average width that are said to carry chalcoprite ore. The River mine, has a 150' shaft, on a vein of 5 to 8' reported width, carrying ore said to average about 5% copper and \$3 per ton in gold and silver.

Equipment: a 70 h. p. steam plant, a small compressor and 8 drills. The 30-ton experimental concentrator has a Blake crusher, 2 rolls, 2 Bartlett tables and 3 screens. The smelter, at the mine, has a 50-ton water-jacketed blast furnace.

ARNOLD MINING CO.

M

Mine office: Santa Cruz, Sonora, Mex. E. D. Arnold, pres. Coppes, mgr.

Property: the Del Pilar mine, about 35 miles N. W. of Cananea developed by a 400' shaft, showing ore said to carry 10% copper. Employed about 25 men. Property was reported sold to the Manhattan Development Co., for \$88,000, May, 1913. No recent information obtainable.

BONANZA MINING CO.

M

Office: Cananea, Sonora, Mexico.

Officers: Geo. Kingdon, pres.; C. T. Knapp, v. p.; Geo. Yourre, asst. pres.; Casey Stites, asst. sec.; preceding officers and M. J. Elsing, mgrs. Is the operating Mexican corporation of the Superior Bonanza Mining Co., which see.

Inc. June 7, 1904, in Mexico. **Cap.**, authorized and issued, 10,000 shares of value of shares \$1 (Mexican). Holds title to the mineral property of that company, located near Imuris, Sonora, Mex., consisting of 19 haciendas, or approximately 491 acres. Controlled through stock owned by Greene Cananea Copper Co. Purchase was made in 1911, but title has not been worked since that time. Contains a silicious ore, low copper content, but with notable quantities of gold. Was purchased to provide a reserve of flux for the iron in the Cananea ores.

BOSTON SONORA MINES CO.

M

Inc. about Dec., 1911, in Arizona, by Thomas Patterson, V. Clark, H. C. Wilderson, James V. Howard and Royal B. Young of Massachusetts. **Cap.**, \$1,000,000; shares \$5 par.

Property: at Cananea, Mexico, includes several claims near the United-Sonora (Carnegie Lead & Zinc Co.) ground, crossed by several replacement veins showing bunches of good ore in the shallow pits and prospect shafts thus far put down. Is a prospect only.

BUFA MINING, MILLING & SMELTING CO.

M

Idle. **Office:** 1030 I. N. Van Nuys Bldg., Los Angeles, Cal. 1 Bufa, Sahuaripa, Sonora, Mex. Wm. E. Richardson, pres. and mgr.; H. A. Sibbet, v. p.; Baron W. Riley, sec.; Frank R. Richardson, mgr.

Inc. 1902, in Arizona. **Cap.**, \$1,500,000; shares \$1 par. Has paid dividends, last being \$60,000, July, 1905.

Property: 123 acres, a 10-acre mill site, and 5,000 acres ranch showing 6 fissure veins, of which 2 under development average 4' thick, opened by a 600' incline.

Ore: said to give average assays of 10% copper, 10% lead, 4% silver and \$2.50 gold per ton, from argentiferous tetrahedral copper sulphides.

Development: shafts of 300' and 600', and a 225' tunnel, with 8 workings and about 20,000 tons of high-grade ore said to be blocked with a considerable amount of low-grade ore on the dump, for treatment.

Equipment:

at the mine, with 2 h

Rand air compressors and 7 power drills. Mine buildings include several small shops, a store, sawmill and about 20 dwellings.

The 35-ton concentrator has a small sampling mill attached. There also is a 20-ton leaching plant.

The smelter, at the mine, receives ore by gravity tram. Equipment includes 10-ton and 25-ton reverberatory furnaces, built of silica brick, made on the ground. Fuel is inferior wood, cut on the premises. Product is a matte carrying 50% copper, 600 to 800 oz. silver and 1.5 oz. gold per ton, shipped, by burro, to Aguascalientes, via Guaymas, for refining, some rich ore being shipped also. Production, 1906, was about 750,000 lbs. fine copper. Management said to be waiting for peace to resume operations.

CADENA DE COBRE MINING CO.

MEXICO

Address: care C. A. McDonald, sec., Bisbee, Ariz. Mine office: Sahuaripa, Sonora, Mex.

Officers: Emil Marks, pres.; C. H. Holz, v. p.; M. Newman, treas.; R. F. Koehler, J. Pennypacker and John Treu, directors; Arthur Houle, cons. engr.

Inc. Jan. 5, 1905. Cap., \$1,000,000; shares \$1 par. The former directors issued to themselves 550,000 shares of stock, and when this was learned the old board resigned and suit was brought, resulting in the cancellation of the stock so issued, it having been a grab, pure and simple.

Property: 84 hectares, in Los Chinos mountains, on the Yaqui river, shows iron outcrops up to 300' in width.

Development: by the 96' Bisbee tunnel, showing ore assaying 4 to 25% copper, with small gold and silver values, and 2 shorter tunnels. Idle on account of revolutionary disturbances in Mexico. Property was fully reported on by Arthur Houle, E. M.

CALUMET-SONORA MINING & MILLING CO.

MEXICO

Bonds foreclosed, Feb. 13, 1915, and property sold to R. P. Borgan for \$82,000. New company organized as Carnegie Lead & Zinc Co., which see.

Owned by Greene Cons. Copper Co., which is controlled by the Greene-Cananea Copper Co., which see.

CANARIO COPPER CO.

MEXICO

Address: Hon. J. B. Wright, Tucson, Ariz.

Officers: J. P. Harvey, pres.; F. O. Schellenberg, v. p.; Hon. J. B. Wright, sec.; E. J. Chapman, treas., and William McDermott, directors.

Inc. in Arizona. Cap., \$2,000,000; shares \$1 par; 600,000 issued. Registrar & Transfer Co., New York, transfer agent; Commercial Trust Co., New Jersey, registrar. Company owns all the capital of El Canario Copper Co., of Mexico, which see.

CARACAHUI MOUNTAIN COPPER CO., LTD.

MEXICO

Office: 3222 Jefferson St., Kansas City, Mo. Mine near Llano, Magdalena, Sonora, Mex.

Officers: M. H. Greene, pres. and gen. mgr.; Chas. M. Howell, v. p.; H. J. Sprink, sec.-treas.; preceding officers, T. McClure, J. C. Brewer, Thos. James and Wm. R. Berryhill, directors.

Inc. May 20, 1907, in Arizona. Cap., \$1,500,000; shares \$1 par, non-assessable; issued \$964,000. Annual meeting, first Tuesday in June.

Lands: 2 groups, 50 hectares, 9 miles S. E. of Llano, said to show 20 parallel veins in granite, 8 in a cross section of about 250', reported as 4 to 60' in width, and traceable 1 mile, carrying cuprite, malachite and chalcocite. Ore said to average 10 to 40% copper, 4 to 40 oz. silver and \$8 to \$10 gold per ton.

Development: by shafts of 50' and 410', and a 195' crosscut tunnel.

Equipment: includes a 40 h. p. boiler and 8x10" hoist good for 1,000' depth, with smithy, superintendent's house and 6 dwellings for workmen. Idle since 1910, but company has no bonded indebtedness, pays all taxes and expects to resume work as soon as peace is restored in Mexico.

CARMAN CONSOLIDATED COPPER CO.

MEXICO

Mine near Arizpe, Sonora, Mex. Joseph Backus, of Virginia, Minn., res., reported to have taken over the property for an indebtedness of 50,000 in 1916 and to be planning organization of new company.

Inc. 1906. Cap., \$500,000, increased to \$750,000; shares \$2.50 par. Held title to lands through Compania de Oro y Plata, S. A., inc. in Mexico.

Lands: 351 pertenencias, 877 acres, in 9 groups, in the vicinity of the Pedrazzini and Chispas mines, show several strong veins, with 1,911' of workings. The Carman and Don Placido groups have dumps carrying about 1,100 tons of ore, claimed to average 4.65% copper, 62.2 oz. silver and 0.21 oz. gold per ton. The Blanca Rosa group gives ore assaying up to 16.8% copper, 77 oz. silver and 0.42 oz. gold per ton: The Maria group has given ore assaying 3% copper, 107 oz. silver and 1.32 oz. gold per ton. Los Toros group has given ore assaying 4.2% copper, 29% lead, 3 oz. silver and 0.03 oz. gold per ton. Shipments to El Paso smelter have given returns ranging from \$82.98 to \$4,575.79 per ton.

CARNEGIE LEAD & ZINC CO.

MEXICO

Offices: Mills Bldg., El Paso, Tex., and Palladio Bldg., Duluth, Minn. **Home office:** J. H. Sanford, Jr., mgr., Aptdo. 265, La Mesa, Cananea, Son., Mex.

Officers: R. P. Burgan, pres.-gen. mgr., 716 Oliver Bldg., Pittsburg, Pa.; Jesse Norton, v. p.; C. A. Williams, sec.; W. W. Wells, treas., with D. T. Helm, J. F. Edmonds, J. H. Sanford, Jr., and C. W. Stilson, directors.

Inc. 1915, in Arizona. Cap., \$500,000; shares \$5 par; 64,749 shares outstanding. Transfer office: 510 Sellwood Bldg., Duluth, Minn. Annual meeting June 12. Company is a reorganization of the Calumet-Sonora Mining & Milling Co., described in Vol. XI, which defaulted on payment of interest on the bond issue. Bonds were foreclosed Feb. 13, 1915, and on Feb. 27 the property was sold for \$82,000, to R. P. Burgan, who immediately organized the present company. Shareholders in the Calumet-Sonora Co. were allowed to subscribe for stock in the new company for from 10 to 15% of their holdings in the Calumet-Sonora Company.

Debentures: \$100,000 authorized; \$33,800 issued July, 1917; balance offered stockholders Nov., 1917, in 25% payments, 3 months apart.

Financial statement of March 31, 1916, gave current assets as \$717,070 with \$77,570 assets in excess of liabilities. Statement of receipts gave total of \$125,321, of which \$89,756 was from treasury stock; disbursements amounted to \$116,214 leaving \$9,107 on hand, included were: \$59,500 Carnegie Nat'l Bank; \$12,364, Cananea Cons. Copper Co.; bonds \$17,800 and legal expense \$2,000. Receipts from concentrates April 1 to June 1, 1916, were \$78,364.

Property: 8 claims, Catalina, Chivera, Morena, Norton, Diamante, Sulana, Topo Chico, and Zenith, comprising 255.3 hectares or 631 acres, about 1/2 miles N. W. of Cananea, shows fissure veins cutting both diabase and the more recent volcanic tuffs which form the foothills and table lands of the Cananea mountains. Many of these veins show as mere discolorations, or staining of the rock, but in places widen into broad masses of leached, silicified ledge matter, resembling the outcrop of the Duluth Cananea. Three mines have been opened by underground workings.

The Chivera mine has thus far been the chief producer of the company.

It has an inclined shaft, 625' deep, with levels at 60', 200', 300', 400', 525' and 625'; developing a well-defined fissure vein in indurated volcanic breccia, or tuff, of varying width that opens out into an orebody 300' long and 150' wide, composed of large and small angular blocks of country rock cemented by argentiferous galena, chalcopyrite and sphalerite, with less abundant tetrahedrite, mixed with quartz. The orebody is in places a glittering mass of galena, but as a whole is a complex mixture of lead, copper and zinc sulphides, the mill feed carrying 4.7% lead, 0.4 to 0.8% copper and 9% zinc. The ore minerals disseminated through the mass of breccia above the 525' level, appear to be concentrating in a narrower ore shoot, 300' long and 50' wide on this level.

Development: enlarging shaft to 3 compartments from 400' to surface. Loading pockets are planned to facilitate the loading of the ore. Churn drilling is contemplated. Development work reported from Jan. 1 to April 1, 1916, as 620'.

Equipment: includes an electric hoist, a 1,435 cu. ft. electric driven Rand compressor, General Electric motors for all machinery, a 36x24" Farrel crusher, a new set of Allis-Chalmers rolls, 3 Deister slime tables and ample storage bins. Machinery is run by electric current supplied by the Cananea Cons. Copper Co. at 2½ c. per k. w. hour.

Ore is hauled over a surface tram to the concentrating mill. Latter is an old mill, brought from Missouri and altered for local conditions, but a makeshift at best. In this mill the silver-lead ore is taken out and the middling containing zinc and copper are sent to the dry, or electrostatic mill. Tailings average 0.21% lead, 0.12% copper and 0.77% zinc. The dry mill contains Huff electrostatic separators, which separate the copper from the zinc. Concentration is 8.5 into 1, being 87.9% of the lead, 74.8% of the zinc and 70% of the copper in the ore; the lead concentrates carry 33 oz. silver per ton, averaging 70% lead. Shipments of concentrates on hand or in transit up to June 13, 1916, was reported as a total of 1,659.44 tons; lead 592.14 tons; zinc 747.21 tons; copper 320.08 tons.

In addition to the workings mentioned, there is the No. 2 Catalina shaft, now idle and dismantled, 225' feet deep, vertical, with levels at 70', 110', 145' and 212', exposing an oreshoot 2½ to 6' wide and as much as 60' long, but cut by cross faults and not continuously minable. The ore shoot has been practically mined out to the 145' level, yielding about 1,800 tons of antimonial copper-lead ore carrying zinc. This ore is higher in value than that now milled. The vein expands west of the mine into a large outcrop which is the most promising surface exposure seen on the company's property and warrants deep exploration.

The company has a large acreage, at least 2 very promising surface outcrops and a dozen or more fissure veins and should, with proper development, become a large producer of low-grade complex ores. The treatment problem has been solved; total mining and milling costs reduced to \$4.50 per ton and the property splendidly equipped for work. Company plans putting a raise through from the 625' level to surface for ventilation; also sinking to the 700' level.

Plans are drawn for a new concentrating plant and company plans to go ahead with the building of this mill and also a railroad spur to connect the mill and mine. The company will spend \$400,000 on its new improvements. The mill will have a capacity of 500 tons daily and should raise the recovery above 80%, the present recovery. Plans include jigs, tables and oil flotation machines and tailings.

Reserves estimated October, 1917: broken ore 75,000 tons; ore developed with large bodies of probable ore not included in above.

CHICAGO EXPLORATION & DEVELOPMENT CO. MEXICO

Address: Mina Mexico, Sonora, Mex. W. E. Pomeroy, mgr.; Geo. Quire, smelter supt.; Chas. Gercken, mine supt.

Property: 45 miles N. E. of Tonichi, the end of a branch line of the P. de M. R. R., produces silver-copper ore and concentrates.

CIENEGUITA CONSOLIDATED MINES MEXICO

Office: 25 Broad St., New York. Is a reorganization of the Cieneguita Copper and Cieneguita Securities companies.

Officers: James F. Whitney, pres., August Gauch, v. p.; R. C. Davenport, sec.; preceding, with Theodore Martin, Geo. D. Christy, C. Trumbull and F. W. Hunt, directors.

Property: 1,100 hectares, about 40 miles S. W. of Sahuaripa, Sonora, covered by rhyolitic rocks, mostly fragmental and cut by a diabase dike. The Chipiona and the Cargona groups lie close together and the Ostimuri-Ayaya group about 2 miles to the S. E. The rocks are cut by vertical veins, 1 reported to be from 3' to 50' wide, traceable 3 miles and to carry ore shoots averaging about 2½% copper and 40 oz. in silver.

Development: mainly by tunnels, one of 1,200' with 2 shallow shafts and a total of about 3 miles of workings. These workings are not sufficient to block out any large amount of ore, but show that the property has merit and may develop into a large mine.

Equipment: includes 100-h. p. steam plant, a 6-drill compressor and all necessary mine buildings and houses for employes.

A small smelter has Blake crushers and rolls, a 75-ton calcining furnace and two 50-ton reverberatory furnaces, burning wood. Smelting plant inadequate and poorly adapted for the ore. Idle, pending restoration of place in Mexico.

CONSOLIDATED SONORA MINES CO. MEXICO

C. P. Shaver, sec., care Bank of Thibodaux, Thibodaux, La. Operating office: Douglas, Ariz. Mine near Fronteras, Sonora, Mex. Jas. Beary, res.; Chas. P. Shaver, sec.-treas.; Chas. McHenry, supt.

Cap., \$3,500,000; shares \$1 par. Is a close corporation.

Property: 1,140 hectares, slightly timbered, on both sides of the Fronteras river, about 25 miles S. E. of Douglas, shows numerous outcrops of ore carrying lead, silver and gold.

Development: on the Mary L. claim includes a crosscut tunnel, intersecting a vein at 425' and a 325' shaft sunk at this point on the vein, is all ore with 125' of drifting on the 50' level and a 430' drift on the 300' level. Shipments to the Douglas smelter, though profitable, did not pay mining and development costs and mine was closed down, Jan., 1913, on account of repeated depredations at the property and danger to the men from the evolutionary disturbances. Still idle, Dec., 1917.

CONSUELO MINING, MILLING & POWER CO. MEXICO

Subsidiary of the Mines Co. of America, which see.

COPETE CONSOLIDATED COPPER CO. MEXICO

Office: 15 William St., New York. Mine office: Francis C. Nicholas, mgr., Box 394, Nogales, Ariz.

Officers: Wm. T. Read, pres.; F. C. Hanford, v. p.; Myra B. Martin, sec.-treas.; preceding, with Ralph Melczer and John C. Morrow, directors.

Inc. March, 1906, in West Virginia. Cap., \$1,000,000; shares \$1 par, non-assessable; issued 549,170½ shares. Annual meeting, first Wednesday in March.

The company was organized to develop the property formerly owned by the Copete Mining Co., under an agreement with that company, title to the property being vested in the Melczer Mining Co., legalized in Mexico, and the entire stock issue of which is held by the Copete Consolidated Copper Co.

Property: 120 pertenencias, comprising the Last Chance, Copetito, Jalisco, Santiago, and El Copete claims, about 173 acres, at El Copete, Sonora, shows an immense gossan capping, apparently the remnant of a great blanket vein, the greater part of which has been eroded away.

Development: by several tunnels and a 615' shaft with about 7,000' of workings. Ores are mainly gold with considerable iron pyrites and some copper, giving average assay values of \$6 per ton. The bottom of the ore zone seems to have been reached at about 300'. Idle, owing to revolutionary disturbances.

It is believed that those in control of the company will use every effort to bring the enterprise to a successful issue and the past may be considered a closed chapter. Those interested in the history of the company will find it given in Vols. X and XI, The Copper Handbook.

COPETE MINING CO.

MEXICO

Office: 15 William St., New York. Myra B. Martin, sec.

Inc. 1900, in West Virginia. **Cap.**, \$5,000,000; shares \$5 par. Owned stock of the Melcer Mining Co., transferred, 1906, to Copete Consolidated Copper Co., which see.

CUBAÑA CONSOLIDATED COPPER CO.

MEXICO

Idle. Mine near Arizpe, Sonora, Mex.

Inc. Jan. 6, 1903, in Arizona. **Cap.**, \$500,000; shares \$1 par.

Lands: 244 hectares, bought for \$20,000; show 6 orebodies, of 4' to 20' width, of which 3, carry estimated values of 12% copper, 10 oz. silver and \$2 gold per ton.

Development: 6 shafts, deepest 102', and a number of tunnels, longest 250' and 575', with a total of 1,415' of underground openings. Mine is about 30 miles from Cananea. Sample carload smelter shipments returned 23% copper, with fair gold and silver values. Property considered promising.

DEMOCRATA CANAÑA SONORA COPPER CO.

MEXICO

Office: Fourth National Bank Bldg., Cincinnati, Ohio. Mine at Cananea, Sonora, Mex.

Officers: H. H. Hoffman, pres.; C. E. Hoffman, v. p. and gen. mgr.; Herbert H. Hoffman, treas.; H. W. Santen, sec.; preceding, with R. C. Swing, directors.

Inc. May 8, 1905, in Arizona. **Cap.**, \$3,000,000; shares \$10 par; issued \$2,869,970. Central Trust Co., registrar. Annual meeting, last Tuesday in May.

Property: 18 hectares, 44.5 acres, lying between the Capote and Veta Grande, in the heart of the Greene Cananea mines. Orebody is of contact metamorphic origin, consisting of a breccia of fragments of altered limestone, cemented by quartz, bornite and copper pyrite, in a fracture zone 50' wide in limestone. The orebody lies about 300' north of the Democrata shaft and also outcrops in 2 patches of garnet rock surrounded by diorite porphyry, good carbonates being mined at the surface.

Development: comprises a 600' shaft and 1,600' tunnel, with 2 other shafts of 90' and 180', together with 3 tunnels of 300', 110' and 60', aggregating 5 miles of underground workings. On the 500' level, the known orebody proved to be larger than previously estimated and the stopes yielded 3% ore. The East orebody near the Kirk mine, developed by tunnel workings, has also materially increased the proven ore reserves. Average assays at present are 3½% copper and 1.5 oz. silver per ton.

Equipment: includes electrically-operated hoist and air compressor, power being obtained from the Cananea Consolidated Copper Co. Smelter contains 3 blast furnaces of 250 and 300 tons daily capacity, making 20% matte. Converter and electric power plant being installed, July, 1917.

Plant was closed down Sept. 1, 1907, to Sept., 1912, since which time operations have been intermittent due to the Mexican revolution. Work was resumed in 1915. When in full operation company employed 1,000 men.

Production: 1916, 8,950,600 lbs. copper; 306,000 oz. silver; 1,265,000 gold. "A valuable one."

DOLOMITO DEVELOPMENT CO.

MEXICO

Address: 1000 Broadway, New York. **Pres.**, Oakland, Cal.; J. F. Torney, sec.

Inc. Jan., 1910, to take control of the Empire Mining Co., S. A., a company protocolized in Mexico, which owns the Major Domo claim, 5 miles from Cananea, Sonora, Mexico, and 7 other properties, including the Golden Cross silver mine, Magdalena district, Sonora, Mex. See Empire Mining Co.

DULUTH-MOCTEZUMA MINING CO.**MEXICO**

Office: Room 610, Lonsdale Bldg., Duluth, Minn.

Officers: Geo. H. Crosby, pres.; Cassius Bagley, v. p.; A. O. Rabideau, c.; all of Duluth.

Inc. 1909, in Minnesota. Cap., \$500,000; shares \$10 par; \$300,000 issued.

Has no holdings of any kind. Mexican holdings forfeited on account excessive taxes. Minnesota iron lease sold for enough to clear up indebtedness on same.

DULUTH-SONORA COPPER CO.**MEXICO**

Office: 809 Sellwood Bldg., Duluth, Minn. Mine near Cananea, Sonora, ex.

Officers: B. Silberstein, v. p.; R. P. Burgan, 2nd v. p., with W. D. Derhill, sec.; Theron H. Hawkes, treas.; preceding, with Geo. M. Tallant and A. F. Norton, directors. P. C. Probert, mine and smelter supt. and ch. agt.

Property: about 3,621 acres, embracing a part of the former holdings of the Calumet & Sonora Co., and the South Cananea, or Mitchell, property. The latter shows a strong vein with wide silicious outcrop and has been developed by a 400' shaft and some underground work, but an examination of dumps fails to show ore. Norton shaft, one-fourth mile distant, was filled with water, is said to be 293' deep and to show good ore, but none is seen and outcrop is unpromising. Remainder of property considered of questionable value. Property has been examined by Verne A. Hart and Walter Harvey Weed. Idle since 1910. Is a prospect only.

STERN CANANEA DEVELOPMENT CO.**MEXICO**

Idle. Mine about 18 miles N. E. of Cananea, Sonora, Mex. John Martin, supt., at last accounts.

Property: said to show copper sulphide ore, developed by shaft, is held under lease and bond from M. L. Fay, of Duluth, Minn., who controls the Cananea Copper Co., which owns the mine through the Cananea East-Mining Co., S. A., a Mexican corporation. No returns secured.

CANARIO COPPER CO.**MEXICO**

Owned by Canario Copper Co., which see for officers.

Address: Hon. J. B. Wright, sec., Tucson, Ariz.

Property: the El Canario mine, 15 miles E., and the Lillie and Lillie unda mines, 3 miles W. of Nacozari, Sonora, Mexico. The El Canario mines La Caridad of the Moctezuma Copper Co.

Development: El Canario ore carries copper in the form of enargite. The main vein is said to be large, made up of "disseminated, replaced and cherty porphyry." A 400' tunnel, in a vertical depth of 300', has cut 15' of sulphide ore and was expected to cut the main orebody within 50'. Arrangements to Douglas were expected to be made early in 1918, and a ton flotation plant has been designed.

The Lillie mine is considered to be one of the richest and most promising in the district. The vein outcrops boldly for several thousand feet and is 3 to 50' wide; it has a footwall of quartzite. Development is by 10 tunnels; No. 3 will gain a depth of 600' on dip of the vein, and was expected to enter the ore zone within 500' from portal. A winze below the 1st tunnel opened 45-53% copper ore, with fair gold contents. Three loads of 22% ore had been sent to Douglas to Nov. 30, 1917, but 40% was not shipped. This ore is packed by burros to Nacozari at a cost of \$1.00 per ton. A compressor is to be erected.

It adjoins the Lillie on the S. and E. It is said to have a

"gigantic porphyry orebody, 1,000' wide and about 6,000' long." The company's engineer is reported to have said, "I fully believe that Lillie Segunda is one of the most extensive and highest grade disseminated porphyry coppers that has ever been discovered in North America." The deposit is being developed by shafts.

Company apparently has three promising properties, about which the management is highly optimistic.

ELENITA DEVELOPMENT CO.

MEXICO

Office: 1400 Alworth Bldg., Duluth, Minn.

Officers: Henry B. Paull, pres.; E. J. Maney, v. p.; F. R. Kennedy, sec. treas.; preceding, with Thos. F. Cole, C. d'Autremont, Jr., I. B. Joralemon, directors.

Cap., originally \$200,000, was increased, 1907, to \$400,000; shares \$10 par; paid in, \$7; issued 27,310 shares. Owns entire stock issue of the Lomita Mining Co., S. A., a Mexican corporation that holds direct title to the land.

Property: the Bonanza de Cobre mine, 1,628 acres, at Cananea, lies north of the smelter and extends to a point nearly opposite the Puertecitos mines of the Greene Cananea.

Development: by 2 shafts and 5 tunnels, mine being wet at slight depth and giving, as far as developed, mainly silver-lead and zinc ores with a little copper. Property inactive since early in 1913.

EL GLOBO MINING & MILLING CO.

MEXICO

Mine near Nacozeni, Sonora, Mex.

Inc. 1905, in Arizona. Cap., \$400,000; shares \$10 par.

Property: 80 hectares, about 20 miles east of Nacozeni, the nearest rail point. Mine has a shallow shaft and a 1,600' crosscut tunnel, cutting a vein with a back of about 1,000'. Ore values are mainly gold and silver.

Equipment: includes a 25-h. p. electric plant, with a 15-stamp mill having 2 Wilfley tables and a small cyanide plant.

Idle many years.

EL TRIUNFO CONSOLIDATED MINING CO.

MEXICO

Idle. Mine office: Bacoachi, Arizpe, Sonora, Mex.

Officers: A. C. Charlot, pres. and gen. mgr.; Dr. S. Newton Leo, v. p.; A. L. King, treas.; preceding, with T. B. Johnstone, Albert Reinert, Julius G. Miller, Henry Stern, Wm. H. Freystadt, I. Neuberger, A. H. Wand, D. Powdermaker, Dr. Moritz Gross, Adolph Oltmann and John H. Brown, directors; John Martin, supt.

Inc. in Arizona. Cap., \$2,000,000; shares \$1 par. Property is held through a Mexican corporation with cap. of 10,000 pesos, shares 100 pesos par, entire stock issue of which is owned by El Triunfo. Annual meeting 1st Monday in October.

Property: 136 acres, in 12 different groups, principal property, about 4 miles from the Picacho mines, about 8 miles S. W. of Bacoachi, 2 miles from the Sonora river and about 75 miles by wagon road from Coahuila. Lands carry 5 orebodies, of 2' to 5' average claimed width, said to be traceable 2 miles, and to carry azurite, malachite, bornite, chalcopyrite and chrysocholla, all silicious, and occasional native silver, with a claimed average value of 5% copper, 25 to 600 oz. silver and \$1 gold per ton.

Development: about 7,000' of shafts, main shaft 400' deep, connected with a tunnel for extraction. There are 5 shafts, 6 tunnels and water open cuts. The main vein is a mass of 2' to 5' width, and practically vertical dip, carrying oxidized ores to some depth, succeeded by sulfide.

Equipment: includes a 90-h. p. engine, 50-ton reverberatory furnace and 50-ton boiler for steam, and 30-h. p. boiler for potable use.

A 50-ton mill has a 25-h. p. steam engine, and a 3-in. 3-mile pipe line to the Sonora river.

Company paid a dividend of 1% in 1912. It has never operated its smelter (reverberatory).

25 per ton. Closed down since 1913 on account of unsettled political conditions and insecurity of property rights during revolution.

Smelter was blown in in 1908 and shut down after a few days; again down in 1911. Transportation facilities are poor, nearest railroad station being at Cos, 38 miles distant by mule trail.

L. VAN COPPER CO., S. A.

MEXICO

Mine near Nacozari, Sonora, Mex. Property not operated for several years and several claims forfeited to government for non-payment of taxes.

EMPIRE MINING CO.

MEXICO

Last Address: Dolores Mining & Development Co., P. O. Box 533, Sta. Oakland, Cal. **Mine address:** care Ben Bound, supt., Cananea, Sonora, Mex. Company is the Mexican holding company of the Dolores Mining & Development Co.

Cap., 10,000 pesos.

Property: 95 hectares, including the Major Domo copper mine, a few miles from Cananea. A 200' shaft is reported to show a N. E.-S. W. vein, 1' to 3' wide. Company also owns the Dolores, Empire, Bonanza, Spanish, Golden Cross and Providencia, silver-gold properties, amounting to 65 hectares, in the Magdalena district, Sonora, Mex. Planned erecting a unit Pittman mill at the Golden Cross property, 14 miles S. W. of Cananea. Recent reports received. Presumably idle.

EMERALDA COPPER CO.

MEXICO

Has no representative at former mine office: Llano, Magdalena, Sonora, Mex. F. C. Emery, pres.; W. D. Fredericks, mgr., at last accounts.

Property: 88 hectares, has about 300' of workings, showing copper ore, the silver said to increase at depth. Presumably idle.

QUER Y CIA; ALEXANDER

MEXICO

Idle. Mine at Baroyeca, Alamos, Sonora, Mex. J. J. Esquer, mgr., at last accounts.

Property: the Mexicana, Esperanza and other mines, developed by shafts and tunnels, carries auriferous and argentiferous copper ores.

Y-CANANEA COPPER CO.

MEXICO

Probably dead. **Last Address:** 2105 East Superior St., Duluth, Minn. Mine near Cananea, Sonora, Mex. Described in Vol. XII.

GARRETSON-SAHUARIPA CO.

MEXICO

Idle: Mine at Calera, Sahuaripa, Sonora, Mex. W. H. Farnsworth, supt.; Laurens Enos, v. p.; W. H. H. Davenport, sec.; D. B. Sherman, treas.; J. A. Moore, supt., at last accounts.

Inc. 1903, in Arizona. **Cap.,** \$600,000; shares \$100 par, non-assessable; **paid,** \$450,000.

Property: 96 hectares, and 14,000 acres of surface rights, about 30 miles S. of Sahuaripa, includes La Calera mine, having 6 orebodies, 2 under development, of 3' to 8' width, estimated by company to average 2% copper, 2% silver and \$14 gold per ton, which is interesting, if true. Mine has at 1,200' of workings.

The smelter, 1 mile from the mine, receiving ore by pack trains, has a 29"x48" Garretson pyritic water-jacket blast furnace, burning charcoal wood, which apparently has not worked well. Idle awaiting construction of the Sonora Central railway from Tonichi, which has been surveyed across through this property.

EENE CANANEA COPPER CO.

MEXICO

Office: New York.

Office: Thornton, pres.; John D. Ryan, v. p.; Jos. W. Allen, treas.; W. S. Harper, asst. treas.; H. B. Paull, L. Foster, W. D. Thornton, Jas. McLean, Jos. B. Cotton and Jos. W. Harriman,

Cap., \$50,000,000; shares \$100 par; Colony Trust Co., Boston, State Street Trust Co., and Boston Stock Ex-

The Greene Cananea is a securities holding company only, but it is practically the only one in which the public now own shares. The relations of the company with its subsidiaries is as follows: Greene Cananea Copper Co., controlled by stock ownership, the Greene Cons. Copper Co., a West Virginia corporation, and the San Pedro Copper Co., S. A., a Mexican corporation. The Greene Cons. Copper Co. owns nothing but the entire capital stock of the Cananea Cons. Copper Co., S. A., Mexico. The Cananea Cons. Copper Co., S. A., and the San Pedro Copper Co., S. A., own, jointly, the property formerly held by the Indiana-Sonora Copper & Mining Co. The company also owns the Superior Bonanza Mining Co. and through this, the Mexican operating company, the Bonanza Mining Co., S. A. The subsidiary corporations named are listed and described elsewhere in this volume, so far as organization, finances and officers are concerned, but the physical properties are described here because the properties are operated together and no description would be complete, or easily understandable, if the properties were described separately. The Cananea Duluth, Cananea Central Copper Co., America Mining, Cananea Development, Sierra de Cobre Mining and Indiana Sonora companies, are all dissolved.

The Greene Cananea Copper Co. was organized for the purpose of acquiring the outstanding capital stock of Greene Cons. Copper Co. and Cananea Central Copper Co. To that end there was authorized to be issued 2,500,000 full paid shares of the aggregate par value of \$50,000,000.

The Greene Cananea exchanged its shares for the stock of the two subsidiary corporations on the basis of $1\frac{1}{2}$ shares for each share of Greene Consolidated, and $1\frac{1}{2}$ shares for each share of Cananea Central. By this transaction the corporation has become the owner of 961,398 shares out of 1,000,000 outstanding shares of Greene Cons. Co.'s stock and has acquired all of the 600,000 full paid shares outstanding of the Cananea Central stock. The privilege of exchanging the balance of the Greene Cons. Copper Co.'s stock not owned by the Greene Cananea Copper Co., is still open, the exchange basis being $\frac{3}{10}$ of a share of Greene Cananea stock, par value \$100, for each share of Greene Cons. Copper Co.'s stock, par value \$10 and stock is reserved for such exchange.

In June, 1917, shareholders in Greene Consolidated voted to sell their assets to Greene-Cananea for \$21,000,000, and to dissolve their own corporation. This is estimated to save \$300,000 per annum. The basis of sale was one share of Greene-Cananea at \$100 par for each two shares of Greene Consolidated at \$10 par. All but 2,000 shares were exchanged on Aug. 11, 1917. The San Pedro Copper Co. is also to be dissolved. Cananea Consolidated will eventually become the only operating concern for Greene-Cananea, the only holding company.

On July 18, 1913, par value of the shares was changed from \$10 to \$100 per share. All shares of \$20 par value have been exchanged for shares of \$100 par value, with exception of 6,931 shares, so that there are now issued and outstanding: 486,851 shares, \$100 par, and 6,931 shares, \$20 par, 191.8 shares, \$100 par, the latter represented by fractional shares issued when par value of shares was changed and which are not entitled to dividends but which is exchangeable in full shares, making a total outstanding capitalization

Dividends:

(a) includes dividends paid Aug. 27. Present

Income for 1916 was \$3,435,879, all from dividends of subsidiaries and interest on deposits.

Cananea is a community of 16,000 inhabitants, located 40 miles south of the international boundary line, on a branch railway of the Southern Pacific of Mexico.

The ores from all of the mines of the various companies are treated at the works of the Cananea Cons. Copper Co., S. A., the principal Mexican corporation, producing blister copper. The yield in 1916 was 62,250,067 lbs. of copper, 11,692 oz. gold, and 1,975,734 oz. silver.

The following description covers all of the subsidiary companies of the Cananea Copper Co.:

Property: mineral lands held under title from the Mexican government amount to 14,062 hectares, or approximately 34,738 acres. The surface lands owned by the company comprise 130,414 hectares, or approximately 322,123 acres. All of the mines, works, offices, warehouses, stores, etc., of the company are located on its own land and in addition the company owns valuable residence properties in Cananea, which are occupied by its local officials and employees.

Geology: the producing mines of the company are situated in the Cananea mountains, which rise from the headwater valleys of the San Pedro and Sonora rivers in northern Sonora. The mines are distributed along a mineral belt, or series of belts, about 6 miles long, in a N. W.-S. E. direction, and about 2 miles wide. The oldest geological formation of the Cananea mountains is pre-Cambrian granite, which is overlaid by Cambrian quartzite, in turn overlaid by Cambrian limestone. Breaking through these rocks, and covering much of the mineral belt, is a series of eruptives of tertiary age, in which 12 different rocks may be recognized, one, a bedded rock, the others massive. Three main classes of ore deposits may be recognized: (1) Deposits containing secondary chalcocite together with iron pyrite either massive or disseminated along shear zones in diorite porphyry; (2) Contact deposits containing chalcopyrite associated with iron pyrites and some zinc blende in a matrix of altered limestone; (3) Disseminated chalcopyrite associated with zinc blende in a diorite porphyry breccia.

The principal producing mines of the Cananea property are the Cobre Grande, Kirk, Veta Grande, Oversight, Capote, Chivatera, Sierra de Cobre, Eureka, Elisa, Henrietta and Puertecitos mines. Also owns the Cananea Sulphur and American mines. The Henrietta and Eureka mines were idle in 1916.

The Cobre Grande mine was the original mine of the Cananea Consolidated Copper Co. Idle for some years; has been worked for ore to be used in the converters. The ore occurs in a strong and wide vein traversing the altered limestones and igneous rocks.

The Kirk mine is situated in an area of highly-altered limestone capped with diorite porphyry. The ore occurs in pieces by small, irregular veins and intrusions of the same material. The ore is not adapted to concentration and it is necessary to hand-sort the ore. The sorted ore carries a desirable high percentage of iron. In 1916 large additions were made to the lean fluxing ores department.

The great mines of Cananea are the Oversight, Capote and Veta Grande, which have had large bodies of direct smelting ore and also bodies of direct smelting ore. This ore and the associated chalcocite, disseminated through diorite porphyry, are the principal reserves in these mines were considerable. The Veta Grande.

The Capote mine differs from the Veta Grande in that the ore occurs not only disseminated in diorite porphyry but also in the underlying granite. There are 3 principal ore shoots in the Capote mine. The ore on the various levels. The ore in the Capote mine is associated with chalcocite, but the new shoot now being developed is associated with primary chalcopyrite and bornite in a matrix of altered limestone.

attained a depth of 1,050', and has ore on each level from the 1st to the 10th. The Capote mine yields both concentrating and direct smelting ores. A new 5-compartment shaft was completed to the 12th level in 1916, to provide an outlet for the new orebody on the lower levels, and has been completely equipped.

Much of the ore is large pyrite, a mass on the 5th level, 220' long with a maximum width of 100', carries over 2½% copper, but there is much leaner ore in the mine which is unprofitable at present.

The Chivatera has a large body of oxidized ore containing about 2% copper, but averages 12-15 oz. silver and some gold. As the orebody now stands it contains several years reserves on the basis of 150-200 tons daily production, and there is a considerable territory lying ahead of present exploration that gives promise of important development. There was a decrease in ore opened in 1916, but its grade was higher.

The Sierra de Cobre property was acquired by purchase from the Phelps-Dodge interest several years ago, and since its acquisition has proved to be one of the largest and most profitably productive mines of the Greene Cananea Copper Co.

The ore from this mine occurs in limestone. Fissures extending out from the "Eureka" fault have acted as channels for mineralizing solutions, making ore along the veins and for a considerable distance into the walls, replacing the limestone by pyrite and chalcopyrite along the bedding planes. There appear to be notable bodies of heavy sulphides on and below the level of the Combination tunnel which passes through this property to the Elisa mine, and these are now being developed with very satisfactory results. The Sierra de Cobre property also has an extensive area of undeveloped ground lying in the limestone areas, along which smelting ore has been found in the Kirk mine and elsewhere.

The Elisa mine contains a number of lenses of ore lying approximately parallel to a nearly vertical fault between limestone and the diorite porphyry. These lenses occur in the limestone at the fault and back of it for a distance of 150', along a zone some 1,500' in length. The ore consists of a garnet matrix containing chalcopyrite and iron pyrites. It is a very desirable ore for the smelter, being more than self-fluxing, containing about 20% of lime in addition to the iron. Recent developments in the Elisa mine have been exceedingly satisfactory and a large amount of first-class ore has been opened up on the deeper levels. The ore from this mine is now delivered through the Combination tunnel to bins at the Capote mine.

The Henrietta is a small mine whose ore occurs on a contact between diorite porphyry and quartz porphyry. The orebodies are not large and the ore is silicious. New development work in the vicinity of Henrietta has not yet shown workable orebodies.

The Puertecitos mine and the town of that name are located at the N. W. end of the mineral belt and at the terminus of the narrow-gauge railroad of the company. The Puertecitos mine ore deposit has a great outcrop of limestone altered by contact metamorphic action to lime-iron-garnet rock and containing carbonates of copper and some chalcopyrite and bornite. Large areas of this outcrop contain enough copper to warrant mining, which is carried on by means of large quarries. The ore mined is not sufficiently rich to be sent direct to the smelter but has to be broken and hand-sorted, yielding about 4 tons of waste material to each ton of ore.

Recently a large amount of underground development work has been done at Puertecitos with highly satisfactory results, the ore being fit for direct smelting; the mine is developed sufficiently to yield 450 tons a day if needed.

The Elenita mine, one of the earliest producers of the camp, located southwest of Puertecitos, has been reopened with a view to again putting it in the producing class. The ore from the mine is similar to that of Puertecitos.

The **Cananea Duluth** mine has an orebody about 1,200' long with a maximum width of 200'. This orebody is a neck of diorite intruded in bedded tuffs. The intrusion is shattered, altered and for 200' to 300' below the surface is impregnated throughout with pyrite and copper minerals. On the 600', the lowest level, the central portion is not commercial; the values being concentrated around the border of this long canoe-shaped orebody. The ore carries good silver and gold values, with about 2% copper. Practically all of the product of this mine is concentrated before smelting. The shaft is being sunk below 600'.

The **American** mine, idle since 1907, produced only such ore as was obtained through development work. Not fully developed, though there are sufficient indications of ore occurrences to warrant a resumption of development operations. Mine has a 3-compartment shaft to the 100' level and ore bins of 900 tons capacity.

Development: total development work since the organization of the company, Dec., 1906 to 1917, is 524,294', which does not include 279,200' done under previous management. Development work done in 1916 amounted to 37,549', compared with 7,870' in 1915 and has kept well ahead of mining.

Equipment: power is delivered from a central power plant located at the smelter, and electrical power is used exclusively except for the steam pumping plant at Ojo de Agua. The power house, also containing the boiler plant, contains three 1,500 k. w. horizontal Curtis turbines, delivering current to the switchboard at 2,300 volts. The entire electrical equipment of turbines and engines has a capacity of 5,850 k. w. alternating current and 100 k. w. of direct current. Electrical energy is transmitted to various parts of the camp at from 2,300 to 11,000 volts. The furnace blast is supplied by

Curtis engines and 1 piston blower, having a combined capacity of 176,000 cu. ft. of free air per minute. The blast is conveyed to the furnace through a pipe 6' in diameter. Converter blast is supplied by 5 blowing engines having a total piston displacement of 55,000 cu. ft. of free air per minute, and is conveyed to the converters through two 30" pipes. In the power house there is also one 6,000-cu. ft. capacity Ingersoll-Rand compound condensing air compressor, furnishing air to the mines for drilling and other purposes; also one 1,200-cu. ft. Ingersoll-Rand compressor, used to furnish air for ramming converter lining and for sundry pneumatic tools around the works.

The report for 1916 states that the power plant is overloaded, and plans are under consideration for increasing its capacity.

There are eleven boilers, with a total capacity of 4,260 b. h. p. Crude oil, imported free from the United States, under a Federal concession, is used as fuel. The waste-heat boiler plant nearby consists of 8 water-tube boilers having a combined nominal capacity of 2,450 b. h. p., heated by the waste gases of 2 reverberatory furnaces. In connection with this waste-heat plant there is a battery of 4 Green economizers, consisting of 8 tubes each. All boilers are equipped with Foster superheaters. The feed water is carefully measured after a simple treatment for the removal of scale-forming material, and is fed to the boilers by means of electrically operated plunger pumps. The power house is equipped with 2 counter-current barometric condensers, each having a separate water pump and separate dry air pump. All engines are operated condensing excepting those whose exhaust is used in heaters.

The principal water supply of the company comes from Ojo de Agua, 10 miles from the town, where a pumping plant, with water-tube boilers, using crude oil as fuel, runs a Reidler high-duty compound condensing engine delivering 1,500,000 gals. of water per day against a pressure of 967'. 10" main connects the pumping plant with a 600,000 gal. tank located on a hill near the concentrators. The Ojo de Agua water is used exclusively for domestic purposes and for feed water for the boilers and is delivered under substantial working pressure. A very well equipped fire department, with a complete system of mains to pressure tanks, is main-

tained. Water from the mines is delivered to the concentrator through wooden pipes and is there used in milling operations.

At the Sierra de Cobre mine, in the Capote basin, there is an Ingersoll-Rand air compressor having a capacity of 2,500 cu. ft. of free air per minute, which is directly connected to a 2,300-volt A. C. motor. This machine is used to boost the pressure in the mains in the outlying districts. Fuel oil is stored in 3 main tanks with a capacity of 10,000 bbls. each.

The main shops near the smelter include machine, boiler, blacksmith, foundry, pattern and electric shops, all well-equipped, up-to-date, and served by both standard and narrow-gauge tracks. A large warehouse, for the company's supplies, and a framing mill, in which timbers for all of the mines are framed, are located on the southern slag dump.

The concentrating department has a capacity of 2,800 tons per day, and consists of a crushing plant, sampling mill, 2 concentrating mills, a settling system and a slime plant. The concentrator is now being remodeled and oil flotation system added.

The crushing plant has storage bins holding 2,000 tons, ore from the mines being delivered in Ingoldsby side-dump cars of 30 tons capacity each. From the storage bins ore is fed to a 30" conveying belt by automatic feeder. This belt delivers the ore to 2 grizzlies, inclined at 48° with 1" openings. The screened ore falls on an 18" conveyor, transferring it to a 24" conveyor, taking it to the mill bins of 4,800 tons capacity.

The oversize from the grizzly goes to two 36" picking belts, where first-class ore and also pieces of wood and steel are sorted out. The ore left on belt is then delivered to crushing bins and fed by automatic plunger feed to five 10x20" Blake crushers of the Cananea type, which reduce the ore to 1½" size. This crushed ore passes to 16x36" rolls, breaking to pieces that which passes a 2" ring. This product is delivered to a 24" conveyor, which delivers to the mill bins, together with the grizzly undersize. The crushing plant is electrically driven and has a capacity of 2,000 tons per 10 hours. An automatic sampler at the head of the 24" conveyor cuts one-fortieth of the total ore, which is ground and automatically cut to sample. All rejects drop to elevator and return by conveyor to mill bins.

No. 1 mill consists of 2 sections of 600 tons capacity each. No. 2 mill is a steel structure, containing 2 sections of 800 tons capacity each. The mills are supplemented by a settling system and a slime plant containing 100 vanners. The 2 mills have practically the same flow sheet, although in Mill No. 1 fine grinding is carried further in rolls.

The ore from the 4,800-ton storage bins is fed by automatic feeder into each section. Concentration begins on all material finer than 2" size. The course of the ore in all 4 sections is as follows:

The ore is delivered to two 36" trommels, the undersize passing to two 36" trommels. The undersize of the latter goes to two 3/16" trommels and the undersize from these to four 2 mm. trommels. The various coarse sizes from screenings are passed to Hartz jigs, and all tailings from jigs coarser than 3/8" ring are passed through rolls, elevated and returned to screens so that no material coarser than 3/8" goes to the Hardinge mills. The coarse material is concentrated on 20 concrete Hartz jigs in each section. The jig tailings finer than 3/8" pass to 2 Hardinge mills and are ground to about 2 mm. The discharge from the Hardinge mills is destined in a drag classifier, the coarse sands are classified, the resulting product being treated on 30 vanners. The very fine sands and slimes are treated on 100 vanners. Tailings from vanners and vanners are settled out and sent to the slime plant for disposal.

The tailings from the jigging are usually 80 per cent in size of silver and gold. The tailings from the jigging are usually 80 per cent in size above the dam. The tailings from the jigging are usually 80 per cent in size but is first passed through a classifier. The tailings from the jigging are usually 80 per cent in size is precipitated and recovered. The tailings from the jigging are usually 80 per cent in size gauge cars to the slime plant.

Flotation being incorporated.

to grind all the ore to pass 48-mesh, necessitating the use of more machinery than formerly, such as Hardinge mills, using steel balls, filters, Dorr thickeners, etc. Flotation as applied to Cananea ores was more or less experimental, which is another factor in increased costs. Installation of flotation plant well advanced in June, 1917.

All ores, concentrates, fluxes and secondaries for blast-furnace treatment are weighed and delivered to the main receiving bins by the company's narrow-gauge railroad. The bin system consists of 11 wooden and 8 steel bins, having a combined capacity of about 3,000 tons. From the receiving bins all material is discharged on a conveyor belt, which passes through the sample mill on its way to the spreading bed plant. In the sample mill the ore is crushed to about 4" through a 24x36" Farrel crusher. One-tenth of the ore stream is cut out and passes through a 10x20" crusher of the Cananea type; one-tenth of this is cut and passed through a Gates gyratory crusher, then one-fifth is cut and passed through a set of 17x27" rolls, when the final sample is cut out, amounting to about one-four-thousandth of the original material. This final sample is quartered down, dried and prepared for the laboratory. The reject from the sample mill is elevated back to the main conveyor system. All material is sampled in this manner with the exception of concentrates, which are hand sampled.

The ore after passing the sampling mill is conveyed to the spreading beds and distributed evenly over the entire length of the bed by an overhead belt which is automatically tripped. The bedding plant is of steel construction, being 453' long, and 196' wide, and contains 3 ore beds of about 9,000 tons capacity each. The composition of each bed is known in advance and in this way an even mixture is assured to the furnaces. When a bed is completed it is reclaimed by a machine which advances into the face of the pile and discharges on to a conveyor which delivers the mixed charge into bins over the blast furnaces, each bin having a capacity of 75 tons. The reclaiming machine has a capacity of about 175 tons per hour. The charge is dropped by gravity from the 75-ton bins above the furnaces into measuring hoppers holding 2,000 lbs. There are 5 such hoppers to each furnace, and these are discharged either directly into the furnace or on to the feed floor by means of arc gates.

The blast furnace building contains 8 blast furnaces, 48x210" at the tapholes. There are 4 settlers, 10' 5"x19' inside of brick lining, each settler serving 2 furnaces. The slag overflows continuously into self-dumping slag cars of 46-cu. ft. capacity. Trains of 6 to 8 cars are hauled to the dump by electric locomotives. The matte is tapped from the settlers into 66-cu. ft. cast-steel ladles and transferred to the converters by electric cranes.

The gases from the furnaces are discharged into a steel balloon flue, hence through 2 cross-flues and 2 goose-necks into the main brick dust chamber. From here the gases pass through a flue to another chamber, hence to a brick-lined steel stack. All flue dust is drawn from the dust chamber and balloon flue into small cars and trammed to the reverberatory furnaces. The coke bins at the west end of the furnace building have a capacity of about 3,000 tons.

The roaster building contains ten 18' six-hearth McDougal calciners. There is a special bedding plant for the roasters, consisting of 4 bins of 500 tons capacity and 2 beds of 3,000 tons each. The mixed roaster charge is reclaimed and delivered by conveyor belts into 60-ton bins over and charged into the roasters. The roaster product is hauled by electric motor in dump cars to the reverberatory furnaces.

The reverberatory plant consists of two 19' 6"x100' oil-fired furnaces. There are three 300-h. p. and five 250-h. p. boilers placed parallel, and steam is drawn through 4 units of Green economizers containing 1,152 tubes, 120" long to a stack 12' 6" in diameter by 152' into 112-cu. ft. electrically-tilted slag cars. The matte is tapped into ladle cars, from which it is hauled by electric cranes.

Equipment: includes a 300-h. p. steam plant, with a new hoist, installed 1912, and a 10-drill air compressor. There are 20 buildings, including an engine house, shops, store, office and about 15 dwellings. The smelter has a 100-ton Macdonald hot-blast pyrite furnace and is operating steadily. Management estimated 70,000 tons of ore in the mine.

LA DURA MILL & MINING CO.

MEXICO

See Mines Co. of America, under Chihuahua.

LA REINA UNION MINING & REDUCTION CO.

MEXICO

Mine near San Javier, Hermosillo, Sonora, Mexico. Property includes the Mimbres mine, said to show a fissure vein carrying lenses of complex lead-copper-sulphide ore with gold and silver values.

Development: by shaft, cut a vein that assayed from 15 to 30 grams gold and 400 grams silver per ton.

Equipment: includes steam and electric power, and an air compressor. Idle owing to revolution in Mexico.

LA UNION CONSOLIDATED COPPER CO.

MEXICO

C. B. Bell, Douglas, Ariz., owner.

Property: 660 acres, in Cerro Tordillo section of the Ajo mountains, W. of Fronteras, Sonora, Mex., shows a 3' to 20' vein traceable a mile, that carries high-grade copper, gold, silver, zinc ore. Orebody is a contact deposit in lime and porphyry formation, ore occurring in shoots.

Development: by 5,000' of tunnels and shafts to depth of 500'. Shipments of 1,500 tons were made to April, 1914, averaging 15% copper, 15 oz. silver and 0.1 oz. gold. The property was worked in 1882-86, acquired by present owner in 1906, and considerable work done in 1912-13-14.

Company gave up property in 1914, and C. B. Bell plans resuming operations when peace is restored in Mexico.

LUCKY TIGER-COMBINATION GOLD MINING CO.

MEXICO

Office: 1012 Baltimore Ave., Kansas City, Mo. **Mine office:** Esqueda, Sonora, Mexico.

Officers: J. Z. Miller, Jr., pres.; W. A. Moses, v. p.; O. V. Dodge, sec.; H. Vanderslice, treas., with E. D. Fisher, F. D. Whiting, G. M. Smith, W. G. Catron, J. E. Hutt, John Kelley, C. M. Bush, J. T. McCormick and A. E. Mosier, directors. L. R. Budrow, gen mgr.; R. T. Mishler asst. gen. mgr.; J. W. Malcolmson, cons. engr.

Inc. March 16, 1903, in Arizona. **Cap.** 800,000 shares; \$10 par; 715,337 shares issued. Annual meeting, 3d Monday in March. Company owns the entire capital stock of Tigre Mining Co., S. A.

The combined balance sheet for 1916 of the Lucky Tiger Combination Gold Mining Co. and The Tigre Mining Co., S. A., shows total assets \$6,628,591, which includes mining property \$5,615,542; plant, machinery, equipment, \$372,744; inventories, \$126,330; product on hand and in transit, \$20,852; cash, \$169,616; liabilities include capital stock, \$7,163,370; current liabilities, \$161,694. Total receipts for the year's operations were \$1,021,022, including \$1,614,207 from ore sales; total expenditures were \$972,697; depletion of property, depreciation, plant and equipment, \$461,938; net realization \$645,120.

Dividends: paid since organization of the company:

Year	Number	Amount
1916	77-85	\$515,042.84
1915	69-76	493,582.53
14	58-68	715,337.00
	46-57	450,662.31
	40-45	336,208.39
	30-39	387,601.10
	18-29	429,000.00
	6-17	409,500.00
	1-5	71,500.00
		\$3,778,432.97

Property: the El Tigre mine, 6 claims, 622 acres, at El Tigre, Montezuma district, Sonora, Mex., shows gold-silver-lead-copper ore in fissure veins traversing rhyolite. Ore is a silicious sulphide occurring in vein 25' wide, proven for 4,000' in length, and running N.-S. with average dip of 65°. Developed by 1,000' incline shaft and 5,000' tunnel, with about 13 miles of underground workings. Ore is mined mostly by overhand shrinkage.

Equipment: includes electric power, 25-h. p. electric hoist, 250-ton concentrating mill and cyanide plant. Reported extraction in 1916 was 93.6%, concentrates averaging 2.17 oz. gold, 683 oz. silver, 2.93% copper, 11.4% lead. Experiments with flotation have been satisfactory, and a plant was to have been erected. Decreased cyanide consumption and lower costs are said to result from flotation.

Production: 83,000 tons in 1912; 90,000 tons in 1913; 88,000 tons in 1914. Ore averages 31 oz. silver, 0.01 oz. gold.

Company has been able to continue operations and shipments more or less regularly, notwithstanding disturbed conditions in Mexico during the past years.

MANHATTAN DEVELOPMENT CO.

MEXICO

Owms Arnold Mining Co. property near Santa Cruz, Sonora, Mexico.

MANHATTAN EXPLORATION CO.

MEXICO

Office: 52 Broadway, New York. **Mine:** at Hermosillo, Sonora, Mex.

Officers: John M. Bishop, pres., Washington, D. C.; A. H. McCarthy, v. p.; T. Addison Bell, sec.-treas.; preceding with Gen. Jas. S. Clarkston and Wm. Tierney, directors.

Inc. Feb. 6, 1909, in Maine. **Cap.**, \$2,000,000; shares, \$100 par; \$1,806,000 outstanding. Company is a close corporation.

Property: 18 titled properties near La Dura in the Yaqui River district, central Sonora. Two of the properties, the Promontorios, silver-lead and the Mesita, copper-silver-lead ore, had just reached the shipping stage when the Mexican revolution stopped all operations, May, 1912. Company expects to resume operations as soon as country is once more safe.

MARIA MINING CO.

MEXICO

Office: 516 Providence Bldg., Duluth, Minn.

Officers: Joseph Backus, pres., Virginia, Minn.; Jas. A. Butchart, sec.-reas.; with Thos. F. Brady, Martin Trehwella and Thos. A. Armstrong, directors.

Cap., \$500,000; shares, \$1 par.

Property: the Carmen mine, in Arizpe mining district, Sonora.

Ore: silver, gold, in veins in andesite and rhyolite.

Development: by shaft; greatest depth 350', with 3,000' of underground workings. Has been idle 4 years, owing to the revolution, but resumed work in Feb., 1917. Rich silver ore being extracted in August, but on account of bandits, work was again suspended.

IELCZER MINING CO.

MEXICO

MEXICAN METALS CO.

MEXICO

Office: 35 Congress St., Boston, Mass.

Officers: Geo. E. Keith, pres.; Geo. H. Woodman, v. p.; Sumner M. Keith, sec.; Harold C. Keith, treas.; with Eldon B. Keith, directors.

Inc. Aug. 16, in Arizona. **Cap.**, \$5,000,000; shares \$5 par; assessable; 373 issued; \$2.55 paid.

Company succeeded the Arizpe Mines Co. and holds title to property of the Moctezuma-Arizpe Development Co., legalized in Mexico.

Trust Co., registrar; Federal Trust Co., transfer agt. Annual meeting Monday in September.

Mexican property near Cananea, Sonora, Mex., closed down in autumn of 1914. After geological survey of property made by J. M. Little, checked by A. H. Rogers, Boston, and Franklin W. Smith, of Bisbee, it was decided to sell or abandon such property as directors considered unworthy and to purchase new properties. Fully described Vol. XI, Copper Handbook.

An option has been secured on a property at Cripple Creek, Colo., where development work is under way.

MEXICO MINING, REFINING & EXPLORATION CO. MEXICO

Office: 501 I. W. Hellman Bldg., Los Angeles, Calif.

Officers: Wm. T. Calderwood, pres and gen. mgr.; Dr. Chas. B. Nichols, v. p.; F. C. Lamb, sec.-treas.; preceding with E. B. Lovie, C. A. Neil, L. A. Davis and A. A. Snodgrass, directors. B. A. Ogden, supt.; A. Wainwright, engr.

Inc. 1905, in Arizona. Cap., \$5,000,000; shares \$1 par; non-assessable. Annual meeting, second Monday in April, at Nogales, Ariz.

Property: 260 acres, El Creston de Cobra mine, about 35 miles west of Hermosillo, shows dolomite and garnite and is an antigua dating from the eighteenth century. The property carries 4 orebodies, of which 2, reported by company as of 30' average width, and traceable 1,400', carry copper ores averaging 4% copper, 8 oz. silver and \$1 gold per ton.

Development: by 8 shafts, deepest 300', and 4 tunnels with 1,000' of workings, estimated by the company to show 100,000 tons of ore.

La Cobriza mine, at Soyopa, is said to show a 16' vein with a 7' pay-streak, carrying copper-silver ore.

Equipment: includes 235-h. p. steam plant, 2 hoists, 6-drill air compressor, and 20-ton mill. Company was planning to erect a 100-ton smelter, but revolution has probably interfered. No recent information secured.

MINA MEXICO MINING CO. MEXICO

Office: 1,025 Peoples Gas Bldg., Chicago, Ill.

Officers: Potter Palmer, Jr., pres.; H. L. Hollis, v. p. and man. dir.; E. F. Bryant, sec.-treas.

Property: at Mina Mexico, district of Sahuaripa, Sonora, Mexico. Has small mill and smelter.

MINERAL DEVELOPMENT CO. MEXICO

See Proprietary Mines Co. of America.

MINNEAPOLIS COPPER CO. MEXICO

Office: 525 Plymouth Bldg., Minneapolis, Minn. Mine address: Cumpas, via Nacozari, Sonora, Mexico.

Officers: J. W. Christy, pres.; James Thompson, sec.; F. A. Guice, gen. mgr.

Inc. June, 1906, in South Dakota. Cap., \$1,000,000; shares, \$10 par; non-assessable; also inc. in Mexico as Minneapolis Copper Co., S. A., the South Dakota corporation being a holding company. Is operated in the United States under the title of Minneapolis Copper Development Co., the reason for which has not been explained.

Property: 277 hectares, about 30 miles S. E. of Cumpas. Property carries several fissure veins, in andesite, with N. E. strike, of which 4, under development, are of 5' to 8' estimated average width, carrying tetrahedrite, estimated by company to average 10% copper, with traces of lead and 5 to 40 oz. silver, and \$1 and upwards in gold, with occasional very high assays.

Development: property has been under development continuously with a small force, since the company took it in 1906. The 125' Fryer shaft develops a 4' vein carrying ore said to average about 9% copper and 25 oz. silver per ton. The Archipelago mine, the principal property, has a 200' incline shaft, and the mine as a whole has about 8,000' of workings, mostly in ore.

Equipment: includes a 35-h. p. generator and a 25-ton smelter. There is also a 75-ton smelter, built in 1911. Cumpas, freight being carried

Being operated under lease, 1917, by Samuel E. Greenidge, of Douglas, Arizona.

MOCTEZUMA COPPER CO.**MEXICO**

Fully described under title of Phelps Dodge Corporation.

MACOZARI CONSOLIDATED COPPER CO.**MEXICO**

Address: P. O. Box 64, Douglas, Arizona. Mine office: Pilares de Macozari, Sonora, Mex.

Officers: John G. Alexander, pres.-gen. mgr.; R. R. Humphrey, v. p.; R. Russell, sec.; Roy Hiatt, treas.; with Geo. S. Howard, Geo. Motz and Y. Soto, directors. Fred Alexander, mine and mill supt.; A. H. Gereth, purch. agt.

Inc. July, 1907, in Arizona. Cap., \$3,000,000; shares, \$5 par; fully paid and non-assessable; issued 535,000; 16,000 shares in treasury, Oct. 1, 1917; 5,000 shares sold for \$2.50 each in 1917. Annual meeting, second Monday in July.

Property: 15 claims, 360 acres, lying in 2 groups, adjoining the Pilares mine of the Moctezuma Copper Co. on the N. and W. and partly on the

The Galera, or southern group shows andesite and brecciated rhyolite with several large veins carrying sulphide ores with gold-silver-copper-lead and zinc values. The Copper King or northern group shows a big reef, 600' wide, of brecciated, silicious vein matter outcropping, evidently an extension of the Pilares deposit.

The Galera group is opened by a working tunnel, 2,600' long, in April, 1917.

Development: to date, 10,500', including shafts, crosscuts, tunnels.

In 1917, a double-compartment shaft was sunk 400' on the San Pablo claims and drifts were started from No. 2, 3 and 4 stations, opening up bodies of silver-copper-lead ore, 10' to 12' wide, the ore netting about \$100 per ton as shipped to smelter at El Paso.

A 100-ton mill, using fine-grinding machinery, Wilfley tables with National rifles and K. and K. machines for oil flotation, was put in operation Sept., 1917.

In tuning up mill in Sept., low-grade ore put through mill produced 60 carloads of concentrate assaying \$100 per ton; two more were expected, Oct. 12.

NORTHERN SIERRA MADRE MINING CO.**MEXICO**

Address: D. E. Alexander, Humboldt Savings Bank Bldg., San Francisco, Cal. Mine near Soyopa, Sonora, Mex.

Officers: Chas. K. Blender, pres.; Carlo Giovannetti, v. p.; John O'Donnell, sec.; Fred Townsend, treas.; preceding, with D. E. Alexander, Fred Evarrow and E. C. Curtis, directors. F. R. Luckhardt, gen. mgr.

Inc. Aug. 2, 1901, in California. Cap., \$300,000; shares, \$1 par.

Property: 167 acres, including La Reina de Cobre and Providencia copper mines and El Colosus silver-lead mine, 25 miles west of Suaqui de Tucuman. Le Reina shows diabase, shale and limestone, carrying orebodies of oxidized and sulphide ores, with quartz gangue, estimated to average 15.5% copper, 20% lead, a trace of zinc, 73 oz. silver and \$8 gold per ton.

Development: by 633' of workings. Management estimates 4,854 tons ore in sight, with 3,214 tons blocked out for stoping. Closed down owing to Mexican revolution.

CIFIC SMELTING & MINING CO.**MEXICO**

Office: 20 Broad St., New York. Mine and smelter office: Fundicion, Sonora, Mex.

Officers: Melbert B. Cary, pres.; Geo. M. Ryall, v. p.; Nelson S. Haughton, sec.-treas.; preceding, with Ronald E. Curtis, Howard McWilliams and Charles E. Wetmore, directors. Thornton C. Kirkland, asst. gen. mgr.

Inc. Oct. 6, 1909, in Maine. Cap., \$3,000,000; shares, \$5 par, issued in 37,850 convertible cumulative 7% preferred stock and \$6,262,150 common stock; all issued. United States Corporation Co., New York, registrar. Annual meeting, third Monday in January, at Augusta, Maine. Listed on New York Curb.

General balance sheet: Dec. 31, 1916, shows property and securities, \$8,409,848; furniture, etc., \$200, and cash and accts. receivable, \$161,311, last item showing \$1,032 reduction, the others identical with 1915 statement. **Liabilities:** \$8,000,000 for stock, \$239,609 accts. payable, compared with \$237,972 in 1915, and \$333,750 surplus, compared with \$333,581 in 1915.

Holdings: company controls the Douglas Copper Co. and Mexican Exploration & Mining Co. by ownership of 98% of the capital of each company. These constituent companies hold practically the whole of the capital of 3 other Mexican companies. The subsidiary Mexican corporations are the Anita Mines Co., Yaqui Mining Co. and the following smelting companies: Compania Metalurgica y Refinadora del Pacifico, S. A., owning the Fundicion smelter; the Mexican American Smelting & Refining Co., S. A., owning the Guaymas smelter and the Sinaloa Smelting Co., holding the Mazatlan, or Sinaloa smelter concession.

Anita Copper Mines Co., S. A., owns the Anita Consolidated, Baroyeca, London, Julia and Maria claims, 330 acres, belonging to the Anita mine, 2½ miles north of the Fundicion smelter and the station of that name on the Southern Pacific Railroad of Mexico. This mine has been developed to a depth of 900' on the dip of the vein and is said to show ore reserves above the 7th level, amounting to 55,000 tons, that average \$2.58 gold, \$1.17 in silver and 3.99% copper.

Geology: the Anita (or El Cobre mine), has a shear zone of 115' width with a diorite foot and trachyte, or rhyolite hanging wall. The shear zone traceable for several thousand feet, with N.-S. strike and dip of about 45° W., carries ore in 5 lenses, or chimneys, the principal one being opened from the surface down to the 8th level, branching into 2 parts at the 4th level. Faulting, cross-faulting and brecciation occurs with displacements up to 200'. The ore is partly metasomatic replacement of diorite, and partly a contact metamorphic deposit. It contains the usual oxide minerals succeeded in depth by chalcopyrite.

Development: consists of a 900' inclined main shaft, No. 1, with 7 levels opened and about 7,415' of workings. There are also 4 other shafts. The management plans further work as soon as enough basic custom ore is available to supply a suitable furnace mixture. Courtenay de Kalb reported that his examination showed about 55,000 tons of ore blocked out with good indications for development of further orebodies.

The surface equipment consists of 2 cross-compound 2-stage Rand compressors of 3,000-cu. ft. combined capacity; a Risdon second-motion duplex hoist, 14x21"; three 150-h. p. boilers; generator for light and power; rock-crushers, picking tables, shops, assay office, office building, houses, dwellings, supplies, etc.

El Cobre ranch owned by the company has approximately 1,000 acres of wood and timber land.

The Pirita mine, of the Anita Copper Mines Co., embraces 2 and Pirita No. 3 claims, 81 acres, located 5 to 7 miles from Fundicion on the Southern Pacific Railroad of Mexico. The mine contains considerable tonnage of pyritic ore having small values in silver-copper, but the deposit has not been extensively developed on account of poor transportation, though in time it will become of value to the company for fluxing purposes.

Yaqui Mining Co., S. A., owns 10 mining properties in Sonora, Mexico, all of which are as yet but partly developed. The Rosamond and Aurora claims have about 800' of development work, exposing a fair tonnage of special copper-silver ore. The company also owns a number of undeveloped prospects and some old mines nearby.

Compania Metalurgica y Refinadora del Pacifico, S. A., owns the Fundicion smelter and other properties. The smelter was built to treat the ores of the Anita mine and to do general custom smelting. The smelting plant has a capacity of 350 tons a day, but was originally part equipped for 3 times that amount. The plant has one blast-furnace, sampling mill, power house, and administrative buildings.

railway connects all departments. Electric plant furnishes current for lighting and power purposes, and all machinery excepting yard locomotives is motor driven. The plant is of modern design and in excellent condition.

The mine is 23 miles from a railway, and ore is hauled to the smelter by Saurer motor trucks. The road is good for 18 miles and bad for 5 miles, frequently muddy, with grades up to 12%.

The L'Aime lime quarry, located 2 miles from the railway near Victoria, has 75 acres of limestone forming a hill 250' high, 300' wide and approximately 3,000' long. The rock is an excellent smelting flux, averaging but 1.2% silica, with about \$1 in gold; it was because of this gold content, determined by a special Government commission, that the company secured it as mineral land.

The Fundicion smelter was in blast for 9½ days in May, 1908, treating 2-ton charges daily, but owing to tap jacket troubles, about 15% of the tonnage melted was tied up in cleaning. As a result of this, 3 carloads of matte, amounting to 73.5 tons, were shipped to the Nicholson Copper Co. for refining. The shipment contained, as per report, 27,868 lbs. silver, 172.2 oz. gold and 67,993 lbs. of copper and returned a net value of \$26,869.12. Mr. W. B. Budrow, who was the smelter superintendent at the time, and who had been connected in a similar capacity with several of the Guggenheim smelters, referring to the operation of the furnace, stated: "The performance of the furnace during this operation was very satisfactory, both from a metallurgical and economical point of view. The matte produced was clean and averaged over 46% copper, and notwithstanding the fact that it carried high values in both silver and gold, the losses in those metals were quite low."

Mexican-American Smelting & Refining Co., S. A., owns the Guaymas smelter with 250 acres, at Batuecas, a suburb of Guaymas, on tide water, lying between the Bay of Guaymas and the Southern Pacific Railroad of Mexico. The plant was originally erected by William C. Greene, founder of the Greene-Cananea Copper Co., and not having been operated some years will need extensive alterations.

The Sinaloa Smelting & Refining Co., S. A., owns a concession from the Government for a smelter at Mazatlan, or elsewhere in the State, for a period of 20 years from the 27th day of April, 1906, and is particularly lucrative in its terms.

The smelters have been closed down since 1910.

Reported 1917 that Anita mine was working and shipping 50 to 100 tons a week, of high-grade copper-silver ore.

ELPS, DODGE CORPORATION

See same title under United States mines.

PICACHO MINING CO. (CIA. MINERA DE PICACHO) MEXICO

J. S. Douglas, Cananea, Sonora, and associates, owners.

Property: 35 miles south of Cananea, a deposit of cupiferous silver that has been under development since about 1900, and has been shipping silver ore to the Copper Queen smelter since 1906.

PIEDRAS VERDES y ANEXAS; COMPANIA MEXICANA MEXICO

Alamos, Sonora, Mex. Angel Almado, president.

Property: about 15 miles N. W. of Alamos, Sonora, includes the Piedras Verdes, Union and other mineralized zone of about 1 mile width, and is composed of schists carrying copper carbonate stains and numerous dioritic intrusions, the veins outcropping and carrying considerable oxidized ore of good grade. There is also some native copper in masses of considerable size.

Development: by a 350' shaft and a 375' tunnel.

done by the General Development Co., 1910.

Equipment: includes steam power, and a small muffle furnace, probably idle.

PLATA-FINA MINING & DEVELOPMENT CO.**MEXICO**

Office: Pomona, Kansas. Mine office: Alamos, Sonora, Mexico.

Officers: E. G. Swayze, pres.; Dr. L. R. King, v. p.; C. N. Emery, sec.; E. A. May, treas.; T. P. Brinegar, mgr.; above with J. M. Nolan, A. P. Elder and J. W. Churchill, directors.

Inc. March, 1911, in Arizona. Cap., \$500,000, reduced to \$300,000; shares \$2 par; 114,720 shares issued.

Property: Plata-Fina group, $9\frac{1}{4}$ hectares; Cacharamba group, 8, Oúlla group, 10 hectares, and 2 new properties, about 100 acres in all, $4\frac{1}{2}$ miles from a railway, in the Alamos district, shows several contact veins between granite and porphyry, in a zone 40' wide. Is said to have 6 oreshoots developed, all about 6' wide and carrying native silver in copper carbonate and chalcocite. Ore blocked out is given as 15,000 tons in the Arapes mine, estimated to be worth \$40 a ton.

Development: by 5 shafts, deepest 115', with about 3,000' of underground workings. Development work is being done in spite of the revolution, about \$8,000 having been spent in 1916. All drilling is done by hand. Shaft will be sunk to 300' depth, 1917.

PROMONTORIO CONSOLIDATED MINING CO.**MEXICO**

Office: 99 John St., New York. Mine office: Lampazos, Moctezuma district, Sonora, Mex.

Property: 11 groups, 1,410 acres, 3 miles from the forks of the Yaqui river; also a 12,000-acre ranch and the Marguerite and Inez claims, adjoining the mineral lands. Includes the Promontorio mine, 35 miles S. E. of Moctezuma, and about 30 miles from the nearest railway at Tonichi, an antigua, said to have produced the copper from which were cast the bells on the old church at Moctezuma, built 1840. During the American Civil War some bornite from this mine was packed on mules, 40 miles to Guaymas and shipped to Swansea for smelting.

The claim shows diorite, granite and limestone, carrying orebodies in a shear zone between granite and diorite, with high-grade bornite and low-grade disseminated chalcopyrite ore. The low-grade zone is upward of 200' in width, with a granite footwall, also carrying low-grade impregnations of copper.

The Inez mine shows a large gossan, mined for flux, underneath which is cupriferous pyrrhotite, carrying small gold and silver values, and the Inez is also said to have another orebody of promise, carrying auriferous and argentiferous copper ore.

Closed down since 1913.

QUINTERA MINING CO., LTD.**MEXICO**

London secretary and Office: J. G. Mills, 8 Crosby Square, London, E.C., England. Paris office: 1 rue des Mathurins, Paris, IXc, France. Mine: at Aduana, Alamos, Sonora, Mex. Jacques F. Kulp, chairman; A. Dubois, S. Einhorn and Ernest May, directors.

Inc. May 4, 1888, in Great Britain. Cap., £52,000, increased Nov. 18 1901, from £40,000; shares £1 par, fully paid; all issued.

Annual meeting in June. Shares listed on the Paris cotulisse. Accounts for calendar year 1916, submitted July 5, 1917, showed £840 loss: total deficit, Jan. 1, 1917, £19,956; reserve fund, £26,623. Operations suspended since 1911, owing to Mexican revolutions.

Dividends: 25% in 1900; 22.5% in 1901; 17.5% in 1902; 17.5% in 1905; 7.5% in 1905; 11.25% in 1906, and 5%, or 2s. 3d. in 1907; none since.

Property: 26 claims, 134 hectares, in the Alamos district, Sonora, and in the Fuerte district, State of Sinaloa, Mex., with ranches of about 7,400 acres. The mining property consists of 4 groups, the Quintra and Libertad, Azulaques and Constanca, Minas Nuevas, Coter and Porvenir, and the Rosario group. Only the Quintera has been worked by the present owners.

Some 40 to 50 years ago a Frenchman owned this and the Rosario, a lead-silver property on Rosario mountain, where the States of Sonora, Sinaloa and Chihuahua touch. He had worked the Rosario extensively, the

ore being a lead carbonate containing much silver, and finally went to Paris, mortgaged both properties to the Egyptian-Paris Bank for \$250,000 and shipped out to South America. He has never been heard from since. After the bank acquired the properties, for many years they sent engineers out each year to examine and report. Finally, about 30 years ago, after several had reported favorably upon the Quintera, work was commenced.

The vein is strong on the surface, 18 to 20' wide, and has granite on the east and dark andesite on the west. It showed low silver values on the surface and 2 to 3% lead. With depth the value of the ore improved and under efficient management, the mine paid \$50,000 to \$100,000 yearly in dividends, notwithstanding that the general mill management was extensive.

The ore is 20 to 30' wide in the deeper levels and assayed 40 to 50 oz. of silver, the lead being replaced by 8 to 9% copper ore as depth increased. This copper ore was sorted out and smelted on the ground using mesquite charcoal at a cost of one-half cent per pound. The mine is on a hill 700' above the mill, and an aerial tram was put in to bring the ore to the mill. A shaft 500' deep was sunk at the north end of the property, from which a drift was driven 1,300' south and a winze sunk, ultimately to a depth of 1,000' below the surface. All ore was hoisted twice and trammed 1,300', when an adit from the mill 2,060 to 2,500' long would have tapped the winze 200' below the long drift, and the ore could have been trammed in cars direct to the mill. Even when the new shaft was sunk from the surface, this was done near the old one, instead of raising from the winze on the 500' level. At 1,500', the vein split. One branch was followed to the east in the granite; it contains no ore of value. A few hundred feet north of the shaft the main vein enters the granite on both sides and becomes barren. At the south end of the property the ore-shoot appears to be dipping into the Promontorio. Property considered valuable, but in consequence of the unsettled state of affairs in Mexico, the property is shut down indefinitely.

RICHFIELD COPPER CO.

MEXICO

Office: 812 Mears Bldg., Scranton, Pa.

Officers: Dr. J. K. Bentley, pres.; Dalbys L. Fickes, sec.; Otto Robinson, reas.; preceding, with Harry Witter, R. H. Gay, Geo. Stark, John Hershberger, Philip Robinson, J. A. Schadt, R. E. Mikesell, W. O. Smith, J. H. Vood and Jacob Huffer, directors.

Inc. 1902, in Arizona, as successor of Richfield Mining Co. **Cap.**, \$5,000,000; shares \$1 par; issued, 4,000,000. **Bonds**, \$250,000, authorized, at 6%; issued, \$230,000. **Scranton Trust Co.**, registrar. **Annual meeting**, 2nd Saturday in October.

Property: 1,300 acres of mineral property, with timber and ranch lands, total holdings 26,512 acres in the Ures district. The Dos Naciones group, 2 miles east of Tuape and 35 miles from a railway, is said to have 7 contact deposits between granite and limestone, of 10' to 60' estimated average width.

Development: includes about 10,000' of underground work, showing oxidized ores and chalcopyrite, reported by present management to average to 15% copper, 7 to 40 oz. silver and \$2 to \$5 gold per ton. A body of good ore was reported at a depth of 350'.

Equipment: includes two 25-h. p. hoists and a 5-drill air compressor, several mine buildings and an 80-ton water-jacket smelter.

Shipments to the American Smelting & Refining Co. and Phelps, Dodge & Co. ran 9 to 10% copper, 10 to 32 oz. silver and \$2 to \$5 gold per ton. Management has been prevented from operating during the last years owing to revolutionary disturbances in Mexico, but plans resuming work when able.

AN ANTONIO COPPER CO.

MEXICO

Address: Geo. J. Eisele, sec.-treas., Iron Mountain, Mich. **Mine office:** an Antonio de la Huerta, Sonora, Mex.

Officers: Otto C. Davidson, pres.; Dr. J. A. Crowell, v. p.; preceding,

with John Uno Sebenius, D. M. Clemson, Hon. Richard C. Flanagan, E. G. Kingsford and W. H. Johnston, directors; John E. McIntyre, supt.

Inc. Sept. 23, 1908, in Arizona. Cap., \$2,500,000; shares \$10 par; issued, \$1,000,000 full paid and \$1,000,000, with \$3.50 paid on the latter. Direct title is held through the San Antonio Copper Co., S. A., inc. April 12, 1908, in Mexico, with all stock owned by this company. Annual meeting, 2nd Monday in April.

Property: 9 groups, about 7,500 acres, with 2,000 acres about 3 miles from San Antonio de la Huerta, near the Yaqui river. The property was worked 1862 in a small way.

Lands show a mineralized zone of 200' to 500' width. Ore includes high-grade oxides and carbonates, with sulphides of good average tenor, there being a considerable quantity of chalcocite, giving assays up to 11% copper.

Development: consists of 20 tunnels with 15,000' total workings, opening 7 separate orebodies in 2 tunnels, with 4,000' of workings in ore. Mr. Dwight E. Woodbridge estimated, March 4, 1910, that the San Antonio had exposed on one plane, 300,000 tons of ore, figured conservatively, averaging 7% copper, with very low values in the precious metals, and that the newer tunnels should increase this tonnage five-fold. Railway connections to within 2.2 miles of the main tunnels were secured, 1910, and will be extended to the tunnel mouth as soon as peace prevails again. Operations suspended on account of revolutionary disturbances since August, 1917. Property considered promising.

SAN XAVIER COPPER CO.

MEXICO

Idle. San Xavier, Sonora, Mex.

Officers: C. C. Rountree, pres.; Wm. Foster, sec.; W. C. Laughlin, mgr. Inc. in Arizona. Cap., \$1,000,000; shares \$1 par and holds direct title to lands through the Cia. Minera de Cerro Verde, S. A., inc. in Mexico.

Property: 1,440 pertenencias, 3,500 acres, 80 miles east of La Colorado in the Hermosillo district, Sonora; also 300 pertenencias lying 24 miles to the southward and about 4 miles north of the Yaqui river.

Letters returned in 1917.

SILVER SEAL MINING CO.

MEXICO

Mine at Pilares de Teras, Sonora, Mex. Fred O. Colson, lessee at last accounts.

Property: includes El Aguaje mine, 12 miles east of Nacozari, showing a fissure vein in andesite rock cut by granite and carrying narrow pay-streaks of gray copper, chalcopryrite and galena ore. The mine has yielded ore assaying up to 15% copper and 20 oz. silver per metric ton. Property worked intermittently during recent years.

SOMBRERETILLO MINING CO., S. A.

MEXICO

Was controlled by the Sonora Central Mines Co., now out of business.

SONORA CENTRAL MINES CO.

MEXICO

Fully described Vol. XI, Copper Handbook. Passed away; foreclosure proceedings took place about 1913, but provided no cash for the bondholders, so they took the property. No reorganization of the Sonora Central was made, but a new company was formed, known as the Alamos Dev. Co.; E. M. Board, v. p., 1510 Dayton St., Chicago; Walter Strong, sec.-treas.; 1638 So. Michigan Ave., Chicago, Ill.

SONORA CHIEF MINING CO.

MEXICO

Idle. Office at last accounts: 219 Argyle Bldg., Kansas City, Mo. Mine near Suaqui de Batuc, Sonora, Mex.

Officers: Jas. E. Crosby, pres.; Dr. Moses T. Runnels, v. p. and treas.; R. A. Bruns, sec.; preceding, with C. D. Stoll and I. D. Waggener, directors. Inc. July 18, 1904, in Arizona. Cap., \$1,500,000; \$1 par.

Property: the Phoenix and Lakeside groups, 464 acres. The flotation was, it is believed, a crooked one. The property has no such showing as reported and described. Such veins as exist are tiny streaks a few inches wide, which in places contained very high-grade ore, chalcocite and perhaps whitneyite. Its location, on the far side of the Yaqui river, is such that even a remarkably good showing would not have been worth development of

the time the company was active. The property is totally devoid of merit. Idle several years.

SONORA COPPER MINING CO.**MEXICO**

Idle. Office at last accounts: 895 So. Clarkson Ave., Denver, Colo.

Officers: Edward J. Wilcox, pres.; H. L. Peebles, v. p.; Fred W. Webber, sec.; C. A. Parker, treas., and L. J. Stark, directors.

Inc. May 17, 1910, in Colorado. **Cap.**, \$10,000; shares \$1 par.

Property: 10 claims, 4 miles from San Felipe, in the Arizpe district, Sonora, and 62 miles from Posa on the S. P. R. R., developed by 820' of underground workings, showing a 12' vein, with some complex silver-lead-zinc ore.

SONORA COPPER SMELTING CO.**MEXICO**

Idle. **Last address:** 424 Scarritt Bldg., Kansas City, Mo. **Mine office:** Noria, Sonora, Mex.

Officers: A. M. Conard, pres. and gen. mgr.; J. M. Lowe, v. p.; C. E. Kroh, sec.; W. R. Moore, treas.; preceding with J. G. Burnley, F. E. Reed, E. E. Axline, J. E. Kramer and Chas. L. Irons, directors.

Inc. June 25, 1908, in Arizona. **Cap.**, \$3,000,000; shares \$10 par.

Company supposed to have been organized as successor of the Sonora Copper Co., but apparently owns only a 50% stock interest in that company, and title to the Mexican property is held in the name of the International Copper Ore Corporation, which is controlled, in some manner, by this company, the corporate relations being neither clear nor satisfactory. Annual meeting, 3rd Tuesday in December.

Property: about 500 acres, including the Cobre Grande, 123 acres, 3 miles east of Noria, the principal mine, is not considered worthy of the money spent upon it and the past history of the president is such that the company is regarded with much suspicion.

SONORA DEVELOPMENT CO.**MEXICO**

Office: 601 New Ridge Bldg., Kansas City, Mo. **Mine office:** Cumpas, Sonora, Mex.

Officers: Charles M. Williams, v. p. and act. pres.; Col. Geo. M. Bowie, v. p.; John W. Amerman, sec.; W. A. Rule, treas.; with A. A. Potter, B. H. Rule, and A. D. Fetterold, directors; Y. Soto, Sonora agent.

Inc. in Arizona. **Cap.**, \$2,500,000. Company absorbed the Goodlander Mining & Milling Co.

Property: 167 hectares, including the Nacozari Copper Queen, Don Genario, La Gran Republica, and Lady Goodlander, copper, silver, lead and zinc; Pittsburg group of 7 properties, silver; La Madrugada and El Nocturno, copper and silver; and Wostenholm, gold and silver. La Gran Republica is leased to James Nolan of Nacozari, shipping ore to Douglas, Ariz. The Nacozari Copper Queen, 65 acres, between Pilares de Nacozari and Bella Union mines of Moctezuma Copper Co., contains some remarkably rich ore.

As conditions appear to be more favorable under Governor Calles, company hopes to resume early in 1918.

SONORA EXPLORATION CO.**MEXICO**

Estación Yzabal, Sonora, Mex.

Property: formerly held by the Florida Copper Co., in the vicinity of the El Tigre mine includes El Temblor, Last Chance, Texas, and other properties, carrying gold and silver-copper ore, developed by shaft.

Equipment: includes steam power and an air compressor. Idle.

SONORA MINING & DEVELOPMENT CO.**MEXICO**

Office: 207 Spitzer Bldg., Toledo, Ohio. **Works office:** Toledo, Sonora, Mex.

Officers: A. E. Klausner, pres.; H. R. Klausner, v. p. and gen. mgr.; J. E. Meilink, sec.-treas.; and A. V. Baumann, directors.

Inc. 1904, in Arizona. **Cap.**, \$5,000,000; shares \$1 par. Company operated in Mexico under the name of the Yaqui Smelting & Refining Co., S. A., which is incorporated in Mexico; cap., 100,000 pesos. Company is exempt from the payment of property tax for 20 years and also enjoys a 50%

reduction on the state tax for 20 years. International Trust Co., Boston, registrar; Frederick R. Tibbetts, Boston, transfer agent.

Property: about 154 hectares of mineral property, and 1,000 acres miscellaneous lands, including a smelter site and town site. Mine is reached by a branch of the Southern Pacific Railway, and company has a government concession for construction of an aerial tram line of 40 kilometers length. Lands are in San Antonio de la Huerta, San Javier and San Onavos, about 80 miles east of Torres and about 60 miles below Campo Santo Niño. The principal property is the Veta Grande mine, about 10 miles from the smelter, said to show a gossan 40' wide, outcropping for a quarter mile. Property also includes the Almeda, Plomosa, Isabella, Moctezuma, San Francisco, Caballos, Ferruginosa, Independencia and Gerberina mines, carrying mainly gold-silver-copper ores, with some auriferous silver-lead ore.

Equipment: the reduction works include a sampler, smelter and power plant, with necessary adjuncts. The 150-ton smelter has a 36" circular Allis-Chalmers blast furnace, for use interchangeably on lead and copper ores, and a smaller furnace for copper only. The power plant includes two 80-h. p. water-tube boilers, 2 engines, an Erie high-speed engine and a No. 1 Connersville blower, for furnace blast. The lead refinery building has a softening furnace, refining furnace and 2 desilverizing kettles, operating on the Parks process. The silver refining plant includes 2 cupel furnaces, with blast attachments, 1 bullion furnace, 1 muffle furnace, and necessary pots and moulds, with a bullion vault. Idle since 1910.

SONORA-PACIFIC MINING CO.

MEXICO

Noria, Sonora, Mex. Ira E. Bowers, gen. mgr. Inc. 1911, as the successor of the Llano Copper Co.

Property: 10 groups, 526 hectares on Caracahui mountain, 3 miles east of Noria, the nearest rail point, also 5,000 hectares of ranch lands. Lands show limestone cut by intrusions of diorite and porphyry, with a quartz vein of 3' to 50' estimated width, traceable 6,000' on the company's claims, which is reported to show bunches of ore carrying chalcocite, bornite and chalcopyrite, with a little native copper, that will average about 7% copper, 6 to 10 oz. silver and \$2 to \$5 gold per ton, as developed.

Development: consists of the 105' No. 1 shaft, No. 4 shaft of 800', and No. 7 shaft of 600', with tunnels of 50', 200', 577' and 750'. Orebodies developed so far are too small and too few for commercial production.

Equipment: includes a 125-h. p. steam plant, with 2 hoists, and a 6-drill Ingersoll-Rand compressor. Presumably idle. Unfavorably regarded.

SUPERIOR BONANZA MINING CO.

MEXICO

Controlled through stock ownership of 60,000 shares by Greene Cananea Copper Co.

Office: Cheyenne, Wyo. Head office: Cananea, Sonora, Mex.

Officers: George Kingdon, pres.; John Cuddihy, v. p.; C. Sites, v. p. and sec.; J. V. Montague, treas.-asst. sec.; J. F. Carmichael, asst. treas.; with A. E. Peterman, A. S. Cox, A. C. Cole and W. L. Thomas, directors.

Inc. in Wyoming, Aug. 31, 1907. **Cap.**, \$1,250,000; shares \$10 par; 74,983 issued. Owns the entire capital stock of Bonanza Mining Co., S. A.

TECOLOTE COPPER CO.

MEXICO

See West Coast Smelting & Refining Co.

THARSIS-YORK CO.

MEXICO

Address: Thomas Pryor, 850 Putnam Ave., Brooklyn, N. Y. **Mine office:** Nacozari, Sonora, Mex.

Officers: Herbert E. Young, v. p.; Thomas L. Pryor, sec.; Willard T. Carleton, treas.; preceding, with R. C. Heath, E. C. Williams, W. R. Sparrell and Wm. J. Maloney, directors.

Inc. April 29, 1909, in Delaware. **Cap.**, \$1,000,000; shares \$5 par; fully paid and non-assessable; issued 145,761. Boston Safe Deposit & Trust Co. registrar and transfer agent, Boston, Mass. Annual meeting, 2nd Wednesday in April.

Property: 12 claims, 1,015 acres, in 8 groups, the Esquina, the main group, adjoining and lying between the Nacozari Consolidated Copper Co.

and the Pilares mine of the Moctezuma Copper Co., with 1 shaft near the boundary of the latter. There are several attractive orebodies on the property, 3 partly developed.

The Esquina claims carry a dike-like mass of red-stained mineralized porphyry, similar to the outcrop of the Pilares orebody and on the same line of fracturing. This outcrop is 600' wide and extends across the claims. Like the Pilares it has a footwall of white rhyolitic breccia, a hanging wall of andesitic breccia, and the lode filling is an altered, sericitized, silicified and mineralized rhyolite, supposedly with copper and iron sulphides below water level.

Development: includes considerable prospect work, with shafts of 168' and 170', latter planned to be sunk to 300' with tunnels of 330', 107', 268' and 485', the mine having about 1,500' of workings. The company was driving a crosscut tunnel to cut the lode at 800' in and to drain the bottom of the 168' shaft and continue across the ore zone. This mineralized belt has thus far shown only bunches of ore, but is expected to develop ore similar to that of the Pilares mine.

Equipment: includes an 80-h. p. electric plant, with a 25-h. p. hoist and a 3-drill air compressor, and the company has the use of the shops of the Moctezuma Copper Co. Was forced to close down in 1914, owing to revolutionary disturbances, and has been idle since then. Property considered promising and development well planned.

TIGRE MINING CO., S. A.

MEXICO

See Lucky Tiger Combination Gold Mining Co.

TRANSSVAAL COPPER MINES CO. OF UTAH

MEXICO

Formerly Transvaal Mining Co. of Utah.

Mine and works office: Cumpas, Sonora, Mex.

Officers: Louis J. Hauck, 433 Dayton St., Cincinnati, Ohio, pres.; Theo. M. Foucar, 1st v. p.; Percy Andrae, 2nd v. p.; Alfred Vogeler, sec.-treas., with Louis Hehman, W. C. Geis, Leo G. Cloud, Bernhard Freiberg and J. J. Haas, directors.

Inc. Aug. 4, 1917, in Utah, as a reorganization of the Transvaal Mining Co. of Utah, which was a reconstruction of the Transvaal Copper Co. **Cap.** \$4,000,000; shares \$5 par. Annual meeting 1st Tuesday after 1st Monday in May.

Property: 3,500 acres of mineral land, including a 50-acre smelter site with 75-acre townsite adjoining; La Piedra Verde ranch of 15,000 acres and an interest in the San Nicolas Tolentino ranch, 26,000 acres, including timber and grazing lands.

Geology: company's holdings cover the heart of a mountainous district showing widespread rock alteration with acid stream waters, bleached and iron-stained areas, and "chimneys" or "pipes" of silicified breccia. The tract shows granitic exposures, part of an underlying batholith, cutting recrystallized volcanic breccias, baked by contact action. In the Transvaal mines, both granite and this cover of fragmental rock are cut by irregular mineralized fractures along which orthoclase, carrying chalcopyrite, fluorite, chlorite, and calcite have been deposited by pneumalytic action. The "pipe" or "chimneys" of brecciated material cemented by quartz, are mostly barren, but in some cases, as at La Verde and Cobre Rico, contain workable copper ores. It is a peculiar type of deposit and resembles the Calumet-Copper Creek deposits of Arizona, the Kamloops mine in British Columbia and the neighboring Washington mine, 4 miles W. of the Cobre Rico property.

Extensive drilling at La Verde, or the Transvaal mine proper, has developed a great tonnage of low-grade primary ore, averaging 1½% copper and estimated by the management at 3,000,000 or more tons, which will doubtless be treated some day by flotation methods. The drills have shown the ore to extend to a depth of 1,100'.

Development: the Cobre Rico mine has 2 shafts, No. 1 of 100' and No. 2 about 140' deep, with several tunnels and about 16,400' of workings, including diamond drilling locally called *chachite*. Ore is estimated to average about 2% copper, 1 to

2 oz. silver and a trace of gold. Management estimates 2,500,000 tons available in this mine.

The Transvaal or Verde mine has shafts, 318' and 210' deep, former the main working shaft with about 5,000' of drift and crosscut work including several tunnels. This development has opened up considerable low-grade ore carrying chalcopryrite which can only be treated by concentration. Development near the mine by diamond-drill work has shown the existence of a large body, or bodies, of primary ore, the cores varying from a trace up to 17.85% copper and 46.8 oz. silver for 2' at 1,032' depth. About 10,000' of drill work had been done up to March, 1913, which shows that the orebody is somewhat irregular in shape and spotty in character but of fair average value.

Equipment: at the Verde shaft includes two 80-h. p. boilers, a steam hoist and air compressor. The water supply at this mine is bad, owing to its acidity. Management estimates between three to four million tons of concentrating ore available at this mine.

The Buckeye mine has about 10,000' of tunnel work, on a blanket vein of 6" to 4' thickness, showing ore reported to have given average returns of 12% copper and 8 to 10 oz. silver, with a trace of gold. There are about 5,000 tons of high-grade ore left in the mine and a considerable amount of low-grade ore of no present commercial value. The mine, however, has been thoroughly explored in the bottom, or lower tunnel level and the ore shoot found to have played out.

The San Nicolas mine is a silver property about 8 or 10 miles from the Transvaal. It shows a vein along an igneous contact varying from 1' to 8' in width, carrying silver-lead ore said to change to copper in the lower workings. The mine is reported to have yielded 6,000 tons of 60 oz. silver ore and still has between 2,000 and 3,000 tons of 50-oz. silver ore, but is locally regarded as practically worked out, though the limited amount of development work does not disprove the downward extension of the ore shoot. It is regarded as a promising prospect, especially for lateral development.

The Ultima Chanza mine has a 300' incline shaft and a 100' winze, with about 5,000' of workings, developing a fissure vein of 10" to 42" width. The management estimates 50,000 tons of ore in sight, averaging 10% copper, 5 oz. silver and a trace of gold. This property is a good, but small mine, needing further development. Equipment includes a steam plant and hoist.

The Guadalupe mine carries cupriferous iron ore, used for flux.

The nearest rail station is at Nacozari, 30 miles north, but the Cananea Rio Yaqui y Pacifico railway has surveyed a line to within 9 miles of the smelter. The company has built about 35 miles of wagon roads and 20 miles of trails at a cost of \$50,000, with a maintenance charge of about \$5,000 yearly.

The main camp is at La Verde, 25 miles S. W. of Cumpas, where mining operations are centered. There are 20 buildings, including 3 power plants, machine shop, carpenter shop, smithies at the principal mines, 2 laboratories, a boarding house, general store, with a branch store at the smelter, a hospital, and several dwellings.

Smelter: at Cumpas, at an average distance of about 25 miles from the mines, was located at that point because of a good site and ample water supply, both lacking at the mines. Equipment includes a 125-ton 42" x 100" El Paso Foundry & Machine Works water-jacket blast furnace, with room for 2 additional furnaces of the same size. There is a reverberatory furnace, variously rated by the company as of 20 to 30 tons daily capacity, and the works have a sampling mill, capable of sampling ore to feed 3 furnaces. The smelter power plant includes three 80-h. p. Babcock & Wilcox boilers, an Allis-Chalmers tandem-compound engine, and a Connersville blower. This smelter was blown in May 1, 1906, receiving steam from the Bagdad and other mines in the district.

slip
report

nd 0.1-0.5 oz. gold per ton. The smelter was blown out, Oct., 1907, and as been idle since.

From May 1, 1906, to Nov. 3, 1907, a period of 18 months, the smelter, in operation about two-thirds of the time owing to scarcity of freighting outfits, smelted 18,550 tons of ore having an average assay tenor of about 0% copper and 8 oz. silver for copper ore, and 2% copper and 60 oz. silver for silver ore, making 3,089 tons of matte, yielding 2,178,855 lbs. fine copper, 27,607 oz. silver and 240 oz. gold.

The extensive development work done on the property since 1909, shows the existence of small veins of rich ore and large deposits of low-grade ore. The property is a valuable one and will be worked on a large scale when given the rail connections now lacking, but absolutely essential to the successful exploitation of the ores.

TRANSVAAL MINING CO. OF UTAH

MEXICO

Reorganized as Transvaal Copper Mines Co. of Utah, which see.

RENTON-SONORA MINING CO.

MEXICO

Mine office: Tarachi, Sonora, Mex.

Property: 4 miles S. of La Calera, includes the San José, Santa Edujges, El Porvenir and other mines, carrying copper ores, with values mainly in silver. The San José mine is reported to show an 18" paystreak of highly auriferous chalcopyrite.

Development: by a 200' shaft, sunk on the vein, equipped with a hoist. here is a mill and a smelter. Probably idle owing to Mexican revolution.

NITED MEXICAN MINES

MEXICO

Idle. Mine near La Verde via Cumpas, Sonora, Mex. O. L. Neer, gr., Douglas, Ariz.

Property: 40 miles S. of Nacozari, includes the Veta Grande and Cerroordo groups, near the Transvaal mine.

Mines show rhyolite, granite and porphyry, with several orebodies occurring in fissure veins, and as breccia deposits between trachite and granite. ores are copper sulphides.

ACTOR MINING AND SMELTING CO.

MEXICO

Office: 315 Schultz Bldg., Columbus, Ohio. Mine address: Cananea, Sonora, Mex.

Officers: S. D. L. Jackson, pres.; M. F. Cole, v. p.; F. P. Jackson, sec.-reas.; preceding, with J. S. MacLean, W. H. Sartain, C. Thornton, Chas. Hindler and C. A. Stillwagen, directors; W. A. Woodlief, fiscal agt.

Inc. May 9, 1905, in Arizona. Cap., \$1,500,000, increased 1907, from \$1,000,000; shares \$10 par; issued, 90,000 shares. Title to property is held through the Guerrero Mining Co., legalized in Mexico. Annual meeting, held Monday in January.

Property: 67 pertenencias, in 2 groups in the Magdalena district, about 10 miles S. W. of Cananea. The property shows fissure veins in granite-porphry intruding sedimentary rocks. The veins are strong and well lined, very silicious and high in iron content.

Development: by a shallow shaft and 5 short tunnels, with a total of about 1,500' of workings, showing high-grade copper ore with small gold and silver values, in 3 veins of about 4' and 70' width, the wider vein showing evidences of considerable leaching. The mine has no power or equipment. Property closed down in 1914 owing to revolutionary disturbances in Mexico.

Mine was ordered sold at receiver's sale, Sept. 11, 1916, at Nogales, Ariz., but such sale could not be legal in Mexico.

WASHINGTON MINES DEVELOPMENT CO.

MEXICO

Office: Douglas, Ariz. Mine office: Washington Mine, via Huepac, Sonora, Mex.

Officers: F. G. Bostwick, pres.; Geo. Cass, v. p.; Albert Sames, sec.-

Inc. 1917, in Arizona. Cap., \$1,500,000; shares \$10 par; issued 150,000

Property: 27 claims, patented, 76 acres, with options on 200 acres additional in the same district, 60 miles from Nacozari, the nearest rail point. There are several big "pipe" ore deposits composed of brecciated rhyolite. Ore is reported to average 3.2% copper, 0.35% tungstic acid; 25 oz. silver and 25 oz. in gold.

Development: by 3 tunnels and 2 air shafts with a total of about 6,000 ft. It is said to show 600,000 tons of ore blocked out for stoping. Company is developing at depth by sinking a winze from No. 2 tunnel below the outcrop, and expects to add 4 additional levels to the mine with the funds in hand.

Equipment: includes a small steam plant with hoist good for 500' and a compressor. A mill was being erected in 1916 to treat tungsten.

Property promising, but needs railroad transportation for profitable operation. Reported under option 1917 to Henry Hovland of Duluth.

WEST COAST SMELTING & REFINING CO. MEXICO

Office: C. H. Kittredge, treas., 30 Church St., New York.

Property: at Tecolote, via Carbo, Sonora, Mex.

YAQUI CANYON COPPER CO. MEXICO

Idle. Former offices: 408 Gumbel Bldg., Kansas City, Mo., and Suaqui de Batuc, Ures, Sonora, Mex.

Officers: at last accounts, A. J. Davies, pres.; S. M. Major, v. p.; W. T. Kerr, sec.; Frank B. Foster, treas.

Inc. in Ariz. Cap., \$2,000,000; shares \$1 par.

Property: 60 pertenencias, 148 acres, known as the Todos Santos and Great Republic mines, and a 50-acre smelter site, has contact deposits between limestone and porphyry, two under development, of 10' estimated average width, carry copper and lead ores, former said to assay 7% copper and 50 oz. silver, and latter 15% lead and 30 oz. silver, with a trace of gold. The principal property is an antigua.

Development: by 4 tunnels and 7 or 8 shafts.

Equipment: includes a steam plant, air compressor and a small smelter, with a 10-ton reverberatory furnace. Presumably idle as the region in which the mine is situated is notoriously unsafe since the Mexican revolution began.

YAQUI COPPER CO. MEXICO

Office: 1 Madison Ave., New York. **Mine office:** Suaqui de Batuc, Ures, Sonora, Mex.

Officers: Wm. Sauntry, pres.; Dr. A. E. Magoris, v. p.; Hon. Geo. E. Green, sec.-treas., at last accounts.

Inc. 1902, in West Virginia. Cap., \$5,000,000; shares \$1 par.

Property: originally claimed to be 6,032 acres of mineral territory, and 119,284 acres of timber and grazing lands, also water rights to 25 miles of the Yaqui river, the mining lands being in the vicinity of Suaqui de Batuc, Campo Santo Nino, in the Sierra Madre, 120 miles from Hermosillo. Property is claimed to show antigua workings, iron ore and indications of coal. In June, 1906, the Montana de Cobre Co. was said to have acquired 1,600 pertenencias formerly held by the Yaqui Copper Co.

Development: begun, 1901, is by 2 shafts and 8 tunnels, and so far as can be learned the mine has shown practically no ore. Improvements include an engine and boiler house, office building and store.

The company was promoted with \$10,000 offices, magnificently furnished, in which visitors were royally entertained and given handsome ore samples. Company's literature was untruthful, its representations gross exaggerations, and its property practically valueless. It caused as much damage as any mining fraud ever perpetrated. See Vol. VIII of this Handbook for description.

Revised Oct., 1916.

YAQUI MINING CO., S. A.**MEXICO**

Fundicion, Sonora, Mex. Geo. M. Ryall, pres., care Jonathan Club, Los Angeles, Cal. Inc. in Mexico.

Owned by Mexican Exploration & Mining Co., controlled by Pacific Smelting Co. Property is described under latter title.

YAQUI SMELTING & REFINING CO., S. A.**MEXICO**

San Antonio de la Huerta, Ures, Sonora, Mex. Is the Mexican operating company of the Sonora Mining & Development Co., and described under latter title. Fully described Vol. VIII of the Copper Handbook.

ZAMBONA DEVELOPMENT CO.**MEXICO**

Idle. Mine office: Minas Nuevas, Alamos, Sonora, Mex.

Officers: R. R. Coleman, pres. and treas.; Wm. S. Cranz, v. p.; C. W. Hayes, sec., at last accounts. Is supposed to be owned by Pacific Smelting Co.

Property: includes the Zambona, Purisima and San Antonio mines, said to have produced about \$7,000,000 worth of ore, in the past, carrying native silver, argentite and chalcocite, with values largely in silver. Developed to depth of 730', and by a long crosscut tunnel. There remain about 200,000 tons of low-grade disseminated ore on the dumps, available for milling and cyaniding.

Equipment: includes a steam and electric plant, a 30-stamp mill having 4 Huntington mills and 8 tube mills, and a 100-ton cyanide plant. Idle and company probably dead.

STATE OF TEPIC**LA JARA GOLD MINES CO.****MEXICO**

Idle. Office: J. W. Dunham, 501 Fifth Ave., New York.

Officers: W. P. Dunham, pres.; E. G. Thomas, v. p.; J. W. Dunham, sec.-treas.

Inc. in Maine. Cap., \$3,000,000; shares \$1 par; non-assessable; 2,500,000 issued. Is the holding company of La Jara Gold Mines Co. of Mexico. Organization and titles are certified by H. L. McNair, attorney, 120 Broadway, New York.

Property: the old Natividad group of claims, 298 acres, at La Jara, territory of Tepic, Mexico. Examined by C. E. Gillette, E. G. Thomas, U. S. York and I. J. Hall. Claims said to show several large quartz veins in andesite carrying gold-silver ore. Openings are mostly by tunnels. Mine was under development until July, 1916, when conditions in Mexico became impossible and mine was left in charge of a Mexican superintendent. Reported late in October, 1917, that property would be reopened as soon as conditions warranted.

In 1917, company acquired an option on the Jim-Crow-Imperial group of patented claims, about 123 acres, in the Steeple Rock district, New Mexico, about 7 miles E. of Duncan, Ariz. Said to have made ore shipments in the past running from \$22 to \$500 a ton in gold and silver.

STATE OF ZACATECAS**EL EDEN; COMPANIA MINERA Y BENEFICIADORA****MEXICO**

... owing to revolution. Mine at El Eden, Zacatecas, Mex. Francisco Llamas, pres. and gen. mgr.; Enrique Gutierrez, sec.; Luis Colina, supt.

... 1905, and reorganized 1907, in Mexico. Cap., 600,000 pesos; shares 100 pesos par.

... property: 102 hectares, is a silver-gold mine with incidental copper.

AFRICA

massive pyritic ore are associated with basic igneous dikes, intrusive in granite and gneiss.

Cape Colony Mines.

The O'okiep mine, long the principal mine, has dwindling ore reserves, estimated, 1916, at only 6,000 long tons, though production has remained practically unchanged for some years and was 13,496 tons net dry weight of 11.22% copper tenor in the fiscal year 1916, containing 151,527 units. It is estimated that there are 120,000 tons of 4% copper ore at the surface. About 514' of drifting was done during 1916.

The NababEEP mine, 5 to 6 miles west of O'okiep, opened 1890, includes the NababEEP South, now the principal producer, and has reserves, estimated, April 30, 1916, at 120,000 tons of 5% ore, production for year ending that date being 70,677 long tons of ore assaying 3.7% copper, containing 261,827 units. Of this production 24,959 tons were from quarrying and open cuts. The returns of the previous year were 68,141 tons of 4.35% copper. The mine is developed by tunnels and a shaft.

The NababEEP North mine extracted 1,326 tons of 4.96% copper, principally from the capping, and containing 6,581 units of copper.

A summary of combined outputs from North and South mines showed an extraction of 72,003 tons, of average assay of 3.72% and containing 263,409 units of copper as compared with 69,798 tons assaying 4.41%, containing 307,909 units of copper for previous year. The average grade of mineral has decreased somewhat in value. Development work for year totaled about 1,560'.

The Narrap mine, about 1 mile east of the O'okiep East, with somewhat similar ore, yielded 4,494 long tons of 5.37% ore in 1916, containing 24,130 units of copper, as compared with 2,692 tons, assaying 4.79% the previous year since the close of the financial year operations have been suspended to effect economies because of the war. This property has an aerial tram, electric hoist and ore crusher. The Narrap South mine, opened to a depth of 120', is without important developments.

The Spektakel mine, 28 miles west of O'okiep, is an idle, old mine, having orebodies both in granite and basic intrusive rocks.

The Carolusberg mine, about 6 miles southeast of O'okiep, opened by tunnel, and the Carolusberg East mine, about 2 miles east of the Carolusberg, are both idle.

Other idle properties include the Flat mine, 4 miles north of NababEEP, which was reopened, 1907; the Kopperberg mine near the Carolusberg, about 5 miles southeast of O'okiep, and the Coetzee mine, which was abandoned and plant removed several years ago.

Electric power has been substituted for steam throughout the principal works, the central power station at the O'okiep mine having 2 suction gas engines, with the old steam plant held in reserve for emergencies.

Reduction works at the mines include smelters at O'okiep and NababEEP, the former closed down 1912, the ore from both mines being treated in the enlarged NababEEP plant, 1913. In 1916, there passed through the furnaces 91,207 tons of ore, slag and flue dust. Production of the smelter is matte of 48 to 50% copper tenor, shipped to the Briton Ferry works for resmelting and refining. For 1916 the average assay of the regulus from the two furnaces was 43.83% copper.

The company owns a 99-mile railway, with 16 miles of sidings, running from O'okiep to Port Nolloth, where there are docks, wharves, cranes, tugs and lighters for the receipt and dispatch of freight. The line is laid with 32, 37 and 50-lb. rails. Freight traffic for fiscal year ending 1916 was 91,250

long tons. The company also owns 4 tugs at Port Nolloth. A tram line connects the principal mines with the smelters. There are about 1,500 men employed at mines, smelters, docks, etc.

In addition to its mines in South Africa, the company has the Terra Nova mine, in Newfoundland, which produced 6,265 tons, assaying 2.41% copper and 37.23% sulphur. No output at present because of high freight rates. Ore reserves estimated at 10,630 tons. Properties in the United States, formerly held under option, were surrendered, 1910, but the company secured title to some claims in Alaska, on which no work is planned until a railway reaches the district.

Rakha Hills Mine—India.

The company has also taken a lease on the Rakha Hills, or Rajaoka property, at Surda, India, and spent £32,058 on its development. This mine shows an extensive belt of cupriferous schist, in blanket formation, with seams of copper ore of 2 to 6% tenor. Development is by several shafts, the main shaft showing 236,401 short tons of 4.12% copper developed and 43,372 tons at 2.93% probable ore; and the No. 4 shaft showing 72,013 tons of 3.74% copper developed and 4,423 tons of 2.51% copper as probable ore. In addition to this there are 36,939 tons of broken ore on surface averaging 3.23% copper, making a total ore reserve of 393,148 tons of about 3.89%. During 1910-12, a number of boreholes were drilled with a total of 9,700', proving the copper belt for nearly 1¼ miles. Development work to March, 1916, amounted to 10,829' in Main shaft section and 1,936 in No. 4 shaft, or a total of 12,765, an increase over 1915 of 366' of drifts. In addition to this there has been done 11,260' of winzes, raises, crosscuts, etc. The main shaft is 1,126' deep, the No. 4, 423'; No. 5, 328', and No. 6, 569'. The new construction plant has been completed and trial runs made. Entire mill was put into operation in Oct., 1916. The smelter plant is progressing rapidly. New equipment, such as transmission lines, steel head frame and equipment at Main shaft, compressor and power plants, etc., have been installed. Property is considered very promising.

Briton Ferry Smelter.

The Briton Ferry smelter, which is the largest in Wales, in addition to treating the company's own ores, does a general custom business, smelting the ores of the Namaqua Copper Co., Ltd., under contract, treating 13,879 long tons of Namaqua ore and 883 tons of Namaqua matte of 54% copper enor in 1906. The Briton Ferry works are located on the Great Western and Rhondda railways, also having canal connection with Swansea, receiving ores mainly by rail. The works have revolving cylindrical calciners up to 80' in length, heated by gas, and four 70-ton blast furnaces, making matte. Ores are smelted, without calcining, in reverberatories, to a 76% white metal, which is refined by the Nichols direct method, by which some of the white metal is calcined and mixed with uncalcined white metal, the consequent reaction eliminating the remaining sulphur. Tilt Cove sulphide ores are burned in kilns for their sulphur contents, fumes going to an acid plant, which makes 30,000 tons of chamber acid yearly. The works have a double concentric chimney of steel and concrete and a telpherage plant for handling material. In 1906 the Briton Ferry works produced the equivalent of 10,212 long tons of fine copper, of which 733 tons were turned out as bluestone, and output was increased, 1909-10. The works include an electrolytic refinery, constructed 1912.

Production of the African mines has been as follows: 8,960,000 lbs. fine copper in 1901; 6,061,000 lbs. in 1902; 10,371,200 lbs. in 1903; 12,264,000

lbs. in 1904; 11,256,000 lbs. in 1905; 8,825,600 lbs. in 1906; 9,475,200 lbs. in 1907; 10,035,200 lbs. in 1908; 10,404,800 lbs. in 1909; 9,867,200 lbs. in 1910. Later metal figures are not available, but in 1914-15 the ore output was 81,496 tons, and in 1915-16, 84,173 tons. In July, 1917, 4,246 tons of 3 to 6% ore yielded 360,640 lbs. copper. In August smelting was suspended through coke shortage.

The management has been criticized occasionally for not adopting the latest methods and machinery, but the circumstances of the case have precluded as rapid advances in this direction as would be warranted were the company mining enormous orebodies. The record of the Cape Copper Co., Ltd., as a steady dividend payer, for 40 years past, is perhaps the best answer to such criticisms, founded upon part misconception of the facts. The company issues full monthly reports to stockholders that are models, and could be imitated by other companies to the advantage of the investor.

NAMAQUA COPPER CO., LTD.

CAPE COLONY

Head office: A. W. Outram, sec., 3 Fenchurch St., London, E. C., England. **Mine office:** James Garland, Concordia, Cape Colony, South Africa.

Officers: William Rich, managing director; Thomas V. Anthony, H. von Berg, F. J. King, C. L. H. Loeffler, directors.

Inc. April 23, 1888, in England. **Cap.**, £200,000; shares £2 par; 94,331 issued.

Balance sheet for 1916 showed ore sales amounting to £249,111, of which £78,407 was profit, after writing off depreciation, etc. Dividends absorbed, £61,314. There was carried forward £16,241. Reserve fund was £70,000.

Dividends: since 1888 total 426%, including 25% for 1916.

Property: 680 acres at Concordia, Little Namaqualand, Cape Colony, South Africa, known as the Tweefontein, Wheel Julia, Henderson's and Hester Maria.

Development: in 1916 totaled 1,769'. Exploration in the Tweefontein was rather disappointing; the eastern section is being prospected. Results in the Wheel Julia and Henderson's were also not very encouraging.

Ore reserves: estimated at 51,264 tons (40,000 in Tweefontein), containing 6,630,000 lbs. of copper, or 6.5%, a decrease of 15,467 tons. Tailings in reserve of 3 to 5% tenor, amount to 59,000 tons.

Equipment: mining plant, sorting plant, mill and Elmore flotation plant, briquetting plant, precipitating tanks, smelter and power plant.

Production: in 1916 the smelter reduced 32,958 tons of mixed ore, etc. yielding 3,763,200 lbs. of copper.

GOLD COAST COLONY

ABBONTIAKOON MINES, LTD.

WEST AFRICA

Office: E. Price, sec., 19 St. Swithin's Lane, London, E. C., England.

Officers: E. Davis, chairman; W. A. Aikin, Lord Brabourne and the Earl of Verulam, directors. S. H. Ford, supt. engr.; Consolidated Gold Fields of South Africa, cons. engrs.

Inc. Feb. 24, 1909, in England. **Cap.**, £800,000; shares 10s. par; 1,273,601 issued.

Revenue in 1915 totaled £261,024, of which £51,490 was net profit. Adding previous balance there was available £66,889, of which £31,834 was distributed and £35,055 carried forward.

Dividends: in 1914, 20%; in 1915, 5%.

Property: 918 claims (1½ acres each) near Tarkwa, Wassau, Gold Coast Colony, West Africa.

Development: by 3,200' shaft. Reserves are given as 429,381 tons of 0.20 gold ore.

Equipment: 25 stamps, tube-mills, and cyanide plant of 12,000-ton monthly capacity.

Production: in 1916 was 117,885 tons yielding £231,000. Costs are about \$50 per ton.

BOSSO GOLD MINING CO., LTD.

WEST AFRICA

Office: 460 Salisbury House, London, E. C., England.

Directors: D. H. Bayldon, M. Attenborough, T. F. Dalglish, F. H. Jamilton and Sir J. S. Hay; E. W. Spencer, supt.

Inc. June 18, 1901, in England. **Cap.**, £400,000; shares £1 par; all issued. Statement for year ending June 30, 1916, showed a profit of £25,024.

Dividend absorbed £20,000. Adding previous balance, there was carried forward £35,646.

Dividends: since 1905 total 65%, 5% being paid in 1916.

Property: in the Wassau district, Gold Coast Colony, West Africa. Reserves are estimated at 237,280 tons, worth \$7.80 per ton.

Equipment: complete for mining, also 50 stamps, tube mill, grinding mills and cyanide plant.

Production: during the last financial year was £179,459 from 113,300 tons. Costs were \$6.14 per ton.

SHANTI GOLDFIELDS CORPORATION, LTD. WEST AFRICA

Office: H. Morgan, sec., 6 Southhampton St., Holborn, London, E. C., England.

Directors: Earl of Bessborough (chairman), J. Colman, G. L. Johnston and C. W. Mann. J. S. Watkins, mgr.; W. R. Feldtmann, cons. engr.

Inc. May 25, 1897, in England. **Cap.**, £250,000; shares 4s par; 1,103,057 shares.

Statement for year ended June 30, 1916, shows a profit of £173,281, of which £154,428 was paid in dividends; £89,052 was carried forward. Reserve fund stands at £117,375.

Dividends: since 1900 total 752%, 50% being paid in 1916.

Property: 100 sq. miles at Obuasi, in Gold Coast Colony, West Africa. Mine is the largest producer in the region.

Geology: the Obuasi shoot occurs in disturbed ground, close to the intersection of two fissure planes. The normal fissure filling or vein formation is a brecciated graphitic schist, in places very friable. The main vein is a solid quartz body 1,000' long on some levels, and from 3 to 40' wide. The ore, owing to parallel streaks of graphite, has a banded structure. Some gold is free, the remainder being in pyrite and other sulphides. The Ayeinm shoot, in the same main fissure, is pear-shaped in horizontal section, being 700' long and from 4 to 60' wide. Gold content in both shoots is erratic.

Development: by shafts to 2,000' depth. Mining is rendered difficult by the weakness of the containing formation, the irregular and considerable width of the quartz, the flat pitch of the shoot and the graphitic selvedge on the footwall. Reserves at Sept. 30, 1916, were 436,600 tons, assaying \$24.90 per ton. Ore extraction costs \$2 and development \$1.50 per ton. Methods are described by H. I. Johnston in the Mining Magazine of Sept., 1917.

Equipment: complete for mining, with 50 stamps, 7 ball mills, Edwards' roasting furnaces, fine grinding and cyanide plant of 15,000 tons monthly capacity.

Production: in 1916, 136,994 tons yielded £475,958 at a cost of 44s 7d (\$10.70) per ton, including development and depreciation. Total output to date amounts to several millions.

KONGO

TANGANYIKA CONCESSIONS, LTD.

KONGO

Office: Friars House, New Broad St., London, E. C., Eng. **Mine offices:** Kambove, Katanga, Belgian Congo, and Kansanshi, Northwestern Rhodesia.

Officers: Tyndale White, chairman; Robt. Williams, managing director; G. C. Hutchinson, Lord Arthur Butler, T. P. Heyvaert, Thos. Honey, Sheffield Neave, and C. F. Rossell, directors; L. Scotland, sec.; Robt. Williams & Co. mgrs. and engrs.

Inc. Jan. 20, 1899, in Great Britain. **Cap.**, £1,000,000. Original capitalization was £100,000, successively increased Dec. 1901, to £184,000, in 1902 to £194,000, in 1903 to £264,600, in April, 1905, to £450,000, in July, 1905, to £525,000, and in Nov., 1906, to present amount; shares £1 par; issued 980,098 to Dec. 31, 1916. Debentures £2,600,000 authorized, at 5%, in denominations of £8; outstanding 2,176,624 at Dec. 31, 1916. Col. Sir Howard Melliss, and Hon. Arthur Stanley, are trustees for the debenture holders. The debentures are redeemable at par Jan. 1, 1917, but owing to the war the Court granted until after it was over to pay interest, but coupons No. 16 to 19 have been paid.

The property of the company, Dec. 31, 1916, consisted of a 39.3% share interest in the Compagnie Union Minière du Haut-Katanga, amounting to 50,000 shares of £100 par and 48,000 dividend shares; 75% of the issued stock of the Rhodesia-Katanga Junction Railway & Mineral Co., Ltd., amounting to 500,750 ordinary £1 shares, 44,500 B 1s. shares, the Kansanshi copper mine having been sold to this company; 1,600 shares of £250 par in the Compagnie du Chemin de Fer du Katanga; £2,700,000 stock of Companhia do Caminho de Ferro de Benguela; 2,297 shares of £4 each of the Intertropical Anglo-Belgian Trading Co.; and £5,000 of the 3% debentures of the Rhodesia Railways, Ltd.

The Tanganyika Concessions, Ltd., has an arrangement with the Zambesia Exploring Co., Ltd., by which the latter is ready to finance the former until the company is independent. The Zambesia Co. has practically the same officers as the Tanganyika, and floated the latter, the former having a capitalization of £870,000, shares £1 par, with 686,963 shares issued, fully paid, and an authorized debenture issue of £250,000, secured by 100,000 shares of Tanganyika and £200,000 5% debentures of Benguela Railway Co. The Zambesia Exploring Co., Ltd., paid a 100% dividend Feb. 7, 1896, and for the year ending June 30, 1912, showed a profit of £134,468. The accounts for the year ending Sept. 30, 1912, submitted May, 1913, show a loss of £136,116, compared with loss of £226,787, for 15 months ending on like date 1911, both amounts being deducted for share premium account.

This company was formed to acquire from the British South Africa Co. a 2,000 sq. mile concession in Northern Rhodesia for a terminal and town site of the Cape to Cairo railway at the S. end of Lake Tanganyika; a 2-year exclusive right to prospect and locate for minerals in an area of 2,000 sq. miles N. of the Zambesi, and to locate 1,000 claims in British South African territory. For these concessions, the company gave £60,000 in fully paid shares, besides which the B. S. A. Co. retains a 35% interest in all mines. Having made important discoveries and located various mines in the borderland of the Belgian Congo, the Tanganyika sought and obtained another mineral concession, covering 60,000 sq. miles of the Belgian Congo region, known as the Katanga, and adjacent to the Rhodesian properties of the company. The

Special Committee of Katanga reserved 60% of the net profits, and received £30,000 in fully paid shares. An extension of this concession and an interest in the Benguella railway later increased to 90%, was acquired in July, 1902, for £10,000 in fully paid shares.

The mineral discoveries in the Belgian Congo cover a copper belt 200 miles long with over 100 known copper deposits; also a tin belt, 100 miles long, with workable deposits, also gold and iron mines and diamondiferous areas.

The Tanganyika Co. has sold its holdings to subsidiary companies controlled by it and thus becomes a parent holding company only. In the Belgian Congo, 72 large mining concessions were located, the company engineers estimating in 1908, that 5 of these claims showed 9,500,000 tons of 6.3 to 14% copper ore, most of which could be extracted by open cut; while on another group, the company estimated 1,500,000 tons of 13% copper tenor.

The copper interests of the Tanganyika Concessions, Ltd., consist of present almost exclusively of its holdings mentioned above in the Union Minière du Haut Katanga, (which see), and the Rhodesia-Katanga Junction Railway & Mineral Co., Ltd. (Kansanshi), and the Benguella Railway. The copper deposits and mines owned by the Union Minière were discovered by prospectors employed by Tanganyika Co., under terms of the concession from the Comité Special du Katanga. These deposits are scattered through a practically uninterrupted belt of country extending from the Rhodesian border in the S. E. corner of the Katanga region to the W. bank of the Lualaba river, a distance of 180 miles in a N. W. and W. direction. This copper belt is a region of rounded hills and steep sided valleys, 4,000 to 5,000' above sea level, the copper areas being bare, due to copper salts. The copper ores occur in sandstones and in schists, slates and limestone, the beds running W.-N. W. and dipping steeply. The ores are oxidized, malachite being the most abundant mineral associated with chrysocolla and azurite, while melaconite is found mixed with wad. The orebodies are lenses that vary from small deposits up to mammoth ones such as Kambove No. 2, said to be 3,000' long, 240 to 400' wide and to hold 10,000,000 tons of 15% copper ore to a depth of 100'.

The Star of the Congo mine, in the Belgian Congo, was the first to be reached by the railway extension from Broken Hill in Rhodesia and the first to be developed and worked. Development work at this mine comprises 20 shafts, a total of 1,250', about 3,000' of crosscutting and a main haulage tunnel open at each end, driven 1,500' through the deposit, at a depth of 80 to 90', or just above water level. This tunnel is equipped with rope haulage and a double track for ore trucks.

The deposit is being mined by opencuts, the ore after breaking, being milled down through winzes to the crosscuts below and hauled out through the main tunnel to the surface. The rich ore goes direct to the smelter, but the bulk is washed, sorted, and concentrated before it is sent to the furnace.

The Lubumbashi smelting works are 8 miles from the mine on the main railway line. The plant contains 5 water-jacket blast furnaces, smelting about 1,500 tons of copper ore monthly. Two more were ready by Aug., 1917.

Coke is now being regularly supplied at the rate of 1,500 tons a month from the Wankies coal mines in Rhodesia, a distance of 725 miles on the main railway. This coke costs about £6 per ton delivered at the smelter, the colliery's entire output being bought by the Union Minière up to the end of 1912. A battery of 22 coke ovens has been built at Lubumbashi works, which, at the end of 1913, will produce 1,200 tons of coke a month, costing about £4. The Wankies coal mines have contracted to supply the Union Minière with washed coal for 5 years at £6 6s. to £7 6s. a ton, with 2,000 tons

minimum and up to 5,000 tons a month. A second battery of 22 coke ovens is to be erected when the first is finished.

The Kambove mine is the largest and most important copper mine owned by the Union Minière. It is 100 miles N. W. of the Star of the Congo and is now reached by the railway and can ship its ores to the Lubumbashi smelter. A 2-compartment haulage tunnel has been driven from the surface through the deposit for 1,500', half through payable ore. The tunnel is equipped with rope haulage and a double track. There are 10 shafts from 100 to 50' deep to the level of this tunnel and 5 bore holes put down to about 100' below tunnel level with about 1,600' of crosscutting. Ore will be quarried and milled through the shafts, and hauled out through the tunnel. Management estimates 3,000,000 tons of 13.4% copper ore in sight above the tunnel level and a similar quantity of probable ore in the 100' below. The Kambove is situated 1,720 miles from the seaport of Beira, by rail, and is reported to be able to produce 500 tons of ore daily in 1913.

The Luiswichi and Luusha mines, 30 miles from the Star, have been developed recently and results being satisfactory, they will be equipped and worked, supplying ore to the Lubumbashi smelter.

On all the other deposits forming the copper belt varying amounts of prospecting and development work have formed the basis of estimates, some of which are as high as 300,000,000 tons of copper ore in sight over the whole copper belt.

The Union Minière company estimates 40,000,000 tons of 8% ore above water level in all the Katanga mines.

The Bukama tin belt of the Union Minière is an area in the Katanga containing tin deposits on which development work was commenced in 1913. The belt is near Bukama, on the navigable Lualaba-Congo route from the West Coast, and 210 miles from Kambove, with which place it is being connected by rail, and should be working its valuable ores by the end of 1914.

The Kansanshi mine, transferred in 1909 to the company's subsidiary, the Rhodesia-Katanga Junction Railway & Mineral Co., Ltd., lies at an elevation of 5,000', about 12 miles S. of the Congo-Zambesia divide, which forms the boundary between Rhodesia and the Belgian Congo. This property shows extensive remains of ancient opencut workings, there being trenches and pits for a distance of 6,000', which form 6 chains or lines of workings, in which the pits vary from 1 to 30' in width, 5 to 30' in depth and 300 to 1,300' in length.

The Kansanshi copper deposits consist of beds, 1 to 10' thick, of sandstone impregnated with copper and resting on limestone and schist. The sandstone is micaceous and fissile in places and more or less charged with malachite particles and flakes, the upper beds carrying malachite and chrysocolla, with occasional occurrences of azurite and melaconite, and some cuprite, with silicious gangue, and some manganese dioxide in the superficial portions. The gangue carries a little limonite, usually ochrous. Surface ores are said by John R. Farrell to show no evidence of having resulted from alteration of sulphides in place, the facts leading him to the opinion that the malachite was deposited from hot solutions, coursing in fissures. The ore is highly silicious.

The main ore bed, known as D reef, averages 8 to 10' thick, with 5 to 10' of sandstone impregnated with malachite on each wall of the vein; the ore as mined is said to average 18.7% copper with \$2 gold per long ton. Sulphide ores, with hornite and chalcopyrite associated with pyrite, show in the deeper workings, but the depth of the oxidized zone has not as yet been determined.

Development in the mine has been limited to the old open cuts, no beds 1 to 10'

thick. The main shaft, 300' depth, is on D reef, which averages 8 to 10' wide and has been opened for a distance of 1,000', on the 85' level, and a second level, at 134'. The E reef, of 2 to 3' width, and another reef of about 4' width, have been opened for nearly 500' on the 85' level. An 8' vein with limestone walls is reported to average 10.5% copper on the 200' level.

The Kansanshi mine produced up to May, 1913, 2,500 tons, or 5,600,000 lbs. of copper, smelted in a small blast furnace made at the mine and using charcoal as fuel. Transport of this cost about £6 per ton from Kausanshi to Baya, on the railroad.

The mine is being developed and a concentrating plant as well as extensive pumping machinery were installed in 1913. The property is 80 miles from the main railway and both ore and supplies are transported by traction engines.

The company's success in opening up a vast territory in Central Africa, building railways and developing great mining interests, has been largely due to its energetic managing director, whose unbounded optimism has carried the company over difficulties that would have swamped a more conservative management. The company has, however, paid a good price for these services, the contract, 1905-11, securing Mr. Williams 10% of the net profits of the company's assets representing profits. The financial part of the company's affairs have also been much criticized on the ground of excessive royalties exacted, amounting to 60% of the net output of the Belgian properties, while only 65% interest is owned by the company in the Rhodesian properties it has spent so much money in developing.

The company's subsidiaries are now producing at the rate of over 60,000,000 lbs. of copper yearly, at a reported cost of £28 per metric ton, at the works, or about 6.2c per lb., but it will be many years yet before the world will be flooded with the copper produced in Central Africa, as was feared when the company was first formed. While the early statements issued greatly exaggerated the present conditions, and the results of 13 years' work and the expenditure of \$33,000,000 have not yet brought the company to a dividend-paying stage, it has demonstrated the worth of the properties. Great credit must be given Mr. Williams for his energy and perseverance in bringing this great enterprise to its present condition. The company has heretofore given out little real information, especially about its financial affairs, but the tide having turned and the enterprise being now fairly under way, fuller reports will doubtless be given. The company still has the problem of treatment of the great silicious copper deposits to solve and the Benguela railroad to build, but these problems are not unsurmountable if money is available. Owing to the war, work on the railroad was suspended at kilometer 520 in 1915.

The remarkable development that has taken place in the Katanga copper country can be realized more fully perhaps when it is remembered that the European population at the Star and Elisabethville numbered 2 in 1907 and now number nearly 2,000, according to official returns from the Belgian Colonial office.

UNION MINIERE DU HAUT KATANGA

KONGO

Offices: 3 Rue de La Chancellerie, Brussels, Belgium. Works at Elizabethville, Katanga, Belgian Congo.

Directors: Jean Jadot, chairman; Robt. Willams, vice-chairman; Baron de Selys Longchamps, director; H. Buttgenbach; E. Francqui, J. Cornet, Lord Alton of Liverpool, White, Sheffield Neave and C. F. Rowsell, directors;

Registered in Congo Free State. Cap., £400,000; shares £4 par; £200,000 paid up by issue of 25,000 new shares, fully paid.

There are also 125,000 dividend shares without par value. **Debentures:** £800,000 authorized, at 4½%; issued £600,000. Company is controlled, through half ownership each by Tanganyika Concessions, Ltd. and Société Générale de Belgique. Annual meeting, second Monday in July.

Property: company has a mining concession covering a copper belt of about 200 miles long, containing upwards of 100 copper outcrops; and a tin belt nearly 100 miles long. Both concessions are situated in the southern part of Katanga, north of Rhodesia, a rolling country with a healthy climate. Company also owns valuable water power rights and other mineral rights.

Development: at the end of 1917 five mines will be in operation, namely, the Star, Kambove, Luushia, Likasi and Chituru. Most of the smelting ore will be supplied by the Kambove at the rate of 25,000 tons per month. This mine will be worked as an open cut by steam shovels.

The probable quantity of ore above water level in all the Katanga mines has been estimated at 40,000,000 tons, averaging 8% copper.

Geology: the formation consists of beds of sandstone carrying malachite in the laminations and also impregnated with that mineral. These sandstones overlie and underlie quartzite containing nodules of malachite in irregular quantities, but sufficient to make this rock pay ore in a great many cases.

Equipment: includes 7 blast-furnaces of an average charge capacity of 300 tons.

Production: from 1911 to 1915, the copper output has been 35,800 metric tons; in 1916, 22,165 tons; and estimated for 1917 is 30,000 tons or 66,120,000 lbs. The ore smelted contains about 15% copper and the black copper produced carries 96% metal. Costs at the works amount to about £28 per metric ton, or say 6.2c per lb. The June, 1917, copper output was 5,246,948 lbs.; and for 10 months, 55,549,120 lbs.

The company's consulting engineer, Archer E. Wheeler, has been for over two years studying the treatment of the lower grade 7% silicious ores and a plant to utilize the water power and produce 50,000 tons of electrolytic copper per annum is now under consideration.

PORTUGUESE EAST AFRICA

MOZAMBIQUE CO. (COMPANHIA DE MOCAMBIQUE).

PORTUGUESE EAST AFRICA

S. H. Sharpe, act. sec., Thames House, Queen St. Place, London, E. C. England. **Head Office:** 10 Largo da Biblioteca, Publica, Lisbon, Portugal.

Inc. March 8, 1888, given royal charter Feb. 11, 1891, and reconstituted May 5, 1892. **Cap.,** £1,500,000; shares £1 par; issued and paid, £1,222,221. Paid a 5% dividend in 1911.

Company practically owns and exercises governmental functions over the whole of the land, mines and produce of 60,000 square miles in the central and richest part of Portuguese East Africa, adjoining Rhodesia. The Manicaland goldfield, or mining district, covers the main mineralized portions of the territory and lies within a radius of 16 miles about Macequece, the district being a part of the Umtali field of Rhodesia. It shows a belt of schists bounded north and south by granite with irregular intrusions of diorite largely altered to serpentine and traversed longitudinally by ledges of ferruginous quartzite paralleling the gold quartz reef. Copper ore occurs and is worked by the South African Copper Trust in the Edmundian mine. (See descriptions under that title.)

The company offers prospectors a 12-months' license for £1, with the right to locate (peg off) 10 claims of 100 meters square, which must be registered and within 12 months thereafter opened by 66% of development work as a

group of 10 or less claims, or 6' 7" on each claim, or in lieu thereof pay 10s. (\$2.40) per claim for an inspection certificate good for 12 months. Claim rents, like those of the Transvaal and Rhodesia start the second year at 10s. (\$2.40) per claim and increase 50% each succeeding year. Royalties amount to 10% of the net profits, except for gold, for which a graduated scale from 1 to 4% is provided for production less than 800 oz. per month, and 10% for over that amount.

RHODESIA

ANTELOPE GOLD MINE (RHODESIA), LTD.

RHODESIA

Office: 8 Old Jewry, London, E. C.

Directors: J. C. Prinsep (chairman), F. Johnson, J. R. Mason, H. W. Morrison and H. L. Sapte. H. A. Piper, cons. engr.

Inc. Nov. 25, 1908, in England. Cap., £400,000; shares 5s. par; 1,893,128 issued. Profit in 1915 was £19,877. Investments at cost are valued at £106,990.

Property: 170 claims, 1½ acres each, 60 miles S. of Bulawayo, Rhodesia. Reserves were estimated in Sept., 1916, at 110,987 tons, assaying \$10.10 per ton.

Development: by vertical and incline shaft 1,400' deep. Equipment: complete for mining, also 150-ton plant using 2 Krupp ball mills, 4 Edwards' furnaces, tube mill, 12 pans, and 2 filter presses.

Production: in 1916, gold worth £91,710 was extracted from 45,927 tons. Costs were \$8.60 per ton.

BRITISH SOUTH AFRICA CO., THE

RHODESIA

Head Office: 2 London Wall Bldgs., London E. C. Eng. A. P. Millar, asst. sec. Administrator of Southern Rhodesia: Sir D. Chaplin, Salisbury. Administrator of Northern Rhodesia: L. A. Wallace, Livingstone. Res. mining eng.: A. H. Ackerman, Bulawayo.

Board of Directors: Rt. Hon. Sir E. Jameson, Bart., C. B., pres.; R. Maquire, Esq.; Hon. Sir L. Michell, C. V. O.; Sir H. Birchenough, K. M. C. G.; Marquess of Winchester; Otto Beit, Esq.; H. W. Fox, Esq., M. P.; Baron E. B. d'Erlanger; D. O. Malcolm, Esq.; Br.-Gen. E. Baring, C. V. O.; Duke of Aberdeen.

Inc. Oct. 29, 1889. In Oct., 1911, the British South Africa Company's Mines Development Co., Ltd., was formed in order to acquire, explore and develop properties in Rhodesia and other parts of So. Africa. Present authorized capital is £9,000,000 in 9,000,000 shares of £1 each, having been increased at intervals from £1,100,000 in 1890; 8,937,324 shares are issued and fully paid. Bonds, £1,250,000 5% mortgage debentures.

Lands: about 400,000 sq. miles. The company acquired: (a) from the Central Search Association, Ltd., the Rudd-Rhodes Concession, consisting of the mining rights over the territory of the King of Matebeleland; the Central Search Association being entitled to one-moiety of the net receipts, which right was subsequently merged in the United Concessions Co., Ltd., and capitalized in 1894 by the issue of 1,000,000 fully-paid shares of the company; (b) mining rights over the territory of the chiefs Khama and Gungunhana; (c) administrative power over the whole British sphere north of the Zambesi and west of Nyasaland; (d) rights of the African Lakes Co. (acquired in 1894); (e) also through the Victoria Falls Power Co., in which this company holds a large interest, the right to develop electrical energy at Victoria

... the name "Rhodesia" to describe all the territories under its administration; the portion south of the Zambesi being known as Southern Rhodesia. The company controls Bwana M'Kubwa and other African copper properties by ownership of a

large stock interest. Company is a gigantic corporation and is the owner of the mineral rights throughout the territory.

BWANA M'KUBWA COPPER MINING CO., LTD. RHODESIA

Office: T. Donald, 365 Salisbury House, London, E. C.

Directors: R. Littlejohn (chairman), E. H. Dunning, T. Huntington, A. Stewart, H. L. Stokes and C. H. Villiers.

Inc. March 16, 1910, in England. Cap., £ 600,000; shares 10s. par; 925,953 issued.

Property: 450 claims, 1½ acres each, containing the Bwana M'Kubwa mine, also other adjacent properties, 1,450 miles by rail from Beira, Portuguese East Africa, in Northern Rhodesia. Reserves are estimated at 23,000 tons of 10% copper ore, 3,000,000 tons of 4.5% and 1,200,000 tons of low-grade material. The war has interfered with work considerably. A 100-ton concentrator is working and a 100-ton leaching plant is to be erected.

CAM & MOTOR GOLD MINING CO., LTD. RHODESIA

Office: Palmerston House, London, E. C., Eng.

Officers: J. Weil, chairman; F. A. Govett, G. R. Lewis, I. Lewis, and S. Weil, directors. Robert Allen, gen. mgr.

Inc. Sept. 3, 1910, in England. Cap., £ 617,500; shares £1 par. Debentures: £ 50,000 in 1914, redeemable at par Dec. 23, 1919. Accounts for year ended June 30, 1916, shows a profit of £8,562.

Property: 286 claims, 1½ acres each, in the Hartley district of Southern Rhodesia. Ore reserves estimated at 577,281 tons, averaging \$9.76 per ton.

Equipment: complete with mill treating 15,000 tons per month.

Production: in 1916, was 162,922 tons yielding £ 219,374. Costs are \$6.25 per ton.

Is a good gold mine, but as the ore contains antimony and arsenic, treatment has been difficult.

FALCON MINES, LTD. RHODESIA

Office: Gold Fields Rhodesian Development Co., 8 Old Jewry, London, E. C., Eng.

Directors: Lieut. Col. F. Johnson, Chairman; J. Prinsep, vice-chairman, B. Vieira, W. F. Andrews, Maj. H. L. Sante, H. T. Brett, gen. mgr. Gold Field Rhodesian Development Co., cons. engr.

Inc. Feb. 26, 1910. Cap., £ 600,000; shares £1 par; 400,000 shares issued and fully paid. Cap. originally £ 400,000, increased Aug., 1912, to provide for bond redemption. Bonds £ 300,000 authorized, 6%, £ 217,341 outstanding.

Accounts, June 30, 1916, showed operating expenses £ 335,133; operating profit, £ 195,688; loans, £ 119,975; receipts from ore sales, £ 530,826.

Property: acquired from the Falcon (Rhodesia) Development Co., Ltd., by Rhodesia Cons., Ltd. In Jan., 1911, the Athens mine was acquired. The mining property comprises 380 claims, 578 acres, farm lands near the Falcon mine, 500 acres adjoining the mine and 19 acres for machinery and water sites.

The orebodies are large, increasing from 17' in width on the 3rd. level to 57' on the 9th. level. Values also increase from 2.45% copper and \$3.68 gold per ton on the 3rd to 21% copper and 6 dwt. gold on the 9th level. The shaft is being sunk to the 11th level, 1917. Report for year ending June 30, 1916, shows ore reserves, 742,228 tons sulphide ore and 119,838 tons oxidized ore.

Equipment: crushing plant, equipped with 3 jaw breakers and 4 trammels, separating the fine and coarse ores; sorted ore of 5% copper content and 9% of total output is sent to furnaces. The mill, installed in 1915, has 86 Nissen stamps, tube mills, Dorr thickeners, vanners and a 9-compartment Mineral Separation flotation plant.

The smelter equipment includes 12 hemispherical blast roasting pots, two blast furnaces, each of 300 ton daily capacity, two 12,500 cu. ft. turbo blowers,

electric crane and 12 converters of 15 ton copper capacity. Copper is cast into bars of 360 lbs. containing 10 oz. gold and 20 oz. silver. The plan of treatment is similar to that of the standard plants in the United States. About 20,000 tons of ore treated per month.

See article "Ore Treatment at Falcon Mine," by H. R. Adams, So. African Mng. Journ., Dec. 30, 1916, p. 421.

Production: during fiscal year, ending June 30, 1916, 160,837 tons of sulphide ore and 57,955 tons of oxidized ore was treated, yielding 3,477 tons of blister copper, which contained 3,411 tons copper, 38,569 oz. gold and 73,862 oz. silver. The working cost amounted to 30s.7d. per ton and the price received for blister copper was 48s. 6d.

GLOBE AND PHOENIX GOLD MINING CO., LTD. RHODESIA

Office: T. Priest, sec., 35 Old Jewry, London, E. C.

Directors: Earl Russell (chairman), J. D. Hope, J. E. Howard, F. A. Macquisten and H. Miller. T. Haddon, gen. mgr.

Inc. Oct. 18, 1895, in England. **Cap.**, £200,000; shares 5s. par; all issued.

Profit in 1915 was £181,492, £80,000 being paid in dividends. **Reserves** are: general, £76,312; gold, £26,175; and litigation, £102,000. The last mentioned was for the long suit with Amalgamated Properties of Rhodesia, which company sued the Globe & Phoenix for wrongful extraction of ore, but lost. The action cost £100,000. The 1916 profit was £250,000.

Dividends: total 1017%, 80% being paid in 1916.

Property: the largest gold producer in Rhodesia, 140 miles N. of Bulawayo.

Development: by incline shafts, 3,149' deep. Reserves early in 1915 were 189,200 tons, assaying \$29.40 per ton.

Equipment: complete, with 40-stamp mill, roasting and cyaniding plant.

Production: in 1916 was 102,473 oz. gold from 77,464 tons.

Warriner, cons. eng.; A. J. Brett, gen. mgr.; W. J. Pitchford and T. Simpson, joint mine mgrs.; and S. H. Pearce, reduction officer.

Inc. March 31, 1892, in England. **Cap.**, £1,000,000; shares 10s. par; 1,880,000 issued.

Debentures: £1,000,000, 5% first mortgage authorized, £744,300 issued.

Profit in 1915 was £1,099,196, of which £611,069 was paid in dividends. Cash assets totaled £173,952.

Dividends: totaled 727% from 1898 to 1910; 120% in 1910; 110% in 1911, 1912 and 1913; 85% in 1914; 65% in 1915; 50% in 1916.

Property: 2,322 claims, 1½ acres each, in the Rand, Transvaal.

Development: by 13 shafts. Ore is hoisted through No. 5 and 7, which are connected by two main haulage levels.

Ore reserves: estimated at 9,938,000 tons, averaging \$6.25 gold per ton.

Equipment: immense mining and reduction plants, including 835 stamps, 26 tube-mills, sand and slime plants, capable of treating 240,000 tons per month.

Production: in 1916 was 2,666,000 tons, yielding gold worth £2,887,777, of which £815,620 was profit. Costs total, \$4 per ton.

EAST RAND PROPRIETARY MINES, LTD. TRANSVAAL

Head office: Farrar Bldg., Johannesburg, Transvaal.

Directors: E. A. Wallers, chairman, J. P. Farrar, J. Friedlander, A. G. Gill, J. H. Jourdan, F. Raleigh, E. J. Renaud, F. G. C. E. Robellaz and H. R. Skinner. E. C. J. Meyer, gen. mgr.; W. T. Anderson, supt. engr.

Inc. May 6, 1893, in the Transvaal. **Cap.**, £2,514,000; shares £1 par, 2,445,897 issued.

Debentures: £1,500,000 authorized; £999,430 outstanding.

Company controls large interests in the Angelo, Cason, Cinderella, Drielenstein Cons., New Blue Sky and New Comet companies, operating on the Rand.

During 1915 a net profit of £514,940 was made. Dividends absorbed £275,163; taxes and war levy, £66,198; debentures purchased, £108,760; carried forward £193,354.

Dividends: since 1903 total 350%; but from 1913 to 1916 they have dwindled from 25 to 5%.

Property: 4,515 claims, 1½ acres each, on the Rand, Transvaal.

Development: by numerous shafts and extensive workings. Reserves early in 1916 were estimated at 4,800,000 tons of \$6.40 and 9,800,000 tons of \$4.40 ore.

Equipment: full complement for mining; and 820 stamps, 26 tube-mills and cyanide plants.

Production: in 1916, 1,936,326 tons yielded £2,365,107. During the second quarter of 1917, 462,500 tons gave an average of \$5.15 per ton.

In August a profit of only £100 was made and in September a loss of £3,606, due to the native labor situation on the Rand.

In 1914 the directors considered that 20 years' profitable work was ahead of the company. Like several other great consolidations on the Rand predicted estimates have not been realized for long; however, this is one of the world's greatest producers.

Balance sheet for year ended June 30, 1916, showed income from copper sales, £559,202, with £255,433 profit. Dividends absorbed £72,715; income and profit tax in Africa, £42,600, and excess profits duty reserve in England, £140,000.

Dividends: in 1915-16 were equal to 40%.

Property: about 22,000 acres; also coal and lime claims in the Zoutpansberg district of the Transvaal. Ore contains chalcocite, bornite and some chalcopyrite occurring in granite.

Development: by shafts, 1,033' and 1,742' deep.

Ore reserves: at middle of 1916 were estimated at 208,061 tons of 4.74% copper ore to No. 11 level.

Equipment: sufficient for several hundred tons daily output, including 250-ton mill and 2 reverberatory furnaces.

Production: in 1915-16 was 111,909 tons of ore milled with copper output of 12,840,000 pounds.

NEW MODDERFONTEIN GOLD MINING CO., LTD. TRANSVAAL

Head office: Corner House, Johannesburg, Transvaal. **London office:** A. Moir, 1 London Wall Bldg., London, England.

Officers: E. A. Wallers, chairman; R. W. Schumacher, W. H. Dawe, C. S. Goldman, S. C. Black, J. G. Currey, W. T. Graham, directors; Rand Mines, Ltd., secretaries; E. M. Sharp, mgr.; H. S. Martin, cons. engr.

Inc. June 1, 1895, in Transvaal. **Cap.**, £1,400,000; shares £4 par; all issued and paid up.

Accounts for year ended June 30, 1916, disclose a profit of £768,235, of which £455,000 was paid in dividends. Net cash assets totaled £108,135.

Dividends: 70% from 1906 to 1911; 25% in 1912; 30% in 1913; 30% in 1914; 31¼% in 1915; 32½% in 1916; 32½% in 1917.

Property: 173 claims, 1½ acres each; also prospecting rights, etc., on the Rand. Mine considered one of the best in the world, considering past production, present profits and future possibilities.

Development: by shafts to 2,258'. Ore reserves 1,000,000 tons, assaying \$8.40 gold per ton.

Equipment: includes 180 stamps, 7 tube mills and other machinery capable of treating 54,000 tons per month.

Production: in last financial year, £1,296,049 worth of gold, with a profit of £749,117. Costs total \$4.14 per ton.

RAND MINES, LTD.

Office: A. Moir, 1 London Wall Bldgs., London, England.

Directors: E. A. Wallers (chairman), F. G. J. Phillips, Sir L. Phillips, E. J. Renaud, F. G. C. E. Robellaz, T. Mellor, cons. geologist.

Inc. Feb. 22, 1913, in the Transvaal. **Cap.**, £1,250,000; 2,125,995 issued.

n 1915, from dividends in other companies, was £868,539, of was distributed.

: 2,690% since 1898, 150% being paid in 1916.

is mainly a holding concern, but owns 1,252 claims with s and derives its income from the following producers, with lds:

Inc. May 19, 1908, in the Transvaal. **Cap.**, £180,000; shares 1s par; all issued.

Statement for year ended June 30, 1916, shows that out of a revenue of £117,252, £25,397 was profit. Dividends paid totaled £18,000.

Dividends: has paid total 104½% since 1910.

Property: tin claims in the Rustenburg district, Transvaal.

Development: by main shaft 243' deep. New openings in 1916 were 11,896', costing \$7.46 per ton; also 11,355' of surface prospecting. Reserves are estimated at 28,659 tons of 3.1% metallic tin.

Equipment: 10 stamps, tube mill and concentrators.

Production:

	Ore Treated, Tons	Tin, Per Cent Metal	Extraction, Per Cent	Metal Pro- duced, Tons	Cost per Ton
1915-16	36,460	3.02 *	77.95	707	\$12.10
1914-15	37,263	2.82	78.27	731	10.21
1913-14	40,643	3.18	78.81	887	11.16
1912-13	35,917	3.56	72.85	832	11.02

For the first half of 1917 there was treated 19,859 tons of ore, yielding 470 tons of 67% metallic tin concentrate and a profit of £17,755.

On a small capital this company is doing well and tin is likely to maintain a good price for many years to come.

ASIA

ASIA CHINA

WANG CHANG MINING & SMELTING CO., LTD. **CHINA**
Head office: Changsha, China. **Other offices:** 51 Kiangse Road, Shang-
Woolworth Bldg., New York; H. M. Newhall & Co., Newhall
Francisco, and H. E. M. Bourke, 21 Great Winchester Street,
London, Eng.

Directors: Y. H. Wang, pres.; H. Y. Liang, v. p. and chief engr.;
W. C. P. and New York mgr.; M. C. Wang, v. p.; N. F. Chu, v. p.
S. L. Tang, supt. and asst. treas.; K. K. Chang, sec.; T. W.
T. sec.; D. C. Chow, Shanghai mgr.

Directors: Y. G. Chow, M. H. Li and C. F. Tsai.

Directors: H. L. Shuan (chairman), H. Q. Liang, Q. Yang, C. T.
W. Tang, P. Q. Yuen, H. K. Liang, L. C. Tsow and F. C. Chow.
Shuan (chairman) was ex-Premier of China during the time of
Yuan Shi Kai. He is wealthy, and owns a large porcelain factory
and lands in the Hunan province. Mr. Chu (v. p.) is a partner
in the firm of Chu, Yin Koo Tang, the largest tea merchants in China,
controlling practically the major part of the tea business in the north, east
and south provinces.

Chow controls about 120 salt firms, extending over practically the
whole of China, and enjoys a high reputation all over the country. He
is the largest shareholder in the company. Mr. Tang is the brother of
the former Governor of Hunan province, and is a large land-owner.

Yuen is the son of the former Viceroy of Canton, and is a large
landowner in Kiangse province.

History: The Wah Chang company was formed in 1898, under the
name of Kiu-Tung Antimony Mining Co., which was the first antimony
mining company in China. In 1908 it was reorganized, and obtained a
patent for its antimony smelting process from the Chinese Government.
In addition to this the company obtained a monopoly of the smelting of
antimony in the province of Hunan, to extend over a period of 10 years
from 1908. It has since been extended for a period of 25 years. Under
this monopoly, no company has the right to erect works in the province,
unless the consent of the Wah Chang company is obtained. The patent
granted extends over the whole of China. No figures are available, but
it is assured that the finances of the company are very strong.

The main office is situated at Changsha, next to the antimony works.
The works extend over a large area, and includes in addition, a lead plant,
coking houses, etc.

Property: the company owns the following:

Antimony mines: (1) the Yi-Yang mines, a good property with modern
mining equipment. A light 25-mile railway will shortly be built to connect
the mine with the river; (2) the An-Hua mines; and (3) the Lu-Lin mines.

Tin mines: the An-Yuen and Poo-Sha tin mines.

Tungsten mines: the Yao Kan Sian and Ton An tungsten mines.

Each mine is controlled by a subsidiary of the Wah Chang company.

Lead mines: the Tien For Tai lead mines.

Equipment: complete, with 210 stamps, tube-mills and cyanide plants.
Production:

INDIA

Office: F. H. Williams, sec., 5 Queen St. Place, London, E. C., England.

Directors: M. Low, chairman; Sir D. Robertson, Sir J. D. Rees, E. Taylor and J. Taylor. H. M. Cooke, supt.; John Taylor & Sons, mgr.

Inc. Oct. 25, 1880, in England. **Cap.**, £410,000; in 240,000 pfd. and 580,000 ord. 10s. shares.

Profit in 1915 was £174,831, of which £138,270 was paid in dividends.

Dividends: on previous capital 87s. on pfd. and 63s. 9d. on ord. shares, and on present capital 55s. 3d. on pfd., and 40s. 3d. on ord. shares.

Property: 931 acres at Kolar, State of Mysore, India.

Development: by vertical shafts, a 4,000' circular shaft being sunk. Reserves amounted to 367,625 tons in 1915.

Equipment: complete with 120-stamp mill and cyanide plant.

Production:

	Ore (Tons)	Gold Yield (Oz.)
1916.....	155,317	90,619
1915.....	153,206	86,643

Costs were \$6 per ton in 1915.

This company completes the important group in the Kolar field. It is supplied with hydro-electric power, generated 91 miles away and sold to the Mysore Government. In case of breakdown an auxiliary steam plant is available at the mines.

JAPAN

FUJITA COMPANY (GOMEI KUMAGATAI)

Office: 20 Dojima-Kitamachi, shiro-cho, Kyobashi-ku, Tokio.

Hokumonkogai, Daitotei, Taipei.

Officers: Baron Heitaro Fujita, Fujita, directors; Nakasuke Sata,

iki, Otojiro Sasano, Kennosuke Tsujimoto, mgrs.; Seiichi Ya- and smel. supt. was formed at Osaka in 1869 by the late Baron Denzaburo Fu- the present president.

ceased later to present figure of 6,000,000 yen, though the capital eration amounts to more than 50,000,000 yen.

pany is also extensively engaged in forestry (Nam Heng rub- Kota Tinggi, Johore State, Malay Peninsula, 6,000 acres; Hok- n northern island of Japan, 180,000 acres; Yawataya sawmill in kisawa sawmill near Kosaka mine, etc.), and agriculture (er- rk at Kojima bay, near Okayama, Japan).

s the most important branch, first begun in 1880. When me- was started in Japan, the Fujita Company was among the first ctive interest in it, and the company led the way in adopting the nces then used in Europe and America. The total number of ns and that of the mines possessed by the company, in Japan, Formosa, are 163 and 37, respectively. Some of them are being hile 25 are being successfully worked. The total value of the ducts of the company for 1916 amounted to 10,500,000 yen, including:

d, ounces	27,000
er, ounces	1,169,000
pper, pounds	22,640,000
id, pounds	764,000
ic, pounds	672,000
her ores, tons	7,063,000

ver, the company produces about 30% of the total yield of Japan; , about 17%; and gold, 13%. The company employs 12,872 mine . of whom 3,993 were underground and 8,167 on surface.

ka Mine: situated at Kosaka-machi, Kazunogun, Rikuchu, in the northern part of Hondo, the main island of Japan. The mine is miles from the Government railway. It was worked until 1897 as mine, passing in 1881 to the present ownership. The Kosaka em- 500 hands in 1916.

logy: country rock is brecciated porphyry tuff, ranging from a fine erate to a coarse grit, of tertiary age, with a covering of volcanic with intrusions of liparite and andesite. The orebodies constitute a mple of metasomatic replacement occurring along the contact zone a the tuff or liparite and andesite, and is surrounded by the clay with nation of pyrite, but are shading imperceptibly into the liparite. There of these orebodies, of immense size, ranging from 20 to 270' thick, oved for a length of a half-mile, while drills have shown the forma- continue to a depth of 1,700'. The area of deposit so far explored 0' long, 800' wide; and 500' deep. There are three kinds of ores: a ex sulphide, pyrite both compact and loose, and silicious. They carry urite.

re: all ores are more or less argentiferous, and the product is divided 3 grades. The first grade is the complex sulphide, averaging 2.43% e 2.28% lead, 9.80% zinc, and 15.64% iron, with 7 oz. silver per ton, rem a trace of gold per ton, the gangue carrying 40 to 45% barium . The second, or the second grade averages 2.34% copper, 0.47% . The silicious ore, the third, averages iron.

. The slicing and fill- specifically abandoned in

1908 for open-cut workings, similar to those of the Utah Copper Co. From 1,000 to 1,800 cu. yd. of overburden is removed daily, the entire overburden being estimated at about 4,000,000 cu. yd. Stripping is partly by hand labor and partly with drills, and with electric trolleys to remove waste.

The open pit is of funnel shape, about 1,000'x2,000' in size, with the sides terraced. Owing to extraction of ore by tunnel and open-out workings only about 500 h. p. is required at the mine.

Equipment: includes two 8-drill Leyner air compressors and one 12-drill compressor, and an electric pump on the 500' level.

The smelter, $1\frac{1}{4}$ miles from the mine, with electric rail connection, is of about 1,000 ton daily capacity. There are 6 pot roasters, 3 Brück-Kretschel briquetting machines, and several stamps used for briquetting fine ores. The percentage of fines is 35% of the raw ore. There are 10 open top water jacket blast furnaces, 7 of which are 24' long, and 4' wide at tuyere level; the others are smaller. One 15' furnace is used for matte concentration. Semi-pyritic smelting is employed, coke charged from the furnace top is about 1.5%, and powdered coal inserted through the tuyeres about 3% of the crude ore. The blast pressure is about 1 lb. About 25% limestone and 10% slag and matte to raw ore are used as fluxes. The average of all ores is only 2.5% copper, with small gold and silver contents. The grade of the first matte is 35%, and the second, 45%.

The converter plant has 2 stands, with 8 shells. There are 2 Brown-Boverie-Rateau blowers, a complete lining department, and 140-ton electric crane. Blister copper from the converter is refined electrolytically, the product being 99.95% copper. The slime from the electrolytic tanks is treated in two cupel furnaces. The monthly capacity of the electrolytic plant is 1,200 tons.

The electrolytic zinc refinery at the Kosaka mine was installed in 1915. There are 4 Herreshoff calcining furnaces, which were used before the matte calcining, one muffle furnace, and 5 Ding's magnetic separators. The daily production of electrolytic spelter is about one ton.

Power is all electric, the Kosaka installations aggregated 3,550 k.w. a.c. and also 220 k.w. d.c. for the mine, smelter, shops, and rail lines. It is generated by 4 water plants on the river Oyu, near the mine, also by a locomobile steam plant.

The Kosaka mine operates an electric trolley, with 9 miles of main line and branch lines, equipped with 35 locomotives and 400 three-ton ore cars. The lines reach all principal points at the mine, smelter, and shops, and connect with the Kosaka railway at the Kosaka depot. The Kosaka railway, which is 15 miles between Kosaka and Odate, connects with the Government railway at Odate.

Production: the annual output of the Kosaka has been as follows: 11,853 long tons of copper, 335 tons of lead, 1,017,200 oz. of silver, 26,667 oz. of gold, and 282 tons of zinc.

The Tokito dressing plant is 2 miles from the smelter, with aerial tram connection. Mixed ores from the branch mines of the Kosaka mine are dressed, the capacity being 100 tons per day.

Hanaoka Mine: in Kita-akita-gun, Akita Prefecture, Japan, owned by the Fujita Co. since 1915.

Ore: the deposit is massive and worked by filling methods. The ore contains chiefly copper and iron pyrites, galena, zinc blende, and gypsum. After hand picking, it is transported to the Kosaka smelter, 18 miles away.

Production: in 1916 was 62,335 tons, which contained 0.00006% gold, 0.003% silver, and 2.08% copper.

Omori Mine: situated in a mountainous region in the province of Iwami (Omori-machi, Nima-gun, Shimane-ken), in the northwest of

the coast of the Japan Sea. This mine is said to have been opened 600 years ago, and reopened in 1525. The mine once was worked, but was closed in 1872 by an earthquake and reopened by the present company, which, after spending considerable capital, has equipped the mine with a modern plant.

The district is composed of Tertiary tuffs and sandstone, including a great mass of andesite containing ore. There are five veins which have been produced by the fillings of the fissures with mineral matter. The dip of veins varies from 80° to 70° N., with from 10° to 20° E. Ore exists in bands in the veins, its average width being from 1 to 6 feet. Some of the veins are 2,000' long, composed of chalcopryrite, galena and zinc blende, containing gold and silver. The veins—Sato, Honnakase, Nakase, Sanjio and Umabiki—are being worked. The ore contains 0.0014% gold, 0.056% silver and 0.8% lead.

The veins are worked by stoping, and material is raised by adits and shafts. The ore, after being cobbled and picked, is crushed by breakers, rolls, trommels, jiggers, etc. The material, with the requisite quantity of limestone and coke, is smelted in a rotary circular jacketed furnace. The matte formed from this smelting is once more smelted, forming blister copper (98% Cu), containing 77.0% silver, and lead. This last operation is carried out by the Japanese Mabuki process.

The output was 1,041,933 lbs. of blister copper in 1914; 1,015,915, and 1,002,590 lbs. in 1915 and 1916. All blister copper from this district is sent to the Kosaka electrolytic refinery.

Mine: about 17 miles W. of Kurosawajiri station on the Government railway, to which a tramway has been constructed from the mine. It is situated at Yuda-mura, Waga-gun, Iwateken (east district of Iwate). It is also the Kosaka mine. It was opened 33 years ago, and is now under the present ownership.

The country rocks are granite, tuff, and liparite of Tertiary age. The country rocks, especially tuff, many veins in various widths from 1 to 6 feet, running nearly parallel in the strike of N. 35° to 60° E. and dipping at 60° to 70° . A few veins dip at the same angle as the former, but in the opposite direction. The gangue is principally quartz, and the principal minerals are chalcopryrite and iron pyrite, also some oxides of copper. The mine W. from the Ōarasawa mine is the Unekura mine. This is the Ōarasawa at present. The district consists mainly of liparite of Tertiary age, and fissure veins are found in liparite and tuff. The veins are classified into two general groups; the strike of one is N. 25° to 35° E. The minerals contained in the ore are chalcopryrite and iron pyrite; the gangue is quartz.

The veins of Ōarasawa and Unekura are worked by stoping, and the material is removed by adits and shafts. The material is mechanically dressed to 7.5% grade.

The output is about 151,000 long tons of dressed ore yearly, plus 1,000 long tons of undressed ore. The blast furnace process is generally similar to that at the Ōarasawa. Annual production of blister copper (anode) contains 0.0005% gold, 0.05% silver, is 1,650 long tons, which is transported to the Kosaka refinery. About 1,000 men are employed, including 500 at the mine.

Mine: situated at Yamada-mura, Okachi-gun, Akita-Ken, about 15 miles W. from Yuzawa station on the Government railway, to which a railway has been laid from the mine. The mine was worked

in the eighteenth century by Shinen Sato, a famous economist, miner and metallurgist, to whom modern mining in Japan is greatly indebted. Since the end of 1906 the present company has operated the property.

Geology: country rocks are liparite and tuff of Tertiary age. Ore deposits consist of a network of veins in the upper part, but only a few veins in the lower part. The ore consists of chalcopyrite, galena, and zinc blende, gold, and silver; and assays 0.003% Au, 0.0085% Ag, and 0.95 % Cu. This is dressed to 0.006% Au, 0.015% Ag, and 2.3% Cu, and is transported by railway to Kosaka. Production was 15,000 tons of dressed ore in 1916.

Obiye Mine: near Okayama, Japan, was discovered a few hundred years ago, and was bought by the Fujita Co. at the end of 1913. It employs 500 men.

Geology: a paleozoic slate is intruded by an irregular "boss" of quartz porphyry, varying from 10' to 50' wide. Veins of chalcopyrite exist in the slate, enclosed by the quartz porphyry in such a manner that mining is carried on separately for each division, namely: Toba, Kurosaki, Kanasai, Saruhiki, Kinsei, Katsuragi, and Asahara, etc. The ores mined are hand picked into over 3.5% ore and 1.38% ore. Hand packing is done by women, whose wages are 27 sen. (13 cents) per day.

Production: Up to the end of 1908 smelting was carried on at this mine, but is now done in Inu island, 13 miles E. of the mine (see Inujima smeltery). The annual production was about 500,000 long tons of dressed copper ore containing 8.2% Cu and 0.003% Ag.

Zuiho Mine: Soon after Formosa came into the possession of Japan the Fujita Co. opened a gold mine in Zuiho, in 1895. The mine is 8 miles East of Keelung, in the northern end of the Island of Formosa, near the coast.

Geology: The mine and its vicinity consist of Tertiary formation, and site alternating with a bed of sedimentary rocks. In the former there are several thin streaks of coal embedded between layers of sandstone and bituminous shale. On the contact zone between the Tertiary and andesite are the gold veins, which are common here to both rocks. The ore is silicious, and contains a small quantity of pyrite and other sulphides. Some of the ore, being rather clayey is difficult to classify.

Production: since 1914 the mine has been under sub-contract of Yen Yün-nien. In 1916, with an average of 291 employees, production was 64,024 tons of ore, yielding 4,791 oz. gold (including alluvial gold), and 1,851 oz. silver.

Inushima Copper Smelter: These works are situated on island Inu at the mouth of Kojima bay of the Inland sea of Seto, that is 2.5 miles in circumference. This plant is one of the large copper smelters in Japan. Ore from the company's own mines—Obiye, Nachi, Seto, Omidani, Minaki, and several mines in Korea, etc.—cupriferous pyrite from Chugoko district and the Provinces of Kii and Awa, are also brought here by junks.

Semi-pyrite smelting is employed. The first matte from the blast furnace contains 11 to 12% Cu, so that it is to be smelted again into a second matte of about 30% Cu, which is converted by the Mabuki furnaces of 20 stands into a blister copper containing 98% Cu, 0.0095% Au, and 0.2687% Ag. The smelting capacity is about 7,000 tons of ore, and 280 tons of blister copper per month. About half the blister copper is transported to the Kosaka refinery as anode. Production in 1916 was 3,330 tons of blister. About 400 men are employed at present.

Hirota Steel and Ferro-Alloy Works: Situated near Aizu, in Fukushima Prefecture. Owing to the war, Japan has suffered from the lack of some materials imported from foreign countries in ordinary times, and all ferro-alloys are among them. The company taking advantage of this opportunity, secured

se alloys and special steels. The works are operated by hydro- and are now producing ferro-silicon, ferro-manganese, ferro-tungsten, ferro-molybdenum, ferro-titanium, ferro-vanadium, every description, and special kinds of high-speed steel, etc. The products are used in Japan by the navy and army arsenals, engineering works, while some alloys are exported to Russian countries.

above, the following mines are important producers:

Annual Output Long Tons	Ore	Average Content			
		Copper, Per Cent	Silver, Per Cent	Zinc, Per Cent	Lead, Per Cent
18,000	Copper	4.2	0.0013		
12,000	Silver	0.065		
3,200	Copper	3.4	0.00005		
9,000	"	2.3			
2,000	"	5.72	0.00115

1,900	Copper	6.5			

MINING & SMELTING CO., LTD. JAPAN

Company, with capital of Y30,000,000 (\$15,000,000) to operate from the mining and smelting department of the Fujita Company (Kwaisha Fujitagume), which see.

GOMEI KAISHA (FURUKAWA & CO.) JAPAN

Baron Toranosuke Furukawa, pres.; Rokusaburo Kondo, Masayuki Otagawa, Koji Inoue, Bunjiro Kondo.

The late Ichibei Furukawa established the Furukawa Copper Firm and was very energetic, and devoted himself to developing and mines he had prospected. In 1903 the late Junkichi Furukawa, the founder, succeeded his father and became president of the same year the concern was reorganized into a company under his name. On his death, in 1906, Toranosuke Furukawa, his brother, succeeded him, and since then he has been president of the company.

The company has 11 offices, 4 copper works, and 25 mines, whose total area is about 70,000 acres; 1,200 officials and 25,000 men are employed. Annual production is 35,000 tons of copper, 20,000 tons of silver, 220,000 tons of copper ore, 1,200,000 tons of coal, and quantities of pig lead, silver ore, zinc ore, etc.

Head Office: Yaesucho, Kojimachi-ku, Tokyo, Japan.

Address:

Head Office..... Ajikawa kamidori, Kita-ku, Osaka.

Branch Office..... Hamamachi Moji.

Branch Office.... Kaigan dori, Wakamatsu, Fukuoka-ken.

Shimoyamada Collieries.....	Kumada-mura, Kaho-gori, Fukuoka-ken.
Yoshima Collieries	Yoshima-mura, Ishiki-gori, Fukushima-ken.

Works:

Mizushima Smelter.....	Mizushima Is., near Tamashima, Kojimagori, Okayama-ken.
Amagasaki Refinery	Amagasaki, near Osaka.
Nikko Copper Works.....	Nikko, Tochigi-ken.
Honjo Copper Works.....	Yanagiwara-cho, Honjo-ku, Tokyo.

Ashio Mines

These mines are in Ashio, Kamitsuga-gori, in Tochigi-ken, about 100 miles from Tokyo, connected by the Imperial Government Railroad and the Ashio Railroad. They are 11 miles W. of famous Nikko. Area of the concession is 4,000 acres.

Geology: the district consists mainly of paleozoic sediments and Tertiary liparite (rhyolite). The liparite forms a volcanic neck erupted through the paleozoic sedimentary rocks and is 2 miles in diameter. The ore deposit of Ashio occur in veins, most of which traverse the liparite. The strike or course of the veins is either N. 60° E. or N. 80° W. The veins of the first-named direction are called the 60° lodes, or the Yokomabu series, and the others the 100° lodes, or the Shinsei series. The mines have more than 300 veins, of which 40 of the Yokomabu series and 60 of the Shinsei series are now being worked. The most important veins of the first series are named as follows: Yokomabu, Kosei, Jimbo and Deai. The second series embraces the Shinsei, Eisei and Tengu. They intersect each other and form rhombic nets of veins. The lodes are generally 1 to 16' thick, 400 to 6,000' long, and generally have steep dips. The chief minerals are chalcopyrite and pyrite, with occasional amounts of zinc blende, arsenopyrite, galena and pyrrhotite. Bornite, chalcocite, cuprite, malachite, pisanite and sometimes azurite and native copper are found in the oxidized zone. The gangue minerals are found in small amounts. clay and chlorite are common, quartz is also common, and calcite is found in deep workings. Native bismuth, bismuthinite, wolframite, fluorite, crystallized vivianite, ludlamite and apatite are rarely found.

Development: the mines have three main adits, namely: the Ariki, Kotaki and Isudo, which are three miles apart.

The **A r i k i** adit is driven mainly along the strike of Yokomabu vein and is 10' high, 10' wide and about 8,000' long. It is an important level for transportation and drainage. The **K o t a k i** adit, whose portal is to the N.W. of the mine, is driven chiefly along the course of the Kosei and Tengu veins, and is connected with the Ariki tunnel. Both the Kotaki and Ariki tunnels are used as trunk haulage ways for underground transportation. The 6 levels below and the 12 levels above are within the reach of the Tsudo adit.

T s u d o adit: this adit is S. of the mine, on the bank of the Watarase river, 475' lower than the Ariki. This level was begun in 1885, and driven northward for 12,000'. More than 50 veins were cut in the tunnel, most of them still being profitably worked. The Tsudo tunnel is the main drainage and transportation way of the mine. It is 11' high and 13' wide. There are 12 mine levels below it, the lowest one 1,500' beneath the tunnel.

H o n k u c h i s h a f t: which is 6'x9', is a half mile from the portal of the Honkuchi tunnel, connects with the 10th level and extends down to the Ariki tunnel level. It is equipped with electric hoists.

Y o k o m a b u No. 1, or first shaft, which is 6'x11' in the clear, is sunk on the Yokomabu vein at a point 4,600' from the portal of the Ariki adit, connecting at 457' below with the Tsudo level. There are 7 levels and many working faces that are now being profitably operated.

Y o k o m a b u No. 2, or second shaft, which is 6'x18', is sunk on the same Yokomabu vein, at a place 2,500' from the Ariki adit. It taps the Tsudo adit at a depth of 410' and goes 100' below it. The shaft has 7 levels between the Ariki and Tsudo tunnels, and 6 levels below the Tsudo adit.

Y o k o m a b u No. 3, or third shaft, 5'x12', is 1,900' from No. 1 Yokomabu and passes through Tsudo level at 466' below Ariki level, and reaches to the depth of 1,300', and more sinking is going on. A hoist is fitted up at the mouth of this shaft for the workings below Tsudo level. The **K o l a k i** shaft, 6'x14', is near the Kosei vein, 2,100' from the Kolaki adit, and it reaches Tsudo level at depth of 448'. No. 1 **K o s e i** shaft, 6'x18', near the Kosei vein, is along No. 23 vein, 2,600' W. from the Tsudo adit. It is 900' deep, and further sinking is in progress in 1917. There are 8 levels connecting with this shaft for the working of the Kosei, Kosei-machi, Tengu, etc., veins. No. 2 Kosei shaft, 6'x18' and 660' deep, is 2,000' W. from No. 1, on the Kosei vein. There are several levels connecting with the shaft, which open up the eastern part of the vein. The **K o s e i - m a c h i** shaft, 6'x23', and sunk on the Kosei-machi vein, is 1,500' deep below the Tsudo adit, but further sinking is in progress.

The vertical depth of the underground working places from the highest outcrop to the lowest level is as follows: Outcrop on Bizendate peak to Tsudo adit, 2,200'; below Tsudo adit, 1,500'; a total of 3,700'.

The aggregate length of drifts amounts to about 1,000,000', or 190 miles.

Overhand stoping is generally used, but also square set work. Each stope is 8' high, and more than 2½' wide, varying according to the thickness of the vein.

Waste Water from the precipitating tank for cement copper and the slimy water from the dressing plants are treated with milk-of-lime, after passing through slime setting ponds.

The smoke from all the furnaces is treated by Cottrell treaters. Ashio being in a very mountainous region, aerial tramways are widely used for transportation of timber, etc.

The total length is 25 miles. The Tanamura system is adopted in all lines.

Power is chiefly supplied from the Hosoo hydro-electric power plant (12 miles from Ashio) which was built in 1905, developing 10,000 h. p. The plant's capacity is now being doubled.

Production: this has increased gradually during the past 10 years as follows: 6,315 long tons in 1907; 7,191 in 1908; 7,526 in 1909; 7,453 in 1910; 7,932 in 1911; 8,470 in 1912; 10,428 in 1913; 12,204 in 1914; 11,624 in 1915; 14,816 (33,187,840 lbs.) in 1916.

Cost of Ashio copper is probably a little less than 10c per lb. finished.

Ani Copper Mines

(Annual production, 1,500 tons of copper.)

The Ani Copper Mines are at Ani, Kitaakita-gōri, on the western side of the Moriyoishi Mountain, in Akita-ken. The concession is over 4,600 acres, and is over 5 miles long.

Geology: rocks include tertiary tuff, tuffaceous shale, liparite, and andesite. Veins traverse the whole formation, there being two sets of veins, one running N. S. and the other E. W. The dip is generally steep, though a few of the N. S. lodes have a dip less than 40°. The E. W. lodes are cut by the N. S. lodes, which are sometimes brecciated veins, and occasionally have a clay filling. The E. W. lodes are numerous, though not thick nor long; while the N. S. lodes are big, though few in number.

The principal metallic minerals are chalcopyrite, associated with pyrite, some galena and zinc blende. The gangue or vein stuff is mainly quartz, but sometimes calcite and barite are found. The oxidized zone is deep, and contains bornite, chalcocite, native copper, etc.

Holes are drilled both by hand and machine drill. The drills used include the Ashio drill, Water-Leyner, Ingersoll-Sergeant, Sullivan, Flottmann, Little Wonder, and others. Air for drills is supplied by 3 air compressing plants at the Hanzon, Kotaki, and Tsūdō mines, each one equipped with 2 sets of Ingersoll-Rand compressors and synchronous motors, the former two being of 320 h. p. and the third 500 h. p.

For timbering, only rough, round logs are used. There are several forms of timbering used including legs and caps, saddle back, and polygonal sets. It is interesting to note that large excavated spaces such as the hoisting and pumping stations and chambers, each 40' wide, 25' high, are timbered with big logs.

Transportation: underground of ores, waste and supplies is by electric locomotives and electric hoists; the former in the Ariki-Kotaki adit, Tsūdō adit and No. 4 and 8 levels below the Tsūdō. The total length of electrically equipped trackage is 10 miles. All shafts are equipped with electric hoists. Total electric power used is 1,200 h. p.

The Ariki and the Kotaki levels drain the water coming from above and the remainder by the Tsūdō adit. There are many kinds of pumps, including the Sulzer and Escher-Wyss turbine types. Total electric power used for pumping is 1,300 h. p.

All the machinery of the mines is driven by electricity, transmitted at 22,000 volts from the Hosoo hydro-electric power plant to five substations, where it is transformed down to 2,200 volts, again stepped down to 500 volts at underground substations.

Ore dressing: the mines have three concentration mills at Honzan, near the portal of the Ariki, Kotaki and Tsūdō tunnels. Crude ore is sorted into two grades underground, one averages 12% copper, the other 0.8%. The daily output of crude ore for the three mills, is 250 long tons of 1st and 1,500 tons of 2nd grade. The former is selected mostly by hand, the latter is treated by jigs, tables and flotation. Concentrates from these mills amount to 300 tons of 12.5% grade daily.

Cement copper: is recovered from old workings and weathered rubbish. The daily production is 2½ tons of 66% copper, which is sent direct to the smelter.

Smelter: this is at Honzan, the eastern part of Ashio. The lamps used

finer from the concentrating mills being silicious, some basic ores and limestone is supplied from other places. About 105,000 tons of 12.5% product is treated annually, indicating a production of 13,000 tons of copper.

The lumps are charged raw to the blast furnace, the fines are reduced in reverberatory furnaces after roasting in 5 McDougall furnaces. The matte is bessemerized as usual.

There are four blast furnaces, 160"x42" at the tuyere level; the height from the center of the tuyeres to feed floor is 8½'. Blast is supplied by a Root No. 8 blower, also by turbo-blowers. Matte averages 40% copper. Slag assays silica, 39%; iron, 25%; lime, 19%; alumina, 9%, and copper, 9.2%.

The reverberatory furnace is 19'x110'. Waste heat is utilized by steam boilers. Matte is ladled into converters by an electric traveling crane.

There are 7 converters of the barrel type, 72" diam. and 100" in length. The tuyeres have Dyblie ball valves. Blast for the converters is produced by two turbo-compressors. Lining for converters is a decomposed rhyolite porphyry (liparite).

The converters produce more than 100,000 lbs. of blister copper daily. Blister is cast into 70 lb. ingots or anode plates, and carried to the Nikkō Copper Works by rail.

Analysis of the blister copper is as follows: copper, 99.077%; gold, 0.0003%; silver, 0.1065%; arsenic, 0.029%; bismuth, 0.006%; iron, 0.052%; sulphur, 0.028%, and selenium and tellurium, 0.038%.

Mining: there are many levels and shafts, including the Manaita, 10' wide, 7' high, and 8,000' long, the most important transportation and drainage level. Below this there are four levels at present. The Kanbun is 7' high, 4' wide, and 4,500' long. There are ten other levels above the Kanbun tunnel with intervals of 60' to 80', the lower five now being used. The Kosawa main shaft, 4'x14', is one of the blind shafts, which is sunk down to Maehi vein in Manaita level, and is 400' deep. It is equipped with hoists and pumps. The Chōmatsu crosscut opens nearly all of the chief veins in this mine. It is 7' high, 10' wide, and 1,000' long and is the most important transportation level. There are seven levels above and six below it.

The Sosuido level is the third below the Chōmatsu, and is 4' wide, 6' high, and 1,700' long. It is used for drainage only. The Kayakusa, 4'x14', is one of the blind shafts sunk to the Shinsei vein on the Chōmatsu level, and is 800' deep at present. The Koganehira level is the lowest for transportation and drainage, and is 7' high, 4' wide, and 1,500' long. The Motosawa level is 50' above the former, and is 6' high, 4' wide, and 3,000' long. There are 10 levels above the Koganehira, connected by winzes. The Amaike tunnel is cut through at the foot of the mountain range between the Kayakusa and Sammai valleys. It is the lowest level in the mine, and is 7' high, 8' wide and 9,000' long, with double tracks. During the driving the chief veins in Kosawa and Sammai were found. The Suidōkō adit is driven first as a crosscut; then, after proceeding along the Shōgorōhi vein, it cuts several other veins. It is 7' high, 8' wide and 6,600' long, and is the most important transportation and drainage level. There are 10 levels above it connected by winzes.

Treatment: the main concentration mill is at the Kosawa mine, and contains Hancock jigs, tables, and flotation plant. The 1% crude ore feed is concentrated to 10% Cu.

Ores: the dressed ore treated contains 40% silica and 10% copper. About 16,000 tons of ore are treated annually, yielding 1,500 tons of copper.

The fines and sands are briquetted or roasted in pots. The briquets, roasted ores, and raw material are reduced in 2 blast furnaces with limestone. Matte is blown to blister copper by the Japanese Mabuki hearth

(?). The matte, containing 98% copper and 0.11% silver, is sent to the refinery and electrolytically refined,

power supplied from the Hitachinai hydro-electric power

station, which generates 1,000 h. p. There are also two small auxiliary plants. Another plant for supplying 2,000 h. p. is under construction.

Nagamatsu Copper Mines

(Annual production, 1,000 tons of copper.)

These extend over Shiraiwa-machi, Nishimurayama-gōri, and Okura-mura, Mogami-gōri, in Yamagata-ken, and are situated on the south of Mt. Gassan. The area of the concession is 1,300 acres.

Geology: the district consists of Tertiary, shale, tuff, and sandstone, with extensive intrusives of liparite and andesite. The ore deposit forms clay veins which traverse all the rocks and consists chiefly of chalcopyrite and pyrite; zinc blende and galena are frequently found; quartz and baryte are found occasionally.

Mining: there are many levels, of which the Ogiri and Chūgiri are the most important. The former is 5,000' long. The latter is 380' above the former, and is 4' wide, 6' high, and 2,500' long.

Treatment: dressing is done by hand and by mechanical means. Crude 1% copper ore is concentrated to 8.5% grade. The dressed ore averages 8.5% copper and is easily smelted. The fine concentrates are roasted in pots; raw lumps and roasted products are smelted into matte in blast furnaces. Matte is blown into blister at Mabuki. The blister contains 97% copper and 0.18% silver, and is sent to Nikkō Copper Works for refining.

Power: a hydro-electric power plant of 200 h. p. is at work.

Mizusawa Copper Mines

(Annual production, 500 tons of copper.)

These are in the village of Iwasaki-mura, Waga-gōri, in Iwate-ken. The area of concession is about 1,882 acres.

Geology: this district is composed of granite, tertiary tuff, and liparite. The important lodes are the Machi, Okuhi, and Uwabanhi. They run mainly in the granite, with a N. 60° E. strike.

Principal minerals are chalcopyrite and pyrite; but occasionally galena and zinc blende are found in small quantities. The gangue is quartz, but is not abundant. Calcite is found in druses.

Mining: Tsūdō adit level, 500' long, is the lowest level and is used for transportation and drainage. No. 6, 1,400' long, is the main transportation level.

Treatment: is mechanical concentration. All machinery is driven by electricity.

The crude ore contains 1.2% copper, and concentrates 7.4%.

Smelting: the dressed ores are silicious, containing 7.4% copper. They are classified into lump ore, small ore, fines and slime. The last three are roasted in pots, the roasted fines and fine dust are briquetted. The raw lump briquets and roasted materials are smelted in the blast furnace, and the resulting matte is blown to blister copper by the Japanese Mabuki process. The blast furnace is rectangular and water-jacketed, 33"x66" at the tuyeres, and 10' 6" high; the diameter of the 8 tuyeres is 2½".

Otori Copper Mines

(Annual production, 500 tons of copper.)

These are in the village of Oizumi-mura, Higashitagawa-gōri, in Yamagata-ken. The area of the concession is 296 acres.

Geology: the ore deposit forms veins which traverse tertiary agglomeratic tuff and liparite. The Hompi is the main lode, and strikes E. W. and dips 80° N. It is 1' to 6' wide, and 2,500' long. Minerals are chalcopyrite and pyrite, and the gangue is quartz and rhodochrosite, both in small quantity.

Mining: Tsūdō adit is 1,600' long. The Ogiri level is 420' above it and is 1,200' long.

Treatment: concentration is mechanical. Crude ore carries 3.6% and the concentrates 8% copper.

Kawaiyama Mines

(Annual production, 500 tons of copper.)

These are situated in Ikumo-mura, Abu-gōri, in Yamaguchi-ken, 20 miles N. W. of Yamaguchi. The area of the concession is about 400 acres.

Geology: the deposit is a contact metamorphic one, which is found on both sides of quartz-porphry dyke erupted through paleozoic limestone. It is 1' to 30' thick, and consists of a mosaic of granite, hedenbergite, quartz, chalcopryrite, and occasionally zinc blende and galena.

Mining: there are five levels, of which the 4th is the longest, being 2,500' long. A shaft is 350' deep.

Treatment: the crude ore is sorted by hand. The quantity of dressed ore is 85% of the original run of mine.

Smelting: is done by blast furnaces and Mabuki hearths. The fineness of the blister is 95% copper, and 0.6 to 0.7% silver.

Kune Copper Mines

(Annual production, 170,000 tons of copper ore.)

These are in the village of Sakuma-mura, Iwata-gōri in Shizuoka-ken, and are situated on the eastern bank of the River Tenryū. The area of the concession is 3,000 acres. The mines have no concentrating mill and no reduction works, the pyritic ores being sold.

Geology: the formation is a graphitic schist and chlorite schist of the Algonkian system. The ore deposit consists of epigenetic beds of pyritic ores (copper 3-8%), which strike N. 35° E., and dip 30° to 60° N. W. The deposit contains six orebodies, the Okuhi orebody being the largest; it is 45' to 100' wide and 1,500' long on the strike, and 1,500' deep. The ore consists of pyrite and chalcopryrite with some pyrrhotite and compact granular texture. Quartz is sometimes found, and occasionally magnetite occurs in separate layers.

Mining: there are 14 levels, of which two are important. The Ogiri, 1,500' long, is a crosscut, and is the most important transportation level. The Tsudō adit, the lowest drainage level, is 400' below the former, and is a crosscut, for drainage and transportation. It is 9' wide, 8' high, and 3,000' long at present. A shaft, with cages, 500' below the Tsudō adit, is working at present; another shaft with skips is under construction.

Overhead stoping is followed. According to the thickness of the bed, the stoping is done in two ways: (1) stoping in the direction of the strike, which is employed in the working places, where the bed varies 4' to 8' thick; and (2) stoping in the horizontal direction at right angles to the strike, which is used generally in the thicker part of the bed.

The mines produce both basic pyritic copper ore, and silicious ore, and there is also a small output of cement copper. Annual production of pyritic ore amounts to 170,000 tons, averaging 4% copper.

Transportation: the ores from the sorting house are carried by a ropeway to bins built on the bank of the River Tenryū, and then are loaded on boats and carried to the Tenryū station of the Imperial Government Railway.

Power: 2,500 h. p. is generated by water at Toyone, 5 miles N. W. of the mines.

Furokura Copper Mines

(Annual production, 50,000 tons of copper ore.)

These are in the village of Oyu-mura, Kazuno-gōri, in Akitaken. The area of the concession is 2,322 acres.

Geology: the rocks in which the orebodies occur comprise tertiary tuff, shale, and andesite, cut by quartz veins that traverse all of the rocks. The Hompi vein is the master lode. It strikes N. 30° to 40° E., and dips steeply N. W. or S. E. The thickness varies from 1' to 12', and the known length is 5,000'. In the middle part of the Hompi vein, there is a branch called the Shijunenhi vein, whose strike is N. 60° W., and dip 60° S. The chief

minerals are chalcopyrite and pyrite, and the vein stuff is quartz. Micaceous hematite occurs with the quartz, and sometimes calcite is found in the druse.

Mining: the Ogiri tunnel is driven along the strike of the Hompi vein; it is 5' wide, 7' high, and 5,000' long, and is the most important transportation and drainage level. The Kyūshichi tunnel, 260' above the former, is also driven on the Hompi vein for a distance of 5,000'. The Hosoji tunnel is 530' above the lowest or Ogiri level. All levels are connected by shafts and winzes. Stopping is practiced. Excavation is by hand drilling and by Leyner rock drill and Ingersoll stopers.

Treatment: high-grade ore is mostly screened and picked, and the low-grade ore is concentrated mechanically. The dressed ores treated are silicious, containing 5.5% copper. They are divided into lumps, grains, and sands, and are sent to the smelter of the Kosaka mines owned by Fujita & Co.

Power: gas engines of 600 h. p. are used, and a hydro-electric power plant of 1,300 h. p. is under construction.

The ores and all supplies are transported by aerial tram between the mines and the Kosaka property.

Kijo Gold Mine

(Annual production, 2,000 tons of lead containing gold.)

This mine is in Tōdō, Kijō-gun, Heianhoku-dō, in Chōsen (Korea). It is 27 miles N. E. from Sensen station of Chosen railway. All supplies are transported on horseback from the station. The concession covers 20,000 acres.

Geology: quartz veins are in gneiss, and number over 15, varying from 1' to 20'. The principal minerals are native gold and galena, with some zinc blende and a little argentite. Iron pyrite, arsenopyrite, and chalcopyrite occur as accessory minerals.

Mining: exploitation of the deposits began in 1912, and the work soon disclosed numerous commercial gold veins and gold-lead veins. Work is proceeding on a large scale.

Smelting: the mines have a small concentrating mill and blast furnaces for experimental work. Lead ingots, containing much gold, are produced, and sent to the Amagasaki refinery.

Innai Silver Mines

(Annual production 400,000 ounces of silver.)

These are in the town of Innai, Ogachi-gōri, in Akita-ken, and are within 3 miles of Innai station of the Imperial Government Railways. The area of the concession is over 2,613 acres.

Geology: the district consists of tertiary tuff, tuffaceous shale, and tuffaceous sandstone, as well as liparite and andesite, the latter two intruding the tertiary. The deposit consists of quartz veins that traverse all rocks.

Mining: the portal of the Sosuidō adit is near the concentrating mill; it is first a crosscut, and then a drift along the Hompi vein, the champion lode of the mines. It is 7,800' long, and is used for drainage and transportation.

No. 1 Yamaichi shaft, 4'x13', is 1,370' deep and develops the Hompi vein. It is equipped with an electric hoist. No. 2 Yamaichi is on the E. end of the Hompi vein, connects with the Sosuidō adit level at a depth of 300', but it has no connection with other levels.

Ore treatment: Crude ore is crushed by gravity stamps and concentrated on Wilfley tables. Concentrates and old tailings are treated by cyanidation. The former contains 1.09% (355 oz.) silver, and the latter 0.02% (6.5 oz.) silver. The cyanide plant was completed and about Aug. 1917, is expected to produce 400,000 oz. of silver annually.

KUHARA MINING CO., LTD.**JAPAN**

Head office: Osaka, Japan; London office: I. Sato, 60 Mark Lane. E. C.; New York office: K. Hishida, 26 Cortlandt St.

Officers: F. Kuhara, pres.; Y. Ayukawa, and I. Saito, directors. Inc. 1912, in Japan. Cap., 30,000,000 yen (\$15,000,000).

Report for half-year ended May 31, 1916, shows a credit balance of 2,927,974 yen after paying dividend. Reserve fund was 11,497,395 yen. The dividend for this period was 30%.

Property: originally owned by Kuhara Mining Office, includes copper, gold and silver mines, such as the Hitachi in Japan, and Kapson in Korea; also refineries at Saganoseki and Iyejuna.

Production: 2,500 to 3,000 tons of electrolytic copper, 9,000 to 10,000 oz. gold, 120,000 to 150,000 oz. silver, 75 to 100 tons copper sulphate, and 200 to 300 tons of zinc, per annum.

MITSUBISHI GOSHI-KAISHA**JAPAN**

Head office: Yaezucho Itchome, Kojimachi-ku, Tokyo, Japan. Branch offices and agencies: Osaka, Kobe, Kyoto, Nagasaki, Moji, Karatsu, Otaru, Nagoya, Ejiri, Yokohama, Tsuruga, Kure, Hakodate, Daihoku, and Muroan. in Japan; Shanghai, Hankow, Peking, Tientsin, Dairen and Hongkong, in China; Singapore, in Strait Settlements; Manila, in the Philippines; London, England; New York, in America; and Vladivostock, in Siberia.

Officers: Baron Koyata Iwasaki, pres.; Seijiro Sho, gen. mgr. gen. affairs dept.; Shinji Harada, gen. mgr. metal mg. dept.; Kusuyata Kimura, gen. mgr. coal mg. dept.; Sadaye Eguchi, gen. mgr. trading dept.; Shoichi Kirishima, gen. mgr. estate dept.; Manzo Kushida, gen. mgr. banking dept.; Taisuke Shiota, gen. mgr. shipbuilding and engineering dept.; Teizaburo Hori, gen. mgr. iron foundry dept.

Established, 1893. Cap., 15,000,000 yen.

The Mitsubishi is the foremost private enterprise in Japan, and a worthy memorial to its founder, the late Yataro Iwasaki. Its interests are varied, but are chiefly in mining, shipbuilding, and banking. The company is an important producer of gold, silver, copper, tin, tungsten ore, and coal, possessing 22 metal mines and 11 coal mines, which in 1916 yielded 1,430 kg. (45,760 oz.) gold, 27,605 kg. (883,360 oz.) silver, 30,619,497 lbs. copper, and 2,982,000 metric tons of coal.

Mitsubishi copper is marketed as electrolytic ingots branded with three diamonds, to insure identification, as it is considered to be unsurpassed in purity and electric conductivity. The larger part of the output is sold in the London market through the London branch.

Osarusawa Mines: about 14,534 acres, in Kazuno district, Akita prefecture, Japan. Shokichi Namura, mgr.; H. Abe, asst. mgr. The mines are ancient, having been opened in the 8th century, but were worked for gold only until about 1650, when copper ores were developed.

Geology: ore carries chalcocite, chalcopyrite, bornite, and a little native copper, associated with pyrite, and small quantities of sphalerite, galena and hematite. Occasionally native gold is found mixed with copper ores and in a quartz fahlband, gold occurring mainly in the upper workings. Ores occur in a complicated system of interlacing fissure veins varying from less than 1' to over 10' thickness. Their dip is 15°, 45°, 75°; also in opposite directions. The average width is 3', and the copper content 3 to 4%; most of ore is also high in iron pyrite. The veins, which are persistent in strike, and workable to an average depth of 500', traverse tertiary shales and tuffs, with intrusive augite-andesite and liparite.

Development: is by 8 working shafts and 12 main tunnels, with upward of 17 miles of workings.

Equipment: includes electrical installations aggregating 1,140 h. p. Working forces average 2,400 persons. The reduction plant has two 40-ton water-jacket blast furnaces, with a 250-h. p. electric plant, turning out blister copper of 98% tenor, sent to the Osaka electric refinery.

During 1200 years of operation, these mines have produced immense quantities of copper, gold and silver. Recent production is as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1913	320	32,740	4,647,486
1914	390	31,010	4,824,936
1915	550	29,950	4,161,426
1916	640	33,920	5,046,122

Ore production is 16,700 tons per month.

Arakawa Mine: about 2,100 acres, at Arakawa-mura, Sempoku district, Akita prefecture, Japan. Tokutaro Segawa, mgr. The mine is connected with Sakai station on the railway by a 7-mile tram.

Geology: country rocks are tertiary volcanic sediments and crystalline rock, including augite-andesite, liparite, and propylite, carrying 10 parallel veins in propylite, with strike approximately N. E. and S. W., and workable for 1,000' to 4,000' along their course. Ore consists of chalcopyrite and quartz with a little pyrite, galena, and blende. Oxide ores, mixed with sulphides, averaging about 2% copper, extend to 500' below the surface.

Development: by 5 shafts, 300' to 600' deep, and numerous tunnels. The deepest working is at 800' in the lower tunnel.

Equipment: includes 5 power houses, with aggregate of 4,000 h. p. About 1,400 persons are employed.

Production: is 5,000 tons of ore per month. Including the Hisaichi mine, the yield has been as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1913	80	32,230	3,990,595
1914	50	34,520	3,755,182
1915	30	36,400	2,914,216
1916	75	28,000	2,391,087

Hisaichi Mine: about 926 acres at Nakagawa village, 5 miles S. E. of the Arakawa, with which it is geologically similar. There are 7 veins, the largest, known as Ugaisawa, of about 24' average width, carrying about 8' of payable ore, and occasionally branching into several smaller veins. The other workable veins range from 5' to 7' width. The ore averages 3% copper as chalcopyrite, with oxide ores, hematite, and lead and zinc sulphides, also a little gold and silver. There is a 500' shaft.

Equipment: includes water and electric power installations. Employees average 1,200.

Production: 2,000 tons of ore monthly, which is partly smelted locally.

Tsunatori Mine: a branch of the Arakawa, has an area of 1,240 acres, at Yokokawame-mura, Waga district, Iwate prefecture, Japan. Employees number 400. Output is 1,200 tons of ore monthly.

Production: since 1915, when the mine came into possession of this company, is as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1915	110	230	25,010
1916	2,750	7,280	807,062

Omodani Mine: area 1,992 acres, at Kamianama-mura, Ono district, Kuki prefecture, Japan, 50 miles S. of the railway at Fukui, and 27 miles from Ono-machi.

This property, opened A. D. 1,350, has numerous small veins, none of which exceed 3' in width, impregnating sandstones and altered quartz porphyry. The ores carry bornite, chalcopyrite, sphalerite, and galena, all argentiferous, also some native silver. Four larger veins, up to 10' in width, showing low-grade ore, are also worked. Ores average about 6% copper and 72 oz. silver per ton.

Development: by a shaft with 5 levels, the longest 12,110', and all aggregating 58,380' in length, with 23,750' of track. Hydro-electric power is used. The working force is around 670 men.

Production: is 3,878 tons of ore per month. For the past 4 years the yield was:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1913	320	79,640	650,185
1914	600	103,960	915,116
1915	1,100	129,310	987,742
1916	800	116,600	1,115,646

Ikuno Mine: area 12,786 acres, at Ikuno Machi, Hyogo prefecture. Japan. Kinjiro Shimamura, mgr. The principal mines of this group are the Tasei, Kanagase, Akenobe and Kasei. There are 4 smaller ones.

Geology: the Tasei has a 14' main vein with numerous branches in quartz porphyry, altered andesite tertiary tuffs. The ores carry native gold and silver, together with chalcopryrite, galena, zinc-blende, and pyrite. This vein is notable for its silver content, and has been the mainstay of the mine for centuries, giving it the name of "Silver Mine of Ikuno."

Kanagase Mine: near the Tasei, has many veins in quartz trachyte, three of them being workable. The property is traversed by several andesite dikes, with fault dislocation of the veins along the dikes. The chief copper vein is 8' to 10', runs N. S., dips 60 to 80° E., and is 10,000' long. The ore carries native copper, bornite, chalcopryrite, and tetrahedrite. Two other veins now being worked are 3' to 9' thick, nearly vertical, minable for 2,000', and contain argentite, sphalerite, galena, ruby silver, and stibnite besides copper sulphides.

The Akenobe mine has numerous copper and tin-bearing veins in Paleozoic slate, scattered along the Akenobe river. Eleven veins are worked, varying from 3' to 4' wide. Ores carry chalcopryrite, bornite, cassiterite, wolframite, and blende also.

The Kasei mine shows hornblende gneiss, cut by rhyolite and porphyry dikes with fissure veins carrying silver sulphides associated with chalcopryrite and native silver.

Equipment: includes steam, water, and electric power plant.

Production: copper is shipped in slabs carrying 96.83% copper, 0.0072% gold, and 0.4742% silver. Output for the past 4 years was as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.	Tin lbs.
1913	3,200	258,900	3,870,311	41,072
1914	2,600	240,200	4,479,880	164,777
1915	2,110	223,200	5,219,481	684,989
1916	2,140	249,000	5,486,119	553,273

Kanayama mine, a dependent of the Ikuno, has 903 acres on the Island of Shikoku, across the Inland Sea, in the Kita district, an hour's run by steamer from Nagahama.

Workings show interbedded lens of cupriferous pyrite 6" to 10' thick in Archean schists. The bed is flat, workable for 3,000', and yields 1,000 tons of ore monthly, averaging 3.3% copper and 40% sulphur. This is sent to Ikuno. Output of sulphur was 5,640 tons in 1915, and 8,497 tons in 1916.

Yoshioka Mine: area 2,155,173 acres, at Fukiyamachi, a small town in Kawakami district, Okayama prefecture, 33 miles from Tatami, on the railway. Fusajiro Fukeda, mgr.

Geology: slates, sandstones, and phyllites are cut by porphyry and quartz porphyry. The ore deposit is divided into two, one part in the sedimentary beds, increasing in richness with depth; the other an impregnation in metamorphic slates in an igneous contact zone. The former shows veins of erratic width, in the form of a stockwerk. Ore is chiefly chalcopryrite, with some pyrite, arsenopyrite, pyrrotite, galena, and blende with a quartz gangue, and averages 3 to 8% copper.

Development: the mine has a 360' shaft, with 9 levels, and a 375' blind shaft. Total openings amount to 28 miles. Employes average 2,700,

Production: 7,000 tons of ore monthly. The output for the past 4 years was as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1913	130	61,250	1,519,989
1914	130	61,790	1,741,342
1915	130	64,500	1,608,555
1916	130	63,200	1,607,312

Makimine Mine: area 1,370 acres, in 4 lots, at Kitakata village, Higashi-Usuki district, Miyazaki prefecture, Japan. It is far away from railway lines, but in a well traveled region. It is accessible by steamer up the Gokase river to Tomi.

Geology: country rock is slate with interbedded sandstone, and a capping of lava from the Aso volcano. These rocks are cut by veins of small size, carrying lenticular ore shoots of pyrite, averaging 5% copper, the ore shading into pyrite and lievrite. There are 11 main veins, whose outcrops are from 10' to 20' wide, though averaging but 1' to 7', and are 30' to 300' long.

Development: is by tunnels at 50' to 60' intervals, with inclined winzes of 310' and 1,000', and a vertical 240' winze. Workings aggregate 23,300'.

Equipment: is hydro-electric. About 780 persons are employed.

Production: for past 4 years was as follows:

Year.	Gold ozs. *	Silver ozs.	Copper lbs.
1913	615	6,430	1,515,903
1914	618	7,740	2,103,181
1915	627	8,100	2,415,395
1916	630	8,350	2,121,223

Takara Mine: area 1,659 acres, is at Takaramura, Yamanashi prefecture, a convenient situation to rail traffic.

Geology: formation of the country consists of Paleozoic slate and quartzite, intruded by diorite. The ore deposit occurs in the former, taking a massive structure and striking from E. to W., with a dip ranging N. 70° to 80° S. The ore produced is pyrite, which carries some copper.

Production: 18,000 tons of ore per year, which is marketed for sulphuric acid manufacture and the solution used in leaching. There are 150 people employed.

Okuyama Mine: area 2,000 acres, is at Minamikami Mura, Kamo district, Shizuoka prefecture. Ores occur as chalcopyrite. Working force averages 280, producing 7,000 tons of ore per year.

Osaka Metallurgical Works: are at Shinkawasaki-machi, Kita-ku, Osaka, adjoining the Imperial Mint. The works cover 12 acres and employ about 350 people. It includes 15 reverberatory furnaces, turning out anodes of 97 to 99% purity for conversion into electrolytic copper, cathodes assaying 99.89% copper, 0.0037% silver, 0.014% lead, 0.01% arsenic, and a trace of sulphur. Gold and silver slime yielded by electrolytic separation are washed and dried preparatory to roasting in a small muffle furnace. They are then leached with the waste solution of the refinery to dispose of the remaining copper, the residue being mixed with lead and cupelled. A new plant is under construction, and when completed, the refining capacity of the works will be doubled. Output for past 4 years is as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1913	32,380	180,000	9,873,566
1914	21,890	161,630	9,191,560
1915	26,530	149,660	10,389,787
1916	14,800	216,660	11,954,755
		Copper sulphate, metric tons	Cathodes, metric tons
1913		1,089	119
1914		883	153
1915		959	143
1916		1,197	155

Production by all mines of the company since 1913 has been as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1913	55,450	805,440	26,098,935
1914	49,300	821,000	27,135,547
1915	57,370	825,700	27,957,579
1916	45,700	883,300	30,619,497

The Mitsubishi is one of the 5 large mining companies operating in Japan, and, like the others, is exceptionally progressive. Success has not been won by the possession of mines of exceptional value, though the company has some excellent properties, but rather by the utilization of the most modern methods and appliances and in mining and metallurgy, directed by the best technical skill available.

MITSUI MINING CO., LTD.

JAPAN

Head office: No. 1 Surugacho, Nihombashi, Tokyo, Japan. New York office: 25 Madison Ave.

Directors: Gennosuke Mitsui, pres.; with Dr. Naoya Yamada, Kainchi Okamoto, Dr. Tamaki Makita, Genyeman Mitsui, and Dr. Takuma Dan. Board of auditors: Jutaro Mitsui, Tanojiro Ono, and Shogoro Hatano.

Cap., 20,000,000 yen, paid up.

Property: the Kamioka, Kushikino, Sano, Kaisen, and Kongo metal mines; the Iwanonobori, Kobui and Araodake sulphur mines; zinc refinery, by-product coke and gas power-plant and dye manufactory; and 8 coal mines, all in Japan.

Production: during 1915 the output of this company was 1,490 oz. gold, 295,800 oz. silver, 29,020 lbs. copper, 7,013,700 lbs. lead, 11,412,000 lbs. zinc, 1,230 lbs. bismuth, 21,800 lbs. arsenic, 2,360 lbs. tungsten ore and 13,863 metric tons of zinc ore.

KOREA (Chosen)

CHOSEN GOLD MINES, LTD.

KOREA

Mining and milling operations were abandoned at end of 1916.

Sec. and office: H. R. S. Aldon, Caxton House, Westminster, London. S. W., Eng. American representative: H. E. Collbran, 1003 First Natl Bank Bldg., Denver, Colo. Korean representative: H. W. Davidson, Seoul Chosen (Korea).

Directors: H. Collbran, chairman; F. B. Lawson, E. T. McCarthy, M. P. Sayce, A. H. Collbran and H. E. Collbran. A. R. Weigall, cons. engr.; H. S. Weigall, gen. mgr.; D. C. McEwen, metallurgist.

Inc. Feb. 28, 1912, in Great Britain. Cap., £74,400; shares £5 par; £62,310 issued.

Annual report for fiscal year ending June 30, 1915, shows: bullion in transit, £2,325; cash, £757; debtors, £150; debit, £759; acc'ts payable, £8,411.

Property: a concession over 750 acres, including the Kok Kang Kol Mine at Chung An, Chosen, Province of North Chung-Chung, Southern Korea. A royalty of 1% upon the gross value of the output is payable to the Korean government, also an annual mining land tax of about 30c. an acre for acreage actually in use.

Ore reserves: Dec. 31, 1915, estimated at 20,800 tons of \$6 ore, \$124,800.

Equipment: includes stamp mill and cyanide addition with 50 tons daily capacity.

ORIENTAL CONSOLIDATED MINING CO.

KOREA

Office: 15 Broad St., New York. Mines and works: Unsan district, Korea, Asia.

Officers: H. C. Perkins, pres.; Leigh Hunt, v. p.; Henry W. Bull, 2nd v. p.-treas.; L. T. Haggin, 3rd v. p.; with Ogden Mills, J. S. Fassett, Wm. P. Palmer and H. F. Meserve, directors. George Kennaby, sec.

Officers in Korea: Alf. Welhaven, gen. mgr.; Thos. W. Van Ess, asst. gen. mgr.; C. A. Crispin, auditor; E. S. Barstow, supt. of transportation; J. B. Lower, supt. of Tabowie, etc.; J. A. Vernon, asst. supt. of Chintui, etc.; E. H. Emerson, elec. engr.; W. H. Aldridge, mech. engr.; K. F. Hoefle, supt. of fuel and timber railway; W. D. Townsend, agent, Chemulpo.

Inc. Sept. 29, 1897, in West Virginia, to operate mining concessions in Korea. **Cap.**, \$5,000,000; outstanding \$4,293,900, and the balance is owned by the company; shares \$10 par. No bonded debt. Stock transferred and dividends paid at 15 Broad St., New York. Listed on London Stock Exchange.

Comparative general balance sheet (June 30):

Assets—	Mines & Prop.	Cash.	Supplies.	Misc.	Total.
1917	\$3,743,900	\$432,534	\$398,938	\$10,826	\$4,586,198

*Deficit.

Dividends: in recent years, 1903, \$1.25; 1904, 1905 and 1906, \$1 each; 1907, 60c.; 1908, \$1.50; 1909, \$1.15; 1910, \$1; 1911, \$1.50; 1912, \$1; 1913 and 1914, \$1.50; 1915, \$2; 1916, \$1.50; 1917, \$1.50. Total dividends to June, 1917, \$7,723,950, equal to \$18 per share, or 180%.

Property: a number of gold mines in the Unsan district, in the northern part of Korea, ore occurring in veins.

Development: by tunnels and shafts, deepest workings 2,296'. New workings for year ending June 30, 1917, were 39,201' Results at the Tabowie, Taracol, Chintui and Tongkol mines were satisfactory. The Charabowie is nearly exhausted. Reserves on July 1, 1917, were estimated as 840,000 tons, valued at \$4,593,800. Of this, the Tabowie contains 550,000 tons and the Taracol 220,000 tons. Mining costs totaled \$1.72 per ton, 7c. less than last year. The Tabowie mine is 2,296' deep. Extensive prospecting is carried on all the time on the concession.

Ores are treated in the company's 3 stamp mills, 200 stamps in all, and 2 cyanide plants. Power is electric, company having water-power, and buys excess required.

Production: (year ending June 30)

Year—	Tons		—Per Ton—		Year—	Tons		—Per Ton—	
	Crushed	Yield	Costs	Yield		Crushed	Yield	Costs	
1909.....	296,417	\$4.80	\$2.72		1914.....	301,162	\$5.60	\$3.68	
1910.....	320,707	4.40	2.43		1915.....	297,889	5.45	3.40	
1911.....	344,097	4.37	2.45		1916.....	309,730	6.04	2.90	
1912.....	323,708	4.76	2.68		1917.....	317,601	5.94	2.76	
1913.....	313,701	5.19	3.25						

Total to June 30, 1917, was 4,462,598 tons, worth \$27,629,894, 26% of which was paid in dividends. The August, 1917, yield was \$112,850. Milling costs, 44c. per ton.

Company's operations are extensive and ably conducted. Ore is complex, recovery averaging 89.8%. Geological conditions are, continually studied, and while one of the mines is almost exhausted, the others maintain ore reserves. Altogether a highly profitable concern, operating on low-grade ore at low cost. Results are given with commendable detail and frankness.

SEOUL MINING CO.

KOREA

Office: 1002 First National Bank Bldg., Denver, Colo. Mine office: Hol-Kol, Hwang-Hai, Korea.

Officers: H. Collbran, pres.; H. R. Bostwick, 1st v. p.; S. S. Sheldon, 2nd v. p.; H. E. Collbran, sec.-treas.; preceding, with A. H. Collbran, F. B. Lawson and A. Coors, directors. A. R. Weigall, gen. mgr.; J. S. Collbran, asst. gen. mgr.; W. T. Hall, supt. at Tul Mi Chung mine; R. Blamey, supt. of Suan mine; H. G. English, mech. supt.; B. V. Barton, supt. of prospecting; H. Maki, cons. elec. engr.; F. A. Oldis, aud.; F. F. Bostwick, purch. agt.

Inc. April 27, 1908, in Connecticut. Cap., \$500,000; shares \$35 par; issued, 20,000 shares. Bankers' Trust Co. of New York, registrar. Annual meeting, third Monday in October.

Dividends: have been 25% in 1910; 50% yearly from 1911 to 1916, inclusive.

Statement submitted December, 1916, shows total earnings, \$1,836,340 for 1916; operating expenses were \$918,502, and profits, \$917,838. Cash balance at end of 1916 was \$766,302.

Property: a lease on the Suan concession, granted Nov. 4, 1905, to the Korean Syndicate, comprising a tract of land 13x20 miles in extent, about 52 miles from Pyeng-Yang. The concession carries full rights to examine, develop and operate all mines and deposits contained within the area covered by the grant. Company also has permission to cut timber and to use all the water required for mining, milling and other purposes from sources within, or adjacent to, the district. These privileges are given for a royalty of 1% on the gross value of the output of the mines. There is an additional annual tax of about 30 cts. per acre (50 sen for each 1,000 tsubo), on all land actually selected for mining operations, such selections to be made at any time before Feb. 1, 1916.

The rights in this concession are secured to the Seoul Mining Co. by an agreement made with the Korean Syndicate which provides for the payment of 8% royalty of the actual profits derived from the concession, clear of all depreciation charges.

Geology: property shows both granite and limestone, the principal ore-body, known as the "Collbran Contact," lying between limestone and a batholith of granitoid rock. Ores carry gold, copper, tungsten and bismuth, the gold seldom being visible and rarely in coarse condition. Silver is also present, alloyed with the gold to an appreciable percentage. The copper ores contain chalcopyrite, bornite and tetrahedrite, with a high gold content, of fair average, probably being about 1.2% copper and \$10 gold. The ore-bodies are irregular and in general parallel with the limestone-granite contact, connected more or less by generally well-defined fissures. The gangue is a highly silicious crystalline limestone, altered by contact action and containing a considerable amount of magnesia and alumina.

Development: by tunnels, drifts, winzes and raises, is about 90,000' in the Suan and Tul Mi Chung mines, also many thousands of feet in prospects. Reserves: in 1915 were estimated at 1,206,136 tons, worth \$15,014,376 and in 1916, 1,221,331 tons, valued at \$13,460,210, plus 2,300,000 tons in the Soctario deposit, containing 40c. gold, 0.95% copper, and 0.25% tungstic oxide.

Equipment: one 40-stamp mill of 10,000 tons monthly capacity, and one ball mill reducing 15,000 tons per month. The Tul Mi Chung mill includes a flotation plant. The Suan mill is used for treatment of the gold tungsten ore. Company's power plant, 50 miles distant, generates 2,000 k. w.

Ore reserves:	Tons.	Value p. t.	Total Value.
1916	1,206,136	\$15,014,376
1915	1,221,331
1914	1,208,600	\$12.42	15,015,000
1913	633,300	12.07	7,646,000
1912	421,000	14.44	6,080,000
1911	211,400	16.55	3,499,000

Production:	Tons Ore.	Rec'y p. t.	Cost p. t.	Profit p. t.
1916	176,518	\$10.40	\$3.98	\$6.42
1915	108,078	9.05	3.94	5.11
1914	74,550	9.44	3.90	5.54
1913	71,535	9.39	4.13	5.26
1912	74,432	8.25	3.52	4.73
1911	70,229	7.83	3.01	4.82
1910	32,793	9.86	4.35	5.81

In 1917 the output averaged about \$130,000 per month in bullion and concentrate. This is a highly profitable company, directed by able technical men who have many problems to solve, not the least being the separation of gold, copper, and tungsten, upon which experiments have been under way for the past two years. Flotation is expected to make a good recovery. The Tul Mi Chung mill is now treating 460 tons daily of gold-copper ore and 1,000 tons is recommended, and if 80% of the gold, copper and tungsten can be extracted from the Soctario ore, a mill of 1,000 tons capacity will be erected. Over \$30,000 worth of bismuth is recovered yearly in concentrate. Company conducts extensive prospecting on its concession, following geologic examinations. Probably late in 1918 these properties will be producing at 3 times the present rate.

PHILIPPINE ISLANDS

The following is a complete list of all the metal mines in the Philippines. The **MINES HANDBOOK** has endeavored in vain to secure detailed information on these companies; the Benguet Cons. Mining Co. being the only company which supplied data on its operations.

Name	Address	Metal	Remarks
Alabat Mng. Assn., Manila	Alabat Island	Placer	Prospecting.

BENGUET CONS. MINING CO. PHILIPPINE ISLANDS

Address: Box 10, Baguio, Benguet Prov., P. I.

Officers: Chas. H. Sleeper, pres.; Chas. S. Cohn, sec.-treas.; with A. W. Beam, N. Leanco and M. Ossorio, directors. A. W. Beam, mgr.; C. M. Eye, supt.

Inc. 1901, in Philippine Islands. Cap., 1,000,000 pesos; shares 1 peso; all outstanding. Financial report for 1916 shows gross earnings, 598,748 pesos; operating expenses, 224,219 pesos (including bullion tax and marketing of bullion); profit, 329,453 pesos. Dividends to July, 1917, total 22½% in 5 payments, beginning Sept., 1916.

Property: 12 claims, 6 patented, about 200 acres in the Antamok valley, about 7 miles from Baguio, shows a steeply dipping quartz vein containing pyrite with gold values of \$30 per ton. Orebodies large, one being reported to be 160' wide and one 500' long.

Development: to depth of 275' by tunnel, workings aggregating a mile in length.

Equipment: includes 10-stamp slime and cyanide mill with tube mill, ½-mile aerial tramway and hydro-electric power. The mill extraction is given as 86% of the gold values, silver not determined. Management estimates ore reserves of 30,000 tons, with about 18,000 tons blocked out.

Production: in 1916 amounted to 569,997 pesos from 13,000 oz. gold and 4,000 oz. silver, from 17,360 tons treated. Also, 22,688 pesos from slag.

Plans enlarging mill and equipment 1918.

SIAM**TONGKAH HARBOUR TIN DREDGING CO.**

Office: H. J. Wise, A. M. P. Chambers, Elizabeth St., Hobart, Tasmania. Directors: A. H. Ashbolt, chairman; F. Bond, H. G. Gray, H. Jones, M. Kennedy and K. J. Tok. E. T. Lewis, gen. mgr.

Inc. 1906, in Tasmania. Cap., £250,000; shares £1 par; all issued.

Dividend: total 215% from 1909 to February, 1917.

Property: 5,350 acres in Tongkah harbor, Siam, of which about 500 acres have been dredged. Estimates place the dredgable material at 180,000,000 cu. yd., carrying 2 lbs. black tin per yard. Five boats are at work.

Production:

	Tin Oxide, 70% metal (tons)	Value
1913-14	1,126	£108,053
1914-15	1,262	123,260
1915-16	1,077	

Costs are about 9c and profits 11c per yard.

AUSTRALASIA

AUSTRALASIA

the Commonwealth of Australia and Dominion of New

NEW SOUTH WALES

IBIE COPPER MINES, LTD.

N. S. W.

A. Day, sec., Winchester House, Old Broad St., London,

ctors: C. J. McMahon, Hon. Sidney Smith, F. H. Aarons, J. T.

Col. E. Robinson, A. E. Schroder, gen. mgr.

t. 29, 1916. Cap., £30,000; shares 6s. par.

y acquired for £10,000 the property and plant of the Lloyd

853 acres, formerly known as the Burruga and Thompson's
1 mile from Burruga, in the Bathurst district, which is arid,
ons are suspended at uncomfortably frequent intervals from
er, though the mine has an 85,000,000-gal. storage tank holding
nths' water supply.

ries slightly argentiferous chalcopyrite, with quartz gangue, oc-
issure veins traversing acid diorite. The main vein has an ore
out 700' length worked to depth of 750'. The vein ranges 3' to
1, an average of about 5'. The ore is highly silicious and
ge returns 1907, of 2.36 copper. To the eastward is a fault
the extension of the vein from the 1st to the 14th levels, but
search has shown a continuation of the vein, to the eastward of
which has given a 300' horizontal downthrow, the discovery of
ion greatly improving the prospects of the property. The future
e apparently depends upon the eastern ground, as it is practically
it between the Melbourne and Sydney faults. Ore reserves at
2 were estimated at 120,000 tons of about 4% copper tenor.

ment: includes steam and electric power, with hoists. Buildings
ecessary shops and mine structure. Fuel is hardwood, about 75
being employed when the property is in operation, as fuel re-
s are about 60,000 cords yearly. Much trouble is experienced
rtage of wood. A 9-mile tram line was built 1912, at a cost of
0,000. About 500 men are employed, normally.

eduction plant includes a concentrator and smelter, built 1901, at
£32,000, overhauled and enlarged 1906 and again remodeled in
esent equipment includes a 40-ton calcining furnace, 19'x48' over
ing 40-ton charges of matte, and a reverberatory furnace, 23'x63'
hearth having an inside width of 20', with grate area of 6'x8', and
ig hoppers; 64% matte is made and shipped direct to the refinery.
als Separation plant for froth flotation concentration was erected,
d is reported treating 150,000 tons of accumulated tailings, May,

uction: from beginning of mining to the end of 1908, when opera-
ased, the company smelted 389,221 long tons of ore, yielding 15,812
as of fine copper, largest production having been 2,947,200 lbs. in
roduction was resumed Jan., 1913, amounting to about 110 tons of
y, of which about 10 tons was 12% smelting ore and the balance
led, yielding 18 tons of 14% copper concentrate. Production of
copper resumed early in 1917.

AMALGAMATED ZINC (DE BAVAY'S), LTD.

N. S. W.

Office: 360 Collins St., Melbourne, Australia. London sec. and office: C. Lloyd, 1 London Wall Bldgs., London, E. C.

Directors: Hon. W. L. Baillieu, chairman; A. J. F. deBavay, H. W. P. Clinton, M. Cohen, F. A. Govett, G. W. W. Mackinnon, W. S. Robinson, and J. L. Wharton. A. J. F. deBavay, cons. chemist and metallurgist. David Meredith, gen. mgr.; Edw. H. Shackell, sec.

Inc. 1909, in Australia. Cap., £500,000; shares £1 par; all issued and fully paid.

Accounts are submitted semi-annually. Report for 1st half-year 1917 showed: assets over liabilities, £245,199, and a net operating profit of £71,008; and for 2nd half, assets over liabilities, £250,209, with net profit of £93,281.

Dividends: 5% in 1910; 20% in 1911; 27½% in 1912; 32½% in 1913; 10% in 1914; 45% in 1916. A dividend of 1s was paid in Feb. and May, 1917, making total disbursements to date, £750,000.

Company acquired the entire assets of the De Bavay Treatment Co. Ltd., and the patents of the Potter's Sulphide Ore Treatment, Ltd. To avoid litigation with the Minerals Separation, Ltd., the companies were merged into the Minerals Separation and De Bavays Processes Australia Proprietary, Ltd., capitalized at £300,000, shares £1 par, of which 100,000 shares were issued the Minerals Separation Ltd., and 83,250 the Amalgamated Zinc. The Amalgamated Zinc has the right to use all the Minerals Separation patents, but must pay the usual royalties.

Company also owns the following share interests: 119,250 shares Minerals Separation & De Bavay's Processes, Australia Pty., Ltd.; 100 shares Barrier Munitions Co. Pty., Ltd.; 502 shares Zinc Producers' Association Pty., Ltd. and 100,104 shares in Electrolytic Zinc Co. of Australia.

Amalgamated Zinc has no mines, but buys zinc-lead-silver tailings from the Broken Hill South, Broken Hill Proprietary Block 10, and New Broken Hill mines at Broken Hill, N. S. W. Material is treated in a flotation plant capable of handling 40,000 tons per month.

During 1916, 263,294 tons of tailings were treated, yielding 72,000 tons of zinc concentrate and 1,535 tons of lead concentrate. The former 48% zinc, 6% lead, and 8.8 oz. silver; latter 54% lead, 11% zinc, and 11 oz. silver per ton. Early in the war company's operations were seriously hampered by trouble in selling its products abroad. Much of its concentrate has since been reduced to metal in America.

BRITISH BROKEN HILL PROPRIETARY CO., LTD.

N. S. W.

Office: F. H. Clark, Steamship Bldgs., Currie St., Adelaide, So. Australia. Directors: J. S. S. Wimby, chairman; F. S. Saunders, & Stewart & W. H. Woodhead. C. J. Emery, gen. mgr.; G. C. Klug, cons. engr.; J. Beal, mill supt.

Inc. Nov. 11, 1887, in England. Cap., £339,000; in 315,000 ord. shares and 60,000 privileged 8s. shares; all issued.

Dividends: since 1897 total 204%, but have been irregular. Property: 141 acres at Broken Hill, New South Wales. Reserves in 1916 amounted to 1,033,250 tons, assaying 13% lead, 0.6 oz. silver and 0.25% zinc.

Development: by shafts. Equipment: complete for mining, also concentrating plant, using flotation (Minerals Separation and Lyster selective).

Production: the war has caused a suspension from August, 1914, early in 1917. During 1913 the mill treated 204,374 tons of ore, producing 41,296,690 lb. lead, 779,522 oz. silver and 5,874,260 lb. zinc.

Production: from August, 1917, to May, 1918, the 500-ton mill was closed on account of war conditions. In the year ended Sept. 30, 1914, 86,592 tons of ore yielded concentrates containing 20,614,000 lbs. lead, 349,839 ozs. silver and 1,568,000 lbs. zinc.

BROKEN HILL SOUTH SILVER MINING CO.

N. S. W.

Head office: Collins House, Collins St., Melbourne, Victoria, Australia. Company owns interest in Broken Hill Ass'd Smelters' Prop. and Zinc Producers' Ass'n, Prop.

Directors: F. C. Howard, chairman; W. M. Hyndman, B. A. Moulden and Colin Fraser. W. E. Wainwright, mgr.

Inc. Oct. 11, 1893, in Victoria. Cap., £200,000; shares £1 par; all issued; but 69,092 have only 9s 6d paid. Debentures: £250,000 6% authorized; £200,000 issued in bonds of £100.

Statements for 1916 show total revenue, £798,824, of which £481,754 was profit. Four dividends amounted to £240,000. Net cash assets were £587,607 at the end of 1916. During the first half of 1917 the profit was £248,234, of which £120,000 was distributed to shareholders. Cash assets increased to £712,698.

Dividends: since 1902 total £9 16s per share, or 980%. In 1917, to June, 12s, or 60%, was paid.

Property: 69 acres at Broken Hill, N. S. W.

Development: by shafts to 1,500' depth and extensive workings. During 1916, 10,712' of new work was done. All underground work is by contract. Ore reserves total 3,500,000 tons. On the 1,270' level, ore assays 14.8% lead, 10 oz. silver and 16% zinc.

Equipment: complete mining, also 8,000-ton per week concentrating mill and lead and zinc selective flotation plants of 2,000 tons per week capacity. New tailings is sold to the Amalgamated Zinc (De Bavay's) Company, and old dumps to the Zinc Corporation, which treat these in their flotation plants, at the rate of 170,000 and 40,000 tons per year, respectively. Commercial tailings on hand total over 1,300,000 tons. Lead concentrate is smelted by the Broken Hill Associated Smelters at Port Pirie, So. Australia.

Production: in 1916 was 244,990 tons of ore carrying 14% lead, 66 oz. silver and 13.5% zinc; also 44,635 tons concentrate carrying 60% lead, 255 ozs. silver and 9.8% zinc.

During the first half of 1917, 122,240 tons were treated. Costs are \$3.00 per ton, much above normal on account of war and labor troubles. There are 1,245 men employed.

COBAR-GLADSTONE MINING CO.

N. S. W.

Mine office: Wrightville, Robinson Co., N. S. W., Australia. Mine is opened by a 400' vertical shaft and makes weekly shipments of 35 tons of concentrates to the E. R. & S. Co. smelter at Port Kembla, assaying from 20 to 23% copper.

Equipment: includes rolls, jig and reconcentrating tables.

ELECTROLYTIC ZINC CO. OF AUSTRALIA PROP., LTD.

HAMPDEN CLONCURRY COPPER MINES, LTD. QUEENSLAND

Office: E. H. Shackell, Collins House, Melbourne, Australia. London office: E. Habben, sec., Palmerston House, London, England.

Directors: J. L. Wharton, chairman; W. L. Baillieu, F. G. Hughes, H. F. C. Keats, W. Orr, H. H. Schlapp. London directors: W. D. Reid, G. W. W. Mackinnon and G. W. Staples. E. Huntley, gen. mgr., Friesland, via Cloncurry, No. Queensland. D. Wentworth, metallurgist.

Inc. July 31, 1909, in Australia, as a reorganization of a company of same name. Cap., £400,000; shares £1 par; 350,000 issued.

Net profits for year ended Aug. 31, 1916, were £285,789; and half-year ended March 1, 1917, £64,540.

Dividends: in 1913, 40%; 1914, nil; 1915, 20%; 1916, 40%, and 1917, 80% for half-year. Total to date is £402,500.

Company owns 4,000 shares of the Electrolytic Ref. & Sm. Co. of Australia, Ltd., and 15,000 shares of Metal Mfrs. stock. Latter company is building works at Port Kembla, New South Wales.

Property: over 450 acres in the Cloncurry mining district, North Queensland. Mines are connected by 2' gauge railway with the Cloncurry Copper Mines, Ltd.

Ore: copper, gold, silver. Ore reserves: estimated, March, 1917, at 284,200 tons containing 20,108 tons of copper.

Equipment: includes 375-ton smelter and converter. Management considering the erection of a Minerals Separation plant.

Production: for year ended Aug. 31, 1916, was 104,479 tons smelted yielding 16,856,000 lbs. copper, 59,119 oz. silver, and 2,234 oz. gold. In half year ended March 1, 1917, the smelter reduced 46,443 tons of ore, yielding 6,948,480 lbs. copper, 23,418 oz. silver, and 1,028 oz. gold.

Is a small though profitable copper mine.

IRVINEBANK MINING CO., LTD. QUEENSLAND

Office: J. H. Reid, managing director, 18 Bridge St., Sydney, N. S. W. Works office: Irvinebank, Queensland.

Property: company owns tin mines and tin concentrating works at Irvinebank, Koorboora and Watsonville; copper mines at Watsonville and wolfram mines and mill at Mt. Carbine, all in North Queensland. The smelter includes a reverberatory furnace and is the only tin works in the State.

MANY PEAKS COPPER MINING CO., LTD. QUEENSLAND

Office: J. D. Murray, sec., East St., Mt. Morgan, Queensland. Inc. 1906, in Queensland. Cap., 81,640 shares, 6s. (12c) par, originally 2,041 shares £1 par, changed in 1914 to present amount.

Company owns a cupriferous pyrite deposit from which the Mt. Morgan G. M. Co. draws its supply of fluxing material at a royalty of 2s. 6d. per ton. The lease calls for not less than 25,000 tons annually.

Receipts for year ending June 30, 1917, amounted to £6,222 in credits of £2,533, making £8,755. Of this £6,503 was distributed as dividends. Cash on hand was £1,166 at end of the term.

Dividends: total £22,041 in 9 years to 1916, equal to 30% for the first 3 years and 2.016% for the remainder.

Property: 320 acres, well timbered, on remains of Boyne Valley railway. The property shows promising gossan outcrops, carrying occasional small quantities of copper ore, with a vein up to 10' in width, extending some little depth, but apparently having no secondary outflows, the gossan containing about 7.5% copper ore, the main tunnel being at the foot of the main panel. The vein is at the end of the property.

1: in the year ended May 31, 1917, was 49,774 tons, making 10 years, on which royalties totaled £58,085.

robably the only way such a property could be profitably the figures are certainly interesting.

Inc. Oct. 1, 1886, in Queensland. Cap., £1,000,000; shares £1 par; fully issued and fully paid.

Balance sheet for year ended May 27, 1917, showed total revenue of £1,301,377; expenditure, including development and depreciation, £992,172; profit, £309,205; dividends, £250,000; and balance forward, including previous balance, £95,986. Cash assets total £522,108.

Dividends: paid quarterly, have ranged from a minimum of 8d., at the beginning, 1886, to a maximum of £1 2s., in 1889. To end of 1916 the company had paid about 825% in dividends, which were 6s. yearly, 1892-97; 6s. 6d. in 1898; 7s. yearly 1899-1900; 5s. 10d. in 1901; 5s. 9d. in 1902; 3s. yearly 1903-06; 4s. 3d. yearly 1907-08; 4s. yearly 1909-13; 3s. in 1914; 4s. in 1915; 5s. in 1916, while 1s. was paid in Aug., 1917. Dividends total £8,879,167, or about \$43,000,000.

Property: 90 acres perpetual leasehold, and 640 acres freehold; also flux quarries, pyrite deposits (Many Peaks mine), coal beds, and magnetite deposits.

Company has a large interest in the Electrolytic Refining & Smelting Co. of Australia, Ltd., which refines Mt. Morgan and custom copper and is the recently organized Metal Manufacturers, Ltd., which is to make copper products from Australian metal. Mt. Morgan is about 25 miles west of Rockhampton, and the mine has been, since 1890, one of the greatest gold producers of the world.

Geology: the Mount Morgan gold deposit proved to be the surface gossan of a great copper deposit. As the ore showed increased copper content at depth the company wisely began extensive diamond-drilling, which proved an immense tonnage of copper ore. The mine has been operated as 2 connected mines, the upper section being worked superficially. The oxidized ores were exhausted in 1910, and only sulphide ores are now mined. The sulphide gold ore is known locally as 'mundie', being auriferous and slightly cupriferous pyrite.

Development: is done through 2 principal shafts, known as the 500 shaft, of 1,050' depth, and the Lynda incline shaft, about 1,300' deep. Underground ore extraction is from the 360' to 650' levels. Depleted stopes are filled with waste, on the pigstye system, some of the stopes being of great size. New openings in the half-way level Nov. 30, 1916, totaled 768', and does not seem extensive, but when the greater area of the deposit is considered such footage is considerable.

Reserves at above date were 1,170,750 tons, containing 2,700,000 lbs. copper and \$6.17 gold per 100 lbs. of ore.

Equipment: this is now very modern, and has been largely replaced in the past 3 years. Buildings include 100 houses, the mine, mills, smelter and engine house. At the portal of the Lynda tunnel there are 20 shower-baths and 504 lockers. In connection with the mine is a firewood storage area of 5,000 tons, a Government railway rail connection, and a Government railway station. The mine is near Dawson coal mines.

The district being arid, extensive dam-building has taken place, there being 7 dams, of which 5, in 1916, had a total capacity of 387,000,000 gal. No. 7 holding tank has a capacity of 1,000,000 gal.

Gold ore was treated in the mills until 1916, when it was being treated in open vats. Some of the tailing is used for the manufacture of brick.

as a large smelting plant, the outcome of many changes in ks. The present blast furnaces, converters, rotary-furnaces, ant, etc., have been erected during and since 1914. In the ear there was reduced 278,380 tons of charge, including Many Peaks pyritic ore and 42,197 tons of concentrate. ating plant, using jigs, tables and flotation, was erected in half-year shows 79,217 tons of 2.19% copper and \$5.59 gold lding 22,694 tons of 7.04% copper and \$15.24 gold concen-.84% recovery of the copper and 78.11% of the gold. About concentrate was saved by flotation, and was nearly 7 times as as the table product, 20.47% against 3.16%.

: in year 1916-17 amounted to 18,014,080 lbs. copper and During June, 1917, the yield was 1,370,880 lbs. copper and valued at £115,960. Costs are \$13.84 per ton of ore mined, somewhat high.

in may now said to be fairly on its feet again, after many ground, in the smelter, power-plant and labor, and should ased dividends for many years. To Sept., 1917, distributions :9,000,000.

lbs. copper, 4,146,240 lbs. lead, and 107,956 oz. silver in 1912-1914.

The Mungana mines suspended operations at the time of the closing down of the Chillagoe smelter, March, 1914, and there seems little immediate prospect of work being resumed.

SCOTTISH GYMPIE GOLD MINES, LTD.

QUEENSLAND

Head office: Dunlop & Murray, secs., 188 St. Vincent St., Glasgow, Scotland. Mine office: Mary St., Gympie, Queensland, Australia.

Officers: G. B. Hoggan, chairman; R. G. Campbell, J. B. Hilliard, A. Robertson and W. Walker, directors. D. E. Reid, gen. mgr.; J. Harris, mine mgr.

Inc. June 11, 1902, in Scotland. Cap., £700,000; shares £1 par; 660,000 issued.

Profit of £7,275 was made in year 1915-16, of which £4,125 was paid as a dividend. Balance forward was £6,375.

Dividends: since 1898, total about £6 2s. per share; £5 8s. to 1902, since when profits have been small. The total to July, 1917, is £608,212.

Property: 126 acres, at Gympie, Queensland. Reserves estimated at 1,000,000 tons.

Equipment: necessary for treatment of about 9,000 tons per month.

Production: in year 1915-16, 83,800 tons of ore and 27,950 tons of tailing cyanided for \$6.44 per ton. In August, 1917, 8,600 tons of ore and 3,400 tons of tailing yielded \$6.77 per ton. Costs are about \$4.70 per ton.

Property has been a large producer, but now makes little profit. Geologic conditions at Gympie are peculiar, and the district is dull at present.

SOUTH AUSTRALIA

BROKEN HILL ASSOCIATED SM. PROPRIETARY, LTD.

S. A.

Office: H. L. Shackell, sec., 360 Collins St., Melbourne, Victoria, Australia.

Directors: W. L. Baillieu, chairman; C. Fraser, F. C. Howard, B. Kelly, D. E. McBryde, W. S. Robinson; W. Robertson, gen. mgr.; G. C. Riddell and G. Rigg, cons. engrs., at lead and zinc works; H. W. Leavens, J. Johnson and J. Winter, supts. at smelters.

Inc. May 7, 1915, in South Australia. Cap., £1,000,000; shares £1 per 700,000 shares issued and held by the Broken Hill Proprietary (£200,000), Broken Hill South Silver M. Co. (£200,000), North Broken Hill (£200,000) and Zinc Corporation (£100,000).

Works: extensive lead smelter of the Broken Hill Proprietary Co. at Port Pirie (said to be the largest in the world), So. Australia, was purchased by this company for £300,000 cash and 200,000 shares. The plant includes railroads, blast furnaces of 6,000-ton per week capacity for lead concentrate, roasting furnaces, Dwight-Lloyd and H. H. systems machines, 3,000 ton per week lead refinery, 200-ton per week spelter works, limestone quarries in So. Australia and coke works at Bellambi, N. S. W. The ore supply for these works comes from 8 Broken Hill companies, all from outside sources. The smelter can produce 150,000 tons of lead, 100 tons spelter, and 6,500,000 oz. silver per year. The coke plant makes 100,000 tons yearly. Antimonial lead, assay lead, litharge, zinc dust, metal and bar and granulated silver are made.

MT. LYELL CONSOLS WALLAROO COPPER MINES, N. L.

S. A.

Reorganized as New Lyell Consols Copper Mine, which see.

NEW LYELL CONSOLS COPPER MINE, N. L.

S. A.

(Formerly Mt. Lyell Consols Wallaroo Copper Mines, N. L.).

Address: T. Rollason, sec., 31 Queen St., Melbourne, Aus. Local secretary, Arnold W. Goodfellow, 17 Coleman St., London, E. C. England. Mine office: Kadina, Daly Co., So. Australia. J. A. Wauchop, gen. mgr.; T. C. Dunster, chairman; S. Cherry, George Dunham and Cecil Smith, directors.

Inc. Nov. 20, 1911, as a reconstruction of Mount Lyell Consols Copper Mines, N. L. Cap., £250,000; shares 10s. par; issued, 250,000 shares.

Operations were suspended on account of the War for 2½ years.

Enough money is being remitted from London to continue and ore shipments will soon be resumed.

50 acres, leasehold, including the Wallaroo Central mine, 70 ft to the Wallaroo mine. Property shows schists and slates and numerous parallel veins including the famous Wallaroo Blue lode. Shaft: by a 260' shaft, showing 2 lodes of 18' and 7' average thickness of ore with about 6% copper and \$8 gold per ton. Shaft is 350'.

Plant: includes 250-h. p. steam plant with hoist, compressor, mine necessary mine buildings.

O & MOONTA MINING & SMELTING CO., LTD. S. A.

Office: Steamship Bldg., Currie St., Adelaide, S. A. Mine offices: Moonta, S. A. Works office: Port Wallaroo, S. A.

Directors: Sir J. L. Stirling, (chairman); Simpson Newland, F. H. R. Corpe and J. R. Baker. H. L. Hancock, gen. mgr.; F. G. McEwen, ec.

Registered in South Australia. Cap., £400,000; shares £2 par; 160,000

Account for 1916 shows total revenue of £852,670 and a net profit of £120,000, of which £120,000 was paid in dividends. Cash assets at the year were £250,851. In Jan., 1917, £20,000 was distributed.

Production to Feb., 1917, total £2,454,254, of which £836,000 had been received by the present company, the remainder by the old Moonta and Moonta companies.

Production: the Wallaroo mines at Kadina and the Moonta mines, 3,010 tons Moonta, S. A., which have yielded 689,812,480 lbs. copper valued at £1,900 to the end of 1916.

Geology: Bull. 6, of the Geological Survey of South Australia, 1917, by R. S. Searles, states that the Wallaroo lodes traverse schistose rocks of sedimentary origin; while the Moonta lodes are found in a mass of hard and massive gneiss, or in an igneous schist formed by selective crushing of feldspar-porphyr. Minerals at Wallaroo are chalcocopyrite, pyrite, galena, with a little galena, blende, and gold; at Moonta, chalcocopyrite, chalcocite, pyrite, a little gold and silver, etc. During the past 10 years copper content averaged 3.85%.

Development: at Wallaroo the main lode has been opened for a length of 3,400' and a depth of 2,900'; at Moonta the main lode extends for a depth of 2,520'. During 1916 new openings, including 1,170' of new shaft drilling, totaled 9,057'. Total openings in the Wallaroo mines amount to 38 miles, and in the Moonta mines to 40 miles.

Plant: includes electric power plant, steam plants, complete mining and sorting plants, ore sorting and concentrating works, tailing, leaching

plant, sulphuric acid and bluestone plants, electrolytic refinery, etc. Production: 1,758,038 tons of 15% ore (sorted) up to 1909, after which, 1,415,103 tons of dressed ore, yielding a total of 689,812,480 lbs.

In 1916 there was 251,078 tons of 3.05% ore handled, dressed to 100% of smelting grade. The metal output from ore and concentrate was 19,248,320 lbs. copper, 3,100 oz. gold, and 3,014 oz. silver; 930 tons of sulphuric acid. The average price received was £113 3s. 6d. (24.24c per lb.) and cost £80 7s. per ton (17.22c per lb.), against £85 3s. 6d. (16.82c per lb.), and £55 9s. 1d. (12c per lb.) in 1915. Costs from 1909 to 1916 were fairly steady at about 11 or 12c per pound. About 1,000 men are employed.

This is one of the great copper companies of Australia.

TASMANIA

THE TASMANIAN TIN AND GENERAL MINING CO., LTD. TASMANIA

Office: T. P. Husband, Royal Bank Chambers, Collins St., Melbourne, Victoria, Australia.

Directors (in London): F. S. E. Drury, chairman; W. Clark, and H. C. Baker (in Melbourne): Sir A. J. Peacock and F. G. Hughes. L. C. Baker, gen. mgr.; D. Currie, cons. engr.

cu. yds. of capping removed, to render available 1,070,000 cu. yds. of ore. It was estimated, Sept. 30, 1916, that the Mt. Lyell proper had ore reserves of 1,726,485 long tons available for extraction, having an estimated average assay of 0.53% copper, 1.96 oz. silver and 0.04 oz. gold per ton. For the half year ending Mar. 31, 1917, the Mt. Lyell mine shipped 84,755 long tons of ore, averaging 0.45% copper, 1.03 oz. silver and 0.04 oz. gold per ton. The mine output is about 700 tons of pyrite ore daily, mostly from the underground levels, the 3 lower benches of the open-cut supplying a minor amount.

The South Mt. Lyell orebody is a lens of the same character as the big orebody of the Mt. Lyell, though much smaller, and not outcropping at surface, being opened from the Mt. Lyell mine and practically a part of that mine.

Equipment: The incline shaft at the Mt. Lyell, which raises all ore from the mine, has a 200-h. p. electric hoist, capacity 600 tons in 8 hours, taking current from the reduction works power-plant by a 1½-mile special line. Hoisting is by self-dumping skips. At this mine there are three 300-h. p. motor-driven compressors with a combined capacity of 3,600 cu. ft. of free air per minute to 80 lbs. pressure per sq. inch, and the air supply is diverted, when required, to the North Mt. Lyell mine by means of a 6,000' pipe line. A triplex pump, capacity 100 gal. per min., lifts all the water requiring discharge.

Geology: The North Lyell mine carries ore as disseminations in highly quartzose-schist, in the vicinity of a conglomerate contact, the schistose ore shoots occurring as pipes, or columns, of irregular cross-section, in the recesses of the highly-contorted contact surface of the conglomerate. Copper contents are mainly in bornite, but there are limited quantities of chalcopyrite and chalcocite, associated with small amounts of pyrite, and there are no deleterious elements. The North Lyell ore averages, as broken, about 6% copper and 1.33 oz. silver per long ton, with a trace of gold, the gangue averaging about 66% silica, 7% iron and 7.3 to 11% alumina. The North Lyell has a number of closely associated but distinct orebodies, the 2 largest being the Main and New Development orebodies. The Main orebody outcropped at surface, and has a vertical dip with depth proven to 1,000'. The New Development orebody connects with the Main orebody at the 400' level, descending at a very sharp pitch, and carries disseminated bornite of good average grade on the 1,200' level, which is the deepest working of the mine. The character of the ore remains unchanged down to the lowest level opened, except that perhaps chalcocite is increasing with depth.

Development: consists of tunnels of 850' and 1,080', and 3 shafts, the Main of 1,200', the Auxiliary of 800', and a blind shaft from the 800' level. Lower levels are opened at 150' and 100' intervals. Stopping is in progress on all levels from the 700 to 1,200', inclusive, and is heaviest on the 1,000' level. Filling for depleted stopes is brought from surface by means of 2 main waste passes, and run to place through branch passes. For 3 months ending Mar. 31, 1917, the North Lyell produced 45,755 tons of ore, with average assays of 0.53% copper, 1.40 oz. silver, and 0.008 gold per ton.

In Sept., 1916, ore reserves were estimated at 1,083,211 long tons, at an average assay value of 6% copper, 1.33 oz. silver and 0.005 oz. gold. The North Lyell has developed wonderfully well and it is evident that the property has excellent prospects of further considerable orebodies, with the ore is persistent to the greatest depth yet reached and high in copper tenor and, although too silicious for straight smelting, blends with the pyritic ore of the Mt. Lyell in a most excellent charge. The daily output of the mine averages 700 tons.

Equipment: 200-h. p. electric hoist, good

300-h. p. motor-driven compressors, triplex pump, 6,000' pipe line, 100 gal. per min.

The Tharsis mine, formerly considered worked out, was acquired by some years ago and is worked for ore of the same character as that of the North Lyell, though very much lower in

The Tharsis and Royal Tharsis mines are idle. The South Tharsis worked opencast for a time, and the Royal Tharsis has been worked underground by an incline shaft. These properties contain pyrite and pyrite, disseminated sparingly in schist, and the ore, of average grade, though not amenable to ordinary wet concentration, can be mined at some future time for flotation concentration.

The Lyell mines: an important property purchased by the company in 1912 and formerly owned by the Mt. Lyell Comstock Mining Co., Ltd. consists of leases 339 acres. The southernmost sections are contiguous with the Mt. Lyell leases and contain the northern extensions of the Lyell mine, the latter, which give them a special value to the company. The mine worked by the former owners is, however, remote from this being 6 miles, by steam train, from the reduction works. The mine has been recently reopened by the company and is worked on a creasing scale for concentration by flotation. The deposit here is on the same line of contact of schist and conglomerate as the other in the district and the character of the ore is similar to that of the Mt. Lyell mine, though more basic, while the ore in the southern sections is, of course, identical with that of the North Mt. Lyell themselves.

In the reduction plant there are quarries of silica and limestone which are used for flux.

The plant equipment: the company has sawmills for furnishing mine timber and for general building purposes.

A 1/2-mile aerial tram transports 750 tons daily from the Mt. Lyell mine to the smelter. There also is a 4,500' incline surface tram, operating on counterbalance, connecting with a 3/4-mile steam railway.

The company owns 2 railway lines; a 22-mile line connects the reduction works at Queenstown with the seaport of Strahan, giving rail communication with all parts of the State. The second line connects Gormanth Kelly Basin, near the head of Macquarie harbor, 25 miles from Queenstown. The company's private narrow-gauge line has about 7 miles of track connecting the mines and works.

An extensive hydro-electric plant at Lake Margaret supplies power for the reduction works, and superseded a large steam plant.

The reduction works are at Queenstown, on the Queen river, 1 1/2 to 2 1/2 miles from the mines. No. 1 smelter has been dismantled for some years. The No. 2 smelter has four 54x210' blast furnaces, with cast-iron water jackets and steel construction, suitable for pyrite smelting. The furnaces have mechanical feeders and hydraulic lifts.

The first successful pyritic smelting ever accomplished was done in this district in 1896, under direction of Robert Sticht. The method has been greatly improved since then.

The charge, averaging 2.5% copper, is brought to a matte of 40 to 50% copper. Slags average about 0.33% copper, 32 to 38% silica, 42 to 52% iron protoxide and about 4% calcium oxide.

The percentage of coke was formerly as low as 1% but is now 3 to 5% in consequence of a reduction of the iron sulphide contents of the ore and an increase of the zinc and lead.

The furnaces have a stationary rectangular forehearth, supplemented by smaller rectangular forehearths, from which the slag flows into a tank of water for granulation. Granulated slag is distributed over the furnace floor by centrifugal pumps or alternately by electric bucket elevator. Air is supplied to furnaces by 4 motor-driven centrifugal blowers, with a capacity at from 72 to 96 oz. per sq. in. pressure. The forehearth is allowed to cool before conversion to slag from the blast furnaces being subject to the same conditions to overcome.

The 75-ton converter plant has 2 remelting furnaces, with 6 stands, and 14 shells of the Stahlmann type, each 60x96". Converter blast is furnished by 2 electrically-driven centrifugal compressors, each of 3,500 cu. ft of free air capacity to 12 lbs. per sq. in. Motors are of 250 b. h. p. Concentrates and flue dust are treated by the Dwight-Lloyd process.

The final product is blister copper averaging 98.83% copper, about 80 oz. silver and 1.5 oz. gold per long ton, the silver contents having declined about 20% and the gold contents about 40% in recent years. For many years, until the end of 1910, blister copper was sent to Baltimore for electrolytic refining, but now goes to the Port Kembla works in New South Wales.

Company owns 3 acid and fertilizer plants, all having Herreshoff calciners sulphur burners and the ordinary chamber process for making sulphuric acid. Crude phosphate rock is secured from Ocean and Christmas Islands. The products of these plants include a variety of superphosphates and commercial fertilizers, demand for which is rapidly increasing in Australia. The raw material for acid is furnished by the Tasmanian mine. Spanish pyrites and sulphur from Japan and Italy. Unfortunately, it is commercially impracticable to utilize the sulphurous acid fumes from the Mt. Lyell smelter, because of the high freight rates, either in carrying the acid away from Mt. Lyell, or bringing in the crude phosphate rock.

The superphosphate works are in Victoria, South and Western Australia.

The company employs about 1,700 men in Tasmania, in addition to considerable forces at the fertilizer plants. About 850 men are employed at the mines, 150 on the railways, and 700 at the reduction works.

Although the average of all ores and concentrates smelted is only about 2.5% copper, and the pyritic ore now mined from the Mt. Lyell mine proper barely exceeds a copper content of one-half of 1%, the cost-sheet makes an excellent showing. Mt. Lyell pyritic ore, won opencast, costs about 3s. 6d. per long ton, inclusive of the charge of 2s. for removal of overburden, and cost of ore extracted from underground workings does not exceed 6s. (\$1.44) per long ton. Ore mined from the North Mt. Lyell costs about 14s. (\$3.36) per long ton and constitutes about one-third of the total ore tonnage.

Costs: average cost of mining, smelting, and converting, from 1898 to 1903, was \$5.48 per ton, and by this company for 6 years ending 1909 the total mining and smelting cost per ton was \$3.56, a figure that reflects great credit upon an efficient manager and staff. For the half-year ending Mar. 30, 1916, costs were \$6 per long ton. Recent advances are due to increased underground work and cost of supplies.

Production: since the organization of the present company in 1903, average production has been 408,000 long tons yearly, while the production of blister copper has averaged 8,550 long tons. Including the production of the old company, from 1896 to Aug. 11, 1903, the total production by the company, to Mar. 31, 1917, was 6,633,972 tons of ore yielding 142,517 tons of fine copper, 11,841,771 oz. of silver, and 349,215 oz. gold. Of the total tonnage, Mt. Lyell contributed 4,743,098 tons, North Lyell 1,535,418 tons, Lyell Comstock 18,563 tons, concentrates 4,336 tons, purchased ore 165,000 tons, and metalliferous fluxes 170,476 tons.

A flotation plant was completed in Sept., 1916 and to April, 1917, 1,450 tons of 3.04% copper, 6.19 oz. silver, and 0.93 oz. gold ore from the Lyell Comstock, and 1,458 tons of 3.06% copper ore from North Lyell was treated. Concentrates assayed 2.97% copper. Recoveries were 80% copper, 74.26% silver, and 67.34% gold.

In the half-year ended Mar. 31, 1917, the smelter reduced a total of 131,679 tons of charge, yielding 2,800 tons of fine copper, 2,800 tons of silver, and 149,829 oz. silver.

The Mt. Lyell enterprise has been a financial, mining and metallurgical success. A serious handicap to its

mine worked by open cuts. Furthermore, two-thirds of the ore is lower in copper-contents than the leanest of the successful mines of the Lake Superior district, which, for 2 generations, has been treating the lowest grade copper ore in the world, until now, but highly creditable distinction, passed to the Mt. Lyell. The ore is excellent, in all departments, and the success of the mine is due to an effective combination of financial ability with high-

VICTORIA

AMALGAMATED GOLDFIELDS

VICTORIA

Bendigo, Victoria, Australia.

This company was organized in 1917 to consolidate a number of mines in the center of the Bendigo Goldfield (which has yielded 100 oz. since 1850), explore them systematically by new open-pit mining, and equip them, if warranted, with modern machinery. Operations are concentrated at a number of central points.

Production: in Sept., 1917, work was under way to a depth of 1,947' in the Gully shaft, 1,018' in the Unity, 1,264' in the Carlisle, 1,601' in the Fish, 2,040' in Koch's, 1,127' in the Northern, 2,380' in the Virginius in the Nelson, and 1,326' in the Extended Hustlers. Generally, the results have been fair.

Output: in August, 1917, was 6,694 tons of ore, yielding from 11s. 7s. (\$11.28) per ton; also 5,905 tons yielding from 8s. (\$1.92) to 10s. per ton. In the second half of August the gold output was worth about \$32,000.

Various schemes have been tried to resurrect this great goldfield and if this one does not, a rapid decline will set in.

WESTERN AUSTRALIA

AMALGAMATED GOLD MINES OF WESTERN AUSTRALIA, LTD.

WESTERN AUSTRALIA

Office: R. Davidson, sec., 20 Copthall Ave., London, E.C., England.
 Office: Kalgoorlie, W. A.

Directors: H. B. Hooper, chairman; B. Brookman, A. H. Collier, F. H. Collier, E. Hooper, H. Landau and E. T. McCarthy. D. F. McAulay,

Gen. Mgr., Dec. 19, 1894, in England. Cap., £500,000; shares £1 par; 495,364 shares. Company is largely interested in the North Thompson, Huronian and Keeley mines in Ontario, Canada.

Production: for the year ended March 31, 1917, a profit of £5,544 was made, revenue of £124,611.

Dividends: from 1898 to 1909 totaled 150%. In 1913 and 1914 2½% each year, and nothing since.

Property: 62 acres in the "Golden Mile," Kalgoorlie, W. A. It has produced a large amount of gold, especially from 1898 to 1904.

Development: by vertical shaft 2,200' and extensive workings. Reserves are difficult to estimate. Ore is a sulpho-telluride.

Equipment: complete mining, also 350-ton plant using crushers, ball mills, roasters, pans, cyaniding equipment and filter presses.

Production: now at a low point, the year ended March 31, 1917, yielded 124,611 from 93,430 tons.

GEN HORSESHOE ESTATES CO., LTD. WEST AUSTRALIA

Office: A. Swaine, Salisbury House, London, E.C., England.

Directors: Sir J. S. Purcell, chairman; R. E. Bucknall, Earl of Kenmore, H. Landau, J. F. Hooper and J. F. Hooper. J. W. Sutherland, gen.

Inc. Feb. 28, 1899, in England. **Cap.**, £1,500,000; shares £5 par; all issued. **Debentures:** £43,800 of 6% outstanding.

In 1915 a profit of £95,818 was made, dividends absorbing £82,500.

Dividends: since 1899 total 48s. 6d. per share.

Property: 24 acres of producing ground and 85 acres of other areas on the "Golden Mile," Kalgoorlie, W. A.

Development: by 2,242 and 3,114' vertical shafts and extensive workings. Reserves at end of 1915 were 764,359 tons of \$9.20 ore, which is a sulpho-telluride.

Equipment: complete modern mining machinery, including compressors, hoists, crushing plants, 170 stamps, tube mills, concentrators and cyanide plants.

Production: in 1916, 162,316 tons yielded gold worth £345,529.

This is one of Australia's big mines and has a great past record.

GREAT BOULDER PERSEVERANCE GOLD MINING CO., LTD.

WESTERN AUSTRALIA

Office: C. F. Bell, 607 Salisbury House, London, E.C., England.

Directors: P. Bright, chairman; G. S. Borwick, E. Hooper, Sir J. F. F. Horner, A. Reitlinger and W. J. Wilson.

Inc. Aug. 17, 1895, in England. **Cap.**, £1,500,000; shares £1 par; 1,400,007 issued.

Dividends: from 1897 to 1912 total £3 18s. per share on old and new companies, mostly before 1904. Since 1906 only 4s. per share.

Property: 24 acres on the "Golden Mile," Kalgoorlie, W. A.

Development: by shafts 2,230' deep. Reserves in 1915 were placed at 544,474 tons of \$5.28 and 317,480 tons of probable \$5.04 ore, which is a sulpho-telluride.

Equipment: complete and modern, with 8 ball mills, 6 roasting furnaces, 2 tube mills, 12 grinding pans, cyanide plant, and filter presses, capable of treating 650 tons per day.

Production:

	1916	1915
Ore, tons.....	194,106	239,514
Gold yield.....	£204,643	£247,470

Costs are about \$4.50 per ton.

Mine has been a great producer, but during 1917, it operated at a loss and in October it was decided to close the mine down.

GREAT BOULDER PROPRIETARY GOLD MINES, LTD.

WESTERN AUSTRALIA

Office: J. Edwards, 80 Bishopsgate, London, E.C., England.

Directors: Sir G. P. Doolette, chairman; A. Joshua, G. North and Waddington. Richard Hamilton, gen. mgr.

Inc. June 20, 1894, in England. **Cap.**, £175,000; shares 2s. par; all issued.

Statement for 1915 shows a revenue of £583,367, of which £314,000 was profit. Dividends amounted to £262,500. The reserve fund is £60,000.

Dividends: total 1,582% from 1895, to the end of 1917.

Property: 85 acres on the "Golden Mile," Kalgoorlie, W. A.

Development: by vertical shafts, 2,844, 2,879 and 2,000' deep, with extensive workings. Reserves at end of 1915 were placed at 494,504 tons averaging \$15 per ton. Exploration at depth has not been successful, the main lode passed into the Golden Horseshoe mine adjoining at the 1,800' depth.

Equipment: complete and modern, with 600-ton dry crushing and roasting plant. Ore is a sulpho-telluride.

Production:

	1916	1915	1914
Ore, tons.....	(1916)	(1915)	(1914)
Gold yield.....			

Costs are about \$6.50 per ton.

This is one of the best known, and is ably directed.

OF GWALIA, LTD. WESTERN AUSTRALIA

ice: E. Pears, sec., 20 Copthall Ave., London, E.C., England. office: Leonora, Western Australia.

ectors: D. Richards, chairman and managing; J. Barry, G. P. Doo- C. A. Moreing and T. W. Wellsted. Bewick, Moreing & Co., gen. W. A. McLeod, supt.

c. Jan. 7, 1898, in England. Cap., £350,000; shares £1 par; 325,000

i 1916 the net profit was £30,890, of which £40,625 was paid in divi- £740 carried forward.

Dividends since 1900 total 63s. per share; 2s. 6d. being paid in 1916.

roperty: 100 acres near Leonora, Western Australia. A highly profit- able property.

Development: vertical shaft 3,500' deep. Ore reserves are over

drilling, with suction gas power pans, tube mills and cyanide

Production: in 1916 was 158,956 tons, yielding 54,837 oz. gold, worth £232,924. Costs were \$4.18 per ton.

SOUTH KALGURLI CONSOLIDATED, LTD. WEST. AUSTRALIA

Office: W. Bramall, sec., 529 Salisbury House, London, E.C., England.
Mine office: Kalgoorlie, Western Australia.

Directors: A. H. Marker, chairman; J. H. Birtwistle, J. Cutcliffe, W. St. D. Griffith, C. T. Hilder, C. B. Jessop and W. W. Slater. J. M. Embleton, gen. mgr.

Inc. March 11, 1913, in England, as a consolidation of the South Kalgurli Gold Mines and Hainault Gold Mine companies. **Cap.**, £150,000; shares 10s. par; 250,007 issued.

For year ended March 31, 1916, the net profit was £16,335, plus £706 brought forward. Dividends absorbed £12,500. The sum of £4,541 was carried forward. Cash assets amounted to £38,700. In 1916-17 the profit was only \$4,050, yielding a dividend of £3,125.

Dividends: 5% in 1913-14, 7½% in 1914-15, 10% in 1915-16 and 2½% in 1916-17.

Property: 36 acres in the "Golden Mile" of Kalgoorlie, Western Australia. Claims have been productive since 1896.

Development: by vertical shafts 1,000' and 1,800' deep. Reserves, March 31, 1916, totaled 157,617 tons of \$6.14 ore and 89,095 of \$5.90 probable ore. A year later the reserve was 133,221 tons of \$5.75 ore.

Equipment: complete mining and milling plants electrically driven, the latter including crushers, ball mills, roasting furnaces, grinding pans, cyaniding apparatus and filter presses.

Production: during 21 months ended Dec. 31, 1916, 199,640 tons of ore yielded gold worth £243,710. Costs are \$5.48 per ton.

This gold mine has been a profitable producer for years, but apparently dividends will be few and far between in the future.

YUANMI GOLD MINES, LTD. WESTERN AUSTRALIA

Office: G. G. Hay, 1 London Wall Bldgs., London, E.C., England.
Mine office: L. B. Williams, mgr., Yuanmi, Western Australia.

Directors: J. H. Cordner-James, chairman; with Theodore J. Holroyd and G. G. Hay.

Inc. April 27, 1911, in England. **Cap.**, £350,000; shares £1 par. Earnings for year ended June 30, 1917, were £72,429; and ~~min~~ expenditures, £65,596; compared with £77,863 and £70,143 in 1915-16.

Dividends: were 12½% in 1912-13, 5% in 1913-14 and none since.

Property: 218 acres in the East Murchison goldfield, W. A. Ore is a sulphide and reserves are estimated at 46,481 tons averaging 34 s. (\$13.94) per ton.

Development: by 680' incline shaft, and considerable openings.

Equipment: 80-ton plant, including ball mill, roasters and cyanide plant. To treat the oxide ore, company originally had a 10-stamp mill and cyanide plant.

Recent results have not been of encouraging character.

NEW CALEDONIA

CHROME CO., LTD.

NEW CALEDONIA

Office: H. W. C. D. **Directors:** E. The

and F. M. Singer.

Inc. Feb. 1, 1911, **sued.** Debentures: £800,000

809, less £9,500 for div

Dividends: 5% in 1911

Property: Chrome mines, Australia.

Production: 61,116 tons in 1916.

: Dec. 7, 1887, in England. Cap., £500,000; shares £1 par; 495,907

alance sheet for 1915 shows a gross profit of £160,858, from which
educted £99,181 for dividends, £24,965 for taxes, £21,840 for deprecia-
tc.; £13,277 was carried forward. Reserve fund amounts to £90,000.
vidends: since 1893 total £11 10s. per £1 share, the highest being
1909, and the last four years paying 4s. each.

roperty: 518 acres of mining claims, 3 large millsites, extensive timber
power sites, etc., at Waihi and adjacent areas, New Zealand. Mine
ed an interesting history; was one of the first in the world to use
ty and has produced over £6,000,000 of gold and silver.

development of 4 shafts, deepest over 1,300'; two are equipped with
pumping plants. Reserves estimated at 1,479,948
and arches.

mine plant, 6-mile railway, 50-mile transmis-
river, one 40-stamp, one 90-stamp,
and electricity; also sand, slime,

Production: in 1916 was £327,506 from 194,231 tons. Ore yields silver and gold in the proportion of about 5 to 1.

WAIHI GRAND JUNCTION GOLD CO., LTD. NEW ZEALAND

Office: S. Leah, 10 Throgmorton St., London, E.C., England.

Directors: H. D. Bishopp, chairman, G. H. Earle, S. Lee, and R. J. Rothwell. W. McConachie, mine mgr.

Inc. Dec. 29, 1897, in England. **Cap.,** £400,000; shares £1 par; 300,000 issued.

Statement for 1915 shows a profit of £39,344, of which £38,417 was paid in dividends. Cash was £43,943; investments, £59,668; reserves, £30,000; accounts payable, £12,807. Since 1910 company has paid 50% in dividends.

Property: 280 acres of mining land, and a timber area, at Waihi, New Zealand.

Development: since about 1893 this has been under way to cut an extension of the Waihi company's lodes, which were not found until a depth of under 500'. Considerable water was encountered. The main shaft is 1,336' deep. Reserves are given as 136,400 tons.

Equipment: complete power and mining plants, with 60-stamp mill, 2 tube mills and cyanide plant.

Production: in 1916 about 115,000 tons yielded gold and silver valued at £194,461.

Sept. 8, 1899, in Del. Cap., \$4,000,000 Com. and \$1,000,000 6%
 Pfd.; outstanding, \$3,880,000 Com. and \$1,000,000 Pfd.; par \$25.
 Regt.: Old Colony Trust Co., Boston; registrar, American Trust
 Co., N. Y. C. No dividends on Pfd. since May, 1911, when semi-annual
 of 3% was paid. Annual meeting, 3d Monday in Dec. Listed on
 New York Stock Exchange.

Outstanding debt: \$374,000 1-year 6% gold notes; dated May 1, 1915; due
 May 1, 1916; int. payable May and Nov. 1st, at company's office. Coupon
 \$500, and \$1,000. Issued in exchange for \$353,300 1-year 6% notes
 dated May 1, 1915, callable at par and interest on any interest date on 4 weeks'
 \$76,000 2-year convertible 6% notes; dated May 1, 1914, due May
 1, 1916, int. payable May and Nov. 1st, at company's office. Coupon \$100,
 and \$1,000. Convertible at maturity at option of holder into Com.
 stock. Issued to retire \$461,200 3-year 6% notes which matured May 1,

1916. Balance-sheet for year ending Dec. 31, 1916, shows assets \$6,452,165,
 including cost of property, \$3,519,833; mine equipment, \$1,506,309;
 \$159,265; cash, \$119,288; bullion, \$124,354; accounts and notes re-
 ceivable, \$38,876; profit and loss, \$977,474. Liabilities include notes payable,
 \$374,000; current liabilities, \$158,063; compared with \$240,570 in 1915.
 Income account for 1916 shows: surplus from operations, \$244,951, com-
 pared with deficit of \$9,244 in 1915; interest charges, \$79,562; surplus for
 1916, \$165,389, as compared with deficit of \$87,789 in 1915. Total deficit
 for 1916, \$977,474, as compared with \$1,006,369 the previous year.

Property: Company acquired the properties of the Guanacaste Syn-
 dicate from the Guacimal Expl. Co. After obtaining possession of three-fifths of
 the capital stock of the Costa Rica Esperanza Mng. Co. in exchange for
 the Abangarez Co., Dec., 31, 1909, acquired the balance of the stock
 and one share of Abangarez and \$1.87 in cash for each share of Costa
 Rica Esperanza. Owns mining properties in full operation covering 118
 acres in the province of Guanacaste, Costa Rica, C. A. The ore de-
 posited at Majica Creek on the Tres Hermanos Lode is transported by
 a tramway to the Abangarez mill. Also owns a power plant in the
 Rio San Juan River, 12 miles from the mill.

Production and marketing.

MINERALS SEPARATION, LTD.

ENGLAND

Sec. and officers: A. O. Williams, 62 London Wall, E. C., England.

Directors: J. Ballot, chairman and managing director; J. H. Curle, F. L. Gibbs, Dr. S. Gregory, H. A. Krohn, W. W. Webster.

Inc. in 1903 to carry on metallurgical operations. Cap., £50,000; shares £1 par; all issued and fully paid.

Annual report: for 1915, submitted Dec. 28, 1916, shows a profit of £22,302; balance forward, £55,014; cash, £19,463; investments, £83,343; creditors, £14,827; debtors, £22,995; share premium account, £19,944.

The chief assets of the company are a number of patents (said to be over 50) for flotation processes and machines for recovery of concentrates from silver and lead, zinc, copper, and other ores. The use of flotation has been as great an advance in the treatment of zinc and copper ores as the cyanide process has been for gold ores. United States, Canadian, and Mexican Minerals Separation patents are owned by Minerals Separation North American Corporation, which see.

ORE CONCENTRATION CO. (1905), LTD.

ENGLAND

(Elmore Process Co.)

Office: 701 Salisbury House, London, Eng. Managing directors: Alex. Stanley Elmore, chairman, and F. E. Elmore; Walter McDermott and B. C. Hinman, directors. J. A. Stecker, sec.

Inc. Nov. 18, 1905, in Great Britain. Cap., 230,000 ord. shares of £1 each, 224,544 issued, and 20,000 pfd. of £1 each, 8,795 issued.

Company owns the Elmore patents in certain parts of the world, for concentration of ores by the use of oil, and has installed plants at low grade copper properties in many parts of the world.

TINCROFT MINES, LTD.

ENGLAND

Office: Wm. Thomas, mgr., Carn Brea, Cornwall. F. E. Martin, sec.

Directors: Jas. Wickett, chairman; T. R. Bolitho, J. Gilbert and H. Bolitho.

Inc. May 20, 1900, in England. Cap., £37,000, in 50,000 priority and 100,000 ord. 5s shares, of which 38,607 and 96,953, respectively, are issued. Debentures: £30,000 authorized, of which £10,000 have been issued.

Statement for 1916 shows earnings from ore sales of £77,846. Operations cost £72,844. Deducting "lord's royalties" (owners), etc., there was a loss of £1,191 for the year. Since 1900 profits and losses have been very erratic, but about balanced one another.

Dividends: priority shares received 10% in 1907, 5% in 1912 and 1913.

Property: 142 acres at Carn Brea, Cornwall, shows a lode, 3' to 27' wide, dipping 60°, and opened to a depth of 1,248' in granite. Ore carries arsenic, copper, tin and wolfram. Reserves are about 80,000 tons.

Equipment: includes beam hoist, 2 Cornish pumps, motor driven Ingersoll-Rand compressor and 200-ton dressing plant.

Production:

	Ore Treated	Arsenic tons	Copper lbs.	Tin lbs.	Wolfram tons	Yield p. t. ore	Cost p. L. ore

es to the amount of 2,000,000 marks, and a new issue of were authorized 1908, to provide for the deepening of and enlarging of the electric plants at the Krughütte and orks, construction of new copper and brass works at er improvements.

ed are upwards of 22,000 men, and exclusive of the West-averaged 19,735 men 1912, of whom about 70% were em- s and 13% at the smelters.

extensive, including besides the Mansfeld copper mine, Westphalia, and a potash bed near Wansleben, opened has been in operation since 1903. Landed holdings also e tracts of forest.

s at Langendreer, near Hamm, Westfalen, include sev- es, with 4 operating shafts, and in connection is a coke ,000 metric tons yearly capacity, production averaging tons of coal and coke daily. There are 2 crushing plants, and the other at Rothenberg.

mine was opened A. D. 1199, was immensely profitable th and fifteenth centuries, but the industry nearly suf- ring the Thirty Years' War. Activity was resumed in t of working the mines was declared free, this resulting of a great number of small independent operators. The as first formed 1852, as a consolidation of the various rs and smelters, and the merging of many small inter- n a nearly seventeenfold increase of production, from e copper and 6,489 kilograms silver in 1852.

incipal orebody of the Mansfeld mines is the kupfer- ed bituminous shale, lying nearly horizontal, having a y, with average thickness of 1', of which only 8" are ing several hundred square miles. The principal ore is s chalcopryrite, bornite and chalcocite, occurring as in very fine grains through the kupferschiefer. Lying rschiefer is an arenaceous shale, carrying chalcopryrite. tly cupriferous limestone bed, known as the Dachberg- arries 2.9 to 10% copper, and ores smelted average 2.5 15 to 0.020% silver.

een modernized in methods and equipment since the t century. Owing to the great age and extent of the dings usually were 2 to 4 kilometers from the shafts, ing was done under considerable disadvantages, the and the great extent of the workings rendering it to work on their sides, stomachs or backs, as in coal s upon their trunks and thighs, in order to protect ock floors. Recent mining operations are through a hoisting shafts, intersecting the kupferschiefer at meters. Three other shafts reach the seam at still of these also intersect a bed of excellent carnalite- ircular, 6 meters in diameter, with a lining of brick, any of the scores of old shafts which average about e used for ventilation, safety and raising water. The e the Hohenthal, at Hebra, the Herman, at Helita, orf. All new shafts have steel headframes. Under- y done by h^orees has been supplanted by electric workings. Ore is hand-sorted on reaching sur- terable limestone, is used for under-

Water from the entire mine is drained to the Hohenthal, Ernst and Niewandth shafts, whence it is raised by steam and electric pumps to the main adit, 150 meters below surface.

Equipment: is very complete. The shafts have mainly cross-compound steam hoists, with conical drums for deep winding, but the Hermann and Paul shafts and the newer exploratory shafts have electric hoists employing the Igner system of balancing. All hoisting is done by double-deck cages, raising 4 trucks. Electric power is used extensively and increasingly, and this is developed mainly from gas installations, with power stations at the Krughütte and Kupferkammer reduction plants.

The company maintains independent machine shops, capable of repairing or building any mining or pumping machinery in use, and also has extensive smithies and wood-working shops.

The Krughütte gas power station has two 1,300-h. p. units, the blast furnaces being connected with 2 parallel gas trunks, taking blast gases to a purifier house, where there are Zschokke and Theisen centrifugal washers through which the gas passes, and is then dried by passing through a Theisen vapor separator, going thence to a gasometer of 500 cubic metres capacity, from whence it is drawn, as required, to two 1,300-h. p. Gebläuser gas engines, direct-connected to a Siemens-Schuckert 3-phase alternator of revolving field type. Current is transmitted to various works at 3,000 to 10,000 volts, and there stepped down for use.

Transportation is by railway lines and a number of Otto aerial trams, the Hermann mine having a 7-kilometer electric aerial tram.

The Mansfeld has numerous reduction plants, including 2 smelters for raw ores, 2 roasting smelters with acid plants, 2 matte smelting works and a desilverizing plant, the various works having a total of 13 reverberatory furnaces.

The method of reduction is by heap roasting, and calcining in shaft furnaces. Roast heaps are built about 1,000 meters long, 6.5 meters broad at the bottom and 3.5 meters broad at the top, and 2 meters high. The only fuel used is a little brushwood, at the edges and bottoms of heaps, and each heap is roasted about 4 weeks. If the ore carries any fines, these are screened, briquetted and added to the roast heaps. Roasting reduces the wet 7 to 10% in weight, and is more for the elimination of carbon dioxide and bituminous matter than to throw off sulphur, the latter running only 2 to 3% in the raw ore, while the bituminous matter ranges 10 to 11%, and carbon dioxide 7 to 13%. There are 2 roast stalls near the shafts, and at the furnaces the first-fusion product is a matte carrying 40% copper and 0.25% silver. This matte is broken up and roasted in 2 calcining kilns, and the roasted matte, with the addition of 5 to 10% raw matte, is smelted in reverberatory furnaces to white metal carrying 74 to 75% copper and 0.44 to 0.50% silver. The slags from the white metal carry 4 to 6% copper and are returned to the shaft furnaces. Slag is utilized extensively for the manufacture of slag brick and paving blocks. The white metal is ground in Krupp ball mills and sent to the Saigerhütte refinery.

The Kochhütte, at Helbra, is the principal smelter, treating about one-fifth of the total production. There are 9 furnaces, 1 held in reserve, of circular shaft type, using cold blast.

The Krughütte treats about two-fifths of the total production. The plant, at Eisleben, near the mines, has 6 furnaces, 1 being held in reserve, of circular shaft type, with blast.

The Kupferkammer plant, at Mansfeld, has 2 furnaces, of circular shaft type, using cold blast, and lead matte. The plant is connected with the Krughütte by an acid channel.

The Kupferkammer plant, at Mansfeld, has 2 furnaces, of circular shaft type, but, unlike the Krughütte, it has no blast. The plant is connected with the Krughütte by an acid channel, and is situated 30 meters

esbelohnunghütte is one of the smaller and less modern smelt-
 nt consisting of 13 small reverberatory furnaces, 17 roasting
 2 small furnaces for refining slags.

gerhütte is mainly a refinery, including a desilverizing plant,
 the Ziervogel process, which roasts the matte and retains the
 sulphate which is dissolved in water and the solution run over
 per, which precipitates the silver, the cement silver so secured
 d and resmelted to metal 999 fine. The final furnaces product,
 traction of the silver, is blister copper of 99.7 to 99.8% tenor.

ion: which was only 5,865,898 lbs. in 1867, increased to 15,230,287
 to 29,176,000 lbs. in 1887, and 40,230,400 lbs. in 1897. Recent
 has been as follows: 42,500,278 lbs. in 1903; 41,629,349 lbs. in
 ,141 lbs. in 1905; 40,108,000 lbs. in 1906; 38,822,000 lbs. in 1907;
 s. in 1908; 41,891,400 lbs. in 1909; 44,769,800 lbs. in 1910; 45,955,-
 1911; 45,188,600 lbs. in 1912. Production in 1912 was secured
 15 metric tons of cupriferos material smelted. Estimates place
 eld as 44,100,000 lbs., and in 1916, 59,000,000 lbs.

ansfield is handled with high technical skill, and its orebodies,
 of their vast extent, are among the largest known.

PORTUGAL

MASON & BARRY, LTD.

PORTUGAL

Office: 87 Cannon St., London, E.C., Eng. **Mine office:** Pomarac, Alemtejo, Portugal. **Jas. Francis Mason**, chairman; **D. H. Barry**, deputy chairman; **Edw. O. Barry**, managing director; **preceding officers**, **Henry E. Beddington** and **Francis Ricardo**, directors; **Philip O'D. Greene**, sec.; **Wm. Neville**, resident administrator.

Inc. June, 1878, in Great Britain and reorganized **June 2, 1892**. **Cap.** £210,000; **shares** £1 par; **issued**, £185,172.

Net profits were £68,325 in 1906; £66,135 in 1907; £56,701 in 1908; £30,934 in 1909; £65,458 in 1910; £64,546 in 1911; £85,665 in 1912; £76,211 in 1913; £31,338 in 1914; £59,737 in 1915; £99,167 in 1916.

Balance sheet for 1916 shows profit of £99,167, of which £83,227 was distributed, equal to 45%. Amount forwarded to 1917 was £36,138, inclusive of balance from 1915.

Dividends: paid regularly since organization, ranging from 2s. to 13s. per share. Recent dividends have been as follows: 13s. in 1901, 11s. in 1902, 7s. in 1903, 7s. in 1904, 7s. in 1905, 7s. in 1906, 6s. in 1907, 6s. in 1908, 5s. in 1909, 6s. in 1910, 6s. in 1911, 7s. in 1912, 7s. in 1913, 3s. in 1914, 6s. in 1915, 9s. in 1916; all less income tax. Total to date, £1,453,592, plus return of capital £740,688.

The company has a staff pension fund.

Company was formed to acquire the lease on the San Domingos copper and sulphur mine at Mertola, Portugal, just over the border of Spain, and in the same belt of pyrite deposits as the Rio Tinto, Tharsis and others. The mine had then been worked since 1858.

The report for 1916 shows that 193,127 tons of pyrite was mined, and that the shipments of raw and washed ore were 202,176 tons. No details are given as to the production of copper or as to the nature of the ore mined and shipped.

Lands are held by lease for a 50-year term, ending Oct., 1958. The property originally was opened and worked extensively by the Romans. Development is by several shafts, deepest level being at 300 meters from surface. A mineral zone of about 200' width, and proven length of 2,000', carries lenses of cupriferous pyrite averaging slightly under 1% copper and about 50% sulphur, the principal values being in sulphur rather than in copper. With increasing depth copper values have decreased slowly but steadily.

Ore reserves: were 6,400,000 long tons at the end of 1916.

Ore is leached for copper values on the same general plan as at the Rio Tinto and at end of 1916 there were 480,000 tons in stock containing 1,400 tons of fine copper. Metal from precipitate in 1916 was 908 tons. Sulphur ore is shipped to various works in Europe and America for burning.

The company owns a railway to Pomarac, a tide-water port on the Rio Guadiana, where there is a shipping pier and tugs.

Production of copper was 3,353,299 lbs. in 1901, and recent production has been 4,505,711 lbs. in 1902, 5,088,329 lbs. in 1903, 5,519,360 lbs. in 1904, 5,299,520 lbs. in 1905, 5,661,330 lbs. in 1906, 5,299,520 lbs. in 1907, 5,661,330 lbs. in 1908, 5,299,520 lbs. in 1909, 5,661,330 lbs. in 1910, 5,299,520 lbs. in 1911, 5,661,330 lbs. in 1912, 5,299,520 lbs. in 1913, 5,661,330 lbs. in 1914, 5,299,520 lbs. in 1915, and 5,661,330 lbs. in 1916. Total 202,176 tons ore.

The company is also an important producer of sulphur, and has a considerable amount of profit from the sale of sulphur.

 Mining & Development Co.

ty: 4 groups, bought of the Fiskars Aktiebolag, including mineral
 hout royalty, to all ores and minerals except iron ore, for the
 ate of about 90 sq. miles and an additional tract, adjoining the
 mine, was bought, 1910, from the same company. Property has
 r and rail transportation. Is now idle.

Orijarvi mine, about 50 miles from Helsingfors, which is the prin-
 erty, was opened A. D., 1757, and mining was continued without
 on until 1875. The property is popularly credited with an output
 100 in copper and silver. The Orijarvi shows slight surface indica-
 the large orebodies below; these lying in silicious limestone near
 tive quartz-diorite contact, ore being chalcopryrite, sphalerite and
 galena, all more or less auriferous and argentiferous, associated
 chotite. The Orijarvi tract is a parallelogram of approximately 2 by
 and the old mine was opened very peculiarly, by a series of trun-
 nical caves, with apexes at surface, openings gradually increasing
 ter with depth, there being no drifting. The old workings show
 p to 60' wide. Diamond-drill borings, with 8 holes, have shown the
 s to continue beneath the bottom of the old workings. The mine
 shafts, deepest 500', with levels at 100' intervals. The old stockpile
 upwards of 30,000 tons of zinc and lead ores discarded from previ-
 ations, but probably of present value, as a zinc smelter could be
 a reasonable cost if shipping were found impracticable. Equipment
 Orijarvi includes a steam plant with a good modern hoist and air
 ssot.

Illijarvi mine, 3 sq. miles, bought 1909, adjoins the Orijarvi. The
 rkings, about one-half mile from the Orijarvi mine, show a well
 ized vein, carrying silicious chalcopryrite, similar to that of the Ori-
 ut with higher gold values.

the Hokka and Kykka mines are included in the mineral claims taken
 1909 near the Illijarvi. The Hokka mine, carrying a continuation of
 rijarvi orebody, was opened 1850, and has two 125' shafts, developing
 y argentiferous and auriferous chalcopryrite of good average tenor,
 quartz gangue. The company has made 650' of new openings on this

The Kykka shows conditions much similar to the Hokka.

mine, 4 miles from the Orijarvi, in the parish of Johja,
 of 30 sq. miles, with mineral rights to the entire

: initial dividend paid in Dec., 1912, equal to 5%, total in 1912, 1913, 5% in 1914, 10% in 1915 (paid in Nov., 1916, and calculational rate of exchange for the ruble.)

heet for year ended Jan. 13, 1916, submitted Nov. 16, 1916, on the war, shows a profit of £111,278, which with previous balance available £257,064. After paying dividend of £83,616, and taxes balance for 1916-17 was £136,419. The Kyshtim Mining Works shows a gross trading profit of 4,397,445 rubles, of which 219,873 rubles to reserve, 1,947,760 rubles to depreciation, leaving 2,229,813 rubles. Out of this taxes are estimated at 760,000 rubles, and 1,067,623 rubles reserved for loss in exchange. The war has greatly affected the Kyshtim, the great copper producer.

Area: 2,198 sq. miles, or 1,406,700 acres, the mineral lands covering 1,000,000 acres, the remainder being farm and forest areas, all situated in the Government of Perm, southern Urals, Russia. The copper mines are in the Government of Kyshtim, connected by company's own line to the Government of Perm. The iron mines are of importance, and the timber is used for mining purposes, also sold to the public.

Other copper mines are the Amerikansky, Ivanoff, Kaniukoff, Smirnov, and Sibirsk. Ore reserves in these are given as 3,148,000 tons, average yield of copper, an increase of 845,000 for the year.

Geology: as described by A. W. Stickney, the pyritic ore deposits of the Kyshtim are a compact, dense, massive aggregate of granular pyrite, barite, and quartz, carrying irregular blotches, streaks, and minute grains of chalcophalerite, and tennantite. The evidence indicates that the ore is of the metasomatic replacement of alternating bands of a sheared schist by a rather fine-grained, cracked, and broken pyrite, anorthite, and quartz. This granular aggregate contained considerable interstitial space, which was later filled by contemporaneous chalcophalerite, and tennantite. Tennantite probably also marks a slight change in the primary mineralization, and with it are contemporaneous chalcopyrite and quartz of a second generation. The content of the sulphide minerals is one of decreasing iron and increasing copper content. The orebodies, as viewed in a vertical section, normally consist of distinct, roughly horizontal and parallel zones. From the outcrop surface they may be designated as: (1) the gossan zone, which extends to a maximum depth of 60'; (2) the zone of loose baritic material, extending from the bottom of the gossan to a maximum depth of 150', the upper part of which lies beneath the level of the ground-water; (3) the zone of leached sulphides, which reach from the bottom of the baritic zone to a maximum depth of 180', where they gradually pass into (4) the zone of hard, firm, massive, mainly unaltered sulphide ore. Downward extension of secondary sulphide does not occur in the form of a shallow, developed, commercially important, horizontal zone, typical of many localities, but has taken place to a relatively slight degree along the hanging wall, especially the hanging wall, to the greatest depth yet attained by exploration, which is 600' below the ground-water level.

Equipment: complete mine plants, also smelter at Karavash capable of producing 10,000 tons of copper yearly. There are 3 blast-furnaces of 400-ton capacity each, 1 reverberatory-furnace for fines and flue-dust and a gas, regenerative-type reverberatory for fine ore. Company has an electrolytic refinery at Kyshtim, where it also treats blister copper from other companies.

Production: 1914, about 15,726,000 lbs. monthly; 1915, 18,229,000 lbs., 1916, 18,000 lbs. and in 1917, about 1,000,000 lbs. Gold and silver yield is considerable.

GOLDFIELDS, LTD.

RUSSIA

15, Abchurch Lane, London, E.C.4, England. Agency: Messrs. Goldfields, Ltd., Nevsky 19, Petrograd, Russia.

Chairman; A. Wischenegradski, vice-chairman;

The accounts for 1916 show a net profit of £64,933, out of which £31,248 was paid as dividend. The remainder was added to the balance in hand, which now stands at £59,837.

Company was formed in London in 1900 to acquire a copper and sulphur mine in the south of Spain that had, for two or three years previously, been worked by a Belgian company. Small dividends were paid from 1901 to 1906, but subsequently condition became less favorable. About six years ago the contract with the Rio Tinto company in connection with railway transport to the coast was terminated, and an independent branch railway to the mine was constructed. During the period of building, deliveries of ore were suspended. The railway was opened in 1914, and since that time the position of the company has steadily improved. Report for 1916 shows that 161,283 tons of ore was raised, as compared with 122,120 tons in 1915; of this amount 53,729 tons was added to the leaching floors, and 107,554 tons was placed for export. The deliveries during the year were 30,766 tons of cupreous ore, 67,527 tons of non-cupreous ore, and 112,145 tons of washed ore. The yield of copper precipitate contained 598 tons of fine copper.

Property: 4,724 acres, the Pena del Hierro group of 17 old mines, 2 miles N. E. of the Rio Tinto mine. Ore extraction is by open quarry work, the over-burden being stripped.

Production:

Year.	Tons. mined.	Ore shipped, tons.	Copper recov'd, tons.	Ore on dumps, tons.
1910	132,559	144,810	1,017	529,000
1911	131,367	124,323	1,004	500,714
1912	84,698	80,844	793	511,700
1913	68,759	5,734	703	380,800
1914	58,832	31,028	597	613,640
1915	122,120	140,616	607	389,000

RIO TINTO CO., LTD.

Secretary and offices: J. Gordon Macleod, 3 Lombard St., London, E.C. England. Mine, at Rio Tinto, Huelva, Spain. **Works office:** Port Talbot, South Wales.

Officers: Chas. Wm. Fielding, chairman; Rt. Hon. Earl of Denbigh and John M. Macdonald, directors; Turquand, Youngs & Co., auditors; Walter J. Browning, mine mgr.

Inc. March 29, 1873, in Great Britain. **Cap.** £3,500,000; increased, November, 1905, from £3,250,000, shares £5 par, in £1,625,000 cumulative 5% preference shares and £1,875,000 ordinary shares, fully issued and paid. The new issue of 50,000 ordinary shares, par £5, was sold to shareholders at £6 per share, netting the company £3,150,000, for the redemption of an outstanding bond issue of £2,989,740, at 4%, which was fully retired. Transfer from common; fee, 2s. 6d.; warrants to bearer are issued in denominations of 1, 5, 10 and 25 shares, fee 1s. per warrant, fee for conversion into registered shares, 2s. 6d. per certificate. Stock Exchange settlement; all shares quoted in the official list. Fiscal year ends with the calendar year; accounts issued in April, and an interim semi-yearly report is issued in October. Dividends are payable in Paris by the Société Générale, 29 Boulevard Haussmann.

Accounts for 1916 showed a gross profit on sales of £2,163,650, compared with £1,291,290 in 1915, and a net profit of £2,145,830. Balance forward £283,330. Dividends, was £283,330.

Dividends have been paid continuously, varying greatly, but the old ordinary shares of £10 per share were in 1906. On the present of £10 per share, from 40% in 1906, to 110% in 1916. The company has seriously had to be interested. In 1916, of £3,600,000 first mortgage.

SPAIN

annual redemption, which would have extinguished the mortgage, by the issue of new share capital November, 1905, floated at a premium of 1,160%, the company placed itself in a financial position, the credit for this able stroke of finance mainly to Mr. Fielding. Recent dividends on ordinary shares as follows: £3 12s. 6d., or 72½%, for 1901; £2 10s., or 50%, or 70%, for 1903; £3 10s., or 70%, for 1904; £4, or 80%, for 1906; £4 7s. 6d., or 87½%, for 1907; £2 15s., or 55%, for 1909, with an interim dividend of £2 10s. for 1910; £4 10s. in 1912; £3 15s. in 1913; £1 15s. in 1914; 15s. for ordinary and 5s. for preferred in 1916; and £2 5s. The company has a reserve fund of £500,000, of which £100,000 are in choice selected shares. 4,710 acres were secured from the Government. Mining operations are conducted in an area of miles.

1916 shows assets totaling £6,520,537, represented by 1,27; ore in process, £1,150,004; stores in Spain, £498,132; tools, £594,195; staff provident fund, £148,304; war loan, £781,637.

Tinto is the Methuselah of all known mines. The first point of the mines dates from the eleventh century before Phœnicians traded in copper made from its ores. Caris young offspring of Tyre, succeeded to the hegemony, and worked the Rio Tinto mines extensively for several centuries, displaced, in turn, by the Romans, after the repulse of the Carthaginian invasion, and the total overthrow of the Carthaginian empire. Tinto was worked by the Romans for centuries upon a declining scale, and after the decadence of the Roman power the mine fell into the hands of the Goths. Again the fortunes of the Iberian peninsula to new masters and the Moors in turn worked the mine. Following the reconquest of the Moors from southern Spain by Ferdinand and Isabella the mine was worked by the Spanish and were reopened by them very early in the sixteenth century. The Spaniards, while among the world's pioneers of silver and gold mining in both North and South America, never paid close attention to copper or iron, and, even at Rio Tinto, although the property of the Spanish Crown, was not worked with any success until the nineteenth century, when it was worked most successfully during the nineteenth century, by foreigners, as it is to this day. In the nineteenth century the mine became a considerable producer, and was worked by a Swedish engineer named Wolters, and after his death in 1857, under the direction of a French metallurgist named Leclapart. In the nineteenth century the mine was leased from the crown by several mining adventurers, of whom the leading spirit was Lady Isabella. During the chaotic period of the French invasion, in the nineteenth century, the mine was abandoned, and, after being reconquered by the Spanish Crown, was worked in a small way only. In 1873 the mine was under the management of various lessees, and in 1873 to Matheson & Co., of London, for 92,800,000 francs. The present company, which has proven one of the most successful mining corporations in existence.

The mining and smelting operations of the ancients are very remarkable. The late Don Gonzalo Tarrin, who was a member of the company and was closely connected with the mine, in his very able work, "Memorias," estimates that the scoria remaining from ancient smelting operations, at Rio Tinto, is not less than thirty million metric tons. The property and its history and his opportunities for working these figures were perhaps better than those of any other mine. The piles left by the Phœnicians is a

alance either leached or sent abroad. The ores average 4
 he zone of secondary enrichment, and with depth decline
 , until at about 1,000' depth the average copper tenor is
 The main orebody is cupriferous pyrite, carrying copper
 ute grains of chalcocite and chalcopyrite. Owing to the
 y rich in sulphur the shipping ores of the Rio Tinto are
 and in addition to supplying various British works the
 l washed sulphur ore in large quantities to Germany,
 and a number of acid works in the United States. The
 he mine are estimated to carry about 150,000 long tons

Rio Tinto has 3 mineral zones, carrying a succession of
 known as the South or Nerva lode, the San Dionisio or
 ie North lode, in addition to which there are 2 smaller
 jacent to the North lode, which also are being worked
 e 5 different mines, of which 4 are worked opencast and
 he underground mine is worked pillar-and-stall, with
 f 12½ meters, levels being opened 4 meters high and the
 into galleries and crosscuts of 4x4 meters, leaving pil-
 which is not an entirely satisfactory method of extrac-
 oes more ore in the pillars than is mined.

io mine, the westernmost and deepest of the group, has
 00' depth. The work of changing over the San Dionisio
 tion was begun 1907, and completed 1911. The over-
 rincipally of porphyry and slate, was removed by steam
 through tunnels on the different levels, similar work
 South lode opencast extension. Ore will be mined by
 ; great a depth as practicable, below which it will be
 y shafts to the lowest tunnel level. The San Dionisio
 hief source of ore supply for several decades to come
 planned systematically for 10 years in advance.

mined is hauled out through tunnels without the need
 . The lowest tunnel now in use for the 2 main lodes,
 io, has not proven deep enough and management plans
 , 200' below the present one, which will be 3 miles long,
 4 years for completion.

le mining has been done by open pit workings which
 tage of giving complete extraction of the ore, and also
 l in tonnage costs in the long run, though requiring
 nditures for the removal of overburden. Fortunately,
 s of the company permit the outlay of vast sums, the
 ll not be repaid for many years, but which eventually
 ull with very handsome interest. The possibility of
 tem for underground mining was considered, but an
 eached. Timber is scarce and high-priced. The depth
 about 600' and beyond the great pit the immense ore-
 drift-stopes, the capping being blasted and sent down
 old the ground as the ore is removed. Steam shovels
 d manual labor to a considerable extent in opencast

entral electric power plant, installed 1908, replaced a
 cal steam installations. The mining equipment is ade-
 xtraction being mainly opencast the Rio Tinto lacks
 scular mining machinery found at many other great
 eels no lack of enterprise, but owing to the com-
 equiring the minimum of such costly ma-

leaching bed, precipitation plant
 cribed at length in the chap-
 y rainfall of the Sierra

elding about 730,000 long tons fine copper. No production figures are available since 1913, on account of war reasons, but considering strikes and temporarily reduced yields, these figures are approximately correct. In 1913 there was shipped 652,168 tons of pyrite, while 1,207,403 tons of 2.19% ore was treated at the mines. This total of 1,859,571 tons compares with 1,069,969 tons in 1912; respective copper outputs were 44,978,880 and 57,395,000 lbs.

Average cost, formerly about 7 cts. per lb., now is only 6 cts. per lb. finished copper, after deducting revenues from sulphur sold and miscellaneous sources. The management of the company is first rate both technically and financially, and the mine itself, after 3,000 years of production, requires no commendation.

Officers: C. C. D'Anvers, chairman; H. Barrett, A. Harter, R. B. Levy, Paisant, E. Porges and C. A. Massaouti, directors; J. F. Allen, con. eng.
 Inc. Oct. 12, 1904, in Great Britain. Cap., £150,000, shares £1 par; increased, November, 1908, to £200,000; fully issued and fully paid. A former debenture issue of £75,000, at 6%, was redeemed, 1905. Dividends were 18¾% in 1906, 7½% in 1912, 7½% in 1913, and 5% in 1914.

Accounts for 1915 show a profit of £2,072, but deducting £3,907 for development charges, there was a loss of £1,835. Previous balance, including reserve, was £35,258, and owing to over-valuation of ore dumps, was reduced to £1,910.

Property: 1,900 acres, including the San Miguel and adjoining mines containing cupriferous pyrites. The property was worked for some years by Sociedad Miniera de San Miguel de Huelva, a Portuguese company, until taken over in 1904 by the present owners. In 1907 the opencast levels of the mine caved, since which time production has been limited to underground ore extraction. The mine has ore reserves, estimated, 1912, at 700,000 long tons, and in addition there are about 450,000 tons of partly leached ore surface, in heaps. Underground ore reserves are estimated at 2.5% per tenor.

The company owns a 12-mile private railway, built at a cost of £40,000, from Almonaster to El Cerro, connecting at the latter point with the Ferrocarril Zafra y Huelva.

Production: 1,612,800 lbs. copper in 1904, 978,880 lbs. in 1906, 797,440 lbs. in 1907, 1,124,480 lbs. in 1908, 1,438,080 lbs. in 1909, 1,635,200 lbs. in 1910, 9,280 lbs. in 1911, 1,422,400 lbs. in 1912, 1,379,840 lbs. in 1913, 952,000 lbs. in 1914; 1,252,160 lbs. in 1915.

In 1915 the mine produced 26,834 tons of ore, of which 13,077 tons were sorted, and 13,757 tons added to heaps for leaching. In 10 years the mine produced 590,000 tons of ore.

 of the
 d.

In addition to dividend disbursements, the company has written off sums aggregating £2,600,114, and on Dec. 31, 1916, had £811,444 in cash and securities. Net profits of operations have ranged from a minimum of £27,052 in 1868, to a maximum of £478,878 in 1899, with £162,743 in 1909, £161,211 in 1910, £188,140 in 1911, £253,066 in 1912, £246,727 in 1913, £156,310 in 1914, £103,291 in 1915, and £199,150 in 1916.

Property: company owns a number of cupreous and iron pyrite mines in the province of Huelva, Spain, some of which were worked in ancient times by the Romans, and possibly by the Phœnicians before them.

At the present time its supplies of ore are principally drawn from the Calañas, or La Zarza, mine, from which 389,197 tons of sulphur ore were extracted in 1916. This mine has been systematically developed at depth, and many million tons of ore are now awaiting extraction. The depth of the orebody is still undetermined.

In the earlier years of the company, the Tharsis group of mines was its principal source of supply, but the richer ores of that property becoming exhausted, the Calañas mine became the mainstay of the company's prosperity. Now that the demand for sulphur is increasing, the company during the last few years has been preparing on a large scale for the renewal of extraction from the Tharsis group. The Tharsis mines still contain many million tons of pyrite, of low copper but high sulphur contents, and the company will shortly be in a position to again supply large quantities annually from that source. In order to cope with the large anticipated increase in the traffic, an extension of the company's pier at Huelva has been authorized by the Spanish Government.

The company also owns the Almagrera and Lagunazo mines, both within a few miles from the Tharsis group.

The Tharsis group is connected with the port of Huelva by the company's railway, 29 miles long, from which a branch line, 18 miles, runs to the Calañas mine; and when the new pier extension is completed, the company will be in an exceptionally good position as regards shipping facilities.

The company's iron pyrite, containing 48 to 50% sulphur, is shipped all over the world for its sulphur content, but its cupreous pyrite is principally shipped to Great Britain and Ireland, where, after the sulphur has been extracted by the acid-makers, the residue, or cinder, is forwarded to the company's works for the extraction of the copper by the wet process and the preparation of the iron residue for the market. A small quantity of silver and gold is also recovered at the copper extraction works.

Owing to the low copper content of the ore now being worked, the company's production of refined copper is much reduced, having fallen from 13,544 tons (30,268,560 lbs.) in 1884 to 3,712 tons (8,314,880 lbs.) in 1916.

UNITED ALKALI CO., LTD.

Office: Cunard Bldg., Liverpool, Eng. Mine office: Valverde del Camino, Huelva, Spain. Works office: St. Helens, Lancashire, Eng.

Officers: Max Muspratt, chairman; E. Mount, sec.; J. H. Cresswell, gen. mgr.; C. Kaesmacher, asst. mgr.; Alex. Hill & Stewart, cons. engr.

Inc. in Great Britain. Cap., £6,550,000. Net earnings were £584,809 in 1915, from which £118,714 was disbursed for interest on debentures.

The company is primarily a chemical and manufacturing corporation, copper mining being merely a small branch of its business, which embraces 46 subsidiary works and corporations, some of the plants of very great size. The company has its principal works at St. Helens, Runcorn, Flint, Widnes and Glasgow, making extensive use of Spanish and Portuguese pyrites, which are burned for sulphur, after which the cinder remaining is leached for copper.

SPAIN

The company's copper properties in Spain include the Sotiel Coronada es; also the Castillo del Buitron mines, held under lease from the Cia. nima de Buitron, and Tinto and Santa Rosa mines, all in the province Huelva. These properties show typical Huelvan slates, carrying lenticu-contact deposits between slate and porphyry, having a generally N.-W. se, with dip from 30° to vertical, carrying cupriferous pyrite.

The Sotiel Coronada mine, 666 hectares, produces cupriferous pyrite and cement copper equivalent to an annual output of about 1,000,000 fine copper.

Extraction is by underground and opencut operations, and mining is by hand stoping, with dry walling and rock filling for depleted stopes. pyritic ore above 15% copper is exported, the low-grade ores being hed at the mine, and washed sulphur ore exported.

The Castillo del Buitron property is a group of 4 concessions, 47 acres, Zalamea La Real, and includes La Poderosa group of 6 hectares, adjoin- and the Concepción mine of 6 hectares, at Almonáster. The Castillo Buitron group has 2 principal lenses of ore, these being the Levante, h a length of 150 meters, but of decidedly irregular outline, and the niente, about 200 meters long. Production of this group averages 1,500,- lbs. fine copper yearly.

The Tinto & Santa Rosa group includes La Santa Rosa and El Tinto es, having a combined area of 141 hectares, at Zalamea La Real. The ita Rosa mine has 2 parallel lenses, with 7 levels opened, and the Tinto ore has ores said to average about 15% copper and 46% sulphur. The up has 9 shafts, and was estimated 1908, by the Spanish Government, to ve 1,500,000 metric tons of ore developed. Production from this group s 38,005 long tons of pyrite and 803 long tons of cement copper, 1903, and 181 metric tons of ore in 1908, and present production is estimated out 2,000,000 lbs. fine copper yearly.

The company controls the Ferrocarril del Buitron of 42nd gaug. ometers length, running from Castillo del Buitron to Huelva, and th 18 locomotives.

Production: from Spanish mines was 180,000 metric tons of pyrite and 1,000 tons of copper precipitate in 1916. The is a large purchaser of iron pyrites, but now supplies ents in the main.

SWEDEN

TENS KOBBERGRUBER

Idle since 1908. Office: care of Sulitelma Aktie-
heden.

Property: 339 claims, also a 60-acre mill site and ous lands. This is the northernmost copper mine r North Cape, in 70° N. latitude. The mine is 300 y 300' from the sea.

Geology: Post-silurian schists and slates have b-
ritic greenstone, showing about 75 orebodies in d-
pregnations in dolomitic strata. The veins have a
like, fissures in diorite dipping at about 30°, and d-
but 60°. About 20 strong veins and many small ones
nt, former ranging 1 to 3 meters in average width
2,000 meters. The various veins average about 1

ARGENTINE

FAMATINA CO., LTD.

ARGENTINE

The company's property is vested in a receiver and manager, appointed June 27, 1913, on behalf of the prior lien and other debenture holders.

Office: 638 Salisbury House, London, E. C., Eng. Directors: Wm. Parker, D. H. Bayldon and G. E. Stephenson. F. F. Fuller, sec.

Company is a reconstruction of the Famatina Development Corporation, Ltd.

Inc. June, 1912. Cap., £800,000. shares 10s. par; 1,523,489 issued and fully paid, of which 1,126,165 are credited 7s. paid. Bonds authorized, £200,000 of which £151,500 are issued.

Property: 850 acres, in 4 groups, in the Mexicana district of the Sierra Famatina range, province of Rioja, Argentine Republic, including the principal mines of the district, the Upulungos group, Mellizas group, Coma group and San Pedro group. These lands lie at an elevation of 7000 ft. and are very difficult of access and transport.

The company has inherited a troublesome problem and a tendency to stagnation as well as mining troubles. Fresh capital was put into the company in 1912, with the understanding that the property would be profitable when smelting was resumed. The new manager, Mr. Parker, stated, in 1913, that the assay value of the ore had been overestimated and that ore extracted is lower grade than previously reported. The smelter is not yet complete nor running smoothly, and the finances of the company are on a bad way, the £20,000 guaranteed by the big stockholders having been spent and the directors seeking further funds. Mines regarded as but company overcapitalized.

BOLIVIA

MAYO FRANCKE MINES, LTD.

BOLIVIA

Office: 148½ Fenchurch St., London, E. C., Eng. Mine office: Tupiza, Bolivia.

Directors: F. A. Aramayo, chairman and managing director; Bernard L. A. Kensington, Robt. G. Ribon and F. J. Torromé. M. Roberts, H. F. Ingo, sec.

Oct. 17, 1906, as Aramayo Francke & Co., Ltd. Cap. £600,000; shares £597,000 outstanding. Name of company changed to present title, 1911.

Annual report for fiscal year ending May 31, 1916, shows: net profit, £13,504 compared with £3,504 in 1915 and £135,764 in 1914.

Dividends: 6d in 1909; 1s 6d in 1910; 2s in 1911; 3s in 1911-12; 3s 6d in 1912-13; 1s 6d in 1914-15; 3s in 1915-16; 3s in 1916-17.

Property: consists of the consolidated mining rights over the mountain of Chorolque, 817 hectares, containing mainly tin, bismuth and wolframite; concentration works of Santa Barbara, Santa Elena and Salas; establishments of Cotani, with its mines; the Quechisla smelter; mines at Taana, covering 1,400 hectares, with concentrator and smelter Retiro; the mines at Churquini, Chocaya, 81½ hectares, the estates Quechisla and the concentrating plant at Asllani, besides other

Production: for fiscal year ending May 31, 1916, amounted to 2,004 tons black tin, 148 tons wolfram, 35.86 tons copper and 110,000 oz. silver.

COROCORO DE BOLIVIA, COMPANIA BOLIVIA

Office: Santiago de Chile. **Mine office:** Coro Coro, La Paz, Bolivia.

Inc. April 23, 1873, in Bolivia. **Cap.**, 1,025,000 bolivianos.

Property: 500 hectares; is the largest copper mine in Bolivia, employing about 1,000 men. Mine 530 meters deep, is opened on steeply inclined sandstone and conglomerate strata carrying native copper, and rarely native silver, with occasional cuprite and chalcocite.

Development: by six vertical shafts timbered with Oregon pine 8"x12" and equipped with electrical hoists ranging from 50 h. p. to 180 h. p. The ore when mined is soft, and even when dry is so weak that it disintegrates in the hand. The copper is between the grains of sand so that grinding in the usual sense is not necessary. Two 12"x18" jaw crushers will disintegrate 1,000 tons in 10 hours. Jigs obtain 95% of the total mill recovery. Capacity of present mill is 200 to 250 tons of ore per day with heads assaying 2% to 3% copper.

Equipment: 1,250-h. p. Diesel engine and a mill, the product of which is exported as copper mineral, production ranging 800 to 1,200 quintales of 46 kilos. monthly, of "barillas de cobre" of about 85% average copper content, estimated by the Bolivian government to cost 7.8 bolivianos per quintal. Copper sulphide, as chalcocite, is exported as crude ore at the rate of 120 metric tons monthly of 18% copper.

COROCORO UNITED COPPER MINES, LTD. BOLIVIA

Registered office: 151 Finsbury Pavement House, London, E. C. England. **Main office:** 7 Rue des Italiens, Paris, France. **Mine office:** Coro Coro, La Paz, Bolivia.

Officers: Baron René de Batz, chairman; G. T. Crane, E. F. Burton, J. L. Barber, A. Berthin, Noël Berthin, H. M. Kersey, C. Pomier, Monnier, and L. Charbonnel, directors; G. B. Wolfe, sec. in London; René Léo, sec. in Paris.

Inc. Aug. 6, 1909, in Great Britain. **Cap.** £700,000, shares £1 par; value £673,607, fully paid. Company took over the properties of J. K. Child & Co., Ltd.; Sucesión Noël Berthin; Compañía Sud Americana de Cobre; Corocoro, and Carreras Hermanos.

Accounts to July 1, 1916, showed: net profit of £172,243; \$467,000 written off for development and £47,752 for mines and buildings; balance forward was £180,542; dividends amounted to £73,484; £35,445 carried forward. The reserve is given as £70,000.

Property: 515 hectares at 12,000' elevation, in the Coro Coro district in central Bolivia. The principal mines are the Vizcachani, Santa Rosa, the Guallatiri, the first named formerly owned by J. K. Child & Co., Ltd., second by Carreras Bros., and the third by the Noël Berthin & Co. Native copper is found native in several beds of sandstone interbedded with reddish and brownish shale. The ore-bearing beds occur in a zone separated by a strong fault; the beds to the east of this fault are inclined to the ramos and dip east, the copper-bearing strata being succeeded by a considerable thickness of red slates capped by green slates and interbedded with them laid in turn by red clay and brown sandstone. The beds to the west are known as vetas, or veins, and are much harder than the ramos. The mineralization is not uniform and the native copper occurs in particles scarcely visible to the naked eye, as well as in small threads and sometimes flat masses weighing several hundred grams. The main vein, known as Dorado vein, is also mineralized and is the principal producer of the company, yielding sulphides and arsenides. It is supposed that this fault was the feeding fissure whose contents were precipitated into the sandstone and was precipitated by organic matter.

The mine workings have not yet crossed very far into the ramos. They show at least 4 ramos and 6 vetas, the 4 ramos being divided into 10 to 14 beds, and the 6 veins into 10 to 14 beds. Some of these beds

meters of homogeneous ore, the White Ramos being 30 meters wide on the 10th level of the Vizcachani shaft, of which 8 meters are mined as ore. The beds average 10 meters workable thickness with an average content of 3 1/2%.

The district is extremely arid, without timber, and almost without shrubs, and extensive use is made of local fuel, which is taquia. Taquia is used for firing boilers and also for drying and roasting ores and in the past even was used for smelting.

Work was recently started on the croppings of several beds where the mineralization appears in the shape of sulphides. These sulphides, after hand-sorting, are bagged and shipped. Company is erecting a flotation plant for the concentration of the ores; the starting capacity being 125 tons daily.

The mine openings in the conglomerate strata stand fairly well, though with some crushing, and levels average 25 meters apart. Winzes are inclined, with steps cut. Little timbering is used, except for shafts, owing to its great cost, timber being imported mainly from North America, and the workings are secured principally by the poteo or dry-walling system. Steel is used for arching lateral workings.

The property is divided into 4 operating units, principal and active sections being the Corocoro and the Guallatiri. The Corocoro has a vertical shaft 330 meters deep, equipped with a steam plant, and ore-sorting and crushing plant. The Guallatiri has shafts of 180 and 350 meters. The ore is treated in 3 mills of 70 tons to 100 tons daily capacity, making a product known as barilla, or crude copper mineral, of 80 to 88% copper tenor, which is shipped to Europe for refining.

Production: in 1912 was 4,100,000 lbs. fine copper; in 1913, 3,784,000 lbs.; in 1914, 4,150,000; in 1915, 7,166,000; in 1916, 11,300,000 lbs. An electrical power plant of 500 k. w., in which alternators are driven by semi-Diesel engines, has been erected, and a further increase of 300 k. w. is contemplated.

Property, reported to have been under option to Messmore Kendall, J. O. Ryan, Chas. Sabin et al. in Feb., 1916, was relinquished. Price was reported to be £1,350,000.

Owing to the remote and almost inaccessible location of these mines, past production has been small, compared with possibilities, but the company is making progress and output is steadily increasing. The property is considered decidedly promising.

COLLA DE ORO (BOLIVIA)

Office: 33 St. Swifth
 Martin, chairman; R. Freumont, mgr., La Paz, Inc. Aug. 18, 1909, in Dividends: 5% in 1911. Property: 5 groups La Paz, Bolivia, carrying vein is 2-6' wide and ore silver.

Development: by several Ore reserves: estimated at

Equipment: includes mining Hardinge ball and 2 pebble mills. Plant capable of treating values are saved by amalgamation.

Production: owing to loss of mill in 1915; yielding 4,949 oz. gold. Company's claims have been the mill in December, 1912, and again in

and milling operations were transferred to a new site. Ore value for 1915 decreased to 0.3 of an ounce gold for 5' width.

PORCO TIN MINES, LTD.**BOLIVIA**

Office: H. F. Ingo, 148½ Fenchurch St., London, E. C.

Directors: E. Hooper, chairman; J. Edwards, L. A. Kensington and J. Macandrew. H. A. Lewis, gen. mgr.; M. Roberts, cons. engr. Avelino Aramayo & Co., general agents in England.

Inc. Sept. 27, 1912, in England. Cap. £140,000; shares, £1 par; 120,075 issued. Debentures: £19,900, 6%.

Property: 400 acres, 25 miles from Potósi, Bolivia. Mines were worked in the 16th century for silver, but are now worked for tin. The district is mountainous, up to 17,000' at one point, and was described in the Engineering & Mining Journal, Feb. 24, 1917, by J. T. Singewald, Jr., and B. LeRoy Miller.

Geology: two mountains, Apo Porco and Huaya Porco, consist of igneous material. The Porco company is working the tin deposits in the former. Country rock is agglomerate, tuff and quartz porphyry. The two former contain shale fragments. The San Jose vein is a shattered zone consisting of heavy pyrite, with low tin values and 8 oz. silver per ton. One shoot is 500' long and 6½' wide. Another is up to 170' long and 8' wide, assaying 3% tin.

Development: by tunnels, open cuts and drifts. Reserves in 1915 were 261,500 tons of 2% metallic tin ore.

Equipment: includes 2½ miles aerial tram and a water-power driven 100-ton mill, which includes 2 ball mills, screens, jigs, Wilfley tables, Huntington mill, classifiers, Humboldt tables, buddles, etc. The tailing is to be cyanided for the silver.

Production: mill feed averages 2½% tin and 12 oz. silver per ton. In 1915, the yield, 168,000 lbs. of tin, and 443,500 lbs. in 1916.

BRAZIL**ITABIRA IRON ORE CO., LTD.****BRAZIL**

Office: C. F. Levick, 81 Gracechurch St., London, E. C.

Directors: S. Baldwin, I. H. Benn, P. M. Gotto, A. E. Harris, T. H. C. Levick, J. W. B. Pease and F. A. E. Samuelson. G. H. Robinson, engr. Inc. March 31, 1911, in England. Cap., £2,000,000, in 500,000 pfd. and 1,500,000 ord. £1 shares of which 359,438 and 1,158,474 are issued.

Property: 18,271 acres in the Province of Minas Geraes, Brazil. Ore reserves are estimated at 100,000,000 tons of hematite, assaying 69% iron. A royalty of 6d. (12c.) per ton is payable to the B. H. Syndicate, Ltd., the previous owners.

OURO PRETO GOLD MINES OF BRAZIL, LTD.**BRAZIL**

Office: G. H. Wells, 5 Queen St. Place, London, E. C.

Directors: J. Taylor, chairman; E. Beer, M. Paisant, R. Taylor and E. F. H. de Wael. A. J. Bensusan, mgr.; John Taylor & Sons, mgrs.

Inc. July 10, 1914 (originally Jan. 31, 1884), in England. Cap., £100,000, in 60,000 10% non-cumulative pfd. and 40,000 ordinary £1 shares, of which 12,212 and 39,422 are issued respectively. Profit in 1915 was £9,545, against £7,402 in 1914.

Property: a concession of 3½ sq. miles in the province of Minas Geraes, Brazil, including the Passagem mine, which had reserves estimated at 74,700 tons at the end of 1915.

Equipment: includes 80-stamp mill and cyanide plant. Ore is somewhat refractory, containing arsenic. During 1915, 85,400 tons yielded 30,200 oz. gold and in 1916 about 28,000 oz. gold were extracted.

G. JOHN DEL REY MINING CO., LTD.**BRAZIL**

Office: F. V. Steward, Finsbury House, Blomfield St., London, E. C.

ng. Mine office: G. Chalmers, supt., Morro Velho, Minas Geraes, Brazil.

Officers: H. P. Harris, chairman; J. R. Remnant, E. A. Gouilding, H. LeRoy Lewis and C. F. W. Kup, directors.

Inc. 1830, in England. Cap., authorized, £800,000, in 600,000 ordinary, 100,000 preference, and 100,000 second preference shares of £1. Issued, £646,265, in 546,265 ordinary and 100,000 preference shares, fully paid. In 1891 capital was increased from £252,000 to £432,000; in 1893 to £462,000, in 1895 to £500,000, in 1895 to £600,000, in 1904 to £700,000, and in 1910 to £800,000. Preference shares are entitled to a non-cumulative dividend of 10% (paid free of income tax in December and June), and to priority for capital, without further participation. Second preference shares will be entitled to a non-cumulative dividend of 10%, and to priority for capital over ordinary shares, without further participation.

Statement for year ended Feb. 28, 1917, shows income from gold and silver, etc., £450,280, and expenses, £291,096, leaving a profit of £159,184, less London charges and taxes, £39,749, or £119,435 net. Dividends absorbed £67,780. Balance forward to 1917-'18 was £4,957. Company has reserve fund of £90,000, and investments of £127,005.

Dividends: from 1842 to 1867, £896,500 on ordinary shares; since then these shares received a total of 320% to 1910, after which 10% per annum. Preference dividends are paid in June and December. Last dividend on both classes of shares paid June, 1917, amounting to £40,808.

Property: the Morro Velho and Cuiaba gold mines and iron deposits in state of Minas Geraes, Brazil. Considered the oldest and deepest modern mine in the world, as work has been continued since 1830, and workings are 5,900' deep vertical.

Development: amounts to about 4,000' yearly. Below No. 20 level, 900' deep, there has been opened 844' of lode. Temperature on this level 102° for the air and 108° for the rock. Reserves are estimated at 5½ years for the mill, which in 1916-'17 treated 187,400 tons.

Equipment: complete mine, mill and power plants. Treatment is by 0 stamps, 7 tube-mills, concentrators, roasting furnaces, cyanidation and ters. Aerial trams are used to advantage. Company operates a store, hotel, medical department, electric railway, farm, and eucalyptus plantation. Power is generated by water at cost of 2.62c. per h. p. day.

Production: in 1916 was 187,400 tons of \$12.06 ore. The recovery was 72% at cost of \$7.20 per ton.

Inc. Jan. 20, 1916, in Delaware. Cap., \$50,000,000; shares, \$100 par.

Property: a very large tract of ground at Potrerillas, Chile, owned by Anaconda Copper Mining Co. under option and drilled.

This work is reported to have shown the existence of a large, over 50,000,000 tons, it is said, carrying 1.67% copper. It is now being extensively developed and prepared for op-

acquire and develop mineral, timber and railroad lands in Chile (Potrerillas district).

ANDES EXPLORATION CO. OF MAINE

CHILE

Controlled by Anaconda Copper Mining Co.

Address: 42 Broadway, New York City. B. B. Thayer, pres.; Wm. Braden, mgr., Santiago, Chile. Company is engaged in exploratory work and has not yet published a report.

BRADEN COPPER MINES CO.

CHILE

Controlled by Kennecott Copper Corp.

Office: 120 Broadway, New York.

Officers: Wm. C. Potter, pres.; Stephen Birch, v. p.; L. Fredrick, treas.; C. K. Lipman, sec.; W. E. Bennett, asst. sec.

Directors: Wm. Braden, Messmore Kendall, Stephen Birch, Saml. J. Clarke, Thos. Cochran, Edm. A. Guggenheim, Harry F. Guggenheim, Wm. P. Hamilton, Henry O. Havemeyer, Seward Prosser, W. C. Potter.

Inc. May 26, 1909, in Delaware. Cap., \$10,000,000, shares \$5 par; increased 1911 to \$14,000,000, non-assessable; issued \$12,953,530 to Dec. 31, 1916.

Bonds: authorized \$20,000,000 issue of 15-year 6% sinking fund gold bonds, non-convertible, due Feb. 1, 1931. Issued \$15,000,000. For the purchase of this last issue a minimum of \$1,000,000 per annum will be applied, payments being made semi-annually, starting Feb. 1, 1917.

Owens entire capital stock and bond issue of the Braden Copper Co., the Braden Copper Mines Co. being purely a holding company. Farmers Loan & Trust Co., New York, registrar. Annual meeting, fourth Monday in June.

In Dec., 1915, offer was made by the Kennecott Copper Corp. to purchase the stock of the company, payment to be made in Kennecott Copper Corp. stock. As an alternative any stockholder had the privilege of receiving \$15 in cash for each share of the Braden Copper Mines Co. As a result of this offer the K. C. Corp. now owns 99% of the stock of the company, which, based on the market value of K. C. Corp. stock at the time the offer was made, cost the K. C. Corp. \$42,281,300.

Combined statement of income and surplus accounts for Braden Copper Mines Co. and Braden Copper Co., for year ending Dec. 31, 1916, shows income from copper production, \$12,648,111; operating expenses, \$5,057,655; net operating profit, \$7,590,455; interest and misc. income, \$385,495; taxes, misc. charges and interest on Braden Copper Mines Co. bonds, \$1,029,786; net income, \$6,945,765. Net surplus, \$5,478,704, of which amount \$4,605,272 is cash and certificates of deposit.

Braden Copper Co.

Operating officials: S. S. Sorenson, gen. mgr.; L. E. Grant, asst. gen. mgr.; O. L. Myers, gen. aud.; H. R. Graham, mine supt.; R. E. Douglass, mill supt.; W. J. Turner, smelter supt.; Jas. Chambers, supt. of railroad; B. T. Colley, mgr. Welfare Dept.; J. K. MacGowan, purch. agt.

Consulting engineers: Fred Hellmann, mining; E. A. Cappelen Smith, metallurgical; H. A. Guess, milling; P. H. Thomas, electrical; S. B. Williamson, construction; H. E. Skougor, designing engr.

Inc. June 18, 1904, in Maine, and name changed to present title, Aug. 9, 1904. Cap., \$2,332,030 shares \$10 par, non-assessable; fully issued. Company is protocalized in Chile. Is controlled, through ownership of entire stock issue, by Braden Copper Mines Co. Has a \$4,000,000 issue of 6% first-mortgage convertible bonds. Annual meeting, 4th Tuesday in July.

Property: 174 claims, about 2,362 acres, including 16 acres at Rancagua r railroad yards, etc. Mines are reached from Valparaiso by the Chilean ate railroad, 158 miles to Rancagua, and from that point by company's row-gauge railway, 43 miles to the smelter and mill and 1½ miles farther the mines. The elevation is 7,700 to 9,000', the mine being in a very gged region on a part of the main range of the Andes.

During 1916, company purchased four new tracts of land. The largest ring 10,000 acres of mountain land, is the new tailings site and will 200 million tons of tailings. It is 8 miles from the mill and together the dam, will cost \$1,200,000, but will not be ready until July, 1918.

Another purchase of 40,000 acres surrounding the mine puts all the company's works, including the new smelter under construction at Cale, on the company's own land and carries smoke easements on adjacent

The third purchase was for sundry lots of land and water rights needed for the new power plant on the Pangal river and a right of way for the line. The fourth piece of land is in Rancagua, adjoining the company's present ground.

Geology: all the rocks are igneous and the rock at the mine is an andesite surrounding a plug of tuff which fills the throat and crater of a volcano. The light gray tuff is no longer loose and friable, but cemented into a hard stone-like mass. The ore deposit is unique, being a volcanic vent of a circular section 4,000' across and filled by tuff and an agglomerate of rounded boulders of all sizes. The crater rim is surrounded by highly red and brecciated andesite, the fractures being mineralized around the circumference. The ore zone has been further fractured by porphyry which occasionally cut into the tuff.

The orebodies occur around, but outside the rim of the crater, in the tuff at, or near, its contact with the tuff. The ore consists of shattered andesite, often finely brecciated near the tuff contact, the copper minerals being bornite and chalcopryrite, but in the andesite the grade becomes lower, passing from breccia to the cracks and openings. The orebodies are limited on one side by the tuff, but in the andesite the grade becomes lower, passing from brecciated rock and fading out in the more blocky country rock. The thicknesses in the rock range from a mere film of sulphide ore up to 3 to 4" of red bornite and chalcopryrite, mainly the latter. The orebodies dip at an angle toward the center of the crater. Five distinct orebodies have been identified and four, the Fortuna, Teniente, Centinela and Bornite, are being developed. All are marked by strong outcrop stained with copper minerals. The depth of oxidation is shallow, ranging from a few feet to 150' in depth, the property carries mainly disseminated ore, the management holds the belief, with strong reason, that values will carry to great depth.

The mine is nearly circular in form, following the outside of a nearly circular plug or tuff which is slightly conical with its base uppermost. The mine has been followed and partly developed on one horizon right around the crater. On the one half is the Fortuna, on the other the Teniente main ore bodies.

The Fortuna orebody is typical of all the deposits. It is lens-shaped in a vertical section, is developed for 3,000' in length and has a maximum thickness of 260'. It has been well developed on all the levels; below the 4th crease can be expected, as the rock has tightened and ore is lower. The lowest tunnel, No. 4, is 1,425' below the outcrop. The copper minerals are bornite and chalcopryrite, associated with ankerite and quartz. The Fortuna orebody is the principal one in point of development. The stoping system, similar to that employed at the Ray Cons., is by steep slopes are carried up 7 metres wide, with 5-metre pillars. The geology of the country is such that shafts are unnecessary; all ore can be brought out through tunnels, and, even though parts of the mine are very deep, shafts are not required.

Development: by 5 tunnels; No. 4 and No. 5 are haulage ways at present. The Fortuna was gophered extensively, by former owners, for high-grade ore, which was followed and extracted wherever found. Average grade of Fortuna ore is lower than in El Teniente mine. Workings show sulphides and occasional metallic copper throughout the brecciated zone.

amplers for concentrate and tail rolls and storage bins. The mill has a capacity of 5,000 tons daily, though it averaged but 3,000 tons. An enlargement of the mill begun in 1916, will give it a capacity of 10,000 tons daily.

An experimental leaching plant was in operation during the year 1915, for the process of extraction of copper from concentrate; it was believed that it might be successfully carried out on a commercial scale, but cost of the plant would be large and, at the present time, not advisable.

The sulphuric acid plant provides the acid required in the flotation process. The heavy table concentrates are roasted in a Wedge 7-hearth furnace, varying from 6% to 7% moisture, 16% copper, 13.6% silica, 28.6% iron, and 3.3% sulphur. Hearth temperatures, from 1 to 7, respectively, in centigrade are 380, 460, 600, 750, 790, 680, 630. The furnace shaft is rotated in 3 minutes 20 seconds, and 12 h. p. is required to rotate the furnace when treating 35 tons of concentrates per 24 hours. The concentrate contains about 2% sulphur.

Lead chambers are four in number, each with a volume of 46,750 cu. ft. formed of timber framing and $\frac{1}{8}$ -in. lead sheets. The following are certain data on chamber operations:

No.	Temperature, Deg. C.	Color of Gas	Deg. Baume of Drip
	80	Gray	51-52
	75	Light gray	50-51
	60	Slightly yellow	49-50
	48	Pale yellow	46-48

The daily production of chamber acid is from 23 to 24 tons at 66 deg. F. The 28 tons produced in the Glover tower bring the total to 28 or 29 tons daily. The plant has been in operation since March, 1913.

The smelter is now in operation at Sewell. This plant, with blast furnace converters and refinery, was completed during the latter half of 1911. At that time several improvements have been made, the most important being the addition of nodulizing kilns. These are similar to the kilns used in the manufacture of Portland cement. The 4th and 5th are the largest ones, 8' in dia. and 100' long. Speed of kilns about 1 r.p.m. Heat is supplied by an oil burner at discharge end. By feeding nodules instead of concentrates the furnace capacity has been almost doubled, due to the absence of water in the charge. Coke consumption was practically cut in

The smelter equipment at present consists of 14 storage bins for concentrates, lime, coke, etc.; 4 sinter grates, with a daily capacity of 50 tons of concentrates, roasted to 40 tons; 5 nodulizing kilns, with daily capacity for the first 3 installed of 215 tons concentrates, roasted to 180 tons; 2 blast furnaces, one being 48"x240" and the other 48"x600". Daily capacity is 300 tons of raw concentrates, or 600 tons nodulized concentrates; 3 Pierce-Smith lined converters, two having 33 tuyères, the other 17 tuyères; 1 cop-casting apparatus. The power plant at the smelter includes 1 Nordberg engine for converter air supply, capacity 10,000 cu. ft. air per min., at 10 lbs. pressure, rope driven, by a 600-h. p. motor; 1 No. 9 Connorsville fan, capacity 20,000 cu. ft. air per min., at 3 lbs. pressure, belt driven, by a 250-h. p. motor, 1 Rateau-Battu-Smoother turbo-blower, for blast furnace air supply, direct connected to an 800-h. p. motor, capacity 39,000 cu. ft. per min., at 3 lbs. pressure; 1 Ingersoll-Rand, Imperial type 10, compressor. Another turbo-blower is being erected. This is for converter air supply and will be direct connected to a 1,700 h. p. motor, capacity 24,000 cu. ft. air per min., at 13 lbs. pressure.

A new smelter is now under construction at Caletones, about 5 miles from Sewell, from where the concentrate will be conveyed by a Trenton electric tramway system to the smelter which is intended to handle 1,000 tons of concentrate from the 10,000-ton mill now under construction at

General summary of smelter operations:

	Per day
Tons of concentrates treated.....	350
Tons of coke consumed.....	60
Tons of fuel oil consumed.....	10
Tons of matte converted.....	150
Tons of copper produced.....	60
Number of men employed.....	350
Electric energy used, 1,500 h. p.	

The experimental Minerals Separation Co.'s flotation plant proved so successful that a 3,000 ton plant, to treat the entire slime product was built and is now in operation. It consists of 8 standard M. S. units that treat the tonnage handled by the 3 mill sections. Extraction is over 77%, and it is expected an 80% extraction will be obtained with the completion of the air cell installation. Daily production of all concentrates is about 350 tons. Average assay is: copper, 19%; iron, 23%; sulphur, 28%; lime, 2%; silica, 17%; alumina, 8%.

The complete works, including the concentrators, leaching plant and smelter, are planned to eventually treat 10,000 tons of ore daily, estimated to average 2.50% copper, at a cost, estimated by the management, of 7½¢ per lb. laid down in New York.

Production is estimated at 3,000,000 lbs. fine copper in 1908; 7,500,000 lbs. in 1909; 9,000,000 lbs. in 1910; 9,500,000 lbs. in 1912, and 18,098,000 in 1913.

Production:

	Tons. Milled.	% Cu.	% Rec. Mill.	Ratio Conc.	% Cu. Cncts.	% Rec. Smelter.	Net prod. Lbs.	Cost cts. Cu. per lb.
1916	1,362,629	2.12	75.07	42,153,270	8.03
1915 (a).....	1,106,420	2.09	74.92	11.29	17.68	94.49	32,733,576	8.78
1914	900,299	2.12	28,304,092	

(a) For year ending Oct. 31, 1915; 35,444,000 lbs. for calendar year 1915.

Production of blister copper for 9 months ending Sept. 30, 1917, estimated at 46,954,000 lbs.

Average price for copper sold in 1916 was 26.35¢ per lb.

Although operations at the Braden property have not yet fulfilled the expectations of its sponsors, it is believed that the treatment problems are now solved and with the completion of plant extensions and of the new smelter at Calatones, under construction in 1917, that the profits will be enormous. Known ore reserves will last 35 years on a 10,000 tons a day basis and the extent of the orebodies is as yet only partially known.

CALAMA: COMPANIA DE MINAS Y FUNDICION DE, CHILE

Reorganized 1913 as Compania Miñera de Calama. In August, 1916, property was sold to the Chile Copper Co., which see.

CATEMOU: SOCIETE DES MINES DE CUIVRE DE, CHILE

Main office: 50 Boulevard de la Senne, Brussels, Belgium. Office: 2 Rue du Helder, Paris, France. Operating and works office: Estacion Chagres, Aconcagua, Chile. A. W. Lehman, gen. mgr.

Officers: Eugène Renevey, chairman; Max Lyon, managing director; Georges Renevey, Jean Renevey, Félix Adam, Robert de la Bouglise and Robert Franklin, directors; Joseph Wouters, sec.

Inc. June 2, 1899, in Belgium. Cap., \$5,000,000; shares \$500 par; divided into 10,000 preference shares at 8%, and 25,000 ordinary shares; non-assessable. Debentures, \$2,500,000 5% bonds. Annual meeting, last Friday June.

Dividends: 4% in 1910, 5% in 1911, 6% in 1912, 5% in 1914, 5% in 1915, % in 1916.

Lands: 155 claims, with sundry miscellaneous tracts held in fee and under government concessions, including the Tanco de Nihue, total holdings

of 30,000 acres, in the districts of Putaendo, Los Andes, Melipilla, Ligua, Quillota and El Nilhue. Property includes numerous mines in smou, Melon and elsewhere, with quarries of fluxing material. The Finca Nilhue carries a stock of 1,200 cattle, for transport and food, and is a able factor in reducing costs.

The local management reports that ores carry an average of 4% cop- and 2 oz. silver per ton. Veins carry the usual oxidized ores in a paratively shallow surface zone, succeeded by chalcocite, bornite and copyrite.

Los Mantos, or Mantos Rojos, mine, opened 1820, has country rocks andstone and limestone, with eruptive dikes traversing the sedimen- es, there being 2 blanket veins, of 5 to 7' thickness, composed of calous matter impregnated mainly with bornite, but having a little chal- yrite and occasional gray copper, ore ranging 3 to 4.5% copper, 1% , 2% zinc and 30 grams silver per metric ton. The oxidation zone has eroded, leaving only sulphide ores. These blanket veins have been ked on a considerable scale since 1835, and the ore, while low in grade, specially suitable for fluxing purposes.

Development: exclusively by tunnels, having a vertical depth of about neters and length of about 1,200 meters, with ore reserves developed 3 to 4 years extraction. The mine produces no water, and walls stand ellently without timbering. Work is generally by contract, according onnage produced, miners being paid 5 to 7 pesos per metric ton for won. Only about 8% of the ore broken is discarded as waste, and ore oncentrated by flotation or smelted direct. Ore is taken to the smelter a 1,580-meter aerial tram, with drop of 750 meters, having 500-kg. kets. Cables last 2 years and guide cables last 5 years.

In 1916, Los Mantos mine employed 500 men, producing monthly 2,000 ,000 tons of ore of 4% copper tenor.

El Soldado mine, one of the Nogales group, and the greatest distance n the smelter, being in the Commune of Melon, on the Calera é Cabildo way, was opened 1841. This property has 15 known veins, of 5' to, 7' rage width, carrying mainly copper sulphides, with quartz gangue. Sev- veins carry oxidized copper ores, with gangue of aluminous silicates, series of veins having an approximately N.S. strike, with dip of 45° ; between trachyte and feldspar-porphry. The series of veins is ted, frequently with throws of 1 to 2 meters, and there is another series likes and veins crossing at approximately right angles to the dip, but a parallel strike, the dikes being partly decomposed porphyry, carrying asional oxidized ores and aluminous silicates. These veins have been ked extensively in the past, showing many antigua openings and ore rages 5 to 6% in copper tenor.

Development: mainly by tunnels, greatest vertical depth obtained being meters and old workings are about 150 meters in length. This mine ws some immense chambers, one being called the Cathedral, in recogni- of its vast size. In 1916 production was about 600 metric tons of high- de ore monthly, secured with an average force of 150 men. Transporta- is by wagon at a cost of 3 to 4 pesos per ton. An aerial tram is ned.

La Union group includes the Restauradora, San José and Vieja mines, ducing about 40 metric tons daily of 3 to 4% copper ore, mainly used fluxing and secured with an average force of 150 men.

Miscellaneous mines include El Nilhue mine, in the department of Putaendo, opened 1886; Las Maquinas de Catému mine, in the department Putaendo, opened in 1870; La Esmeralda mine, opened 1860; La Con- scia and La Democracia mines, 10 kilometers from the smelter, carrying alot veins, and La Marquesa, Malva, Tabourina, Caracoles, Almendro y its and other properties, in various stages of development, some of con- erable promise.

The mines and works have telegraph and telephone communication.

sq. miles in Colombia, S. A. The Silencio mine is the main producer. Recent development has been on the 14th and 15th levels. Company also owns an interest in the newly formed Marmajito Mines, Ltd., owning adjoining properties.

Ore reserves: June, 1916, estimated at 48,200 tons.

Equipment: includes reduction plant, with 10-stamp mill and cyanide plant.

Production: in 1915, 25,971 tons, yielding 26,938 oz. gold; 1916, 24,484 tons, yielding 22,358 oz. gold.

PATO MINES (COLOMBIA), LTD.

COLOMBIA

Office: Henry Richards, sec., 441 Salisbury House, London Wall, London. E. C., Eng. **Mine office:** Apartado 104, Barranquilla, Colombia.

Directors: Fred W. Baker, chairman; F. D. Behrend, H. S. Derby, A. Stanley Elmore, T. J. Hoover and H. C. Porter. W. A. Prichard, mine supt. Inc. Oct. 5, 1909. **Cap.**, £100,000; shares, £1 par; all outstanding.

Financial statement for year ending Sept. 30, 1916, showed: assets, \$438,584, which includes, property, \$100,000; Nechi Mines (Colombia), Ltd., holdings (14,000 shares, 10s. each), £18,653; cash, £16,268. **Liabilities include:** sundry creditors, £12,746; profit and loss, £136,499. **Net profit for the year amounted to £74,894. Net receipts from gold shipments totaled £144,640.**

Property: the Pato area still undredged is estimated at 529 acres and is calculated to contain 22,419,490 cu. yds. of \$5,347,638 net value. The Nechi property is estimated to contain 6,855,900 cu. yds. of \$4,372,128 net value.

The above properties lie in an oval basin cut through by the Nechi River and surrounded by crystalline rocks; within the basin are flat tables of gravel deposits whose clay is red or blue and contains beds of peat or brown coal. The gravel benches grow richer in depth and deep drilling has been recommended.

Equipment: includes hydro-electric power plant, an 8½ cu. ft. dredge, ice plant and repair shops.

Production: in 1916, 1,484,731 cu. yds. were dredged, as compared with 1,308,470 for the previous year, the gross value of the gold recovered being \$719,493, averaging 48.5c. per cu. yd., against \$618,884, averaging 47.3c. for the previous year. The field operating cost for the year averaged 12.4c. per yd., as compared with 11.4c. for 1915.

ECUADOR

SOUTH AMERICAN DEVELOPMENT CO.

ECUADOR

Address: Paul C. Schraps, Apartado 655, Guayaquil, Ecuador.

Property: gold mine in the Zaruma district, El Oro province, Ecuador. The nearest town is Portovelo. Transportation of supplies is difficult and expensive, being \$85 to \$95 per ton from New York. A 90' head-frame costing \$10,100 was recently erected at main shaft. This mine contributes nearly all the gold produced in Ecuador. Veins are in fine grained diorite and are often 15' wide. Extensive faulting is evident. Ore treated is a mixture of quartz and calcite, with 10% by weight of sulphides.

Equipment: includes water-power, hoist, compressor, stamp mill and counter current decantation cyanide plant. Reconstruction of the power canal was described by Paul C. Schraps in the *Engineering and Mining Journal* of Nov. 10, 1917.

ZARUMA MINING CORPORATION, LTD.

EQUADOR

Office: J. C. Stamfer, 156 Palace Chambers, London, S. W., Eng.

Directors: J. Rey, chairman; C. Brault, P. J. E. E. Chambost, A. E. Lund, E. Saladin and J. Vielle.

Inc. Jan. 31, 1913, in England. Cap., £120,000, in 110,000 pfd. £1 and 200,000 dfd. 1s. shares; 90,000 of former and all of latter issued.

Property: 1,838 acres in the Zaruma district, Ecuador. In the *Caridad*

le is estimated 90,000 tons of £12 gold-silver-copper-lead ore and in the
ristina 61,000 tons of £10 ore.

PERU

BACKUS Y JOHNSTON DEL PERU; SOC. MIN.

PERU

Main office: 134 Plateros de San Pedro, Lima, Peru.

Officers: A. J. Bennett, pres.; R. R. Sturrock, v. p., with D. C. Babbitt, P. Jones and B. A. Simpson, directors. N. B. Roper, smelter supt.; A. S. Bowie, supt. Morococha mines; J. A. Irving, supt. Casapalca mines.

Inc. May 1, 1917, in Peru. **Cap.**, £480,000; shares, £1 par, fully paid. Company purchased practically entire holdings of the Backus & Johnston Co., a New Jersey corporation, fully described Vol. XI.

Property: consists of several large groups of copper-silver mines.

Casapalca Mines: the principal mines in this district are the Carlos Francisco, Upper and Lower, the Cuarenta, Corina and Chuquichuccho. The st named is developed by an adit, equipped with electric haulage, about 600' long, which cuts the vein at a depth of about 2,500' below the outcrop. The vein is being worked along a length of 7,500' from the adit level, and from adits about 1,200' and higher above the main adit. Ore from the upper workings is sent to smelter over a 4,500' aerial tramway. The output from the upper and lower workings of Carlos Francisco is 2,500 tons per month, averaging 2% copper and 40 oz. silver, including concentrates. The other three mines are still in an early stage of development, and their combined output is at present only about 700 tons of ore, running about the same grade as that from Carlos Francisco.

Morococha Mines: the company relies principally upon the Morococha district for its copper ores, the chief sources of supply being the Huilca, Atavidad, Churruca, Isabel, Alicia, Favorita, Alapampa, Ombla, San Luis, Pachapata, La Vieja, Manuelita, and the mines of the Cia. Santa Clara, Cia. Inera de Pesares and of the Cia. Blanc. All of these mines are operated by the company either on account of ownership, by partnership arrangements or on lease. The completion of the power plant at Bellavista in 1913, the arrangement for the rental of further power, with a consequently more complete installation of compressors and machine drills, and the driving of three drainage tunnels have resulted in much lower mining costs and in a much more extensive exploitation of the properties.

The Natividad, the deepest shaft of the district, is 250' below the drainage tunnel level—a total of 750'; and to provide for the deeper development of this and of the other mines of the district it is proposed, in conjunction with other miners of the district, to sink a large central shaft to a depth of 1,000' below the level of the drainage tunnels and to install a pumping plant capable of handling 10,000 gallons per minute. The ore from the Morococha district is transported to the smelter, distant 32 kilometers, over the Peruvian Central Railway, which has a branch line 14 kilometers long running from Ticlio on the main line to Morococha.

Production at present is at the rate of 12,000 tons per month, averaging 2% copper and 10 oz. silver, but this will be raised to 16,000 tons as soon as the additions to the smelter are completed.

Smelter: the smelter and concentrating plants are situated at Casapalca on the main line of the Peruvian Central Railway, 154 kilometers from the port of Callao, at an altitude of 13,700'. The company is operating at present two blast furnaces and three 96"x150" horizontal barrel type basic converters, but an additional blast furnace as well as a fourth converter are now being installed. The sintering plant consists of 20 roasting pots of 10 tons' daily capacity each, and of two Dwight-Lloyd sintering machines. The dust is briquetted and returned to furnaces. The smelter handles a considerable quantity of custom ore, and the company has always prided itself on its friendly relations with the independent miners of the district.

In 1914 the smelter treated 175,000 dry tons ore, the production, in the form

of blister copper, being 19,395,000 lbs. fine copper, 8,262,500 oz. fine silver and 3,587 oz. gold. The additions at present under way will give the plant an increased capacity of about 50%.

Concentrating plant: low grade ores from the Casapalca mines are concentrated in a 200-ton mill adjoining the smelter, equipped with a No. 1 gyratory crusher, 2 primary ball mills, one regrinding ball mill, 3 Hancock jigs, 4 Overstrom tables and 5 single-deck and 2 double-deck Deister tables. Mill slime is dewatered in a 30' Dorr thickener and filter-pressed.

The main power plant, situated on the Rio Rimac, 4 miles below the smelter, contains two 800-kw. generators driven by Pelton wheels, transmission being at 10,000 volts. At the smelter there are two 150-kw. and one 125-kw. generators, also driven by Pelton wheels. Air is furnished as follows: for the furnaces, by one 118-cu. ft. and one 200-cu. ft. Connersville blowers, both driven by Pelton wheels, and by one motor-driven turbo-blower of 24,000 cu. ft. capacity; for the sintering pots, by 3 small rotary blowers of the Connersville type; for the converters, by a 14,000 cu. ft. Nordberg blowing engine, direct-driven by a synchronous motor; for the Casapalca mines, by 3 motor-driven Ingersoll-Rand air compressors with a combined capacity of 5,000 cu. ft. free air p. m.

CERRO DE PASCO COPPER CORPORATION

PERU

Office: 15 Broad St., New York.

Officers: L. T. Haggin, pres.; Edward H. Clark, v. p.; H. Esk Moller, sec.-treas.

Inc. Oct. 28, 1915, in New York, succeeding the Cerro de Pasco Copper Investment Co. Cap., \$1,000,000; shares, without par value; 782,000 shares issued; 218,000 in treasury for conversion of \$10,000,000 10-yr. 6% convertible Gold Bonds, dated Nov. 1, 1915; int. payable May and Nov. 1. Bonds convertible at option of holder after 2 years into stock at \$30 per share. Bonds subject to redemption at option of company, on 90 days' notice, on any semi-annual interest date after 2 years at \$105, plus interest. Stock listed on New York Curb.

First published annual report showed income in 1916 of \$3,670,000 from its subsidiary companies, and dividends paid of \$2,666,664; bond interest of \$700,000; administration expenses, etc., \$119,312, and a balance surplus of \$187,552. Balance sheet, Dec. 31, 1916, showed cash, \$391,652, and investments in its three subsidiaries, \$29,519,120. Consolidated balance sheet gave assets as \$39,857,905; including current assets, \$10,540,228; current liabilities of \$3,035,782, and surplus of \$14,472,123. Current assets included cash on hand, \$2,549,544; bullion, \$3,147,520 and accounts receivable, \$1,441,615.

Earnings applicable to dividends in 1917 were estimated at \$9,000,000 taxes paid.

Dividends: during 1916 company received \$1,285,000 from the Cerro de Pasco M. Co., \$285,000 from the Cerro de Pasco R. Co. and \$1,850,000 from the Morococha M. Co., a total of \$3,420,000. Out of this there was paid \$300,000 to shareholders of first named company, \$200,000 to the second and \$1,850,000 to the third. Distributions are at the rate of \$1 per quarter. In 1917, \$4 per share was paid plus extras totaling \$1.75 per share.

Owns all outstanding stock of Cerro de Pasco Mining Co. and all of the Morococha Mining Co., and \$2,850,000 of the \$3,000,000 capital of the Cerro de Pasco Railway Co.

Cerro de Pasco Mining Co.

Office: No. 15 Broad St., New York. Peruvian general office: Lima, Peru. Mine office: Cerro de Pasco, Junin, Peru. Works office: La Fundición, Tiahuanaca, Junin, Peru.

Officers: L. T. Haggin, pres.; Edward H. Clark, v. p.; H. Esk Moller, sec.-treas.; W. J. Hamilton, gen. mgr., Lima.

Inc. June 6, 1902, in New Jersey. Cap., \$10,000,000, all issued. Owns the entire stock issue of the Cerro de Pasco Railway Co. and is controlled through stock ownership, by Cerro de Pasco Copper Corp. Estate of L. T. Haggin is said to hold about 40% of the total investment.

ty: over 940 claims, and 70,000 acres miscellaneous lands in the and Yauli districts and about 400 acres of land that includes parts of the rich Cerro de Pasco district, with a smelter site and coal tracts north of Cerro de Pasco.

Cerro de Pasco lies 14,300' above sea level, rendering physical laboring. The population of the town is about 6,000, of whom only a percentage are white. The region is bleak and all food and supplies are brought in from considerable distances. The year has but 2 months wet and dry, the former from November to April. Both are bleak and exceedingly disagreeable. Snow and hail fall at any time in summer or winter, but rarely remain on the ground as long as 48 hours in winter. The fluctuation between mean summer and winter temperature is about 20° F. only, less than the daily variation.

Copper was discovered at Cerro de Pasco in 1630, and the mines produced to the close of the nineteenth century, about 450,000,000 oz., from 100,000 tons of silver and copper ore, nearly all extracted by hand work. The silver bullion was transported by llamas 200 miles to Lima, until when a railroad was completed to Oroya. Formerly only the copper ores of 25 to 40% copper were shipped.

Geology: authorities disagree as to the geology of the district, but the area is about a mile wide and nearly 2 miles long, nearly every claim carries silver. Cerro de Pasco one of the richest mineral fields of the globe. The bodies outcrop prominently, as crestones, or ridges, and carry gold, silver, copper, lead, zinc and cobalt. The oxidized zone carries considerable silver, running as high as 1 to 2 oz. per ton, occurring in rich but erratic quantities.

The high silver values usually extend to about 100' depth only, usually running up to thousands of ounces per ton, followed by rich silver copper ores, which in turn, at a little greater depth, are succeeded by low silver but richer in copper, the copper ores being estimated to average 15 to 30 oz. per ton in the old workings. Primary ores below water level contain bornite and chalcocite, associated with pyrite, arsenopyrite and sphalerite, containing little silver and only a trace of gold. There are occasional veins of high-grade silver-lead ores, others carrying up to 8% zinc; practically all the copper ores are siliceous, hence refractory in reduction. The ores carry about 35% silver and 14 to 30% iron, the excess of silica requiring considerable lime for fluxing.

Development: includes hundreds of old mine workings, some opened to 100' depth, though the majority not over 100' deep. The surface of the property shows scores of tajos, big pits resulting from the caving in of old cast workings, some of these being 300' deep. The property lies in a valley, and the mines are very wet, especially below a depth of 400'. The diaphragm drainage tunnel, begun April, 1877, by Henry Meiggs, was completed 1907, by the Compañía Empresa Socavonera del Cerro de Pasco, with which a financial arrangement was made, through a 5% stock interest given to the Cerro de Pasco Copper Co., obviating the payment of the 20% royalty to which the former company was legally entitled.

The present company has disregarded old workings and opened a new mine, by 2 tunnels, of about 2 miles length each, and 5 new shafts. The main shaft, La Esperanza, Carmen and Noruega 2-compartment shafts have recently opened, and are bottomed at 410'. The 4-compartment Esperanza shaft is planned to do the hoisting for the entire mine and the shops and power plant are near this shaft. Waste is used for filling, timber being very expensive, and used only for lining shafts and timbering important tunnels. The mines are equipped with powerful pumps. Estimates of ore reserves vary from 2,000,000 to 75,000,000 tons, the latter figure being excessive, and not countenanced by the management. Reserves of ore blocked out are said to be kept 4 years ahead of smelter consumption, these including first-grade ore of 8 to 10% copper tenor, with good silver values, and second grade ore, of uncertain copper tenor, though probably workable in the main.

The reduction works, at La Fundición, near Tifahuarea, 9 miles from the mines, are connected therewith by rail. All buildings are of steel frames, covered with corrugated iron. The plant treats a small quantity of custom ores and has a sampling mill with crushers, rolls and chain-bucket elevators. The works are terraced throughout, permitting the handling of material by gravity, and are built on the unit plan, so that their capacity may be doubled or, if desired, quadrupled at later date.

The furnace building has twelve 2,000-ton flat-bottomed steel ore bins filled from railroad tracks above, and loading into charging cars ran alongside, that are drawn by small locomotives on a narrow-gauge track running on either side of each furnace, 2 cars constituting a charge. There are five 56"x180" water-jacketed blast furnaces of about 300 tons actual daily capacity each. Slag is granulated by running water. The smelter building has a steel stack, 220' high and 20' in diameter. There are three 60' reverberatory furnaces and fourteen 18' six-hearth McDougal calcining furnaces. Six Dwight-Lloyd sintering machines were added in 1913.

The converter department, in a separate building, has 4 Pierce-Smith basic lined converters. Product of the converter is 99% blister copper, in cakes, shipped to Baltimore for refining.

The power plant includes a boiler house with sixteen 250-h. p. Babcock & Wilcox boilers, and an engine house, latter having a 600-h. p. Nordberg cross-compound engine, direct-connected to a 440-k. w. Westinghouse generator; two 475-h. p. Nordberg engines, direct-connected to two 250-k. w. generators; a 750-k. w. Westinghouse alternator and dynamo and 2 smaller dynamos furnishing electric power and light. There are 3 No. 11 Connersville blowers, driven by a Nordberg cross-compound engine, a large Nordberg air compressor for converter blast, and an air compressor for the pneumatic operation of furnace doors, etc. The power plant is practically duplicated, as a precaution against accidents.

A 12,000-h. p. hydro-electric plant was completed in 1913 and will greatly help the company's operations. The plant has a 10½-mile ditch and pipe line with a fall of 750', delivering 200 second-feet of water to 6 Pelton wheels connected in sets of 2 with three 3,000-k. w. dynamos. The transmission line is 70 miles long and will serve both Cerro de Pasco and Morococha. The entire plant cost \$1,000,000.

The adoption of electric power has greatly relieved the fuel situation and made the company practically independent of foreign coke.

The company furnishes its own fuel, owning extensive beds of bituminous coal, of rather indifferent average quality, though with some coal of coking grade. The principal coal mines are at Goyllarisquisca, Quishuarcancha and Vincuscancha. A branch line of the railway to Goyllarisquisca is 21 miles long, to Quishuarcancha 11 miles, the Vincuscancha coal mine being about midway. The coke plant near the smelter has seventy 75-ton beehive ovens, making a satisfactory coke for blast furnace use, no coke being imported. The coal contains 50 to 60% fixed carbon, 20% volatile matter and about 13% ash, with considerable sulphur.

The company's brick plant has proven an important success, as imported brick of all kinds are very costly, and the local plant turns out the and silica brick of very fine quality, from clays found in the mines, and common building brick are made from a clay pit near the Vincuscancha mine. This plant also makes tile and tile pipe. A limestone quarry 10 miles from the works, furnishes flux.

The Cerro de Pasco Railway, owned by the company, is operated under a government concession, has a main line of 83 miles from Cerro de Pasco to Oroya, and a branch line of 10 miles from Oroya to the way of Peru, and a branch line of 10 miles from Oroya to the way of Peru.

co railway has a branch to the coal fields, and, with all spurs, sidings yards, has about 135 miles of standard-gauge track, laid with 70-lb. s. The main line has an average grade of 1.5%, with a maximum grade 3%, and cost upward of \$2,000,000. Equipment includes 13 locomotives, addition to 6 light switching engines at the smelter, and 59 steel ore and gondolas, with a total of 247 forty-ton cars, rolling stock being of the American manufacture. The railroad is on a paying basis.

The company has 2 hotels, one for native and one for American labor, maintains a clubhouse with bowling alley, swimming pool, gymnasium, which is a social center and aids greatly in keeping the American kmen and their families contented. The company also furnishes facilities for riding and hunting. Although the altitude is very high, people of good health find no difficulty in living comfortably in the rarified air of Cerro de Pasco. Wages range from \$2.50 to \$4 per day for white men, and 60 to 75c per day for native common labor, the latter being fair, and, for some purposes, fairly efficient. Up to \$2, and even \$2.50 per day, is paid the native timberman. The company employs about 2,200 men at the copper mines, 1,500 men at the smelter, 1,000 at the Goyllariscaña coal mine, 400 at the Vincuscancha coal mine, and 200 at the Quiscancha coal mine.

Production: 3,389,787 lbs. copper in 1906; 20,258,689 lbs. in 1907; 23,646,921 lbs. in 1908; 30,327,423 lbs. in 1909; 34,713,012 lbs. in 1910; 48,600,926 lbs. in 1911; 45,272,000 lbs. in 1912; 43,856,000 lbs in 1913; 40,753,000 lbs. in 1914; 60,000 lbs. in 1915; 71,452,000 lbs. in 1916, and in 1917, to November, 25,000 lbs., the October yield being 9,050,000 lbs.

The Cerro de Pasco is undoubtedly the most expensive copper proposition ever developed, the total investment to date being nearly \$25,000,000. No serious discouragements were met in the earlier days, but overcome, and recent progress has been made to justify terming the property a success. The ores are refractory and the great altitude of the smelter, which is 10,000' above sea-level, coupled with inefficient native labor, have given rise to an exceedingly complex and tiresome problem in ore reduction. Estimated cost of production at 8c per lb. and annual output at 70,000,000 lbs., earnings per share of the Cerro de Pasco Copper Corporation would be \$10 on a 14c, \$8.40 on a 20c and \$12.60 on a 26c copper market.

Morococha Mining Co.

Office: 15 Broad St., New York, and Morococha, Junin, Peru.

Officers: E. H. Clark, pres.; L. T. Haggin, v. p.; H. Esk Moller, secretary; H. Kingsmill, mng. supt.

Inc. 1908 in New Jersey. Cap., \$10,000,000. Company is a subsidiary, owned by the New York interests of the Cerro de Pasco Co., prior to the settlement of litigation with the Socavon del Cerro de Pasco.

Property: the Gertrudis, San Francisco and San Miguel mines and a half interest in the Natividad mine, which is owned jointly with the Yukon & Johnston Co.

The Mina Gertrudis, opened 1897, on the Cerro San Marcello, shortly west of Lake Morococha, shows 3 limestone beds with ore impregnations following the bedding planes; vein has strike of N. 51° E. and nearly vertical dip. It averages about 2 meters in width, with a paystreak of 60 cm. thick, carrying gray copper and chalcocite averaging about 14% copper and 1,000 grams silver per metric ton, balance of vein carrying about 1% copper and 300 grams silver per metric ton. The mine has a 12-meter shaft, but is developed mainly by a tunnel, just above the level of Lake Morococha, mining through winzes sunk from short crosscuts in the hanging wall. Ore is hand-cobbed at the portal of the tunnel.

The Natividad mine is opened to about 300 meters depth, developing a vein about 4' wide, carrying ore averaging about 14% copper and 14 to 70 grams silver per ton. A tunnel, planned to be 750 meters long, is being driven under the

The Mina San Miguel is developed by the Copaycocha and Vulcano tunnels, lower of about 500 meters length, and ore is mainly enargite, with some tetrahedrite and tennantite, associated with pyrite. Mine was opened 1894, and in 10 years produced from ore averaging about 20% copper and 333 grams silver per metric ton, 6,476,400 kgs. fine copper and 10,794 kgs. fine silver.

The San Francisco is opened by a 4,000' tunnel, completed in March, 1916, known as the Carlos Reynaldo adit.

Production is gradually increasing and the ore is sold to and smelted by the Cerro de Pasco Mng. Co. Production is approximately 20,000,000 lbs. per year. In 1915 company furnished $\frac{1}{3}$ of the output of Cerro de Pasco Mng. Co.

FERROBAMBA, LTD.

PERU

Office: F. F. Fuller, sec., 638 Salisbury House, London, E. C., Eng.
Operating office: Arequipa, Peru. **Mine office:** Ferrobamba, Catobambos Apurimac, Peru.

Directors: A. C. Burrage, chairman; A. C. Adams, T. C. J. Burgess, W. H. W. Bliss, C. D. Burrage, H. W. Brown and A. Solomon.

Inc. Nov. 5, 1909, in Great Britain. Cap., £150,000; 60,000 priority shares 10s. par; issued, 36,658; 120,000 ordinary shares, £1 par, fully issued. Is registered in Peru.

The Ferrobamba property is one of the great copper deposits of the world. It is in central Peru at an elevation of 13,000' above the sea and about 45 miles west of Cusco, the terminus of the Southern railway, 500 miles from Mollendo, the seaport. The 207 claims are in 10 groups, covering 2,255 acres, all in the Ferrobamba district, Cotobamba province, Apurimac department, Peru. The deposits show oxidized ores of copper at the surface, underlain by sulphides largely bornite, and can be worked by steam shovels.

Property: includes valuable water-right concessions, from which it is planned to develop hydro-electric power, the rivers being fed by the melting snows of the Andes. The concessions include water rights to the Rio Chahuahuacho and several affluents, and application has been made for similar rights on the Rio Apurimac, about 25 miles in an air line from Ferrobamba No. 1. Including the last named concession, the available water power is rated at 120,000 h. p.

For purposes of development the property has been divided into zones, or groups, known as Ferrobamba No. 1, Ferrobamba No. 2, Katap-Charcas and Bonanza. Conditions are much the same at these different properties and it is thought that all can be worked opencast.

Ferrobamba No. 1, which includes Ferrobamba Nos. 1, 4 and 5, an area of 900 acres, has been the site of the principal development. The property shows an enormous mass of garnet rock, apparently of contact metamorphic origin, rocks being hornblende-biotite-granite and limestone altered into wollastonite by contact metamorphism for a remarkable distance, in many places up to 3,000' from any recognized igneous contact. Ferrobamba No. 1 is stated to carry 34 hectares of known copper ground, this area having a combined east and west length of 2,300', and north-south length of 1,640'; is estimated by the management to carry ore of payable tenor to a depth of 200', the contents being calculated by the management at 27,635,700 cu. yds., or approximately 12,000,000 tons of ore. Development is by a 100' shaft in chalcopyrite and bornite ore assaying copper, 3 oz. silver and 9 grains gold per ton. There is also a tunnel, and for a powder magazine, showing ore assaying 4.5 to 9% copper, in samples, at 2-meter intervals, for 100 meters, averaged 5.8% copper, 1.2 silver and 9 grains gold per ton. Copper values, so far as determined by prospecting, are quite uniform, the average values of 3 oz. silver and 9 grains gold per long ton being remarkably constant. Core drilling with under-

ork in 15 tunnels and the shafts, has proved up 6,000,000 tons of ore averaging 3.7% copper and 1.3% sulphur.

Ferrobamba Nos. 2 and 3, 300 acres, constitute the Sulfobamba mine. Development to January, 1913, has proven 778,000 tons of ore carrying 2.25% copper, with 6.75% sulphur and 532,000 tons too low grade to work.

The Katanga or Reina de Cobre mine, area 300 acres, is estimated by Mr. Vautin as likely to rival Ferrobamba No. 1 in tonnage, though but little work has been done thereon. Surface ores, chalcopyrite and bornite, have given assays of 2 to 7% copper, 2 to 4 oz. silver and 8 to 16 grams gold per long ton.

The Charcas, which is the fourth group, is small, having an area of only about 35 acres. Mr. Vautin reports an orebody of 100 meters width and 10 meters length, carrying exclusively chalcopyrite, associated with pyrite, suitable for open cast workings, the whole visible face of a bluff of ore saying up to 24% copper, with an average of 5% copper, 3 oz. silver and 3 grams gold per ton.

The Bonanza claims Nos. 1, 2 and 3, area 420 acres, lying 9 miles south of Ferrobamba No. 1, constitute the fifth group, known as the Bonanza mine. Surface conditions apparently are much the same as at the other properties, but no mining has been undertaken.

Development: in 1912 comprised 8,300' of tunnel or adit work and continuous operation of 2 churn drills.

It is stated that the oxidized surface ores as well as the sulphides are amenable to concentration. Extensive testing is reported to have shown that the ore concentrates 11 into 1 with 74% recovery of the product being a mixture of sulphide and oxidized minerals with 30% copper. Considering current work by Arizona companies, this seems reasonable, and as the property can be worked by steam shovels, the deposit is workable. The discovery of iron-copper-sulphide ores in deposits 9 miles west of the mines, supplies a much needed source of sulphur. Property has been examined and reported on by Frank Klepetko and W. H. Wiley. In June, 1913, the property was closed down awaiting railway transportation and the company is exploring properties in the Chumbivilcas district, nearer the railway, held under option.

The company gave an option to Albert C. Burrage, of Boston, in 1911, providing for a new company, to be organized in New Jersey, capitalization \$7,000,000, shares \$5 par, such new corporation to give to the Ferrobamba, 420,000 shares, or \$2,100,000 in stock, and £250,000 cash, the balance of 3,000,000 shares, or \$3,650,000, to be subscribed, at par, for working capital, the cash part of the consideration, £250,000, to be payable in 4 equal annual installments, secured by mortgage debentures. This option was not exercised.

Making all due allowances for optimistic estimates, it is obvious that the Ferrobamba is a property of exceptional promise, with good prospects making a very large low-grade mine, if adequately financed and skillfully managed.

BA COPPER CO.

CUBA

Office: 2401-60 Wall St., New York. Mine office: El Cobre, Santiago Cuba.

Officers: Benj. B. Lawrence, pres.; Colgate Hoyt, v. p.; I. W. Hunter, W. T. C. Carpenter, treas.; Edw. H. Emerson, gen. mgr.; Edw. B. Jel, supt.

Inc. Jan. 5, 1907, in West Virginia, as successor of El Cobre Mines. \$2,000,000; shares \$100 par; in \$1,500,000 non-cumulative 6% preferred \$500,000 common stock. Annual meeting, 1st Tuesday in March. Property being operated, in 1916, by the Cuba Leasing Co., a temporary organization arranged for financial purposes with same management as the Cuba Copper Co. Offices with Beer Sondheimer Co., 61 Broadway, New York. History: was the first copper mine in the new world worked by white men; opened A. D. 1538 by the Spanish, the first copper from El Cobre having been used for casting Spanish cannon. Properties were taken about 1832, by a Hispano-English company, and ore was shipped to Mexico for reduction. The custom-house records of Santiago are said to show exports of 610,210 tons of ore, 1851-60, and 186,226, probably

in depreciated Spanish currency, the ore assaying from 12.69% upwards, and probably averaging about 16% in copper tenor. In 1844 El Cobre railway was built, the Queen of Spain being the principal shareholder. The property shows the remains of an old stamp mill. During the revolt of 1863-1878, the big Cornish pump was burned, flooding the mines, which remained idle until taken over, 1902, by the predecessor of this company. Immediately after the Spanish-American war, the property was denounced by F. D. Pagliuchi and financed by Wm. Astor Chandler and associates, who had much trouble handling the great amount of water and in opening up the orebodies.

The mine was finally unwatered in April, 1916, and the bottom level 1,120' deep found to show unoxidized chalcopryite ore, averaging 8% copper in substantial widths, besides a large amount of low-grade ore amenable to flotation treatment.

Lands: 8 miles west of Santiago bay, show a mineralized zone of 200' width, traceable 6,500', carrying 3 parallel veins with much altered intervening rock. The mine is in a hill of rhyolite tuff agglomerate, of variable texture and appearance; the nearby hills are limestone, and diorite occurs to the south. The veins are confined to the rhyolite, only 2 are worked, the main or principal one being also called the South or "Middle" vein. The veins run E. to a fault which throws them 350' to the north. Ore occurs in pockets and shoots up to 80' across, in a vein of breccia, lying against a fault plane or mud slip. The gangue is altered rock and quartz. The ore contains much anhydrite and gypsum at 640' depth and below. Ore carries chalcopryite, associated with pyrite, in a quartz gangue, the grains of chalcopryite frequently being coated with covellite. Ore occurs in lenticular shoots. The oxidized zone is of 50 to 75' depth only, succeeded by sulphide ores averaging 4 to 5% in copper tenor, without either gold or silver in important quantities.

In the mine workings the oxidized ore extends deeper, and is underlain by semi-oxidized or tarnished ore, which gave much trouble in flotation work. The deeper ore is fresh chalcopryite with pyrite.

Development: old workings were extensive, including some 40 shafts with numerous remains of hoists and boilers. The 4 deepest shafts were about 1,000' each, with 17 miles of workings, timbered mainly with mahogany. The mine was found in bad shape, requiring heavy retimbering, as many of the old stopes, up to 20' and 30' in width, had caved. During the rainy season the mine makes 500 to 1,200 gals. per minute of strongly acid water, requiring pumps of bronze, with lead or wood-lined pipes. The mine has pumps with a combined capacity of 3,000 gals. per minute. Water from the mine was formerly run over scrap iron, producing considerable cement copper, but this has been discontinued, owing to cost and because the mine water formerly carrying 400 grams copper per ton now carries only 50.

The present company has sunk a 1,000' shaft at the footwall of the north vein and crosscut 400' S. to the vein. From this level winzes extend down to 1,300' in depth. Exploration consists in drifting along the vein with crosscuts at intervals to the hanging-wall.

El Cobre railroad, 9 miles long, connects the mine with Punta Sal on Santiago harbor, and is equipped with 2 locomotives and 40 cars.

The reduction plant at Cobre includes a 600-ton concentrator with 4 largest size Hardinge mills for grinding the ore for the 700-ton flotation plant. Forces are about 450 men. Concentrates of about 16% copper tenor are shipped for smelting to the United States.

In this plant, "the ore is crushed dry by rolls, screened through 8-mesh and conveyed to the storage-bin. Four Hardinge and two ordinary tube-mills are fed from the storage-bin by individual Challenge feeders to insure equal distribution and regular feed, as the ratio of oil to ore is most important. Cresylic acid, carbolic acid, Mexican crude, and light asphalt oil are fed into the tube-mills by special machines. Grinding is done on a slick pulp, 25 to 30% moisture, until 65% will pass 60-mesh. The pulp

ers to the M. S. box without classification or re-grinding. Fourteen
 ers with 13 spitz-boxes are used. Direct concentrate is taken from as
 y boxes as show a good concentrate, the poorer froth being returned to
 first box. Number of boxes treated varies with this and is changed by
 operator who judges by eye. All the coarse tailing is roughed over
 fleys to recover the coarse pyrite carrying copper. Caustic soda and
 -oil are added as needed in the stirring-boxes. The various concen-
 es go to the classifier, the coarser product passing direct to the bins
 1 about 8% moisture. The overflow is thickened and drained by an
 er filter, giving about 20% moisture. The plant handles 600 tons per
 and gives about 85% extraction of the insoluble copper in a 3% feed.
 s interesting to note that with El Cobre ores using a cold neutral solu-
 wood-products have not given any satisfaction. The concentrate car-
 16% copper, 35% iron, 40% sulphur, and 9% silica." (Mng. Sci. Press,
 22, 1916.)

Production: company is now milling about 600 tons of 3% ore daily.
 erty produces about 2,000,000 lbs. copper annually. (See "Mining in
 nte Province, Cuba," by Jos. T. Singewald and B. L. Miller, Eng. &
 s. Jour., April 1, 1916.)

3 CERROS COPPER CO.

CUBA

Idle. Office: Blackstone Bldg., Cleveland, Ohio.

Officers: W. I. Boardman, pres.; W. C. Watkins, v. p.; Sherman C.
 ey, sec.; W. L. Rees, treas.; Col. D. H. Pond, gen. mgr.

Inc. Aug. 12, 1905, in Arizona. Cap., \$500,000; shares \$100 par.

Property: 2 claims, 100 acres, also 1,500 miscellaneous lands, near Fo-
 to, Prov. de Sta. Clara, Cuba, opened by 3 shallow shafts and 5 tunnels,
 est 250', showing ore assaying 10% copper, 20 to 25% zinc, 20% sulphur
 30% silica, with gold and silver values. Zinc apparently decreases at
 h. The vein has a 12' to 15' gossan outcrop along its strike. Property
 1 antigua last operated in 1750. The ore though mostly low-grade and
 iferous can be concentrated and property is considered worthy of further
 lopment under competent direction.

TAHAMBRE MINE

CUBA

Manuel Luciano Diaz, owner, Apartado 1795, Havana, Cuba.

Property: 8 kilometers from port of Santa Lucia, in province of Pinar
 Rio, Western Cuba.

Geology: most orebodies in the region so far disclosed are found in
 tered slates or shales in the foothills W. of the Sierra.

Development: to 1,000' depth. Reserves reported as sufficient for seven
 s' output. Exploration being continued. About 1,300 employed.

Production: began in Dec., 1913, and by April, 1914, company had
 ped over 8,000 tons ore, averaging 18% copper and 1.5 oz. silver per

In 1914 nearly 6,000,000 lbs. copper were shipped. In 1915 production
 about 40,000 tons of 12% ore; in 1916, 80,000 tons.

Concentrator to treat second-class ore being erected, 1917.

IUPO MANGANESE CO.

CUBA

Offices: 71 Broadway, New York and Santiago de Cuba, Cuba.

Directors: Chas. F. Rand, pres.-treas., New York; Pedro Aguilera, v. p.,
 iago de Cuba; Chas. F. Smith, sec.

**Inc. in New Jersey. Cap., \$30,000; shares \$100 par; all outstanding.
 s earnings in 1915, \$567,800, of which \$315,748 was from iron ore sales.
 ating expenses in 1915, \$250,568.**

Property: company owns iron, manganese and copper mines, the iron
 s being the only ones operated at present. They are worked as open
 ries.

Production: in 1915, 72,387 tons ore, assaying 60% iron, silica 10%,
 phorus 0.015%. Average value ore shipped, \$4.44 in the U. S.

3T INDIES MINES DEVELOPMENT CO.

CUBA

Address: 25 Broad St., New York.

Property: the Constanca and other copper mines near Viñales, Western

Cuba, and north of the Matahambre mine. M. Paetzold, Austrian consul at Habana, controls mines.

HAYTI AND SANTO DOMINGO

BLANTON COPPER MINING SYNDICATE

Office: The Bourse Bldg., Philadelphia, Pa. **Mine office:** Bucaro, San Cristobal, Santo Domingo.

Officers: E. J. Hedden, pres.; H. A. Smith, sec.; J. B. Thom, treas. with M. W. O'Boyer, A. D. Blackinton, J. F. Wilt; directors. F. T. Eddingfield, mgr., Santo Domingo; Otto Peterson, supt.

Inc. Feb. 16, 1910, in Delaware. **Cap.**, \$500,000; shares \$25 par; non-assessable; \$360,000 outstanding. Authorized bond issue \$400,000; \$190,000 outstanding. Annual meeting, 1st Monday in January. Total receipts from ore sales, from October, 1915 to July 15, 1916, amounted to \$45,193, or net cash, \$32,440, for 857 tons selected ore, the ore averaging 12.4% copper and \$1.60 in gold and silver. Shipments from January-July, 1917, totaled 231 tons of 12.78% copper ore. This ore is handsorted about 10 into 1. Property examined and reported on by the following Mining Engineers: F. Lynwood Garrison, Thos. F. Donnelly, Henry D. Adams, and F. T. Eddyfield.

Property: 1,700 acres, held under government concession, including the Bucaro mine, on the Rio Nigua, 27 miles west of San Domingo, bought of San Cristobal Mining Co. Property shows orebodies in limestone, near a porphyry contact, one orebody in the Bucaro mine carrying chalcopyrite, bornite and chalcocite, all auriferous and argentiferous.

Development: by tunnels, the work aggregating 3,500' in 1917. Company reports 35,000 tons ore blocked out and that property is near the profitable stage. The Ferdinand vein opened for 200' on No. 1 level is said to average 16' of 4% ore for 150', and has 25,000 tons nearly probable ore. The Santiago vein appears to be 40' to 80' wide and assays $\frac{1}{2}\%$ - $1\frac{1}{2}\%$ copper for levels 130' apart along 200' drift.

A 100-ton mill is to be erected and water power 7,000' from the mine is said to be capable of development.

COPPER IN AMERICA

By WALTER HARVEY WEED

AN ADDRESS DELIVERED AT THE PAN-AMERICAN CONGRESS AT
WASHINGTON, D. C., 1916.*

Fifty years is but a brief span in the history of mankind yet it comprises practically the entire period in which copper has become and been an important factor in American industry and life.

Although the metal was known and used by the American Indians before the advent of Columbus and small deposits of the metal were worked by the early settlers, copper mining was an insignificant industry for the first 350 years after America was discovered. The history of copper mining in America can be fittingly divided into several periods. The first is the colonial period, which in effect lasted until 1845 when the second, or Lake Superior period, began. In 1883 the Arizona and Montana mines began production ushering in a bonanza period in which very rich ores were mined, continuing with a gradual exhaustion of these extremely rich ores and a corresponding betterment in concentration and smelting methods until the advent of the present porphyry-copper period in 1904. These porphyry deposits have almost dominated the field since that time, though their total production is only equal to that of the Butte mines.

The colonial history of copper mining in America dates from 1632, when the metal was discovered at the pyrite deposits of Massachusetts, but the first copper mine in the United States was opened at Granby, Conn., in 1705. In 1709 a copper mining company was incorporated to work the copper ores near New Haven and in 1719 the deposits beneath the trap sheets of New Jersey, near New York City, were mined. The chief producer up to 1840 was, however, the Vermont copper mine at Ely in that State.

In 1844 the Lake Superior mines were opened and in 1849 dividend payments started and North American copper mining became an important industry. About this time the mines of Maryland were worked and in 1850 the Ducktown, Tenn., deposits were discovered and the rich black copper ores of the secondary enrichment zone were mined and shipped. Upon exhaustion of these rich ores, commercial failure attended all attempts to work the primary sulphides until such work was stopped by the Civil War.

In the British provinces copper was found on the Newfoundland coast in the early history of this, the oldest British colony in America, but it was not until 1865 that mining worthy of the name began. In Canada, the Bruce mines, opened in 1846, still await development, but important copper mining dates from the opening of the Sudbury deposits in 1886.

In Mexico copper mining and smelting were carried on by the Aztecs previous to the Spanish conquest, but modern mining dates from 1870 when the Boleo mines of Lower California were opened by the Rothschild interests.

In the past half century the economic rôle played by copper has changed from that of the tool of the savage, the domestic utensil and humble currency of the Roman, as well as its glorified use in art as bronze, to the indispensable metal of modern industry and twentieth century warfare. Its extraction from the earth's crust is a basic industry and

like agriculture is of benefit to all for each pound added to the world's store is an actual contribution to the world's real wealth. In electrical uses, for alloys in particular for anti-friction metals and for brass, it is indispensable and has no substitutes. It is not too much to say that without it our cities would be dark, our streets quiet, our trains idle and shops closed.

The development of both the present day necessities and conveniences has been so rapid since 1880 that it is difficult to realize how important a part the metal has played in America.

Geographical Occurrence

The geographical distribution of copper ores in commercial quantities is quite different from the geographic occurrence of copper minerals. The latter are found in Newfoundland, in all the eastern provinces of Canada and in all but our southernmost and prairie States. Throughout this continental area there is a marked association of copper ores and either existing or planed down mountain sections. The Appalachian Mountain region from Alabama northward, like the Michigan Peninsula, is known to have furnished native copper to the Indians before the advent of Columbus, while in 10 relatively level States, including Florida and much of the central Mississippi Valley region, no copper minerals occur. Westward practically every mountain uplift contains copper minerals.

Ore deposits of copper, worked, working or workable, are less widespread. The Ducktown, Tenn., deposits are now the only important producers in the entire Appalachian region from Nova Scotia to Alabama. The Vermont copper mine at Ely; Ore Knob, N. C.; the Gossan lead of Virginia, once our most noted producers, have long been shut down. Sherbrooke in Quebec and Sudbury, Ontario, with the Michigan mines are practically the only active properties east of the Rocky Mountain Province.

Copper deposits occur throughout the entire length of the Rocky Mountain region, from Alaska through Canada, the United States and Mexico to the Isthmus of Panama. This region, the backbone of the Continent, with the Great Basin province and Pacific Coast section, includes the greatest ore bodies of the continent now being worked, yielding three quarters of the North American copper output. Throughout the arid desert region of New Mexico, Arizona and Nevada, every mountain range contains deposits of copper ore, most of them perhaps a reserve for future generations when new methods and economies, or advanced prices may make the working of such deposits profitable. The coastal region of Alaska and British Columbia contains three or four important producers and many, very many, undeveloped properties, but the greatest mines to-day are in the interior of the continent, from the Boundary and Rossland districts of Canada and the Butte mines of Montana southward.

At the present time there are but eight important copper producing States in the Union; Tennessee, Michigan, Montana, Utah, Nevada, Arizona, New Mexico, California, besides our great isolated territory, Alaska. Three other States, Colorado, Idaho, and Oregon are of minor importance as producers.

A similar association of copper deposits and geographic conditions prevails in South America, where the copper deposits are confined to the Andean Cordillera from Colombia south to the Straits of Magellan and to the lesser mountain uplifts which form the eastern border of the continent in Venezuela, Brazil and southward to the southerly tip of the continent owned by Argentine. This geographical association has been found

be world wide and is as significant of geological conditions as of geographical relationships.

Though copper is so widespread in its geographical distribution, the world's supply of this metal comes from a few great deposits. There are less than 400 mines in the entire world producing as much as 100,000 tons, or 50 tons of copper a year, an output normally worth about \$1,000. In the whole of North America there are but 21 really important copper producing districts, four of them in Canada; Sudbury, Rossland, the boundary district, and Maple Bay; one in Alaska; four in Mexico; and the balance in the United States, namely, Ducktown, Tenn.; the Michigan Peninsula; Butte, Mont.; Bingham, Utah; Ely, Nev.; Bisbee, Ariz.; Clifton-Morenci, Globe-Miami, and Ray in Arizona; Santa Rita in New Mexico; Shasta County, Cal., and possibly Yerington, Nev., comprise the entire list.

Political Economy

The political effect of the copper mining industry has been most important. The Michigan Copper Range was a wilderness of swamp and forest until the discovery of its nuggets and of huge masses of the native metal led to its settlement. At first sailing vessels and then steamships brought supplies and took away copper from a region that was lowbound and inaccessible during the half of the year in which Lake Superior was not navigable. The growing industry induced railway lines to build into this remote section of the United States, opening up a great extent of new country which after having supplied the entire United States with cheap pine lumber is now slowly but surely filling up with hardy farmers. The Copper Range itself now supports a population of over 10,000 people and its towns and settlements may well serve as a model for other mining camps.

In Nevada the Ely region, once the home of a few ranchers and its grass-grown hills the grazing ground for great herds of cattle, its nearest railway 70 miles distant, is now well settled, with its own railway line and steam shovels taking out 3,500 tons of ore a day, carried 20 miles to mill and smelter plant. The mine payroll supports several busy, thriving towns containing about 8,000 people.

In Southern Arizona where the one transcontinental railway traversed the desert and had but scanty business throughout its course, the copper industry has built up new towns and branch lines, and induced the settlement of every spot where water is found. To-day the entire State feels the throbbing energy of the copper mines and smelters and the money paid for supplies and wages enriches in one way or another every home of the entire commonwealth. The copper industry has been the immediate and direct cause of the building of a new transcontinental line, bringing coal and supplies both for mining and for general use. Bisbee, Globe, Miami, Douglas, Clifton, and Morenci contain one-quarter of the population of the State, pay half its taxes, and support directly or indirectly over half the citizens of this our newest State.

An excellent illustration of the great influence copper mining has had on our national life is seen in Montana. Its copper output comes but from one place, Butte, a city of 70,000 people with four transcontinental railroads and four great electric power lines, bringing 40,000 electric horsepower to its mines. A monthly payroll of \$1,800,000, distributed to some 3,000 workers, results in a yearly output of metals worth \$78,639,000. A sister city, Anaconda, with 12,000 people, 27 miles distant, was built for and is supported by the reduction works where the Butte ores are treated.

Both cities are the market for enormous amounts of timber, coal, powder, and other supplies, thus giving employment to double the number actually engaged in mine work. The five railways handle 193,000 cars of freight, equal to 5,485 trains a year, carrying 8,640,000 tons. At Anaconda the reduction works, which cost \$15,000,000, treat 12,000 tons of ore, consume 2,300 tons of limestone, 500 tons of coke, and 550 tons of coal per day. Some 80,000 out of a total population of 400,000 are directly affected, one company alone, the Anaconda, employing 16,000 people and spending an average of \$30,000,000 a year in the State. These figures show the influence that an area 1½ miles long and one-half mile wide has upon the political economy of the State and indeed of the entire Nation.

That copper mining and copper production have increased wonderfully in the past 10 years is very generally known, but just how rapidly this increase has come about is not so well recognized. Statistics show so rapid an expansion of the industry that a copper famine has been predicted as likely to come in the near future. Without burdening the members of this Congress with production tables, it may be stated that in the first 10 years of the past century the world's production was only 91,000 long tons. This was increased by 5.5 per cent in the next 10 years, 40 per cent in the succeeding 10 years, 61 per cent the next decade and reached a decennial increase of 99 per cent in the years 1881-1890. The average increase was 77.83 per cent for the last 20 years of the nineteenth century. In the United States a production of 650 tons in 1850, or of 37,650 tons for the decade following, had grown to a yearly output of 10,000 tons in 1867, 21,000 in 1877, and 81,017 tons in 1887, and Montana and Arizona both started production in 1883.

By 1897 the production had grown to 220,571 tons, almost double in 1908. The following year a full billion pounds of copper were produced and for 1915 that figure will seem small. An annual increase of 7 per cent in production is usually accepted as correct.

If these figures are plotted to scale with the years as abscissas and the production figures as ordinates, it will be seen that the production runs upward at so startling a rate as to justify the fear of a copper famine. My belief that this fear is unfounded is based on a knowledge of the immensity of the reserves of low-grade copper bearing material which can be called ore in the near future when improved and new methods of treatment, now being tried out, will lower working and reduction costs. Methods now actually in use on a commercial scale in experimental plants at Anaconda and at Butte, Mont., at Morenci and Miami, Ariz., in Michigan and in other camps, make it certain that our per cent sulphide ore will some day be profitably handled, provided, of course, that the price of the metal stays at or above its normal average of 14 cents per pound.

It used to be said that it takes \$1,000,000 and 10 years' time to make a copper mine, but nowadays it takes 10 times that amount and half the time to make a really big producer. Should the Chuquicamata property in Chile and the Tanganyika mines of Africa fulfill their owners' expectations, the average decennial increase of 50 per cent will be taken care of for a while at least. The former property will in time treat even more than the mammoth daily tonnage of the Utah Copper Co.

About half of the American copper output goes abroad, much of it to England, whose copper mines, once regarded as the largest in the world, now yield but a scanty 150 tons a year. Germany, in later years our largest customer, and who is now using up her hoarded purchases in warfare, has already, we are told, bargained for new supplies to

delivered when peace comes again. In fact not a nation of the Old World, save Spain and Portugal, produces copper enough for its own needs. The same is true of Asia. If hydroelectrical development, with its consequent expansion of industry, advances as rapidly abroad in the next few years to come as it has done in the last decade, America's surplus copper will be as badly needed for peaceful uses as it is now for war munitions.

Prices

As is usual in most industries, increasing use and demand have been met by increasing production, which responds to increased price. This has been followed by gradually decreasing price, whose low average stimulates further increase in consumption. The history of copper prices conforms in general to this experience. The average price of Lake Superior copper from 1845 to 1910 was 14.19 cents per pound, but this figure does not tell the whole truth. Not only did prices vary widely during that time, but the purchasing power of a dollar in 1845 and even in 1860 was nearly double that of to-day, so that a price of 24 cents some 25 years ago is quite different from 24 cents to-day. During our Civil War the price rose to a maximum of 55 cents per pound, averaging 47 cents for the year 1864. In the next year the price dropped 9 cents, 5 cents more the following year, with a further decrease of 9 cents in the succeeding 12 months. It rose again to 35½ cents in 1872, and showed a gradual decline in the next score of years, reaching a minimum of 9 cents in June, 1894. This is the lowest price yet reached by the metal.

In this connection it might be well to add that making no allowances for failures, but considering only the successful mines of the Lake Superior district, the actual cost of production of a pound of copper throughout a period of 65 years was 10.63 cents per pound and the companies have shown a dividend record equal to 3.56 cents per pound. With the advent of the porphyry coppers as producers, this record of low cost has been beaten, but it is safe to say that the average cost per pound of copper at all operating mines is to-day not much less than 10 cents per pound. A careful consideration of sales statistics and prices for the past 35 years when plotted shows that the average price of copper has been practically 14 cents. As both high and low prices are usually for relatively limited amounts of the metal, any average based upon these figures alone would be misleading. Yet even a geometrical average is merely a scientific guess as applied to the future since supply and demand must necessarily govern the price. If prices go down, the high cost producer must close down its mines. A rich company may produce the metal at a loss for a short period in order to keep its plant operating and its staff intact, but such operations are, of course, merely temporary. To tell the future price of the metal requires not only a knowledge of European conditions only known to a few, but also a consideration of the cost of production by the big producers and a forecast of interest rates for the years to come when surplus copper may be stored in periods of trade depression. There are, in fact, so many variable factors that the problem is almost hopeless if more than an estimate is desired. It is certain that the present high prices seriously curtail ordinary uses and teach consumers to turn to less desirable though usable substitutes. For many purposes sheet copper and copper coatings are used instead of solid metal, and in a multitude of small ways people are learning to do without copper and will continue to do so even when the metal price falls. Fortunately, the electrical industries utilize more than one-half

total amount of copper consumed in America. For such purposes per must be used whatever its price may be, the amount being only ted by the demand for electrical machinery and copper wires. A idard price of 15 cents a pound would be a boon to producers and sumers alike, and if our country would but stabilize the market, as done abroad for zinc, this price, fair to all, could be maintained. er pre-war conditions only the Europeans reaped the benefit of our est prices, owing to their ability and determination to combine against erican producers.

Geology

As the metal combines with great facility with 86 other elements, it ns several hundred minerals, most of which are found in America. withstanding this bewildering array of copper-bearing mineral species, y of them of wonderful beauty, the minerals of commercial im- tance are relatively few and in North America include a half dozen hides and as many ore minerals in the oxidized deposits of the al. Contrasted with the rest of the world, American copper deposits notable for the size and abundance of the native copper ores, and ondy, for the abundance and richness of copper glance ores. Bornite ommon as an ore mineral and enargite, the sulpharsenide of copper, aratively rare in other continents, is found in great abundance in atana deposits. Gray copper, though a common ore mineral, is more racteristic of silver deposits than those of copper. Chalcopyrite, the al and commonest copper ore mineral of European and, in fact, of t copper deposits outside of America, is of minor importance in most erican copper districts outside of Tennessee, Ontario, and California. idized ores rich in copper are characteristic of the shallow workings he mines in Arizona and Mexico, where arid conditions prevail.

Probably 58 per cent of the American copper production comes from ococite ores, 7 per cent from enargite ores, 20 per cent from native per ores, and the balance from the chalcopyrite ores of Nacozari bury, California, and Tennessee.

At present one may safely say that all the great deposits with prom- outcrops have been discovered. It is, nevertheless, true that no tw will agree as to what is promising, and with increased experience ain minor hitherto overlooked characters become significant and tive of good ore bodies below. Perhaps when these signs are cor- ly read, further great deposits will be found and opened up. At ent, indeed, it looks as if all the really great deposits, readily reac- ble as such, have been found and opened. It is certainly true that

big mining companies find it more and more difficult to get the es that are up to their standard of size. Prof. Richards has aptly said: "It is a million dollars worth of copper, but it is not worth the trouble of getting it."

satisfaction in knowing how the copper is formed. The study of ore deposition was

as a commercialization of science. Our petrographers were

new rock species or writing technical reports. It is more interesting than in observing the observation by mineral-bearing solutions

various specialists in geology. It is the study of ore deposits

ed by the study of ore deposits. Perhaps the best example of this is the work of Lindgren. In many

etrographer, and stratigraphic geologist are all needed and the chemists and physicists must be called upon for help.

The occurrence of copper minerals with particular rock types has been observed throughout the entire world. Early works on mining advised the reader to search for copper ores in the crystalline schists, the oldest, or supposedly oldest, rocks of mountainous regions. Increasing knowledge has shown that while copper deposits are found in nearly every kind of rock, most of the productive deposits now known are in igneous rocks and especially those of relatively late geologic age. Experience proves that metalliferous deposits are very frequently found in or near bodies of intrusive rocks. Practically all the dark-colored, silicic, igneous rocks, including the traps, basalts, and other more distinctly ferromagnesian varieties contain copper. This has been established by reliable analysis, and further research has shown that the dark, iron-magnesian silicates of such rock contain most, if not all, the copper. Similar analytical work indicates that on the contrary the silicious, igneous rocks, such as the granites, porphyries, and alaskites contain very little any copper. The Hawaiian basalt is reported to average 0.18 per cent copper, with some samples carrying as much as 9.6 pounds per ton. The trap rocks of the Michigan Copper Range average 0.02 per cent, four-tenths of a pound of copper per ton; the relatively basic Butte granite averages only 0.006 per cent.

Despite this well-known favoritism of copper for the basic rocks there are but two out of the many copper deposits of Pan America which occur in rocks of this character, namely, the native copper ores of Michigan and the nickel-copper deposits found in norite at Sudbury, Canada. The greater number of workable copper deposits of the American Continent are not only found in the relatively acid or silicious igneous rocks, but are genetically connected with them and appear to derive their copper content from such rocks. That this is the case is established by abundant and competent evidence. It is apparently strange that this should be so. The reason why is not generally understood, though it is equally important from the commercial as well as the scientific point of view. One explanation suggested is that the metal is well distributed in small quantities throughout the basic rock, but that only in exceptional cases is the cooling of such rocks been slow enough to permit of the segregation of the sulphides into separate masses through magmatic segregation. Such appears to be the case at Sudbury, Ontario, whose ores are in part simply basic rock containing unusually large amounts of chalcopyrite and pyrrhotite concentrated in the cooling magma and gathered along the margin of the mass. In the silicious rocks, on the other hand, fractional differentiation and crystallization have concentrated copper, together with boron, fluorine and water in the mother liquor, or residual portion of the magma. The part is still liquid, while the greater part has solidified. This final product, which is also the more valuable, is related to alaskite, appears to contain small quantities of arsenic and often tourmaline. In Mexico, close to the stock mines, the value, since it was naturally found in such an advantageous position, is generally recognized as the metal.

The copper deposits of the continent present a very wide variety of types, though the really workable deposits are practically of but eight kinds and may be designated as the Sudbury, Tennessee, Michigan, Butte, Bisbee, Boleo, Shasta, and Ray types. To describe them even briefly would lengthen this paper beyond the time allotted. Though so varied in genesis, the practical miner would feel warranted in grouping them as pyritic lenses, limestone replacements, vein deposits, bedded veins, and last, but in tonnage much the greatest, the blanket deposits of the so-called porphyry, or disseminated ores.

Lenticular deposits of pyritic ore were for a long period the world's chief source of supply; Rio Tinto, Spain, and Mount Lyell, Tasmania, are well-known foreign examples, and Sudbury, Ducktown, and the Shasta deposits would all fall within this division of the miners' classifications, though each has a different genesis. Limestone replacements are always genetically connected with igneous rocks and the accompanying metamorphic action, but as generally understood they form a distinct group which includes the Bisbee deposits, the Kennecott, Alaska, deposits and many others of lesser magnitude.

The Michigan native copper ores stand practically alone as impregnations of conglomerate beds and of the porous parts of interbedded, basaltic lava flows, fractured by movements along bedding planes. The study of these deposits carried on for so many years has not yet solved the mystery of the concentration of the metal in ore shoots, although it has shown the very wide spread occurrence of the metal, indicating that this peninsula has a reserve of low grade material possibly workable in the future that is greater than that of any other known locality in the world.

Vein mining is best exemplified in the great deposits of Butte, Mont., where quartz pyrite replacements of sheeted granitic rock carry immense bodies of glance and enargite ores, not only in the quartz vein matter but in the crushed, softened, and highly altered granitic rock. In the slightly later fault veins, similar ores occur in well defined shoots, separated by altered granitic material reduced to soft clay and breccia by attrition and fault movement, and it is notable that such ore shoots do not outcrop, nor come within several hundred feet of the present surface.

The limestone replacement deposits are but a phase of ore deposition accompanying or following igneous intrusion. They are usually found to be connected with disseminations and veins as parts of one ore bearing complex, but their great commercial importance warrants giving them separate mention.

The disseminated deposits, often called "porphyry" deposits, form a distinct class and one of great commercial importance. These deposits all occur in altered, usually granular acidic rocks or the schist bordering such intrusive masses. The deposits are blanketlike in form with a capping of valueless leached material from 50 to 300 feet thick. The ore bodies themselves are from 50 to 600 feet thick and of irregular but extensive area, that at Ray, Ariz., for example, covering 205 acres. Development shows that there is a gradual decrease in the percentage of copper in the ore downward, from 2 per cent or 3 per cent near the top of the ore blanket, to 1.3 per cent or even less at the lower limit of the enrichment. The transition to lean primary mineralization is often sharp, and within a few feet one may pass from the chalcocite ore to a relatively fresh rock peppered with tiny particles of pyrite and probably some chalcopyrite, the rock averaging about 0.5 per cent of copper. At the Miami field near Globe nearly 142,189,120 tons of ore have been developed by churn drilling and by underground work. At Ely, Nev., the

deposit contains 95,157,543 tons, and at Ray, Ariz., 108,873,326 have been blocked out, while at Bingham, Utah, the enormous total of 369,845,558 tons of ore has been blocked out. At the last-named camp 35,000 tons a day are mined, the ore carrying less than 1.5 per cent copper with 36 cents in gold and about 12 cents in silver per ton; all these great ore bodies are the result of oxidization, leaching and reprecipitation of copper in a process generally known as secondary enrichment or secondary sulphide enrichment. The recognition of this process has been of direct practical benefit to the mining world and has done much to give geology a standing with the practical mining men. Though based upon chemical and physical factors its field study is geological work and its development due to geologists.

Secondary enrichment is the phenomena of sulphide formation from sulphates derived from the oxidization of lean sulphide ores. It is directly due to the formation of solutions in which copper is carried downward and precipitated by contact with pyritic material below. The process was first noted in copper deposits being named and described by the writer in 1899 and in 1900 by Emmons and Van Hise. It has been so generally established as true by mining operations that there is danger of its being applied where it has not taken place. Commercially secondary enrichment is not merely important but is often the determining factor between a payable mine and a worthless one. Scientifically it has stimulated investigation in chemical laboratories and by the aid of microscope, and has led to an amount of real research work that is not only of practical value but which is building up stone by stone a structure which, even if never completed, will endure as truth itself and will represent the science of mining geology.

In the light of our present knowledge, the adjective secondary is objectionable, for our richest copper ores are often Tertiary and even Quaternary in character. The copper ores lend themselves more readily to a study of enrichment processes than those of any other metal, for copper is not only readily soluble and in such state forms new compounds with great facility, but it also occurs in a wide variety of minerals, more so than any other metal. The bright color of its commoner oxidized minerals and the brilliant luster and tints of its sulphides make it an ideal material to study with the reflecting microscope.

We now know that the secondary sulphide ore so generally understood to be the product of secondary sulphide enrichment must be distinguished from a similar ore due to other processes and from primary chalcocite. The secondary enrichment processes as generally understood are but a phase or feature of oxidation, sulphide enrichment being contrasted with oxide enrichment, a term including the formation of the carbonates, oxides, and other oxidized ores of copper. A second and equally important form of sulphide enrichment discovered and enunciated several years ago, but apparently overlooked by many students, is an enrichment by ascending and probably heated waters. It is only since the metallographic microscope has been applied to the study of ores that the many changes and replacements of one mineral by another with gradual enrichment of the ore could be satisfactorily studied. This work is yet under way and its results not yet conclusive, but enough is known to be certain that pyrite is altered to chalcocite by descending copper sulphate waters and that this is the characteristic mineral of secondary enrichment deposits. Its development is dependent upon rainfall and climate, water level, associated minerals, rock texture and fracture. It is notable that the deposits of positively known primary origin consist of the copper-

everywhere utilized to make steam. The contact process has made the gases, which once poured out of the stacks to kill the vegetation of whole counties, a great source of revenue at certain favored localities. The sulphuric acid made from these gases is now used in manufacturing fertilizers, thus repaying agriculture for the damage formerly done by the fumes. Science has done more, for the Cottrell process now clears the smelter smoke of its metallic dust by electrical current, much as the dust and haze of a summer day is cleared away by the lightning flashes of a thunderstorm, though without the accompanying rain. The resulting product or dust is successfully utilized in making arsenic, bismuth, and other useful products. Electrolytic refining, experimentally proven in 1847, first successfully applied in Wales in 1869, did not become a really important factor in the copper world until it was introduced in America in 1883, since which time it has grown in importance, until now 80 per cent of the American production is electrolytic copper.

When so much has been done in a brief period of less than half a century and many brilliant minds are now working on the problems of the industry, no one but a dreamer can foresee the future. As copper mining has developed great communities and been a pioneer in the settlement of our far West, once shown on our school geographies as the great American Desert, one may hope and confidently expect similar results in Mexico, Peru, Bolivia, Ecuador, and Chile, countries as rich, or richer, than our own in this metal and all destined for great places in the future history of the Americas.

MINES WANTED

List your property in the Mines Handbook Office, so that prospective buyers will hear of it. Information blank sent on request.

Address **THE MINES HANDBOOK**
29 Broadway New York City

ADDENDA

EL PASO CONSOLIDATED GOLD MNG. CO.

(Material omitted from description in body of book)

Property: 70½ acres in the Cripple Creek mining district, including Elkton and Tornado mines developed by three shafts to a depth of 1,350'. Has been a prominent operator for a great many years. For geology of the Cripple Creek district, see 16th Ann. Rept. of Colo.; also U. S. G. S. Bull. 260, 1915, pp. 85-98. Orebodies occur at vein intersections in vicinity of phonolite dikes.

In 1915, after careful investigation it was found by a new management that very little ore was in sight and it was mostly low-grade; that during 1914-15 the company had made no profits, had exhausted its treasury surplus, was about \$70,000 in debt and doing business largely upon credit; that general expenses amounted to \$1,500 per month and mining operations were being run at a loss of \$3,000 to \$4,000 per month.

Development: work in 1916 totaled 7,498', without discovering any additional orebodies of value. Management states that the prospects of finding merchantable ore below the 1,000' level do not warrant further exploration work and that therefore, since Jan., 1917, company has confined itself strictly to leasing.

Fifteen sets of leasers operating, 1917, shipping 500 tons \$20 ore per month.

Production: in 1916 amounted to 8,622 tons by the company and 10,511 tons by lessees, having gross value of \$104,405 and \$175,279, respectively.

In March, 1917, the "Independent Stockholders Committee" was formed with W. M. Downing, chairman; K. Macdermid, vice-chairman, and C. J. Starke, sec., for the purpose of changing the management of the company. The committee asserts that the El Paso mine has been worked for the benefit of the Golden Cycle Mng. & Red'n Co., and that if a flotation mill had been built, company could have mined its large reserves of low-grade ores, instead of sending only the high-grade to the Golden Cycle mill.

Committee also charges that the present management has shipped over 30,000 tons of El Paso ore to the Golden Cycle mill, averaging \$8-\$11 a ton, on which treatment charges of \$4 and sorting charge of \$1 were paid, whereas, if a flotation mill had been built, the company might have treated its ores at \$1 a ton and made a handsome profit.

Report on property by Louis S. Noble, sent out in 1917, is far from encouraging and unless some radical changes are made, stockholders will never receive another dividend.

Management is considering the advisability of a flotation mill and also of a cyaniding mill for treatment of the dump and low-grade ore in the mine.

FOSTER SUPERHEATERS
 FOR STEAM AND AIR

are essential to economical operation of steam plants and air hoists. They make steam do 12% to 33% more work, or the same amount of work can be done with 10% to 25% less steam in turbines, engines and pumps.

Water eliminated from steam lines, erosion of turbine blades avoided; size of steam pipes and valves reduced.
